TRADEMARKS

Following is the most current list of National Semiconductor Corporation's trademarks and registered trademarks.

AirShare®	COP8™	PHYTER®
AT/LANTIC®	DNR®	Silicon Dust™
BI-FET®	Geode™	SIMPLE SWITCHER®
Boomer®	Mediamatics™	Stylized N®(National Worldmark)
COMBO®	National Semiconductor®	Virtual System Architecture®
Comilinear®	Navigator®	VSA™
CompactRISC™	Overture®	WebPAD™

AT® is a registered trademark of International Business Machines Corporation.

Dolby® is a registered trademark of Dolby Labs.

IC® is a registered trademark of the Philips Corporation.

iceMASTER™ is a trademark of MetaLink Corporation.

K6™ is a trademark of Advanced Micro Devices, Inc.

Lap-Link® is a registered trademark of Travelling Software.

LocalTalk™ is a trademark of Apple Computer, Inc.

LT® is a registered trademark of Linear Technology Corporation.

Microsoft™ is a trademark of the Microsoft Corporation.

PAL® is a registered trademark of and used under license from Advanced Micro Devices, Inc.

PC-AT® and PC-XT® are registered trademarks of International Business Machines Corporation.

PC® is a registered trademark of International Business Machines Corporation.

Pentium II® is a registered trademark of Intel Corporation.

Pentium™ is a trademark of Intel Corporation.

PowerPC® is a registered trademark of IBM.

SMBus™ is a trademark of Intel Corporation.

SPI™ is a trademark of Motorola, Inc.

Teflon® is a registered trademark of DuPont.

Windows® is a registered trademark of Microsoft Corporation.

Z80™ is a trademark of Zilog Corporation.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

National Semiconductor Corporation 2900 Semiconductor Drive, P.O. Box 58090, Santa Clara, California 95052-8090

National does not assume any responsibility for use of any circuitry described, no circuit patent licenses are implied, and National reserves the right, at any time without notice, to change said circuitry or specifications.

Introduction

National continues its leadership in both Analog and Interface with innovations in performance, packaging, and integration. We are pleased to bring you highlights of all our Analog and Interface products in this databook.

Since the late 1960s, when our first operational amplifiers and regulators were developed, National has been a leading manufacturer of analog integrated circuits. Interface products, beginning with line drivers and receivers, were added in 1973. From the first monolithic regulator, the LM100, to the new chip-scale-packaged product families, many of these products have been "firsts" in performance and function.

The 2001 Analog/Interface Databook contains abbreviated datasheets for thousands of Analog and Interface products. Providing an overview of product capabilities and applications, these short datasheets are the first few pages extracted from the complete document. Selection guides give additional assistance in selecting the products needed to meet the system requirements.

A CD-ROM accompanies this databook, containing the full datasheet for each product. In addition, the CD-ROM includes application notes, information on Military-Aerospace products, and complete mechanical specifications for packages.

Information on all National products, including those released since this publication, can be found on the National web site at www.national.com.

Product Status Definitions

Definition of Terms

Data Sheet Identification	Product Status	Definition
Advance Information	Formative or In Design	This data sheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	This data sheet contains preliminary data, and supplementary data will be published at a later date. National Semiconductor Corporation reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.
No Identification Noted	Full Production	This data sheet contains final specifications. National Semiconductor Corporation reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.
Obsolete	Not In Production	This data sheet contains specifications on a product that has been discontinued by National Semiconductor Corporation. The data sheet is printed for reference information only.

National Semiconductor Corporation reserves the right to make changes without further notice to any products herein to improve reliability, function or design. National does not assume any liability arising out of the application or use of any product or circuit described herein; neither does it convey any license under its patent rights, nor the rights of others.

LM833 Dual Audio Operational Amplifier.	1-122
LM837 Low Noise Quad Operational Amplifier.	1-125
LMC2001 High Precision, 6MHz Rail-To-Rail Output Operational Amplifier.	1-128
LMC6001 Ultra Ultra-Low Input Current Amplifier.	1-131
LMC6022 Low Power CMOS Dual Operational Amplifier.	1-136
LMC6024 Low Power CMOS Quad Operational Amplifier.	1-140
LMC6032 CMOS Dual Operational Amplifier.	1-144
LMC6034 CMOS Quad Operational Amplifier.	1-148
LMC6035/LMC6036 Low Power 2.7V Single Supply CMOS Operational Amplifiers.	1-152
LMC6041 CMOS Single Micropower Operational Amplifier.	1-156
LMC6042 CMOS Dual Micropower Operational Amplifier.	1-160
LMC6044 CMOS Quad Micropower Operational Amplifier.	1-164
LMC6061 Precision CMOS Single Micropower Operational Amplifier.	1-168
LMC6062 Precision CMOS Dual Micropower Operational Amplifier.	1-172
LMC6064 Precision CMOS Quad Micropower Operational Amplifier.	1-176
LMC6081 Precision CMOS Single Operational Amplifier.	1-180
LMC6082 Precision CMOS Dual Operational Amplifier.	1-184
LMC6084 Precision CMOS Quad Operational Amplifier.	1-188
LMC6442 Dual Micropower Rail-to-Rail Output Single Supply Operational Amplifier.	1-192
LMC6462 Dual/LMC6464 Quad Micropower, Rail-to-Rail Input and Output CMOS Operational Amplifier.	1-197
LMC6482 CMOS Dual Rail-To-Rail Input and Output Operational Amplifier.	1-202
LMC6484 CMOS Quad Rail-to-Rail Input and Output Operational Amplifier.	1-207
LMC6492 Dual/LMC6494 Quad CMOS Rail-to-Rail Input and Output Operational Amplifier.	1-212
LMC6572/LMC6574 Dual and Quad Low Voltage (2.7V and 3V) Operational Amplifier.	1-216
LMC660 CMOS Quad Operational Amplifier.	1-220
LMC662 CMOS Dual Operational Amplifier.	1-224
LMC7101 Tiny Low Power Operational Amplifier with Rail-To-Rail Input and Output.	1-228
LMC7111 Tiny CMOS Operational Amplifier with Rail-to-Rail Input and Output.	1-234
LMC8101 Rail-to-Rail Input and Output, 2.7V Op Amp in micro SMD package with Shutdown.	1-240
LMV101/102/105/110 Fixed-Gain Amplifiers.	1-246
LMV111 Operational Amplifier with Bias Network.	1-249
LMV321/LMV358/LMV324 Single/Dual/Quad General Purpose, Low Voltage, Rail-to-Rail Output Operational Amplifiers.	1-252
LMV710 and LMV711 Low Power, RRIO Operational Amplifiers with High Output Current Drive and Shutdown Option.	1-256
LMV721/LMV722 10MHz, Low Noise, Low Voltage, and Low Power Operational Amplifier.	1-260
LMV751 Low Noise, Low Vos, Single Op Amp.	1-264
LMV821 Single/LMV822 Dual/LMV824 Quad Low Voltage, Low Power, R-to-R Output, 5 MHz Op Amps.	1-267

LMV921/LMV922/LMV924 Single, Dual and Quad 1.8V, 1MHz, Low Power Operational Amplifiers with Rail-To-Rail Input and Output.	1-272
LP324/LP2902 Micropower Quad Operational Amplifier.	1-278
LPC660 Low Power CMOS Quad Operational Amplifier.	1-281
LPC661 Low Power CMOS Operational Amplifier.	1-285
LPC662 Low Power CMOS Dual Operational Amplifier.	1-289
LPV321 Single/LPV358 Dual/LPV324 Quad General Purpose, Low Voltage, Low Power, Rail-to-Rail Output Operational Amplifiers.	1-293
TL082 Wide Bandwidth Dual JFET Input Operational Amplifier.	1-297

Section 2 Amplifiers - High Speed

High Speed Amplifiers/Buffers/Multiplexers/Variable Gain Amplifiers Selection Guide.	2-4
High Speed Op Amp Definition Of Terms.	2-13
CLC111 Ultra-High Slew-Rate, Closed-Loop Buffer.	2-15
CLC114 Quad, Low-Power Video Buffer.	2-17
CLC400 Fast Settling, Wideband Low-Gain Monolithic Op Amp.	2-19
CLC401 Fast Settling, Wideband High-Gain Monolithic Op Amp.	2-21
CLC404 Wideband, High-Slew Rate, Monolithic Op Amp.	2-23
CLC405 Low-Cost, Low-Power, 110MHz Op Amp with Disable.	2-25
CLC406 Wideband, Low-Power Monolithic Op Amp.	2-27
CLC409 Very Wideband, Low Distortion Monolithic Op Amp.	2-29
CLC410 Fast Settling, Video Op Amp with Disable.	2-31
CLC411 High-Speed Video Op Amp with Disable.	2-33
CLC412 Dual Wideband Video Op Amp.	2-35
CLC414 Quad, Low-Power Monolithic Op Amp.	2-37
CLC415 Quad, Wideband Monolithic Op Amp.	2-39
CLC420 High-Speed, Voltage Feedback Op Amp.	2-41
CLC425 Ultra Low Noise Wideband Op Amp.	2-43
CLC426 Wideband, Low-Noise, Voltage Feedback Op Amp.	2-45
CLC428 Dual Wideband, Low-Noise, Voltage Feedback Op Amp.	2-47
CLC430 General Purpose 100MHz Op Amp with Disable.	2-49
CLC431/432 Dual Wideband Monolithic Op Amp with Disable.	2-51
CLC440 High-Speed, Low-Power, Voltage Feedback Op Amp.	2-54
CLC446 400MHz, 50mW Current-Feedback Op Amp.	2-56
CLC449 1.1GHz Ultra-Wideband Monolithic Op Amp.	2-58
CLC450 Single Supply, Low-Power, High Output, Current Feedback Amplifier.	2-60
CLC452 Single Supply, Low-Power, High Output, Current Feedback Amplifier.	2-62
CLC501 High-Speed, Output Clamping Op Amp.	2-64
CLC502 Clamping, Low-Gain Op Amp with Fast 14-bit Settling.	2-66
CLC505 High-Speed, Programmable-Supply Current, Monolithic Op Amp.	2-67
CLC520 Amplifier with Voltage Controlled Gain, AGC +Amp +.	2-68
CLC522 Wideband Variable-Gain Amplifier.	2-70
CLC5506 Gain Trim Amplifier (GTA).	2-72

Table of Contents (Continued)

CLC5509 Ultra-Low Noise Preamplifier.	2-75
CLC5523 Low-Power, Variable Gain Amplifier.	2-77
CLC5526 Digital Variable Gain Amplifier (DVGA).	2-79
CLC5602 Dual, High Output, Video Amplifier.	2-81
CLC5612 Dual, High Output, Programmable Gain Buffer.	2-83
CLC5622 Dual, High Output, Video Amplifier.	2-85
CLC5623 Triple, High Output, Video Amplifier.	2-87
CLC5632 Dual, High Output, Programmable Gain Buffer.	2-89
CLC5633 Triple, High Output, Programmable Gain Buffer.	2-91
CLC5644 Low-Power, Low-Cost, Quad Operational Amplifier.	2-93
CLC5654 Very High-Speed, Low-Cost, Quad Operational Amplifier.	2-95
CLC5665 Low Distortion Amplifier with Disable.	2-97
CLC5801 High Speed Low Noise Voltage Feedback Amplifier.	2-99
CLC5802 Dual Low-Noise, Voltage Feedback Op Amp.	2-101
LM6121/LM6221/LM6321 High Speed Buffer.	2-103
LM6161/LM6261/LM6361 High Speed Operational Amplifier.	2-105
LM6162 High Speed Operational Amplifier.	2-106
LM6164/LM6264/LM6364 High Speed Operational Amplifier.	2-107
LM6165/LM6265/LM6365 High Speed Operational Amplifier.	2-108
LM6171 High Speed Low Power Low Distortion Voltage Feedback Amplifier.	2-109
LM6172 Dual High Speed, Low Power, Low Distortion, Voltage Feedback Amplifiers.	2-111
LM6181 100 mA, 100 MHz Current Feedback Amplifier.	2-113
LM6182 Dual 100 mA Output, 100 MHz Current Feedback Amplifier.	2-114
LM7121 235 MHz Tiny Low Power Voltage Feedback Amplifier.	2-116
LM7131 Tiny High Speed Single Supply Operational Amplifier.	2-117
LM7171 Very High Speed, High Output Current, Voltage Feedback Amplifier.	2-118
Section 3 Analog Microcontrollers	
The 8-Bit COP8 Family: Optimized for Value.	3-4
ROM Products.	3-9
COP912C 8-Bit Microcontroller.	3-10
COP820C/840C Family 8-Bit CMOS ROM Based Microcontrollers with 1k or 2k Memory.	3-12
COP680C/COP681C/COP682C/COP880C/COP881C/ COP882C/COP980C/COP981C/COP982C Microcontrollers.	3-14
COP820CJ/COP840CJ Family 8-Bit CMOS ROM Based Microcontrollers with 1k or 2k Memory, Comparator and Brown Out Detector.	3-17
COP688CL/COP684CL, COP888CL/COP884CL, COP988CL/COP984CL 8-Bit Microcontroller.	3-20
COP8SE Family 8-Bit CMOS ROM Based and OTP Microcontrollers with 4k Memory and 128 Bytes EERAM.	3-24
COP888FH 8-Bit CMOS ROM Based Microcontrollers with 12k Memory, Comparators, USART and Hardware Multiply/Divide.	3-28

Table of Contents (Continued)

COP888xG/CS Family 8-Bit CMOS ROM Based Microcontrollers with 4k to 24k Memory, Comparators and USART.	3-32
COP884BC/COP885BC 8-Bit CMOS ROM Based Microcontrollers with 2k Memory, Comparators, and CAN Interface.	3-36
COP888EB 8-Bit CMOS ROM Based Microcontrollers with 8k Memory, CAN Interface, 8-Bit A/D, and USART.	3-39
COP888CF 8-Bit CMOS ROM Based Microcontrollers with 4k Memory and A/D Converter.	3-43
COP888GD 8-Bit CMOS ROM Based Microcontrollers with 16k Memory and 8-Channel A/D.	3-47
COP8ACC Family 8-Bit CMOS ROM Based and OTP Microcontrollers with 4k or 16k Memory and High Resolution A/D.	3-50
COP888EK 8-Bit CMOS ROM Based Microcontrollers with 8k Memory, Comparator, and Single-slope A/D Capability.	3-53
COP888GW 8-Bit Microcontroller with Pulse Train Generators and Capture Modules.	3-57
OTP Products.	3-59
COP87LxxCJ/RJ Family 8-Bit CMOS OTP Microcontrollers with 4k or 32k Memory and Comparator.	3-60
COP8SA Family 8-Bit CMOS ROM Based and One-Time Programmable (OTP) Microcontroller with 1k to 4k Memory, Power On Reset, and Very Small Packaging.	3-63
COP87L88CL 8-Bit One-Time Programmable (OTP) Microcontroller.	3-68
COP8SG Family 8-Bit CMOS ROM Based and OTP Microcontrollers with 8k to 32k Memory, Two Comparators and USART.	3-72
COP87L88FH 8-Bit CMOS OTP Microcontrollers with 16k Memory, Comparators, USART and Hardware Multiply/Divide.	3-78
COP87L84BC 8-Bit CMOS OTP Microcontrollers with 16k Memory, Comparators, and CAN Interface.	3-82
COP87L88EB/RB Family 8-Bit CMOS OTP Microcontrollers with 16k or 32k Memory, CAN Interface, 8-Bit A/D, and USART.	3-84
COP87L88CF 8-Bit CMOS OTP Microcontrollers with 16k Memory and A/D Converter.	3-88
COP87L88GD/RD Family 8-Bit CMOS OTP Microcontrollers with 16k or 32k Memory and 8-Channel A/D with Prescaler.	3-92
COP87L88EK/RK Family 8-Bit CMOS OTP Microcontrollers with 8k or 32k Memory, Comparator, and Single-slope A/D Capability.	3-95
COP87L88RW 8-Bit One-Time Programmable (OTP) Microcontroller with Pulse Train Generators and Capture Modules.	3-99
Flash Products.	3-102
COP8SBR9/COP8SCR9/COP8SDR9 8-Bit CMOS Flash Based Microcontroller with 32k Memory, Virtual EEPROM and Brownout.	3-103
Section 4 Audio	
Audio Power Amplifiers.	4-5
LM1875 20W Audio Power Amplifier.	4-6
LM1876 <i>Overture</i> Audio Power Amplifier Series Dual 20W Audio Power Amplifier with Mute and Standby Modes.	4-7

Table of Contents (Continued)

LM1877 Dual Audio Power Amplifier.	4-8
LM2876 <i>Overture</i> Audio Power Amplifier Series High-Performance 40W Audio Power Amplifier w/Mute.	4-10
LM380 2.5W Audio Power Amplifier.	4-12
LM384 5W Audio Power Amplifier.	4-14
LM386 Low Voltage Audio Power Amplifier.	4-15
LM3875 <i>Overture</i> Audio Power Amplifier Series High-Performance 56W Audio Power Amplifier.	4-16
LM3876 <i>Overture</i> Audio Power Amplifier Series High-Performance 56W Audio Power Amplifier w/Mute.	4-18
LM3886 <i>Overture</i> Audio Power Amplifier Series High-Performance 68W Audio Power Amplifier w/Mute.	4-20
LM4651 & LM4652 <i>Overture</i> Audio Power Amplifier 170W Class D Audio Power Amplifier Solution.	4-22
LM4663 Boomer 2 Watt Stereo Class D Audio Power Amplifier with Stereo Headphone Amplifier.	4-23
LM4700 <i>Overture</i> Audio Power Amplifier Series 30W Audio Power Amplifier with Mute and Standby Modes.	4-24
LM4701 <i>Overture</i> Audio Power Amplifier Series 30W Audio Power Amplifier with Mute and Standby Modes.	4-25
LM4752 Stereo 11W Audio Power Amplifier.	4-26
LM4753 Dual 10W Audio Power Amplifier w/Mute, Standby and Volume Control.	4-27
LM4755 Stereo 11W Audio Power Amplifier with Mute.	4-29
LM4765 <i>Overture</i> Audio Power Amplifier Series Dual 30W Audio Power Amplifier with Mute and Standby Modes.	4-30
LM4766 <i>Overture</i> Audio Power Amplifier Series Dual 40W Audio Power Amplifier with Mute.	4-31
LM4808 Boomer Dual 105 mW Headphone Amplifier.	4-32
LM4830 Two-Way Audio Amplification System with Volume Control.	4-33
LM4831 Boomer Multimedia Computer Audio Chip.	4-35
LM4832 Boomer Digitally Controlled Tone and Volume Circuit with Stereo Audio Power Amplifier, Microphone Preamp Stage and National 3D Sound.	4-36
LM4834 Boomer 1.75W Audio Power Amplifier with DC Volume Control and Microphone Preamp.	4-37
LM4835 Boomer Stereo 2W Audio Power Amplifiers with DC Volume Control and Selectable Gain.	4-38
LM4836 Boomer Stereo 2W Audio Power Amplifiers with DC Volume Control, Bass Boost, and Input Mux.	4-39
LM4850 Boomer Mono 1.5 W / Stereo 300 mW Power Amplifier.	4-40
LM4860 Boomer Series 1W Audio Power Amplifier with Shutdown Mode.	4-42
LM4861 Boomer 1.1W Audio Power Amplifier with Shutdown Mode.	4-43
LM4862 Boomer 675 mW Audio Power Amplifier with Shutdown Mode.	4-44
LM4863 Boomer Dual 2.2W Audio Amplifier Plus Stereo Headphone Function.	4-45
LM4864 Boomer 300 mW Audio Power Amplifier with Shutdown Mode.	4-47

Table of Contents (Continued)

LM4865 Boomer 750 mW Audio Power Amplifier with DC Volume Control and Headphone Switch.	4-48
LM4870 Boomer 1.1W Audio Power Amplifier with Shutdown Mode.	4-49
LM4871 Boomer 1.1W Audio Power Amplifier with Shutdown Mode.	4-50
LM4872 Boomer 1 Watt Audio Power Amplifier in micro SMD package.	4-51
LM4873 Boomer Dual 2.1W Audio Amplifier Plus Stereo Headphone Function.	4-52
LM4876 Boomer 1.1W Audio Power Amplifier with Logic Low Shutdown.	4-54
LM4877 Boomer 1 Watt Audio Power Amplifier in micro SMD package with Shutdown Logic Low.	4-55
LM4880 Boomer Dual 250 mW Audio Power Amplifier with Shutdown Mode.	4-56
LM4881 Boomer Dual 200 mW Headphone Amplifier with Shutdown Mode.	4-58
LM4882 Boomer 250mW Audio Power Amplifier with Shutdown Mode.	4-59
LM4890 Boomer 1 Watt Audio Power Amplifier.	4-60
LM675 Power Operational Amplifier.	4-62
Audio Controls and Signal Processing.	4-63
LM1036 Dual DC Operated Tone/Volume/Balance Circuit.	4-64
LM1971 <i>Overture</i> Audio Attenuator Series Digitally Controlled 62 dB Audio Attenuator with/Mute.	4-65
LM1972 μ Pot 2-Channel 78dB Audio Attenuator with Mute.	4-67
LM1973 μ Pot3-Channel 76dB Audio Attenuator with Mute.	4-68
LM3914 Dot/Bar Display Driver.	4-69

A/D Converter Definition Of Terms.	6-8
D/A Converter Definition Of Terms.	6-10
ADC0801/ADC0802/ADC0803/ADC0804/ADC0805 8-Bit μ P Compatible A/D Converters.	6-11
ADC08031/ADC08032/ADC08034/ADC08038 8-Bit High-Speed Serial I/O A/D Converters with Multiplexer Options, Voltage Reference, and Track/Hold Function.	6-13
ADC08061/ADC08062 500 ns A/D Converter with S/H Function and Input Multiplexer.	6-15
ADC0808/ADC0809 8-Bit μ P Compatible A/D Converters with 8-Channel Multiplexer.	6-18
ADC08100 8-Bit, 100 MSPS, 1.3 mW/MSPS A/D Converter.	6-20
ADC08131/ADC08134/ADC08138 8-Bit High-Speed Serial I/O A/D Converters with Multiplexer Options, Voltage Reference, and Track/Hold Function.	6-23

Table of Contents (Continued)

ADC0816/ADC0817 8-Bit μ P Compatible A/D Converters with 16-Channel Multiplexer.	6-25
ADC08161 500 ns A/D Converter with S/H Function and 2.5V Bandgap Reference. . .	6-27
ADC0820 8-Bit High Speed μ P Compatible A/D Converter with Track/Hold Function. .	6-29
ADC0831/ADC0832/ADC0834/ADC0838 8-Bit Serial I/O A/D Converters with Multiplexer Options.	6-31
ADC08351 8-Bit, 42 MSPS, 40 mW A/D Converter.	6-34
ADC0844/ADC0848 8-Bit μ P Compatible A/D Converters with Multiplexer Options. . . .	6-37
ADC08831/ADC08832 8-Bit Serial I/O CMOS A/D Converters with Multiplexer and Sample/Hold Function.	6-39
ADC1001 10-Bit μ P Compatible A/D Converter.	6-41
ADC10030 10-Bit, 30 MSPS, 125 mW A/D Converter with Internal Sample and Hold. .	6-42
ADC1005 10-Bit μ P Compatible A/D Converter.	6-46
ADC10061/ADC10062/ADC10064 10-Bit 600 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-47
ADC10154/ADC10158 10-Bit Plus Sign 4 μ s ADCs with 4- or 8-Channel MUX, Track/Hold and Reference.	6-50
ADC10221 10-Bit, 15 MSPS, 98 mW A/D Converter with Internal Sample and Hold. . .	6-52
ADC10321 10-Bit, 20 MSPS, 98 mW A/D Converter with Internal Sample and Hold. . .	6-56
ADC10461/ADC10462/ADC10464 10-Bit 600 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-60
ADC1061 10-Bit High-Speed μ P-Compatible A/D Converter with Track/Hold Function.	6-62
ADC10662/ADC10664 10-Bit 360 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-64
ADC10731/ADC10732/ADC10734/ADC10738 10-Bit Plus Sign Serial I/O A/D Converters with Mux, Sample/Hold and Reference.	6-67
ADC1173 8-Bit, 3-Volt, 15 MSPS, 33 mW A/D Converter.	6-70
ADC1175 8-Bit, 20 MHz, 60 mW A/D Converter.	6-73
ADC1175-50 8-Bit, 50 MSPS, 125 mW A/D Converter.	6-76
ADC12H030/ADC12H032/ADC12H034/ADC12H038, ADC12030/ADC12032/ADC12034/ADC12038 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-80
ADC12L030/ADC12L032/ADC12L034/ADC12L038 3.3V Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-84
ADC12041 12-Bit Plus Sign 216 kHz Sampling Analog-to-Digital Converter.	6-88
ADC12048 12-Bit Plus Sign 216 kHz 8-Channel Sampling Analog-to-Digital Converter.	6-91
ADC12081 12-Bit, 5 MHz Self-Calibrating, Pipelined A/D Converter with Internal Sample & Hold.	6-95
ADC12130/ADC12132/ADC12138 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-99
ADC12181 12-Bit, 10 MHz Self-Calibrating, Pipelined A/D Converter with Internal Sample & Hold.	6-103
ADC12191 12-Bit, 10 MHz Self-Calibrating, Pipelined A/D Converter with Internal Sample & Hold.	6-107
ADC12281 12-Bit, 20 MSPS Single-Ended Input, Pipelined A/D Converter.	6-111

Table of Contents (Continued)

ADC14061 Self-Calibrating 14-Bit, 2.5 MSPS, 390 mW A/D Converter.	6-115
ADC14071 14-Bit, 7 MSPS, 380 mW A/D Converter.	6-120
ADC14161 Low-Distortion, Self-Calibrating 14-Bit, 2.5 MSPS, 390 mW A/D Converter.	6-124
ADC16061 Self-Calibrating 16-Bit, 2.5 MSPS, 390 mW A/D Converter.	6-129
ADCV0831 8 Bit Serial I/O Low Voltage Low Power ADC with Auto Shutdown in a SOT Package.	6-134
CLC5956 12-bit, 65 MSPS Broadband Monolithic A/D Converter.	6-135
CLC5958 14-Bit, 52 MSPS A/D Converter.	6-137
DAC0800/DAC0802 8-Bit Digital-to-Analog Converters.	6-139
DAC0808 8-Bit D/A Converter.	6-140
DAC0830/DAC0832 8-Bit μ P Compatible, Double-Buffered D to A Converters.	6-142
LM12454/LM12458/LM12H458 12-Bit + Sign Data Acquisition System with Self-Calibration.	6-144
LM12L458 12-Bit + Sign Data Acquisition System with Self-Calibration.	6-147

Section 7 Flat Panel Display Circuits

Flat Panel Display (FPD) Link and LDI Selection Guide.	7-3
DS90C363A/DS90CF363A +3.3V Programmable LVDS Transmitter 18-Bit Flat Panel Display (FPD) Link—65 MHz +3.3V LVDS Transmitter 18-Bit Flat Panel Display (FPD) Link—65 MHz.	7-5

LM20 2.4V, 10 μ A, SC70, micro SMD Temperature Sensor.	12-6
LM34 Precision Fahrenheit Temperature Sensors.	12-8
LM35 Precision Centigrade Temperature Sensors.	12-10

Table of Contents (Continued)

