TO THE SUGAR PLANTERS OF LOUISIANA.

N. RILLIEUX' PATENT FOR MAKING SUGAR.—The undersigned having been appointed agents of Messrs. Merrick and Towne, proprietors of the Southwark Foundry Philadelphia, and assignees of the Patentee, hereby give notice that they are prepared to contract for the apparatus to be delivered and set up in time for the ensuing crop.—The various sizes are as follows, viz:

No. 1, capable of boiling	6 hhds	in 24 hours.		
2,	do	do	12	do do
3,	do	do	18	do do
4,	do	do	24	do do

The sugar produced by this process is increased at least 20 per cent. in weight and 25 per cent. in value over that obtained by the usual process. The molasses decreases 20 per cent., but is of a very superior quality. The sugar is made white by the use of coarse bone black, without employing moulds or liquoring. The saving of fuel is another important consideration. The bagasse or refuse cane, properly preserved is sufficient to make the crop of sugar—and if bagasse is not used, one cord of wood per hogshead is alone sufficient—the only fire used being in the furnace of the steam engine. This new method of sugar making is no longer an experiment, as may be seen by reference to the letter of T J Packwood, Esq., published in the Bee of Feb'y 1st, and in the Bulletin, Tropic, Picayune and New Orleans Price Current of 17th Feb'y, on whose plantation it has been erected, and proved to his entire satisfaction.

Orders received until the end of April.
