Performance Data Reference

Prospect® 8.0.6 for Ericsson GSM/GPRS/UMTS

Vallent™

Service Management | Performance Management | Professional Services

Notices

This information was developed for products and services offered in the U.S.A.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing
IBM Corporation
North Castle Drive
Armonk, NY 10504-1785, U.S.A.

For license inquiries regarding double-byte (DBCS) information, contact the IBM Intellectual Property Department in your country or send inquiries, in writing, to:

IBM World Trade Asia Corporation
Licensing
2-31 Roppongi 3-chome, Minato-ku
Tokyo 106, Japan

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law:
INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement might not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM Web sites are provided for convenience only and do not in any manner serve as an endorsement of those Web sites. The materials at those Web sites are not part of the materials for this IBM product and use of those Web sites is at your own risk.

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

IBM Corporation
2Z4A/101
11400 Burnet Road
Austin, TX 78758 U.S.A.

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurement may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

Trademarks

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM

trademarks is available on the Web at "Copyright and trademark information" at www.ibm.com/legal/copytrade.shtml.

Intel, Itanium, the Intel Inside logos, and Pentium are trademarks of Intel Corporation in the United States, other countries, or both.

Java and all Java-based trademarks and logos are trademarks or registered trademarks of Sun Microsystems, Inc. in the U.S., and other countries.

Linux is a trademark of Linus Torvalds in the United States, other countries, or both.

Microsoft and Windows are registered trademarks of Microsoft Corporation in the U.S. and other countries.

UNIX is a registered trademark of The Open Group in the United States and other countries.

Other company, product, or service names may be trademarks or service marks of others.

1 About This Documentation

The *Performance Data Reference* provides a reference of performance data and fields to use in Prospect® software to create reports. This guide is customized to support Prospect 8.0.6 (Release 8.0.6) for Ericsson GSM/GPRS/UMTS (ReleasePoint 14.3).

Furthermore, this guide contains information to support the following technologies:

This guide was last updated on 22 July 2009.

Please see the current release notes on this product for a list of revision dates for all Prospect publications.

Audience

This guide is intended for technicians and engineers who use the Prospect software to manage and analyze the performance of a telecommunication network.

Required Skills and Knowledge

This guide is intended for users who have knowledge and skills in the following:

- Basics of Windows
- Features and functions of Microsoft Excel
- High school level mathematics
- Basic statistics
- The network from which Prospect software receives data

Document Conventions

This document uses the typographical conventions shown in the following table:

Table 1: General Document Conventions

Format	*Examples*	*Description*
ALL UPPERCASE	• GPS • NULL • MYWEBSERVER	Acronyms, device names, logical operators, registry keys, and some data structures.
Underscore	See Document Conventions	For links within a document or to the Internet. Note that TOC and index links are not underscored. Color of text is determined by browser settings.
Bold	• **Note**: The busy hour determiner is...	Heading text for Notes, Tips, and Warnings.
SMALL CAPS	• The STORED SQL dialog box... • ...click VIEW... • In the main GUI window, select the FILE menu, point to NEW, and then select TRAFFIC TEMPLATE.	Any text that appears on the GUI.
Italic	• A *busy hour* is... • A web server *must* be installed... • See the *User Guide*	New terms, emphasis, and book titles.
`Monospace`	• `./wminstall` • `$ cd /cdrom/cdrom0` • `/xml/dict` • `http://java.sun.com/products/` • `addmsc.sh` • `core.spec` • Type `OK` to continue.	Code text, command line text, paths, scripts, and file names. Text written in the body of a paragraph that the user is expected to enter.

`Monospace Bold`	**`[root] # pkginfo | grep -i perl`**
	`system Perl5 On-Line Manual Pages`
	`system Perl 5.6.1 (POD Documentation)`
	`system Perl 5.6.1`
		For contrast in a code example to show lines the user is expected to enter.

`<Monospace italics>`	`# cd <oracle_setup>`	Used in code examples: command-line variables that you replace with a real name or value. These are always marked with arrow brackets.
`[square bracket]`	`log-archiver.sh [-i][-w][-t]`	Used in code examples: indicates options.

User Publications

Prospect software provides the following user publications in HTML or Adobe Portable Document Format (PDF) formats.

Table 2: Prospect User Documentation

Document	*Description*
Administration Guide	Helps an administrator configure and support Prospect core server software to analyze network performance and perform other network or database management tasks.
Administrator's Quick Reference Card	Presents the principal tasks of a Prospect core server administrator in an easy-to-use format.
Expressions Technical Reference	Provides detailed information about expressions used in special calculations for reports.
Installation Guide	Instructions for installing and configuring the Prospect software.
Open Interface API Guide	Describes how the Open Interface tool enhances your access to information about database peg counts and scenarios.
Performance Data Reference	Provides detailed information including entity hierarchies, peg counts, primitive calculations, and forecast expressions specific to your organization.
Release Notes	Provides technology-specific and late-breaking information about a given Prospect release and important details about installation and operation.
Server Preparation Guide	Provides instructions for installing and setting up Solaris and Oracle software before you install Prospect software.
Server Sizing Tool Guide	Helps an administrator use the sizing tool to calculate the system space needed for the Prospect software and database.
User Guide	Provides conceptual information and procedures for using Prospect software for performance and trending analysis.

Viewing the Desktop Client Help Publications

To view the desktop client Help publications, select a guide from the HELP menu of the Prospect graphical user interface or press F1 for context-sensitive Help. To update the Help files, click the HELP menu on the Prospect Explorer, and select UPDATE ALL HELP FILES.

When Help files are updated, they are downloaded automatically from the Prospect server to the Prospect client. A message box notifies you when this download occurs.

Viewing the Publications in PDF

All of the user publications are available in Adobe Portable Document Format (PDF). To open a PDF, you need the Adobe Acrobat Reader. You can download Adobe Acrobat Reader free of charge from the Adobe Web site. For more details about the Acrobat Reader, see the Adobe Web site http://www.adobe.com/ .

Training and Technical Support

Both training and technical support are available for Prospect software. For technical support, contact us at prospect@us.ibm.com. For training, contact us at training@vallent.com.

For more information on product training courses, contact your delivery management team at:

- Americas: tivamedu@us.ibm.com
- Asia Pacific: tivtrainingap@au1.ibm.com
- EMEA: tived@uk.ibm.com

2 Introduction

This reference contains detailed technical information about Prospect®. The information included in this document includes the following:

- Entity descriptions and reporting hierarchy
- System-defined fields
- Reference of possible Prospect Expressions in primitive calculations

This reference lists most fields that you can include in reports. The fields listed in this reference are system-defined fields and do not reflect the complete list of available fields. Additional fields, such as User-Defined Calculations (UDCs) or External fields, may also be available.

The following table describes the field types in this reference.

Table 1: Field Types

Field Type	***Description***
Data availability	Data availability fields are automatically created for each data file type that is loaded.
Peg count	A performance metric gathered from the wireless network.
Primitive calculation	A performance metric whose value is determined by a set calculation. Some primitive calculations use Prospect expressions. For more information on Prospect expressions, see the *Expressions Technical Reference*.
Roll-up field	Roll-up fields provide aggregated information about a field defined at a child entity level.

4 AUC Traffic Fields

The following is a list of available AUC Traffic performance data fields.

AUC Primitive Calculations

The following is a list of primitive calculations for the AUC entity.

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

AUC Peg Counts

The following is a list of peg counts for the AUC entity.

AUC_RELEASE

Release

NGSUBSCNT

Number of registered GSM authentication subscriptions in AUC

NSUBSCNT_AUCSUBS

Number of registered subscriptions in AUC

NUSUBSCNT

Number of registered UMTS authentication subscriptions in AUC

PERLEN

Period Length

MAP_AUC Primitive Calculations

The following is a list of primitive calculations for the MAP_AUC entity.

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

MAP_AUC Peg Counts

The following is a list of peg counts for the MAP_AUC entity.

AUC_RELEASE

Release

NMAPFLT

Unsuccessful operations due to problems reported by the local TCAP

NMAPSUCC

Successful operations executed

NMAPTOT

Total requests of a MAP operation

PERLEN

Period Length

System Primitive Calculations

The following is a list of primitive calculations for the System entity.

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

PercentActiveSubscribers

Percent Active Subscribers

Calculation

```
sum(MSC.HLRSubs[subString(LocalKey, 1, 6) = "420608"], NHLRREGAST) * 100.0
/ sum(HLR, NSUBSCNT)
```

PercentRegisteredSubscribers

Percent Registered Subscribers

Calculation

```
sum(MSC.HLRSubs[subString(LocalKey, 1, 6) = "420608"],NHLRMSST ) * 100.0 /
sum(HLR, NSUBSCNT)
```

RegisteredInroamers

Registered Inroamers

Calculation

```
sum(MSC.HLRSubs[subString(LocalKey, 1, 6) != "420608"], NHLRMSST)
```

RegisteredOutroamer

Registered Outroamers

Calculation

```
sum(HLR.PLMN[subString(LocalKey, 1, 6) != "420608"], vsum( GPPERPLMNCNT,
PERPLMNCNT ))
```

SubscribersHLR

Subscribers in HLR

Calculation

```
AGGR(HLR, NSUBSCNT)
```

SubscribersVLR

Subscribers in VLR

Calculation

```
sum(MSC.HLRSubs[subString(LocalKey, 1, 6) = "420608"], NHLRMSST)
```

TotalCellTCHTraffic

Average TCH/F Traffic Level

Calculation

```
protect(sum(MSC.BSC.BTSSite.Cell, TCF_TRAFF_VOL))
```

TotalSwitchedTraffic

Generates a predefined graph showing total switch traffic in the network and total air traffic

Calculation

```
sum(MSC, TotalSwitchedTraffic)
```

System Peg Counts

The following is a list of peg counts for the System entity.

rg_reap

ReportGenerator Internal Count

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

5 FNR Traffic Entities

The following figures show the Prospect reporting hierarchy for FNR traffic entities.

Figure 2: Reporting Hierarchy

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

6 FNR Traffic Fields

The following is a list of available FNR Traffic performance data fields.

FNR Primitive Calculations

The following is a list of primitive calculations for the FNR entity.

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

FNR Peg Counts

The following is a list of peg counts for the FNR entity.

EXPMESSCNT

Number of successful translations performed for EXPORTED subscribers.

FNR_RELEASE

Release

IMPMESSCNT

Number of successful translations performed for IMPORTED subscribers.

INANSISUCCCNT

Number of incoming messages from ANSI-41 networks successfully translated in the SRF application.

INGSMSUCCCNT

Number of incoming messages from GSM or UMTS networks successfully translated in the SRF application.

LOCREQMAPCNT

Number of Location Request operations received in the ANSI-41 MAP application.

LOCREQRELAYCNT

Number of Location Request operations rec. in the ANSI-41 MAP application and relayed through the SCCP user function.

LOCREQSUCCCNT

Number of Location Request operations successfully answered to originating MSC for GSM or UMTS subscribers.

NANSISUBSCNT

Number of individual subscribers in the operators own ANSI-41 network defined in the FNR database.

NGSMSUBSCNT

Number of individual subscribers in the operators own GSM or UMTS network defined in the FNR database.

NPNOACNT

Tot nof mess. rec. with the non stand NOA value indicating Second Query for the subsc. (Not used for GSM 800/1900)

OTHERMESSCNT

Number of successful translations performed for OTHER subscribers.

PERLEN

Period Length

RELAYHOMECNT

Number of messages relayed to the HPLMN except those forwarded to the default route.

RELAYOUTCNT

Number of messages relayed outside the HPLMN.

SMSREQMAPCNT

Number of SMS Request operations received in the ANSI-41 MAP application.

SMSREQRELAYCNT

Number of SMS Request operations received in the ANSI-41 MAP application and relayed through the SCCP user function.

SRFDBMISCNT

Total number of messages answered with an error due to database mismatch. (Not used for GSM 800/1900)

SRIANSISUCCCNT

Number of SRI or RIR operations successfully answered to GMSC for ANSI-41 subscribers.

SRIEXPCNT

Number of SRI or RIR messages successfully answered to GMSC for EXPORTED subscribers.

SRIIMPCNT

Number of SRI or RIR messages successfully answered to GMSC for IMPORTED subscribers.

SRIOTHERCNT

Number of SRI or RIR messages successfully answered to GMSC for OTHER subscribers.

TRANSDBMISCNT

Number of mismatched relationships detected in the database. Associated to functions: NP. (Not used in GSM 800/1900)

TRANSEXPCNT

Number of EXPORTED individual relationships defined in the database. Associated to functions: NP.

TRANSFAILANSICNT

Number of SCCP messages rec. with Global Title in the Called Address and forwarded to the ANSI-41 default route.

TRANSFAILCNT

Nof rec SCCP mess with a global title in the Called Address and fw to default route. Ass to funct: NP, FAMF and NMF.

TRANSIMPCNT

Number of IMPORTED individual relationships defined in the database. Associated to functions: NP.

TRANSOTHERCNT

Number of OTHER individual relationships defined in the database. Associated to functions: NP.

TRANSPAIRCNT

Number of translation relationships defined in the database. Associated to functions: NP, FAMF and NMF.

TRANSUCNT

Number of translations succesfully accomplished for FAMF. Associated to function: FAMF.

TTIN0MESSCNT

Number of messages received with TTIN=0. (Not used for GSM 800/1900)

TTIN10MESSCNT

Counter of all the messages received with TTIN=10

TTIN128MESSCNT

Number of messages received with TTIN=128. (Not used for GSM 800/1900)

TTIN1PARCNT

No of messages received with TTIN defined by application parameter TTIN1. (Not used for GSM 900/1800)

TTIN5PARCNT

No of messages received with TTIN defined by application parameter TTIN5. (Associated to function: NMF)

TTINPOS1CNT

No of messages received with TTIN stored in position 1 of the TT table.

TTINPOS2CNT

No of messages received with TTIN stored in position 2 of the TT table.

TTINPOS3CNT

No of messages received with TTIN stored in position 3 of the TT table.

TTINPOS4CNT

No of messages received with TTIN stored in position 4 of the TT table.

TTINPOS5CNT

No of messages received with TTIN stored in position 5 of the TT table.

TTINPOS6CNT

No of messages received with TTIN stored in position 6 of the TT table.

TTINPOS7CNT

No of messages received with TTIN stored in position 7 of the TT table.

TTINPOS8CNT

No of messages received with TTIN stored in position 8 of the TT table.

UNKSUBSCNT

Number of messages answered with Unknown Subscriber error.

UNSADDRESCNT

Nof rec SCCP mess without a global title in the Called Address and fw to default route. Ass to funct: NP, FAMF and NMF.

UNSUCCANSICNT

Number of SCCP messages rec. without Global Title in the Called Address and forwarded to the ANSI-41 default route.

System Primitive Calculations

The following is a list of primitive calculations for the System entity.

Calculation

```
sum(HLR.PLMN[subString(LocalKey, 1, 6) != "420608"], vsum( GPPERPLMNCNT,
PERPLMNCNT ))
```

SubscribersHLR

Subscribers in HLR

Calculation

```
AGGR(HLR, NSUBSCNT)
```

SubscribersVLR

Subscribers in VLR

Calculation

```
sum(MSC.HLRSubs[subString(LocalKey, 1, 6) = "420608"], NHLRMSST)
```

TotalCellTCHTraffic

Average TCH/F Traffic Level

Calculation

```
protect(sum(MSC.BSC.BTSSite.Cell, TCF_TRAFF_VOL))
```

TotalSwitchedTraffic

Generates a predefined graph showing total switch traffic in the network and total air traffic

Calculation

```
sum(MSC, TotalSwitchedTraffic)
```

System Peg Counts

The following is a list of peg counts for the System entity.

APN Primitive Calculations

The following is a list of primitive calculations for the APN entity.

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

pAPNpacketSuccessRate

APN Packet Success Rate is the Success Factor of the overal Packets sent to and Received from an Speciefic APN. Each success factor is weighted by percentage of total packets in either uplink or downlink direction

Calculation

```
( (1- vsum(ggsnApnUplinkDrops *  ggsnApnUplinkPackets,  ggsnApnDown-
linkDrops *  ggsnApnDownlinkPackets) ) * 100.0 )  / ( 1.0 * vsum( ggsnApnU-
plinkPackets, ggsnApnDownlinkPackets ) )
```

pAPNSuccessRate

APN Success Rate shows the success factor of the Overall Operations of specific APN . Each PDP Operation success is weighted by the number of the operation

Calculation

```
( ( 1 - vsum( ggsn_Att_pdp_act, ggsn_att_da_pdp_act, ggsn_att_ms_act,
ggsn_att_init_deact, ggsn_att_ms_deact, -1 * ggsn_cmp_pdp_act, -1 *
ggsn_cmp_da_pdp_act, -1 * ggsn_cmp_ms_act,  -1 * ggsn_cmp_init_deact, -1 *
ggsn_cmp_ms_deact ) ) * 100.0 )/ ( 1.0 * vsum( ggsn_Att_pdp_act,
ggsn_att_da_pdp_act, ggsn_att_ms_act, ggsn_att_init_deact,
ggsn_att_ms_deact ) )
```

pGTPaverPacktSizeDownlinkAPN

Average packet size is the ratio between bytes send and number of packets in Downlink per APN

Calculation

```
(ggsnApnUplinkBytes * 1.0)  / ( 1.0 * ggsnApnUplinkPackets)
```

pGTPaverPacktSizeUplinkAPN

Average packet size is the ratio between bytes send and number of packets in Uplinklink per APN

Calculation

```
(ggsnApnDownlinkBytes * 1.0)  / ( 1.0 * ggsnApnDownlinkPackets)
```

ppacketDropRateDownpAPN

The Ratio between the number of uplink Dropped Packets and Downlink packets processed on a per APN in percent

Calculation

```
(ggsnApnDownlinkDrops * 100.0) / (1.0 * ggsnApnDownlinkPackets)
```

ppacketDropRateUplinkpAPN

The Ratio between the number of uplink Dropped Packets and uplink packets processed on a per APN in percent

Calculation

```
(ggsnApnUplinkDrops * 100.0) / ( 1.0 * ggsnApnUplinkPackets)
```

pPDPActFailpAPN

PDP Activation Failure Rate is the ratio between the number of Attempt PDP context activation minus PDP context Activation completed divided by Attempt PDP context Activation Received at the APN in percent

Calculation

```
(vsum( ggsn_Att_pdp_act, -1 * ggsn_cmp_pdp_act ) * 100.0) / ( 1.0 *
ggsn_Att_pdp_act)
```

pPDPActivMSFailpAPN

PDP Activation MS Failure Rate is the ratio between the number of PDP Attempted MS activations minus the number of PDP Completed MS activations divided by PDP Attempted MS activations in percent

Calculation

```
(vsum( ggsn_att_ms_act, -1 *  ggsn_cmp_ms_act ) * 100.0) / ( 1.0 *
ggsn_att_ms_act )
```

pPDPDeActivGGSNFailpAPN

PDP Deactivation Failure Rate is the ratio between the number of GGSN initiated deactivations minus the number of Completed GGSN deactivations divided by the number of GGSN initiated deactivations at the APN in percent

Calculation

```
(vsum( ggsn_att_init_deact, -1 * ggsn_cmp_init_deact ) * 100.0) / ( 1.0 *
ggsn_att_init_deact)
```

pPDPDeActivMSFailpAPN

PDP deactivation failure rate MS is the ratio between the number of Attempted MS deactivations minus the number of Completed MS deactivations divided by the number of at the APN in percent

Calculation

```
(vsum( ggsn_att_ms_deact, -1 * ggsn_cmp_ms_deact ) * 100.0) / (1.0 *
ggsn_att_ms_deact)
```

pPDPDynamicAddrFailpAPN

PDP activation with dynamic addresses failure Rate is the ratio between the number of Dynamic PDP activation attempt minus the number of PDP completed activation divided by the number of Dynamic PDP activation attempt in the APN in percent

Calculation

```
(vsum( ggsn_att_da_pdp_act, -1 * ggsn_cmp_da_pdp_act) * 100.0) / (1.0 *
ggsn_att_da_pdp_act)
```

UnknownEnterpriseField

Unknown Field exported from Enterprise Server

Calculation

```
nullInt()
```

APN Peg Counts

The following is a list of peg counts for the APN entity.

attActPdpContDynPerApnOfGgsn

Number of dynamic PDP context activation procedures initiated by the MS where a dynamic PDP address is requested (attActPdpContextDynPerApnOfGgsn)

Data Source

GGSN

attActPdpContextPerApnOfGgsn

Number of PDP context activation procedures initiated by the MS

ggsnApnActivePdpContextCount

Total number of active PDP contexts per APN Collected using CLI.

Data Source

GGSN

Source Field

ActivePDPcontexts

Source Section

ggsnstatisticsapn

ggsnApnActivePdpContextCount_jn

Total number of active PDP contexts per APN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnActivePdpContextCount

Source Section

ggsnApn

ggsnApnActivePdpContextMax

Maximum number of activated PDP contexts on this APN. (Incremented when a PDP context is activated and the number of active PDP contexts = peak.) (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnActivePdpContextMax

Source Section

ggsnApn

ggsnApnActivePdpContextMean

Average number of active PDP contexts on the APN during the last 15 minutes. Updated every 15 minutes. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnActivePdpContextMean

Source Section

ggsnApn

ggsnApnActPdpContextCountIpv6

Number of active IPv6 PDP contexts associated with the APN.

Data Source

GGSN

ggsnApnAtmptActivationIpv6

The total number of attempted IPv6 PDP context activation procedures on a per APN

Data Source

GGSN

ggsnApnAttemptedActivation

Number of attempted PDP context activations for this APN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnAttemptedActivation

Source Section

ggsnApn

ggsnApnAttemptedAuthActivation

The total number of attempted session establishment with user authentication required per APN of this GGSN.

Data Source

GGSN

Source Field

ggsnApnAttemptedAuthActivation

ggsnApnAttemptedDeactivation

Number of attempted PDP context deactivations for this APN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnAttemptedDeactivation

Source Section

ggsnApn

ggsnApnAttemptedDynActivation

Number of attempted PDP context activations where a dynamic MS IP address is requested for this APN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnAttemptedDynActivation

Source Section

ggsnApn

ggsnApnAttemptedMSActivation

Number of PDP context activations initiated by the MS for this APN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnAttemptedMSActivation

Source Section

ggsnApn

ggsnApnAttemptedMSDeactivation

Number of PDP context deactivations initiated by the MS for this APN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnAttmptMSDeactivation

Source Section

ggsnApn

ggsnApnAttemptedSelfDeactivation

Number of PDP context deactivations initiated by this GGSN for this APN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnAttmptSelfDeactivation

Source Section

ggsnApn

ggsnApnAttemptedUpdateMsAndSgsn

The total number of attempted PDP context update initiated by MS or SGSN per APN of this GGSN.

Data Source

GGSN

Source Field

ggsnApnAttemptedUpdateMsAndSgsn

ggsnApnCmpltdActivationIpv6

The total number of completed IPv6 PDP context activations on a per APN

Data Source

GGSN

ggsnApnCompletedActivation

Number of completed PDP context activations for this APN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnCompletedActivation

Source Section

Data Source

GGSN

Source Field

ggsnApnCmpltdMSDeactivation

Source Section

ggsnApn

ggsnApnCompletedSelfDeactivation

Number of completed PDP context deactivations initiated by this GGSN for this APN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnCmpltdSelfDeactivation

Source Section

ggsnApn

ggsnApnCompletedUpdateMsAndSgsn

The total number of successfully completed PDP context update initiated by MS or SGSN per APN of this GGSN.

Data Source

GGSN

Source Field

ggsnApnCompletedUpdateMsAndSgsn

ggsnApnDownlinkBytes

Number of Downlink GTP-U bytes sent for the specific APN in the GGSN Collected using CLI

Data Source

GGSN

Source Field

DownlinktrafficBytes

Source Section

ggsnstatisticsapn

ggsnApnDownlinkBytes_jn

Number of Downlink GTP-U bytes sent for the specific APN in the GGSN (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnApnDownlinkBytes

Source Section

ggsnApn

ggsnApnDownlinkBytesIpv6

Total bytes for all processed IPv6 downlink packets on a per APN of this GGSN.

Data Source

GGSN

Source Field

ggsnApnDownlinkBytesIpv6

ggsnApnDownlinkDrops

Number of Downlink GTP-U packets dropped for the specific APN Collected using CLI.

Data Source

GGSN

Source Field

DownlinktrafficDroppedpackets

Source Section

ggsnstatisticsapn

ggsnApnDownlinkDrops_jn

Data Source

GGSN

Source Field

ggsnApnDownlinkPackets

Source Section

ggsnApn

ggsnApnDownlinkPacketsIpv6

Total downlink IPv6 packets processed on a per APN.

Data Source

GGSN

Source Field

ggsnApnDownlinkPacketsIpv6

ggsnApnFailedAuthActivation

The total number of failed session establishement due to user authentication failure, per APN of this GGSN.

Data Source

GGSN

Source Field

ggsnApnFailedAuthActivation

ggsnApnGiSignalingInBytes

The total number of bytes for incoming signaling packets on the Gi interface per APN of this GGSN.

Data Source

GGSN

Source Field

ggsnApnGiSignalingInBytes

ggsnApnGiSignalingInPackets

The number of incoming packets used for signaling purpose on the Gi interface per APN of this GGSN.

Data Source

GGSN

Source Field

ggsnApnGiSignalingInPackets

ggsnApnGiSignalingOutBytes

The total number of bytes for outgoing signaling packets on the Gi interface per APN of this GGSN.

Data Source

GGSN

Source Field

ggsnApnGiSignalingOutBytes

ggsnApnGiSignalingOutPackets

The number of outgoing packets used for signaling purpose on the Gi interface per APN of this GGSN.

Data Source

GGSN

Source Field

ggsnApnGiSignalingOutPackets

ggsnApnIdleTimeOutDeactivation

The total number of PDP contexts deactivated per APN due to continuous idle time limit

Data Source

GGSN

Source Field

ggsnApnIdleTimeOutDeactivation

ggsnApnNbrOfTftFilters

The current number of TFT filters in use per APN of this GGSN.

Data Source

GGSN

Source Field

ggsnApnNbrOfTftFilters

ggsnApnNghbrSolicitationRcv

The number of neighbor solicitation request received by GGSN, per APN

Data Source

GGSN

ggsnApnNghbrSolicitationRsp

The number of neighbor solicitation responses from GGSN, per APN

Data Source

GGSN

ggsnApnRouterSolicitationRcv

The number of router solicitation request received by GGSN, per APN

Data Source

GGSN

Source Field

ggsnApnRouterSolicitationRcv

ggsnApnRouterSolicitationRsp

The number of router solicitation responses from GGSN, per APN

Data Source

GGSN

Source Field

ggsnApnRouterSolicitationRsp

ggsnApnSessTimeoutDeactivation

The total number of PDP contexts deactivated per APN due to duration limit.

Data Source

GGSN

Source Field

ggsnApnSessTimeoutDeactivation

ggsnApnUplinkBytes

Number of Uplink GTP-U bytes sent for the specific APN in the GGSN Collected using CLI

Data Source

GGSN

Source Field

UplinktrafficBytes

Source Section

ggsnstatisticsapn

ggsnApnUplinkBytes_jn

BSSGP Peg Counts

The following is a list of peg counts for the BSSGP entity.

bssgpDownlinkOctets

The total number of downlink BSSGP octets per Network Service Entity (NSE).

Data Source

SGSN

Source Field

bssgpDownlinkOctets

Source Section

NSEI

bssgpDownlinkPackets

The total number of downlink BSSGP packets per NSE.

Data Source

SGSN

Source Field

bssgpDownlinkPackets

Source Section

NSEI

bssgpDownlinkPacketsSignalling

The number of downlink BSSGP signaling packets per NSE.

Data Source

SGSN

Source Field

bssgpDownlinkPacketsSignalling

Source Section

NSEI

bssgpStatusBvcUnknown

This measurement provides the number of BVC unknown BSSGP-STATUS messages sent to the Base Station Controller (BSC). These messages are sent to the BSC when traffic, that is, BSSGP-UL-UNITDATA messages, is received on the PTP-BVCs that do not exist in the SGSN. The traffic is then discarded. The PTP-BVCs is non-existent in the SGSN since no BVC-RESET messages, for the PTP-BVC, have been received from the BSC.