LM45 SOT-23 Precision Centigrade Temperature Sensors.	12-12
LM50 SOT-23 Single-Supply Centigrade Temperature Sensor.	12-13
LM56 Dual Output Low Power Thermostat.	12-14
LM60 2.7V, SOT-23 Temperature Sensor.	12-16
LM61 2.7V, SOT-23 or TO-92 Temperature Sensor.	12-17
LM62 2.7V, 15.6 mV/°C SOT-23 Temperature Sensor.	12-19
LM66 Dual Output Internally Preset Thermostat.	12-20
LM70 SPI/MICROWIRE 10-Bit Plus Sign Digital Temperature Sensor.	12-21
LM74 SPI/MICROWIRE 12-Bit Plus Sign Temperature Sensor.	12-24
LM75 Digital Temperature Sensor and Thermal watchdog with Two-Wire Interface.	12-27
LM76 ±0.5°C, ±1°C, 12-Bit + Sign Digital Temperature Sensor and Thermal Window Comparator with Two-Wire Interface.	12-29
LM77 9-Bit + Sign Digital Temperature Sensor and Thermal Window Comparator with Two-Wire Interface.	12-31
LM80 Serial Interface ACPI-Compatible Microprocessor System Hardware Monitor.	12-33
LM81 Serial Interface ACPI-Compatible Microprocessor System Hardware Monitor.	12-36
LM82 Remote Diode and Local Digital Temperature Sensor with Two-Wire Interface.	12-40
LM83 Triple-Diode Input and Local Digital Temperature Sensor with Two-Wire Interface.	12-43
LM84 Diode Input Digital Temperature Sensor with Two-Wire Interface.	12-46
LM87 Serial Interface System Hardware Monitor with Remote Diode Temperature Sensing.	12-49
LM92 ±0.33°C Accurate, 12-Bit + Sign Temperature Sensor and Thermal Window Comparator with Two-Wire Interface.	12-52
LM134/LM234/LM334 3-Terminal Adjustable Current Sources.	12-54
LM135/LM235/LM335, LM135A/LM235A/LM335A Precision Temperature Sensors.	12-55
Section 13 Video Circuits	
Video Circuits Selection Guide.	13-3
LM1279 110 MHz RGB Video Amplifier System with OSD.	13-4
LM1281 85 MHz RGB Video Amplifier System with On Screen Display (OSD).	13-5
LM1282 110 MHz RGB Video Amplifier System with On Screen Display (OSD).	13-6
LM1283 140 MHz RGB Video Amplifier System with On Screen Display (OSD).	13-7
LM2202 230 MHz Video Amplifier System.	13-8
LM1253A Monolithic Triple 180 MHz I ² C CRT Pre-amp With Integrated Analog On Screen Display (OSD) Generator.	13-9
LM2453 Monolithic Triple 6 nS CRT Driver With Integrated Clamp and G1 Blanking.	13-12
LM2402 Monolithic Triple 3 ns CRT Driver.	13-14
LM2403 Monolithic Triple 4.5 nS CRT Driver.	13-15
LM2405 Monolithic Triple 7 ns CRT Driver.	13-16
LM2407 Monolithic Triple 7.5 nS CRT Driver.	13-17
LM2409 Monolithic Triple 9.5 ns CRT Driver.	13-18
LM2415 Monolithic Triple 5.5 ns CRT Driver.	13-19
LM2435 Monolithic Triple 5.5 ns CRT Driver.	13-20

Table of Contents (Continued)

LM2437 Monolithic Triple 7.5 ns CRT Driver.	13-21
LM2438 Monolithic Triple 13.5 ns CRT Driver.	13-22
LM2439 Monolithic Triple 9.5 ns CRT Driver.	13-23
Section 14 Voltage Control and Supervision Products	
Voltage Control and Supervisor Products Selection Guide.	14-3
LM809/LM810 3-Pin Microprocessor Reset Circuits.	14-5
LM2601 Adapter Interface Circuit.	14-7
LM3411 Precision Secondary Regulator/Driver.	14-9
LM3812/LM3813 Precision Current Gauge IC with Ultra Low Loss Sense Element and PWM Output.	14-11
LM3814/LM3815 Fast Current Gauge IC with Ultra Low Loss Sense Element and PWM Output.	14-13
LM3822 Precision Current Gauge IC with Internal Zero Ohm Sense Element and PWM Output.	14-15
LM3824 Precision Current Gauge IC with Internal Zero Ohm Sense Element and PWM Output.	14-17
LMC6953 PCI Local Bus Power Supervisor.	14-19
LP3470 Tiny Power On Reset Circuit.	14-21
Section 15 Voltage References	
Voltage Reference Selection Guide.	15-3
LM10 Operational Amplifier and Voltage Reference.	15-9
LM129/LM329 Precision Reference.	15-10
LM199/LM299/LM399/LM3999 Precision Reference.	15-12
LM134/LM234/LM334 3-Terminal Adjustable Current Sources.	15-14
LM136-2.5/LM236-2.5/LM336-2.5V Reference Diode.	15-15
LM136-5.0/LM236-5.0/LM336-5.0 5.0V Reference Diode.	15-17
LM185/LM285/LM385 Adjustable Micropower Voltage References.	15-19
LM185-1.2/LM285-1.2/LM385-1.2 Micropower Voltage Reference Diode.	15-21
LM185-2.5/LM285-2.5/LM385-2.5 Micropower Voltage Reference Diode.	15-23
LM4040 Precision Micropower Shunt Voltage Reference.	15-25
LM4041 Precision Micropower Shunt Voltage Reference.	15-28
LM4050 Precision Micropower Shunt Voltage Reference.	15-30
LM4051 Precision Micropower Shunt Voltage Reference.	15-32
LM4120 Precision Micropower Low Dropout Voltage Reference.	15-34
LM4121 Precision Micropower Low Dropout Voltage Reference.	15-36
LM4130 Precision Micropower Low Dropout Voltage Reference.	15-38
LM4140 High Precision Low Noise Low Dropout Voltage Reference.	15-40
LM431 Adjustable Precision Zener Shunt Regulator.	15-42
LM4431 Micropower Shunt Voltage Reference.	15-45
LM611 Operational Amplifier and Adjustable Reference.	15-46
LM613 Dual Operational Amplifiers, Dual Comparators, and Adjustable Reference.	15-47
LM614 Quad Operational Amplifier and Adjustable Reference.	15-48

Table of Contents (Continued)

LMV431/LMV431A/LMV431B Low-Voltage (1.24V) Adjustable Precision Shunt Regulators.	15-49
Section 16 Voltage Regulators - Linear	
Linear Voltage Regulators Selection Guide.	16-3
Voltage Regulators Definition Of Terms.	16-5
LM105/LM305/LM305A Voltage Regulators.	16-6
LM109/LM309 5-Volt Regulator.	16-7
LM117/LM317A/LM317 3-Terminal Adjustable Regulator.	16-8
LM117HV/LM317HV 3-Terminal Adjustable Regulator.	16-9
LM123/LM323A/LM323 3-Amp, 5-Volt Positive Regulator.	16-11
LM133/LM333 3-Ampere Adjustable Negative Regulators.	16-12
LM137/LM337 3-Terminal Adjustable Negative Regulators.	16-13
LM137HV/LM337HV 3-Terminal Adjustable Negative Regulators (High Voltage).	16-14
LM138/LM338 5-Amp Adjustable Regulators.	16-15
LM340/LM78MXX Series 3-Terminal Positive Regulators.	16-16
LM150/LM350A/LM350 3-Amp Adjustable Regulators.	16-17
LM317L 3-Terminal Adjustable Regulator.	16-18
LM320L/LM79LXXAC Series 3-Terminal Negative Regulators.	16-20
LM325 Dual Voltage Regulator.	16-21
LM330 3-Terminal Positive Regulator.	16-22
LM337L 3-Terminal Adjustable Regulator.	16-23
LM341/LM78MXX Series 3-Terminal Positive Voltage Regulators.	16-24
LM723/LM723C Voltage Regulator.	16-25
LM78XX Series Voltage Regulators.	16-27
LM78LXX Series 3-Terminal Positive Regulators.	16-29
LM79XX Series 3-Terminal Negative Regulators.	16-30
LM79MXX Series 3-Terminal Negative Regulators.	16-31
Section 17 Voltage Regulators - Low-Dropout	
Low Dropout Regulators Selection Guide.	17-4
Low-Dropout Voltage Regulators Definition Of Terms.	17-7
LM1084 5A Low Dropout Positive Regulators.	17-8
LM1085 3A Low Dropout Positive Regulators.	17-10
LM1086 1.5A Low Dropout Positive Regulators.	17-12
LM1117 800mA Low-Dropout Linear Regulator.	17-15
LM2930 3-Terminal Positive Regulator.	17-18
LM2931 Series Low Dropout Regulators.	17-19
LM2936-3.0 Ultra-Low Quiescent Current 3.0V Regulator.	17-23
LM2936-3.3 Ultra-Low Quiescent Current 3.3V Regulator.	17-25
LM2936-5.0 Ultra-Low Quiescent Current 5V Regulator.	17-27
LM2937 500 mA Low Dropout Regulator.	17-29
LM2937-2.5, LM2937-3.3 400mA and 500mA Voltage Regulators.	17-31
LM2940/LM2940C 1A Low Dropout Regulator.	17-33

Table of Contents (Continued)

LM2941/LM2941C 1A Low Dropout Adjustable Regulator.	17-35
LM2984 Microprocessor Power Supply System.	17-36
LM2990 Negative Low Dropout Regulator.	17-37
LM2991 Negative Low Dropout Adjustable Regulator.	17-39
LM3460-1.2, -1.5 Precision Controller for GTLp and GTL Bus Termination.	17-41
LM3480 100 mA, SOT-23, Quasi Low-Dropout Linear Voltage Regulator.	17-43
LM3490 100 mA, SOT-23, Quasi Low-Dropout Linear Voltage Regulator with Logic-Controlled ON/OFF.	17-45
LM3940 1A Low Dropout Regulator for 5V to 3.3V Conversion.	17-47
LMS1585A/LMS1587 5A and 3A Low Dropout Fast Response Regulators.	17-49
LMS8117 1A Low-Dropout Linear Regulator.	17-52
LP2950/LP2951 Series of Adjustable Micropower Voltage Regulators.	17-55
LP2952/LP2952A/LP2953/LP2953A Adjustable Micropower Low-Dropout Voltage Regulators.	17-58
LP2954/LP2954A 5V and Adjustable Micropower Low-Dropout Voltage Regulators.	17-60
LP2956/LP2956A Dual Micropower Low-Dropout Voltage Regulators.	17-62
LP2957/LP2957A 5V Low-Dropout Regulator for μ P Applications.	17-64
LP2960 Adjustable Micropower 0.5A Low-Dropout Regulators.	17-65
LP2966 Dual 150mA Ultra Low-Dropout Regulator.	17-66
LP2975 MOSFET LDO Driver/Controller.	17-69
LP2978 Micropower SOT, 50 mA Low-Noise Ultra Low-Dropout Regulator <i>Designed for Use with Very Low ESR Output Capacitors.</i>	17-71
LP2980 Micropower 50 mA Ultra Low-Dropout Regulator In SOT-23 and micro SMD Packages.	17-73
LP2980-ADJ Micropower SOT, 50 mA Ultra Low-Dropout Adjustable Voltage Regulator.	17-77
LP2980LV Micropower SOT, 50 mA Low-Voltage Low-Dropout Regulator For Applications With Output Voltages < 2V.	17-79
LP2981 Micropower 100 mA Ultra Low-Dropout Regulator in SOT-23 and micro SMD Packages.	17-81
LP2982 Micropower 50 mA Ultra Low-Dropout Regulator in SOT-23 and micro SMD Packages.	17-84
LP2985 Micropower 150 mA Low-Noise Ultra Low-Dropout Regulator in SOT-23 and micro SMD Packages <i>Designed for Use with Very Low ESR Output Capacitors.</i>	17-88
LP2986 Micropower, 200 mA Ultra Low-Dropout Fixed or Adjustable Voltage Regulator.	17-93
LP2987/LP2988 Micropower, 200 mA Ultra Low-Dropout Voltage Regulator with Programmable Power-On Reset Delay; Low Noise Version Available (LP2988).	17-96
LP2989 Micropower/Low Noise, 500 mA Ultra Low-Dropout Regulator For Use with Ceramic Output Capacitors.	17-101
LP2989LV Micropower 500 mA Low Noise Low Dropout Regulator for Applications with Output Voltages < 2V <i>Designed for Use with Very Low ESR Output Capacitors.</i>	17-103
LP3961/LP3964 800mA Fast Ultra Low Dropout Linear Regulators.	17-105

Table of Contents (Continued)

LP3962/LP3965 1.5A Fast Ultra Low Dropout Linear Regulators.	17-111
LP3963/LP3966 3A Fast Ultra Low Dropout Linear Regulators.	17-117
Section 18 Voltage Regulators - Switching and SIMPLE SWITCHER	
Switching Regulators Selection Guide.	18-4
Switching Regulators Definition Of Terms.	18-7
LM1575/LM2575/LM2575HV Series SIMPLE SWITCHER 1A Step-Down Voltage Regulator.	18-9
LM1577/LM2577 SIMPLE SWITCHER Step-Up Voltage Regulator.	18-12
LM2524D/LM3524D Regulating Pulse Width Modulator.	18-13
LM2574/LM2574HV SIMPLE SWITCHER 0.5A Step-Down Voltage Regulator.	18-14
LM2576/LM2576HV Series SIMPLE SWITCHER 3A Step-Down Voltage Regulator.	18-16
LM2578A/LM3578A Switching Regulator.	18-18
LM2585 SIMPLE SWITCHER 3A Flyback Regulator.	18-19
LM2586 SIMPLE SWITCHER 3A Flyback Regulator with Shutdown.	18-20
LM2587 SIMPLE SWITCHER 5A Flyback Regulator.	18-22
LM2588 SIMPLE SWITCHER 5A Flyback Regulator with Shutdown.	18-23
LM2594/LM2594HV SIMPLE SWITCHER Power Converter 150 kHz 0.5A Step-Down Voltage Regulator.	18-25
LM2595 SIMPLE SWITCHER Power Converter 150 kHz 1A Step-Down Voltage Regulator.	18-27
LM2596 SIMPLE SWITCHER Power Converter 150 kHz 3A Step-Down Voltage Regulator.	18-29
LM2597/LM2597HV SIMPLE SWITCHER Power Converter 150 kHz 0.5A Step-Down Voltage Regulator, with Features.	18-31
LM2598 SIMPLE SWITCHER Power Converter 150 kHz 1A Step-Down Voltage Regulator, with Features.	18-32
LM2599 SIMPLE SWITCHER Power Converter 150 kHz 3A Step-Down Voltage Regulator, with Features.	18-34
LM2621 Low Input Voltage, Step-Up DC-DC Converter.	18-35
LM2636 5-Bit Programmable Synchronous Buck Regulator Controller.	18-37
LM2637 Motherboard Power Supply Solution with a 5-Bit Programmable Switching Controller and Two Linear Regulator Controllers.	18-40
LM2638 Motherboard Power Supply Solution with a 5-Bit Programmable Switching Controller and Two Linear Regulator Controllers.	18-41
LM2639 5-Bit Programmable, High Frequency Multi-phase PWM Controller.	18-42
LM2640 Dual Adjustable Step-Down Switching Power Supply Controller.	18-43
LM2641 Dual Adjustable Step-Down Switching Power Supply Controller.	18-47
LM2650 Synchronous Step-Down DC/DC Converter.	18-51
LM2651 1.5A High Efficiency Synchronous Switching Regulator.	18-53
LM2653 1.5A High Efficiency Synchronous Switching Regulator.	18-55
LM2655 2.5A High Efficiency Synchronous Switching Regulator.	18-56
LM2670 SIMPLE SWITCHER High Efficiency 3A Step-Down Voltage Regulator with Sync.	18-59

Table of Contents (Continued)

LM2671 SIMPLE SWITCHER Power Converter High Efficiency 500mA Step-Down Voltage Regulator with Features.	18-61
LM2672 SIMPLE SWITCHER Power Converter High Efficiency 1A Step-Down Voltage Regulator with Features.	18-62
LM2673 SIMPLE SWITCHER 3A Step-Down Voltage Regulator with Adjustable Current Limit.	18-63
LM2674 SIMPLE SWITCHER Power Converter High Efficiency 500 mA Step-Down Voltage Regulator.	18-65
LM2675 SIMPLE SWITCHER Power Converter High Efficiency 1A Step-Down Voltage Regulator.	18-66
LM2676 SIMPLE SWITCHER High Efficiency 3A Step-Down Voltage Regulator.	18-67
LM2677 SIMPLE SWITCHER High Efficiency 5A Step-Down Voltage Regulator with Sync.	18-69
LM2678 SIMPLE SWITCHER High Efficiency 5A Step-Down Voltage Regulator.	18-71
LM2679 SIMPLE SWITCHER 5A Step-Down Voltage Regulator with Adjustable Current Limit.	18-73
LM2825 Integrated Power Supply 1A DC-DC Converter.	18-75
LM3478 High Efficiency Low-Side N-Channel Controller for Switching Regulator.	18-76
LM3488 High Efficiency Low-Side N-Channel Controller for Switching Regulators.	18-78
LM2720 5-Bit Programmable, High Frequency Multi-phase PWM Controller.	18-80
Section 19 Voltage Regulators and Converters - Switched Capacitor	
Switched Capacitor Converter Selection Guide.	19-3
LM2660/LM2661 Switched Capacitor Voltage Converter.	19-4
LM2662/LM2663 Switched Capacitor Voltage Converter.	19-5
LM2664 Switched Capacitor Voltage Converter.	19-6
LM2665 Switched Capacitor Voltage Converter.	19-7
LM2681 Switched Capacitor Voltage Converter.	19-8
LM2682 Switched Capacitor Voltage Doubling Inverter.	19-9
LM2685 Dual Output Regulated Switched Capacitor Voltage Converter.	19-10
LM2686 Regulated Switched Capacitor Voltage Converter.	19-12
LM2687 Low Noise Regulated Switched Capacitor Voltage Inverter.	19-14
LM2765 Switched Capacitor Voltage Converter.	19-16
LM2766 Switched Capacitor Voltage Converter.	19-18
LM2767 Switched Capacitor Voltage Converter.	19-20
LM3350 Switched Capacitor Voltage Converter.	19-22
LM3351 Switched Capacitor Voltage Converter.	19-23
LM3352 Regulated 200 mA Buck-Boost Switched Capacitor DC/DC Converter.	19-24
LM828 Switched Capacitor Voltage Converter.	19-26
LMC7660 Switched Capacitor Voltage Converter.	19-27
MAX660 Switched Capacitor Voltage Converter.	19-28
Section 20 Wireless	
LMX1600/LMX1601/LMX1602 PLLatinum Low Cost Dual Frequency Synthesizer.	20-3

ADC12H030 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-80
ADC12H032 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-80
ADC12H034 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-80
ADC12H038 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/ Hold.	6-80
ADC12L030 3.3V Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-84
ADC12L032 3.3V Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-84
ADC12L034 3.3V Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-84
ADC12L038 3.3V Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-84
ADC0801 8-Bit μ P Compatible A/D Converters.	6-11
ADC0802 8-Bit μ P Compatible A/D Converters.	6-11
ADC0803 8-Bit μ P Compatible A/D Converters.	6-11
ADC0804 8-Bit μ P Compatible A/D Converters.	6-11
ADC0805 8-Bit μ P Compatible A/D Converters.	6-11
ADC0808 8-bit Microprocessor Compatible A/D Converters With 8-Channel Multiplexer. . .	6-18
ADC0809 8-bit Microprocessor Compatible A/D Converters With 8-Channel Multiplexer. . .	6-18
ADC0816 8-Bit Microprocessor Compatible A/D Converter with 16-Channel Multiplexer. . . .	6-25
ADC0817 8-Bit Microprocessor Compatible A/D Converter with 16-Channel Multiplexer. . . .	6-25
ADC0820 8-Bit High Speed μ P Compatible A/D Converter with Track/Hold Function.	6-29
ADC0831 8-Bit Serial I/O A/D Converter with Multiplexer Option.	6-31
ADC0832 8-Bit Serial I/O A/D Converter with Multiplexer Option.	6-31
ADC0834 8-Bit Serial I/O A/D Converter with Multiplexer Option.	6-31
ADC0838 8-Bit Serial I/O A/D Converter with Multiplexer Option.	6-31
ADC0844 8-Bit Microprocessor Compatible A/D Converter with Multiplexer Option.	6-37
ADC0848 8-Bit Microprocessor Compatible A/D Converter with Multiplexer Option.	6-37
ADC1001 10-Bit μ P Compatible A/D Converter.	6-41
ADC1005 10-Bit Microprocessor Compatible A/D Converter.	6-46
ADC1061 10-Bit High Speed μ P-Compatible A/D Converter with Track/Hold Function.	6-62
ADC1173 8-Bit, 3-Volt, 15MSPS, 33mW A/D Converter.	6-70
ADC1175 8-Bit, 20MHz, 60mW A/D Converter.	6-73
ADC1175-50 8-Bit, 50MSPS, 125mW A/D Converter.	6-76
ADC08031 8-Bit High Speed Serial I/O A/D Converter with Multiplexer Options, Voltage Ref. and Track/Hold Function.	6-13
ADC08032 8-Bit High Speed Serial I/O A/D Converter with Multiplexer Options, Voltage Ref. and Track/Hold Function.	6-13
ADC08034 8-Bit High Speed Serial I/O A/D Converter with Multiplexer Options, Voltage Ref. and Track/Hold Function.	6-13

Alpha-Numeric Index (Continued)

ADC08038 8-Bit High Speed Serial I/O A/D Converter with Multiplexer Options, Voltage Ref. and Track/Hold Function.	6-13
ADC08061 500 ns A/D Converter with S/H Function and Input Multiplexer.	6-15
ADC08062 500 ns A/D Converter with S/H Function and Input Multiplexer.	6-15
ADC08100 8-Bit, 100MSPS, 1.3mW/MSPS A/D Converter.	6-20
ADC08131 8-Bit High Speed Serial I/O A/D Converter with Multiplexer Options, Voltage Reference and Track/Hold Function.	6-23
ADC08134 8-Bit High Speed Serial I/O A/D Converter with Multiplexer Options, Voltage Reference and Track/Hold Function.	6-23
ADC08138 8-Bit High Speed Serial I/O A/D Converter with Multiplexer Options, Voltage Reference and Track/Hold Function.	6-23
ADC08161 500 ns A/D Converter with S/H Function and 2.5V Bandgap Reference.	6-27
ADC08351 8-Bit, 42 MSPS, 40 mW A/D Converter.	6-34
ADC08831 8-Bit Serial I/O CMOS A/D Converters with Multiplexer and Sample/Hold Function.	6-39
ADC08832 8-Bit Serial I/O CMOS A/D Converters with Multiplexer and Sample/Hold Function.	6-39
ADC10030 10-Bit, 30 MSPS, 125 mW A/D Converter with Internal Sample and Hold.	6-42
ADC10061 10-Bit 600 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-47
ADC10062 10-Bit 600 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-47
ADC10064 10-Bit 600 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-47
ADC10154 10-Bit Plus Sign 4 microseconds ADCs with 4- or 8-Channel MUX, Track/Hold and Reference.	6-50
ADC10158 10-Bit Plus Sign 4 microseconds ADCs with 4- or 8-Channel MUX, Track/Hold and Reference.	6-50
ADC10221 10-Bit, 15MSPS, 98mW A/D Converter with Internal Sample and Hold.	6-52
ADC10321 10-Bit, 20MSPS, 98mW A/D Converter with Internal Sample and Hold.	6-56
ADC10461 10-Bit 600 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-60
ADC10462 10-Bit 600 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-60
ADC10464 10-Bit 600 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-60
ADC10662 10-Bit 360 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-64
ADC10664 10-Bit 360 ns A/D Converter with Input Multiplexer and Sample/Hold.	6-64
ADC10731 10-Bit Plus Sign Serial I/O A/D Converters with Mux, Sample/Hold and Reference.	6-67
ADC10732 10-Bit Plus Sign Serial I/O A/D Converters with Mux, Sample/Hold and Reference.	6-67
ADC10734 10-Bit Plus Sign Serial I/O A/D Converters with Mux, Sample/Hold and Reference.	6-67
ADC10738 10-Bit Plus Sign Serial I/O A/D Converters with Mux, Sample/Hold and Reference.	6-67
ADC12030 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-80
ADC12032 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-80

Alpha-Numeric Index (Continued)

ADC12034 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-80
ADC12038 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold.	6-80
ADC12041 12-Bit Plus Sign 216 kHz Sampling Analog-to-Digital Converter.	6-88
ADC12048 12-Bit Plus Sign 216 kHz 8 Channel Sampling Analog to Digital Converter. ...	6-91
ADC12081 12-Bit, 5 MHz Self-Calibrating, Pipelined A/D Converter with Internal Sample & Hold.	6-95
ADC12130 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converter with MUX and Sample/Hold.	6-99
ADC12132 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converter with MUX and Sample/Hold.	6-99
ADC12138 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converter with MUX and Sample/Hold.	6-99
ADC12181 12-Bit, 10 MHz Self-Calibrating, Pipelined A/D Converter with Internal Sample & Hold.	6-103
ADC12191 12-Bit, 10 MHz Self-Calibrating, Pipelined A/D Converter with Internal Sample & Hold.	6-107
ADC12281 12-Bit, 20 MSPS Single-Ended Input, Pipelined A/D Converter.	6-111
ADC14061 Self-Calibrating 14-Bit, 2.5 MSPS, 390 mW A/D Converter.	6-115
ADC14071 14-Bit, 7 MSPS, 380 mW A/D Converter.	6-120
ADC14161 Low-Distortion, Self-Calibrating 14-Bit, 2.5 MSPS, 390 mW A/D Converter. ...	6-124
ADC16061 Self-Calibrating 16-Bit, 2.5 MSPS, 390 mW A/D Converter.	6-129
ADCV0831 8 Bit Serial I/O Low Voltage Low Power ADC with Auto Shutdown in a SOT Package.	6-134
CLC005 ITU-T G.703 Cable Driver with Adjustable Outputs.	10-5
CLC006 Serial Digital Cable Driver with Adjustable Outputs.	10-7
CLC007 Serial Digital Cable Driver with Dual Complementary Outputs.	10-8
CLC011 Serial Digital Video Decoder.	10-9
CLC012 Adaptive Cable Equalizer for ITU-T G.703 Data Recovery.	10-11
CLC014 Adaptive Cable Equalizer for High-Speed Data Recovery.	10-13
CLC016 Data Retiming PLL with Automatic Rate Selection.	10-15
CLC018 8 x 8 Digital Crosspoint Switch, 1.4 Gbps.	10-17
CLC020 SMPTE 259M Digital Video Serializer with Integrated Cable Driver.	10-18
CLC021 SMPTE 259M Digital Video Serializer with EDH Generation/Insertion.	10-20
CLC111 Ultra-High Slew-Rate, Closed-Loop Buffer.	2-15
CLC114 Quad, Low-Power Video Buffer.	2-17
CLC400 Fast Settling, Wideband Low-Gain Monolithic Op Amp.	2-19
CLC401 Fast Settling, Wideband High-Gain Monolithic Op Amp.	2-21
CLC404 Wideband, High-Slew Rate, Monolithic Op Amp.	2-23
CLC405 Low-Cost, Low-Power, 110MHz Op Amp with Disable.	2-25
CLC406 Wideband, Low-Power Monolithic Op Amp.	2-27
CLC409 Very Wideband, Low Distortion Monolithic Op Amp.	2-29

Alpha-Numeric Index (Continued)

CLC410 Fast Settling, Video Op Amp with Disable	2-31
CLC411 High-Speed Video Op Amp with Disable	2-33
CLC412 Dual Wideband Video Op Amp.	2-35
CLC414 Quad, Low-Power Monolithic Op Amp.	2-37
CLC415 Quad, Wideband Monolithic Op Amp.	2-39
CLC420 High-Speed, Voltage Feedback Op Amp.	2-41
CLC425 Ultra Low Noise Wideband Op Amp.	2-43
CLC426 Wideband, Low-Noise, Voltage Feedback Op Amp.	2-45
CLC428 Dual Wideband, Low-Noise, Voltage Feedback Op Amp.	2-47
CLC430 General Purpose 100MHz Op Amp with Disable.	2-49
CLC431/432 Dual Wideband Monolithic Op Amp with Disable.	2-51
CLC440 High-Speed, Low-Power, Voltage Feedback Op Amp.	2-54
CLC446 400MHz, 50mW Current-Feedback Op Amp.	2-56
CLC449 1.1GHz Ultra-Wideband Monolithic Op Amp.	2-58
CLC450 Single Supply, Low-Power, High Output, Current Feedback Amplifier.	2-60
CLC452 Single Supply, Low-Power, High Output, Current Feedback Amplifier.	2-62
CLC501 High-Speed, Output Clamping Op Amp.	2-64
CLC502 Clamping, Low-Gain Op Amp with Fast 14-bit Settling.	2-66
CLC505 High-Speed, Programmable-Supply Current, Monolithic Op Amp.	2-67
CLC520 Amplifier with Voltage Controlled Gain, AGC +Amp.	2-68
CLC522 Wideband Variable-Gain Amplifier.	2-70
CLC532 High-Speed 2:1 Analog Multiplexer.	11-3
CLC533 High-Speed 4:1 Analog Multiplexer.	11-4
CLC5506 Gain Trim Amplifier (GTA).	2-72
CLC5509 Ultra-Low Noise Preamplifier.	2-75
CLC5523 Low-Power, Variable Gain Amplifier.	2-77
CLC5526 Digital Variable Gain Amplifier (DVGA).	2-79
CLC5602 Dual, High Output, Video Amplifier.	2-81
CLC5612 Dual, High Output, Programmable Gain Buffer.	2-83
CLC5622 Dual, High Output, Video Amplifier.	2-85
CLC5623 Triple, High Output, Video Amplifier.	2-87
CLC5632 Dual, High Output, Programmable Gain Buffer.	2-89
CLC5633 Triple, High Output, Programmable Gain Buffer.	2-91
CLC5644 Low-Power, Low-Cost, Quad Operational Amplifier.	2-93
CLC5654 Very High-Speed, Low-Cost, Quad Operational Amplifier.	2-95
CLC5665 Low Distortion Amplifier with Disable.	2-97
CLC5801 High Speed Low Noise Voltage Feedback Amplifier.	2-99
CLC5802 Dual Low-Noise, Voltage Feedback Op Amp.	2-101
CLC5956 12-bit, 65 MSPS Broadband Monolithic A/D Converter.	6-135
CLC5958 14-Bit, 52 MSPS A/D Converter.	6-137
COP8ACC5 Family 8-Bit CMOS ROM Based and OTP Microcontrollers with 4k or 16k Memory and High Resolution A/D.	3-50

