Index 3

This is the optional preamble (an untitled section body). Useful for writing simple sectionless documents consisting only of a preamble.

The optional abstract (one or more paragraphs) goes here.

This document is an *AsciiDoc* article skeleton containing briefly annotated element placeholders plus a couple of example index entries and footnotes. The preface, appendix, bibliography, glossary and index section titles are significant (*specialsections*).

1. The First Section

Article sections start at level 1 and can be nested up to four levels deep. [1]

And now for something completely different: monkeys, lions and tigers (Bengal and Siberian) using the alternative syntax index entries. Note that multi-entry terms generate separate index entries.

Here are a couple of image examples: an example inline image followed by an example block image:

[1] An example footnote.

Figure 1. Tiger block image

Followed by an example table:

Table 1. An example table

Option	Description
-a *USER GROUP*	Add *USER* to *GROUP*.
-R *GROUP*	Disables access to *GROUP*.

1.1. Sub-section with Anchor

Sub-section at level 2.

1.1.1. A Nested Sub-section

Sub-section at level 3.

1.1.1.1. Yet another nested Sub-section

Sub-section at level 4.

This is the maximum sub-section depth supported by the distributed *AsciiDoc* configuration. [2]

2. The Second Section

Article sections are at level 1 and can contain sub-sections nested up to four deep.

[2] A second example footnote.

An example link to anchor at start of the first sub-section.

An example link to a bibliography entry [taoup].

A. Example Appendix

AsciiDoc article appendices are just just article sections with *specialsection* titles.

A.1. Appendix Sub-section

Appendix sub-section at level 2.

Bibliography

The bibliography list is an example of an *AsciiDoc* SimpleList, the *AsciiDoc* source list items are bulleted with a + character.

[taoup] Eric Steven Raymond. *The Art of Unix Programming*. Addison-Wesley. ISBN 0-13-142901-9.

[walsh-muellner] Norman Walsh & Leonard Muellner. *DocBook - The Definitive Guide*. O'Reilly & Associates. 1999. ISBN 1-56592-580-7.

Glossary

Glossaries are optional. Glossaries entries are an example of *AsciiDoc* VariableList entries, the *AsciiDoc* source entry terms are terminated by the ":-" characters.

A glossary term	The corresponding (indented) definition.
A second glossary term	The corresponding (indented) definition.

Index

B

Bengal Tiger, 1
Big cats
  Lions, 1
  Tigers
    Bengal Tiger, 1
    Siberian Tiger, 1

E

Example index entry, 1

L

Lions, 1

M

monkeys, 1

S

Second example index entry, 3
Siberian Tiger, 1

T

Tigers
- Bengal Tiger, 1
- Siberian Tiger, 1