Data Source

Card Primitive Calculations

The following is a list of primitive calculations for the Card entity.

atmal5IfInPkts

The number of received AAL5 CPCS PDUs passed to a higher-layer. R7: For IBASv3b, the port ID is always zero and the value returned is the sum of all ports.

Calculation

```
atmal5IfInUcastPkts
```

atmal5IfOutPkts

The number of AAL5 CPCS PDUs received from a higher layer for transmission. R7: For IBASv3b, the port ID is always zero and the value returned is the sum of all ports.

Calculation

```
atmal5IfOutUcastPkts
```

AverageCapGTP_CPICthisGGSN

Average capacity of the GTP-C PIC on this GGSN

Calculation

```
ggsnGtpcPdpCapacity
```

CardGOS

Dimensioned Grade of Service

Calculation

DatagramFragFailRate_GSN

Datagram fragm rates show the percentage of datagrams that have been discarded

Calculation

```
ipFragFails * 100.0 / ipFragOKs
```

DatagramInAddressFailRate_GSN

Datagram IP address fail rate shows the percentage of input datagrams discarded

Calculation

```
ipInAddrErrors * 100.0  / ipInReceives
```

DatagramInHeaderFailRate_GSN

IP datagram headers errors Shows the percentage of inc datagrams that been disca

Calculation

```
ipInHdrErrors * 100.0 / ipInReceives
```

DatagramNoRoutesFailRate_GSN

Datagram no Route failure rate shows the percentage of datagrams discarded

Calculation

```
ipOutNoRoutes * 100.0  / ipInReceives
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

IcmpInMsgsSucc

ICMP messages which the entity received success rate %

Calculation

```
100 - (icmpInDestUnreachs + icmpInRedirects + icmpOutDestUnreach + OutEr-
rors) * 100.0 / (icmpInMsgs + icmpInDestUnreachs + icmpInRedirects +
icmpOutDestUnreach + OutErrors)
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

pDatagramFragFail

Datagram fragmentation rates show the percentage of datagrams that have been discarded because they needed to be fragmented compare to successful fragmentation.

Calculation

```
ipFragFails * 100.0 / ipFragOKs
```

pDatagramInAddrFailRate

Datagram IP address failure rate shows the percentage of input datagrams discarded because the IP address in their IP header's destination field was not a valid address.

Calculation

```
ipInAddrErrors * 100.0 / ipInReceives
```

pDatagramInHdrFail

IP datagram headers errors

Calculation

```
ipInHdrErrors * 100.0 / ipInReceives
```

pDatagramNoRoutesFail

Datagram no Route failure rate shows the percentage of datagrams discarded because no route could be found to transmit them to their destination.

Calculation

```
ipOutNoRoutes * 100.0 / ipInReceives
```

pToIDatagramsFail

Total IP datagram failures rate shows the percentage of incoming datagrams that have been discarded.

Calculation

```
ipInReceives * 100.0 / vsum(ipInHdrErrors, ipInAddrErrors, ipOutNoRoutes,
ipFragFails)
```

TotalCapGTP_CPICThisGGSN

Total capacity of the GTP-C PIC on this GGSN

Calculation

```
ggsnGtpcPdpCapacity
```

TotIpDatagramsFailRate_GSN

Tot IP datagr fail rate shows the percentage of inc datagr that have been disca

Calculation

```
ipInReceives * 100.0 / (ipInHdrErrors + ipInAddrErrors + ipOutNoRoutes +
ipFragFails)
```

UnknownEnterpriseField

Unknown Field exported from Enterprise Server

Calculation

```
nullInt()
```

Card Peg Counts

The following is a list of peg counts for the Card entity.

atmal5CRCErrors

The number of AAL5 CPCS PDUs received with CRC-32 errors. R7: For IBASv3b, the port ID is always zero and the value returned is the sum of all ports.

Data Source

SGSN

Source Field

atmal5CRCErrors

Source Section

Interface Type (one of: ATM, BGP, ETH, IP or ALL)

Data Source

SGSN

Source Section

GPRS General

ipForwardingTableEntries

The total number of Forwarding table entries.

Data Source

SGSN

Source Field

ipForwardingTableEntries

Source Section

IP

ipForwDatagrams

Number of input datagrams for which this entity was not their final IP destination

Data Source

SGSN

Source Field

ipForwDatagrams

Source Section

IP

ipFragCreates

Number of IP datagram fragments that have been generated as a result of fragmentation at this entity.

Data Source

SGSN

Source Field

ipFragCreates

Source Section

IP

ipFragFails

Number of IP datagrams that have been discarded because they needed to be fragmented at this entity but could not be

Data Source

SGSN

Source Field

ipFragFails

Source Section

IP

ipFragOKs

Number of IP datagrams that have been fragmented at this entity.

Data Source

SGSN

Source Field

ipFragOKs

Source Section

IP

ipInAddrErrors

Number of input datagrams discarded because the IP address in their IP header's destination field was not a valid address

Data Source

SGSN

Source Field

ipInAddrErrors

Source Section

IP

ipInHdrErrors

Number of input datagrams discarded due to errors in their IP headers

Data Source

SGSN

Source Field

ipInHdrErrors

Source Section

IP

ipInReceives

Total number of input datagrams received from interfaces, including those received in error.

Data Source

SGSN

Source Field

ipInReceives

Source Section

IP

ipOutNoRoutes

Number IP datagrams discarded because no route could be found to transmit them to their destination

Data Source

SGSN

Source Field

ipOutNoRoutes

Source Section

IP

ipReasmFails

Number of failures detected by the IP re-assembly algorithm for whatever reason

Data Source

SGSN

Source Field

ipReasmFails

Source Section

IP

ipReasmOKs

Number of IP datagrams successfully re-assembled.

Data Source

SGSN

Source Field

ipReasmOKs

Source Section

IP

ipReasmReqds

Number IP fragments received which needed to be reassembled at this entity.

Data Source

SGSN

ipsecIncorrectPackets

Number of packets not processed

Data Source

SGSN

Source Field

ipsecIncorrectPackets

Source Section

IPsec/GRE CPU

ipsecIssIllegalSpi

Number of incoming packets which spi does not have an SA in IPSEC SAD.

Data Source

SGSN

Source Field

ipsecIssIllegalSpi

Source Section

IPsec/GRE CPU

ipsecIssInOkPackets

Number of packets which has been processed correctly, coming in.

Data Source

SGSN

Source Field

ipsecIssInOkPackets

Source Section

IPsec/GRE CPU

ipsecIssMd5Mismatch

Number of times the comparison between the given value and the calculated (with md5 alg.) value did not match.

Data Source

SGSN

Source Field

ipsecIssMd5Mismatch

Source Section

IPsec/GRE CPU

ipsecIssOutOkPackets

Number of packets which has been processed correctly, going out.

Data Source

SGSN

Source Field

ipsecIssOutOkPackets

Source Section

IPsec/GRE CPU

ipsecIssSha1Mismatch

Number of times the comparison between the given value and the calculated (with sha1 alg.) value did not match.

Data Source

SGSN

Source Field

ipsecIssSha1Mismatch

Source Section

IPsec/GRE CPU

ipsecWaPacketsProcessed

This counter is only to be used as a randomizer for the function that drops packets during high CPU load

Data Source

SGSN

Source Field

ipsecWaPacketsProcessed

Source Section

IPsec/GRE CPU

ospfExternLsaCount

Number of external (LS type 5) link-state advertisements in the link-state database.

Data Source

SGSN

Source Field

ospfExternLsaCount

Source Section

OSPF CPU

ospfOriginateNewLsas

Number of new link-state advertisements that have been originated

Data Source

SGSN

Source Field

ospfOriginateNewLsas

Source Section

OSPF CPU

ospfRxNewLsas_R21

Number of link-state advertisements received determined to be new instantiations

Data Source

SGSN

Source Field

ospfRxNewLsas

Source Section

OSPF CPU

OutErrors

The nr of ICMP mess which entity did not send due to probl disco within ICMP

DLCI Primitive Calculations

The following is a list of primitive calculations for the DLCI entity.

DLCIGOS

Dimensioned Grade of Service

Calculation

Gb_FR_TrafficRX

Total Amount of data transmitted on the Gb interface at the Fr layer received , in Kbytes (including headers)

Calculation

```
(frPvcRxBytes * 1.0) / 1024.0
```

Gb_FR_TrafficTX

Total Amount of data transmitted on the Gb interface at the Fr layer transmitted , in Kbytes (including headers)

Calculation

```
(frPvcTxBytes * 1.0) / 1024.0
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

MaxCIR

Max committed data transfer rate (in bits per second) is the maximum information capacity of the virtual circuit i.e. PVC, that is guaranteed to a particular subscriber on a particular DLCI.

Calculation

```
frPvcCirHiWat
```

MinCIR

Min committed data transfer rate (in bits per second) is the minimum of CIR of the virtual circuit i.e. PVC, that is guaranteed to a particular subscriber on a particular DLCI.

Calculation

```
frPvcCirLoWat
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

pDisEligRx

Discard Eligibility Rate Receive indicates the rate that the received frames are to be discarded in case of overload. This indication can be regarded as a prioritising function, although frames without a DE indication can also be discarded.

Calculation

```
frPvcRxDe * 100.0 / frPvcRxFrames
```

pDisEligTx

Discard Eligibility Rate indicates the rate that the transmitted frames are to be discarded in case of overload. This indication can be regarded as a prioritising function, although frames without a DE indication can also be discarded.

Calculation

```
frPvcTxDe * 100.0 / (frPvcTxFrames * 1.0)
```

UnknownEnterpriseField

Unknown Field exported from Enterprise Server

Calculation

```
nullInt()
```

UtilizationRX

Utilization RX shows the Quality of reception in the sense of not experiencing any congestion on a PVC link on a particular DLCI.

Calculation

```
(frPvcRxFrames - frPvcRxStops) * 100.0 / (frPvcRxFrames * 1.0)
```

UtilizationTX

Utilization TX shows the Quality of transmission in the sense of not experiencing any congestion on a PVC link on a particular DLCI.

Calculation

```
(frPvcTxFrames - frPvcTxStops) * 100.0 / (frPvcTxFrames * 1.0)
```

GSN Primitive Calculations

The following is a list of primitive calculations for the GSN entity.

attActPdpContextMSPerSgsn

Retired fr 5.0.11.0.11. Replaced by SMAttActPdpContextG. The counter is incremented for each Activate PDP Context Request received on the Gb Interface

Calculation

```
SMAttActPdpContextG
```

attDeactPdpContextGgsnPerSgsn

Retired fr 5.0.10.0.0. Replaced by SMAttDeactPdpContextGgsnG.The counter is incremented for each Deactivate PDP Context Request received on the Gn Interface

Calculation

```
SMAttDeactPdpContextGgsnG
```

attDeactPdpContextMsPerSgsn

Retired fr 5.0.10.0.0. Replaced by SMAttDeactPdpContextMsG.The counter is incremented for each Deactivate PDP Context Request received on the Gb Interface

Calculation

```
SMAttDeactPdpContextMsG
```

AverageCapGTP_CPICallGGSN

Average capacity of the GTP-C PIC on all GGSNs

Calculation

```
aggr (Card, ggsnGtpcPdpCapacity )
```

ethInErrors

Number of incoming errors.

Calculation

```
AGGR(Card, vsum(ethInErrors_Unit0, ethInErrors_Unit1))
```

ethInErrorsBUF

Number of incoming buffer errors.

Calculation

```
AGGR(Card, vsum(ethInErrorsBUF_Unit0, ethInErrorsBUF_Unit1))
```

ethInErrorsCE

Number of incoming CRC errors.

Calculation

```
AGGR(Card, vsum(ethInErrorsCE_Unit0, ethInErrorsCE_Unit1))
```

ethInErrorsCLBLK

Number of incoming clblk errors.

Calculation

```
AGGR(Card, vsum(ethInErrorsCLBLK_Unit0, ethInErrorsCLBLK_Unit1))
```

ethInErrorsCS

Number of incoming collisions seen.

Calculation

```
AGGR(Card, vsum(ethInErrorsCS_Unit0, ethInErrorsCS_Unit1))
```

ethInErrorsFF

Failed the address recognition filtering.

Calculation

```
AGGR(Card, vsum(ethinErrorsFF_Unit0, ethinErrorsFF_Unit1))
```

ethInErrorsMBLK

Number of incoming mblock errors.

Calculation

```
AGGR(Card, vsum(ethInErrorsMBLK_Unit0, ethInErrorsMBLK_Unit1))
```

ethInErrorsRF

Number of runt frames (frames damaged by collision).

Calculation

```
AGGR(Card, vsum(ethInErrorsRF_Unit0, ethInErrorsRF_Unit1))
```

ethInErrorsTL

Ethernet frame too long.

Calculation

```
AGGR(Card, vsum(ethInErrorsTL_Unit0, ethInErrorsTL_Unit1))
```

ethInMF

Retired fr 5.0.10.0.0-Ethernet Multicast frames received.

Calculation

```
AGGR(Card, vsum(ethInMF_Unit0, ethInMF_Unit1))
```

ethInPkts

Retired fr 5.0.10.0.0-The total nr of packets, delivered by this sub-layer to a higher (sub-)layer.

Calculation

```
AGGR(Card, vsum(ethInPkts_Unit0, ethInPkts_Unit1))
```

ethOutErrorOWN

Number of outgoing own errors.

Calculation

```
AGGR(Card, vsum(ethOutErrorOWN_Unit0, ethOutErrorOWN_Unit1))
```

ethOutErrors

Number of outbound errors.

Calculation

```
AGGR(Card, vsum(ethOutErrors_Unit0, ethOutErrors_Unit1))
```

ethOutErrorsBUF

Number of outgoing buffer errors.

Calculation

```
AGGR(Card, vsum(ethOutErrorsBUF_Unit0, ethOutErrorsBUF_Unit1))
```

ethOutErrorsEC

Number of outgoing excessive collisions.

Calculation

```
AGGR(Card, vsum(ethOutErrorsEC_Unit0, ethOutErrorsEC_Unit1))
```

ethOutErrorsLC

Number of outgoing late collisions.

Calculation

```
AGGR(Card, vsum(ethOutErrorsLC_Unit0, ethOutErrorsLC_Unit1))
```

ethOutErrorsLO

Number of outgoing loss of carrier errors.

Calculation

```
AGGR(Card, vsum(ethOutErrorsLO_Unit0, ethOutErrorsLO_Unit1))
```

ethOutErrorsNC

Number of outgoing no carrier errors.

Calculation

```
AGGR(Card, vsum(ethOutErrorsNC_Unit0, ethOutErrorsNC_Unit1))
```

ethOutErrorsTO

Number of outgoing transmit jabber timeouts.

Calculation

```
AGGR(Card, vsum(ethOutErrorsTO_Unit0, ethOutErrorsTO_Unit1))
```

ethOutErrorsTXD

Number of transmit descriptor errors (TxD could not be created).

Calculation

```
AGGR(Card, vsum(ethOutErrorsTXD_Unit0, ethOutErrorsTXD_Unit1))
```

ethOutErrorsUF

Number of outgoing underflow errors.

Calculation

```
AGGR(Card, vsum(ethOutErrorsUF_Unit0, ethOutErrorsUF_Unit1))
```

ethOutPkts

Retired fr 5.0.10.0.0-The total nr of packets that higher-level protocols requested to be transmitted

Calculation

```
AGGR(Card, vsum(ethOutPkts_Unit0, ethOutPkts_Unit1))
```

filterAllowedPacketsOnSlot

Number of packets allowed by filter on this CPU.

Calculation

```
AGGR(Card, filterPacketsAllowedOnCPU)
```

filterDeniedPacketsOnSlot

Number of packets denied by filter on this CPU.

Calculation

```
AGGR(Card, filterPacketsDeniedOnCPU)
```

filterIpsecPacketsOnSlot

Number of packets classified as IPsec by filter on this CPU.

Calculation

```
AGGR(Card, filterIpsecPacketsOnCPU)
```

gprsMmSgsnUnsuccessfulPagingProcedures

Retired fr 5.0.10.0.0-Unsuccessful paging procedures per SGSN.

Calculation

```
gprsMmUnsuccessfulPagingProcedures
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

icmpInDestUnreachs

Number of ICMP Destination Unreachable messages received.

Calculation

```
AGGR(Card, icmpInDestUnreachs)
```

icmpInDestUnreachsRate

ICMP Destination Unreachable Rate shows Ratio of ICMP Destination Unreachable messages received to total ICMP messages received.

Calculation

```
( jnxicmpInDestUnreachs * 100.0 ) / ( 1.0 * jnxicmpInMsgs )
```

icmpInEchoReps

Number of ICMP Echo Reply messages received.

Calculation

```
AGGR(Card, icmpInEchoReps)
```

icmpInEchos

Number of ICMP Echo (request) messages received.

Calculation

```
AGGR(Card, icmpInEchos)
```

icmpInErrorRate

Icmp Error Rate shows the ratio of ICMP messages which the entity received but determined as having ICMP-specific errors (bad ICMP checksums, bad length, etc. to the total ICMP Messages

Calculation

```
( jnxicmpInErrors * 100.0 ) / ( 1.0 * jnxicmpInMsgs)
```

icmpInErrors

Nr of ICMP mess which the entity rec but determ as having ICMP-specific errors

Calculation

```
AGGR(Card, icmpInErrors)
```

icmpInMsgs

Total nr of ICMP messages which the entity received

Calculation

```
AGGR(Card, icmpInMsgs)
```

IcmpInMsgsSucc

ICMP messages which the entity received success rate

Calculation

```
100 * (1 - ((icmpInDestUnreachs + icmpInRedirects + icmpOutDestUnreachs +
icmpOutErrors) * 1.0 / (icmpInMsgs + icmpInDestUnreachs + icmpInRedirects +
icmpOutDestUnreachs + icmpOutErrors)))
```

icmpInParmProbs

Number of ICMP Parameter Problem messages received.

Calculation

```
AGGR(Card, icmpInParmProbs)
```

icmpInRedirects

Number of ICMP Redirect messages received.

Calculation

```
AGGR(Card, icmpInRedirects)
```

icmpInTimeExcds

Number of ICMP Time Exceeded messages received.

Calculation

```
AGGR(Card, icmpInTimeExcds)
```

icmpOutDestUnreachs

Number of ICMP Destination Unreachable messages sent.

Calculation

```
AGGR(Card, icmpOutDestUnreach)
```

icmpOutDestUnreachsRate

ICMP Error Rate is ratio between the number of ICMP messages which this entity did not send and the total number of ICMP messages which this entity attempted to send.

Calculation

```
( jnxicmpOutDestUnreachs * 100.0 ) / ( 1.0 * jnxicmpOutMsgs )
```

icmpOutEchoReps

Number of ICMP Echo Reply messages sent.

Calculation

```
AGGR(Card, icmpOutEchoReps)
```

icmpOutEchos

Number of ICMP Echo (request) messages sent.

Calculation

```
AGGR(Card, icmpOutEchos)
```

icmpOutErrors

The nr of ICMP mess which entity did not send due to probl disco within ICMP

Calculation

```
AGGR(Card, OutErrors)
```

icmpOutErrorsRate

ICMP Error Rate is ratio between the number of ICMP messages which this entity did not send and the total number of ICMP messages.

Calculation

```
( jnxicmpOutErrors * 100.0 )  / ( 1.0 * jnxicmpOutMsgs )
```

icmpOutMsgs

Total number of ICMP messages which this entity attempted to send.

Calculation

```
AGGR(Card, icmpOutMsgs)
```

icmpOutParmProbs

Number of ICMP Parameter Problem messages sent.

Calculation

```
AGGR(Card, icmpOutParmProbs)
```

icmpOutRedirects

nr of ICMP Redirect messages sent. For a host this object will always be zero

Calculation

```
AGGR(Card, icmpOutRedirects)
```

icmpOutTimeExcds

Number of ICMP Time Exceeded messages sent.

Calculation

```
AGGR(Card, icmpOutTimeExcds)
```

ipForwardingTableEntries

The total number of Forwarding table entries.

Calculation

```
AGGR (Card, ipForwardingTableEntries)
```

ipForwDatagrams

Nr of input datagrams for which this entity was not their final IP destination

Calculation

```
AGGR(Card, ipForwDatagrams)
```

ipForwDatagramsRate

IP Forwarding Datagram Rate shows the ratio of input datagrams forwarded to total IP datagrams.capability of the routing.

Calculation

```
( jnxipForwDatagrams * 100.0 ) / ( 1.0 * vsum(jnxipForwDatagrams, jnxipIn-
Delivers, jnxipInAddrErrors, jnxipInDiscards, jnxipInHdrErrors, jnxipInUn-
knownProtos) )
```

ipFragCreates

nr of IP datagram fragm that have been generated as result of fragm at entity.

Calculation

```
AGGR(Card, ipFragCreates)
```

ipFragFails

Nr of IP datagrams that have been disca because needs to be fragme at entity

Calculation

```
AGGR(Card, ipFragFails)
```

ipFragFailsRate

IP Fragmentation Failure Rate shows the ratio of IP datagrams that have been discarded because they needed to be fragmented at this entity.

Calculation

```
( jnxipFragFails * 100.0 ) / ( 1.0 * vsum( jnxipFragCreates, jnxipFragFails
) )
```

ipFragOKs

Number of IP datagrams that have been fragmented at this entity.

Calculation

```
AGGR(Card, ipFragOKs)
```

ipInAddrErrors

Nr of input datagram disc bec the IP adr in their IP destinat field not valid

Calculation

```
AGGR(Card, ipInAddrErrors)
```

ipInAddrErrorsRate

IP address error rate shows the ratio number of input datagrams discarded and total IP Packets.

Calculation

```
( jnxipInAddrErrors * 100.0 )/ ( 1.0 * vsum(jnxipForwDatagrams, jnxipInDel-
ivers, jnxipInAddrErrors, jnxipInDiscards, jnxipInHdrErrors, jnxipInUn-
knownProtos) )
```

ipInDeliversRate

IP Successful Delivery Rate shows the ratio of successful datagrams delivered to IP user-protocols, to total incoming datagrams.

Calculation

```
( jnxipInDelivers * 100.0 ) / ( 1.0 * vsum (jnxipForwDatagrams, jnxipInDel-
ivers, jnxipInAddrErrors, jnxipInDiscards, jnxipInHdrErrors, jnxipInUn-
knownProtos) )
```

ipInDiscardsRate

Ip Discard Rate shows the ratio of input IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded.

Calculation

```
( jnxipInDiscards * 100.0 ) / ( 1.0 * vsum(jnxipForwDatagrams, jnxipInDel-
ivers, jnxipInAddrErrors, jnxipInDiscards, jnxipInHdrErrors, jnxipInUn-
knownProtos) )
```

ipInHdrErrors

Nr of input datagrams discarded due to errors in their IP headers

Calculation

```
AGGR(Card, ipInHdrErrors)
```

ipInHdrErrorsRate

Ip Header Error Rate shows the ratio of input datagrams discarded due to errors in their IP headers.

Calculation

```
( jnxipInHdrErrors * 100.0 ) / ( 1.0 * vsum(jnxipForwDatagrams, jnxipInDel-
ivers, jnxipInAddrErrors, jnxipInDiscards, jnxipInHdrErrors, jnxipInUn-
knownProtos) )
```

ipInReceives

Total nr of input datagrams rec from interfaces, including those rec in error

Calculation

```
AGGR(Card, ipInReceives)
```

ipOutDiscardsRate

IP Discard Rate is the ratio of output IP datagrams Discarded to total number of output datagrams.

Calculation

```
( jnxipOutDiscards * 100.0 ) / ( 1.0 * vsum ( jnxipOutDiscards, jnxipOutRe-
quests, jnxipOutNoRoutes ) )
```

ipOutNoRoutes

Nr IP datagrams disc because no route could be found to transmit them to dest

Calculation

```
AGGR(Card, ipOutNoRoutes)
```

ipReasmFails

Nr of fail detect by the IP re-assembly algorithm for reason timed out errors

Calculation

```
AGGR(Card, ipReasmFails)
```

ipReasmFailsRate

IP Datagram Segmentation Failure Rate shows the ratio of failures detected by the IP re-assembly algorithm (for whatever reason: timed out, errors, etc) to total IP Datagrams that needs fragmentation.

Calculation

```
( jnxipReasmFails * 100.0 ) / ( 1.0 * vsum( jnxipReasmFails, jnxipReasm-
Reqds) )
```

ipReasmOKs

Number of IP datagrams successfully re-assembled.

Calculation

```
AGGR(Card, ipReasmOKs)
```

ipReasmReqds

Number IP fragments received which needed to be reassembled at this entity.

Calculation

```
AGGR(Card, ipReasmReqds)
```

ipsecIncorrectPackets

Nr of packets not processed

Calculation

```
AGGR(Card, ipsecIncorrectPackets)
```

ipsecIssIllegalSpi

Number of incoming packets which spi does not have an SA in IPSEC SAD.

Calculation

```
AGGR(Card, ipsecIssIllegalSpi)
```

ipsecIssInOkPackets

Number of packets which has been processed correctly, coming in.

Calculation

```
AGGR(Card, ipsecIssInOkPackets)
```

ipsecIssMd5Mismatch

Nr of times the comparison between the given value and the calculated

Calculation

```
AGGR(Card, ipsecIssMd5Mismatch)
```

ipsecIssOutOkPackets

Number of packets which has been processed correctly, going out.

Calculation

```
AGGR(Card, ipsecIssOutOkPackets)
```

ipsecIssSha1Mismatch

Nr of times the comparison between the given value and the calc

Calculation

```
AGGR(Card, ipsecIssSha1Mismatch)
```

ipsecWaPacketsProcessed

This count only used as a random for the funct that drops packet high CPU load

Calculation

```
AGGR(Card, ipsecWaPacketsProcessed)
```

MMAttGprsAttachU

Attempted GPRS attach procedures initiated in this SGSN area

Calculation

```
AGGR(RA_GSN, MMAttGprsAttachU)
```

MMAttGprsDetachMsU

Number of attempted GPRS detach procedures initiated by MS in this SGSN area

Calculation

```
AGGR(RA_GSN, MMAttGprsDetachMsU)
```

MMAttGprsDetachSgsnU

Number of attempted GPRS detach procedures initiated by SGSN

Calculation

```
AGGR(RA_GSN, MMAttGprsDetachSgsnU)
```

MMAttInterSgsnRaUpdateU

No of att inter-SGSN Routing Area Update procedures initiated in this SGSN area

Calculation

```
AGGR(RA_GSN, MMAttInterSgsnRaUpdateU)
```

MMAttIntraSgsnRaUpdateU

Attempted intra-SGSN Routing Area Update procedures initiated in this SGSN area

Calculation

```
AGGR(RA_GSN,  MMAttIntraSgsnRaUpdateU)
```

MMNbrActAttachedSubG

Number of attached subscriber within this SGSN area.

Calculation

```
nbrOfAttachedSub
```

MMSuccInterSgsnRaUpdateU

No of succ comp inter-SGSN Routing Area Update Proc initiated in this SGSN area

Calculation

```
AGGR(RA_GSN, MMSuccInterSgsnRaUpdateU)
```

MMUnsuccAttachCC14G

Number of unsuccessful GPRS attach requests, where the Cause code in the Attach Reject is Cause Code #14

Calculation

```
gprsMmSgsnUnsuccAttachRequestsCC14
```

MMUnsuccAttachCC8G

Number of unsuccessful Combined GPRS/IMSI attach, where the Cause code in the Attach Reject is Cause Code #8

Calculation

```
gprsMmSgsnUnsuccessfulAttachRequestsCC8
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

ospfExternLsaCount

Nr of external (LS type 5) link-state advertisements in the link-state database

Calculation

```
AGGR(Card, ospfExternLsaCount)
```

ospfOriginateNewLsas

Nr of new link-state advertisements (LSA) that have been originated

Calculation

```
AGGR(Card, ospfOriginateNewLsas)
```

ospfRxNewLsas

Nr of link-state advertisements received determined to be new instantiations.