LM2990 Negative Low Dropout Regulator.	17-37
LM2991 Negative Low Dropout Adjustable Regulator.	17-39
LM3046 Transistor Array.	11-10
LM3302 Low Power Low Offset Voltage Quad Comparator.	5-13
LM3350 Switched Capacitor Voltage Converter.	19-22
LM3351 Switched Capacitor Voltage Converter.	19-23
LM3352 Regulated 200 mA Buck-Boost Switched Capacitor DC/DC Converter.	19-24
LM3411 Precision Secondary Regulator/Driver.	14-9
LM3420-4.2 Lithium-Ion Battery Charger Controller.	11-29
LM3420-8.2 Lithium-Ion Battery Charger Controller.	11-29
LM3420-8.4 Lithium-Ion Battery Charger Controller.	11-29
LM3420-12.6 Lithium-Ion Battery Charger Controller.	11-29
LM3420-16.8 Lithium-Ion Battery Charger Controller.	11-29
LM3460 Precision Controller for GTLp and GTL Bus Termination.	17-41
LM3478 High Efficiency Low-Side N-Channel Controller for Switching Regulator.	18-76
LM3480 100 mA, SOT-23, Quasi Low-Dropout Linear Voltage Regulator.	17-43
LM3488 High Efficiency Low-Side N-Channel Controller for Switching Regulator.	18-78
LM3490 100 mA, SOT-23, Quasi Low-Dropout Linear Voltage Regulator with Logic-Controlled ON/OFF.	17-45
LM3524D Regulating Pulse Width Modulator.	18-13

Alpha-Numeric Index (Continued)

LM3525 Single Port USB Power Switch and Over-Current Protection.	11-53
LM3526 Dual Port USB Power Switch and Over-Current Protection.	11-55
LM3578A Switching Regulator.	18-18
LM3620 Lithium-Ion Battery Charger Controller.	11-31
LM3621 Single Cell Lithium-Ion Battery Charger Controller.	11-33
LM3622 Lithium-Ion Battery Charger Controller.	11-35
LM3647 Universal Battery Charger for Li-Ion, Ni-MH and Ni-Cd Batteries.	11-38
LM3812 Precision Current Gauge IC with Ultra-Low Loss Sense Element and PWM Output, for High-Side Sensing.	14-11
LM3813 Precision Current Gauge IC with Ultra Low Loss Sense Element and PWM Output, for Low-Side Sensing.	14-11
LM3814 Fast Current Gauge IC with Ultra-Low Loss Sense Element and PWM Output, for High-Side Sensing.	14-13
LM3815 Fast Current Gauge IC with Ultra Low Loss Sense Element and PWM Output, for Low-Side Sensing.	14-13
LM3822 Precision Current Gauge IC with Internal Zero Ohm Sense Element and PWM Output.	14-15
LM3824 Precision Current Gauge IC with Internal Zero Ohm Sense Element and PWM Output.	14-17
LM3875 Overture Audio Power Amplifier Series High-Performance 56W Audio Power Amplifier.	4-16
LM3876 Overture Audio Power Amplifier Series High-Performance 56W Audio Power Amplifier with Mute.	4-18
LM3886 Overture Audio Power Amplifier Series High-Performance 68W Audio Power Amplifier with Mute.	4-20
LM3914 Dot/Bar Display Driver.	4-69
LM3915 Dot/Bar Display Driver.	4-71
LM3916 Dot/Bar Display Driver.	4-73
LM3940 1A Low Dropout Regulator for 5V to 3.3V Conversion.	17-47
LM3999 Precision Reference.	15-12

LM4651 Overture Audio Power Amplifier Series 170W Class D Audio Power Amplifier Solution.	4-22
LM4652 Overture Audio Power Amplifier Series 170W Class D Audio Power Amplifier Solution.	4-22
LM4663 2W Stereo Class D Audio Power Amplifier with Stereo Headphone Amplifier.	4-23
LM4700 Overture Audio Power Amplifier Series 30 Watt Audio Power Amplifier with Mute and Standby Modes.	4-24
LM4701 Overture Audio Power Amplifier Series 30 Watt Audio Power Amplifier with Mute and Standby Modes.	4-25
LM4752 Stereo 11W Audio Power Amplifier.	4-26
LM4753 Dual 10W Audio Power Amplifier w/Mute, Standby and Volume Control.	4-27
LM4755 Stereo 11W Audio Power Amplifier with Mute.	4-29
LM4765 Overture Audio Power Amplifier Series Dual 30 Watt Audio Power Amplifier with Mute and Standby Modes.	4-30
LM4766 Overture Audio Power Amplifier Series Dual 40 Watt Audio Power Amplifier with Mute.	4-31
LM4808 Boomer Audio Power Amplifier Series Dual 150 mW Headphone Amplifier.	4-32
LM4830 Two-Way Audio Amplification System with Volume Control.	4-33
LM4831 Boomer Audio Power Amplifier Series Multimedia Computer Audio Chip.	4-35
LM4832 Boomer Digitally Controlled Tone and Volume Circuit with Stereo Audio Power Amplifier, Microphone Preamp Stage and National 3D Sound.	4-36
LM4834 Boomer Audio Power Amplifier Series 1.75W Audio Power Amplifier with DC Volume Control and Microphone Preamp.	4-37
LM4835 Boomer Audio Power Amplifier Series Stereo 2W Audio Power Amplifiers with DC Volume Control and Selectable Gain.	4-38
LM4836 Boomer Audio Power Amplifier Series Stereo 2W Audio Power Amplifiers with DC Volume Control, Bass Boost and Input Mux.	4-39
LM4850 Boomer Audio Power Amplifier Series Mono 1.5 W / Stereo 300 mW Power Amplifier.	4-40
LM4860 Boomer Audio Power Amplifier Series 1 Watt Audio Power Amplifier with Shutdown Mode.	4-42
LM4861 Boomer Audio Power Amplifier Series 1.1W Audio Power Amplifier with Shutdown Mode.	4-43
LM4862 Boomer Audio Power Amplifier Series 675 mW Audio Power Amplifier with Shutdown Mode.	4-44
LM4863 Boomer Audio Power Amplifier Series Dual 2.2W Audio Amplifier Plus Stereo Headphone Function.	4-45
LM4864 Boomer Audio Power Amplifier Series 300 mW Audio Power Amplifier with Shutdown Mode.	4-47
LM4865 Boomer Audio Power Amplifier Series 750mW Audio Power Amplifier with DC Volume Control and Headphone Switch.	4-48

Alpha-Numeric Index (Continued)

LM4870 Boomer Audio Power Amplifier Series 1.1 Watt Audio Power Amplifier with Shutdown Mode.	4-49
LM4871 Boomer Audio Power Amplifier Series 1.1 Watt Audio Power Amplifier with Shutdown Mode.	4-50
LM4872 Boomer Audio Power Amplifier Series 1 Watt Audio Power Amplifier in micro SMD package.	4-51
LM4873 Boomer Audio Power Amplifier Series Dual 2.1W Audio Amplifier Plus Stereo Headphone Function.	4-52
LM4876 Boomer Audio Power Amplifier Series 1.1W Audio Power Amplifier with Logic Low Shutdown.	4-54
LM4877 Boomer Audio Power Amplifier Series 1 Watt Audio Power Amplifier in micro SMD package with Shutdown Logic Low.	4-55
LM4880 Boomer Audio Power Amplifier Series Dual 250 mW Audio Power Amplifier with Shutdown Mode.	4-56
LM4881 Boomer Audio Power Amplifier Series Dual 200 mW Headphone Amplifier with Shutdown Mode.	4-58
LM4882 Boomer Audio Power Amplifier Series 250 mW Audio Power Amplifier with Shutdown Mode.	4-59
LM4890 1 Watt Audio Power Amplifier	4-60
LM6118 Fast Settling Dual Operational Amplifier.	1-100
LM6121 High Speed Buffer.	2-103
LM6132 Dual Low Power 10 MHz Rail-to-Rail I/O Operational Amplifier.	1-87
LM6134 Quad Low Power 10 MHz Rail-to-Rail I/O Operational Amplifier.	1-87
LM6142 Dual High Speed/Low Power 17 MHz Rail-to-Rail I/O Operational Amplifier.	1-94
LM6142 Dual High Speed/Low Power 17 MHz Rail-to-Rail I/O Operational Amplifier.	4-85
LM6144 Quad High Speed/Low Power 17 MHz Rail-to-Rail I/O Operational Amplifier.	1-94
LM6144 Quad High Speed/Low Power 17 MHz Rail-to-Rail I/O Operational Amplifier.	4-85
LM6152 Dual and Quad 75 MHz GBW Rail-to-Rail I/O Operational Amplifiers.	1-97
LM6154 Dual and Quad 75 MHz GBW Rail-to-Rail I/O Operational Amplifiers.	1-97
LM6161 High Speed Operational Amplifier.	2-105
LM6162 High Speed Operational Amplifier.	2-106
LM6164 High Speed Operational Amplifier.	2-107
LM6165 High Speed Operational Amplifier.	2-108
LM6171 High Speed Low Power Low Distortion Voltage Feedback Amplifier.	2-109
LM6172 Dual High Speed, Low Power, Low Distortion Voltage Feedback Amplifiers.	2-111
LM6181 100 mA, 100 MHz Current Feedback Amplifier.	2-113
LM6182 Dual 100 mA Output, 100 MHz Current Feedback Amplifier.	2-114
LM6218 Fast Settling Dual Operational Amplifier.	1-100

**Amplifiers - General Purpose,
Low-Power and Buffers**

Section 1 Contents

Low Power/General Purpose Operational Amplifiers	1-5
Operational Amplifier Definition Of Terms	1-14
LF147/LF347 Wide Bandwidth Quad JFET Input Operational Amplifiers	1-15
LF353 Wide Bandwidth Dual JFET Input Operational Amplifier	1-18
LF411 Low Offset, Low Drift JFET Input Operational Amplifier	1-21
LF412 Low Offset, Low Drift Dual JFET Input Operational Amplifier	1-24
LF442 Dual Low Power JFET Input Operational Amplifier	1-28
LF444 Quad Low Power JFET Input Operational Amplifier	1-31
LM10 Operational Amplifier and Voltage Reference	1-34
LM13700 Dual Operational Transconductance Amplifiers with Linearizing Diodes and Buffers	1-38
LM101A/LM201A/LM301A Operational Amplifiers	1-41
LM118/LM218/LM318 Operational Amplifiers	1-44
LM12CL 80W Operational Amplifier	1-46
LM124/LM224/LM324/LM2902 Low Power Quad Operational Amplifiers	1-48
LM1458/LM1558 Dual Operational Amplifier	1-53
LM146/LM346 Programmable Quad Operational Amplifiers	1-56
LM148/LM248/LM348 Quad 741 Op Amps, LM149 Wide Band Decompensated ($A_{V(MIN)} = 5$)	1-59
LM158/LM258/LM358/LM2904 Low Power Dual Operational Amplifiers	1-62
LM359 Dual, High Speed, Programmable, Current Mode (Norton) Amplifiers	1-67
LM392 Low Power Operational Amplifier/Voltage Comparator	1-70
LM4250 Programmable Operational Amplifier	1-73
LM611 Operational Amplifier and Adjustable Reference	1-78
LM613 Dual Operational Amplifiers, Dual Comparators, and Adjustable Reference	1-82
LM6132/LM6134 Dual and Quad Low Power 10 MHz Rail-to-Rail I/O Operational Amplifiers	1-87
LM614 Quad Operational Amplifier and Adjustable Reference	1-90
LM6142 and LM6144 17 MHz Rail-to-Rail Input-Output Operational Amplifiers	1-94
LM6152/LM6154 Dual and Quad 75 MHz GBW Rail-to-Rail I/O Operational Amplifiers	1-97
LM6118/LM6218 Fast Settling Dual Operational Amplifiers	1-100
LM675 Power Operational Amplifier	1-103
LM725 Operational Amplifier	1-105
LM7301 Low Power, 4 MHz GBW, Rail-to-Rail Input-Output Operational Amplifier in TinyPak Package	1-108
LM741 Operational Amplifier	1-113
LM8261 Single RRIO, High Output Current & Unlimited Cap Load Op Amp in SOT23-5	1-117

LM833 Dual Audio Operational Amplifier	1-122
LM837 Low Noise Quad Operational Amplifier.	1-125
LMC2001 High Precision, 6MHz Rail-To-Rail Output Operational Amplifier.	1-128
LMC6001 Ultra Ultra-Low Input Current Amplifier.	1-131
LMC6022 Low Power CMOS Dual Operational Amplifier.	1-136
LMC6024 Low Power CMOS Quad Operational Amplifier	1-140
LMC6032 CMOS Dual Operational Amplifier	1-144
LMC6034 CMOS Quad Operational Amplifier.	1-148
LMC6035/LMC6036 Low Power 2.7V Single Supply CMOS Operational Amplifiers	1-152
LMC6041 CMOS Single Micropower Operational Amplifier	1-156
LMC6042 CMOS Dual Micropower Operational Amplifier	1-160
LMC6044 CMOS Quad Micropower Operational Amplifier.	1-164
LMC6061 Precision CMOS Single Micropower Operational Amplifier	1-168
LMC6062 Precision CMOS Dual Micropower Operational Amplifier	1-172
LMC6064 Precision CMOS Quad Micropower Operational Amplifier.	1-176
LMC6081 Precision CMOS Single Operational Amplifier	1-180
LMC6082 Precision CMOS Dual Operational Amplifier	1-184
LMC6084 Precision CMOS Quad Operational Amplifier.	1-188
LMC6442 Dual Micropower Rail-to-Rail Output Single Supply Operational Amplifier	1-192
LMC6462 Dual/LMC6464 Quad Micropower, Rail-to-Rail Input and Output CMOS Operational Amplifier	1-197
LMC6482 CMOS Dual Rail-To-Rail Input and Output Operational Amplifier	1-202
LMC6484 CMOS Quad Rail-to-Rail Input and Output Operational Amplifier	1-207
LMC6492 Dual/LMC6494 Quad CMOS Rail-to-Rail Input and Output Operational Amplifier	1-212
LMC6572/LMC6574 Dual and Quad Low Voltage (2.7V and 3V) Operational Amplifier	1-216
LMC660 CMOS Quad Operational Amplifier.	1-220
LMC662 CMOS Dual Operational Amplifier	1-224
LMC7101 Tiny Low Power Operational Amplifier with Rail-To-Rail Input and Output	1-228
LMC7111 Tiny CMOS Operational Amplifier with Rail-to-Rail Input and Output	1-234
LMC8101 Rail-to-Rail Input and Output, 2.7V Op Amp in micro SMD package with Shutdown	1-240
LMV101/102/105/110 Fixed-Gain Amplifiers	1-246
LMV111 Operational Amplifier with Bias Network	1-249
LMV321/LMV358/LMV324 Single/Dual/Quad General Purpose, Low Voltage, Rail-to-Rail Output Operational Amplifiers.	1-252
LMV710 and LMV711 Low Power, RRIO Operational Amplifiers with High Output Current Drive and Shutdown Option	1-256
LMV721/LMV722 10MHz, Low Noise, Low Voltage, and Low Power Operational Amplifier.	1-260
LMV751 Low Noise, Low Vos, Single Op Amp.	1-264
LMV821 Single/LMV822 Dual/LMV824 Quad Low Voltage, Low Power, R-to-R Output, 5 MHz Op Amps.	1-267
LMV921/LMV922/LMV924 Single Dual and Quad 1.8V, 1MHz, Low Power Operational Amplifiers with Rail-To-Rail Input and Output	1-272

LP324/LP2902 Micropower Quad Operational Amplifier	1-278
LPC660 Low Power CMOS Quad Operational Amplifier	1-281
LPC661 Low Power CMOS Operational Amplifier	1-285
LPC662 Low Power CMOS Dual Operational Amplifier	1-289
LPV321 Single/LPV358 Dual/LPV324 Quad General Purpose, Low Voltage, Low Power, Rail-to-Rail Output Operational Amplifiers	1-293
TL082 Wide Bandwidth Dual JFET Input Operational Amplifier	1-297

Low Power/General Purpose Operational Amplifiers

Operational Amplifier Definition Of Terms

Gain Bandwidth (GBW): The open loop gain times the frequency at a specified frequency higher than the first pole.

Unity Gain Bandwidth: The frequency where the amplifier open loop gain equals to one. It equals GBW if single pole roll off exist.

Common-Mode Rejection Ratio (CMRR): The ratio of differential voltage amplification to common-mode voltage amplification. It is measured by determining the ratio of a change in input common-mode voltage to the resulting change in input offset voltage change.

$$\text{CMRR(dB)} = 20 \log 10 (\Delta V_{\text{CM}} / \Delta V_{\text{OS}})$$

Total Harmonic Distortion (THD): When a pure sinusoid given as $V_{\text{in}}(\omega) = V_p \sin(\omega t)$ is applied to the input of an operational amplifier, the output with harmonic distortion will be $V_{\text{out}}(\omega) a_1 V_p \sin(\omega t) + a_2 V_p \sin(\omega t) + \dots + a_n V_p \sin(n\omega t)$. THD is express as

$$\text{THD(\%)} = [(a_2^2 + a_3^2 + \dots + a_n^2)^{1/2} / a_1] \times 100$$

Input Current (I_b or I_{in}): The average of the two input currents.

Input Common-Mode Voltage Range (V_{CM}): Typically the range of voltages on the input terminals for which the amplifier's performance is specified.

Input Impedance (Z_{in}): The ratio of input AC voltage to input AC current.

Common-Mode Input Resistance: The ratio of the common-mode input voltage change to the inverting or non-inverting input current change.

Differential Input Resistance: The ratio of the differential input voltage change to the input current change.

Input Offset Current (I_{OS}): The difference of the currents between the two input terminals.

Input Offset Voltage (V_{OS}): The DC error voltage which exists between the input terminals due to non-ideal balancing of the input stage to the output. It is multiplied by the closed loop gain.

Large-Signal Voltage Gain (A_v): The ratio of the output voltage change to the change in input voltage. This parameter is usually specified at a large output voltage, less than maximum output Voltage, and typically under DC condition.

Output Impedance (Z_o): The apparent output impedance of an op amp, typically illustrated with an ideal op amp with zero output impedance in series with an output impedance, Z_{out} , measured under AC condition.

Output Resistance: The apparent output resistance of an op amp, typically illustrated with an ideal op amp with zero output resistance in series with an output resistor, R_{out} , measured under DC condition.

Output Voltage Swing (V_o): The maximum peak-to-peak output voltage swing under specified load and supply voltages.

Offset Voltage Temperature Coefficient (TCV_{OS}): The average rate of change in offset voltage for the junction temperature variation over a specified temperature range.

Power Supply Rejection Ratio (PSRR): The ratio of the change in input offset voltage to the change in power supply voltages producing it.

$$\text{PSRR(dB)} = 20 \log 10 (\Delta V_{\text{OS}} / \Delta V_s)$$

Settling Time: The time between the initiation of the input step function and the time when the output voltage has settled to within a specified error band, which is expressed as the \pm percentage of the total voltage change.

Slew Rate (SR): The rate that an amplifier output changes from one voltage level to another when a step or square wave input is applied. Typically it is the average rate measured from 10% to 90% of the total output voltage change.

Supply Current (I_s): The current required from the power supply to operate the amplifier with no load and the output midway between the supplies.

Transient Response: The closed-loop step-function response of the amplifier under small-signal conditions. Usually small signal is less than 100mV.

Input Voltage Noise (e_n): The equivalent voltage noise applied in series with the input of the noiseless amplifier.

Input Current Noise (i_n): The equivalent current noise applied in parallel with the input of the noiseless amplifier.

Phase Margin (Φ_m): The open-loop phase shift between the output and the inverting input at the unity frequency.

Gain Margin (C_m): Open loop gain at the frequency where the phase between inverting input and output crosses zero.

Rise Time (t_r): The time required for an output voltage step to change from 10% to 90% of its final value.

Short-Circuit Output Current: The maximum available current out of the output of an op amp.

Open loop Gain: The ratio of the voltage change at the output to the voltage change at the input, usually under AC condition.

Note: All parameters are under specific conditions.

LF147/LF347

Wide Bandwidth Quad JFET Input Operational Amplifiers

General Description

The LF147 is a low cost, high speed quad JFET input operational amplifier with an internally trimmed input offset voltage (BI-FET II™ technology). The device requires a low supply current and yet maintains a large gain bandwidth product and a fast slew rate. In addition, well matched high voltage JFET input devices provide very low input bias and offset currents. The LF147 is pin compatible with the standard LM148. This feature allows designers to immediately upgrade the overall performance of existing LF148 and LM124 designs.

The LF147 may be used in applications such as high speed integrators, fast D/A converters, sample-and-hold circuits and many other circuits requiring low input offset voltage, low input bias current, high input impedance, high slew rate and wide bandwidth. The device has low noise and offset voltage drift.

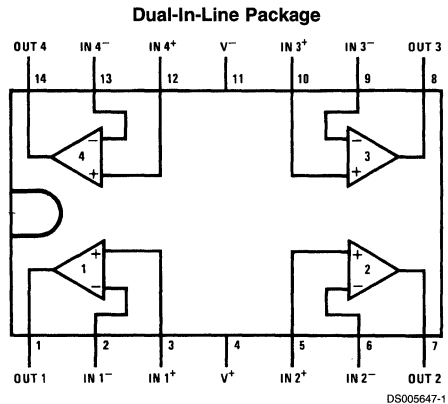

Features

- Internally trimmed offset voltage: 5 mV max
- Low input bias current: 50 pA
- Low input noise current: 0.01 pA/√Hz
- Wide gain bandwidth: 4 MHz
- High slew rate: 13 V/μs
- Low supply current: 7.2 mA
- High input impedance: 10¹²Ω
- Low total harmonic distortion: ≤0.02%
- Low 1/f noise corner: 50 Hz
- Fast settling time to 0.01%: 2 μs

Note 2: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Note 3: Unless otherwise specified the absolute maximum negative input voltage is equal to the negative power supply voltage.

Note 4: Any of the amplifier outputs can be shorted to ground indefinitely, however, more than one should not be simultaneously shorted as the maximum junction temperature will be exceeded.

Note 5: For operating at elevated temperature, these devices must be derated based on a thermal resistance of θ_{JA} .

Note 6: The LF147 is available in the military temperature range $-55^\circ\text{C}\leq T_A\leq 125^\circ\text{C}$, while the LF347B and the LF347 are available in the commercial temperature range $0^\circ\text{C}\leq T_A\leq 70^\circ\text{C}$. Junction temperature can rise to $T_J\text{ max} = 150^\circ\text{C}$.

Note 7: Unless otherwise specified the specifications apply over the full temperature range and for $V_S=\pm 20\text{V}$ for the LF147 and for $V_S=\pm 15\text{V}$ for the LF347B/LF347. V_{OS} , I_B , and I_{OS} are measured at $V_{CM}=0$.

Note 8: The input bias currents are junction leakage currents which approximately double for every 10°C increase in the junction temperature, T_J . Due to limited production test time, the input bias currents measured are correlated to junction temperature. In normal operation the junction temperature rises above the ambient temperature as a result of internal power dissipation, P_D . $T_J=T_A+\theta_{JA} P_D$ where θ_{JA} is the thermal resistance from junction to ambient. Use of a heat sink is recommended if input bias current is to be kept to a minimum.

Note 9: Supply voltage rejection ratio is measured for both supply magnitudes increasing or decreasing simultaneously in accordance with common practice from $V_S = \pm 5\text{V}$ to $\pm 15\text{V}$ for the LF347 and LF347B and from $V_S = \pm 20\text{V}$ to $\pm 5\text{V}$ for the LF147.

Note 10: Refer to RETS147X for LF147D and LF147J military specifications.

Note 11: Max. Power Dissipation is defined by the package characteristics. Operating the part near the Max. Power Dissipation may cause the part to operate outside guaranteed limits.

Note 12: Human body model, 1.5 k Ω in series with 100 pF.

LF353

Wide Bandwidth Dual JFET Input Operational Amplifier

General Description

These devices are low cost, high speed, dual JFET input operational amplifiers with an internally trimmed input offset voltage (BI-FET II™ technology). They require low supply current yet maintain a large gain bandwidth product and fast slew rate. In addition, well matched high voltage JFET input devices provide very low input bias and offset currents. The LF353 is pin compatible with the standard LM1558 allowing designers to immediately upgrade the overall performance of existing LM1558 and LM358 designs.

These amplifiers may be used in applications such as high speed integrators, fast D/A converters, sample and hold circuits and many other circuits requiring low input offset voltage, low input bias current, high input impedance, high slew rate and wide bandwidth. The devices also exhibit low noise and offset voltage drift.

Features

- Internally trimmed offset voltage: 10 mV
- Low input bias current: 50pA
- Low input noise voltage: 25 nV/√Hz
- Low input noise current: 0.01 pA/√Hz
- Wide gain bandwidth: 4 MHz
- High slew rate: 13 V/μs
- Low supply current: 3.6 mA
- High input impedance: 10¹²Ω
- Low total harmonic distortion : ≤0.02%
- Low 1/f noise corner: 50 Hz
- Fast settling time to 0.01%: 2 μs

θ_{JA} M Package

TBD

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which guarantee specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not guaranteed for parameters where no limit is given, however, the typical value is a good indication of device performance.

DC Electrical Characteristics

(Note 5)

e _n	Equivalent Input Noise Voltage	T _A =25°C, R _S =100Ω, f=1000 Hz		16		nV/√Hz
i _n	Equivalent Input Noise Current	T _J =25°C, f=1000 Hz		0.01		pA/√Hz

AC Electrical Characteristics (Continued)

(Note 5)

Symbol	Parameter	Conditions	LF353			Units
			Min	Typ	Max	
THD	Total Harmonic Distortion	$A_V = +10$, $RL = 10k$, $V_O = 20V_{p-p}$, $BW = 20 \text{ Hz} - 20 \text{ kHz}$		<0.02		%

Note 2: For operating at elevated temperatures, the device must be derated based on a thermal resistance of 115°C/W typ junction to ambient for the N package, and 158°C/W typ junction to ambient for the H package.

Note 3: Unless otherwise specified the absolute maximum negative input voltage is equal to the negative power supply voltage.

Note 4: The power dissipation limit, however, cannot be exceeded.

Note 5: These specifications apply for $V_S = \pm 15V$ and $0^\circ C \leq T_A \leq +70^\circ C$. V_{OS} , I_B and I_{OS} are measured at $V_{CM} = 0$.

Note 6: The input bias currents are junction leakage currents which approximately double for every 10°C increase in the junction temperature, T_J . Due to the limited production test time, the input bias currents measured are correlated to junction temperature. In normal operation the junction temperature rises above the ambient temperature as a result of internal power dissipation, P_D . $T_J = T_A + \theta_{JA} P_D$ where θ_{JA} is the thermal resistance from junction to ambient. Use of a heat sink is recommended if input bias current is to be kept to a minimum.

Note 7: Supply voltage rejection ratio is measured for both supply magnitudes increasing or decreasing simultaneously in accordance with common practice. $V_S = \pm 6V$ to $\pm 15V$.

Note 8: Human body model, 1.5 kΩ in series with 100 pF.

LF411

Low Offset, Low Drift JFET Input Operational Amplifier

General Description

These devices are low cost, high speed, JFET input operational amplifiers with very low input offset voltage and guaranteed input offset voltage drift. They require low supply current yet maintain a large gain bandwidth product and fast slew rate. In addition, well matched high voltage JFET input devices provide very low input bias and offset currents. The LF411 is pin compatible with the standard LM741 allowing designers to immediately upgrade the overall performance of existing designs.

These amplifiers may be used in applications such as high speed integrators, fast D/A converters, sample and hold circuits and many other circuits requiring low input offset voltage and drift, low input bias current, high input impedance, high slew rate and wide bandwidth.

Features

- Internally trimmed offset voltage: 0.5 mV(max)
- Input offset voltage drift: 10 μ V/°C(max)
- Low input bias current: 50 pA
- Low input noise current: 0.01 pA/ \sqrt Hz
- Wide gain bandwidth: 3 MHz(min)
- High slew rate: 10V/ μ s(min)
- Low supply current: 1.8 mA
- High input impedance: $10^{12}\Omega$
- Low total harmonic distortion: $\leq 0.02\%$
- Low 1/f noise corner: 50 Hz
- Fast settling time to 0.01%: 2 μ s

AC Electrical Characteristic (Note 5) (Continued)

Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Note 2: Unless otherwise specified the absolute maximum negative input voltage is equal to the negative power supply voltage.

Note 3: For operating at elevated temperature, these devices must be derated based on a thermal resistance of θ_{JA} .

Note 4: These devices are available in both the commercial temperature range $0^{\circ}\text{C} \leq T_A \leq 70^{\circ}\text{C}$ and the military temperature range $-55^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$. The temperature range is designated by the position just before the package type in the device number. A "C" indicates the commercial temperature range and an "M" indicates the military temperature range. The military temperature range is available in "H" package only.

Note 5: Unless otherwise specified, the specifications apply over the full temperature range and for $V_S = \pm 20\text{V}$ for the LF411A and for $V_S = \pm 15\text{V}$ for the LF411. V_{OS} , I_B , and I_{OS} are measured at $V_{CM} = 0$.

Note 6: The LF411A is 100% tested to this specification. The LF411 is sample tested to insure at least 90% of the units meet this specification.

Note 7: The input bias currents are junction leakage currents which approximately double for every 10°C increase in the junction temperature, T_J . Due to limited production test time, the input bias currents measured are correlated to junction temperature. In normal operation the junction temperature rises above the ambient temperature as a result of internal power dissipation, P_D . $T_J = T_A + \theta_{JA} P_D$ where θ_{JA} is the thermal resistance from junction to ambient. Use of a heat sink is recommended if input bias current is to be kept to a minimum.

Note 8: Supply voltage rejection ratio is measured for both supply magnitudes increasing or decreasing simultaneously in accordance with common practice, from $\pm 15\text{V}$ to $\pm 5\text{V}$ for the LF411 and from $\pm 20\text{V}$ to $\pm 5\text{V}$ for the LF411A.

Note 9: RETS 411X for LF411MH and LF411MJ military specifications.

Note 10: Max. Power Dissipation is defined by the package characteristics. Operating the part near the Max. Power Dissipation may cause the part to operate outside guaranteed limits.

LF412

Low Offset, Low Drift Dual JFET Input Operational Amplifier

General Description

These devices are low cost, high speed, JFET input operational amplifiers with very low input offset voltage and guaranteed input offset voltage drift. They require low supply current yet maintain a large gain bandwidth product and fast slew rate. In addition, well matched high voltage JFET input devices provide very low input bias and offset currents. The LF412 dual is pin compatible with the LM1558, allowing designers to immediately upgrade the overall performance of existing designs.

These amplifiers may be used in applications such as high speed integrators, fast D/A converters, sample and hold circuits and many other circuits requiring low input offset voltage and drift, low input bias current, high input impedance, high slew rate and wide bandwidth.

Features

- Internally trimmed offset voltage: 1 mV (max)
- Input offset voltage drift: 10 $\mu\text{V}/^\circ\text{C}$ (max)
- Low input bias current: 50 pA
- Low input noise current: 0.01 pA/ $\sqrt{\text{Hz}}$
- Wide gain bandwidth: 3 MHz (min)
- High slew rate: 10V/ μs (min)
- Low supply current: 1.8 mA/Amplifier
- High input impedance: $10^{12}\Omega$
- Low total harmonic distortion $\leq 0.02\%$
- Low 1/f noise corner: 50 Hz
- Fast settling time to 0.01%: 2 μs

i_n	Equivalent Input Noise Current	$T_A=25^\circ\text{C}$, $f=1$ kHz		0.01			0.01		$\text{pA}/\sqrt{\text{Hz}}$

Note 3: Unless otherwise specified the absolute maximum negative input voltage is equal to the negative power supply voltage.

Note 4: Any of the amplifier outputs can be shorted to ground indefinitely, however, more than one should not be simultaneously shorted as the maximum junction temperature will be exceeded.

Note 5: For operating at elevated temperature, these devices must be derated based on a thermal resistance of θ_{jA} .

Note 6: These devices are available in both the commercial temperature range $0^\circ\text{C} \leq T_A \leq 70^\circ\text{C}$ and the military temperature range $-55^\circ\text{C} \leq T_A \leq 125^\circ\text{C}$. The temperature range is designated by the position just before the package type in the device number. A "C" indicates the commercial temperature range and an "M" indicates the military temperature range. The military temperature range is available in "H" package only. In all cases the maximum operating temperature is limited by internal junction temperature T_j max.

Note 7: Unless otherwise specified, the specifications apply over the full temperature range and for $V_S = \pm 20\text{V}$ for the LF412A and for $V_S = \pm 15\text{V}$ for the LF412. V_{OS} , I_B , and I_{OS} are measured at $V_{CM} = 0$.

Note 8: The LF412A is 100% tested to this specification. The LF412 is sample tested on a per amplifier basis to insure at least 85% of the amplifiers meet this specification.

Note 9: The input bias currents are junction leakage currents which approximately double for every 10°C increase in the junction temperature, T_j . Due to limited production test time, the input bias currents measured are correlated to junction temperature. In normal operation the junction temperature rises above the ambient temperature as a result of internal power dissipation, P_D . $T_j = T_A + \theta_{jA} P_D$ where θ_{jA} is the thermal resistance from junction to ambient. Use of a heat sink is recommended if input bias current is to be kept to a minimum.

Note 10: Supply voltage rejection ratio is measured for both supply magnitudes increasing or decreasing simultaneously in accordance with common practice. $V_S = \pm 6\text{V}$ to $\pm 15\text{V}$.

Note 11: Refer to RETS412X for LF412MH and LF412MJ military specifications.

Note 12: Max. Power Dissipation is defined by the package characteristics. Operating the part near the Max. Power Dissipation may cause the part to operate outside guaranteed limits.

Note 13: Human body model, 1.5 k Ω in series with 100 pF.

LF442

Dual Low Power JFET Input Operational Amplifier

General Description

The LF442 dual low power operational amplifiers provide many of the same AC characteristics as the industry standard LM1458 while greatly improving the DC characteristics of the LM1458. The amplifiers have the same bandwidth, slew rate, and gain (10 kΩ load) as the LM1458 and only draw one tenth the supply current of the LM1458. In addition the well matched high voltage JFET input devices of the LF442 reduce the input bias and offset currents by a factor of 10,000 over the LM1458. A combination of careful layout design and internal trimming guarantees very low input offset voltage and voltage drift. The LF442 also has a very low equivalent input noise voltage for a low power amplifier.

The LF442 is pin compatible with the LM1458 allowing an immediate 10 times reduction in power drain in many applications. The LF442 should be used where low power dissipation and good electrical characteristics are the major considerations.

Features

- 1/10 supply current of a LM1458: 400 μA (max)
- Low input bias current: 50 pA (max)
- Low input offset voltage: 1 mV (max)
- Low input offset voltage drift: 10 μV/°C (max)
- High gain bandwidth: 1 MHz
- High slew rate: 1 V/μs
- Low noise voltage for low power: 35 nV/√Hz
- Low input noise current: 0.01 pA/√Hz
- High input impedance: 10¹²Ω
- High gain V_O = ±10V, R_L = 10k: 50k (min)

AC Electrical Characteristics (Note 7) (Continued)

Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Note 2: Unless otherwise specified the absolute maximum negative input voltage is equal to the negative power supply voltage.

Note 3: Any of the amplifier outputs can be shorted to ground indefinitely, however, more than one should not be simultaneously shorted as the maximum junction temperature will be exceeded.

Note 4: The value given is in 400 linear feet/min air flow.

Note 5: The value given is in static air.

Note 6: These devices are available in both the commercial temperature range $0^{\circ}\text{C} \leq T_A \leq 70^{\circ}\text{C}$ and the military temperature range $-55^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$. The temperature range is designated by the position just before the package type in the device number. A "C" indicates the commercial temperature range and an "M" indicates the military temperature range. The military temperature range is available in "H" package only.

Note 7: Unless otherwise specified, the specifications apply over the full temperature range and for $V_S = \pm 20\text{V}$ for the LF442A and for $V_S = \pm 15\text{V}$ for the LF442. V_{OS} , I_B , and I_{OS} are measured at $V_{CM} = 0$.

Note 8: The input bias currents are junction leakage currents which approximately double for every 10°C increase in the junction temperature, T_J . Due to limited production test time, the input bias currents measured are correlated to junction temperature. In normal operation the junction temperature rises above the ambient temperature as a result of internal power dissipation, P_D . $T_J = T_A + \theta_{JA}P_D$ where θ_{JA} is the thermal resistance from junction to ambient. Use of a heat sink is recommended if input bias current is to be kept to a minimum.

Note 9: Supply voltage rejection ratio is measured for both supply magnitudes increasing or decreasing simultaneously in accordance with common practice from $\pm 15\text{V}$ to $\pm 5\text{V}$ for the LF442 and $\pm 20\text{V}$ to $\pm 5\text{V}$ for the LF442A.

Note 10: Refer to RETS442X for LF442MH military specifications.

Simplified Schematic

LF444

Quad Low Power JFET Input Operational Amplifier

General Description

The LF444 quad low power operational amplifier provides many of the same AC characteristics as the industry standard LM148 while greatly improving the DC characteristics of the LM148. The amplifier has the same bandwidth, slew rate, and gain (10 kΩ load) as the LM148 and only draws one fourth the supply current of the LM148. In addition the well matched high voltage JFET input devices of the LF444 reduce the input bias and offset currents by a factor of 10,000 over the LM148. The LF444 also has a very low equivalent input noise voltage for a low power amplifier.

The LF444 is pin compatible with the LM148 allowing an immediate 4 times reduction in power drain in many applications. The LF444 should be used wherever low power dissipation and good electrical characteristics are the major considerations.

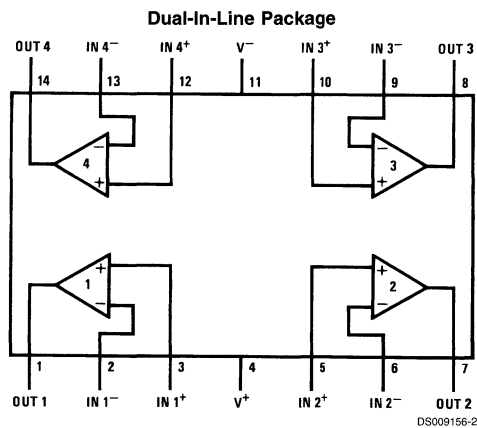

Features

- 1/4 supply current of a LM148: 200 μA/Amplifier (max)
- Low input bias current: 50 pA (max)
- High gain bandwidth: 1 MHz
- High slew rate: 1 V/μs
- Low noise voltage for low power 35 nV/√Hz
- Low input noise current 0.01 pA/√Hz
- High input impedance: 10¹²Ω
- High gain: 50k (min)

e_n	Equivalent Input Noise Voltage	$T_A = 25^\circ C, R_S = 100\Omega,$ $f = 1\text{ kHz}$		35			35		nV/ \sqrt{Hz}
i_n	Equivalent Input Noise Current	$T_A = 25^\circ C, f = 1\text{ kHz}$		0.01			0.01		pA/ \sqrt{Hz}

Note 1: Unless otherwise specified the absolute maximum negative input voltage is equal to the negative power supply voltage.

Note 2: Any of the amplifier outputs can be shorted to ground indefinitely, however, more than one should not be simultaneously shorted as the maximum junction temperature will be exceeded.

Note 3: For operating at elevated temperature, these devices must be derated based on a thermal resistance of θ_{JA} .

Note 4: The LF444A is available in both the commercial temperature range $0^\circ C \leq T_A \leq 70^\circ C$ and the military temperature range $-55^\circ C \leq T_A \leq 125^\circ C$. The LF444 is available in the commercial temperature range only. The temperature range is designated by the position just before the package type in the device number. A "C" indicates the commercial temperature range and an "M" indicates the military temperature range. The military temperature range is available in "D" package only.

Note 5: Unless otherwise specified the specifications apply over the full temperature range and for $V_S = \pm 20V$ for the LF444A and for $V_S = \pm 15V$ for the LF444. V_{OS} , I_B , and I_{OS} are measured at $V_{CM} = 0$.

Note 6: The input bias currents are junction leakage currents which approximately double for every $10^\circ C$ increase in the junction temperature, T_j . Due to limited production test time, the input bias currents measured are correlated to junction temperature. In normal operation the junction temperature rises above the ambient temperature as a result of internal power dissipation, P_D . $T_j = T_A + \theta_{JA}P_D$ where θ_{JA} is the thermal resistance from junction to ambient. Use of a heat sink is recommended if input bias current is to be kept to a minimum.

Note 7: Supply voltage rejection ratio is measured for both supply magnitudes increasing or decreasing simultaneously in accordance with common practice from $\pm 15V$ to $\pm 5V$ for the LF444 and from $\pm 20V$ to $\pm 5V$ for the LF444A.

Note 8: Refer to RETS444X for LF444MD military specifications.

Note 9: Max. Power Dissipation is defined by the package characteristics. Operating the part near the Max. Power Dissipation may cause the part to operate outside guaranteed limits.

Note 10: Human body model, $1.5\text{ k}\Omega$ in series with 100 pF .

Note 11: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which guarantee specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not guaranteed for parameters where no limit is given, however, the typical value is a good indication of device performance.

LM10

Operational Amplifier and Voltage Reference

General Description

The LM10 series are monolithic linear ICs consisting of a precision reference, an adjustable reference buffer and an independent, high quality op amp.

The unit can operate from a total supply voltage as low as 1.1V or as high as 40V, drawing only 270 μ A. A complementary output stage swings within 15 mV of the supply terminals or will deliver ± 20 mA output current with ± 0.4 V saturation. Reference output can be as low as 200 mV.

The circuit is recommended for portable equipment and is completely specified for operation from a single power cell. In contrast, high output-drive capability, both voltage and current, along with thermal overload protection, suggest it in demanding general-purpose applications.

The device is capable of operating in a floating mode, independent of fixed supplies. It can function as a remote comparator, signal conditioner, SCR controller or transmitter for

analog signals, delivering the processed signal on the same line used to supply power. It is also suited for operation in a wide range of voltage- and current-regulator applications, from low voltages to several hundred volts, providing greater precision than existing ICs.

This series is available in the three standard temperature ranges, with the commercial part having relaxed limits. In addition, a low-voltage specification (suffix "L") is available in the limited temperature ranges at a cost savings.

Features

- input offset voltage: 2.0 mV (max)
- input offset current: 0.7 nA (max)
- input bias current: 20 nA (max)
- reference regulation: 0.1% (max)
- offset voltage drift: 2 μ V/ $^{\circ}$ C
- reference drift: 0.002%/ $^{\circ}$ C

				65			90	nA
Reference drift			0.002			0.003		%/°C
Supply current			260	400		280	500	μA
				500			570	μA

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Note 2: The Input voltage can exceed the supply voltages provided that the voltage from the input to any other terminal does not exceed the maximum differential input voltage and excess dissipation is accounted for when $V_{\text{IN}}<V^-$.

Note 3: The maximum, operating-junction temperature is 150°C for the LM10, 100°C for the LM10B(L) and 85°C for the LM10C(L). At elevated temperatures, devices must be derated based on package thermal resistance.

Note 4: Internal thermal limiting prevents excessive heating that could result in sudden failure, but the IC can be subjected to accelerated stress with a shorted output and worst-case conditions.

Note 5: These specifications apply for $V^- \leq V_{\text{CM}} \leq V^+ - 0.85\text{V}$ (1.0V), 1.2V (1.3V) $< V_S \leq V_{\text{MAX}}$, $V_{\text{REF}}=0.2\text{V}$ and $0 \leq I_{\text{REF}} \leq 1.0\text{ mA}$, unless otherwise specified: $V_{\text{MAX}}=40\text{V}$ for the standard part and 6.5V for the low voltage part. Normal typeface indicates 25°C limits. **Boldface type indicates limits and altered test conditions for full-temperature-range operation;** this is -55°C to 125°C for the LM10, -25°C to 85°C for the LM10B(L) and 0°C to 70°C for the LM10C(L). The specifications do not include the effects of thermal gradients ($\tau_1=20\text{ ms}$), die heating ($\tau_2=0.2\text{ s}$) or package heating. Gradient effects are small and tend to offset the electrical error (see curves).

Note 6: For $T_J > 90^\circ\text{C}$, I_{OS} may exceed 1.5 nA for $V_{\text{CM}}=V^-$. With $T_J=125^\circ\text{C}$ and $V^- \leq V_{\text{CM}} \leq V^+ + 0.1\text{V}$, $I_{\text{OS}} \leq 5\text{ nA}$.

Note 7: This defines operation in floating applications such as the bootstrapped regulator or two-wire transmitter. Output is connected to the V^+ terminal of the IC and input common mode is referred to V^- (see typical applications). Effect of larger output-voltage swings with higher load resistance can be accounted for by adding the positive-supply rejection error.

Note 8: Refer to RETS10X for LM10H military specifications.

Definition of Terms

Input offset voltage: That voltage which must be applied between the input terminals to bias the unloaded output in the linear region.

Input offset current: The difference in the currents at the input terminals when the unloaded output is in the linear region.

Input bias current: The absolute value of the average of the two input currents.

Input resistance: The ratio of the change in input voltage to the change in input current on either input with the other grounded.

Large signal voltage gain: The ratio of the specified output voltage swing to the change in differential input voltage required to produce it.

Shunt gain: The ratio of the specified output voltage swing to the change in differential input voltage required to produce it with the output tied to the V^+ terminal of the IC. The load and power source are connected between the V^+ and V^- terminals, and input common-mode is referred to the V^- terminal.

Common-mode rejection: The ratio of the input voltage range to the change in offset voltage between the extremes.

Supply-voltage rejection: The ratio of the specified supply-voltage change to the change in offset voltage between the extremes.

Line regulation: The average change in reference output voltage over the specified supply voltage range.

Load regulation: The change in reference output voltage from no load to that load specified.

Feedback sense voltage: The voltage, referred to V^- , on the reference feedback terminal while operating in regulation.

Reference amplifier gain: The ratio of the specified reference output change to the change in feedback sense voltage required to produce it.

Feedback current: The absolute value of the current at the feedback terminal when operating in regulation.

Supply current: The current required from the power source to operate the amplifier and reference with their outputs unloaded and operating in the linear range.

LM13700

Dual Operational Transconductance Amplifiers with Linearizing Diodes and Buffers

General Description

The LM13700 series consists of two current controlled transconductance amplifiers, each with differential inputs and a push-pull output. The two amplifiers share common supplies but otherwise operate independently. Linearizing diodes are provided at the inputs to reduce distortion and allow higher input levels. The result is a 10 dB signal-to-noise improvement referenced to 0.5 percent THD. High impedance buffers are provided which are especially designed to complement the dynamic range of the amplifiers. The output buffers of the LM13700 differ from those of the LM13600 in that their input bias currents (and hence their output DC levels) are independent of I_{ABC} . This may result in performance superior to that of the LM13600 in audio applications.

Features

- g_m adjustable over 6 decades

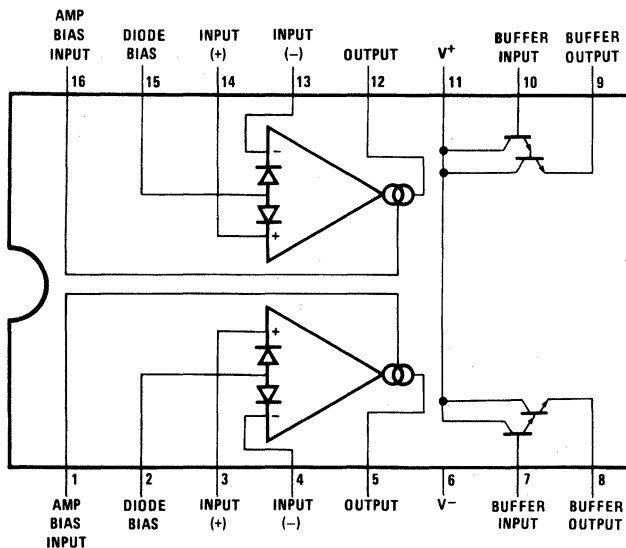

- Excellent g_m linearity
- Excellent matching between amplifiers
- Linearizing diodes
- High impedance buffers
- High output signal-to-noise ratio

Applications

- Current-controlled amplifiers
- Current-controlled impedances
- Current-controlled filters
- Current-controlled oscillators
- Multiplexers
- Timers
- Sample-and-hold circuits

Voltage Controlled Low-Pass Filter

LM101A/LM201A/LM301A Operational Amplifiers

General Description

The LM101A series are general purpose operational amplifiers which feature improved performance over industry standards like the LM709. Advanced processing techniques make possible an order of magnitude reduction in input currents, and a redesign of the biasing circuitry reduces the temperature drift of input current. Improved specifications include:

- Offset voltage 3 mV maximum over temperature (LM101A/LM201A)
- Input current 100 nA maximum over temperature (LM101A/LM201A)
- Offset current 20 nA maximum over temperature (LM101A/LM201A)
- Guaranteed drift characteristics
- Offsets guaranteed over entire common mode and supply voltage ranges
- Slew rate of 10V/μs as a summing amplifier

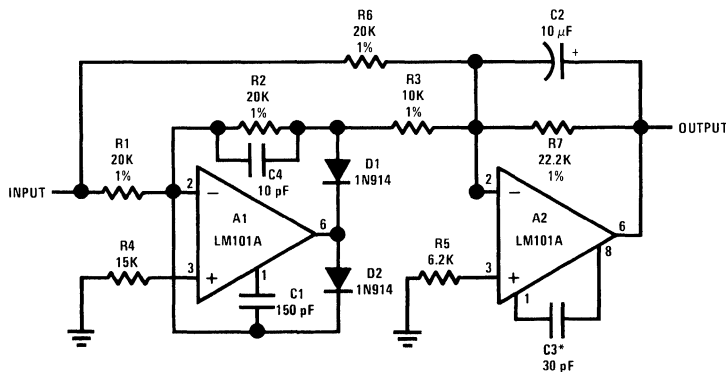

This amplifier offers many features which make its application nearly foolproof: overload protection on the input

and output, no latch-up when the common mode range is exceeded, and freedom from oscillations and compensation with a single 30 pF capacitor. It has advantages over internally compensated amplifiers in that the frequency compensation can be tailored to the particular application. For example, in low frequency circuits it can be over-compensated for increased stability margin. Or the compensation can be optimized to give more than a factor of ten improvement in high frequency performance for most applications.

In addition, the device provides better accuracy and lower noise in high impedance circuitry. The low input currents also make it particularly well suited for long interval integrators or timers, sample and hold circuits and low frequency waveform generators. Further, replacing circuits where matched transistor pairs buffer the inputs of conventional IC op amps, it can give lower offset voltage and a drift at a lower cost.

The LM101A is guaranteed over a temperature range of -55°C to +125°C, the LM201A from -25°C to +85°C, and the LM301A from 0°C to +70°C.

Fast AC/DC Converter (Note 1)

DS007752-33

Note 1: Feedforward compensation can be used to make a fast full wave rectifier without a filter.

Note 2: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating ratings indicate for which the device is functional, but do not guarantee specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which guarantee specific limits. This assumes that the device is within the Operating Ratings. Specifications are not guaranteed for parameters where no limit is given, however, the typical value is a good indication of device performance.

Note 3: For supply voltages less than $\pm 15V$, the absolute maximum input voltage is equal to the supply voltage.

Note 4: Continuous short circuit is allowed for case temperatures to $125^\circ C$ and ambient temperatures to $75^\circ C$ for LM101A/LM201A, and $70^\circ C$ and $55^\circ C$ respectively for LM301A.

Note 5: Unless otherwise specified, these specifications apply for $C1 = 30 pF$, $\pm 5V \leq V_S \leq \pm 20V$ and $-55^\circ C \leq T_A \leq +125^\circ C$ (LM101A), $\pm 5V \leq V_S \leq \pm 20V$ and $-25^\circ C \leq T_A \leq +85^\circ C$ (LM201A), $\pm 5V \leq V_S \leq \pm 15V$ and $0^\circ C \leq T_A \leq +70^\circ C$ (LM301A).

Note 6: Refer to RETS101AX for LM101A military specifications and RETS101X for LM101 military specifications.

Note 7: Human body model, 100 pF discharged through 1.5 k Ω .

LM118/LM218/LM318 Operational Amplifiers

General Description

The LM118 series are precision high speed operational amplifiers designed for applications requiring wide bandwidth and high slew rate. They feature a factor of ten increase in speed over general purpose devices without sacrificing DC performance.

The LM118 series has internal unity gain frequency compensation. This considerably simplifies its application since no external components are necessary for operation. However, unlike most internally compensated amplifiers, external frequency compensation may be added for optimum performance. For inverting applications, feedforward compensation will boost the slew rate to over 150V/ μ s and almost double the bandwidth. Overcompensation can be used with the amplifier for greater stability when maximum bandwidth is not needed. Further, a single capacitor can be added to reduce the 0.1% settling time to under 1 μ s.

The high speed and fast settling time of these op amps make them useful in A/D converters, oscillators, active filters,

sample and hold circuits, or general purpose amplifiers. These devices are easy to apply and offer an order of magnitude better AC performance than industry standards such as the LM709.

The LM218 is identical to the LM118 except that the LM218 has its performance specified over a -25°C to $+85^{\circ}\text{C}$ temperature range. The LM318 is specified from 0°C to $+70^{\circ}\text{C}$.

Features

- 15 MHz small signal bandwidth
- Guaranteed 50V/ μ s slew rate
- Maximum bias current of 250 nA
- Operates from supplies of $\pm 5\text{V}$ to $\pm 20\text{V}$
- Internal frequency compensation
- Input and output overload protected
- Pin compatible with general purpose op amps

Fast Voltage Follower

Large Signal Voltage Gain	$T_A = 25^\circ\text{C}$, $V_S = \pm 15\text{V}$ $V_{\text{OUT}} = \pm 10\text{V}$, $R_L \geq 2\text{ k}\Omega$	50	200		25	200		V/mV
Slew Rate	$T_A = 25^\circ\text{C}$, $V_S = \pm 15\text{V}$, $A_v = 1$ (Note 6)	50	70		50	70		V/ μs
Small Signal Bandwidth	$T_A = 25^\circ\text{C}$, $V_S = \pm 15\text{V}$		15			15		MHz
Input Offset Voltage				6			15	mV
Input Offset Current				100			300	nA
Input Bias Current				500			750	nA
Supply Current	$T_A = 125^\circ\text{C}$		4.5	7				mA
Large Signal Voltage Gain	$V_S = \pm 15\text{V}$, $V_{\text{OUT}} = \pm 10\text{V}$ $R_L \geq 2\text{ k}\Omega$	25			20			V/mV
Output Voltage Swing	$V_S = \pm 15\text{V}$, $R_L = 2\text{ k}\Omega$	±12	±13		±12	±13		V
Input Voltage Range	$V_S = \pm 15\text{V}$	±11.5			±11.5			V
Common-Mode Rejection Ratio		80	100		70	100		dB
Supply Voltage Rejection Ratio		70	80		65	80		dB

Note 2: The maximum junction temperature of the LM118 is 150°C, the LM218 is 110°C, and the LM318 is 110°C. For operating at elevated temperatures, devices in the H08 package must be derated based on a thermal resistance of 160°C/W, junction to ambient, or 20°C/W, junction to case. The thermal resistance of the dual-in-line package is 100°C/W, junction to ambient.