Calculation

```
AGGR(Card, ospfRxNewLsas_R21)
```

Payload_DL_SGSN

SGSN payload traffic in downlink measured on the Iu interface (MB)

Calculation

```
S_PayloadgtpuOutDataOctIu / (1024.0 * 1024)
```

Payload_UL_SGSN

SGSN payload traffic in uplink measured on the Iu interface (MB)

Calculation

```
S_PayloadgtpuInDataOctIu / (1024.0 * 1024)
```

pdropPackRatedownAllSGSN

Total Average Packet Success Rate of overall Packets send from this GGSN to all SGSNs connected to it.

Calculation

```
AGGR( SGSN_GGSN, protect(vsum(100, -1 * pSGSN_GGSNdropPackRatedown)) )
```

pdropPackRateupAllSGSN

Total Average Packet Success Rate of overall Packets received in this GGSN from all SGSNs connected to it.

Calculation

```
AGGR( SGSN_GGSN, protect(vsum(100, -1 * pSGSN_GGSNdropPackRateup)) )
```

pGGSNPacketSuccessRate

GGSN Packet Success Rate is the Success Factor of the overall Packets sent to and Received from an Speciefic GGSN. Each success factor is weighted by the is weighted by percentage of total packets in either uplink or downlink direction

Calculation

```
((1- vsum( jnxggsnUplinkDrops *  jnxggsnUplinkPackets, jnxggsnDownlinkDrops
*  jnxggsnDownlinkPackets) ) * 100.0) / (1.0 * vsum(jnxggsnUplinkPackets,
jnxggsnDownlinkPackets ) )
```

pGprsAttchFail

Attach failure rate has a close connection to GPRS service accessibility of SGSN

Calculation

```
(vsum(gprsMmSgsnUnsuccessfulAttachRequests, attGprsAttach, attCombiAttach,
attImsiAttach, -1.0* succGprsAttach, -1 * succCombiAttach, -1 * succImsiAt-
tach) * 100.0 ) / (1.0 *  vsum( gprsMmSgsnAttachRequests, attGprsAttach,
attCombiAttach, attImsiAttach ))
```

pGTPaveragePacketSizeUpLink

Average packet size is the ratio between bytes send and number of packets in uplink

Calculation

```
(ggsnGtpUplinkBytes * 1.0) /( 1.0 * ggsnGtpUplinkPackets)
```

pGTPaverPackSizeDownlinkGGSN

Average packet size is the ratio between bytes send and number of packets in downlink

Calculation

```
( ggsnGtpDownlinkBytes * 1.0) / ( 1.0 * ggsnGtpDownlinkPackets)
```

pGTPpacketDropRateDownlink

GTP Packet Drop Rate is the ratio between dropped packets and sent packets in Downlink direction in the GGSN

Calculation

```
(jnxggsnDownlinkDrops * 100.0) / (1.0 * jnxggsnDownlinkPackets)
```

pGTPpacketDropRateUpLink

GTP Packet Drop Rate is the ratio between dropped packets and sent packets in Uplink direction in the GGSN

Calculation

```
(jnxggsnUplinkDrops * 100) / (1.0 * ggsnGtpUplinkPackets)
```

pInterSgsnRoutUpdFailpSgsn

Inter SGSN Routing area update failure rate has a close connection with the Quality of GPRS Mobility management between different Routing Areas

Calculation

```
(vsum(gprsMmSgsnUnsuccInterRoutingAreaUpdReq, attInterSgsnRaUpdate, -1.0 *
succInterSgsnRaUpdate, 0) * 100.0) / (1.0 * vsum(gprsMmSgsnInterRoutin-
gAreaUpdateRequests, attInterSgsnRaUpdate))
```

pIntraSgsnRoutUpdFailpSgsn

Intra SGSN Routing area update failure rate has a close connection with the Quality of GPRS Mobility management in a Routing Area

Calculation

```
(vsum(gprsMmSgsnUnsuccIntraRoutingAreaUpdReq, attIntraSgsnRaUpdate, -1.0 *
succIntraSgsnRaUpdate, 0) * 100.0) / (1.0 * vsum(gprsMmSgsnIntraRoutin-
gAreaUpdateRequests, attIntraSgsnRaUpdate))
```

pPagingFailpSgsn

Paging Failure Rate is an indication of SGSN and downlink accessibility

Calculation

```
gprsMmUnsuccessfulPagingProcedures * 100.0 / 1.0 * vsum(gprsMmSgsnSuccess-
fulPagingProcedures, gprsMmUnsuccessfulPagingProcedures)
```

pPdpActReFailpGGSN

The ratio between the number of Attempt PDP context activation minus completed PDP context Activation divided by Attempt PDP context Activation Received at the GGSN in percent

Calculation

```
(vsum( ggsnAttemptedActivation, -1 * ggsnCompletedActivation ) * 100.0) /
(1.0 * ggsnAttemptedActivation)
```

pPdpContextEstabFailpGGSN

PDP context establishment failure rate has a close connection of GPRS Core network accessibility of GGSN

Calculation

```
gprsSmGgsnUnsuccessfulPdpCreations * 100.0 / vsum(gprsSmGgsnSuccessfulPdp-
Creations, gprsSmGgsnUnsuccessfulPdpCreations)
```

pPdpContextEstabFailpSGSN

PDP context establishment failure rate has a close connection of GPRS Core network accessibility of SGSN

Calculation

```
vsum(gprsSmSgsnUnsuccessfulActivations, attActPdpContextMSPerSgsn, -1.0 *
succActPdpContextMSPerSgsn, 0) * 100.0 / 1.0 * vsum(gprsSmSgsnSuccessfulAc-
tivations, gprsSmSgsnUnsuccessfulActivations, attActPdpContextMSPerSgsn )
```

pPdpContextModFailpSGSN

PDP context modification failure rate has a close connection of GPRS Core network accessibility and QOS of SGSN delivered

Calculation

```
gprsSmSgsnUnsuccessfulModifications * 100.0 / vsum(gprsSmSgsnSuccessfulMod-
ifications, gprsSmSgsnUnsuccessfulModifications,0.0)
```

pPdpContextUpdFailpGGSN

PDP context modification failure rate has a close connection of GPRS Core network accessibility and QOS of GGSN delivered

Calculation

```
gprsSmGgsnUnsuccessfulPdpUpdatings * 100.0 / vsum(gprsSmGgsnSuccessfulPdp-
Updatings, gprsSmGgsnUnsuccessfulPdpUpdatings,0.0)
```

pPdpDeActReFailpGGSN

The ratio between the number of PDP attempt deactivation minus the number of PDP completed deactivate divided by PDP attempt deactivation in percent

Calculation

```
(vsum(ggsnAttemptedDeactivation, -1 * ggsnCompletedDeactivation ) * 100.0)
/ ( 1.0 * ggsnAttemptedDeactivation)
```

pPdpSelfDeActReFailpGGSN

The ratio between the number of PDP attempt Self deactivations minus the number of PDP completed Self deactivations divided by PDP attempted Self deactivations received at the GGSN in percent

Calculation

```
(vsum(ggsnAttemptedSelfDeactivation, -1 * ggsnCompletedSelfDeactivation ) *
100.0) / ( 1.0 * ggsnAttemptedSelfDeactivation)
```

pPdpSessionManReFailpGGSN

PDP Context Session Management Failure rate is an aggregated Key Quality indicator of the total Session Management failure statistic Received per GGSN

Calculation

```
(vsum( pPdpActReFailpGGSN, pPdpUpdReFailpGGSN, pPdpDeActReFailpGGSN, pPdp-
SelfDeActReFailpGGSN ) * 1.0) / (4 * 1.0)
```

pPdpUpdReFailpGGSN

The ratio between the number of PDP attempt update minus the number of PDP completed update divided by PDP attempt update received at the GGSN in percent

Calculation

```
(vsum( ggsnAttemptedUpdate, -1 * ggsnCompletedUpdate ) * 100.0) / (1.0 *
ggsnAttemptedUpdate)
```

pSessionManSuccessRateGGSN

PDP Context Session Management Failure rate is an aggregated Key Quality indicator of the total Session Management failure statistic Received per GGSN

Calculation

```
(( 1 - vsum( ggsnAttemptedActivation, ggsnAttemptedUpdate, ggsnAttemptedDe-
activation, ggsnAttemptedSelfDeactivation, -1 * ggsnCompletedActivation, -1
*  ggsnCompletedUpdate,  -1 * ggsnCompletedDeactivation, -1 * ggsnComplet-
edSelfDeactivation ) ) * 100.0)  / (vsum( ggsnAttemptedActivation, ggsnAt-
temptedUpdate, ggsnAttemptedDeactivation, ggsnAttemptedSelfDeactivation ) *
1.0)
```

pTotalAPNpacketSuccessRate

Total APN Packet Success Rate is the Total Average Success Factor of the overal Packets sent to and Received from all APN. Each success factor is weighted by percentage of total packets in either uplink or downlink direction.

Calculation

```
aggr(APN, pAPNpacketSuccessRate )
```

Updated: 2009-07-22

pTotalAPNSuccessRate

Total APN Success Rate shows the Total Average success factor of the Overall Operations of all APN . Each PDP Operation success is weighted by the number of the operation

Calculation

```
aggr(APN, pAPNSuccessRate )
```

SECAttIdentityReqImsiG

The counter is incremented when sending Identity Request to an MS

Calculation

```
attIdentityReq
```

SECAttReqAuthSetsSentToHlrBySGSN

Number of attempted requests for authentication sets, sent to the HLR by SGSN

Calculation

```
attReqAuthSetsSentToHlrBySgsn
```

SECemptyResponsesForAuthSetsFromHlr

Number of empty responses to the request for authentication sets that were sent to the HLR.

Calculation

```
emptyResponsesForAuthSetsFromHlr
```

SECSuccIdentityReqImsiG

Incremented at reception of an Identity Response message with the requested identity for example IMSI and IMEI from the MS.

Calculation

```
succIdentityReq
```

SECSuccReqAuthSetsSentToHlrBySGSN

Number of successful requests for authentication sets that were sent from the HLR to the SGSN.

Calculation

```
succReqAuthSetsHlr
```

SMAttActPdpContextDynG

The counter is incremented for each Activate PDP Context Request (with Empty PDP Address) received on the Gb Interface

Calculation

```
attActPdpContextDynMSPerSgsn
```

SMNbrActivePdpPerSgsnG

Number of mobile subscribers with activated PDP.

Calculation

```
nbrSubsWithActivePdpInSgsn
```

SMNbrActPdpContextG

Total number for the active PDP contexts per SGSN.

Calculation

```
gprsSmSgsnTotalActive
```

SMSuccActPdpContextDynG

Number of successfully completed PDP context activations where a dynamic PDP address is used.

Calculation

```
succActPdpContextDynMsPerSgsn
```

SMSuccActPdpContextG

Number of successfully completed PDP context activations

Calculation

```
succActPdpContextMSPerSgsn
```

SMSuccModPdpContextSgsnG

Unsuccessful PDP context modification per SGSN.

Calculation

```
gprsSmSgsnUnsuccessfulModifications
```

SuccActPdpContextDynRate

Successful dynamic PDP context activation procedures initiated by MS rate

Calculation

```
SMSuccActPdpContextDynU * 100.0 / SMAttActPdpContextDynU
```

SuccActPdpContextRate

Successful PDP context activation procedures initiated by MS rate

Calculation

```
SMSuccActPdpContextU * 100.0 / SMAttActPdpContextU
```

succDeactPdpContextGgsnPerSgsn

Retired fr 5.0.10.0.0. Replaced by SMSuccDeactPdpContextGgsnG. Number of successfully handled PDP context deactivations initiated by the GGSN

Calculation

```
SMSuccDeactPdpContextGgsnG
```

succDeactPdpContextMsPerSgsn

Retired fr 5.0.10.0.0. Replaced by SMSuccDeactPdpContextMsG. This measurement provides the number of successfully completed PDP context deactivations

Calculation

```
SMSuccDeactPdpContextMsG
```

SuccGprsAttachRate

Successful GPRS attach procedures initiated in this SGSN area

Calculation

```
AGGR(RA_GSN, SuccGprsAttachRate)
```

SuccIntraSgsnRaUpdate_Rate

Successful intra-SGSN Routing Area Update Rate procedure initiated in this SGSN area in percent. RA_SGN succIntraSgsnRaUpdate aggregate to GSN entity.

Calculation

```
AGGR(RA_GSN, SuccIntraSgsnRaUpdate)
```

TotalCapGTP_CPICallGGSN

Total capacity of the GTP-C PIC on all GGSNs

Calculation

```
aggr (Card, ggsnGtpcPdpCapacity)
```

UnknownEnterpriseField

Unknown Field exported from Enterprise Server

Calculation

```
nullInt()
```

GSN Peg Counts

The following is a list of peg counts for the GSN entity.

attActPdpContextDynMSPerSgsn

The counter is incremented for each Activate PDP Context Request (with Empty PDP Address) received on the Gb Interface

Data Source

SGSN

Source Field

attActPdpContextDynMSPerSgsn

Source Section

GPRS Session Management

attAuthInSgsn

The counter is incremented when sending Authentication and Ciphering Request to an MS

Data Source

SGSN

Source Field

attAuthInSgsn

Source Section

Security

attCombiAttach

The counter is incremented for each Attach Request indicating Combined GPRS/IMSI Attach received on the Gb Interface

Data Source

SGSN

Source Field

attCombiAttach

Source Section

GPRS Mobility Management

attCombiDetachMs

The counter is incremented for each Detach Request indicating Combined GPRS/IMSI Detach received on the Gb Interface

Data Source

SGSN

Source Field

attCombiDetachMs

Source Section

GPRS Mobility Management

attGprsAttach

The counter is incremented for each Attach Request indicating GPRS Only Attach received on the Gb Interface

Data Source

SGSN

Source Field

attGprsAttach

Source Section

GPRS Mobility Management

attGprsAttachUmts

The number of attempted GPRS attach procedures initiated within this SGSN area. Resending from MSs are also counted.

Data Source

SGSN

Source Field

attGprsAttachUmts

Source Section

Mobility Management

attGprsAttachVisitor

This measurement provides the number of attempted GPRS attach procedures, within this SGSN area, initiated by visiting GPRS subscribers . Visiting subscribers are defined by the roaming status parameter in the IMSI number series configuration. Resendings from MSs are not counted.

Data Source

SGSN

Source Field

attGprsAttachVisitor

Source Section

Mobility Management

attGprsDetachMs

The counter is incremented for each Detach Request indicating GPRS Detach received on the Gb Interface

Data Source

SGSN

Source Field

attGprsDetachMs

Source Section

GPRS Mobility Management

attGprsDetachMsUmts

The number of attempted GPRS detach procedures.

Data Source

SGSN

Source Field

attGprsDetachMsUmts

Source Section

Mobility Management

attGprsDetachSgsn

The counter is incremented when sending Detach Request to an MS

Data Source

SGSN

Source Field

attGprsDetachSgsn

Source Section

GPRS Mobility Management

attGprsDetachSgsnUmts

The number of attempted GPRS detach procedures initiated by the SGSN.

Data Source

SGSN

Source Field

attGprsDetachSgsnUmts

Source Section

Mobility Management

attIdentityReq

The counter is incremented when sending Identity Request to an MS

Data Source

SGSN

Source Field

attIdentityReq

Source Section

Security

attImsiAttach

The counter is incremented for each Attach Request indicating GPRS Attach while IMSI Attached received on the Gb Interface

Data Source

SGSN

Source Field

attImsiAttach

Source Section

GPRS Mobility Management

attImsiDetachMS

The counter is incremented for each Detach Request indicating IMSI Detach received on the Gb Interface

Data Source

SGSN

Source Field

attImsiDetachMS

Source Section

GPRS Mobility Management

attInterSgsnRaUpdate

The counter is incremented for each RA Update Request (where old RA is served by a cooperating SGSN) received on the Gb Interface

Data Source

SGSN

Source Field

attInterSgsnRaUpdate

Source Section

GPRS Mobility Management

attInterSgsnRaUpdateUmts

The number of attempted inter-SGSN RA update procedures.

Data Source

SGSN

Source Field

attInterSgsnRaUpdateUmts

Source Section

Mobility Management

attInterSgsnRaUpdateVisitor

This measurement provides the number of attempted inter-SGSN RAU procedures initiated by visiting GPRS subscribers within this SGSN, where the old RA is served by another SGSN. Visiting subscribers are defined by the roaming status parameter in the IMSI number series configuration. Resendings from MSs are not counted.

Data Source

SGSN

Source Field

attInterSgsnRaUpdateVisitor

Source Section

Mobility Management

attIntraSgsnRaUpdate

The counter is incremented for each RA Update Request (where old and new RA are served by this SGSN) received on the Gb Interface

Data Source

SGSN

Source Field

attIntraSgsnRaUpdate

Source Section

GPRS Mobility Management

attIntraSgsnRaUpdateUmts

The number of attempted intra-SGSN RA update procedures.

Data Source

SGSN

Source Field

attIntraSgsnRaUpdateUmts

Source Section

Mobility Management

attPacketSwitchingPaging

Number of attempted packet switched paging procedures, for GPRS services, within this SGSN area

Data Source

SGSN

Source Field

attPacketSwitchingPaging

Source Section

Radio Resource Management

attPacketSwitchingPagingUmts

The number of attempted PS paging procedures.

Data Source

SGSN

Source Field

attPacketSwitchingPagingUmts

Source Section

Mobility Management

attReqAuthSetsSentToHlrBySgsn

Number of attempted requests for authentication sets, sent to the HLR by SGSN

Data Source

SGSN

Source Field

attReqAuthSetsSentToHlrBySgsn

Source Section

Security

bssgpAttResumeProc

The number of attempted BSS GPRS Protocol (BSSGP) resume procedures.

Data Source

SGSN

Source Field

bssgpAttResumeProc

Source Section

BSSGP

bssgpAttSuspendProc

The total number of downlink BSSGP suspend procedures

Data Source

SGSN

Source Field

bssgpAttSuspendProc

Source Section

BSSGP

bssgpDLPacketsDscMobileSuspend

This measurement provides the number of discarded IP packets due to suspended mobile. This counter is increased when it is the MS that has suspended GPRS.

Data Source

SGSN

Source Field

bssgpDownlinkPacketsDiscardedMobileSuspend

Source Section

BSSGP

bssgpDownlinkPacketsBuff

This measurement provides the total number of IP packets buffered. It is updated when downlink payload is buffered.

Data Source

SGSN

Source Field

bssgpDownlinkPacketsBuff

Source Section

BSSGP

bssgpDownlinkPacketsBuffBucketFull

This measurement provides the total number of IP packets being buffered due to flow control. This counter is increased when buffering IP packets and either the BSS Cell bucket is full, the BSS MS bucket is full or when the BSS PFC bucket is full.

Data Source

SGSN

Source Field

bssgpDownlinkPacketsBuffBucketFull

Source Section

BSSGP

bssgpDownlinkPacketsBuffLlcSuspend

This measurement provides the number of IP packets buffered due to suspended Logical Link Control (LLC) between MS and SGSN.

Data Source

SGSN

Source Field

bssgpDownlinkPacketsBuffLlcSuspend

Source Section

BSSGP

bssgpDownlinkPacketsBuffMobileSuspend

This counter will be increased when buffering packets and the last reason for delay was the MS that has suspended GPRS.

Data Source

SGSN

Source Field

bssgpDownlinkPacketsBuffMobileSuspend

Source Section

BSSGP

bssgpDownlinkPacketsBuffSnapshot

This measurement is a snapshot of the number of IP packets currently being buffered. It is increased when bssgp.DownlinkPacketsBuff is stepped and decreased when a packet is removed from the buffer regardless if the packet is sent or discarded.

Data Source

SGSN

Source Field

bssgpDownlinkPacketsBuffSnapshot

Source Section

BSSGP

bssgpDownlinkPacketsDiscardedBucketFull

This measurement provides the total number of discarded IP packets due to Bucket Full. The counter is increased when either the BSS Cell bucket is full, the BSS MS bucket is full or the BSS PFC bucket is full.

Data Source

SGSN

Source Field

bssgpDownlinkPacketsDiscardedBucketFull

Source Section

BSSGP

bssgpDownlinkPacketsDiscardedBvcBlocked

This measurement provides the number of discarded packets due to blocked BVCs. The counter is increased when a packet is discarded and the BSS has blocked a cell.

Data Source

SGSN

Source Field

bssgpDownlinkPacketsDiscardedBvcBlocked

Source Section

BSSGP

bssgpDownlinkPacketsDiscardLlcSuspended

This measurement provides the number of Internet Protocol (IP) packets discarded due to suspended LLC between Mobile Station (MS) and Serving GPRS Support Node (SGSN).

Data Source

SGSN

Source Field

bssgpDownlinkPacketsDiscardLlcSuspended

Source Section

BSSGP

CAMAttCamelDialogues

The total number of CAMEL dialogue attempts in GPRS.

Data Source

SGSN

Source Field

CAM.AttCamelDialogues.G

Source Section

CAMEL

CAMAttCamelDialoguesU

The total number of CAMEL dialogue attempts in UMTS.

Data Source

SGSN

Source Field

CAM.AttCamelDialogues.U

Source Section

CAMEL

CAMFailDialoguesScf

The number of failed CAMEL dialogues in GPRS, error or reject from gsm SCF. The CAM.FailDialoguesScf counter is split into G and W counters.

Data Source

SGSN

Source Field

CAM.FailDialoguesScf.G

Source Section

CAMEL

CAMFailDialoguesScfU

The number of failed CAMEL dialogues, error or reject from gsm SCF.The CAM.FailDialoguesScf counter is split into G and W counters.

Data Source

SGSN

Source Field

CAM.FailDialoguesScf.U

Source Section

CAMEL

CAMFailDialoguesSsf

The number of failed CAMEL dialogues in GPRS, aborted locally by gprsSSF.The CAM.FailDialoguesSsf counter is split into G and W counters.

Data Source

SGSN

Source Field

CAM.FailDialoguesSsf.G

Source Section

CAMEL

CAMFailDialoguesSsfU

The number of failed CAMEL dialogues, aborted locally by gprsSSF.The CAM.FailDialoguesSsf counter is split into G and W counters.

Data Source

SGSN

Source Field

CAM.FailDialoguesSsf.U

Source Section

CAMEL

collectionPeriod

Source Section

GGSN General

discardedAttachMsError

The discardedAttachMsError counter is incremented when there is a rejected attach because the MS has wrong Temporary Logical Link Identity (TLLI). There is an IMSI attach on non-random TLLI.

Data Source

SGSN

Source Field

discardedAttachMsError

Source Section

Mobility Management

discardedCombiAttach

The number of discarded combined GPRS/IMSI attach requests on the DP level due to overload protection or incorrect information elements.

Data Source

SGSN

Source Field

discardedCombiAttach

Source Section

Mobility Management

discardedCombiRaUpdate

The number of discarded combined GPRS/IMSI RA update requests on the DP level due to overload protection or incorrect information elements.

Data Source

SGSN

Source Field

discardedCombiRaUpdate

Source Section

Mobility Management

discardedDetach

The number of discarded detach requests on the DP level due to overload protection or incorrect information elements.

Data Source

SGSN

Source Field

discardedDetach

Source Section

Mobility Management

discardedGprsAttach

The number of discarded GPRS attach requests on the Device Processor (DP) level due to overload protection or incorrect information elements.

Data Source

SGSN

Source Field

discardedGprsAttach

Source Section

Mobility Management

discardedPayloadPacket

The number of discarded payload packets on the DP level due to overload or incorrect information elements.

Data Source

SGSN

Source Field

discardedPayloadPacket

Source Section

Session Management

discardedRaUpdate

The number of discarded RA update requests on the DP level due to overload protection or incorrect information elements.

Data Source

SGSN

Source Field

discardedRaUpdate

Source Section

Mobility Management

DiscardedSccpConnectInd

The counter is incremented when a SCCP Connect Indication message is discarded

Data Source

SGSN

discardedSessionMgmnt

The number of discarded session management messages on the DP level due to overload or incorrect information elements.

Data Source

SGSN

Source Field

discardedSessionMgmnt

Source Section

Session Management

downlinkSndcpNpduSent

The number of outgoing N-PDUs sent by the SNDCP protocol layer.

Data Source

SGSN

Source Field

downlinkSndcpNpduSent

Source Section

SNDCP

downlinkSndcpOctetSent

The number of octets in outgoing N-PDUs sent by the SNDCP protocol layer (kOctets, 1024 octets)

Data Source

SGSN

Source Field

downlinkSndcpOctetSent

Source Section

SNDCP

emptyResponsesForAuthSetsFromHlr

Number of empty responses to the request for authentication sets that were sent to the HLR.

Data Source

SGSN

Source Field

emptyResponsesForAuthSetsFromHlr

Source Section

Security

errLlcFramesDetectedBySgsn

The number of erroneously received LLC frames in case of error detection in the SGSN.

GTPstatisticsDownlinkpackets

Source Section

ggsnstatisticsgtp

ggsnGtpDownlinkPackets_jn

Number of Downlink GTP-U packets sent in the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpDownlinkPackets

Source Section

ggsnGtp

ggsnGtpEchoReqReceived

Number of (GTP Message) Echo Requests received in the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpEchoReqReceived

Source Section

ggsnGtp

ggsnGtpEchoReqSent

Number of (GTP Message) Echo Requests transmitted from the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpEchoReqSent

Source Section

ggsnGtp

ggsnGtpEchoRespReceived

Number of (GTP Message) Echo Responses received in the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpEchoRespReceived

Source Section

ggsnGtp

ggsnGtpEchoRespSent

Number of (GTP Message) Echo Responses transmitted from the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpEchoRespSent

Source Section

ggsnGtp

ggsnGtpErrInvalidReqFormatDel

The number of GTP Invalid delete request format errors sent by the GGSN

Data Source

GGSN

ggsnGtpErrInvalidReqFormatUpd

The number of GTP Invalid update request format errors sent by the GGSN

Data Source

GGSN

ggsnGtpErrMndtryIEInvalidDel

The number of errors sent by the GGSN indicating that a mandatory information element was invalid in delete request

Data Source

GGSN

ggsnGtpErrMndtryIEInvalidUpd

The number of errors sent by the GGSN indicating that a mandatory information element was invalid in update request

Data Source

GGSN

ggsnGtpErrMndtryIEMissingDel

The number of errors sent by the GGSN indicating that a mandatory information element was missing in delete request

Data Source

GGSN

ggsnGtpErrMndtryIEMissingUpd

The number of errors sent by the GGSN indicating that a mandatory information element was missing in update request.

Data Source

GGSN

ggsnGtpErrOptionalIEInvDel

The number of errors sent by this GGSN indicating that an optional information element was invalid in delete request

Data Source

GGSN

ggsnGtpErrOptionalIEInvUpd

The number of errors sent by the GGSN indicating that an optional information element was invalid in update request

Data Source

GGSN

ggsnGtpErrorApnAccessDenied

The number of GTP APN access denied errors with no subscription

Data Source

GGSN

Source Field

ggsnGtpErrorApnAccessDenied

ggsnGtpErrorApnUnknown

Results Unknown APN (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrorApnUnknown

Source Section

ggsnGtpErrorStats

ggsnGtpErrorAuthenticationFailed

Results Authentication failed (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrAuthenFailed

Source Section

ggsnGtpErrorStats

ggsnGtpErrorDynAddrUnavailable

Results Dynamic addresses unavailable (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrDynAddrUnavailable

Source Section

ggsnGtpErrorStats

ggsnGtpErrorIndicationReceived

Results Error indications received (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrIndicationReceived

Source Section

ggsnGtpErrorStats

ggsnGtpErrorIndicationSent

Results Error indications transmitted (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrorIndicationSent

Source Section

ggsnGtpErrorStats

ggsnGtpErrorInvalidRequestFormat

Results Invalid request format (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrInvalidRqstFormat

Source Section

ggsnGtpErrorStats

ggsnGtpErrorMandatoryIEInvalid

Results Mandatory IE invalid (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrMandatoryIEInvalid

Source Section

ggsnGtpErrorStats

ggsnGtpErrorMandatoryIEMissing

Results Mandatory IE missing (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrMandatoryIEMissing

Source Section

ggsnGtpErrorStats

ggsnGtpErrorMemoryUnAvailable

Results No memory available (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrorMemoryUnAvailable

Source Section

ggsnGtpErrorStats

ggsnGtpErrorOptionalIEInvalid

Results Optional IE invalid (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrOptionalIEInvalid

Source Section

ggsnGtpErrorStats

ggsnGtpErrorPackFiltSemantError

Results Packet filtering semantic error (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrPackFiltSemantError

Source Section

ggsnGtpErrorStats

ggsnGtpErrorPackFiltSyntaxError

Results Packet filtering syntax error (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrPackFiltSyntaxError

Source Section

ggsnGtpErrorStats

ggsnGtpErrorPDPAddrUnknown

Results Unknown PDP address or type (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrorPDPAddrUnknown

Source Section

ggsnGtpErrorStats

ggsnGtpErrorPdpWithoutTft

The number of PDP context without TFT already activated.

Data Source

GGSN

Source Field

ggsnGtpErrorPdpWithoutTft

ggsnGtpErrorReferenceInexistent

Results Reference does not exist (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrReferenceInexistent

Source Section

ggsnGtpErrorStats

ggsnGtpErrorResourceUnavailable

Results Resources not available (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrResourceUnavailable

Source Section

ggsnGtpErrorStats

ggsnGtpErrorServiceUnsupported

Results Service is unsupported (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrServiceUnsupported

Source Section

ggsnGtpErrorStats

ggsnGtpErrorSystemFailure

Results System failure (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrorSystemFailure

Source Section

ggsnGtpErrorStats

ggsnGtpErrorSystemFailureUpd

The number of GTP system update failure errors sent by the GGSN

Data Source

GGSN

Source Field

ggsnGtpErrorSystemFailureUpd

ggsnGtpErrorTFTSemanticError

Results TFT semantic error (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrorTFTSemanticError

Source Section

ggsnGtpErrorStats

ggsnGtpErrorTFTSyntaxError

Results TFT syntax error (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpErrorTFTSyntaxError

Source Section

ggsnGtpErrorStats

ggsnGtpErrorTFTSyntaxErrorUpd

The number of GTP TFT update syntax errors sent by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpErrorTFTSyntaxErrorUpd

ggsnGtpErrPackFiltSemantErUpd

The number of semantic update packet filter errors sent by the GGSN

Data Source

GGSN

ggsnGtpErrPackFiltSyntaxErUpd

The number of packet filter update syntax errors sent by the GGSN

Data Source

GGSN

ggsnGtpErrReferInexistentDel

The number of reference delete inexistent errors sent by this GGSN

Data Source

GGSN

ggsnGtpErrRefInexistentUpd

The number of reference update inexistent errors sent by this GGSN.

Data Source

GGSN

ggsnGtpErrTFTSemanticErrorUpd

The number of GTP TFT update semantic errors sent by the GGSN.

Data Source

GGSN

ggsnGtpNbrofCreatedTunnels

The total number of GTP tunnels that have been created by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpNbrofCreatedTunnels

ggsnGtpNbrOfTunnels

The number of active GTP tunnels on the GGSN.

Data Source

GGSN

Source Field

ggsnGtpNbrOfTunnels

ggsnGtpPdpCreateReqReceived

Number of (GTP Message) PDP Create Requests received in the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPdpCreateReqReceived

Source Section

ggsnGtp

ggsnGtpPdpCreateRespSent

Number of (GTP Message) PDP Create Responses transmitted from the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPdpCreateRespSent

Source Section

ggsnGtp

ggsnGtpPdpDeleteReqReceived

Number of (GTP Message) PDP Delete Requests received in the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPdpDeleteReqReceived

Source Section

ggsnGtp

ggsnGtpPdpDeleteReqSent

Number of (GTP Message) PDP Delete Requests transmitted from the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPdpDeleteReqSent

Source Section

ggsnGtp

ggsnGtpPdpDeleteRespReceived

PDP Contexts: PDP delete responses received (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPdpDeleteRespReceived

Source Section

ggsnGtp

ggsnGtpPdpDeleteRespSent

PDP Contexts: PDP delete responses transmitted (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPdpDeleteRespSent

Source Section

ggsnGtp

ggsnGtpPdpUpdateReqReceived

Number of (GTP Message) PDP Update Requests received in the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPdpUpdateReqReceived

Source Section

ggsnGtp

ggsnGtpPdpUpdateReqSent

Number of (GTP Message) PDP Update Requests transmitted from the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPdpUpdateReqSent

Source Section

ggsnGtp

ggsnGtpPdpUpdateRespReceived

Number of (GTP Message) PDP Update Responses received in the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPdpUpdateRespReceived

Source Section

ggsnGtp

ggsnGtpPdpUpdateRespSent

Number of (GTP Message) PDP Update Responses transmitted from the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPdpUpdateRespSent

Source Section

ggsnGtp

ggsnGtpPrAlreadyFulfilled

The number of GTP Prime data record transfer response Request Already Fulfilled received by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpPrAlreadyFulfilled

ggsnGtpPrDataRecTransferReceived

Number of (GTP Message) Data Record Transfer Responses received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrDataRecTransferRcvd

Source Section

ggsnGtpprime

ggsnGtpPrDataRecTransferSent

Number of (GTP Message) Data Record Transfer Requests sent by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrDataRecTransferSent

Source Section

ggsnGtpprime

ggsnGtpPrDecodingError

The number of GTP Prime data record transfer response ecoding Error received by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpPrDecodingError

ggsnGtpPrDupPacketFulfilled

The number of GTP Prime data record transfer response Request Duplicate Packet Fulfilled received by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpPrDupPacketFulfilled

ggsnGtpPrEchoReqReceived

The number of GTP Prime Echo Requests received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrEchoReqReceived

Source Section

ggsnGtpprime

ggsnGtpPrEchoRequestsSent

The number of GTP Prime Echo Requests sent by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrEchoRequestsSent

Source Section

ggsnGtpprime

ggsnGtpPrEchoRespReceived

The number of GTP Prime Echo Responses received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrEchoRespReceived

Source Section

ggsnGtpprime

ggsnGtpPrEchoRespSent

The number of GTP Prime Echo Responses sent by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrEchoRespSent

Source Section

ggsnGtpprime

ggsnGtpPrErrorMandatoryIEInvalid

The number of GTP Prime Mandatory Information Element Invalid errors received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrErrMndtryIEInvalid

Source Section

ggsnGtpprime

ggsnGtpPrErrorMandatoryIEMissing

The number of GTP Prime mandatory Information Element Missing errors received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrErrMndtryIEMissing

Source Section

ggsnGtpprime

ggsnGtpPrErrorOptionalIEInvalid

The number of GTP Prime Optional Information Element Invalid errors received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrErrOptionalIEInvalid

Source Section

ggsnGtpprime

ggsnGtpPrErrorRefInexistent

The number of GTP Prime Reference Inexistent errors received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrErrorRefInexistent

Source Section

ggsnGtpprime

ggsnGtpPrimeDataRecTransfReqTransm

Number of (GTP Prime) Data record transfer requests transmitted on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesDatarecordtransferrequeststransmitted

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeDataRecTransfResRcvd

Number of (GTP Prime) Data record transfer responses received on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesDatarecordtransferresponsesreceived

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeEchoReqRcvd

Number of (GTP Prime) Echo requests received on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesEchorequestsreceived

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeEchoReqTransm

Number of (GTP Prime) Echo requests transmitted on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesEchorequestsTransmitted

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeEchoResRcvd

Number of (GTP Prime) Echo responses received on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesEchoresponsesreceived

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeEchoResTransm

Number of (GTP Prime) Echo responses transmitted on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesEchoresponsesTransmitted

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeMndtIE_invalid

Number of (GTP Prime) Mandatory IE invalid on the GGSN Collected using CLI

Data Source

SGSN

Source Field

ResultsMandatoryIEinvalid

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeMndtIE_missing

Number of (GTP Prime) Mandatory IE missing on the GGSN Collected using CLI

Data Source

SGSN

Source Field

ResultsMandatoryIEmissing

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeNodeAliveReqRcvd

Number of (GTP Prime) Node alive requests received on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesNodealiverequestsreceived

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeNodeAliveReqTransm

Number of (GTP Prime) Node alive requests transmitted on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesNodealiverequestsTransmitted

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeNodeAliveResRcvd

Number of (GTP Prime) Node alive responses received on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesNodealiveresponsesreceived

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeNodeAliveResTransm

Number of (GTP Prime) Node alive responses transmitted on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesNodealiveresponsesTransmitted

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeOptIE_invalid

Number of (GTP Prime) Optional IE invalid on the GGSN Collected using CLI

Data Source

SGSN

Source Field

ResultsOptionalIEinvalid

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeRedReqRcvd

Number of (GTP Prime) Redirection requests received on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesRedirectionrequestsreceived

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeRedReqTransm

Number of (GTP Prime) Redirection requests transmitted on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesRedirectionrequestsTransmitted

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeRedResRcvd

Number of (GTP Prime) Redirection responses received on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesRedirectionresponsesreceived

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeRedResTransm

Number of (GTP Prime) Redirection responses transmitted on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesRedirectionresponsesTransmitted

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeVerUnsupPktRcvd

Number of (GTP Prime) Version unsupported packets received on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesVersionunsupportedpacketsreceived

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrimeVerUnsupPktTransm

Number of (GTP Prime) Version unsupported packets transmitted on the GGSN Collected using CLI

Data Source

SGSN

Source Field

MessagesVersionunsupportedpacketsTransmitted

Source Section

ggsnstatisticsgtpprime

ggsnGtpPrInvalidMessageFormat

The number of GTP Prime data record transfer response Invalid Message Format received by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpPrInvalidMessageFormat

ggsnGtpPrNodeAliveReqReceived

Number of (GTP Message) Node Alive Requests received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrNodeAliveReqReceived

Source Section

ggsnGtpprime

ggsnGtpPrNodeAliveReqSent

Number of (GTP Message) Node Alive Requests sent by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrNodeAliveReqSent

Source Section

ggsnGtpprime

ggsnGtpPrNodeAliveRespReceived

Number of (GTP Message) Node Alive Responses received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrNodeAliveRespRcvd

Source Section

ggsnGtpprime

ggsnGtpPrNodeAliveRespSent

Number of (GTP Message) Node Alive Responses sent by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrNodeAliveRespSent

Source Section

ggsnGtpprime

ggsnGtpPrNoResource

The number of GTP Prime data record transfer response No Resource received by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpPrNoResource

ggsnGtpPrRedirectReqReceived

Number of (GTP Message) Redirection Requests received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrRedirectReqReceived

Source Section

ggsnGtpprime

ggsnGtpPrRedirectReqSent

Number of (GTP Message) Redirection Requests sent by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrRedirectReqSent

Source Section

ggsnGtpprime

ggsnGtpPrRedirectRespReceived

Number of (GTP Message) Redirection Responses received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrRedirectRespReceived

Source Section

ggsnGtpprime

ggsnGtpPrRedirectRespSent

Number of (GTP Message) Redirection Responses sent by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrRedirectRespSent

Source Section

ggsnGtpprime

ggsnGtpPrRequestAccepted

The number of GTP Prime data record transfer response Request Accepted received by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpPrRequestAccepted

ggsnGtpPrRequestUnfulfilled

The number of GTP Prime data record transfer response Request Unfulfilled received by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpPrRequestUnfulfilled

ggsnGtpPrServiceUnsupported

The number of GTP Prime data record transfer response Service Unsupported received by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpPrServiceUnsupported

ggsnGtpPrSndDataRecordPackets

The number of GTP Prime data record transfer request Send Data Record packets sent by the GGSN

Data Source

GGSN

Source Field

ggsnGtpPrSndDataRecordPackets

ggsnGtpPrSystemFailure

The number of GTP Prime data record transfer response System Failure received by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpPrSystemFailure

ggsnGtpPrVersionUnsupported

The number of GTP Prime data record transfer response Version Unsupported received by the GGSN.

Data Source

GGSN

Source Field

ggsnGtpPrVersionUnsupported

ggsnGtpPrVerUnsupPacketsReceived

The number of GTP Prime Version Unsupported packets received by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrVerUnsupPktsReceived

Source Section

ggsnGtpprime

ggsnGtpPrVerUnsupPacketsSent

The number of GTP Prime Version Unsupported packets sent by this GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpPrVerUnsupPacketsSent

Source Section

ggsnGtpprime

ggsnGtpRequestsAccepted

Results Request accepted (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpRequestsAccepted

Source Section

ggsnGtp

ggsnGtpUplinkBytes

GTP statistics Uplink Bytes Collected using CLI

Data Source

SGSN

Source Field

GTPstatisticsUplinkBytes

Source Section

ggsnstatisticsgtp

ggsnGtpUplinkBytes_jn

GTP statistics Uplink Bytes (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpUplinkBytes

Source Section

ggsnGtp

ggsnGtpUplinkPackets

GTP statistics Uplink Packets Collected using CLI

Data Source

SGSN

Source Field

GTPstatisticsUplinkpackets

Source Section

ggsnstatisticsgtp

ggsnGtpUplinkPackets_jn

GTP statistics Uplink Packets (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpUplinkPackets

Source Section

ggsnGtp

ggsnGtpVerUnsupPacketsReceived

Number of (GTP Message) Version not supported received in the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpVerUnsupPktsReceived

Source Section

ggsnGtp

ggsnGtpVerUnsupPacketsSent

Number of (GTP Message) Version not supported transmitted from the GGSN. (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnGtpVerUnsupPacketsSent

Source Section

ggsnGtp

ggsnNbrOfActivePdpContexts

Total number of active PDP contexts currently served by this GGSN Collected using CLI.

Data Source

SGSN

Source Field

ActivePDPcontexts

Source Section

ggsnstatistics

ggsnNbrOfActivePdpContexts_jn

The number of active PDP contexts on this GGSN.

Data Source

GGSN

Source Field

ggsnNbrOfActivePdpContexts

Source Section

ggsnGlobalStats

ggsnNbrOfActPdpContextsIpv6

The number of active IPv6 PDP contexts on this GGSN.

Data Source

GGSN

ggsnNbrOfSubscribers

The number of subscribers currently serviced by this GGSN. -Subscriber is uniquely identified by IMSI

Data Source

GGSN

Source Field

ggsnNbrOfSubscribers

ggsnNbrOfSubscribersMean

The mean number of subscribers serviced by this GGSN.

Data Source

GGSN

Source Field

ggsnNbrOfSubscribersMean

ggsnNbrOfTftFilters

The number of Traffic Flow Template filters on this GGSN

Data Source

GGSN

Source Field

ggsnNbrOfTftFilters

ggsnNeighborSolicitationRcv

The number of neighbor solicitation requests received by GGSN. (to discover the routers on the network)

Data Source

GGSN

Source Field

ggsnNeighborSolicitationRcv

ggsnNeighborSolicitationRsp

The number of neighbor solicitation responses from GGSN.

Data Source

GGSN

Source Field

ggsnNeighborSolicitationRsp

ggsnPayloadLoad

Gauge to keep track of the weighted load on the node for the payload part. The gauge is used for the new load balancing scheme.

Data Source

GGSN

Source Field

ggsnPayloadLoad

ggsnRouterSolicitationRcv

The number of router solicitation requests received by GGSN.

Data Source

GGSN

Source Field

ggsnRouterSolicitationRcv

ggsnRouterSolicitationRsp

The number of router solicitation responses from GGSN.

Data Source

GGSN

Source Field

ggsnRouterSolicitationRsp

ggsnSessionTimeoutDeactivation

The number of PDP contexts deactivated on this GGSN due to duration supervision function

Data Source

GGSN

Source Field

ggsnSessionTimeoutDeactivation

ggsnUplinkBytesIpv6

Total bytes for all processed IPv6 uplink packets via this GGSN.

Data Source

GGSN

Source Field

ggsnUplinkBytesIpv6

ggsnUplinkDropsBytes

The total number of uplink bytes dropped by this GGSN (SNMP DataStream)

Data Source

GGSN

Source Field

ggsnUplinkDropsBytes

Source Section

ggsnUplinkTrafficInfo

ggsnUplinkDropsIpv6

The number of dropped IPv6 packets in the uplink direction

Data Source

GGSN

Source Field

ggsnUplinkDropsIpv6

ggsnUplinkPacketsIpv6

Total IPv6 uplink packets processed by this GGSN.

Data Source

GGSN

Source Field

ggsnUplinkPacketsIpv6

gprsMmSgsnAttachRequests

Total number of attach requests per SGSN

Data Source

SGSN

Source Field

gprsMmSgsnAttachRequests

Source Section

GPRS Mobility Management

gprsMmSgsnCurrentlyAttachedSubscribers

Number of currently attached subscriber per SGSN

Data Source

SGSN

Source Field

gprsMmSgsnCurrentlyAttachedSubscribers

Source Section

GPRS Mobility Management

gprsMmSgsnInterRoutingAreaUpdateRequests

Total number of inter SGSN RA updates per SGSN

Data Source

SGSN

Source Field

gprsMmSgsnInterRoutingAreaUpdateRequests

Source Section

GPRS Mobility Management

gprsMmSgsnIntraRoutingAreaUpdateRequests

Total number of intra SGSN RA updates per SGSN (excluding periodic RA update)

Data Source

SGSN

Source Field

gprsMmSgsnIntraRoutingAreaUpdateRequests

Source Section

GPRS Mobility Management

gprsMmSgsnPagingProcedures

Total number of paging procedures per SGSN

Data Source

SGSN

Source Field

gprsMmSgsnPagingProcedures

Source Section

GPRS Mobility Management

gprsMmSgsnRejectedByAdmissionControl

Number of Attach or Inter SGSN RA-update requests that were rejected by admission control

Data Source

SGSN

Source Field

gprsMmSgsnRejectedByAdmissionControl

Source Section

GPRS Mobility Management

gprsMmSgsnSuccessfulPagingProcedures

Successful paging procedures per SGSN

Data Source

SGSN

Source Field

gprsMmSgsnSuccessfulPagingProcedures

Source Section

GPRS Mobility Management

gprsMmSgsnUnsuccAttachRequestsCC14

Number of unsuccessful GPRS attach requests, where the Cause code in the Attach Reject is Cause Code #14

Data Source

SGSN

Source Field

gprsMmSgsnUnsuccessfulAttachRequestsCC14

Source Section

GPRS Mobility Management

gprsMmSgsnUnsuccessfulAttachRequests

Unsuccessful attach requests per SGSN

Data Source

SGSN

Source Field

gprsMmSgsnUnsuccessfulAttachRequests

Source Section

GPRS Mobility Management

gprsMmSgsnUnsuccessfulAttachRequestsCC8

Number of unsuccessful Combined GPRS/IMSI attach, where the Cause code in the Attach Reject is Cause Code #8

Data Source

SGSN

Source Field

gprsMmSgsnUnsuccessfulAttachRequestsCC8

Source Section

GPRS Mobility Management

gprsMmSgsnUnsuccInterRoutingAreaUpdReq

Unsuccessful inter SGSN RA updates per SGSN

Data Source

GTPDownlinkPacketsBuffU

This measurement is a snapshot of the number of IP packets currently being buffered in downlink direction. It is increased when downlink payload is buffered and decreased when packet leaves the buffer.

Data Source

SGSN

Source Field

GTP.DownlinkPacketsBuff.U

Source Section

GTP

GTPGtpuInDataOctIu

The number of octets in incoming GPRS Tunneling Protocol (GTP) data packets on the Iu interface without the GTP-U header.Unit: KOctets (1024 Octets)

Data Source

SGSN

Source Field

GTP.GtpuInDataOctIu

GTPGtpuInDataPktIu

The number of GTP data PDUs which have been accepted and processed by the GTP-U protocol entity on the Iu interface.

Data Source

SGSN

Source Field

GTP.GtpuInDataPktIu

GTPGtpuOutDataOctIu

The number of octets in outgoing GTP data packets on the Iu interface without the GTP-U header.Unit: KOctets (1024 Octets)

Data Source

SGSN

Source Field

GTP.GtpuOutDataOctIu

GTPGtpuOutDataPktIu

The number of GTP data PDUs which have been generated by the GTP-U protocol entity on the Iu interface.

Data Source

SGSN

Source Field

GTP.GtpuOutDataPktIu

GTPInDataOctGn

The number of octets in incoming GTP data packets on the Gn interface.

Data Source

SGSN

Source Field

GTP.InDataOctGn

Source Section

GTP

GTPInDataPktGn

The number of GPRS Tunneling Protocol (GTP) Data PDUs, which have been accepted and processed by the GTP protocol entity on the Gn interface.

Data Source

SGSN

Source Field

GTP.InDataPktGn

Source Section

GTP

GTPMBMSInDataPktGn

This measurement provides the number of GTP data PDUs for MBMS bearer contexts which have been accepted and processed by the GTP entity on the Gn interface.

Data Source

SGSN

Source Field

GTP.MBMSInDataPktGn

Source Section

GTP

GTPMBMSOutDataPktIu

This measurement provides the number of MBMS bearer context GTP data PDUs which have been generated by the GTP-U protocol entity on the Iu interface.

Data Source

SGSN

Source Field

GTP.MBMSOutDataPktIu

Source Section

GTP

GTPOutDataOctGn

The number of octets in outgoing GTP data packets on the Gn interface.

Data Source

SGSN

Source Field

GTP.OutDataOctGn

Source Section

GTP

GTPOutDataPktGn

The number of GTP data PDUs, which have been generated by the GTP protocol entity on the Gn interface

Data Source

SGSN

Source Field

GTP.OutDataPktGn

Source Section

GTP

GTPPayloadgtpuErrorPkt

The number of incoming GTP data packets where payload length indicated in GTP header is inconsistent with actual length.

Data Source

SGSN

Source Field

GTP.PayloadgtpuErrorPkt

Source Section

GTP

GTPTotalDownlinkPacketsBuffU

This measurement provides the total number of IP packets buffered.

jnxIcmpv6StatsOutEchoReqs

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutMLDones

The total number of Multicast Listener Done messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutMLDones

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutMLQueries

The total number of Multicast Listener Query messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutMLQueries

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutMLReports

The total number of Multicast Listener Report messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutMLReports

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutNbrAdvs

The total number of Neighbor Advertisement messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutNbrAdvs

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutNbrSolicits

The total number of Neighbor Solicitation messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutNbrSolicits

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutNIReplies

The total number of Node Information Report messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutNIReplies

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutNIReqs

The total number of Node Information Request messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutNIReqs

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutParamProbs

The total number of Parameter Problem messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutParamProbs

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutPktTooBigs

The total number of 'Packet Too Big' messages to be transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutPktTooBigs

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutRedirects

The total number of Redirect messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutRedirects

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutRtrAdvs

The total number of Router Advertisment messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutRtrAdvs

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutRtrRenumbers

The total number of Router Renumber messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutRtrRenumbers

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutRtrSolicits

The total number of Router Solicitation messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutRtrSolicits

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutTimeExceeds

The total number of Time Exceeded messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutTimeExceeds

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsOutUnreachables

The total number of Unreachable messages transmitted.

Data Source

GGSN

Source Field

jnxIcmpv6StatsOutUnreachables

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsPortUnreachs

The total number of 'port unreachable' messages generated.

Data Source

GGSN

Source Field

jnxIcmpv6StatsPortUnreachs

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsRedirects

The total number of 'redirect' messages generated.

Data Source

GGSN

Source Field

jnxIcmpv6StatsRedirects

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsResponses

The total number of message responses generated.

Data Source

GGSN

Source Field

jnxIcmpv6StatsResponses

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsTooBigs

The total number of 'Packet Too Big' messages generated.

Data Source

GGSN

Source Field

jnxIcmpv6StatsTooBigs

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsTooFreqs

The total number of errors not generated due to rate limitations.

Data Source

GGSN

Source Field

jnxIcmpv6StatsTooFreqs

Source Section

jnxIcmpv6GlobalStats

jnxIcmpv6StatsTooShorts

The total number of messages less than the minimum length.

Data Source

GGSN

Source Field

jnxIcmpv6StatsTooShorts

Source Section

jnxIcmpv6GlobalStats

jnxipForwDatagrams

The number of input datagrams for which this entity was not their final IP destination, as a result of which an attempt was made to find a route to forward them to that final destination.

Data Source

GGSN

Source Field

ipForwDatagrams

Source Section

ip

jnxipFragCreates

The number of IP datagram fragments that have been generated as a result of fragmentation at this entity.

Data Source

GGSN

Source Field

ipFragCreates

Source Section

ip

jnxipFragFails

The number of IP datagrams that have been discarded because they needed to be fragmented at this entity but could not be, e.g., because their Don't Fragment flag was set.

Data Source

GGSN

Source Field

ipFragFails

Source Section

ip

jnxipFragOKs

The number of IP datagrams that have been successfully fragmented at this entity.

Data Source

GGSN

Source Field

ipFragOKs

Source Section

ip

jnxipInAddrErrors

The number of input datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity.

Data Source

GGSN

Source Field

ipInAddrErrors

Source Section

ip

jnxipInDelivers

The total number of input datagrams successfully delivered to IP user-protocols (including ICMP).

Data Source

GGSN

Source Field

ipInDelivers

Source Section

ip

jnxipInDiscards

The number of input IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (e.g., for lack of buffer space).

Data Source

GGSN

Source Field

ipInDiscards

Source Section

ip

jnxipInHdrErrors

The number of input datagrams discarded due to errors in their IP headers.

Data Source

GGSN

Source Field

ipInHdrErrors

Source Section

ip

jnxipInReceives

The total number of input datagrams received from interfaces, including those received in error.

Data Source

GGSN

Source Field

ipInReceives

Source Section

ip

jnxipInUnknownProtos

The number of locally-addressed datagrams received successfully but discarded because of an unknown or unsupported protocol.

Data Source

GGSN

Source Field

ipInUnknownProtos

Source Section

ip

jnxipOutDiscards

The number of output IP datagrams for which no problem was encountered to prevent their transmission to their destination, but which were discarded (e.g., for lack of buffer space).

Data Source

GGSN

Source Field

ipOutDiscards

Source Section

ip

jnxipOutNoRoutes

The number of IP datagrams discarded because no route could be found to transmit them to their destination.

Data Source

GGSN

Source Field

ipOutNoRoutes

Source Section

ip

jnxipOutRequests

The total number of IP datagrams which local IP user-protocols (including ICMP) supplied to IP in requests for transmission.

Data Source

GGSN

Source Field

ipOutRequests

Source Section

ip

jnxipReasmFails

The number of failures detected by the IP re-assembly algorithm (for whatever reason: timed out, errors, etc).

Data Source

GGSN

Source Field

ipReasmFails

Source Section

ip

jnxipReasmOKs

The number of IP datagrams successfully re-assembled.

Data Source

GGSN

Source Field

ipReasmOKs

Source Section

ip

jnxipReasmReqds

The number of IP fragments received which needed to be reassembled at this entity.

Data Source

GGSN

Source Field

ipReasmReqds

Source Section

ip

jnxipReasmTimeout

The maximum number of seconds that received fragments is held while they are awaiting reassembly at this entity.

Data Source

GGSN

Source Field

ipReasmTimeout

Source Section

ip

jnxipRoutingDiscards

The number of routing entries which were chosen to be discarded even though they are valid. One possible reason for discarding such an entry could be to free-up buffer space for other routing entries.

Data Source

GGSN

Source Field

ipRoutingDiscards

Source Section

ip

jnxIpv6StatsBadOptions

The total number of IPv6 packets encountering errors in option processing.

Data Source

GGSN

Source Field

jnxIpv6StatsBadOptions

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsBadScopes

The total number of IPv6 packets that violate scope rules.

Data Source

GGSN

Source Field

jnxIpv6StatsBadScopes

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsBadVersions

The total number of IPv6 packets with incorrect version number.

Data Source

GGSN

Source Field

jnxIpv6StatsBadVersions

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsDelivers

The total number of IPv6 packets delivered to upper layers.

Data Source

GGSN

Source Field

jnxIpv6StatsDelivers

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsForwards

The total number of IPv6 packets forwarded.

Data Source

GGSN

Source Field

jnxIpv6StatsForwards

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsForwCacheHits

The total number of forward cache hits.

Data Source

GGSN

Source Field

jnxIpv6StatsForwCacheHits

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsForwCacheMisses

The total number of forward cache misses.