Note 3: The inputs are shunted with back-to-back diodes for overvoltage protection. Therefore, excessive current will flow if a differential input voltage in excess of 1V is applied between the inputs unless some limiting resistance is used.

Note 4: For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.

Note 5: These specifications apply for $\pm 5\text{V} \leq V_S \leq \pm 20\text{V}$ and $-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$ (LM118), $-25^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$ (LM218), and $0^\circ\text{C} \leq T_A \leq +70^\circ\text{C}$ (LM318). Also, power supplies must be bypassed with 0.1 μF disc capacitors.

Note 6: Slew rate is tested with $V_S = \pm 15\text{V}$. The LM118 is in a unity-gain non-inverting configuration. V_{IN} is stepped from -7.5V to +7.5V and vice versa. The slew rates between -5.0V and +5.0V and vice versa are tested and guaranteed to exceed 50V/ μs .

Note 7: Refer to RETS118X for LM118H and LM118J military specifications.

Note 8: Human body model, 1.5 kΩ in series with 100 pF.

LM12CL

80W Operational Amplifier

General Description

The LM12 is a power op amp capable of driving $\pm 25V$ at $\pm 10A$ while operating from $\pm 30V$ supplies. The monolithic IC can deliver 80W of sine wave power into a 4Ω load with 0.01% distortion. Power bandwidth is 60 kHz. Further, a peak dissipation capability of 800W allows it to handle reactive loads such as transducers, actuators or small motors without derating. Important features include:

- input protection
- controlled turn on
- thermal limiting
- overvoltage shutdown
- output-current limiting
- dynamic safe-area protection

The IC delivers $\pm 10A$ output current at any output voltage yet is completely protected against overloads, including shorts to the supplies. The dynamic safe-area protection is provided by instantaneous peak-temperature limiting within the power transistor array.

The turn-on characteristics are controlled by keeping the output open-circuited until the total supply voltage reaches 14V. The output is also opened as the case temperature ex-

ceeds $150^\circ C$ or as the supply voltage approaches the BV_{CEO} of the output transistors. The IC withstands overvoltages to 80V.

This monolithic op amp is compensated for unity-gain feedback, with a small-signal bandwidth of 700 kHz. Slew rate is $9V/\mu s$, even as a follower. Distortion and capacitive-load stability rival that of the best designs using complementary output transistors. Further, the IC withstands large differential input voltages and is well behaved should the common-mode range be exceeded.

The LM12 establishes that monolithic ICs can deliver considerable output power without resorting to complex switching schemes. Devices can be paralleled or bridged for even greater output capability. Applications include operational power supplies, high-voltage regulators, high-quality audio amplifiers, tape-head positioners, x-y plotters or other servo-control systems.

The LM12 is supplied in a four-lead, TO-3 package with V- on the case. A gold-eutectic die-attach to a molybdenum interface is used to avoid thermal fatigue problems. The LM12 is specified for either military or commercial temperature range.

AC Thermal Resistance	(Note 5)	1.6	2.1	°C/W (max)
Supply Current	$V_{OUT} = 0$, $I_{OUT} = 0$	60	120/140	mA (max)

Note 1: Absolute maximum ratings indicate limits beyond which damage to the device may occur. The maximum voltage for which the LM12 is guaranteed to operate is given in the operating ratings and in Note 4. With inductive loads or output shorts, other restrictions described in applications section apply.

Note 2: Neither input should exceed the supply voltage by more than 50 volts nor should the voltage between one input and any other terminal exceed 60 volts.

Note 3: Operating junction temperature is internally limited near 225°C within the power transistor and 160°C for the control circuitry.

Note 4: The supply voltage is $\pm 30V$ ($V_{MAX} = 60V$), unless otherwise specified. The voltage across the conducting output transistor (supply to output) is V_{DISS} and internal power dissipation is P_{DISS} . Temperature range is $0^\circ C \leq T_C \leq 70^\circ C$ where T_C is the case temperature. Standard typeface indicates limits at 25°C while **bold-face type refers to limits or special conditions over full temperature range**. With no heat sink, the package will heat at a rate of 35°C/sec per 100W of internal dissipation.

Note 5: This thermal resistance is based upon a peak temperature of 200°C in the center of the power transistor and a case temperature of 25°C measured at the center of the package bottom. The maximum junction temperature of the control circuitry can be estimated based upon a dc thermal resistance of 0.9°C/W or an ac thermal resistance of 0.6°C/W for any operating voltage.

Although the output and supply leads are resistant to electrostatic discharges from handling, the input leads are not. The part should be treated accordingly.

LM124/LM224/LM324/LM2902 Low Power Quad Operational Amplifiers

General Description

The LM124 series consists of four independent, high gain, internally frequency compensated operational amplifiers which were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage.

Application areas include transducer amplifiers, DC gain blocks and all the conventional op amp circuits which now can be more easily implemented in single power supply systems. For example, the LM124 series can be directly operated off of the standard +5V power supply voltage which is used in digital systems and will easily provide the required interface electronics without requiring the additional $\pm 15V$ power supplies.

Unique Characteristics

- In the linear mode the input common-mode voltage range includes ground and the output voltage can also swing to ground, even though operated from only a single power supply voltage
- The unity gain cross frequency is temperature compensated
- The input bias current is also temperature compensated

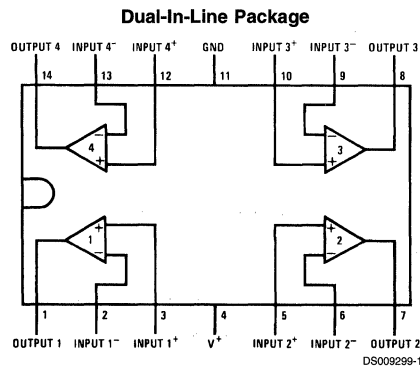

Advantages

- Eliminates need for dual supplies
- Four internally compensated op amps in a single package
- Allows directly sensing near GND and V_{OUT} also goes to GND
- Compatible with all forms of logic
- Power drain suitable for battery operation

Features

- Internally frequency compensated for unity gain
- Large DC voltage gain 100 dB
- Wide bandwidth (unity gain) 1 MHz (temperature compensated)
- Wide power supply range:
Single supply 3V to 32V
or dual supplies $\pm 1.5V$ to $\pm 16V$
- Very low supply current drain (700 μA)—essentially independent of supply voltage
- Low input biasing current 45 nA (temperature compensated)
- Low input offset voltage 2 mV and offset current: 5 nA
- Input common-mode voltage range includes ground
- Differential input voltage range equal to the power supply voltage
- Large output voltage swing 0V to $V^+ - 1.5V$

	Sink $V_{IN^-} = +1V$, $V_{IN^+} = 0V$, $V^+ = 15V$			5	8		5	8		5	8		

Note 4: For operating at high temperatures, the LM324/LM324A/LM2902 must be derated based on a $+125^\circ C$ maximum junction temperature and a thermal resistance of $88^\circ C/W$ which applies for the device soldered in a printed circuit board, operating in a still air ambient. The LM224/LM224A and LM124/LM124A can be derated based on a $+150^\circ C$ maximum junction temperature. The dissipation is the total of all four amplifiers—use external resistors, where possible, to allow the amplifier to saturate or to reduce the power which is dissipated in the integrated circuit.

Note 5: Short circuits from the output to V^+ can cause excessive heating and eventual destruction. When considering short circuits to ground, the maximum output current is approximately 40 mA independent of the magnitude of V^+ . At values of supply voltage in excess of +15V, continuous short-circuits can exceed the power dissipation ratings and cause eventual destruction. Destructive dissipation can result from simultaneous shorts on all amplifiers.

Note 6: This input current will only exist when the voltage at any of the input leads is driven negative. It is due to the collector-base junction of the input PNP transistors becoming forward biased and thereby acting as input diode clamps. In addition to this diode action, there is also lateral NPN parasitic transistor action on the IC chip. This transistor action can cause the output voltages of the op amps to go to the V^+ voltage level (or to ground for a large overdrive) for the time duration that an input is driven negative. This is not destructive and normal output states will re-establish when the input voltage, which was negative, again returns to a value greater than $-0.3V$ (at $25^\circ C$).

Note 7: These specifications are limited to $-55^\circ C \leq T_A \leq +125^\circ C$ for the LM124/LM124A. With the LM224/LM224A, all temperature specifications are limited to $-25^\circ C \leq T_A \leq +85^\circ C$, the LM324/LM324A temperature specifications are limited to $0^\circ C \leq T_A \leq +70^\circ C$, and the LM2902 specifications are limited to $-40^\circ C \leq T_A \leq +85^\circ C$.

Note 8: $V_O \cong 1.4V$, $R_S = 0\Omega$ with V^+ from 5V to 30V; and over the full input common-mode range (0V to $V^+ - 1.5V$) for LM2902, V^+ from 5V to 26V.

Note 9: The direction of the input current is out of the IC due to the PNP input stage. This current is essentially constant, independent of the state of the output so no loading change exists on the input lines.

Note 10: The input common-mode voltage of either input signal voltage should not be allowed to go negative by more than 0.3V (at $25^\circ C$). The upper end of the common-mode voltage range is $V^+ - 1.5V$ (at $25^\circ C$), but either or both inputs can go to $+32V$ without damage ($+26V$ for LM2902), independent of the magnitude of V^+ .

Note 11: Due to proximity of external components, insure that coupling is not originating via stray capacitance between these external parts. This typically can be detected as this type of capacitance increases at higher frequencies.

Note 12: Refer to RETS124AX for LM124A military specifications and refer to RETS124X for LM124 military specifications.

Note 13: Human body model, 1.5 k Ω in series with 100 pF.

LM1458/LM1558

Dual Operational Amplifier

General Description

The LM1458 and the LM1558 are general purpose dual operational amplifiers. The two amplifiers share a common bias network and power supply leads. Otherwise, their operation is completely independent.

The LM1458 is identical to the LM1558 except that the LM1458 has its specifications guaranteed over the temperature range from 0°C to +70°C instead of -55°C to +125°C.

Features

- No frequency compensation required
- Short-circuit protection
- Wide common-mode and differential voltage ranges
- Low-power consumption
- 8-lead can and 8-lead mini DIP
- No latch up when input common mode range is exceeded

Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Note 2: The maximum junction temperature of the LM1558 is 150°C, while that of the LM1458 is 100°C. For operating at elevated temperatures, devices in the H08 package must be derated based on a thermal resistance of 150°C/W, junction to ambient or 20°C/W, junction to case. For the DIP the device must be derated based on a thermal resistance of 187°C/W, junction to ambient.

Note 3: For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.

Note 4: These specifications apply for $V_S = \pm 15\text{V}$ and $-55^\circ\text{C} \leq T_A \leq 125^\circ\text{C}$, unless otherwise specified. With the LM1458, however, all specifications are limited to $0^\circ\text{C} \leq T_A \leq 70^\circ\text{C}$ and $V_S = \pm 15\text{V}$.

Note 5: Refer to RETS 1558V for LM1558J and LM1558H military specifications.

Note 6: Human body model, 1.5 k Ω in series with 100 pF.

Numbers in parentheses are pin numbers for amplifier B.

LM146/LM346

Programmable Quad Operational Amplifiers

General Description

The LM146 series of quad op amps consists of four independent, high gain, internally compensated, low power, programmable amplifiers. Two external resistors (R_{SET}) allow the user to program the gain bandwidth product, slew rate, supply current, input bias current, input offset current and input noise. For example, the user can trade-off supply current for bandwidth or optimize noise figure for a given source resistance. In a similar way, other amplifier characteristics can be tailored to the application. Except for the two programming pins at the end of the package, the LM146 pin-out is the same as the LM124 and LM148.

Features

($I_{SET}=10 \mu A$)

- Programmable electrical characteristics
- Battery-powered operation
- Low supply current: 350 μA /amplifier
- Guaranteed gain bandwidth product: 0.8 MHz min
- Large DC voltage gain: 120 dB
- Low noise voltage: 28 nV/\sqrt{Hz}
- Wide power supply range: $\pm 1.5V$ to $\pm 22V$
- Class AB output stage—no crossover distortion
- Ideal pin out for Biquad active filters
- Input bias currents are temperature compensated

Input CM Range	$T_A = 25^\circ C$	± 0.7			± 0.7			V
CM Rejection Ratio	$R_S \leq 50\Omega$, $T_A = 25^\circ C$		80			80		dB
Output Voltage Swing	$R_L \geq 10 \text{ k}\Omega$, $T_A = 25^\circ C$	± 0.6			± 0.6			V

Note 1: For supply voltages less than $\pm 15V$, the absolute maximum input voltage is equal to the supply voltage.

Note 2: The maximum power dissipation for these devices must be derated at elevated temperatures and is dictated by T_{JMAX} , θ_{JA} , and the ambient temperature, T_A . The maximum available power dissipation at any temperature is $P_D = (T_{JMAX} - T_A) / \theta_{JA}$ or the $25^\circ C$ P_{DMAX} , whichever is less.

Note 3: Any of the amplifier outputs can be shorted to ground indefinitely; however, more than one should not be simultaneously shorted as the maximum junction temperature will be exceeded.

Note 4: These specifications apply over the absolute maximum operating temperature range unless otherwise noted.

Note 5: Refer to RETS146X for LM146J military specifications.

LM148/LM248/LM348

Quad 741 Op Amps

LM149

Wide Band Decompensated ($A_{V(MIN)} = 5$)

General Description

The LM148 series is a true quad 741. It consists of four independent, high gain, internally compensated, low power operational amplifiers which have been designed to provide functional characteristics identical to those of the familiar 741 operational amplifier. In addition the total supply current for all four amplifiers is comparable to the supply current of a single 741 type op amp. Other features include input offset currents and input bias current which are much less than those of a standard 741. Also, excellent isolation between amplifiers has been achieved by independently biasing each amplifier and using layout techniques which minimize thermal coupling. The LM149 series has the same features as the LM148 plus a gain bandwidth product of 4 MHz at a gain of 5 or greater.

The LM148 can be used anywhere multiple 741 or 1558 type amplifiers are being used and in applications where amplifier matching or high packing density is required. For lower power refer to LF444.

Features

- 741 op amp operating characteristics
- Low supply current drain: 0.6 mA/Amplifier
- Class AB output stage—no crossover distortion
- Pin compatible with the LM124
- Low input offset voltage: 1 mV
- Low input offset current: 4 nA
- Low input bias current: 30 nA
- Gain bandwidth product
 - LM148 (unity gain): 1.0 MHz
 - LM149 ($A_V \geq 5$): 4 MHz
- High degree of isolation between amplifiers: 120 dB
- Overload protection for inputs and outputs

Schematic Diagram

$V_S = \pm 15\text{V}$

Application Hints

The LM148 series are quad low power 741 op amps. In the proliferation of quad op amps, these are the first to offer the convenience of familiar, easy to use operating characteristics of the 741 op amp. In those applications where 741 op amps have been employed, the LM148 series op amps can be employed directly with no change in circuit performance.

The LM149 series has the same characteristics as the LM148 except it has been decompensated to provide a wider bandwidth. As a result the part requires a minimum gain of 5.

LM158/LM258/LM358/LM2904 Low Power Dual Operational Amplifiers

General Description

The LM158 series consists of two independent, high gain, internally frequency compensated operational amplifiers which were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage.

Application areas include transducer amplifiers, dc gain blocks and all the conventional op amp circuits which now can be more easily implemented in single power supply systems. For example, the LM158 series can be directly operated off of the standard +5V power supply voltage which is used in digital systems and will easily provide the required interface electronics without requiring the additional $\pm 15V$ power supplies.

The LM358 is also available in a chip sized package (8-Bump micro SMD) using National's micro SMD package technology.

Unique Characteristics

- In the linear mode the input common-mode voltage range includes ground and the output voltage can also swing to ground, even though operated from only a single power supply voltage.
- The unity gain cross frequency is temperature compensated.
- The input bias current is also temperature compensated.

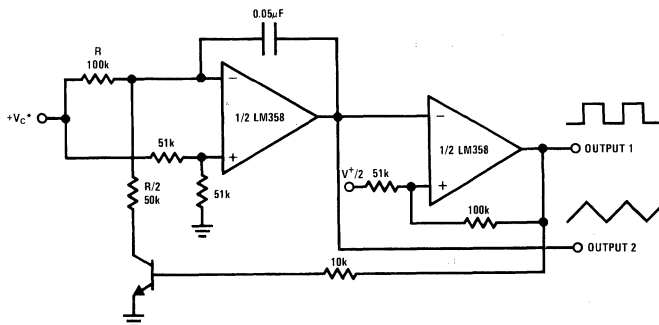

Advantages

- Two internally compensated op amps
- Eliminates need for dual supplies
- Allows direct sensing near GND and V_{OUT} also goes to GND
- Compatible with all forms of logic
- Power drain suitable for battery operation
- Pin-out same as LM1558/LM1458 dual op amp

Features

- Available in 8-Bump micro SMD chip sized package, (See AN-1112)
- Internally frequency compensated for unity gain
- Large dc voltage gain: 100 dB
- Wide bandwidth (unity gain): 1 MHz (temperature compensated)
- Wide power supply range:
 - Single supply: 3V to 32V
 - or dual supplies: $\pm 1.5V$ to $\pm 16V$
- Very low supply current drain (500 μA)—essentially independent of supply voltage
- Low input offset voltage: 2 mV
- Input common-mode voltage range includes ground
- Differential input voltage range equal to the power supply voltage
- Large output voltage swing: 0V to $V^+ - 1.5V$

	Sink	$V_{IN}^- = +1V$, $V_{IN}^+ = 0V$, $V^+ = 15V$, $V_O = 2V$		5		8		5	8	mA

Note 1: For operating at high temperatures, the LM358/LM358A, LM2904 must be derated based on a $+125^\circ\text{C}$ maximum junction temperature and a thermal resistance of 120°C/W for MDIP, 182°C/W for Metal Can, 189°C/W for Small Outline package, and 230°C/W for micro SMD, which applies for the device soldered in a printed circuit board, operating in a still air ambient. The LM258/LM258A and LM158/LM158A can be derated based on a $+150^\circ\text{C}$ maximum junction temperature. The dissipation is the total of both amplifiers—use external resistors, where possible, to allow the amplifier to saturate or to reduce the power which is dissipated in the integrated circuit.

Note 2: Short circuits from the output to V^+ can cause excessive heating and eventual destruction. When considering short circuits to ground, the maximum output current is approximately 40 mA independent of the magnitude of V^+ . At values of supply voltage in excess of +15V, continuous short-circuits can exceed the power dissipation ratings and cause eventual destruction. Destructive dissipation can result from simultaneous shorts on all amplifiers.

Note 3: This input current will only exist when the voltage at any of the input leads is driven negative. It is due to the collector-base junction of the input PNP transistors becoming forward biased and thereby acting as input diode clamps. In addition to this diode action, there is also lateral NPN parasitic transistor action on the IC chip. This transistor action can cause the output voltages of the op amps to go to the V^+ voltage level (or to ground for a large overdrive) for the time duration that an input is driven negative. This is not destructive and normal output states will re-establish when the input voltage, which was negative, again returns to a value greater than $-0.3V$ (at 25°C).

Note 4: These specifications are limited to $-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$ for the LM158/LM158A. With the LM258/LM258A, all temperature specifications are limited to $-25^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$, the LM358/LM358A temperature specifications are limited to $0^\circ\text{C} \leq T_A \leq +70^\circ\text{C}$, and the LM2904 specifications are limited to $-40^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$.

Note 5: $V_O \cong 1.4V$, $R_S = 0\Omega$ with V^+ from 5V to 30V; and over the full input common-mode range (0V to $V^+ - 1.5V$) at 25°C . For LM2904, V^+ from 5V to 26V.

Note 6: The direction of the input current is out of the IC due to the PNP input stage. This current is essentially constant, independent of the state of the output so no loading change exists on the input lines.

Note 7: The input common-mode voltage of either input signal voltage should not be allowed to go negative by more than 0.3V (at 25°C). The upper end of the common-mode voltage range is $V^+ - 1.5V$ (at 25°C), but either or both inputs can go to +32V without damage (+26V for LM2904), independent of the magnitude of V^+ .

Note 8: Due to proximity of external components, insure that coupling is not originating via stray capacitance between these external parts. This typically can be detected as this type of capacitance increases at higher frequencies.

Note 9: Refer to RETS158AX for LM158A military specifications and to RETS158X for LM158 military specifications.

Note 10: Human body model, 1.5 k Ω in series with 100 pF.

LM359 Dual, High Speed, Programmable, Current Mode (Norton) Amplifiers

General Description

The LM359 consists of two current differencing (Norton) input amplifiers. Design emphasis has been placed on obtaining high frequency performance and providing user programmable amplifier operating characteristics. Each amplifier is broadbanded to provide a high gain bandwidth product, fast slew rate and stable operation for an inverting closed loop gain of 10 or greater. Pins for additional external frequency compensation are provided. The amplifiers are designed to operate from a single supply and can accommodate input common-mode voltages greater than the supply.

Applications

- General purpose video amplifiers
- High frequency, high Q active filters
- Photo-diode amplifiers
- Wide frequency range waveform generation circuits
- All LM3900 AC applications work to much higher frequencies

Features

- User programmable gain bandwidth product, slew rate, input bias current, output stage biasing current and total device power dissipation
- High gain bandwidth product ($I_{SET} = 0.5 \text{ mA}$)
400 MHz for $A_V = 10$ to 100
30 MHz for $A_V = 1$
- High slew rate ($I_{SET} = 0.5 \text{ mA}$)
60 V/ μs for $A_V = 10$ to 100
30 V/ μs for $A_V = 1$
- Current differencing inputs allow high common-mode input voltages
- Operates from a single 5V to 22V supply
- Large inverting amplifier output swing, 2 mV to $V_{CC} - 2\text{V}$
- Low spot noise, $6 \text{ nV}/\sqrt{\text{Hz}}$, for $f > 1 \text{ kHz}$

Typical Application

DS007788-1

- $A_V = 20 \text{ dB}$
- -3 dB bandwidth = 2.5 Hz to 25 MHz
- Differential phase error $< 1^\circ$ at 3.58 MHz
- Differential gain error $< 0.5\%$ at 3.58 MHz

Supply Current	Non-Inverting Input Grounded, $R_L = \infty$		18.5	22	mA
Power Supply Rejection (Note 4)	$f = 120 \text{ Hz}$, $I_{IN(+)} \text{ Grounded}$	40	50		dB

Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Note 2: See Maximum Power Dissipation graph.

Note 3: Mirror gain is the current gain of the current mirror which is used as the non-inverting input. $\left(A_1 = \frac{I_{IN(-)}}{I_{IN(+)}} \right)$

Δ Mirror Gain is the % change in A_1 for two different mirror currents at any given temperature.

Note 4: See Supply Rejection graphs.

LM392

Low Power Operational Amplifier/Voltage Comparator

General Description

The LM392 series consists of 2 independent building block circuits. One is a high gain, internally frequency compensated operational amplifier, and the other is a precision voltage comparator. Both the operational amplifier and the voltage comparator have been specifically designed to operate from a single power supply over a wide range of voltages. Both circuits have input stages which will common-mode input down to ground when operating from a single power supply. Operation from split power supplies is also possible and the low power supply current is independent of the magnitude of the supply voltage.

Application areas include transducer amplifier with pulse shaper, DC gain block with level detector, VCO, as well as all conventional operational amplifier or voltage comparator circuits. Both circuits can be operated directly from the standard 5 V_{DC} power supply voltage used in digital systems, and the output of the comparator will interface directly with either TTL or CMOS logic. In addition, the low power drain makes the LM392 extremely useful in the design of portable equipment.

Advantages

- Eliminates need for dual power supplies
- An internally compensated op amp and a precision comparator in the same package
- Allows sensing at or near ground

- Power drain suitable for battery operation
- Pin-out is the same as both the LM358 dual op amp and the LM393 dual comparator

Features

- Wide power supply voltage range
 - Single supply: 3V to 32V
 - Dual supply: $\pm 1.5V$ to $\pm 16V$
- Low supply current drain—essentially independent of supply voltage: 600 μA
- Low input biasing current: 50 nA
- Low input offset voltage: 2 mV
- Low input offset current: 5 nA
- Input common-mode voltage range includes ground
- Differential input voltage range equal to the power supply voltage

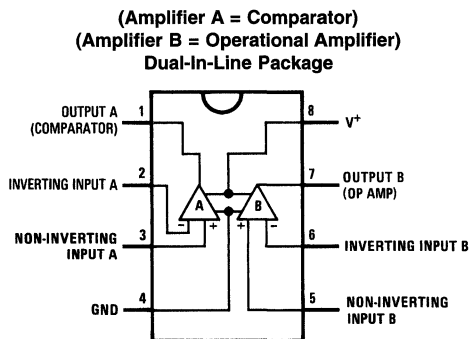

ADDITIONAL OP AMP FEATURES

- Internally frequency compensated for unity gain
- Large DC voltage gain: 100 dB
- Wide bandwidth (unity gain): 1 MHz
- Large output voltage swing: 0V to V⁺ - 1.5V

ADDITIONAL COMPARATOR FEATURES

- Low output saturation voltage: 250 mV at 4 mA
- Output voltage compatible with all types of logic systems

Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Note 2: For operating at temperatures above 25°C , the LM392 must be derated based on a 125°C maximum junction temperature and a thermal resistance of $122^\circ\text{C}/\text{W}$ which applies for the device soldered in a printed circuit board, operating in still air ambient. The dissipation is the total of both amplifiers—use external resistors, where possible, to allow the amplifier to saturate or to reduce the power which is dissipated in the integrated circuit.

Note 3: Short circuits from the output to V^+ can cause excessive heating and eventual destruction. When considering short circuits to ground, the maximum output current is approximately 40 mA for the op amp and 30 mA for the comparator independent of the magnitude of V^+ . At values of supply voltage in excess of 15V, continuous short circuits can exceed the power dissipation ratings and cause eventual destruction.

Note 4: This input current will only exist when the voltage at any of the input leads is driven negative. It is due to the collector-base junction of the input PNP transistors becoming forward biased and thereby acting as input diode clamps. In addition to this diode action, there is also lateral NPN parasitic transistor action on the IC chip. This transistor action can cause the output voltages of the amplifiers to go to the V^+ voltage level (or to ground for a large overdrive) for the time duration that an input is driven negative. This is not destructive and normal output states will re-establish when the input voltage, which was negative, again returns to a value greater than -0.3V (at 25°C).

Note 5: These specifications apply for $V^+ = 5\text{V}$, unless otherwise stated. For the LM392, temperature specifications are limited to $0^\circ\text{C} \leq T_A \leq +70^\circ\text{C}$.

Note 6: At output switch point, $V_o = 1.4\text{V}$, $R_S = 0\Omega$ with V^+ from 5V to 30V; and over the full input common-mode range (0V to $V^+ - 1.5\text{V}$).

Note 7: The direction of the input current is out of the IC due to the PNP input stage. This current is essentially constant, independent of the state of the output so no loading change exists on the input lines.

Note 8: The input common-mode voltage or either input signal voltage should not be allowed to go negative by more than 0.3V. The upper end of the common-mode voltage range is $V^+ - 1.5\text{V}$, but either or both inputs can go to 32V without damage.

Note 9: Due to proximity of external components, insure that coupling is not originating via the stray capacitance between these external parts. This typically can be detected as this type of capacitive coupling increases at higher frequencies.

Note 10: Positive excursions of input voltage may exceed the power supply level. As long as the other input voltage remains within the common-mode range, the comparator will provide a proper output state. The input voltage to the op amp should not exceed the power supply level. The input voltage state must not be less than -0.3V (or 0.3V below the magnitude of the negative power supply, if used) on either amplifier.