Data Source

GGSN

Source Field

jnxIpv6StatsForwCacheMisses

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsFragDrops

The total number of fragments dropped.

Data Source

GGSN

Source Field

jnxIpv6StatsFragDrops

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsFragments

The total number of packet fragments received.

Data Source

GGSN

Source Field

jnxIpv6StatsFragments

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsFragOverFlows

The total number of fragments that exceeded limit.

Data Source

GGSN

Source Field

jnxIpv6StatsFragOverFlows

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsFragTimeOuts

The total number of fragments dropped due to timeouts.

Data Source

GGSN

Source Field

jnxIpv6StatsFragTimeOuts

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsHdrNotContinuous

The total number of IPv6 packets whose headers are not continuous.

Data Source

GGSN

Source Field

jnxIpv6StatsHdrNotContinuous

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInAhs

The total number of IPv6 packets with an IPv6 AH next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInAhs

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInDestOpts

The total number of IPv6 packets with an IPv6 Destination Option next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInDestOpts

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInEsps

The total number of IPv6 packets with an IPv6 ESP next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInEsps

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInEths

The total number of IPv6 packets with an Ethernet next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInEths

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInFrags

The total number of IPv6 packets with an IPv6 Fragment next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInFrags

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInHopByHops

The total number of IPv6 packets received with a Hop by Hop next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInHopByHops

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInIcmps

The total number of IPv6 packets received with an ICMP(v4) next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInIcmps

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInIcmpv6s

The total number of IPv6 packets with an ICMPv6 next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInIcmpv6s

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInIdps

The total number of IPv6 packets received with an xns IDP next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInIdps

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInIgmps

The total number of IPv6 packets received with an IGMP next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInIgmps

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInIps

The total number of IPv6 packets received with an IPv4 next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInIps

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInIpv6s

The total number of IPv6 packets with an IPv6 next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInIpv6s

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInIsoIps

The total number of IPv6 packets with an ISO CLNP next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInIsoIps

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInNoNhs

The total number of IPv6 packets with no next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInNoNhs

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInOspfs

The total number of IPv6 packets with an OSPF next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInOspfs

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInPims

The total number of IPv6 packets with a PIM next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInPims

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInRoutings

The total number of IPv6 packets with an IPv6 Routing next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInRoutings

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInTcps

The total number of IPv6 packets received with a TCP next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInTcps

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInTps

The total number of IPv6 packets received with a TP4 next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInTps

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsInUdps

The total number of IPv6 packets received with a UDP next header.

Data Source

GGSN

Source Field

jnxIpv6StatsInUdps

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsMCNoDests

The total number of IPv6 Multicast packets dropped due to no destination.

Data Source

GGSN

Source Field

jnxIpv6StatsMCNoDests

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsNoGifs

The total number of tunneling IPv6 packets that can't find gif.

Data Source

GGSN

Source Field

jnxIpv6StatsNoGifs

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsNotMcastMembers

The total number of IPv6 multicast packets which are not joined.

Data Source

GGSN

Source Field

jnxIpv6StatsNotMcastMembers

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsOptRateDrops

The total number of IPv6 option packets dropped due to rate limits.

Data Source

GGSN

Source Field

jnxIpv6StatsOptRateDrops

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsOutDeadNextHops

The total number of output IPv6 packets destined to dead next hops.

Data Source

GGSN

Source Field

jnxIpv6StatsOutDeadNextHops

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsOutDiscards

The total number of output IPv6 packets dropped due to no bufs, etc.

Data Source

GGSN

Source Field

jnxIpv6StatsOutDiscards

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsOutFragCreates

The total number of output IPv6 packets that have been generated as a result of fragmentation at the output interface.

Data Source

GGSN

Source Field

jnxIpv6StatsOutFragCreates

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsOutFragFails

The total number of output IPv6 packets that can't be fragmented.

Data Source

GGSN

Source Field

jnxIpv6StatsOutFragFails

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsOutFragOKs

The total number of output IPv6 packets fragmented.

Data Source

GGSN

Source Field

jnxIpv6StatsOutFragOKs

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsOutNoRoutes

The total number of output IPv6 packets discarded because no route could be found.

Data Source

GGSN

Source Field

jnxIpv6StatsOutNoRoutes

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsOutRequests

The total number of IPv6 packets generated by this host.

Data Source

GGSN

Source Field

jnxIpv6StatsOutRequests

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsRawOuts

The total number of IPv6 packets sent with fabricated IPv6 headers.

Data Source

GGSN

Source Field

jnxIpv6StatsRawOuts

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsReasmOKs

The total number of IPv6 packets reassembled successfully.

Data Source

GGSN

Source Field

jnxIpv6StatsReasmOKs

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsReceives

The total number of IPv6 packets received.

Data Source

GGSN

Source Field

jnxIpv6StatsReceives

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsRedirects

The total number of IPv6 packets forwarded on the same net as received.

Data Source

GGSN

Source Field

jnxIpv6StatsRedirects

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsTooManyHdrs

The total number of IPv6 packets discarded due to too many headers.

Data Source

GGSN

Source Field

jnxIpv6StatsTooManyHdrs

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsTooShorts

The total number of IPv6 packets with size smaller than minimum.

Data Source

GGSN

Source Field

jnxIpv6StatsTooShorts

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsTooSmalls

The total number of IPv6 packets with data size less than data length.

Data Source

GGSN

Source Field

jnxIpv6StatsTooSmalls

Source Section

jnxIpv6GlobalStats

jnxIpv6StatsUnreachables

The total number of IPv6 packets received for unreachable destinations.

Data Source

GGSN

Source Field

jnxIpv6StatsUnreachables

Source Section

jnxIpv6GlobalStats

jnxOperationBuffer

The buffer pool utilization in percentage of this subject. Zero if unavailable or nonapplicable.

Calculation

```
( jnxAtmIfInNoBufDropPkts * 100.0 ) / ( 1.0 * vsum( jnxAtmIfInNoBufDropP-
kts,  jnxAtmIfOutVCQueueDrops,  jnxAtmIfInNoBufDropPkts,  jnxAtmIfInLenEr-
rPkts ) )
```

ATMAAL5TimeoutPkts

Ratio of packets droped because reassembly timeout to tottal dropped Packets in percent

Calculation

```
( jnxAtmIfInTimeoutPkts * 100.0 ) / ( 1.0 * vsum(jnxAtmIfInTimeoutPkts,
jnxAtmIfInNoBufDropPkts,  jnxAtmIfOutVCQueueDrops,  jnxAtmIfInNoBufDropP-
kts, jnxAtmIfInLenErrPkts ) )
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

ATMAAL5VCQueueDropsPktsRate

Ratio of packets droped because of queue limits on each VC to tottal dropped Packets in percent

Calculation

```
( jnxAtmIfOutVCQueueDrops * 100.0 ) / ( 1.0 * vsum( jnxAtmIfInNoBufDropP-
kts,  jnxAtmIfOutVCQueueDrops,  jnxAtmIfInNoBufDropPkts,  jnxAtmIfInLenEr-
rPkts ) )
```

ATMavgPktsSizeIn

Ratio of the number of bytes received to number of packets on this VC

Calculation

```
AGGR(VirtualPath.VirtualChannel, jnxAtmVCInBytes)  / AGGR(VirtualPath.Vir-
tualChannel, jnxAtmVCInPkts)
```

ATMavgPktsSizeOut

Ratio of the number of bytes Transmitted to number of packets on this VC

Calculation

```
AGGR(VirtualPath.VirtualChannel, jnxAtmVCOutBytes) / AGGR(VirtualPath.Vir-
tualChannel, jnxAtmVCOutPkts)
```

ATMHeaderCheckSeqCorrRate

ATM Cell Header Check Correction Rate is the Ratio between the number of correctable cell Header Check Sequence (HCS) Errors and the sum of correctable and uncooecteble HCS Errors that occurred in Procent.

Calculation

```
( jnxAtmIfCorrHCSErrs * 100.0 ) / ( 1.0 * vsum ( jnxAtmIfCorrHCSErrs, jnx-
AtmIfUncorrHCSErrs ) )
```

ATMHeaderCheckUnCorrErrRate

ATM Cell Header Check Uncorrectable Error Rate is the ratio Between the number Cells with uncorrectable HCS errors to total number of received Cells

Calculation

```
( jnxAtmIfUncorrHCSErrs * 100.0 ) / ( 1.0 * jnxAtmIfRxCellCount )
```

ATMIdelCellRate

ATM Idle Cell rate is the ratio between number of Idle Cells and total number of transmmited Cells in Procent . This is an indication of Utilization. Beacause when the Interface has noting to send It sends Idle Cells.

Calculation

```
( jnxAtmIfTxIdleCellCount * 100.0 )  / ( 1.0 * jnxAtmIfTxCellCount )
```

ATMNoBufferOAMFailRate

ATM No Buffer OAM Failure Rate is the ratio between dopped OAM and raw cells to total

Calculation

```
( jnxAtmIfInNoBufferOAMCells * 100.0 ) / ( 1.0 * jnxAtmIfRxCellCount  )
```

ATMoverrunFIFORecieveRate

ATM Overrun FIFO Recieve Rate is the ratio Output FIFO Overruns and total Transmit cells in procent. Input errors indicating that the input queue overflowed while copying received cells.

Calculation

```
( jnxAtmIfRxCellFIFOOverRuns * 100.0 ) / ( 1.0 * jnxAtmIfRxCellCount)
```

ATMoverrunFIFOTransmitRate

ATM Overrun FIFO Transmit Rate is the ratio Output FIFO Overruns and total Transmit cells in procent are output errors indicating that the Output queue overflowed while copying received frames.

Calculation

```
( jnxAtmIfTxCellFIFOOverRuns * 100.0 )  / ( 1.0 * jnxAtmIfTxCellCount)
```

ATMTotalAAL5PacketsDropped

Total Number of AAl5 Dropped because of reassembly timeout,length was incorrect,queue limits on each VC, ,no enough buffer to handle them.

Calculation

```
( vsum (jnxAtmIfInNoBufDropPkts,  jnxAtmIfOutVCQueueDrops,  jnxAtmIfInNo-
BufDropPkts,  jnxAtmIfInLenErrPkts ) )
```

ATMunderrunFIFORecieveRate

ATM Underrun FIFO Receive rate is the rate that the transmitter has been running faster than the interface can handle.

Calculation

```
( jnxAtmIfRxCellFIFOUnderRuns * 100.0 ) / ( 1.0 *  jnxAtmIfRxCellCount)
```

ATMVCTailQueuePktDropRate

Ratio of the number of packets dropped due to bandwidth constraints to total Packets Out on this VC in Percent. This is an Indication that packets were queued to send out at a rate faster than allowed.

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

Calculation

```
AGGR(VirtualPath.VirtualChannel, jnxAtmVCTailQueuePktDrops) * 100.0  /
AGGR(VirtualPath.VirtualChannel, jnxAtmVCOutPkts)
```

ATMVirtuConnecFailRate

ATM Virtual Connection Failure rate is ratio of cells that received with no existing virtual connection to the total number of Received Packets.

Calculation

```
( jnxAtmIfInInvalidVCCells * 100.0 )  / ( 1.0 * jnxAtmIfRxCellCount )
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

IfAccuracy

Interface accuracy can be expressed by the ratio of the packets that does not result in an error to the total packets

Calculation

```
( vsum (100, -1 * jnxifInErrors * 100.0) )  / ( 1.0 * vsum( jnxifInUcastP-
kts, jnxifInMulticastPkts, jnxifInBroadcastPkts) )
```

ifInDiscardRate

Rate of incoming packets discarded on an interface

Calculation

```
( jnxifInDiscards * 100.0 ) / ( 1.0 * vsum(jnxifInUcastPkts, jnxifInMulti-
castPkts, jnxifInBroadcastPkts, jnxifInDiscards, jnxifInErrors,jnxifInUn-
knownProtos) )
```

ifInErrorsRate

Ratio of incoming errored packets to total packets

Calculation

```
( jnxifInErrors * 100.0 )  / ( 1.0 * vsum(jnxifInUcastPkts, jnxifInMulti-
castPkts, jnxifInBroadcastPkts, jnxifInDiscards, jnxifInErrors,jnxifInUn-
knownProtos) )
```

ifInPkts

The total nr of packets, delivered by this sub-layer to a higher (sub-)layer (All CPUs)

Calculation

```
vsum(ifInPkts_CPU2, ifInPkts_CPU3, ifInPkts_CPU4)
```

ifOutDiscardRate

Rate of outgoing packets discarded on an interface

Calculation

```
( jnxifOutDiscards * 100.0 ) / ( 1.0 * vsum(jnxifOutUcastPkts, jnxifOutMul-
ticastPkts, jnxifOutBroadcastPkts, jnxifOutDiscards, jnxifOutErrors, jnxi-
fInUnknownProtos) )
```

ifOutErrorsRate

Rate of outgoing errored packets

Calculation

```
( jnxifOutErrors * 100.0 )  / ( vsum( jnxifOutUcastPkts, jnxifOutMulticast-
Pkts, jnxifOutBroadcastPkts, jnxifOutDiscards, jnxifOutErrors) )
```

ifOutPkts

The total nr of packets that higher-level protocols requested to be transmitted (All CPUs)

Calculation

```
vsum(ifOutPkts_CPU2, ifOutPkts_CPU3, ifOutPkts_CPU4)
```

InterfaceBalance_GSN

Interface balance outgoing divided by incoming traffic %

Calculation

```
(ifOutOctets_CPU2 + ifOutOctets_CPU3 + ifOutOctets_CPU4) * 100.0 /
(ifInOctets_CPU2 + ifInOctets_CPU3 + ifInOctets_CPU4)
```

InterfaceGOS

Dimensioned Grade of Service

Calculation

InterfaceThrouputRx

Interface input is the total number of octets transmitted out of the interface, including framing characters in 15 minutes in Kbytes/s

Calculation

```
(ifInOctets * 1.0) / (collectionPeriod * 60.0)
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

InterfaceThrouputRx_GSN

Interface input is the total number of octets/s transmitted out of the interface

Calculation

```
(ifInOctets_CPU2 + ifInOctets_CPU3 + ifInOctets_CPU4) / ( collectionPeriod
* 1.0)
```

InterfaceThrouputTx

Interface output of interface is the total number of octets transmitted out of the interface, including framing characters in 15 minutes in Kbytes/s

Calculation

```
(ifOutOctets * 1.0) / (collectionPeriod * 60.0)
```

InterfaceThrouputTx_GSN

Interface outp of interface is the tot nr of octets/s transm out of the interface

Calculation

```
(ifOutOctets_CPU2 + ifOutOctets_CPU3 + ifOutOctets_CPU4) / (collectionPe-
riod * 1.0)
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

PacketDiscardRate_GSN

Packet Discard Rate shows the ratio of discarded packets %

Calculation

```
(ifOutDiscards_CPU2 + ifOutDiscards_CPU3 + ifOutDiscards_CPU4) * 100.0 /
(ifOutPkts_CPU2 + ifOutPkts_CPU3 + ifOutPkts_CPU4)
```

pInUtilization

Interface Utilization is an indication of the general performance of the interface.

Calculation

```
ifOutOctets * 100.0 / ifInOctets
```

pPktDis

Packet Discard Rate shows the ratio of discarded packets to delivered packets.

Calculation

```
(ifOutDiscards * 100.0) / vsum(ifInUcastPkts, ifInPkts_CPU2, ifInPkts_CPU3,
ifInPkts_CPU4, -1 * ifOutDiscards, -1 * ifOutQlen)
```

pPktQue

Packet Queued Rate shows the ratio of queued packets to delivered packets.

Calculation

```
(ifOutQlen * 100.0) / vsum(ifInUcastPkts, ifInPkts_CPU2, ifInPkts_CPU3,
ifInPkts_CPU4, -1 * ifOutDiscards, -1 * ifOutQlen)
```

UnknownEnterpriseField

Unknown Field exported from Enterprise Server

Calculation

```
nullInt()
```

Interface Peg Counts

The following is a list of peg counts for the Interface entity.

collectionPeriod

GPRS General

Data Source

Data Source

GGSN

Source Field

ifOutBroadcastPkts

Source Section

ifXEntry

jnxifOutDiscards

The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted.

Data Source

GGSN

Source Field

ifOutDiscards

Source Section

ifEntry

jnxifOutErrors

The number of outbound packets that could not be transmitted because of errors.

Data Source

GGSN

Source Field

ifOutErrors

Source Section

ifEntry

jnxifOutMulticastPkts

The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer

Data Source

GGSN

Source Field

ifOutMulticastPkts

Source Section

ifXEntry

jnxifOutOctets

The total number of octets transmitted out of the interface, including framing characters.

Data Source

GGSN

Source Field

ifOutOctets

Source Section

ifEntry

jnxifOutQLen

The length of the output packet queue (in packets).

Data Source

GGSN

Source Field

ifOutQLen

Source Section

ifEntry

jnxifOutUcastPkts

The total number of packets that higher-level protocols requested be transmitted.

Calculation

UnknownEnterpriseField

Unknown Field exported from Enterprise Server

Calculation

```
nullInt()
```

VirtualChannel Peg Counts

The following is a list of peg counts for the VirtualChannel entity.

aal5VccCrcErrors

The number of AAL5 CPCS PDUs received with CRC-32 errors on this AAL5 VCC at the interface associated with an AAL5 entity.

Data Source

GGSN

Source Field

aal5VccCrcErrors

Source Section

aal5VccEntry

aal5VccOverSizedSDUs

The number of AAL5 CPCS PDUs discarded on this AAL5 VCC at the interface associated with an AAL5 entity because the AAL5 SDUs were too large.

Data Source

GGSN

Source Field

aal5VccOverSizedSDUs

Source Section

aal5VccEntry

aal5VccSarTimeOuts

of partially re-assembled AAL5 CPCS PDUs which were discarded on this AAL5 VCC at the interface because they were not fully re-assembled within the required time period.

HLR_IOG20_APG40

Source Field

LTSCCOPR

Source Section

SS7HSLPG1

LTSETALG

Timer_T1, time between link release and re-establishment during alignment

Data Source

HLR_IOG20_APG40

Source Field

LTSETALG

Source Section

SS7HSLPG1

LTSTATLS

T_loss, STAT loss limit

Data Source

HLR_IOG20_APG40

Source Field

LTSTATLS

Source Section

SS7HSLPG1

LTTAUERR

T (tau), error monitoring interval

Data Source

HLR_IOG20_APG40

Source Field

LTTAUERR

Source Section

SS7HSLPG1

MONEREVT

N, Monitoring intervals after 400ms error event

Data Source

HLR_IOG20_APG40

Source Field

MONEREVT

Source Section

SS7HSLPG1

MONINTER

N_blk, monitoring intervals per block

Data Source

HLR_IOG20_APG40

Source Field

MONINTER

Source Section

SS7HSLPG1

NMXSDPDU

MaxPD, maximum number of SD PDUs sent between POLL PDUs

Data Source

HLR_IOG20_APG40

Source Field

NMXSDPDU

Source Section

SS7HSLPG1

NMXSTPDU

MaxSTAT, maximum number of list elements in a STAT PDU

Data Source

HLR_IOG20_APG40

Source Field

NMXSTPDU

Source Section

SS7HSLPG1

NMXUNACK

MaxCC, maximum number of unacknowledged BGN, END, ER, or RS PDUs

Data Source

HLR_IOG20_APG40

Source Field

NMXUNACK

Source Section

SS7HSLPG1

PDUSENTP

N1, PDUs sent during normal proving

Data Source

HLR_IOG20_APG40

Source Field

PDUSENTP

Source Section

SS7HSLPG1

PERLEN

Period Length

rg_reap

ReportGenerator Internal Count

SCCOPPDU

Max_NRP, maximum number of retransmitted SSCOP PDUs permissible for link proving

Data Source

HLR_IOG20_APG40

Source Field

SCCOPPDU

Source Section

SS7HSLPG1

THRSRUNQ

Thres, threshold for comparing the running Quality of Service

Data Source

HLR_IOG20_APG40

Source Field

THRSRUNQ

Source Section

SS7HSLPG1

HLR_SS7Link Primitive Calculations

The following is a list of primitive calculations for the HLR_SS7Link entity.

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

INTERVALS

Number of 60 minute intervals covered

Calculation

```
PERLEN / (1.0 * 60)
```

INTERVALS_C7TM

Number of 60 minute intervals covered (from C7TMFILE data)

Calculation

```
PERLEN_C7TM / (1.0 * 60)
```

LocalName

HLR_C7Link Name

Calculation

```
LocalKey
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

VENDORTECH

Vendor Technology

Updated: 2009-07-22

Calculation

```
isNull( PERLEN ) ? nullString() : "EricssonGSM"
```

HLR_SS7Link Peg Counts

The following is a list of peg counts for the HLR_SS7Link entity.

ACHGOVRS

Number of automatic changeovers

Data Source

HLR_IOG20_APG40

Source Field

ACHGOVRS

Source Section

SS7SLMT2

ACHGOVRS_SS7HSLMT2

Number of automatic changeovers

Data Source

HLR_IOG20_APG40

Source Field

ACHGOVRS

Source Section

SS7HSLMT2

ALGNFLRS_SS7HSLMT2

Signalling link alignment failures

Data Source

HLR_IOG20_APG40

Source Field

ALGNFLRS

Source Section

SS7HSLMT2

ASLDUR

Duration of link in In-Service state in seconds.

Data Source

HLR_IOG20_APG40

Source Field

ASLDUR

Source Section

C7SL1

CDISCONX_SS7HSLMT3

Number of abnormal occurrences of SSCOP Connection Disconnect

Data Source

HLR_IOG20_APG40

Source Field

CDISCONX

Source Section

SS7HSLMT3

CGSTEVL_SS7HSLMT1

Current link transmit congestion level

Source Field

LTMXIDLE

Source Section

SS7HSLPG1

LTNOCRED

Timer_NO-CREDIT, maximum interval without credit

Data Source

BSC_IOG20_APG40

Source Field

LTNOCRED

Source Section

SS7HSLPG1

LTPRVPDU

Timer_T3, time between proving PDUs in 1ms

Data Source

BSC_IOG20_APG40

Source Field

LTPRVPDU

Source Section

SS7HSLPG1

LTPULLRT

Timer_POLL, Poll for 3622 cells/sec signalling rate

Data Source

BSC_IOG20_APG40

Source Field

LTPULLRT

Source Section

SS7HSLPG1

LTSCCFAL

Timer_T2, time SSCF will attempt alignment

Data Source

BSC_IOG20_APG40

Source Field

LTSCCFAL

Source Section

SS7HSLPG1

LTSCCOPR

Timer_REPEAT-SREC, minimum interval between reports of an SSCOP recovery

Data Source

BSC_IOG20_APG40

Source Field

LTSCCOPR

Source Section

SS7HSLPG1

LTSETALG

Timer_T1, time between link release and re-establishment during alignment

Data Source

BSC_IOG20_APG40

Source Field

LTSETALG

Source Section

SS7HSLPG1

LTSTATLS

T_loss, STAT loss limit

Data Source

BSC_IOG20_APG40

Source Field

LTSTATLS

Source Section

SS7HSLPG1

LTTAUERR

T (tau), error monitoring interval

Data Source

BSC_IOG20_APG40

Source Field

LTTAUERR

Source Section

SS7HSLPG1

MONEREVT

N, Monitoring intervals after 400ms error event

Data Source

BSC_IOG20_APG40

Source Field

MONEREVT

Source Section

SS7HSLPG1

MONINTER

N_blk, monitoring intervals per block

Data Source

BSC_IOG20_APG40

Source Field

MONINTER

Source Section

SS7HSLPG1

NMXSDPDU

MaxPD, maximum number of SD PDUs sent between POLL PDUs

Data Source

BSC_IOG20_APG40

Source Field

NMXSDPDU

Source Section

SS7HSLPG1

NMXSTPDU

MaxSTAT, maximum number of list elements in a STAT PDU

Data Source

BSC_IOG20_APG40

Source Field

NMXSTPDU

Source Section

SS7HSLPG1

NMXUNACK

MaxCC, maximum number of unacknowledged BGN, END, ER, or RS PDUs

Data Source

BSC_IOG20_APG40

Source Field

NMXUNACK

Source Section

SS7HSLPG1

NT17REAL

T1.111.4 T17 Timer, "delay to avoidoscillation of initial alignment failure and link restart" in ms.

Data Source

BSC_IOG20_APG40

Source Field

NT17REAL

Source Section

SS7PRGRP

PCRN2

Number of octets in TB and RTB before forced retransmission is ordered-64 -1. Valid only when ERRCORR = 2.

Data Source

BSC_IOG20_APG40

Source Field

PCRN2

Source Section

SS7PRGRP

PDUSENTP

N1, PDUs sent during normal proving

Data Source

BSC_IOG20_APG40

Source Field

PDUSENTP

Source Section

SS7HSLPG1

PERLEN

Period Length

SCCOPPDU

Max_NRP, maximum number of retransmitted SSCOP PDUs permissible for link proving

Data Source

BSC_IOG20_APG40

Source Field

SCCOPPDU

Source Section

SS7HSLPG1

SUERMD

SUERM parameter D in signal units/4.

Data Source

BSC_IOG20_APG40

Source Field

SUERMD

Source Section

SS7PRGRP

SUERMT

SUERM parameter T.

Data Source

BSC_IOG20_APG40

Source Field

SUERMT

Source Section

SS7PRGRP

TAS

T1.111.7 T1 Timer, "signalling linktest message acknowledgementsupervision" in sec.

Data Source

BSC_IOG20_APG40

Source Field

TAS

Source Section

SS7PRGRP

THRSRUNQ

Thres, threshold for comparing the running Quality of Service

Data Source

BSC_IOG20_APG40

Source Field

THRSRUNQ

Source Section

SS7HSLPG1

TTS

Signalling link test procedure periodin sec.

BSC_SS7Link Primitive Calculations

The following is a list of primitive calculations for the BSC_SS7Link entity.

C7_SLTL_RX

C7 Link Received Traffic (Erlangs)

Calculation

```
(8 * vsum(nullValue(NSIFSRE,RECVDOCT_BSC_C7Link), (6 * null-
Value(NMSURE,MSURECD_BSC_C7Link))) / (1.0 * ((PERLEN * 60.0) * 64000)))
```

C7_SLTL_TX

C7 Link Transmitted Traffic (Erlangs)

Calculation

```
(8 * vsum(nullValue(NSIFTR,TRANOCT_BSC_C7Link), (6 * null-
Value(NMSUTR,MSUTRAN_BSC_C7Link))) / (1.0 * ((PERLEN * 60.0) * 64000)))
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

INTERVALS

Number of 60 minute intervals covered

Calculation

```
PERLEN / (1.0 * 60)
```

NumberMSUsReceived

Number of MSU's received

Calculation

```
nullValue(NMSURE,MSURECD_BSC_C7Link)
```

NumberMSUsTransmitted

Number of MSU's transmitted

Calculation

```
nullValue(NMSUTR,MSUTRAN_BSC_C7Link)
```

NumberSIFAndSIOOctetsReceived

Number of SIF and SIO octets received

Calculation

```
nullValue(NSIFSRE,RECVDOCT_BSC_C7Link)
```

NumberSIFAndSIOOctetsTransmitted

Number of SIF and SIO octets transmitted

Calculation

```
nullValue(NSIFTR,TRANOCT_BSC_C7Link)
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

PercentageLinkAvailability

Percentage Link Availability

Calculation

```
nullValue(ASLDUR,TLNKACTV_BSC_C7Link) * 100.0 / (PERLEN * 60)
```

PercentageLocalBusy

Percentage Local Busy

Calculation

```
((10.0 * LBUSDUR) / (PERLEN * 60.0))
```

VENDORTECH

Vendor Technology

Calculation

```
isNull( PERLEN ) ? nullString() : "EricssonGSM"
```

BSC_SS7Link Peg Counts

The following is a list of peg counts for the BSC_SS7Link entity.

ACHGOVRS_BSC_C7Link

Number of automatic changeovers

Data Source

BSC_IOG20_APG40

Source Field

ACHGOVRS

Source Section

SS7SLMT2

ACHGOVRS_BSC_HSC7Link

Number of automatic changeovers

Data Source

BSC_IOG20_APG40

Source Field

ACHGOVRS

Source Section

SS7HSLMT2

ALGNFLRS_BSC_HSC7Link

Signalling link alignment failures

Data Source

BSC_IOG20_APG40

Source Field

ALGNFLRS

Source Section

SS7HSLMT2

ASLDUR

Duration of link in In-Service state in seconds.

Data Source

BSC_IOG20_APG40

Source Field

ASLDUR

Source Section

C7SL1

BSS_RELEASE

Release

CDISCONX_BSC_HSC7Link

Number of abnormal occurrences of SSCOP Connection Disconnect

Data Source

BSC_IOG20_APG40

Source Field

CDISCONX

Source Section

SS7HSLMT3

CGSTEVL_BSC_HSC7Link

Current link transmit congestion level

Data Source

BSC_IOG20_APG40

Source Field

CGSTEVL

Source Section

SS7HSLMT1

CGSTLEVL

Current link transmit congestion level is 0, 1, 2, or 3.

Data Source

BSC_IOG20_APG40

Source Field

CGSTLEVL

Source Section

SS7HSLMT1

CGSTLEVL_BSC_C7Link

Current Link Transmit Congestion Level

Data Source

BSC_IOG20_APG40

Source Field

CGSTLEVL

Source Section

BSC_SS7LinkSet Primitive Calculations

The following is a list of primitive calculations for the BSC_SS7LinkSet entity.

C7_LSTL_AvgRX

Average C7 Link Received Traffic (Erlangs)

Calculation

```
mean(BSC_SS7Link, C7_SLTL_RX)
```

C7_LSTL_AvgTX

Average C7 Link Transmitted Traffic (Erlangs)

Calculation

```
mean(BSC_SS7Link, C7_SLTL_TX)
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

INTERVALS

Number of 60 minute intervals covered

Calculation

```
PERLEN / (1.0 * 60)
```

Link_Unavailable

Link UnAvailability in LinkSet

Calculation

```
protect(sum( BSC_SS7Link, UNAVAILDUR ) / NumLinks)
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

NumLinks

Number of Links Per Linkset

Calculation

```
count(BSC_SS7Link)
```

PercentageLinkAvailability

Signalling Link Unavailability Duration

Calculation

```
mean(BSC_SS7Link,PercentageLinkAvailability)
```

PercentageLinksetInService

Percentage Linkset In Service

Calculation

```
(100 * (mean(BSC_SS7Link, nullValue(ASLDUR,(TLNKACTV_BSC_C7Link * 10))) /
(1.0 * (PERLEN * 60))))
```

RX_AvgLink

Total (RX) LinkSet Usage per Link

Calculation

```
C7_LSTL_AvgRX / ( 1.0 * NumLinks )
```

RX_MSUS

RX MSUS For all Links

Calculation

```
AGGR(BSC_SS7Link, NMSURE)
```

RX_Octets

RX SIF/SIO Octets for all Links

Calculation

```
AGGR(BSC_SS7Link, NSIFSRE)
```

TX_AvgLink

Total (TX) LinkSet Usage per Link

Calculation

```
C7_LSTL_AvgTX / ( 1.0 * NumLinks )
```

TX_MSUS

TX MSUS For all Links

Calculation

```
AGGR(BSC_SS7Link, NMSUTR)
```

TX_Octets

TX SIF/SIO Octets for all Links

Calculation

```
AGGR(BSC_SS7Link, NSIFTR)
```

VENDORTECH

Vendor Technology

Calculation

```
isNull( PERLEN ) ? nullString() : "EricssonGSM"
```

BSC_SS7LinkSet Peg Counts

BSC_SS7RouteSet Primitive Calculations

The following is a list of primitive calculations for the BSC_SS7RouteSet entity.

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

INTERVALS

Number of 60 minute intervals covered

Calculation

```
PERLEN / (1.0 * 60)
```

LocalName

BSC_C7RouteSet Name

Calculation

```
LocalKey
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

VENDORTECH

Vendor Technology

Calculation

```
isNull( PERLEN ) ? nullString() : "EricssonGSM"
```

BSC_SS7RouteSet Peg Counts

The following is a list of peg counts for the BSC_SS7RouteSet entity.

BSS_RELEASE

Release

PERLEN

Period Length

STINACNT_BSC

Number of occurrences of unavailability of route set to a given destination

Data Source

BSC_IOG20_APG40

Source Field

STINACNT

Source Section

C7RTSET

BTSSite Peg Counts

The following is a list of peg counts for the BTSSite entity.

BSS_RELEASE

Release

PERLEN

Period Length

Cell Primitive Calculations

The following is a list of primitive calculations for the Cell entity.

Active_PDCH

Average number of active PDCHs

Calculation

```
ALLPDCHACTACC / (1.0 * ALLPDCHSCAN)
```

Active_Preempted_PDCH

Preemption, Active PDCHs. No of preempted active PDCHs

Calculation

```
PREEMPTPDCH
```

Alloc_Failure%

Packet Channel Allocation Failure rate (%)

Calculation

```
100 * (PCHALLFAIL / PCHALLATT)
```

AvailableSDCCH

Average number of available sdcch's

Calculation

```
CAVAACC / (1.0 * CAVASCAN)
```

Correlation

Correlation co-efficient

Calculation

```
WM_FCAST_CORRELATION(instance_id)
```

CS12DLACK_and_RETRANSDL

Number of retransmitted radio messages, downlink (R9 + R10)

Calculation

```
nullValue(CS12DLACK, RETRANSDL)
```

CS12DLSCHED_and_RBCDL

Number of radio block messages, downlink (R9 + R10)

Calculation

```
nullValue(CS12DLSCHED, RBCDL)
```

CS12ULACK_and_RETRANSUL

Number of retransmitted radio messages, uplink (R9 + R10)

Calculation

```
nullValue(CS12ULACK, RETRANSUL)
```

CS12ULSCHED_and_RBCUL

Number of radio block messages, uplink (R9 + R10)

Calculation

```
nullValue(CS12ULSCHED, RBCUL)
```

DIMENSION

Dimensioning Parameter

Calculation

```
WM_FCAST_DIMENSION(instance_id, TimeAndElement.tstamp)
```

DropBadQualitys

Drop Bad Quality

Calculation

```
vsum(TFDISQAUL, TFDISQADL, TFDISQABL)
```

DropLow_ss

Drop Low SS

Calculation

```
vsum(TFDISSDL, TFDISSUL, TFDISSBL)
```

ExtraChan_Req

Extra Channels Required in Cell at the End of Forecast Period

Calculation

```
vsum( N3Days_FCAST_Ch, -1.0 * TNUCHCNT)
```

Forecast_Value1

Forecasted Value at N1 days ahead

Calculation

```
vsum(WM_FCAST_DIMENSION(instance_id, TimeAndElement.tstamp), GROWTH / 7 *
WM_FCAST_DAYS(1))
```

Forecast_Value2

Forecasted Value at N2 days ahead

Calculation

```
vsum(WM_FCAST_DIMENSION(instance_id, TimeAndElement.tstamp), GROWTH / 7 *
WM_FCAST_DAYS(2))
```

Forecast_Value3

Forecasted Value at N3 days ahead

Calculation

```
vsum(WM_FCAST_DIMENSION(instance_id, TimeAndElement.tstamp), GROWTH / 7 *
WM_FCAST_DAYS(3))
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

GROWTH

The Growth in Erlangs per Week for Linear Regression

Calculation

```
WM_FCAST_GROWTH(instance_id) * 3600 * 24 * 7
```

HO_CAUSE_BKC%

Percentage of Handovers due to better K-Cell

Calculation

```
sum(NBCell, HOTOLCL) * 100.0 / HO_CAUSEALL
```

HO_CAUSE_BKC%_RUP

Percentage of Handovers due to better K-Cell

Calculation

```
S_HOTOLCL * 100.0 / HO_CAUSEALL_RUP
```

HO_CAUSE_BLC%

Percentage of Handovers due to better L-Cell

Calculation

```
sum(NBCell, HOTOKCL) * 100.0 / HO_CAUSEALL
```

HO_CAUSE_BLC%_RUP

Percentage of Handovers due to better L-Cell

Calculation

```
S_HOTOKCL * 100.0 / HO_CAUSEALL_RUP
```

HO_CAUSEALL

Number of Handovers (All Causes)

Calculation

```
sum(NBCell, HO_CAUSEALL)
```

HO_CAUSEALL_RUP

Number of Handovers (All Causes)

Calculation

```
vsum(S_HOTOKCL, S_HOTOLCL, S_HODWNQA, S_HOUPLQA, S_HOEXCTA, S_HOATTLSS,
S_HOATTHSS)
```

HO_CAUSEDIST%

Percentage of Handovers due to Distance

Calculation

```
protect(sum(NBCell, HOEXCTA) * 100.0 / HO_CAUSEALL)
```

Updated: 2009-07-22

HO_CAUSEDIST%_RUP

Percentage of Handovers due to Distance

Calculation

```
(100.0 * S_HOEXCTA) / (1.0 * HO_CAUSEALL_RUP)
```

HO_CAUSEDWQL%

Percentage of Handovers due to Downlink Quality

Calculation

```
protect(sum(NBCell, HODWNQA) * 100.0 / HO_CAUSEALL)
```

HO_CAUSEDWQL%_RUP

Percentage of Handovers due to Downlink Quality

Calculation

```
(100.0 * S_HODWNQA) / (1.0 * HO_CAUSEALL_RUP)
```

HO_CAUSEHCS

Handovers due to HCS Processing

Calculation

```
AGGR(NBCell, HOTOHCS)
```

HO_CAUSEHCS_RUP

Handovers due to HCS Processing

Calculation

```
S_HOTOHCS
```

HO_CAUSEPWBGHI%

Percentage of Handovers due to Power Budget (High Signal Strength

Calculation

```
protect(sum(NBCell, HOATTHSS) * 100.0 / HO_CAUSEALL)
```

HO_CAUSEPWBGHI%_RUP

Percentage of Handovers due to Power Budget (High Signal Strength)

Calculation

```
(100.0 * S_HOATTHSS) / (1.0 * HO_CAUSEALL_RUP)
```

HO_CAUSEPWBGLO%

Percentage of Handovers due to Power Budget (Low Signal Strength)

Calculation

```
sum(NBCell, HOATTLSS) * 100.0 / HO_CAUSEALL
```

HO_CAUSEPWBGLO%_RUP

Percentage of Handovers due to Power Budget (Low Signal Strength)

Calculation

```
(S_HOATTLSS * 100.0) / HO_CAUSEALL_RUP
```

HO_CAUSEUPQL%

Percentage of Handovers due to Uplink Quality

Calculation

```
protect(sum(NBCell, HOUPLQA) * 100.0 / HO_CAUSEALL)
```

HO_CAUSEUPQL%_RUP

Percentage of Handovers due to Uplink Quality

Calculation

```
(100.0 * S_HOUPLQA) / (1.0 * HO_CAUSEALL_RUP)
```

HO_SUCHIHR%

Percentage of successful HO at High HO Rate

Calculation

```
AGGR(NBCell, HO_SUCHIHR%)
```

HO_SUCHIHR%_RUP

Percentage of successful HO at High HO Rate

Calculation

```
100.0 * SM_HOSUCHR / SM_HOATTHR
```

HOASBCL

Assign Handover Att to Better cell

Calculation

```
AGGR(NBCell, HOASBCL)
```

HOASBCL_RUP

Assign Handover Att to Better cell

Calculation

```
S_HOASBCL
```

HOASWCL

Assign Handover to Worse cell

Calculation

```
AGGR(NBCell, HOASWCL )
```

HOASWCL_RUP

Assign Handover to Worse cell

Calculation

```
S_HOASWCL
```

HOATTLS

Handover attempts due to cell load sharing.

Calculation

```
nullValue(HOATTLS_CELLEVENT, HOATTLS_CELEVENTH)
```

HODUPFT

Number of internal handover attempts during a predefined time (10 seconds)

Calculation

```
AGGR(NBCell, HODUPFT)
```

HODUPFT_RUP

Number of internal handover attempts during a predefined time (10 seconds)

Calculation

```
S_HODUPFT
```

HOE_LOST

MS lost at BSC external handover

Calculation

```
AGGR(NBCell, nullValue(HOE_LOST, 0))
```

HOE_LOST%

Percentage MS lost at BSC external handover

Calculation

```
AGGR(NBCell, nullValue(HOE_LOST%, 0))
```

HOE_LOST%_RUP

Percentage MS lost at BSC external handover

Calculation

```
(100.0 * protect(vsum(0.0, HOE_LOST_E_RUP))) / (1.0 * protect(vsum(0.0,
S_HOETOT)))
```

BSC internal handover attempts

Calculation

```
AGGR(NBCell, nullValue(HOI_TOT, 0))
```

HOI_TOT_RUP

BSC internal handover attempts

Calculation

```
S_HOITOT
```

HOINBOCH

Number of unsuccessful intra-cell handover attempts, MS back on old channel

Calculation

```
nullValue(HOINBOCH_CELLEVENT, HOINBOCH_CELEVENTI)
```

HOINBQA

Number of intra-cell handover attempts at bad quality in both links

Calculation

```
nullValue(HOINBQA_CELLEVENT, HOINBQA_CELEVENTI)
```

HOINDQA

Number of intra-cell handover attempts due to bad downlink quality

Calculation

```
nullValue(HOINDQA_CELLEVENT, HOINDQA_CELEVENTI)
```

HOINSUC

Number of successful intra-cell handovers

Calculation

```
nullValue(HOINSUC_CELLEVENT, HOINSUC_CELEVENTI)
```

HOINUQA

Number of intra cell handover attempts at bad uplink quality

Calculation

```
nullValue(HOINUQA_CELLEVENT, HOINUQA_CELEVENTI)
```

HOSUCBCL

successful assignment HOs to better cell

Calculation

```
AGGR(NBCell, HOSUCBCL )
```

HOSUCBCL_RUP

successful assignment HOs to better cell

Calculation

```
S_HOSUCBCL
```

HOSUCLS

Successful handovers due to cell load sharing.

Calculation

```
nullValue(HOSUCLS_CELLEVENT, HOSUCLS_CELEVENTH)
```

HOSUCWCL

successful assignment HOs to worse cell

Calculation

```
AGGR(NBCell, HOSUCWCL)
```

Handover Atts to CELL

Calculation

```
HOVERCNT_E_RUP
```

IDLU_BAND1

Mean number of idle full rate UL TCH in interference band 1

Calculation

```
protect(ITFUSIB1 / (1.0 * NOACCUF ))
```

IDLU_BAND2

Mean number of idle full rate UL TCH in interference band 2

Calculation

```
protect(ITFUSIB2 / (1.0 * NOACCUF ))
```

IDLU_BAND3

Mean number of idle full rate UL TCH in interference band 3

Calculation

```
protect(ITFUSIB3 / (1.0 * NOACCUF ))
```

IDLU_BAND4

Mean number of idle full rate UL TCH in interference band 4

Calculation

```
protect(ITFUSIB4 / (1.0 * NOACCUF ))
```

IDLU_BAND5

Mean number of idle full rate UL TCH in interference band 5

Calculation

```
protect(ITFUSIB5 / (1.0 * NOACCUF ))
```

IHO_LOST

Total number of intra cell handover Lost

Calculation

```
vsum(HOINDQA, HOINUQA, HOINBQA, -1 * HOINSUC, -1 * HOINBOCH)
```

IHO_LOST%

Percentage of intra cell handover Lost

Calculation

```
nullValue(IHO_LOST * 100.0 / IHO_TOT, 0.0)
```

IHO_TOT

Total number of intra cell handover attempts

Calculation

```
vsum(HOINDQA, HOINUQA, HOINBQA)
```

INTERVALS

Number of 60 minute intervals covered

Calculation

```
PERLEN / (1.0 * 60)
```

MAXTSDL

The Accumulation of the maximum possible timeslots for all DL TBFs scanned.

Calculation

```
vsum(MAXGTSDL, MAXEGTSDL)
```

MC19ULACK_and_ERETRANSUL

Number of retransmitted RLC Data blocks, uplink for EGPRS (R9 + R10)

Calculation

```
nullValue(MC19ULACK, ERETRANSUL)
```

MC19ULSCHED_and_ERBCUL

Number of transmitted RLC Data blocks, uplink for EGPRS (R9 + R10)

Calculation

```
nullValue(MC19ULSCHED, ERBCUL)
```

N1Days_FCAST_Ch

Forecast Channels in N1 days time

Calculation

```
nullValue(circuits(TCH_GOS, Forecast_Value1),0)
```

N2Days_FCAST_Ch

Forecast Channels in N2 days time

Calculation

```
nullValue(circuits(TCH_GOS, Forecast_Value2),0)
```

N3Days_FCAST_Ch

Forecast Channels in N3 days time

Calculation

```
nullValue(circuits(TCH_GOS, Forecast_Value3),0)
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

PABH3

Profile Average Busy Hour for 3 highest values

Calculation

```
WM_FCAST_PABH(instance_id, TimeAndElement.tstamp, 3)
```

PABH5

Profile Average Busy Hour for 5 highest values

Calculation

```
WM_FCAST_PABH(instance_id, TimeAndElement.tstamp, 5)
```

PDCH_Alloc

Average no of allocated PDCH

Calculation

```
ALLPDCHACC / (1.0 * ALLPDCHSCAN)
```

Peak_Usage

Peak Usage

Calculation

```
ALLPDCHPEAK
```

PercentageCallSetupSuccessRate

% Call set up Success Rate

Calculation

```
TFCASSALL * 100.0/ TASSALL
```

RA_ACC%

Number of accepted random accesses

Calculation

```
CNROCNT * 100.0 / RA_TOT
```

RA_ImmAsgnAtt

Immediate Assignment Attempts (Derived from RACH Counts)

Calculation

```
vsum(RAANPAG, RAEMCAL, RACALRE, RAOSREQ, RAOTHER, RAAPOPS, RAORSPE, RAOR-
DAT, RAAPAG1, RAAPAG2)
```

RA_TOT

Total random accesses

Calculation

```
vsum(CNROCNT, RAACCFA)
```

Req_Ch

No of Channels Required to carry the traffic given by Dimensioning parameter

Calculation

```
circuits(TCH_GOS, DIMENSION)
```

RL_EGPRS_Quality_UL%

Radio Link quality -EGPRS Retransmitted Radio Block Msg, UL (%)

Calculation

```
100 * (MC19ULACK / MC19ULSCHED)
```

RL_GPRS_Quality_DL%

Radio Link quality -GPRS Retransmitted Radio Block Messages, rate DL (%)

Calculation

```
100 * (CS12DLACK / CS12DLSCHED)
```

RL_GPRS_Quality_UL%

Radio Link quality -GPRS Retransmitted Radio Block Messages, rate UL (%)

Calculation

```
100 * (CS12DLACK / CS12ULSCHED)
```

Sample_Size

The number of Samples in the Regression

Calculation

```
WM_FCAST_SAMPLES(instance_id)
```

SD_CONG%

SDCCH congestion of total number of SDCCH seizure attempts

Calculation

```
CCONGS * 100.0 / CCALLS
```

SD_DR_ALL%

Dropped SDCCH connections

Calculation

```
CNDROP * 100.0 / CMSESTAB
```

SD_MHT

SDCCH Mean Holding Time (s)

Calculation

```
(CTRALACC * PERLEN * 60.0) / (CNSCAN * CMSESTAB)
```

SD_TRAFF_VOL

SDCCH traffic volume (Erlang hours)

Calculation

```
protect((CTRALACC / (1.0 * CNSCAN)) * PERLEN / 60.0)
```

SEG_LLC_PDU_Data_DL

Average LLC-PDU Data (kbit)

Calculation

```
DLBGEGDATA / (1.0 * DLBGEGPFC)
```

SEG_LLC_PDU_Data_DL1

Average LLC-PDU Data (kbit)

Calculation

```
DLTHP1EGDATA / (1.0 * DLTHP1EGPFC)
```

SEG_LLC_PDU_Data_DL2

Average LLC-PDU Data (kbit)

Calculation

```
DLTHP2EGDATA / (1.0 * DLTHP2EGPFC)
```

SEG_LLC_PDU_Data_DL3

Average LLC-PDU Data (kbit)

Calculation

```
DLTHP3EGDATA / (1.0 * DLTHP3EGPFC)
```

```

TBF_PDCH_EGPRS_UL

TBFs/PDCH EGPRS, UL

Calculation

```
TBFPULEGPRS / (1.0 * PDCHULEGPRS)
```

TBF_PDCH_GPRS_DL

TBFs/PDCH GPRS, DL

Calculation

```
TBFPDLGPRS / (1.0 * PDCHDLGPRS)
```

TBF_PDCH_GPRS_UL

TBFs/PDCH GPRS, UL

Calculation

```
TBFPULGPRS / (1.0 * PDCHULGPRS)
```

TC_AVAIL%

TCH availability

Calculation

```
TAVAACC * 100.0 / (TAVASCAN * TNUCHCNT)
```

TC_AVAIL%_Rank

% Cell Availability Ranking (1 = lowest availability)

Calculation

```
rankAscending(nullValue(decode(TC_AVAIL%,0.0,nullFloat(),TC_AVAIL%),null-
Float()), TimeAndElement.Cell, nullValue(decode(TC_AVAIL%,0.0,null-
Float(),TC_AVAIL%),nullFloat()),IsValid())
```

TCF_AV_NR

Average Number of Available TCHs

Calculation

```
TAVAACC / (1.0 * TAVASCAN )
```

TCF_CONGS_AS%

Failed Attempts to Allocate TCH/Fs due to Congestion of Total Call Attempts

Calculation

```
TFCONGSAS * 100.0 / TASSALL
```

TCF_CONGS_AS%_Rank

% Cell Assignment Congestion (1 = highest congestion)

Calculation

```
rankDescending(TCF_CONGS_AS% , TimeAndElement.Cell, TCF_CONGS_AS%,
IsValid())
```

TCF_DR_ALL_C%

Full rate dropped TCH connections of total TCH connections. This formula shows t

Calculation

```
TFNDROP * 100.0 / TFMSESTB
```

TCF_DR_ALL_C%_Rank

% Cell Dropped Call Rate (1 = highest dropped %)

Calculation

```
rankDescending(TCF_DR_ALL_C% , TimeAndElement.Cell, TCF_DR_ALL_C%,
IsValid())
```

TCF_DR_BQ

Full rate dropped connections due to bad quality. From this formula the amount o

Calculation

```
vsum(TFDISQAUL, TFDISQADL, TFDISQABL)
```

TCF_DR_SS_C

Full rate dropped TCH connections due to low signal strength

Calculation

```
vsum(TFDISSDL, TFDISSUL, TFDISSBL)
```

TCF_MNHOLD

Full rate mean holding time [s]

Calculation

```
(60 * PERLEN * TFTRALACC) / (1.0 * TFNSCAN_CELTCHF * TFMSESTB )
```

TCF_TRAFF_VOL

Full rate TCH traffic volume [Erlang hours]

Calculation

```
protect((TFTRALACC / (1.0 * TFNSCAN_CELTCHF)) * PERLEN / 60.0)
```

TCF_TRAFF_VOL_BH

Full rate TCH traffic volume [Erlang hours]

Calculation

```
protect((TFTRALACC / (1.0 * TFNSCAN_CELTCHF)) * PERLEN / 60.0)
```

TCH_Critical_Carried

TCH Critical Traffic based on Carried Traffic

Calculation

```
capacityB( (int) TCF_AV_NR, TCH_GOS )
```

TCH_Critical_Offerred

TCH Critical Traffic based on Offered Traffic

Calculation

```
TCH_Critical_Carried / (1.0 - TCH_GOS )
```

TCH_Current_Util%

Current Utilization%

Calculation

```
100 * (DIMENSION / TCH_Critical_Offerred)
```

TCH_Est_GOS_%

Calculated Theoretical Grade of Service

Calculation

```
gos( (int) TCF_AV_NR, offTraffic( (int) TCF_AV_NR, TCF_TRAFF_VOL)) * 100.0
```

TCH_Est_Lost

Calculated Theoretical Lost Traffic

Calculation

```
(TCH_Est_Lost_H < 0.01) ? 0.0 : TCH_Est_Lost_H
```

TCH_Est_Lost_H

Calculated Theoretical Lost Traffic

Calculation

```
vsum(offTraffic( (int) TCF_AV_NR, TCF_TRAFF_VOL), -1.0 * TCF_TRAFF_VOL)
```

TCH_Exhaust_Date

Cell Exhaustion Date based on Critical Traffic

Calculation

```
dateToString(stringToDate(TimeAndElement.tstamp, "%Y-%m-%d") +
(int)(vsum(TCH_Critical_Carried, -1.0 * DIMENSION) /
(WM_FCAST_GROWTH(instance_id) * 3600 * 24)), "%Y-%m-%d")
```

TCH_Exhaust_Days

Number of Days until Cell Exhausts, based on Critical Traffic

Calculation

```
(int)(vsum(TCH_Critical_Carried, -1.0 * DIMENSION) /
(WM_FCAST_GROWTH(instance_id) * 3600 * 24))
```

TCH_Final_Util%

The forecast utilization at the end of the forecast period.

Calculation

```
100 * ( Forecast_Value3 / TCH_Critical_Offerred )
```

TCH_GOS

Dimensioned Grade of Service for TCH Channels

Calculation

TCH_Traffic_Off

Calculated Theoretical Offered Traffic

Calculation

```
offTraffic( (int) TCF_AV_NR, TCF_TRAFF_VOL)
```

TCH_Util_Offered

TCH %Utilization based on Offered Traffic

Calculation

```
100 * (TCH_Traffic_Off / (1.0 * TCH_Critical_Offerred ))
```

VENDORTECH

Vendor Technology

Calculation