Note 11: The response time specified is for a 100 mV input step with 5 mV overdrive. For larger overdrive signals 300 ns can be obtained.

LM4250

Programmable Operational Amplifier

General Description

The LM4250 and LM4250C are extremely versatile programmable monolithic operational amplifiers. A single external master bias current setting resistor programs the input bias current, input offset current, quiescent power consumption, slew rate, input noise, and the gain-bandwidth product. The device is a truly general purpose operational amplifier.

The LM4250C is identical to the LM4250 except that the LM4250C has its performance guaranteed over a 0°C to +70°C temperature range instead of the -55°C to +125°C temperature range of the LM4250.

Features

- ±1V to ±18V power supply operation
- 3 nA input offset current
- Standby power consumption as low as 500 nW
- No frequency compensation required
- Programmable electrical characteristics
- Offset voltage nulling capability
- Can be powered by two flashlight batteries
- Short circuit protection

LM611

Operational Amplifier and Adjustable Reference

General Description

The LM611 consists of a single-supply op-amp and a programmable voltage reference in one space saving 8-pin package. The op-amp out-performs most single-supply op-amps by providing higher speed and bandwidth along with low supply current. This device was specifically designed to lower cost and board space requirements in transducer, test, measurement and data acquisition systems.

Combining a stable voltage reference with a wide output swing op-amp makes the LM611 ideal for single supply transducers, signal conditioning and bridge driving where large common-mode signals are common. The voltage reference consists of a reliable band-gap design that maintains low dynamic output impedance (1Ω typical), excellent initial tolerance (0.6%), and the ability to be programmed from 1.2V to 6.3V via two external resistors. The voltage reference is very stable even when driving large capacitive loads, as are commonly encountered in CMOS data acquisition systems.

As a member of National's Super-Block™ family, the LM611 is a space-saving monolithic alternative to a multi-chip solution, offering a high level of integration without sacrificing performance.

Features

OP AMP

- Low operating current: 300 μ A (op amp)
- Wide supply voltage range: 4V to 36V
- Wide common-mode range: V^- to $(V^+ - 1.8V)$
- Wide differential input voltage: $\pm 36V$
- Available in low cost 8-pin DIP
- Available in plastic package rated for Military Temperature Range Operation

REFERENCE

- Adjustable output voltage: 1.2V to 6.3V
- Tight initial tolerance available: $\pm 0.6\%$
- Wide operating current range: 17 μ A to 20 mA
- Reference floats above ground
- Tolerant of load capacitance

Applications

- Transducer bridge driver
- Process and Mass Flow Control systems
- Power supply voltage monitor
- Buffered voltage references for A/D's

Electrical Characteristics (Continued)

These specifications apply for $V^- = \text{GND} = 0\text{V}$, $V^+ = 5\text{V}$, $V_{\text{CM}} = V_{\text{OUT}} = 2.5\text{V}$, $I_{\text{R}} = 100\ \mu\text{A}$, FEEDBACK pin shorted to GND, unless otherwise specified. Limits in standard typeface are for $T_{\text{J}} = 25^\circ\text{C}$; limits in **boldface type** apply over the **Operating Temperature Range**.

Symbol	Parameter	Conditions	Typical (Note 5)	LM611AM	LM611M	Units
				LM611AI Limits (Note 6)	LM611BI LM611I LM611C Limits (Note 6)	
VOLTAGE REFERENCE						
$\frac{\Delta V_{\text{R}}}{\Delta V_{\text{ANODE}}}$	V_{R} Change with V_{ANODE} Change	$V^+ = V^+ \text{ max}$, $\Delta V_{\text{R}} = V_{\text{R}}$ (@ $V_{\text{ANODE}} = V^- = \text{GND}$) – V_{R} (@ $V_{\text{ANODE}} = V^+ - 1.0\text{V}$)	0.7 3.3	1.5 3.0	1.6 3.0	mV max mV max
I_{FB}	FEEDBACK Bias Current	I_{FB} ; $V_{\text{ANODE}} \leq V_{\text{FB}} \leq 5.06\text{V}$	22 29	35 40	50 55	nA max nA max
e_{n}	V_{R} Noise	10 Hz to 10,000 Hz, $V_{\text{RO}} = V_{\text{R}}$	30			μV_{RMS}

Note 1: Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device beyond its rated operating conditions.

Note 2: More accurately, it is excessive current flow, with resulting excess heating, that limits the voltages on all pins. When any pin is pulled a diode drop below V^+ , a parasitic NPN transistor turns ON. No latch-up will occur as long as the current through that pin remains below the Maximum Rating. Operation is undefined and unpredictable when any parasitic diode or transistor is conducting.

Note 3: Junction temperature may be calculated using $T_{\text{J}} = T_{\text{A}} + P_{\text{D}} \theta_{\text{JA}}$. The given thermal resistance is worst-case for packages in sockets in still air. For packages soldered to copper-clad board with dissipation from one op amp or reference output transistor, nominal θ_{JA} is 90°C/W for the N package and 135°C/W for the M package.

Note 4: Human body model, 100 pF discharged through a 1.5 k Ω resistor.

Note 5: Typical values in standard typeface are for $T_{\text{J}} = 25^\circ\text{C}$; values in **boldface type** apply for the full operating temperature range. These values represent the most likely parametric norm.

Note 6: All limits are guaranteed at room temperature (standard type face) or at operating temperature extremes (**bold face type**).

Note 7: Slew rate is measured with op amp in a voltage follower configuration. For rising slew rate, the input voltage is driven from 5V to 25V, and the output voltage transition is sampled at 10V and 20V. For falling slew rate, the input voltage is driven from 25V to 5V, and output voltage transition is sampled at 20V and 10V.

Note 8: V_{R} is the cathode-feedback voltage, nominally 1.244V.

Note 9: Average reference drift is calculated from the measurement of the reference voltage at 25°C and at the temperature extremes. The drift, in ppm/ $^\circ\text{C}$, is $10^6 \cdot \Delta V_{\text{R}} / (V_{\text{R}}(25^\circ\text{C}) \cdot \Delta T_{\text{J}})$, where ΔV_{R} is the lowest value subtracted from the highest, $V_{\text{R}}(25^\circ\text{C})$ is the value at 25°C , and ΔT_{J} is the temperature range. This parameter is guaranteed by design and sample testing.

Note 10: Hysteresis is the change in V_{R} caused by a change in T_{J} , after the reference has been "dehysterized". To dehysterize the reference; that is minimize the hysteresis to the typical value, its junction temperature should be cycled in the following pattern, spiraling in toward 25°C : 25°C , 85°C , -40°C , 70°C , 0°C , 25°C .

Note 11: Low contact resistance is required for accurate measurement.

Note 12: Military RETS 611AMX electrical test specification is available on request. The LM611AMJ/883 can also be procured as a Standard Military Drawing.

LM613

Dual Operational Amplifiers, Dual Comparators, and Adjustable Reference

General Description

The LM613 consists of dual op-amps, dual comparators, and a programmable voltage reference in a 16-pin package. The op-amps out-performs most single-supply op-amps by providing higher speed and bandwidth along with low supply current. This device was specifically designed to lower cost and board space requirements in transducer, test, measurement, and data acquisition systems.

Combining a stable voltage reference with wide output swing op-amps makes the LM613 ideal for single supply transducers, signal conditioning and bridge driving where large common-mode-signals are common. The voltage reference consists of a reliable band-gap design that maintains low dynamic output impedance (1Ω typical), excellent initial tolerance (0.6%), and the ability to be programmed from 1.2V to 6.3V via two external resistors. The voltage reference is very stable even when driving large capacitive loads, as are commonly encountered in CMOS data acquisition systems.

As a member of National's Super-Block™ family, the LM613 is a space-saving monolithic alternative to a multi-chip solution, offering a high level of integration without sacrificing performance.

Features

OP AMP

- Low operating current (Op Amp): 300 μ A
- Wide supply voltage range: 4V to 36V
- Wide common-mode range: V^- to ($V^+ - 1.8V$)
- Wide differential input voltage: $\pm 36V$
- Available in plastic package rated for Military Temp. Range Operation

REFERENCE

- Adjustable output voltage: 1.2V to 6.3V
- Tight initial tolerance available: $\pm 0.6\%$
- Wide operating current range: 17 μ A to 20 mA
- Tolerant of load capacitance

Applications

- Transducer bridge driver
- Process and mass flow control systems
- Power supply voltage monitor
- Buffered voltage references for A/D's

e_{n}	V_{R} Noise	10 Hz to 10 kHz, $V_{\text{RO}} = V_{\text{R}}$	30			μV_{RMS}

Note 1: Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device beyond its rated operating conditions.

Note 2: Input voltage above V^+ is allowed. As long as one input pin voltage remains inside the common-mode range, the comparator will deliver the correct output.

Note 3: More accurately, it is excessive current flow, with resulting excess heating, that limits the voltages on all pins. When any pin is pulled a diode drop below V^- , a parasitic NPN transistor turns ON. No latch-up will occur as long as the current through that pin remains below the Maximum Rating. Operation is undefined and unpredictable when any parasitic diode or transistor is conducting.

Note 4: Simultaneous short-circuit of multiple comparators while using high supply voltages may force junction temperature above maximum, and thus should not be continuous.

Note 5: Junction temperature may be calculated using $T_{\text{J}} = T_{\text{A}} + P_{\text{D}} \theta_{\text{JA}}$. The given thermal resistance is worst-case for packages in sockets in still air. For packages soldered to copper-clad board with dissipation from one comparator or reference output transistor, nominal θ_{JA} is $90^\circ\text{C}/\text{W}$ for the N package, and $135^\circ\text{C}/\text{W}$ for the WM package.

Note 6: Human body model, 100 pF discharged through a 1.5 k Ω resistor.

Note 7: Typical values in standard typeface are for $T_{\text{J}} = 25^\circ\text{C}$; values in **bold face type** apply for the full operating temperature range. These values represent the most likely parametric norm.

Note 8: All limits are guaranteed at room temperature (standard type face) or at operating temperature extremes (**bold type face**).

Note 9: Slew rate is measured with the op amp in a voltage follower configuration. For rising slew rate, the input voltage is driven from 5V to 25V, and the output voltage transition is sampled at 10V and @20V. For falling slew rate, the input voltage is driven from 25V to 5V, and the output voltage transition is sampled at 20V and 10V.

Note 10: V_{R} is the Cathode-to-feedback voltage, nominally 1.244V.

Note 11: Average reference drift is calculated from the measurement of the reference voltage at 25°C and at the temperature extremes. The drift, in ppm/ $^\circ\text{C}$, is $10^6 \cdot \Delta V_{\text{R}} / (V_{\text{R}[25^\circ\text{C}]} \cdot \Delta T_{\text{J}})$, where ΔV_{R} is the lowest value subtracted from the highest, $V_{\text{R}[25^\circ\text{C}]}$ is the value at 25°C , and ΔT_{J} is the temperature range. This parameter is guaranteed by design and sample testing.

Note 12: Hysteresis is the change in V_{R} caused by a change in T_{J} , after the reference has been "dehysteresized". To dehysteresize the reference; that is minimize the hysteresis to the typical value, its junction temperature should be cycled in the following pattern, spiraling in toward 25°C : 25°C , 85°C , -40°C , 70°C , 0°C , 25°C .

Note 13: Low contact resistance is required for accurate measurement.

LM6132 /LM6134

Dual and Quad Low Power 10 MHz Rail-to-Rail I/O Operational Amplifiers

General Description

The LM6132/34 provides new levels of speed vs power performance in applications where low voltage supplies or power limitations previously made compromise necessary. With only 360 μ A/amp supply current, the 10 MHz gain-bandwidth of this device supports new portable applications where higher power devices unacceptably drain battery life.

The LM6132/34 can be driven by voltages that exceed both power supply rails, thus eliminating concerns over exceeding the common-mode voltage range. The rail-to-rail output swing capability provides the maximum possible dynamic range at the output. This is particularly important when operating on low supply voltages. The LM6132/34 can also drive large capacitive loads without oscillating.

Operating on supplies from 2.7V to over 24V, the LM6132/34 is excellent for a very wide range of applications, from battery operated systems with large bandwidth requirements to high speed instrumentation.

Features

(For 5V Supply, Typ Unless Noted)

- Rail-to-Rail input CMVR $-0.25V$ to $5.25V$
- Rail-to-Rail output swing $0.01V$ to $4.99V$
- High gain-bandwidth, 10 MHz at 20 kHz
- Slew rate 12 V/ μ s
- Low supply current 360 μ A/amp
- Wide supply range 2.7V to over 24V
- CMRR 100 dB
- Gain 100 dB with $R_L = 10k$
- PSRR 82 dB

Applications

- Battery operated instrumentation
- Instrumentation Amplifiers
- Portable scanners
- Wireless communications
- Flat panel display driver

LM614

Quad Operational Amplifier and Adjustable Reference

General Description

The LM614 consists of four op-amps and a programmable voltage reference in a 16-pin package. The op-amp out-performs most single-supply op-amps by providing higher speed and bandwidth along with low supply current. This device was specifically designed to lower cost and board space requirements in transducer, test, measurement and data acquisition systems.

Combining a stable voltage reference with four wide output swing op-amps makes the LM614 ideal for single supply transducers, signal conditioning and bridge driving where large common-mode-signals are common. The voltage reference consists of a reliable band-gap design that maintains low dynamic output impedance (1Ω typical), excellent initial tolerance (0.6%), and the ability to be programmed from 1.2V to 6.3V via two external resistors. The voltage reference is very stable even when driving large capacitive loads, as are commonly encountered in CMOS data acquisition systems.

As a member of National's new Super-Block™ family, the LM614 is a space-saving monolithic alternative to a multichip solution, offering a high level of integration without sacrificing performance.

Features

Op Amp

- Low operating current: 300 μ A
- Wide supply voltage range: 4V to 36V
- Wide common-mode range: V^- to $(V^+ - 1.8V)$
- Wide differential input voltage: $\pm 36V$
- Available in plastic package rated for Military Temperature Range Operation

Reference

- Adjustable output voltage: 1.2V to 6.3V
- Tight initial tolerance available: $\pm 0.6\%$
- Wide operating current range: 17 μ A to 20 mA
- Tolerant of load capacitance

Applications

- Transducer bridge driver and signal processing
- Process and mass flow control systems
- Power supply voltage monitor
- Buffered voltage references for A/D's

$\frac{\Delta V_{\text{R}}}{\Delta V^+}$	V_{R} Change with V^+ Change	$V_{\text{R}}(V^+ = 5\text{V}) - V_{\text{R}}(V^+ = 36\text{V})$ ($V^+ = 32\text{V}$ for LM614C)	0.1	1.2	1.2	mV max
		$V_{\text{R}}(V^+ = 5\text{V}) - V_{\text{R}}(V^+ = 3\text{V})$	0.01	1	1	mV max
			0.01	1.5	1.5	mV max
I_{FB}	FEEDBACK Bias Current	$V_{\text{ANODE}} \leq V_{\text{FB}} \leq 5.06\text{V}$	22 29	35 40	50 55	nA max nA max
e_{n}	Voltage Noise	$\text{BW} = 10\ \text{Hz to } 10\ \text{kHz}$, $V_{\text{RO}} = V_{\text{R}}$	30			μV_{RMS}

Note 1: Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device beyond its rated operating conditions.

Note 2: Input voltage above V^+ is allowed.

Note 3: More accurately, it is excessive current flow, with resulting excess heating, that limits the voltages on all pins. When any pin is pulled a diode drop below V^- , a parasitic NPN transistor turns ON. No latch-up will occur as long as the current through that pin remains below the Maximum Rating. Operation is undefined and unpredictable when any parasitic diode or transistor is conducting.

Note 4: Junction temperature may be calculated using $T_{\text{J}} = T_{\text{A}} + P_{\text{D}}\theta_{\text{JA}}$. The given thermal resistance is worst-case for packages in sockets in still air. For packages soldered to copper-clad board with dissipation from one comparator or reference output transistor, nominal θ_{JA} are 90°C/W for the N package, WM package.

Note 5: Human body model, $100\ \text{pF}$ discharged through a $1.5\ \text{k}\Omega$ resistor.

Note 6: Typical values in standard typeface are for $T_{\text{J}} = 25^\circ\text{C}$; values in **boldface type** apply for the full operating temperature range. These values represent the most likely parametric norm.

Note 7: All limits are guaranteed at room temperature (standard type face) or at operating temperature extremes (**bold type face**).

Note 8: Slew rate is measured with op amp in a voltage follower configuration. For rising slew rate, the input voltage is driven from 5V to 25V , and the output voltage transition is sampled at 10V and $@20\text{V}$. For falling slew rate, the input voltage is driven from 25V to 5V , and the output voltage transition is sampled at 20V and 10V .

Note 9: V_{R} is the Cathode-feedback voltage, nominally 1.244V .

Note 10: Average reference drift is calculated from the measurement of the reference voltage at 25°C and at the temperature extremes. The drift, in $\text{ppm}/^\circ\text{C}$, is $106 \cdot \Delta V_{\text{R}} / (V_{\text{R}[25^\circ\text{C}]} \cdot \Delta T_{\text{J}})$, where ΔV_{R} is the lowest value subtracted from the highest, $V_{\text{R}[25^\circ\text{C}]}$ is the value at 25°C , and ΔT_{J} is the temperature range. This parameter is guaranteed by design and sample testing.

Note 11: Hysteresis is the change in V_{R} caused by a change in T_{J} , after the reference has been "dehysteresized". To dehyserize the reference; that is minimize the hysteresis to the typical value, cycle its junction temperature in the following pattern, spiraling in toward 25°C : 25°C , 85°C , -40°C , 70°C , 0°C , 25°C .

Note 12: Low contact resistance is required for accurate measurement.

Note 13: A military RETSLM614AMX electrical test specification is available on request. The LM614AMJ/883 can also be procured as a Standard Military Drawing.

LM6142 and LM6144

17 MHz Rail-to-Rail Input-Output Operational Amplifiers

General Description

Using patent pending new circuit topologies, the LM6142/44 provides new levels of performance in applications where low voltage supplies or power limitations previously made compromise necessary. Operating on supplies of 1.8V to over 24V, the LM6142/44 is an excellent choice for battery operated systems, portable instrumentation and others.

The greater than rail-to-rail input voltage range eliminates concern over exceeding the common-mode voltage range. The rail-to-rail output swing provides the maximum possible dynamic range at the output. This is particularly important when operating on low supply voltages.

High gain-bandwidth with 650 $\mu\text{A}/\text{Amplifier}$ supply current opens new battery powered applications where previous higher power consumption reduced battery life to unacceptable levels. The ability to drive large capacitive loads without oscillating functionally removes this common problem.

Features

At $V_S = 5\text{V}$. Typ unless noted.

- Rail-to-rail input CMVR -0.25V to 5.25V
- Rail-to-rail output swing 0.005V to 4.995V
- Wide gain-bandwidth: 17 MHz at 50 kHz (typ)
- Slew rate:
 - Small signal, $5\text{V}/\mu\text{s}$
 - Large signal, $30\text{V}/\mu\text{s}$
- Low supply current 650 $\mu\text{A}/\text{Amplifier}$
- Wide supply range 1.8V to 24V
- CMRR 107 dB
- Gain 108 dB with $R_L = 10\text{k}$
- PSRR 87 dB

Applications

- Battery operated instrumentation
- Depth sounders/fish finders
- Barcode scanners
- Wireless communications
- Rail-to-rail in-out instrumentation amps

LM6152/LM6154

Dual and Quad 75 MHz GBW Rail-to-Rail I/O Operational Amplifiers

General Description

Using patented circuit topologies, the LM6152/54 provides new levels of speed vs. power performance in applications where low voltage supplies or power limitations previously made compromise necessary. With only 1.4 mA/amplifier supply current, the 75 MHz gain bandwidth of this device supports new portable applications where higher power devices unacceptably drain battery life. The slew rate of the devices increases with increasing input differential voltage, thus allowing the device to handle capacitive loads while maintaining large signal amplitude.

The LM6152/54 can be driven by voltages that exceed both power supply rails, thus eliminating concerns about exceeding the common-mode voltage range. The rail-to-rail output swing capability provides the maximum possible dynamic range at the output. This is particularly important when operating on low supply voltages.

Operating on supplies from 2.7V to over 24V, the LM6152/54 is excellent for a very wide range of applications, from battery operated systems with large bandwidth requirements to high speed instrumentation.

Features

At $V_S = 5V$, Typ unless noted

- Greater than Rail-to-Rail Input CMVR $-0.25V$ to $5.25V$
- Rail-to-Rail Output Swing $0.01V$ to $4.99V$
- Wide Gain-Bandwidth: 75 MHz @ 100 kHz
- Slew Rate:
 - Small signal $5V/\mu s$
 - Large signal $45V/\mu s$
- Low supply current 1.4mA/amplifier
- Wide supply range 2.7V to 24V
- Fast settling time of $1.1\mu s$ for 2V step (to 0.01%)
- PSRR 91 dB
- CMRR 84 dB

Applications

- Portable high speed instrumentation
- Signal conditioning amplifier/ADC buffers
- Barcode scanners

LM6118/LM6218

Fast Settling Dual Operational Amplifiers

General Description

The LM6118/LM6218 are monolithic fast-settling unity-gain-compensated dual operational amplifiers with ± 20 mA output drive capability. The PNP input stage has a typical bias current of 200 nA, and the operating supply voltage is ± 5 V to ± 20 V.

These dual op amps use slew enhancement with special mirror circuitry to achieve fast response and high gain with low total supply current.

The amplifiers are built on a junction-isolated VIP™ (Vertically Integrated PNP) process which produces fast PNP's that complement the standard NPN's.

Features

- Low offset voltage:
- 0.01% settling time:
- Slew rate $A_V = -1$:
- Slew rate $A_V = +1$:
- Gain bandwidth:
- Total supply current:
- Output drives 50 Ω load (± 1 V)

Typical	
0.2 mV	Low offset voltage
400 ns	0.01% settling time
140 V/ μ s	Slew rate $A_V = -1$
75 V/ μ s	Slew rate $A_V = +1$
17 MHz	Gain bandwidth
5.5 mA	Total supply current

Applications

- D/A converters
- Fast integrators
- Active filters

	Follower	3			pF

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications do not apply when operating the device beyond its rated operating conditions.

Note 2: Input voltage range is (V⁺ - 1V) to (V⁻).

Note 3: The inputs are shunted with three series-connected diodes back-to-back for input differential clamping. Therefore differential input voltages greater than about 1.8V will cause excessive current to flow unless limited to less than 10 mA.

Electrical Characteristics (Continued)

Note 4: Current limiting protects the output from a short to ground or any voltage less than the supplies. With a continuous overload, the package dissipation must be taken into account and heat sinking provided when necessary.

Note 5: Devices must be derated using a thermal resistance of $90^{\circ}\text{C}/\text{W}$ for the N and WM packages.

Note 6: Limits are guaranteed by testing or correlation.

LM675

Power Operational Amplifier

General Description

The LM675 is a monolithic power operational amplifier featuring wide bandwidth and low input offset voltage, making it equally suitable for AC and DC applications.

The LM675 is capable of delivering output currents in excess of 3 amps, operating at supply voltages of up to 60V. The device overload protection consists of both internal current limiting and thermal shutdown. The amplifier is also internally compensated for gains of 10 or greater.

Features

- 3A current capability
- A_{VO} typically 90 dB
- 5.5 MHz gain bandwidth product
- 8 V/ μ s slew rate
- Wide power bandwidth 70 kHz

- 1 mV typical offset voltage
- Short circuit protection
- Thermal protection with parol circuit (100% tested)
- 16V–60V supply range
- Wide common mode range
- Internal output protection diodes
- 90 dB ripple rejection
- Plastic power package TO-220

Applications

- High performance power op amp
- Bridge amplifiers
- Motor speed controls
- Servo amplifiers
- Instrument systems

Output Power	THD = 1%, $f_O = 1\text{ kHz}$, $R_L = 8\Omega$	25	20	W
Gain Bandwidth Product	$f_O = 20\text{ kHz}$, $A_{VCL} = 1000$	5.5		MHz
Max Slew Rate		8		$\text{V}/\mu\text{s}$
Input Common Mode Range		± 22	± 20 (min)	V

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which guarantee specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not guaranteed for parameters where no limit is given, however, the typical value is a good indication of device performance.

Note 2: Assumes T_A equal to 70°C . For operation at higher tab temperatures, the LM675 must be derated based on a maximum junction temperature of 150°C .

Typical Applications

Generating a Split Supply From a Single Supply

DS006739-3

$V_S = \pm 8\text{V} \rightarrow \pm 30\text{V}$

LM725 Operational Amplifier

General Description

The LM725/LM725A/LM725C are operational amplifiers featuring superior performance in applications where low noise, low drift, and accurate closed-loop gain are required. With high common mode rejection and offset null capability, it is especially suited for low level instrumentation applications over a wide supply voltage range.

The LM725A has tightened electrical performance with higher input accuracy and like the LM725, is guaranteed over a -55°C to $+125^{\circ}\text{C}$ temperature range. The LM725C has slightly relaxed specifications and has its performance guaranteed over a 0°C to 70°C temperature range.

Features

- High open loop gain 3,000,000
- Low input voltage drift $0.6 \mu\text{V}/^{\circ}\text{C}$
- High common mode rejection 120 dB
- Low input noise current $0.15 \text{ pA}/\sqrt{\text{Hz}}$
- Low input offset current 2 nA
- High input voltage range $\pm 14\text{V}$
- Wide power supply range $\pm 3\text{V}$ to $\pm 22\text{V}$
- Offset null capability
- Output short circuit protection

Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

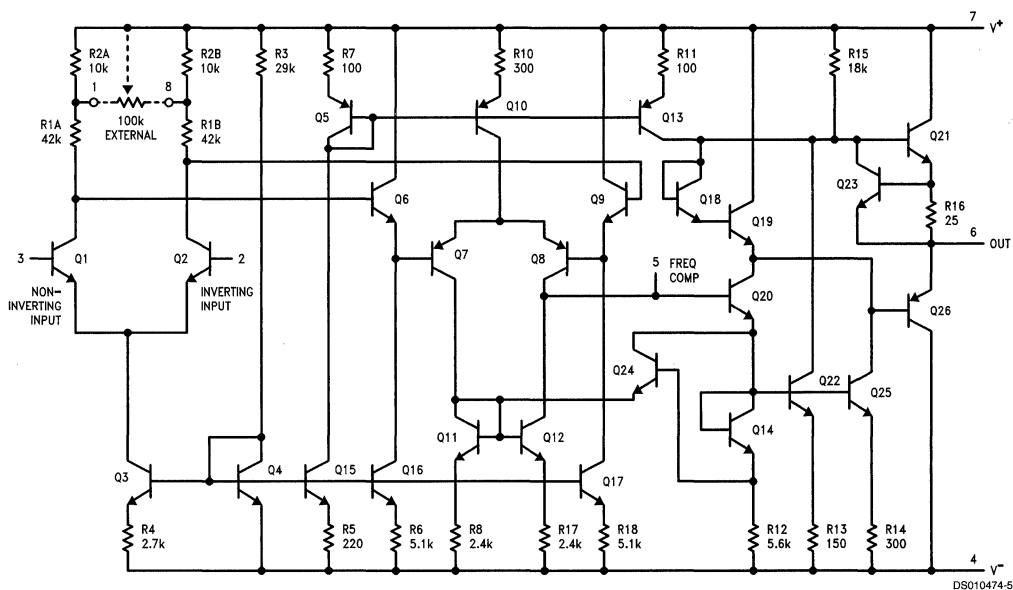

Note 2: Derate at 150°C/W for operation at ambient temperatures above 75°C .

Note 3: For supply voltages less than $\pm 22\text{V}$, the absolute maximum input voltage is equal to the supply voltage.

Note 4: These specifications apply for $V_S = \pm 15\text{V}$ unless otherwise specified.

Note 5: For Military electrical specifications RETS725AX are available for LM725AH and RETS725X are available for LM725H.

Schematic Diagram

LM7301

Low Power, 4 MHz GBW, Rail-to-Rail Input-Output Operational Amplifier in TinyPak™ Package

General Description

The LM7301 provides high performance in a wide range of applications. The LM7301 offers greater than rail-to-rail input range, full rail-to-rail output swing, large capacitive load driving ability and low distortion.

With only 0.6 mA supply current, the 4 MHz gain-bandwidth of this device supports new portable applications where higher power devices unacceptably drain battery life.