```
isNull( PERLEN ) ? nullString() : "EricssonGSM"
```

Cell Peg Counts

The following is a list of peg counts for the Cell entity.

ACCEGEXTIPLAT

IP latency measured for EGPRS extended UL capable MS.

Data Source

BSC_IOG20_APG40

Source Field

ACCEGEXTIPLAT

Source Section

CELLGPRS3

ACCEGNOEXTIPLAT

IP latency measured for EGPRS no extended UL capable MS.

Data Source

BSC_IOG20_APG40

Source Field

ACCEGNOEXTIPLAT

Source Section

CELLGPRS3

ACCEGRLIPLAT

Accumulates the IP Latency for an EGPRS capable MS with Reduced Latency capability.

Data Source

BSC_APG40

Source Field

ACCEGRLIPLAT

Source Section

CELLGPRS3

ACCGEXTIPLAT

IP latency measured for GPRS extended UL capable MS.

Data Source

BSC_IOG20_APG40

Source Field

ACCGEXTIPLAT

Source Section

CELLGPRS3

ACCGNOEXTIPLAT

IP latency measured for GPRS no extended UL capable MS.

Data Source

BSC_IOG20_APG40

Source Field

ACCGNOEXTIPLAT

Source Section

CELLGPRS3

ACREJEIT

Number of times channel resources could not be reserved for EIT service as requested due to Admission Control and the action according to the parameter EITQOSPRIO was performed.

Data Source

BSC_IOG20_APG40

Source Field

ACREJEIT

Source Section

CELLEIT2

ACREQEIT

Total number of Admission Control requests for EIT.

Data Source

BSC_IOG20_APG40

Source Field

ACREQEIT

Source Section

CELLEIT2

ACTEUSE

The accumulated number of active users with EGPRS capable mobiles

Data Source

BSC_IOG20_APG40

Source Field

ACTEUSE

Source Section

CELLGPRS4

ACTGUSE

The accumulated number of active users with GPRS capable mobiles

Data Source

BSC_IOG20_APG40

Source Field

ACTGUSE

Source Section

CELLGPRS4

ACTUSESCAN

Number of scans of active users

Data Source

BSC_IOG20_APG40

Source Field

ACTUSESCAN

Source Section

CELLGPRS4

ALLPDCHACC

Number of allocated PDCHs accumulator

Data Source

BSC_IOG20_APG40

Source Field

ALLPDCHACC

Source Section

CELLGPRS

ALLPDCHACC0

Accumulate ALLPDCH0 on ALLPDCHACC0 i.e. every tenth. second.

Data Source

BSC_IOG20_APG40

Source Field

ALLPDCHACC0

Source Section

CHGRP0F

ALLPDCHACCSUB

nr of allocated PDCHs accumulator for OL subcells.

Data Source

BSC_IOG20_APG40

Source Field

ALLPDCHACCSUB

Source Section

CELLGPRSO

ALLPDCHACTACC

Number of used PDCHs last 15 minutes

Data Source

BSC_IOG20_APG40

Source Field

ALLPDCHACTACC

Source Section

CELLGPRS

ALLPDCHACTACCSUB

nr of used PDCHs accumulator for OL subcells.

Data Source

BSC_IOG20_APG40

Source Field

ALLPDCHACTACCSUB

Source Section

CELLGPRSO

ALLPDCHPEAK

The peak number of active PDCHs. If the measurement period is 1 hour then this value represents the peak for the last 15min of the hour

Data Source

BSC_IOG20_APG40

Source Field

ALLPDCHPEAK

Source Section

CELLGPRS

ALLPDCHSCAN

Number of accumulations of allocated PDCHs

Data Source

BSC_IOG20_APG40

Source Field

ALLPDCHSCAN

Source Section

CELLGPRS

ALLPDCHSCAN0

Number of accumulation of allocated PDCHs in channel group 0.

Data Source

BSC_IOG20_APG40

Source Field

ALLPDCHSCAN0

Source Section

CHGRP0F

ALLPDCHSCANSUB

nr of accumulations of allocated PDCHs in OL subcell.

Data Source

BSC_IOG20_APG40

Source Field

ALLPDCHSCANSUB

Source Section

CELLGPRSO

AMRABHOSUCFRHR

Number of successful intra cell handovers due to FR to HR channel rate change at Abis congestion made by an AMR capable mobile.

Data Source

BSC_IOG20_APG40

Source Field

AMRABHOSUCFRHR

Source Section

CLRATECHG

ATAMRLDHRFRHO

Number of intra cell handover attempts, due to HR to FR channel rate change triggered by low cell load and low Abis load, for AMR/HR calls.

Data Source

BSC_APG40

Source Field

ATAMRLDHRFRHO

Source Section

CLRATECHG

ATNAMRLDHRFRHO

Number of intra cell handover attempts, due to HR to FR channel rate change triggered by low cell load and low Abis load, for NON AMR/HR calls.

Data Source

BSC_APG40

Source Field

ATNAMRLDHRFRHO

Source Section

CLRATECHG

AVAILRBLKS

Number of available 20 ms RLC blocks on all allocated PDCHs (DL and UL).

Data Source

BSC_IOG20_APG40

Source Field

AVAILRBLKS

Source Section

CELLGPRS3

AWABHOSUCFRHR

Number of successful Intra Cell Handovers due to FR to HR channel rate change at Abis congestion

Data Source

BSC_APG40

Source Field

AWABHOSUCFRHR

Source Section

CLRATECHG

BCDTCBCOM

Number of intra-cell handover attempt out of BCCH channel group, BCCHDTCB criteria.

Data Source

BSC_IOG20_APG40

Source Field

BCDTCBCOM

Source Section

CELEVENTI

BCDTCBSUC

Number of successful intra-cell handover out of BCCH channel group, BCCHDTCB criteria.

Data Source

BSC_IOG20_APG40

Source Field

BCDTCBSUC

Source Section

CELEVENTI

BCLOSSCOM

Number of intra-cell handover attempt out of BCCH channel group, BCCHLOSS criteria.

Data Source

DigitalPath_MSC Peg Counts

The following is a list of peg counts for the DigitalPath_MSC entity.

BFF

Bit faults frequency

CSLE

Number of seconds with controlled slips

CSLER

Number of seconds with controlled slips

DF

Number of disturbances

ES

Number of errored seconds

ESR

Number of errored seconds remote end

FSBE

Number of frame synchronization bit error events

FSBER

Number of frame synchronization bit error events

G1

Number of CRC error events of type G1

G1R

Number of CRC error events of type G1

G2

Number of CRC error events of type G2

G2R

Number of CRC error events of type G2

G3

Number of CRC error events of type G3

G3R

Number of CRC error events of type G3

G4

Number of CRC error events of type G4

G4R

Number of CRC error events of type G4

G5

Number of CRC error events of type G5

G5R

Number of CRC error events of type G5

G6

Number of CRC error events of type G6

G6R

Number of CRC error events of type G6

LCVE

Number of line code violation events

LCVER

Number of line code violation events

SEFE

Number of severely errored framing events

SEFER

Number of severely errored framing events

SES

Number of severely errored seconds

SESR

Number of severely errored seconds remote end

SF

Number of slips

SMI

Nr of suspect-marked 15-minute intervals UASB and SMI are used in 32-ch PCM sys

UAS

Number of unavailable seconds

UASB

Number of unavailable seconds bi-directional, unavailable time

UASR

Number of unavailable seconds remote end

UAV

Number of unavailability events

PERLEN_TRAR / (1.0 * 60)
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

INTERVALS_TRART

Number of 60 minute intervals covered (from TRART data)

Calculation

```
PERLEN_TRART / (1.0 * 60)
```

IntMSCIncHOAtts

Incoming Inter-MSC Handover Attempts

Calculation

```
sum(bridgeList(LocalKey, System.MSC.NB_MSC, LocalKey), NNBRHINATOT)
```

IntMSCIncHOFail%

Percentage Incoming Inter-MSC Handover Failures

Calculation

```
nullValue(IntMSCIncHOFails * 100.0 / IntMSCIncHOAtts, 0.0)
```

IntMSCIncHOFails

Incoming Inter-MSC Handover Failures

Calculation

```
sum(bridgeList(LocalKey, System.MSC.NB_MSC, LocalKey), NNBRHINATOT -
NNBRHINASUCC)
```

IntMSCOutHOAtts

Outgoing Inter-MSC Handover Attempts

Calculation

```
AGGR(NB_MSC, vsum(NNBRHBANTOT, NNBRHSNATOT))
```

IntMSCOutHOFail%

Percentage Outgoing Inter-MSC Handover Failures

Calculation

```
nullValue(IntMSCOutHOFails * 100.0 / IntMSCOutHOAtts, 0.0)
```

IntMSCOutHOFails

Outgoing Inter-MSC Handover Failures

Calculation

```
AGGR(NB_MSC, vsum(NNBRHBANTOT, NNBRHSNATOT, -1 * NNBRHBANSUCC, -1 * NNBRHS-
NASUCC))
```

LU_IMSI_AT

Ratio between IMSI attach/detach and all location updates. (When BSC parameter ATT = on)

Calculation

```
NLOCATTTOT * 100.0 / NLOCOLDTOT
```

LU_IMSI_DE

Ratio between IMSI detach and IMSI attach

Calculation

```
NLOCDETTOT * 100.0 / NLOCATTTOT
```

LU_NORM

Ratio between location updates made when an MS is changing loaction area and all location updates

Calculation

```
(NLOCOLDTOT - NLOCPERTOT - NLOCATTTOT) * 100.0 / NLOCOLDTOT
```

LU_NR

The rate of location update from non registered subscribers

Calculation

```
NLOCNRGTOT * 100.0 / (NLOCOLDTOT + NLOCNRGTOT)
```

LU_NR_SUC

The success rate for location updates made by subscribers not registered in VLR

Calculation

```
NLOCNRGSUCC * 100.0 / NLOCNRGTOT
```

LU_PERIOD

Ratio between periodic registrations and all location updates

Calculation

```
NLOCPERTOT * 100.0 / NLOCOLDTOT
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

LU_R

The rate of location update from registered subscribers

Calculation

```
NLOCOLDTOT * 100.0 / (NLOCOLDTOT + NLOCNRGTOT)
```

LU_R_SUC

The success rate for location updates made by subscribers already registered in VLR

Calculation

```
NLOCOLDSUCC * 100.0 / NLOCOLDTOT
```

LU_SUC

The percentage rate of location update success registered and non registered subscribers

Calculation

```
vsum(NLOCOLDSUCC, NLOCNRGSUCC) * 100.0 / vsum( (1.0 * NLOCOLDTOT), NLOCNRG-
TOT)
```

LU_TOT

Number of location update attempts

Calculation

```
NLOCOLDTOT + NLOCNRGTOT
```

MobileTerminatingFailedCalls

Mobile Terminating Failed Calls

Calculation

```
vsum(NCHATOMTOT, -1.0 * NCHATOMSUCC)
```

MobilOriginatingFailedCalls

Mobil Originating Failed Calls

Calculation

```
vsum(NCHAFRMTOT, -1.0 * NCHAFRMSUCC)
```

MocMtcSetupSuccessRate

Call setup success. Successful TCH Assignments of Tot Nr of Assignment Attempts %

Calculation

```
(NCHAFRMSUCC + NCHATOMSUCC) * 100.0 / (NCHAFRMTOT + NCHATOMTOT)
```

Updated: 2009-07-22

MocMtcSetupSuccessRate_UMTS

UMTS Call setup success. Successful TCH Assignments of Tot Nr of Assignment Attempts %

Calculation

```
(NMSFRMSCCI + NMSTOMSCCO) * 100.0 / (NMSFRMTOTI + NMSTOMTOTO)
```

MocMtcSetupSuccessRateUMTS

RAB assignment success rate % (includes both MOC and MTC)

Calculation

```
(NMSFRMSCCI + NMSTOMSCCO) * 100.0 / (NMSFRMTOTI + NMSTOMTOTO)
```

MocSetupRatio

Mobile Originating traffic %

Calculation

```
NCHAFRMTOT * 100.0 / (NCHAFRMTOT + NCHATOMTOT)
```

MocSetupRatio_UMTS

UMTS Mobile Originating traffic %

Calculation

```
NMSFRMTOTI * 100.0 / (NMSFRMTOTI + NMSTOMTOTO)
```

MocSetupRatioUMTS

Mobile Originated Traffic in % of total traffic.

Calculation

```
NMSFRMTOTI * 100.0 / (NMSFRMTOTI + NMSTOMTOTO)
```

MocSetupSuccessRate

MOC setup success. Successful originating MSC channel assignments %

Calculation

```
NCHAFRMSUCC * 100.0 / NCHAFRMTOT
```

MocSetupSuccessRate_UMTS

UMTS MOC setup success. Successful originating MSC channel assignments %

Calculation

```
NMSFRMSCCI * 100.0 / NMSFRMTOTI
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

MocSetupSuccessRateUMTS

RAB assignment success rate % for Mobile Originated Call (MOC)

Calculation

```
NMSFRMSCCI * 100.0 / NMSFRMTOTI
```

MtcSetupRatio

Mobile Terminating traffic %

Calculation

```
NCHATOMTOT * 100.0 / (NCHAFRMTOT + NCHATOMTOT)
```

MtcSetupRatio_UMTS

UMTS Mobile Terminating traffic %

Calculation

```
NMSTOMTOTO * 100.0 / (NMSFRMTOTI + NMSTOMTOTO)
```

MtcSetupRatioUMTS

Mobile Originated Traffic in % of total traffic.

Calculation

```
NMSTOMTOTO * 100.0 / (NMSFRMTOTI + NMSTOMTOTO)
```

MtcSetupSuccessRate

MTC setup success. Successful terminating MSC channel assignments %

Calculation

```
NCHATOMSUCC * 100.0 / NCHATOMTOT
```

MtcSetupSuccessRate_UMTS

UMTS MTC setup success. Successful terminating MSC channel assignments %

Calculation

```
NMSTOMSCCO * 100.0 / NMSTOMTOTO
```

MtcSetupSuccessRateUMTS

RAB assignment success rate % for Mobile Terminated Call (MTC)

Calculation

```
NMSTOMSCCO * 100.0 / NMSTOMTOTO
```

NANSWERS_BW

Number of seizures that leads to a B-answer on the incoming and outgoing trunks

Calculation

```
AGGR(TrunkRoute, NANSWERS_BW) / 2.0
```

NCALLS_BW

Number of detected seizures by the incoming and outgoing trunks

Calculation

```
AGGR(TrunkRoute, NCALLS_BW) / 2.0
```

NHLRMSST_AVG

Subscriber in VLR

Calculation

```
sum(HLRSubs,NHLRMSST)
```

NHLRMSST_MAX

Subscriber in VLR

Calculation

```
sum(HLRSubs,NHLRMSST)
```

NISUPATP_BW

Number of ATP received on incoming and outgoing routes

Calculation

```
AGGR(TrunkRoute, NISUPATP_BW) / 2.0
```

NOVERFLOW_BW

Number of congested call attempts on incoming and outgoing trunks

Calculation

```
AGGR(TrunkRoute, NOVERFLOW_BW) / 2.0
```

NRESTRICT_BW

Sum of Number of Incoming and Outgoing calls rejected due to the function restriction of accessible incoming and outgoing circuits

Calculation

```
AGGR(TrunkRoute, NRESTRICT_BW) / 2.0
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

NSEMIPERC_BW

Number of semiperminant connection (Both Way)

Calculation

```
AGGR(TrunkRoute, NSEMIPERC_BW) / 2.0
```

NTRALACC_TRUNKROUTE_BW

Accumulated traffic level (Both Way)

Calculation

```
AGGR(TrunkRoute, NTRALACC_TRUNKROUTE_BW) / 2.0
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

OutgoingInterMSCHandoverAttempts

Outgoing inter MSC Handover attempts

Calculation

```
protect(sum(NB_MSC, vsum(NNBRHBANTOT, NNBRHSNATOT)))
```

PercAnsSwitchCallsFiltered

Percentage Answered Switched Calls

Calculation

```
100 * AGGR(TrafficType[inGroup(LocalKey, "IEX", "ORG")], (NANSW / (1.0 *
vsum(NCALLS, -1.0 * NICONG))))
```

PercFailCallsFiltered

Percentage Failed Calls on an MSC

Calculation

```
100 * AGGR(TrafficType[inGroup(LocalKey, "IEX", "ORG")], (vsum(NUNSUCC,
NICONG, NECONG) / (1.0 * NCALLS)))
```

PercFailSwitchCallsFiltered

Percentage Failed Switched Calls

Calculation

```
100 * AGGR(TrafficType[inGroup(LocalKey, "IEX", "ORG")], (vsum(NUNSUCC,
NECONG) / (1.0 * vsum(NCALLS, -1.0 * NICONG))))
```

SMS_MO_SUC

Successful Transfer of Mobile Originated SMSs

Calculation

```
NSMSCAOSUCC * 100.0 / NSMSCDOTOT
```

SMS_MOSENT

Number of Mobile Originated Requests for SMS Delivery towards SC

Calculation

```
NSMSCDOTOT * 100.0 / NSMSRDOTOT
```

SMS_MT_SUC

Successful SMS deliveries towards MSs of Total Number of Sent SMSs towards MSs

Calculation

```
NSMSCMRSUCC * 100.0 / NSMSCMTOT
```

SMS_MTSENT

Number of SMS-GMSC Requests for SMS delivery towards MSs

Calculation

```
NSMSCMTOT * 100.0 / NSMSSMRLTOT
```

SMS_Successful

Number of successful SMS Total

Calculation

```
(NSMSCAOSUCC + NSMSSRSUCC) * 100.0 / (NSMSCMTOT + NSMSCDOTOT)
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

SRNCDroppedCallRate

Dropped Call (%)

Calculation

```
NRELRELERR * 100.0 / NRELRNCTOT
```

SRNCRelocationSuccessRate

SRNC Relocation Success (%)

Calculation

```
NRELRNCSUCC * 100.0 / NRELRNCTOT
```

SRNCRelocSucSigChanRate

SRNC Relocation Success on Signalling Channel %

Calculation

```
NRELSDHSUCC * 100.0 / NRELSDHTOT
```

SRNCSwitchBackRate

Switch Back (%)

Calculation

```
NRELATTSUCC * 100.0 / NRELRNCTOT
```

SuccessfulInterCelIntraMSCHandovers

Successful inter cell intra MSC Handover

Calculation

```
vsum(NHNDEBSSUCC, NHNDIBSSUCC)
```

SwitchCallsFiltered

Switched Calls

Calculation

```
AGGR(TrafficType[inGroup(LocalKey, "IEX", "ORG")], vsum(NCALLS, -1.0 *
NICONG))
```

SwitchedAttmptFiltered

Switched Attempt

Calculation

```
AGGR(TrafficType[inGroup(LocalKey, "IEX", "ORG")], NCALLS)
```

Updated: 2009-07-22

SwitchTraffFiltered

Switched Traffic

Calculation

```
sum(TrafficType[inGroup(LocalKey, "IEX", "ORG")], SwitchedTraffic)
```

TotalGlobalPages

Total Global Pages on an MSC

Calculation

```
vsum(NPAG1GLTOT, NPAG2GLTOT)
```

TotalInterSwitchTraffic

Total Inter Switch Traffic

Calculation

```
protect(sum(TrunkRoute[(subString(LocalKey,0,1) == "M")], SUMTRAFLVL) /
(1.0 * ACCTRAFCNTR))
```

TotalLADirectedPages

Total LA Directed Pages on an MSC

Calculation

```
vsum(NPAG1LOTOT, NPAG2LOTOT)
```

TotalPOITraffic

Total POI Traffic

Calculation

```
protect(sum(TrunkRoute[inGroup(subString(LocalKey,0,2), "PH", "BO", "OL",
"KO", "RD", "AL", "TG") ], SUMTRAFLVL) / (1.0 * ACCTRAFCNTR))
```

TotalSwitchedTraffic

Total Switched Traffic on an MSC

Calculation

```
sum(TrafficType[inGroup(LocalKey, "IEX", "ORG")], SwitchedTraffic)
```

TRAL_TRUNKROUTE_BW

Indicator of the number of seized individuals by incoming and outgoing routes.

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

Calculation

```
AGGR(TrunkRoute, TRAL_TRUNKROUTE_BW) / 2.0
```

VENDORTECH

Vendor Technology

Calculation

```
isNull( PERLEN ) ? nullString() : "EricssonGSM"
```

MSC Peg Counts

The following is a list of peg counts for the MSC entity.

ABLOL_MSC

Number of RP's in blocking state, aut. blocked.

Data Source

MSC_IOG20_APG40

Source Field

ABLOL

Source Section

RP

ACCBLKCNTR

Number of accumulations of the blocking level counter

Data Source

MSC_TRAR

Source Field

ACCBLKCNTR

Source Section

ASC_TRAR

ACCLOAD

Accumulated Processor Load in percent

Data Source

MSC_IOG20_APG40

Source Field

ACCLOAD

Source Section

LOAS

ACCTRAFCNTR

Number of accumulations of the traffic level counter

Data Source

MSC_TRAR

Source Field

ACCTRAFCNTR

Source Section

ASC_TRAR

BLOLCLM

Number of blocked CLMs (blocking level).

Data Source

MSC_IOG20_APG40

Source Field

BLOLCLM

Source Section

GRPSWITCH

BLOLEMUX

Number of blocked EMUXs (blocking level) in both planes.

Data Source

MSC_IOG20_APG40

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

Source Field

BLOLEMUX

Source Section

GRPSWITCH

BLOLEMUXA

Number of blocked EMUXs (blocking level) in the A plane.

Data Source

MSC_IOG20_APG40

Source Field

BLOLEMUXA

Source Section

GRPSWITCH

BLOLEMUXB

Number of blocked EMUXs (blocking level) in the B plane.

Data Source

MSC_IOG20_APG40

Source Field

BLOLEMUXB

Source Section

GRPSWITCH

BLOLSPM

Number of blocked SPMs (blocking level) in both planes.

Data Source

MSC_IOG20_APG40

Source Field

BLOLSPM

Source Section

GRPSWITCH

BLOLSPMA

Number of blocked SPMs (blocking level) in the A-plane.

Data Source

MSC_IOG20_APG40

Source Field

BLOLSPMA

Source Section

GRPSWITCH

BLOLSPMB

Number of blocked SPMs (blocking level) in the B-plane.

Data Source

MSC_IOG20_APG40

Source Field

BLOLSPMB

Source Section

GRPSWITCH

BLOLTSM

Number of blocked TSMs (blocking level) in both planes.

Data Source

Source Section

GRPSWITCH

CALLATT

Number of call seizure attempts. This counter is never decremented

Data Source

MSC_IOG20_APG40

Source Field

CALLATT

Source Section

SHAM

CALLCNG

Number of call attempts that have met congestion. This counter is never decremented

Data Source

MSC_IOG20_APG40

Source Field

CALLCNG

Source Section

SHAM

CALLCNTI

Number of NS/EP calls received from incoming trunks.

Data Source

BSC_IOG20_APG40

Source Field

CALLCNTI

CALLNPPI

Number of NS/EP calls received from incoming trunks, without the Precedence parameter.

Data Source

BSC_IOG20_APG40

Source Field

CALLNPPI

CALLTRF

Number of occupied individuals. The counter gives continuous information on the number of calls which are at a given moment directed through the SSF. The counter is increased at each successful seizure attempt and decreased at release of the call

Data Source

MSC_IOG20_APG40

Source Field

CALLTRF

MSC_SS7Link Primitive Calculations

The following is a list of primitive calculations for the MSC_SS7Link entity.

C7_SLTL_DiffRX

% C7 Link RX Traffic (Erlangs) Difference from Mean

Calculation

```
(C7_SLTL_RX - MSC_SS7LinkSet.C7_LSTL_AvgRX) * 100.0 /
MSC_SS7LinkSet.C7_LSTL_AvgRX
```

C7_SLTL_DiffTX

% C7 Link TX Traffic (Erlangs) Difference from Mean

Calculation

```
(C7_SLTL_TX - MSC_SS7LinkSet.C7_LSTL_AvgTX) * 100.0 /
MSC_SS7LinkSet.C7_LSTL_AvgTX
```

C7_SLTL_RX

C7 Link Received Traffic (Erlangs)

Calculation

```
(8 * vsum(nullValue(NSIFSRE,RECVDOCT_MSC_C7Link), (6 * null-
Value(NMSURE_C7SL1,MSURECD_MSC_C7Link))) / (1.0 * ((PERLEN * 60.0) *
64000)))
```

C7_SLTL_TX

C7 Link Transmitted Traffic (Erlangs)

Calculation

```
(8 * vsum(nullValue(NSIFTR,TRANOCT_MSC_C7Link), (6 * null-
Value(NMSUTR_C7SL1,MSUTRAN_MSC_C7Link))) / (1.0 * ((PERLEN * 60.0) *
64000)))
```

DataRate

Number of MSU received and Transmitted

Calculation

```
64000
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

InterconnectTraffReciev

No. Of recived SIF and SIO octets per second

Calculation

```
(vsum((NSIFSRE * PERLEN * 100.0 / 8), -1.0 * 6 * PERLEN * NMSURE_C7SL1)) /
PERLEN
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

InterconnectTraffTrans

No. Of transmitted SIF and SIO octets per second

Calculation

```
(vsum((NSIFTR * PERLEN * 100.0 / 8), -1.0 * 6 * PERLEN * NMSUTR_C7SL1)) /
PERLEN
```

INTERVALS

Number of 60 minute intervals covered

Calculation

```
PERLEN / (1.0 * 60)
```

INTERVALS_C7TM

Number of 60 minute intervals covered (from C7TMFILE data)

Calculation

```
PERLEN_C7TM / (1.0 * 60)
```

Link_Usage

Sum of TX and RX Usage

Calculation

```
vsum(( 8.0 * ( vsum( NSIFTR, 6.0 * NMSUTR )) / ( 3600.0 * DataRate )), vsum(
NSIFSRE, 6.0 * NMSURE ) / ( 3600.0 * DataRate ))
```

MSUS

Number of MSU received and Transmitted

Calculation

```
vsum( NMSUTR, NMSURE )
```

NMSURE

Number of MSU's received

Calculation

```
nullValue(NMSURE_C7SL1, NMSURE_ASC_CCITT7)
```

NMSUTR

Number of MSU's transmitted

Calculation

```
nullValue(NMSUTR_C7SL1, NMSUTR_ASC_CCITT7)
```

NumberMSUsReceived

Number of MSU's received

Calculation

```
nullValue(NMSURE_C7SL1,MSURECD_MSC_C7Link)
```

NumberMSUsTransmitted

Number of MSU's transmitted

Calculation

```
nullValue(NMSUTR_C7SL1,MSUTRAN_MSC_C7Link)
```

NumberSIFAndSIOOctetsReceived

Number of SIF and SIO octets received

Calculation

```
nullValue(NSIFSRE,RECVDOCT_MSC_C7Link)
```

NumberSIFAndSIOOctetsTransmitted

Number of SIF and SIO octets transmitted

Calculation

```
nullValue(NSIFTR,TRANOCT_MSC_C7Link)
```

NumberSLFailures

Number of SL failures, all reasons

Calculation

```
nullValue(NSLFA,NMDCLFLR)
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

Calculation

PercentageLinkAvailability

Percentage Link Availability

Calculation

```
nullValue(ASLDUR,TLNKACTV * 10) * 100.0 / (PERLEN * 60)
```

PercentageLocalBusy

Percentage Local Busy

Calculation

```
((100 * LBUSDUR / 10.0) / (1.0 * (PERLEN * 60)))
```

VENDORTECH

Vendor Technology

Calculation

```
isNull( PERLEN ) ? nullString() : "EricssonGSM"
```

MSC_SS7LinkSet Primitive Calculations

The following is a list of primitive calculations for the MSC_SS7LinkSet entity.

C7_LSTL_AvgRX

Average C7 Link Received Traffic (Erlangs)

Calculation

```
mean(MSC_SS7Link, C7_SLTL_RX)
```

C7_LSTL_AvgTX

Average C7 Link Transmitted Traffic (Erlangs)

Calculation

```
mean(MSC_SS7Link, C7_SLTL_TX)
```

Critical_Carried

critical Carried

Calculation

```
0.4
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

DIMENSION

Dimensioning Parameter

Calculation

```
WM_FCAST_DIMENSION(instance_id, TimeAndElement.tstamp)
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

GROWTH

The Growth in Erlangs per Week for Linear Regression

Calculation

```
WM_FCAST_GROWTH(instance_id) * 3600 * 24 * 7
```

INTERVALS

Number of 60 minute intervals covered

Calculation

```
PERLEN / (1.0 * 60)
```

Link_Unavailable

Link UnAvailability in LinkSet

Calculation

```
AGGR( MSC_SS7Link, UNAVAILDUR )
```

Link_Usage

Sum of TX and RX Usage

Calculation

```
AGGR(MSC_SS7Link, Link_Usage)
```

Links_Q

Number of assigned SLs (Q aggregator)

Calculation

```
LINKS
```

Ln_Correlation

Correlation co-efficient

Calculation

```
WM_FCAST_CORRELATION(instance_id)
```

Ln_Exhaust_Date

Exhaustion Date based on Critical Traffic

Calculation

```
dateToString(stringToDate(TimeAndElement.tstamp, "%Y-%m-%d") +
(int)(vsum(Critical_Carried, -1.0 * DIMENSION) /
(WM_FCAST_GROWTH(instance_id) * 3600 * 24)), "%Y-%m-%d")
```

Ln_Exhaust_Days

Number of Days until LinkSet Exhausts, based on Critical Traffic

Calculation

```
vsum((int) vsum(Critical_Carried, -1.0 * DIMENSION) /
(WM_FCAST_GROWTH(instance_id) * 3600 * 24), -7)
```

MSUS

Number of MSU received and Transmitted Per LSET

Calculation

```
AGGR(MSC_SS7Link, MSUS)
```

Nominal_Capacity

Nominal Capacity based on specified Max Nominal erlangs Per LSET

Calculation

```
0.4 * NumLinks
```

NSLFA

Number of SL failures, all reasons.

Calculation

```
AGGR(MSC_SS7Link, NSLFA)
```

NumberMSUsReceived

Number of MSU's received

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

Calculation

```
nullValue(AGGR(MSC_SS7Link,NMSURE_C7SL1),MSURECD)
```

NumberMSUsTransmitted

Number of MSU's transmitted

Calculation

```
null-
Value(AGGR(MSC_SS7Link,NMSUTR_C7SL1),AGGR(MSC_SS7Link,MSUTRAN_MSC_C7Link))
```

NumberSLFailures

Number of SL failures, all reasons

Calculation

```
nullValue(AGGR(MSC_SS7Link,NSLFA),AGGR(MSC_SS7Link,NMDCLFLR))
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

NumLinks

Number of Links Per Linkset

Calculation

```
count(MSC_SS7Link)
```

PercentageLinkAvailability

Signalling Link Unavailability Duration

Calculation

```
100 * (1 - (nullValue(AGGR(MSC_SS7Link, UNAVAILDUR),(AGGR(MSC_SS7Link,DRD-
CLFLR)*10)) / (1.0 * (PERLEN * 60))))
```

PercentageLinksetInService

Percentage Linkset In Service

Calculation

```
(100 * (nullValue(AGGR(MSC_SS7Link,
ASLDUR),(AGGR(MSC_SS7Link,TLNKACTV)*10)) / (1.0 * (PERLEN * 60))))
```

RX_AvgLink

Total (RX) LinkSet Usage per Link

Calculation

```
C7_LSTL_AvgRX / ( 1.0 * NumLinks )
```

RX_MSUS

RX MSUS For all Links

Calculation

```
AGGR(MSC_SS7Link, NMSURE)
```

RX_Octets

RX SIF/SIO Octets for all Links

Calculation

```
AGGR(MSC_SS7Link, NSIFSRE)
```

Sample_Size

The number of Samples in the Regression

Calculation

```
WM_FCAST_SAMPLES(instance_id)
```

TX_AvgLink

Total (TX) LinkSet Usage per Link

Calculation

```
C7_LSTL_AvgTX / ( 1.0 * NumLinks )
```

TX_MSUS

TX MSUS For all Links

Calculation

```
AGGR(MSC_SS7Link, NMSUTR)
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

TX_Octets

TX SIF/SIO Octets for all Links

Calculation

```
AGGR(MSC_SS7Link, NSIFTR)
```

VENDORTECH

Vendor Technology

Calculation

```
isNull( PERLEN ) ? nullString() : "EricssonGSM"
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

MSCOutTrunk Peg Counts

The following is a list of peg counts for the MSCOutTrunk entity.

BANSWCNT

Number of B - answers

CONVLACC

Accumulated traffic level after B - answer

IDISCCNT

Number of rejected calls

MSC_RELEASE

Release

OCONGCNT

Number of unsuccessful seizure attempts of outgoing individual

ODISCCNT

Number of disconnections of outgoing individual in register position

OTTIME

Accumulated seizure time of outgoing individual in register position

PERLENSEC

Period Length

SCANCNT

Number of accumulations of the level counters

SCANNINT

Interval between scannings in seconds

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

THCONCNT

Number of through connections

TRALACC

Accumulated traffic level after through connection

MSCTrunkDest Primitive Calculations

The following is a list of primitive calculations for the MSCTrunkDest entity.

BANSWCNT_TrunkDest

Number of B - answers

Calculation

```
nullValue(BANSWCNT, AGGR(MSCOutTrunk, BANSWCNT))
```

CONVLACC_TrunkDest

Accumulated traffic level after B - answer

Calculation

```
nullValue(CONVLACC, AGGR(MSCOutTrunk, CONVLACC))
```

DestinationTraffic_AfterBAnsw

Traffic in Erlang from B-answer to release

Calculation

```
CONVLACC_TrunkDest / SCANCNT_TrunkDest
```

DestinationTraffic_BeforeBAnsw

Traffic in Erlang from reaching the EOS state waiting for B-answer to release.

Calculation

```
TRALACC_TrunkDest / SCANCNT_TrunkDest
```

GRAPHmultiLineSeparator

Special Control Field for Multi-Line Graphs

Calculation

```
""
```

Updated: 2009-07-22

IDISCCNT_TrunkDest

Number of rejected calls

Calculation

```
nullValue(IDISCCNT, AGGR(MSCOutTrunk, IDISCCNT))
```

INTERVALS_TRDIP

Number of 60 minute intervals covered (from TRDIP data)

Calculation

```
PERLEN_TRDIP / (1.0 * 60)
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

OCONGCNT_TrunkDest

Number of unsuccessful seizure attempts of outgoing individual

Calculation

```
nullValue(OCONGCNT, AGGR(MSCOutTrunk, OCONGCNT))
```

ODISCCNT_TrunkDest

Number of disconnections of outgoing individual in register position

Calculation

```
nullValue(ODISCCNT, AGGR(MSCOutTrunk, ODISCCNT))
```

OTTIME_TrunkDest

Accumulated seizure time of outgoing individual in register position

Calculation

```
nullValue(OTTIME, AGGR(MSCOutTrunk, OTTIME))
```

Calculation

```
vsum(NTRALACCI_TRUNKROUTE, NTRALACCO_TRUNKROUTE)
```

NumberOfBAnswers

Number of B-answers

Calculation

```
nullValue(BANS,AGGR(MSC.MSCTrunkDest,BANSWCNT))
```

NumberOfBids

Number of bids

Calculation

```
nullValue(NBIDS_TRAR,vsum(NCALLSI,NCALLSO))
```

NUMDAYS

of days in Report

Calculation

```
DAYSINREPORT()
```

NUMHOURS

of hours in Summation Data

Calculation

PercentageCongestion

Percentage Congestion

Calculation

```
UNSUC_BIDS * 100.0 / NBIDS_TRAR
```

PercentAnswerSeizeRatio

% Answer Seize Ratio

Calculation

```
nullValue(BANS,AGGR(MSC.MSCTrunkDest,BANSWCNT)) * 100.0 / null-
Value(NBIDS_TRAR,vsum(NCALLSI,NCALLSO))
```

PercentSuccessCalls

Successful Calls Percentage

Calculation

```
100 * vsum(nullValue(NBIDS_TRAR,vsum(NCALLSI,NCALLSO)), -1.0 * null-
Value(UNSUC_BIDS,vsum(NOVERFLOWI,NOVERFLOWO))) / null-
Value(NBIDS_TRAR,vsum(NCALLSI,NCALLSO))
```

Sample_Size

The number of Samples in the Regression

Calculation

```
WM_FCAST_SAMPLES(instance_id)
```

TR_Correlation

Correlation co-efficient

Calculation

```
WM_FCAST_CORRELATION(instance_id)
```

TR_Critical_Carried

TG Critical Traffic based on Carried Traffic

Calculation

```
capacityB( (int) Circuits_Available, TR_GOS )
```

TR_Critical_Offerred

Route Critical Traffic based on Offered Traffic

Calculation

```
TR_Critical_Carried / ( 1.0 - TR_GOS )
```

TR_Current_Util%

Current Utilization%

Calculation

```
100 * (DIMENSION / TR_Critical_Offerred)
```

TR_Est_GOS

Calculated Theoretical Grade of Service

Calculation

```
gos( (int) Circuits_Available, offTraffic( (int) Circuits_Available, 1.0 *
TR_Traffic ))
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

TR_Est_Lost

Calculated Theoretical Lost Traffic

Calculation

```
vsum( TR_Traffic_Off, -1.0 * TR_Traffic )
```

TR_Exhaust_Date

Circuits Exhaustion Date based on Critical Traffic

Calculation

```
dateToString(stringToDate(TimeAndElement.tstamp, "%Y-%m-%d") +
(int)(vsum(TR_Critical_Carried, -1.0 * DIMENSION) /
(WM_FCAST_GROWTH(instance_id) * 3600 * 24)), "%Y-%m-%d")
```

TR_Exhaust_Days

Number of Days until Circuits Exhausts, based on Critical Traffic

Calculation

```
vsum((int) vsum(TR_Critical_Carried, -1.0 * DIMENSION) /
(WM_FCAST_GROWTH(instance_id) * 3600 * 24), -7)
```

TR_ExtraCirct_Req

Extra Circuits Required in Route at the End of Forecast Period

Calculation

```
vsum( TR_N3Days_FCAST, -1.0 * NDEV_TRAR )
```

TR_Final_Util%

The forecast utilization at the end of the forecast period.

Calculation

```
100 * ( TR_Forecast_Value3 / TR_Critical_Offerred )
```

TR_Forecast_Value1

Forecasted Value at N1 days ahead

Calculation

```
vsum(WM_FCAST_DIMENSION(instance_id, TimeAndElement.tstamp), GROWTH / 7 *
WM_FCAST_DAYS(1))
```

TR_Forecast_Value2

Forecasted Value at N2 days ahead

Calculation

```
vsum(WM_FCAST_DIMENSION(instance_id, TimeAndElement.tstamp), GROWTH / 7 *
WM_FCAST_DAYS(2))
```

TR_Forecast_Value3

Forecasted Value at N3 days ahead

Calculation

```
vsum(WM_FCAST_DIMENSION(instance_id, TimeAndElement.tstamp), GROWTH / 7 *
WM_FCAST_DAYS(3))
```

TR_GOS

Dimensioned Grade of Service for TrunkRoute

Calculation

TR_N1Days_FCAST

Forecast Circuits in N1 days time

Calculation

```
circuits(TR_GOS, TR_Forecast_Value1)
```

TR_N2Days_FCAST

Forecast Circuits in N2 days time

Calculation

```
circuits(TR_GOS, TR_Forecast_Value2)
```

TR_N3Days_FCAST

Forecast Circuits in N3 days time

Calculation

```
circuits(TR_GOS, TR_Forecast_Value3)
```

TR_PABH3

Profile Average Busy Hour for 3 highest values

Calculation

```
WM_FCAST_PABH(instance_id, TimeAndElement.tstamp, 3)
```

© Copyright IBM Corp. 2008, 2009. All Rights Reserved.

TR_PABH5

Profile Average Busy Hour for 5 highest values

Calculation

```
WM_FCAST_PABH(instance_id, TimeAndElement.tstamp, 5)
```

TR_Req_Ch

No of Circuits Required to carry the traffic given by Dimensioning parameter

Calculation

```
circuits(TR_GOS, DIMENSION)
```

TR_Traffic

Carried Traffic in Erlangs (BOTHWAY)

Calculation

```
nullValue(SUMTRAFLVL, vsum(NTRALACCI_TRUNKROUTE, NTRALACCO_TRUNKROUTE)) /
(1.0 * nullValue(ACCTRAFCNTR, NSCAN_TRUNKROUTE))
```

TR_Traffic_Off

Calculated Theoretical Offered Traffic

Calculation

```
offTraffic( (int) NDEV_TRAR, 1.0 * TR_Traffic )
```

TR_Traffic_OneWay

Carried Traffic in Erlangs

Calculation

```
nullValue(SUMTRAFLVL, vsum(NTRALACCI_TRUNKROUTE, NTRALACCO_TRUNKROUTE)) /
(1.0 * nullValue(ACCTRAFCNTR, NSCAN_TRUNKROUTE))
```

TR_Util_Offered

TCH %Utilization based on Offered Traffic

Calculation

```
100 * (TR_Traffic_Off / (1.0 * TR_Critical_Offerred ))
```

Traffic

Calculation

```
nullValue(SUMTRAFLVL,vsum(NTRALACCI_TRUNKROUTE,NTRALACCO_TRUNKROUTE)) /
(1.0 * nullValue(MSC.ACCTRAFCNTR,NSCAN_TRUNKROUTE))
```

TrafficBW

Traffic on Route (Erlangs)

Calculation

```
(NTRALACCI_TRUNKROUTE + NTRALACCO_TRUNKROUTE) / (1.0 * NSCAN_TRUNKROUTE)
```

TrafficInc

Trunk traffic incoming route (E)

Calculation

```
NTRALACCI_TRUNKROUTE / (1.0 * NSCAN_TRUNKROUTE)
```

TrafficOut

Trunk traffic outgoing route (E)

Calculation

```
NTRALACCO_TRUNKROUTE / (1.0 * NSCAN_TRUNKROUTE)
```

TRAL_TRUNKROUTE_BW

Indicator of the number of seized individuals by incoming and outgoing routes.

Calculation

```
vsum(TRALI_TRUNKROUTE, TRALO_TRUNKROUTE)
```

TrunkCallAttempts

Total trunk call attempts

Calculation

```
vsum(NCALLSI, NCALLSO)
```

VENDORTECH

Vendor Technology

Calculation

```
isNull( PERLEN ) ? nullString() : "EricssonGSM"
```

browserURL

Source Section

Connectivity

connectionStatus

This attribute will be set to FALSE if connection to the Network Element or link is NOT present.

Data Source

OSSRC

Source Field

connectionStatus

Source Section

ElementManagement

emUrl

The URL to launch the Element Manager for this Network Element.

Data Source

OSSRC

Source Field

emUrl

Source Section

Connectivity

FROM_FDN

The Network Object to be associated from.

Data Source

OSSRC

Source Field

FROM_FDN

Source Section

Connectivity

ftpBackupStore

A reference to a ftpService that can be used for storing backups for the NE. This field is not mandatory and is modifiable.

Data Source

OSSRC

Source Field

ftpBackupStore

Source Section

Connectivity

ftpLicenseKeyStore

A reference to a ftpService that can be used for License Key installation on the NE. This field is not mandatory and is modifiable.

Data Source

OSSRC

Source Field

ftpLicenseKeyStore

Source Section

Connectivity

ftpSwStore

A reference to a ftpService that can be used for SW installation of the NE.

Data Source

OSSRC

Source Field

ftpSwStore

Source Section

Connectivity

hostname

This is the hostname of the Network Element. This field is not mandatory and is modifiable.

Data Source

OSSRC

Source Field

hostname

Source Section

Connectivity

ipAddress

This is the IP address of the Network Element.ip_v4 attribute

Data Source

OSSRC

Source Field

ipAddress

Source Section

Connectivity

isManaged

Select TRUE if the Network Element is managed by the OSS. Select False if the Network Element is to be displayed in the topology but not to be managed by the OSS.

Data Source

OSSRC

Source Field

isManaged

Source Section

ElementManagement

IubInfoRbsId

This information is used when creating the IUB link.

Data Source

OSSRC

Source Field

IubInfoRbsId

Source Section

ElementManagement

IubInfoRncModuleId

This information is used to create the IUB link.

Data Source

OSSRC

Source Field

IubInfoRncModuleId

Source Section

ElementManagement

ManagedElementId

This is used to give the Network Element a unique, unchangeable identity.

Data Source

OSSRC

managedElementType

The extra functions available depend on the Network Element type.

Data Source

OSSRC

Source Field

managedElementType

Source Section

ElementManagement

ManagedServiceAvailability

This provides an extra level of granularity needed for managed elements to define administration state from the OSS point of view.0: Not Managed. 1: Fully Managed, 20: Fault Management and EAM supported.

Data Source

OSSRC

Source Field

ManagedServiceAvailability

Source Section

ElementManagement

namingPort

This is the naming port of the Name Service on the Network Element itself (if a Name Service exists).

Data Source

OSSRC

Source Field

namingPort

Source Section

Protocol

namingUrl

The URL of the Naming Service (if applicable). In the Cello case this is the URL to the .ior file, which can then be used to connect to the CS on the Network Element.

Data Source

OSSRC

Source Field

namingUrl

Source Section

Protocol

NeadAttach

Aal2Ap_NodeB Primitive Calculations

The following is a list of primitive calculations for the Aal2Ap_NodeB entity.

Aal2_SuccAll_NodeB

The number of successful Aal2 connection establishment requests, incoming and outgoing. The success rate for all connection establishments.

Calculation

```
vsum(pmSuccInConnsRemote,pmSuccOutConnsRemote)
```

Aal2_UnSuccIn_NodeB

Sum of the rejected incoming Aal2 connection establishment requests.The requests has either rejected by this node, local, by another node, remote.

Calculation

```
vsum(pmUnSuccInConnsRemote,pmUnSuccInConnsLocal)
```

Aal2_UnSuccOut_NodeB

Sum of the rejected outgoing Aal2 connection establishment requests. The requests has either rejected by this node, local, by another node, remote.

Calculation

```
vsum(pmUnSuccInConnsRemote,pmUnSuccInConnsLocal)
```

Calculation

```
pmAverageRssi_11
```

pmAverageRssiP5MD_12

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -104.5..-104.0dBm

Calculation

```
pmAverageRssi_12
```

pmAverageRssiP5MD_13

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -104.0..-103.5dBm

Calculation

```
pmAverageRssi_13
```

pmAverageRssiP5MD_14

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -103.5..-103.0dBm

Calculation

```
pmAverageRssi_14
```

pmAverageRssiP5MD_15

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -103.0..-102.5dBm

Calculation

```
pmAverageRssi_15
```

pmAverageRssiP5MD_16

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -102.5..-102.0dBm

Calculation

```
pmAverageRssi_16
```

pmAverageRssiP5MD_17

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -102.0..-101.5dBm

Calculation

```
pmAverageRssi_17
```

pmAverageRssiP5MD_18

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -101.5..-101.0dBm

Calculation

```
pmAverageRssi_18
```

pmAverageRssiP5MD_19

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -101.0..-100.5dBm

Calculation

```
pmAverageRssi_19
```

pmAverageRssiP5MD_20

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -100.5..-100.0dBm

Calculation

```
pmAverageRssi_20
```

pmAverageRssiP5MD_21

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -100.0..-99.5dBm

Calculation

```
pmAverageRssi_21
```

pmAverageRssiP5MD_22

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -99.5..-99.0dBm

Calculation

```
pmAverageRssi_22
```

pmAverageRssiP5MD_23

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -99.0..-98.5dBm

Calculation

```
pmAverageRssi_23
```

pmAverageRssiP5MD_24

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -98.5..-98.0dBm

Calculation

```
pmAverageRssi_24
```

pmAverageRssiP5MD_25

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -98.0..-97.5dBm

Calculation

```
pmAverageRssi_25
```

pmAverageRssiP5MD_26

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -97.5..-97.0dBm

Calculation

```
pmAverageRssi_26
```

pmAverageRssiP5MD_27

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -97.0..-96.5dBm

Calculation

```
pmAverageRssi_27
```

pmAverageRssiP5MD_28

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -96.5..-96.0dBm

Calculation

```
pmAverageRssi_28
```

pmAverageRssiP5MD_29

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -96.0..-95.5dBm

Calculation

```
pmAverageRssi_29
```

pmAverageRssiP5MD_30

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -95.5..-95.0dBm

Calculation

```
pmAverageRssi_30
```

pmAverageRssiP5MD_31

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -95.0..-94.5dBm

Calculation

```
pmAverageRssi_31
```

pmAverageRssiP5MD_32

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -94.5..-94.0dBm

Calculation

```
pmAverageRssi_32
```

pmAverageRssiP5MD_33

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -94.0..-93.5dBm

Calculation

```
pmAverageRssi_33
```

pmAverageRssiP5MD_34

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -93.5..-93.0dBm

Calculation

```
pmAverageRssi_34
```

pmAverageRssiP5MD_35

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -93.0..-92.5dBm

Calculation

```
pmAverageRssi_35
```

pmAverageRssiP5MD_36

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -92.5..-92.0dBm

Calculation

```
pmAverageRssi_36
```

pmAverageRssiP5MD_37

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -92.0..-91.5dBm

Calculation

```
pmAverageRssi_37
```

pmAverageRssiP5MD_38

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -91.5..-91.0dBm

Calculation

```
pmAverageRssi_38
```

pmAverageRssiP5MD_39

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -91.0..-90.5dBm

Calculation

```
pmAverageRssi_39
```

pmAverageRssiP5MD_40

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -90.5..-90.0dBm

Calculation

```
pmAverageRssi_40
```

pmAverageRssiP5MD_41

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -90.0..-89.5dBm

Calculation

```
pmAverageRssi_41
```

pmAverageRssiP5MD_42

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -89.5..-89.0dBm

Calculation

```
pmAverageRssi_42
```

pmAverageRssiP5MD_43

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -89.0..-88.5dBm

Calculation

```
pmAverageRssi_43
```

pmAverageRssiP5MD_44

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -88.5..-88.0dBm

Calculation

```
pmAverageRssi_44
```

pmAverageRssiP5MD_45

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -88.0..-87.5dBm

Calculation

```
pmAverageRssi_45
```

pmAverageRssiP5MD_46

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -87.5..-87.0dBm

Calculation

```
pmAverageRssi_46
```

pmAverageRssiP5MD_47

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -87.0..-86.5dBm

Calculation

```
pmAverageRssi_47
```

pmAverageRssiP5MD_48

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -86.5..-86.0dBm

Calculation

```
pmAverageRssi_48
```

pmAverageRssiP5MD_49

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -86.0..-85.5dBm

Calculation

```
pmAverageRssi_49
```

pmAverageRssiP5MD_50

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -85.5..-85.0dBm

Calculation

```
pmAverageRssi_50
```

pmAverageRssiP5MD_51

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -85.0..-84.5dBm

Calculation

```
pmAverageRssi_51
```

pmAverageRssiP5MD_52

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -84.5..-84.0dBm

Calculation

```
pmAverageRssi_52
```

pmAverageRssiP5MD_53

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -84.0..-83.5dBm

Calculation

```
pmAverageRssi_53
```

pmAverageRssiP5MD_54

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -83.5..-83.0dBm

Calculation

```
pmAverageRssi_54
```

pmAverageRssiP5MD_55

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -83.0..-82.5dBm

Calculation

```
pmAverageRssi_55
```

pmAverageRssiP5MD_56

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -82.5..-82.0dBm

Calculation

```
pmAverageRssi_56
```

pmAverageRssiP5MD_57

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -82.0..-81.5dBm

Calculation

```
pmAverageRssi_57
```

pmAverageRssiP5MD_58

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -81.5..-81.0dBm

Calculation

```
pmAverageRssi_58
```

pmAverageRssiP5MD_59

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -81.0..-80.5dBm

Calculation

```
pmAverageRssi_59
```

pmAverageRssiP5MD_60

The average Received Signal Strength Indication (RSSI). Measured on TR device(s) every 100 ms, and the average value is calculated at the same rate. Number of samples in range -80.5..-80.0dBm

Calculation

```
pmAverageRssi_60
```

pmTxCarrierPowerP5MD_02

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 25.5..26dBm

Calculation

```
pmTXCarPwr_052
```

pmTxCarrierPowerP5MD_03

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 26..26.5dBm

Calculation

`pmTXCarPwr_053`

pmTxCarrierPowerP5MD_04

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 26.5..27dBm

Calculation

`pmTXCarPwr_054`

pmTxCarrierPowerP5MD_05

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 27..27.5dBm

Calculation

`pmTXCarPwr_055`

pmTxCarrierPowerP5MD_06

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 27.5..28dBm

Calculation

`pmTXCarPwr_056`

pmTxCarrierPowerP5MD_07

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 28..28.5dBm

Calculation

`pmTXCarPwr_057`

pmTxCarrierPowerP5MD_08

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 28.5..29dBm

Calculation

`pmTXCarPwr_058`

pmTxCarrierPowerP5MD_09

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 29..29.5dBm

Calculation

`pmTXCarPwr_059`

pmTxCarrierPowerP5MD_10

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 29.5..30dBm

Calculation

`pmTXCarPwr_060`

pmTxCarrierPowerP5MD_11

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 30..30.5dBm

Calculation

`pmTXCarPwr_061`

pmTxCarrierPowerP5MD_12

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 30.5..31dBm

Calculation

`pmTXCarPwr_062`

pmTxCarrierPowerP5MD_13

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 31..31.5dBm

Calculation

`pmTXCarPwr_063`

pmTxCarrierPowerP5MD_14

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 31.5..32dBm

Calculation

`pmTXCarPwr_064`

pmTxCarrierPowerP5MD_15

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 32..32.5dBm

Calculation

`pmTXCarPwr_065`

pmTxCarrierPowerP5MD_16

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 32.5..33dBm

Calculation

`pmTXCarPwr_066`

pmTxCarrierPowerP5MD_17

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 33..33.5dBm

Calculation

`pmTXCarPwr_067`

pmTxCarrierPowerP5MD_18

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 33.5..34dBm

Calculation

`pmTXCarPwr_068`

pmTxCarrierPowerP5MD_19

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 34..34.5dBm

Calculation

`pmTXCarPwr_069`

pmTxCarrierPowerP5MD_20

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 34.5..35dBm

Calculation

`pmTXCarPwr_070`

pmTxCarrierPowerP5MD_21

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 35..35.5dBm

Calculation

`pmTXCarPwr_071`

pmTxCarrierPowerP5MD_22

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 35.5..36dBm

Calculation

`pmTXCarPwr_072`

pmTxCarrierPowerP5MD_23

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 36..36.5dBm

Calculation

`pmTXCarPwr_073`

pmTxCarrierPowerP5MD_24

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 36.5..37dBm

Calculation

`pmTXCarPwr_074`

pmTxCarrierPowerP5MD_25

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 37..37.5dBm

Calculation

`pmTXCarPwr_075`

pmTxCarrierPowerP5MD_26

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 37.5..38dBm

Calculation

`pmTXCarPwr_076`

pmTxCarrierPowerP5MD_27

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 38..38.5dBm

Calculation

`pmTXCarPwr_077`

pmTxCarrierPowerP5MD_28

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 38.5..39dBm

Calculation

`pmTXCarPwr_078`

pmTxCarrierPowerP5MD_29

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 39..39.5dBm

Calculation

`pmTXCarPwr_079`

pmTxCarrierPowerP5MD_30

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 39.5..40dBm

Calculation

`pmTXCarPwr_080`

pmTxCarrierPowerP5MD_31

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 40..40.5dBm

Calculation

`pmTXCarPwr_081`

pmTxCarrierPowerP5MD_32

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 40.5..41dBm

Calculation

`pmTXCarPwr_082`

pmTxCarrierPowerP5MD_33

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 41..41.5dBm

Calculation

`pmTXCarPwr_083`

pmTxCarrierPowerP5MD_34

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 41.5..42dBm

Calculation

`pmTXCarPwr_084`

pmTxCarrierPowerP5MD_35

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 42..42.5dBm

Calculation

`pmTXCarPwr_085`

pmTxCarrierPowerP5MD_36

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 42.5..43dBm

Calculation

`pmTXCarPwr_086`

pmTxCarrierPowerP5MD_37

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 43..43.5dBm

Calculation

`pmTXCarPwr_087`

pmTxCarrierPowerP5MD_38

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 43.5..44dBm

Calculation

`pmTXCarPwr_088`

pmTxCarrierPowerP5MD_39

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 44..44.5dBm

Calculation

`pmTXCarPwr_089`

pmTxCarrierPowerP5MD_40

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 44.5..45dBm

Calculation

`pmTXCarPwr_090`

pmTxCarrierPowerP5MD_41

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 45..45.5dBm

Calculation

`pmTXCarPwr_091`

pmTxCarrierPowerP5MD_42

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 45.5..46dBm

Calculation

`pmTXCarPwr_092`

pmTxCarrierPowerP5MD_43

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 46..46.5dBm

Calculation

`pmTXCarPwr_093`

pmTxCarrierPowerP5MD_44

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 46.5..47dBm

Calculation

`pmTXCarPwr_094`

pmTxCarrierPowerP5MD_45

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 47..47.5dBm

Calculation

`pmTXCarPwr_095`

pmTxCarrierPowerP5MD_46

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 47.5..48dBm

Calculation

`pmTXCarPwr_096`

pmTxCarrierPowerP5MD_47

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 48..48.5dBm

Calculation

`pmTXCarPwr_097`

pmTxCarrierPowerP5MD_48

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 48.5..49dBm

Calculation

`pmTXCarPwr_098`

pmTxCarrierPowerP5MD_49

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 49..49.5dBm

Calculation

`pmTXCarPwr_099`

pmTxCarrierPowerP5MD_50

(Retired in Utran P6)The transmitted carrier power. Measured on the TR device(s) every 100 ms. Number of samples in range 49.5..50dBm

Calculation

`pmTXCarPwr_100`

Carrier Peg Counts

The following is a list of peg counts for the Carrier entity.

The distribution of the DL Channel Element utilization, as percentages of the license limit for the DownlinkBaseBandPool. If two baseband pools are used, the licensed capacity of DL Channel Elements is distributed between the two baseband pools according to the parameter NodeBFunction::dlLicFractBBPool2. The licensed capacity is not distributed at delayed activation of license key, at emergency unlock, when the license key value is 9999, and when license key is invalid/missing. Range: Number of sampled value in range 20..40%

pmSumNackedBitsCellEulTti2

Counter for the total amount of nacked data received in kbits after HARQ process on MAC-e level for all 2 ms TTI users in a cell, excluding data that is NACKed due to lack of hardware to decode the frame. Note that k = 1000.