The LM7301 can be driven by voltages that exceed both power supply rails, thus eliminating concerns over exceeding the common-mode voltage range. The rail-to-rail output swing capability provides the maximum possible dynamic range at the output. This is particularly important when operating on low supply voltages.

Operating on supplies of 1.8V–32V, the LM7301 is excellent for a very wide range of applications in low power systems.

Placing the amplifier right at the signal source reduces board size and simplifies signal routing. The LM7301 fits easily on low profile PCMCIA cards.

Features

at $V_S = 5V$ (Typ unless otherwise noted)

- Tiny SOT23-5 package saves space
- Greater than Rail-to-Rail Input CMVR $-0.25V$ to $5.25V$
- Rail-to-Rail Output Swing $0.07V$ to $4.93V$
- Wide Gain-Bandwidth 4 MHz
- Low Supply Current 0.60 mA
- Wide Supply Range 1.8V to 32V
- High PSRR 104 dB
- High CMRR 93 dB
- Excellent Gain 97 dB

Applications

- Portable instrumentation
- Signal conditioning amplifiers/ADC buffers
- Active filters
- Modems
- PCMCIA cards

		Sinking (Note 4)	11.5	8.2 6.0	mA min
I_S	Supply Current		0.72	1.30 1.35	mA max

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C.

Note 4: The maximum power dissipation is a function of $T_{J(\text{max})}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(\text{max})} - T_A)/\theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

LM741 Operational Amplifier

General Description

The LM741 series are general purpose operational amplifiers which feature improved performance over industry standards like the LM709. They are direct, plug-in replacements for the 709C, LM201, MC1439 and 748 in most applications. The amplifiers offer many features which make their application nearly foolproof: overload protection on the input and output, no latch-up when the common mode range is exceeded, as well as freedom from oscillations.

The LM741C is identical to the LM741/LM741A except that the LM741C has their performance guaranteed over a 0°C to +70°C temperature range, instead of -55°C to +125°C.

LM8261 Single RRIO, High Output Current & Unlimited Cap Load Op Amp in SOT23-5

General Description

The LM8261 is a Rail-to-Rail input and output Op Amp which can operate with a wide supply voltage range. This device has high output current drive, greater than Rail-to-Rail input common mode voltage range, unlimited capacitive load drive capability, and provides tested and guaranteed high speed and slew rate while requiring only 0.97mA supply current. It is specifically designed to handle the requirements of flat panel TFT panel V_{COM} driver applications as well as being suitable for other low power, and medium speed applications which require ease of use and enhanced performance over existing devices.

Greater than Rail-to-Rail input common mode voltage range with 50dB of Common Mode Rejection, allows high side and low side sensing, among many applications, without having any concerns over exceeding the range and no compromise in accuracy. Exceptionally wide operating supply voltage range of 2.5V to 30V alleviates any concerns over functionality under extreme conditions and offers flexibility of use in multitude of applications. In addition, most device parameters are insensitive to power supply variations; this design enhancement is yet another step in simplifying its usage. The output stage has low distortion (0.05% THD+N) and can supply a respectable amount of current (15mA) with minimal headroom from either rail (300mV).

The LM8261 is offered in the space saving SOT23-5 package.

Features

($V_S = 5V$, $T_A = 25^\circ C$, Typical values unless specified).

- GBWP 21MHz
- Wide supply voltage range 2.5V to 30V
- Slew rate 12V/ μs
- Supply current 0.97 mA
- Cap load limit Unlimited
- Output short circuit current +53mA/-75mA
- +/-5% Settling time 400ns (500pF, 100mV $_{PP}$ step)
- Input common mode voltage 0.3V beyond rails
- Input voltage noise 15nV/ \sqrt{Hz}
- Input current noise 1pA/ \sqrt{Hz}
- THD+N < 0.05%

Applications

- TFT-LCD flat panel V_{COM} driver
- A/D converter buffer
- High side/low side sensing
- Headphone amplifier

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Rating indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, $1.5\text{k}\Omega$ in series with 100pF .

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C .

Note 4: The maximum power dissipation is a function of $T_J(\text{max})$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_J(\text{max}) - T_A) / \theta_{JA}$. All numbers apply for packages soldered directly onto a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: Positive current corresponds to current flowing into the device.

Note 8: Slew rate is the slower of the rising and falling slew rates. Connected as a Voltage Follower.

Note 9: Machine Model, 0Ω is series with 200pF .

Note 10: Short circuit test is a momentary test. See Note 11.

Note 11: Output short circuit duration is infinite for $V_S \leq 6\text{V}$ at room temperature and below. For $V_S > 6\text{V}$, allowable short circuit duration is 1.5ms.

Note 12: Offset voltage average drift determined by dividing the change in V_{OS} at temperature extremes into the total temperature change.

LM833 Dual Audio Operational Amplifier

General Description

The LM833 is a dual general purpose operational amplifier designed with particular emphasis on performance in audio systems.

This dual amplifier IC utilizes new circuit and processing techniques to deliver low noise, high speed and wide bandwidth without increasing external components or decreasing stability. The LM833 is internally compensated for all closed loop gains and is therefore optimized for all preamp and high level stages in PCM and HiFi systems.

The LM833 is pin-for-pin compatible with industry standard dual operational amplifiers.

Features

- Wide dynamic range: 140dB
- Low input noise voltage: 4.5nV/√Hz
- High slew rate: 7 V/μs (typ); 5V/μs (min)
- High gain bandwidth: 15MHz (typ); 10MHz (min)
- Wide power bandwidth: 120KHz
- Low distortion: 0.002%
- Low offset voltage: 0.3mV
- Large phase margin: 60°
- Available in 8 pin MSOP package

ϕ_M	Phase Margin	Open Loop	60	deg
	Input Referred Cross Talk	$f = 20\text{--}20\text{ kHz}$	-120	dB

Design Electrical Characteristics (Continued)

Note 1: *Absolute Maximum Ratings* indicate limits beyond which damage to the device may occur. *Operating Ratings* indicate conditions for which the device is functional, but do not guarantee specific performance limits. *Electrical Characteristics* state DC and AC electrical specifications under particular test conditions which guarantee specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not guaranteed for parameters where no limit is given, however, the typical value is a good indication of device performance.

Note 2: All voltages are measured with respect to the ground pin, unless otherwise specified.

Note 3: If supply voltage is less than $\pm 15\text{V}$, it is equal to supply voltage.

Note 4: This is the permissible value at $T_A \leq 85^\circ\text{C}$.

Note 5: Human body model, $1.5\text{ k}\Omega$ in series with 100 pF .

LM837

Low Noise Quad Operational Amplifier

General Description

The LM837 is a quad operational amplifier designed for low noise, high speed and wide bandwidth performance. It has a new type of output stage which can drive a 600Ω load, making it ideal for almost all digital audio, graphic equalizer, preamplifiers, and professional audio applications. Its high performance characteristics also make it suitable for instrumentation applications where low noise is the key consideration.

The LM837 is internally compensated for unity gain operation. It is pin compatible with most other standard quad op amps and can therefore be used to upgrade existing systems with little or no change.

Features

- High slew rate 10 V/μs (typ); 8 V/μs (min)
- Wide gain bandwidth product 25 MHz (typ); 15 MHz (min)
- Power bandwidth 200 kHz (typ)
- High output current ±40 mA
- Excellent output drive performance >600Ω
- Low input noise voltage 4.5 nV/√Hz
- Low total harmonic distortion 0.0015%
- Low offset voltage 0.3 mV

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which guarantee specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not guaranteed for parameters where no limit is given, however, the typical value is a good indication of device performance.

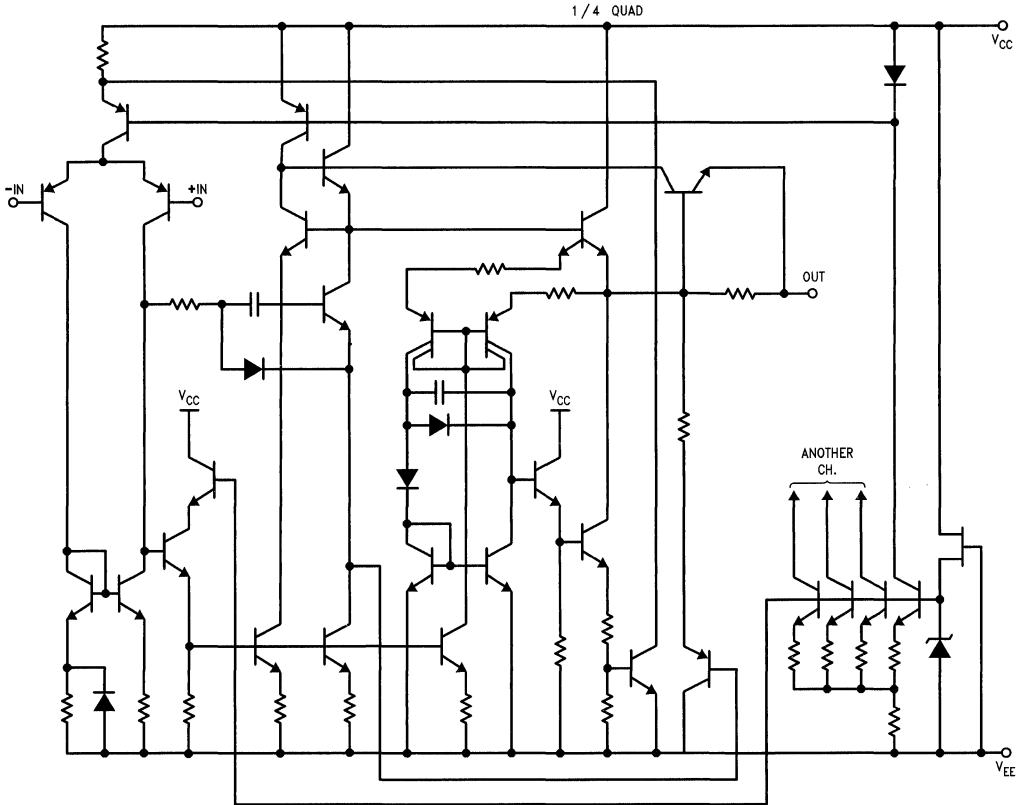

Note 2: Unless otherwise specified the absolute maximum input voltage is equal to the power supply voltage.

Design Electrical Characteristics (Continued)

Note 3: For operation at ambient temperatures above 25°C, the device must be derated based on a 150°C maximum junction temperature and a thermal resistance, junction to ambient, as follows: LM837N, 90°C/W; LM837M, 150°C/W.

Note 4: The following parameters are not tested or guaranteed.

Detailed Schematic

DS009047-3

LMC2001

High Precision, 6MHz Rail-To-Rail Output Operational Amplifier

General Description

The LMC2001 is a new precision amplifier that offers unprecedented accuracy and stability at an affordable price and is offered in miniature (SOT23-5) package. This device utilizes patented techniques to measure and continually correct the input offset error voltage. The result is an amplifier which is ultra stable over time, and temperature. It has excellent CMRR and PSRR ratings, and does not exhibit the familiar 1/f voltage and current noise increase that plagues traditional amplifiers. The combination of the LMC2001 characteristics makes it a good choice for transducer amplifiers, high gain configurations, ADC buffer amplifiers, DAC I-V conversion, and any other 5V application requiring precision and/or stability.

Other useful benefits of the LMC2001 are rail-to-rail output, low supply current of 750µA, and wide gain-bandwidth product of 6MHz. The LMC2001 comes in 5 pin SOT23 and 8 pin SOIC. These extremely versatile features found in the LMC2001 provide high performance and ease of use.

Features

(Vs = 5V, RL = 10K to V+ /2, Typ. Unless Noted)

- Low Guaranteed Vos 40µV
- en With No 1/f 85nV/√Hz
- High CMRR 120dB
- High PSRR 120dB
- High AVOL 137dB
- Wide Gain-Bandwidth Product 6MHz
- High Slew Rate 5V/µs
- Low Supply Current 750µA
- Rail-To-Rail Output 30mV from either rail
- No External Capacitors Required

Applications

- Precision Instrumentation Amplifiers
- Thermocouple Amplifiers
- Strain Gauge Bridge Amplifier

Connection Diagrams

Absolute Maximum Ratings (Note 1)

			0.030	0.060 0.060	V max
		$R_L = 2\text{k}\Omega$ to 2.5V $V_{IN}(\text{diff}) = \pm 0.5\text{V}$	4.936		V
			0.075		V
I_O	Output Current	Sourcing, $V_O = 0\text{V}$ $V_{IN}(\text{diff}) = \pm 0.5\text{V}$	5.9	4.1 1.5	mA min
			14.5	4.5 1.5	mA min
		Sinking, $V_O = 5\text{V}$ $V_{IN}(\text{diff}) = \pm 0.5\text{V}$			
I_S	Supply Current		0.75	1.0 1.2	mA max

AC Electrical Characteristics

$T_J = 25^\circ\text{C}$, $V^+ = 5\text{V}$, $V^- = 0\text{V}$, $V_{\text{CM}} = 2.5\text{V}$, $V_O = 2.5\text{V}$, and $R_L > 1\text{M}\Omega$.

Symbol	Parameter	Conditions	Typ (Note 5)	Units	
SR	Slew Rate	$A_V = +1$, $V_{\text{in}} = 3.5\text{Vpp}$	5	V/ μs	
GBW	Gain-Bandwidth Product		6	MHz	
θ_m	Phase Margin		75	Deg	
G_m	Gain Margin		12	dB	
e_n	Input-Referred Voltage Noise	$f = 0.1\text{Hz}$	85	$\text{nV}/\sqrt{\text{Hz}}$	
$e_{n,p-p}$	Input-Referred Voltage Noise	$R_S = 100\Omega$, DC to 10Hz	1.6	μVpp	
i_n	Input-Referred Current Noise	$f = 0.1\text{Hz}$	180	$\text{fA}/\sqrt{\text{Hz}}$	
THD	Total Harmonic Distortion	$f = 1\text{kHz}$, $A_V = -2$ $R_L = 10\text{k}\Omega$, $V_O = 4.5\text{Vpp}$	0.02	%	
trec	Input Overload Recovery Time		50	ms	
T_S	Output Settling time	(Note 10) $A_V = +1$, 1V step	1%	250	ns
			0.1%	400	
			0.01%	3200	
		(Note 10) $A_V = -1$, 1V step	1%	80	
			0.1%	860	
			0.01%	1400	

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and test conditions, see the Electrical Characteristics.

Note 2: Human body model, $1.5\text{k}\Omega$ in series with 100pF . Machine model, 200Ω in series with 100pF .

Note 3: Output currents in excess of $\pm 30\text{mA}$ over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{J(\text{max})}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(\text{max})} - T_A)/\theta_{\text{JA}}$. All numbers apply for packages soldered directly onto a PC board.

Note 5: Typical values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis, unless otherwise noted.

Note 7: $V^+ = 5\text{V}$, $V_{\text{CM}} = 2.5\text{V}$, and R_L connected to 2.5V . For Sourcing tests, $2.5\text{V} \leq V_O \leq 4.8\text{V}$. For Sinking tests, $0.2\text{V} \leq V_O \leq 2.5\text{V}$.

Note 8: Guaranteed V_{OS} Drift is based on 280 devices operated for 1000 hrs at 150°C (equivalent to 30 years 55°C).

Note 9: Guaranteed by design only.

Note 10: Settling times shown correspond to the worse case (positive or negative step) and does not include slew time. See the Application Note section for test schematic.

Note 11: The limits are set by the accuracy of high speed automatic test equipment. For the typical V_{OS} distribution, see the curve on page 4.

Note 12: Precision bench measurement of more than 300 units. More than 65% of units had less than $15\text{nV}/^\circ\text{C}$ V_{OS} drift.

LMC6001

Ultra Ultra-Low Input Current Amplifier

General Description

Featuring 100% tested input currents of 25 fA max., low operating power, and ESD protection of 2000V, the LMC6001 achieves a new industry benchmark for low input current operational amplifiers. By tightly controlling the molding compound, National is able to offer this ultra-low input current in a lower cost molded package.

To avoid long turn-on settling times common in other low input current opamps, the LMC6001A is tested 3 times in the first minute of operation. Even units that meet the 25 fA limit are rejected if they drift.

Because of the ultra-low input current noise of $0.13 \text{ fA}/\sqrt{\text{Hz}}$, the LMC6001 can provide almost noiseless amplification of high resistance signal sources. Adding only 1 dB at 100 k Ω , 0.1 dB at 1 M Ω and 0.01 dB or less from 10 M Ω to 2,000 M Ω , the LMC6001 is an almost noiseless amplifier.

The LMC6001 is ideally suited for electrometer applications requiring ultra-low input leakage such as sensitive photodetection transimpedance amplifiers and sensor amplifiers. Since input referred noise is only $22 \text{ nV}/\sqrt{\text{Hz}}$, the LMC6001

can achieve higher signal to noise ratio than JFET input type electrometer amplifiers. Other applications of the LMC6001 include long interval integrators, ultra-high input impedance instrumentation amplifiers, and sensitive electrical-field measurement circuits.

Features

(Max limit, 25°C unless otherwise noted)

- Input current (100% tested): 25 fA
- Input current over temp.: 2 pA
- Low power: 750 μA
- Low V_{OS} : 350 μV
- Low noise: $22 \text{ nV}/\sqrt{\text{Hz}}$ @1 kHz Typ.

Applications

- Electrometer amplifier
- Photodiode preamplifier
- Ion detector
- A.T.E. leakage testing

THD	Total Harmonic Distortion	$F = 10\text{ kHz}$, $A_V = -10$, $R_L = 100\text{ k}\Omega$, $V_O = 8\text{ V}_{\text{PP}}$	0.01				%

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single supply and split supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C . Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(max)}} - T_A)/\theta_{\text{JA}}$.

Note 4: Typical values represent the most likely parametric norm.

Note 5: All limits are guaranteed by testing or statistical analysis.

Note 6: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$ and R_L connected to 7.5V . For Sourcing tests, $7.5\text{V} \leq V_O \leq 11.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_O \leq 7.5\text{V}$.

Note 7: $V^+ = 15\text{V}$. Connected as Voltage Follower with 10V step input. Limit specified is the lower of the positive and negative slew rates.

Note 8: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A)/\theta_{\text{JA}}$.

Note 9: Human body model, $1.5\text{ k}\Omega$ in series with 100 pF .

Note 10: Do not connect the output to V^+ , when V^+ is greater than 13V or reliability will be adversely affected.

Note 11: All numbers apply for packages soldered directly into a printed circuit board.

LMC6022

Low Power CMOS Dual Operational Amplifier

General Description

The LMC6022 is a CMOS dual operational amplifier which can operate from either a single supply or dual supplies. Its performance features include an input common-mode range that reaches V^- , low input bias current, and voltage gain (into 100k and 5 k Ω loads) that is equal to or better than widely accepted bipolar equivalents, while the power supply requirement is less than 0.5 mW.

This chip is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LMC6024 datasheet for a CMOS quad operational amplifier with these same features.

Features

- Specified for 100 k Ω and 5 k Ω loads
- High voltage gain: 120 dB
- Low offset voltage drift: 2.5 $\mu\text{V}/^\circ\text{C}$

- Ultra low input bias current: 40 fA
- Input common-mode range includes V^-
- Operating range from +5V to +15V supply
- Low distortion: 0.01% at 1 kHz
- Slew rate: 0.11 V/ μs
- Micropower operation: 0.5 mW

Applications

- High-impedance buffer or preamplifier
- Current-to-voltage converter
- Long-term integrator
- Sample-and-hold circuit
- Peak detector
- Medical instrumentation
- Industrial controls

i_n	Input-Referred Current Noise	F = 1 kHz	0.0002		pA/ \sqrt{Hz}

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to component may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature and/or multiple Op Amp stages can result in exceeding the maximum allowed junction temperature of $150^\circ C$. Output currents in excess of ± 30 mA over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A)/\theta_{JA}$.

Note 4: Human body model, 100 pF discharged through a 1.5 k Ω resistor.

Note 5: Typical values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or correlation.

Note 7: $V^+ = 15V$, $V_{CM} = 7.5V$, and R_L connected to 7.5V. For Sourcing tests, $7.5V \leq V_O \leq 11.5V$. For Sinking tests, $2.5V \leq V_O \leq 7.5V$.

Note 8: $V^+ = 15V$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 9: Input referred. $V^+ = 15V$ and $R_L = 100$ k Ω connected to 7.5V. Each amp excited in turn with 1 kHz to produce $V_O = 13$ V $_{PP}$.

Note 10: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A)/\theta_{JA}$.

Note 11: All numbers apply for packages soldered directly into a PC board.

Note 12: Do not connect output to V^+ when V^+ is greater than 13V or reliability may be adversely affected.

LMC6024

Low Power CMOS Quad Operational Amplifier

General Description

The LMC6024 is a CMOS quad operational amplifier which can operate from either a single supply or dual supplies. Its performance features include an input common-mode range that reaches V^- , low input bias current and voltage gain (into 100 k Ω and 5 k Ω loads) that is equal to or better than widely accepted bipolar equivalents, while the power supply requirement is less than 1 mW.

This chip is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LMC6022 datasheet for a CMOS dual operational amplifier with these same features.

Features

- Specified for 100 k Ω and 5 k Ω loads
- High voltage gain 120 dB
- Low offset voltage drift 2.5 $\mu\text{V}/^\circ\text{C}$

- Ultra low input bias current 40 fA
- Input common-mode range includes V^-
- Operating range from +5V to +15V supply
- Low distortion 0.01% at 1 kHz
- Slew rate 0.11 V/ μs
- Micropower operation 1 mW

Applications

- High-impedance buffer or preamplifier
- Current-to-voltage converter
- Long-term integrator
- Sample-and-hold circuit
- Peak detector
- Medical instrumentation
- Industrial controls

Connection Diagram

Absolute Maximum Ratings (Note 1)

Note 8: $V^+ = 15V$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 9: Input referred, $V^+ = 15V$ and $R_L = 100$ k Ω connected to 7.5V. Each amp excited in turn with 1 kHz to produce $V_O = 13$ V_{pp}.

Note 10: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A)/\theta_{JA}$.

Note 11: All numbers apply for packages soldered directly into a PC board.

Note 12: Do not connect output to V^+ when V^+ is greater than 13V or reliability may be adversely affected.

LMC6032

CMOS Dual Operational Amplifier

General Description

The LMC6032 is a CMOS dual operational amplifier which can operate from either a single supply or dual supplies. Its performance features include an input common-mode range that reaches ground, low input bias current, and high voltage gain into realistic loads, such as 2 k Ω and 600 Ω .

This chip is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LMC6034 datasheet for a CMOS quad operational amplifier with these same features. For higher performance characteristics refer to the LMC662.

Features

- Specified for 2 k Ω and 600 Ω loads
- High voltage gain: 126 dB

- Low offset voltage drift: 2.3 $\mu\text{V}/^\circ\text{C}$
- Ultra low input bias current: 40 fA
- Input common-mode range includes V^-
- Operating range from +5V to +15V supply
- $I_{SS} = 400 \mu\text{A}/\text{amplifier}$; independent of V^+
- Low distortion: 0.01% at 10 kHz
- Slew rate: 1.1 V/ μs
- Improved performance over TLC272

Applications

- High-impedance buffer or preamplifier
- Current-to-voltage converter
- Long-term integrator
- Sample-and-hold circuit
- Medical instrumentation

Connection Diagram

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to component may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature and/or multiple Op Amp shorts can result in exceeding the maximum allowed junction temperature of 150°C . Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{J(\text{max})}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(\text{max})} - T_A)/\theta_{\text{JA}}$.

Note 4: Human body model, 100 pF discharged through a $1.5\text{ k}\Omega$ resistor.

Note 5: Typical values represent the most likely parametric norm.

Note 6: All limits are guaranteed at room temperature (standard type face) or at operating temperature extremes (bold type face).

Note 7: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$, and R_L connected to 7.5V . For Sourcing tests, $7.5\text{V} \leq V_O \leq 11.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_O \leq 7.5\text{V}$.

Note 8: $V^+ = 15\text{V}$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 9: Input referred. $V^+ = 15\text{V}$ and $R_L = 10\text{ k}\Omega$ connected to $V^+/2$. Each amp excited in turn with 1 kHz to produce $V_O = 13\text{ V}_{\text{PP}}$.

Note 10: Do not connect output to V^+ , when V^+ is greater than 13V or reliability may be adversely affected.

Note 11: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A)/\theta_{\text{JA}}$.

Note 12: All numbers apply for packages soldered directly into a PC board.

LMC6034

CMOS Quad Operational Amplifier

General Description

The LMC6034 is a CMOS quad operational amplifier which can operate from either a single supply or dual supplies. Its performance features include an input common-mode range that reaches ground, low input bias current, and high voltage gain into realistic loads, such as 2 k Ω and 600 Ω .

This chip is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LMC6032 datasheet for a CMOS dual operational amplifier with these same features. For higher performance characteristics refer to the LMC660.

Features

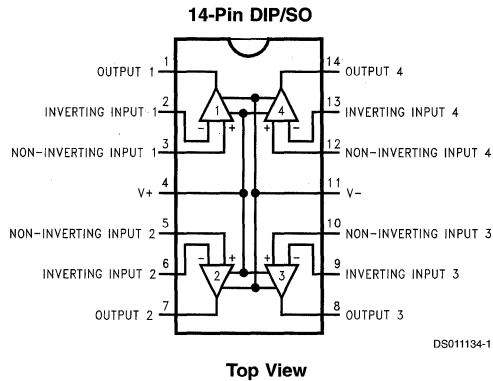

- Specified for 2 k Ω and 600 Ω loads
- High voltage gain: 126 dB

- Low offset voltage drift: 2.3 $\mu\text{V}/^\circ\text{C}$
- Ultra low input bias current: 40 fA
- Input common-mode range includes V^-
- Operating Range from +5V to +15V supply
- $I_{\text{SS}} = 400 \mu\text{A}/\text{amplifier}$; independent of V^+
- Low distortion: 0.01% at 10 kHz
- Slew rate: 1.1 V/ μs
- Improved performance over TLC274

Applications

- High-impedance buffer or preamplifier
- Current-to-voltage converter
- Long-term integrator
- Sample-and-hold circuit
- Medical instrumentation

THD	Total Harmonic Distortion	$F = 10\text{ kHz}$, $A_V = -10$ $R_L = 2\text{ k}\Omega$, $V_O = 8 V_{\text{PP}}$ $\pm 5\text{V Supply}$	0.01		%

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the component may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature and/or multiple Op Amp shorts can result in exceeding the maximum allowed junction temperature of 150°C . Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(max)}} - T_A) / \theta_{\text{JA}}$.

Note 4: Human body model, 100 pF discharged through a $1.5\text{ k}\Omega$ resistor.

Note 5: Typical values represent the most likely parametric norm.

Note 6: All limits are guaranteed at room temperature (standard type face) or at operating temperature extremes (**bold type face**).

Note 7: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$, and R_L connected to 7.5V . For Sourcing tests, $7.5\text{V} \leq V_O \leq 11.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_O \leq 7.5\text{V}$.

Note 8: $V^+ = 15\text{V}$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 9: Input referred. $V^+ = 15\text{V}$ and $R_L = 10\text{ k}\Omega$ connected to $V^+/2$. Each amp excited in turn with 1 kHz to produce $V_O = 13 V_{\text{PP}}$.

Note 10: Do not connect output to V^+ , when V^+ is greater than 13V or reliability may be adversely affected.

Note 11: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A) / \theta_{\text{JA}}$.

Note 12: All numbers apply for packages soldered directly into a PC board.

LMC6035/LMC6036

Low Power 2.7V Single Supply CMOS Operational Amplifiers

General Description

The LMC6035/6 is an economical, low voltage op amp capable of rail-to-rail output swing into loads of 600 Ω . LMC6035 is available in a chip sized package (8-Bump micro SMD) using National's micro SMD package technology. Both allow for single supply operation and are guaranteed for 2.7V, 3V, 5V and 15V supply voltage. The 2.7V supply voltage corresponds to the End-of-Life voltage (0.9V/cell) for three NiCd or NiMH batteries in series, making the LMC6035/6 well suited for portable and rechargeable systems. It also features a well behaved decrease in its specifications at supply voltages below its guaranteed 2.7V operation. This provides a "comfort zone" for adequate operation at voltages significantly below 2.7V. Its ultra low input currents (I_{IN}) makes it well suited for low power active filter application, because it allows the use of higher resistor values and lower capacitor values. In addition, the drive capability of the LMC6035/6 gives these op amps a broad range of applications for low voltage systems.

Features

(Typical Unless Otherwise Noted)

- LMC6035 in micro SMD Package
- Guaranteed 2.7V, 3V, 5V and 15V Performance
- Specified for 2 k Ω and 600 Ω Loads
- Wide Operating Range: 2.0V to 15.5V
- Ultra Low Input Current: 20 fA
- Rail-to-Rail Output Swing
 - @ 600 Ω : 200 mV from either rail at 2.7V
 - @ 100 k Ω : 5 mV from either rail at 2.7V
- High Voltage Gain: 126dB
- Wide Input Common-Mode Voltage Range
 - 0.1V to 2.3V at $V_s = 2.7V$
- Low Distortion: 0.01% at 10 kHz
- LMC6035 Dual LMC6036 Quad

Applications

- Filters
- High Impedance Buffer or Preamplifier
- Battery Powered Electronics
- Medical Instrumentation

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of 30 mA over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(max)}} - T_A)/\theta_{\text{JA}}$. All numbers apply for packages soldered directly onto a PC board with no air flow.

Note 5: Typical Values represent the most likely parametric norm or one sigma value.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$ and R_L connected to 7.5V. For Sourcing tests, $7.5\text{V} \leq V_O \leq 11.5\text{V}$. For Sinking tests, $3.5\text{V} \leq V_O \leq 7.5\text{V}$.

Note 8: Do not short circuit output to V^+ when V^+ is greater than 13V or reliability will be adversely affected.

Note 9: $V^+ = 15\text{V}$. Connected as voltage follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 10: Input referred, $V^+ = 15\text{V}$ and $R_L = 100\text{ k}\Omega$ connected to 7.5V. Each amp excited in turn with 1 kHz to produce $V_O = 12\text{ V}_{\text{PP}}$.

Note 11: Guaranteed by design.

LMC6041

CMOS Single Micropower Operational Amplifier

General Description

Ultra-low power consumption and low input-leakage current are the hallmarks of the LMC6041. Providing input currents of only 2 fA typical, the LMC6041 can operate from a single supply, has output swing extending to each supply rail, and an input voltage range that includes ground.

The LMC6041 is ideal for use in systems requiring ultra-low power consumption. In addition, the insensitivity to latch-up, high output drive, and output swing to ground without requiring external pull-down resistors make it ideal for single-supply battery-powered systems.

Other applications for the LMC6041 include bar code reader amplifiers, magnetic and electric field detectors, and hand-held electrometers.

This device is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LMC6042 for a dual, and the LMC6044 for a quad amplifier with these features.

Features

- Low supply current: 14 μ A (Typ)
- Operates from 4.5V to 15.5V single supply
- Ultra low input current: 2 fA (Typ)
- Rail-to-rail output swing
- Input common-mode range includes ground

Applications

- Battery monitoring and power conditioning
- Photodiode and infrared detector preamplifier
- Silicon based transducer systems
- Hand-held analytic instruments
- pH probe buffer amplifier
- Fire and smoke detection systems
- Charge amplifier for piezoelectric transducers

T.H.D.	Total Harmonic Distortion	$F = 1\text{ kHz}$, $A_V = -5$ $R_L = 100\text{ k}\Omega$, $V_O = 2 V_{\text{pp}}$ $\pm 5\text{V}$ Supply	0.01			%

AC Electrical Characteristics (Continued)

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating conditions indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 110°C. Output currents in excess of ±30 mA over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A)/\theta_{JA}$.

Note 4: Human body model, 1.5 k Ω in series with 100 pF.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed at room temperature (standard type face) or at operating temperature extremes (bold face type).

Note 7: $V^+ = 15V$, $V_{CM} = 7.5V$ and R_L connected to 7.5V. For Sourcing tests, $7.5V \leq V_O \leq 11.5V$. For Sinking tests, $2.5V \leq V_O \leq 7.5V$.

Note 8: $V^+ = 15V$. Connected as Voltage Follower with 10V step input. Number specified in the slower of the positive and negative slew rates.

Note 9: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A)/\theta_{JA}$.

Note 10: All numbers apply for packages soldered directly into a PC board.

Note 11: Do not connect output to V^+ when V^+ is greater than 13V or reliability may be adversely affected.

LMC6042

CMOS Dual Micropower Operational Amplifier

General Description

Ultra-low power consumption and low input-leakage current are the hallmarks of the LMC6042. Providing input currents of only 2 fA typical, the LMC6042 can operate from a single supply, has output swing extending to each supply rail, and an input voltage range that includes ground.

The LMC6042 is ideal for use in systems requiring ultra-low power consumption. In addition, the insensitivity to latch-up, high output drive, and output swing to ground without requiring external pull-down resistors make it ideal for single-supply battery-powered systems.

Other applications for the LMC6042 include bar code reader amplifiers, magnetic and electric field detectors, and hand-held electrometers.

This device is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LMC6041 for a single, and the LMC6044 for a quad amplifier with these features.

Features

- Low supply current: 10 μ A/Amp (typ)
- Operates from 4.5V to 15V single supply
- Ultra low input current: 2 fA (typ)
- Rail-to-rail output swing
- Input common-mode range includes ground

Applications

- Battery monitoring and power conditioning
- Photodiode and infrared detector preamplifier
- Silicon based transducer systems
- Hand-held analytic instruments
- pH probe buffer amplifier
- Fire and smoke detection systems
- Charge amplifier for piezoelectric transducers

Symbol	Parameter	Conditions	Typ (Note 5)	LMC6042AI	LMC6042I	Units (Limit)
				Limit (Note 6)	Limit (Note 6)	
T.H.D.	Total Harmonic Distortion	$f = 1\text{ kHz}$, $A_V = -5$ $R_L = 100\text{ k}\Omega$, $V_O = 2 V_{\text{PP}}$ $\pm 5\text{V Supply}$	0.01			%

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Conditions indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 110°C . Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{\text{J(Max)}}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(Max)}} - T_A)/\theta_{\text{JA}}$.

Note 4: Human body model, $1.5\text{ k}\Omega$ in series with 100 pF .

Note 5: Typical values represent the most likely parametric norm.

Note 6: All limits are guaranteed at room temperature (standard type face) or at operating temperature extremes (bold face type).

Note 7: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$ and R_L connected to 7.5V . For Sourcing tests, $7.5\text{V} \leq V_O \leq 11.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_O \leq 7.5\text{V}$.

Note 8: $V^+ = 15\text{V}$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 9: Input referred $V^+ = 15\text{V}$ and $R_L = 100\text{ k}\Omega$ connected to $V^+/2$. Each amp excited in turn with 100 Hz to produce $V_O = 12 V_{\text{PP}}$.

Note 10: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A)/\theta_{\text{JA}}$.

Note 11: All numbers apply for packages soldered directly into a PC board.

Note 12: Do not connect output to V^+ when V^+ is greater than 13V or reliability may be adversely affected.

LMC6044

CMOS Quad Micropower Operational Amplifier

General Description

Ultra-low power consumption and low input-leakage current are the hallmarks of the LMC6044. Providing input currents of only 2 fA typical, the LMC6044 can operate from a single supply, has output swing extending to each supply rail, and an input voltage range that includes ground.

The LMC6044 is ideal for use in systems requiring ultra-low power consumption. In addition, the insensitivity to latch-up, high output drive, and output swing to ground without requiring external pull-down resistors make it ideal for single-supply battery-powered systems.

Other applications for the LMC6044 include bar code reader amplifiers, magnetic and electric field detectors, and hand-held electrometers.

This device is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LMC6041 for a single, and the LMC6042 for a dual amplifier with these features.

Features

- Low supply current: 10 μ A/Amp (Typ)
- Operates from 4.5V to 15.5V single supply
- Ultra low input current: 2 fA (Typ)
- Rail-to-rail output swing
- Input common-mode range includes ground

Applications

- Battery monitoring and power conditioning
- Photodiode and infrared detector preamplifier
- Silicon based transducer systems
- Hand-held analytic instruments
- pH probe buffer amplifier
- Fire and smoke detection systems
- Charge amplifier for piezoelectric transducers

				Limit (Note 6)	Limit (Note 6)	
T.H.D.	Total Harmonic Distortion	$F = 1\text{ kHz}$, $A_V = -5$ $R_L = 100\text{ k}\Omega$, $V_O = 2 V_{pp}$ $\pm 5\text{V}$ Supply	0.01			%

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 110°C . Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A)/\theta_{JA}$.

Note 4: Human body model, $1.5\text{ k}\Omega$ in series with 100 pF .

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed at room temperature (standard type face) or at operating temperature extremes (bold face type).

Note 7: $V^+ = 15\text{V}$, $V_{CM} = 7.5\text{V}$ and R_L connected to 7.5V . For Sourcing tests, $7.5\text{V} \leq V_O \leq 11.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_O \leq 7.5\text{V}$.

Note 8: $V^+ = 15\text{V}$. Connected as Voltage Follower with 10V step input. Number specified in the slower of the positive and negative slew rates.

Note 9: Input referred $V^+ = 15\text{V}$ and $R_L = 100\text{ k}\Omega$ connected to $V^+/2$. Each amp excited in turn with 100 Hz to produce $V_O = 12 V_{pp}$.

Note 10: For operating at elevated temperatures, the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A)/\theta_{JA}$.

Note 11: All numbers apply for packages soldered directly into a PC board.

Note 12: Do not connect output to V^+ when V^+ is greater than 13V or reliability may be adversely affected.

LMC6061

Precision CMOS Single Micropower Operational Amplifier

General Description

The LMC6061 is a precision single low offset voltage, micropower operational amplifier, capable of precision single supply operation. Performance characteristics include ultra low input bias current, high voltage gain, rail-to-rail output swing, and an input common mode voltage range that includes ground. These features, plus its low power consumption, make the LMC6061 ideally suited for battery powered applications.

Other applications using the LMC6061 include precision full-wave rectifiers, integrators, references, sample-and-hold circuits, and true instrumentation amplifiers.

This device is built with National's advanced double-Poly Silicon-Gate CMOS process.

For designs that require higher speed, see the LMC6081 precision single operational amplifier.

For a dual or quad operational amplifier with similar features, see the LMC6062 or LMC6064 respectively.

PATENT PENDING

Features

(Typical Unless Otherwise Noted)

- Low offset voltage: 100 μV
- Ultra low supply current: 20 μA
- Operates from 4.5V to 15V single supply
- Ultra low input bias current: 10 fA
- Output swing within 10 mV of supply rail, 100k load
- Input common-mode range includes V^-
- High voltage gain: 140 dB
- Improved latchup immunity

Applications

- Instrumentation amplifier
- Photodiode and infrared detector preamplifier
- Transducer amplifiers
- Hand-held analytic instruments
- Medical instrumentation
- D/A converter
- Charge amplifier for piezoelectric transducers

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Differential Input Voltage	±Supply Voltage
Voltage at Input/Output Pin	(V ⁺) +0.3V, (V ⁻) -0.3V
Supply Voltage (V ⁺ - V ⁻)	16V
Output Short Circuit to V ⁺	(Note 10)
Output Short Circuit to V ⁻	(Note 2)
Lead Temperature (Soldering, 10 sec.)	260°C
Storage Temp. Range	-65°C to +150°C
Junction Temperature	150°C
ESD Tolerance (Note 4)	2 kV

Current at Input Pin	±10 mA
Current at Output Pin	±30 mA
Current at Power Supply Pin	40 mA
Power Dissipation	(Note 3)

Operating Ratings (Note 1)

Temperature Range	
LMC6061AM	-55°C ≤ T _J ≤ +125°C
LMC6061AI, LMC6082I	-40°C ≤ T _J ≤ +85°C
Supply Voltage	4.5V ≤ V ⁺ ≤ 15.5V
Thermal Resistance (θ _{JA}) (Note 11)	
N Package, 8-Pin Molded DIP	115°C/W
M Package, 8-Pin Surface Mount	193°C/W
Power Dissipation	(Note 9)

DC Electrical Characteristics

Unless otherwise specified, all limits guaranteed for T_J = 25°C. **Boldface** limits apply at the temperature extremes. V⁺ = 5V, V⁻ = 0V, V_{CM} = 1.5V, V_O = 2.5V and R_L > 1M unless otherwise specified.

Symbol	Parameter	Conditions	Typ (Note 9)	LMC6061AM Limit (Note 6)	LMC6061AI Limit (Note 6)	LMC6061I Limit (Note 6)	Units

T.H.D.	Total Harmonic Distortion	$F = 1\text{ kHz}$, $A_V = -5$ $R_L = 100\text{ k}\Omega$, $V_O = 2\text{ V}_{\text{PP}}$ $\pm 5\text{V}$ Supply	0.01				%

AC Electrical Characteristics (Continued)

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of ±30 mA over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{J(\text{Max})}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(\text{Max})} - T_A)/\theta_{JA}$.

Note 4: Human body model, 1.5 kΩ in series with 100 pF.

Note 5: Typical values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: $V^+ = 15V$, $V_{CM} = 7.5V$ and R_L connected to 7.5V. For Sourcing tests, $7.5V \leq V_O \leq 11.5V$. For Sinking tests, $2.5V \leq V_O \leq 7.5V$.

Note 8: $V^+ = 15V$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 9: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A)/\theta_{JA}$.

Note 10: Do not connect output to V^+ , when V^+ is greater than 13V or reliability will be adversely affected.

Note 11: All numbers apply for packages soldered directly into a PC board.

Note 12: For guaranteed Military Temperature Range parameters see RETSMC6061X.

LMC6062

Precision CMOS Dual Micropower Operational Amplifier

General Description

The LMC6062 is a precision dual low offset voltage, micropower operational amplifier, capable of precision single supply operation. Performance characteristics include ultra low input bias current, high voltage gain, rail-to-rail output swing, and an input common mode voltage range that includes ground. These features, plus its low power consumption, make the LMC6062 ideally suited for battery powered applications.

Other applications using the LMC6062 include precision full-wave rectifiers, integrators, references, sample-and-hold circuits, and true instrumentation amplifiers.

This device is built with National's advanced double-Poly Silicon-Gate CMOS process.

For designs that require higher speed, see the LMC6082 precision dual operational amplifier.

PATENT PENDING

Features

(Typical Unless Otherwise Noted)

- Low offset voltage 100 μ V
- Ultra low supply current 16 μ A/Amplifier
- Operates from 4.5V to 15V single supply
- Ultra low input bias current 10 fA
- Output swing within 10 mV of supply rail, 100k load
- Input common-mode range includes V^-
- High voltage gain 140 dB
- Improved latchup immunity

Applications

- Instrumentation amplifier
- Photodiode and infrared detector preamplifier
- Transducer amplifiers
- Hand-held analytic instruments
- Medical instrumentation
- D/A converter
- Charge amplifier for piezoelectric transducers

LMC6064

Precision CMOS Quad Micropower Operational Amplifier

General Description

The LMC6064 is a precision quad low offset voltage, micropower operational amplifier, capable of precision single supply operation. Performance characteristics include ultra low input bias current, high voltage gain, rail-to-rail output swing, and an input common mode voltage range that includes ground. These features, plus its low power consumption make the LMC6064 ideally suited for battery powered applications.

Other applications using the LMC6064 include precision full-wave rectifiers, integrators, references, sample-and-hold circuits, and true instrumentation amplifiers.

This device is built with National's advanced double-Poly Silicon-Gate CMOS process.

For designs that require higher speed, see the LMC6084 precision quad operational amplifier.

For single or dual operational amplifier with similar features, see the LMC6061 or LMC6062 respectively.

PATENT PENDING

Features

(Typical Unless Otherwise Noted)

- Low offset voltage: 100 μ V
- Ultra low supply current: 16 μ A/Amplifier
- Operates from 4.5V to 15V single supply
- Ultra low input bias current: 10 fA
- Output swing within 10 mV of supply rail, 100k load
- Input common-mode range includes V^-
- High voltage gain: 140 dB
- Improved latchup immunity

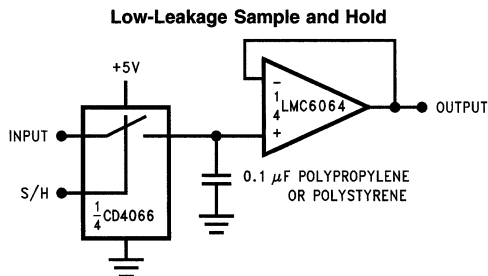

Applications

- Instrumentation amplifier
- Photodiode and infrared detector preamplifier
- Transducer amplifiers
- Hand-held analytic instruments
- Medical instrumentation
- D/A converter
- Charge amplifier for piezoelectric transducers

T.H.D.	Total Harmonic Distortion	$F = 1\text{ kHz}$, $A_V = -5$					
		$R_L = 100\text{ k}\Omega$, $V_O = 2\text{ V}_{\text{PP}}$ $\pm 5\text{V}$ Supply	0.01				%

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C . Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{\text{J(Max)}}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(Max)}} - T_A)/\theta_{\text{JA}}$.

Note 4: Human body model, $1.5\text{ k}\Omega$ in series with 100 pF .

Note 5: Typical values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$ and R_L connected to 7.5V . For Sourcing tests, $7.5\text{V} \leq V_O \leq 11.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_O \leq 7.5\text{V}$.

Note 8: $V^+ = 15\text{V}$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 9: Input referred $V^+ = 15\text{V}$ and $R_L = 100\text{ k}\Omega$ connected to 7.5V . Each amp excited in turn with 100 Hz to produce $V_O = 12\text{ V}_{\text{PP}}$.

Note 10: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A)/\theta_{\text{JA}}$.

Note 11: Do not connect output to V^+ , when V^+ is greater than 13V or reliability will be adversely affected.

Note 12: All numbers apply for packages soldered directly into a PC board.

Note 13: For guaranteed Military Temperature Range parameters see RETSMC6064X.

LMC6081

Precision CMOS Single Operational Amplifier

General Description

The LMC6081 is a precision low offset voltage operational amplifier, capable of single supply operation. Performance characteristics include ultra low input bias current, high voltage gain, rail-to-rail output swing, and an input common mode voltage range that includes ground. These features, plus its low offset voltage, make the LMC6081 ideally suited for precision circuit applications.

Other applications using the LMC6081 include precision full-wave rectifiers, integrators, references, and sample-and-hold circuits.

This device is built with National's advanced Double-Poly Silicon-Gate CMOS process.

For designs with more critical power demands, see the LMC6061 precision micropower operational amplifier.

For a dual or quad operational amplifier with similar features, see the LMC6082 or LMC6084 respectively.

PATENT PENDING

Features

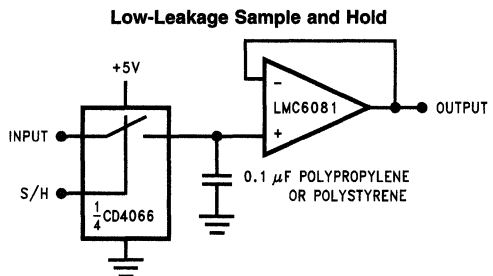

(Typical unless otherwise stated)

- Low offset voltage: 150 μ V
- Operates from 4.5V to 15V single supply
- Ultra low input bias current: 10 fA
- Output swing to within 20 mV of supply rail, 100k load
- Input common-mode range includes V^-
- High voltage gain: 130 dB
- Improved latchup immunity

Applications

- Instrumentation amplifier
- Photodiode and infrared detector preamplifier
- Transducer amplifiers
- Medical instrumentation
- D/A converter
- Charge amplifier for piezoelectric transducers

Connection Diagram

LMC6082

Precision CMOS Dual Operational Amplifier

General Description

The LMC6082 is a precision dual low offset voltage operational amplifier, capable of single supply operation. Performance characteristics include ultra low input bias current, high voltage gain, rail-to-rail output swing, and an input common mode voltage range that includes ground. These features, plus its low offset voltage, make the LMC6082 ideally suited for precision circuit applications.

Other applications using the LMC6082 include precision full-wave rectifiers, integrators, references, and sample-and-hold circuits.

This device is built with National's advanced Double-Poly Silicon-Gate CMOS process.

For designs with more critical power demands, see the LMC6062 precision dual micropower operational amplifier.

PATENT PENDING

Features

(Typical unless otherwise stated)

- Low offset voltage: 150 μ V
- Operates from 4.5V to 15V single supply
- Ultra low input bias current: 10 fA
- Output swing to within 20 mV of supply rail, 100k load
- Input common-mode range includes V^-
- High voltage gain: 130 dB
- Improved latchup immunity

Applications

- Instrumentation amplifier
- Photodiode and infrared detector preamplifier
- Transducer amplifiers
- Medical instrumentation
- D/A converter
- Charge amplifier for piezoelectric transducers

i_n	Input-Referred Current Noise	$F = 1\text{ kHz}$	0.0002				pA/ $\sqrt{\text{Hz}}$
T.H.D.	Total Harmonic Distortion	$F = 10\text{ kHz}$, $A_V = -10$ $R_{\text{L}} = 2\text{ k}\Omega$, $V_{\text{O}} = 8 V_{\text{PP}}$ $\pm 5\text{V}$ Supply	0.01				%

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C . Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{\text{J(Max)}}$, θ_{JA} , and T_{A} . The maximum allowable power dissipation at any ambient temperature is $P_{\text{D}} = (T_{\text{J(Max)}} - T_{\text{A}}) / \theta_{\text{JA}}$.

Note 4: Human body model, $1.5\text{ k}\Omega$ in series with 100 pF .

Note 5: Typical values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$ and R_{L} connected to 7.5V . For Sourcing tests, $7.5\text{V} \leq V_{\text{O}} \leq 11.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_{\text{O}} \leq 7.5\text{V}$.

Note 8: $V^+ = 15\text{V}$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 9: Input referred $V^+ = 15\text{V}$ and $R_{\text{L}} = 100\text{ k}\Omega$ connected to 7.5V . Each amp excited in turn with 1 kHz to produce $V_{\text{O}} = 12 V_{\text{PP}}$.

Note 10: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_{\text{D}} = (T_{\text{J}} - T_{\text{A}}) / \theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 11: Do not connect output to V^+ , when V^+ is greater than 13V or reliability will be adversely affected.

Note 12: All numbers apply for packages soldered directly into a PC board.

LMC6084

Precision CMOS Quad Operational Amplifier

General Description

The LMC6084 is a precision quad low offset voltage operational amplifier, capable of single supply operation. Performance characteristics include ultra low input bias current, high voltage gain, rail-to-rail output swing, and an input common mode voltage range that includes ground. These features, plus its low offset voltage, make the LMC6084 ideally suited for precision circuit applications.

Other applications using the LMC6084 include precision full-wave rectifiers, integrators, references, and sample-and-hold circuits.

This device is built with National's advanced Double-Poly Silicon-Gate CMOS process.

For designs with more critical power demands, see the LMC6064 precision quad micropower operational amplifier.

For a single or dual operational amplifier with similar features, see the LMC6081 or LMC6082 respectively.

PATENT PENDING

Features

(Typical unless otherwise stated)

- Low offset voltage: 150 μ V
- Operates from 4.5V to 15V single supply
- Ultra low input bias current: 10 fA
- Output swing to within 20 mV of supply rail, 100k load
- Input common-mode range includes V^-
- High voltage gain: 130 dB
- Improved latchup immunity

Applications

- Instrumentation amplifier
- Photodiode and infrared detector preamplifier
- Transducer amplifiers
- Medical instrumentation
- D/A converter
- Charge amplifier for piezoelectric transducers

Connection Diagram

Input Bias Current vs Temperature

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Differential Input Voltage	±Supply Voltage
Voltage at Input/Output Pin	(V ⁺) +0.3V, (V ⁻) -0.3V
Supply Voltage (V ⁺ - V ⁻)	16V
Output Short Circuit to V ⁺	(Note 11)
Output Short Circuit to V ⁻	(Note 2)
Lead Temperature (Soldering, 10 Sec.)	260°C
Storage Temp. Range	-65°C to +150°C
Junction Temperature	150°C
ESD Tolerance (Note 4)	2 kV

Current at Input Pin	±10 mA
Current at Output Pin	±30 mA
Current at Power Supply Pin	40 mA
Power Dissipation	(Note 3)

Operating Ratings (Note 1)

Temperature Range	
LMC6084AM	-55°C ≤ T _J ≤ +125°C
LMC6084AI, LMC6084I	-40°C ≤ T _J ≤ +85°C
Supply Voltage	4.5V ≤ V ⁺ ≤ 15.5V
Thermal Resistance (θ _{JA}) (Note 12)	
14-Pin Molded DIP	81°C/W
14-Pin SO	126°C/W
Power Dissipation	(Note 10)

DC Electrical Characteristics

Unless otherwise specified, all limits guaranteed for T_J = 25°C. **Boldface** limits apply at the temperature extremes. V⁺ = 5V, V⁻ = 0V, V_{CM} = 1.5V, V_O = 2.5V and R_L > 1M unless otherwise specified.

Note 9: Input referred $V^+ = 15\text{V}$ and $R_L = 100\text{ k}\Omega$ connected to 7.5V . Each amp excited in turn with 1 kHz to produce $V_{\text{O}} = 12\text{ V}_{\text{PP}}$.

Note 10: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_{\text{D}} = (T_{\text{J}} - T_{\text{A}}) / \theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 11: Do not connect output to V^+ , when V^+ is greater than 13V or reliability will be adversely affected.

Note 12: All numbers apply for packages soldered directly into a PC board.

LMC6442

Dual Micropower Rail-to-Rail Output Single Supply Operational Amplifier

General Description

The LMC6442 is ideal for battery powered systems, where very low supply current (less than one microamp per amplifier) and Rail-to-Rail output swing is required. It is characterized for 2.2V to 10V operation, and at 2.2V supply, the LMC6442 is ideal for single (Li-Ion) or two cell (NiCad or alkaline) battery systems.

The LMC6442 is designed for battery powered systems that require long service life through low supply current, such as smoke and gas detectors, and pager or personal communications systems.

Operation from single supply is enhanced by the wide common mode input voltage range which includes the ground (or negative supply) for ground sensing applications. Very low (5fA, typical) input bias current and near constant supply current over supply voltage enhance the LMC6442's performance near the end-of-life battery voltage.

Designed for closed loop gains of greater than plus two (or minus one), the amplifier has typically 9.5 KHz GBWP (Gain Bandwidth Product). Unity gain can be used with a simple compensation circuit, which also allows capacitive loads of up to 300 pF to be driven, as described in the Application Notes section.

For compact assembly the LMC6442 is available in the MSOP 8 pin package, about one half the size required by the SOIC 8 pin package. 8 pin DIP and 8 pin SOIC are also available.

Key Specifications

Features

(Typical, $V_S = 2.2V$)

- Output Swing to within 30 mV of supply rail
- High voltage gain 103 dB
- Gain Bandwidth Product 9.5 KHz
- Guaranteed for: 2.2V, 5V, 10V
- Low Supply Current 0.95 μA /Amplifier
- Input Voltage Range $-0.3V$ to $V^+ - 0.9V$
- Power consumption 2.1 μW /Amplifier
- Stable for $A_V \geq +2$ or $A_V \leq -1$

Applications

- Portable instruments
- Smoke/gas/CO/fire detectors
- Pagers/cell phones
- Instrumentation
- Thermostats
- Occupancy sensors
- Cameras
- Active badges

	Crosstalk Rejection	(Note 9)	85			dB

Electrical Characteristics (continued)

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of ± 30 mA over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A) / \theta_{JA}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis unless otherwise specified.

Note 7: Do not short circuit output to V^+ , when V^+ is greater than 13V or reliability will be adversely affected.

Note 8: Slew rate is the slower of the rising and falling slew rates.

Note 9: Input referred, $V^+ = 10V$ and $R_L = 10$ M Ω connected to 5V. Each amp excited in turn with 1 KHz to produce about 10 Vpp output.

Note 10: Limiting input pin current is only necessary for input voltages that exceed absolute maximum input voltage ratings.

Note 11: R_L connected to $V^+/2$. For Sourcing Test, $V_O > V^+/2$. For Sinking tests, $V_O < V^+/2$.

Note 12: Output shorted to ground for sourcing, and shorted to V^+ for sinking short circuit current test.

Note 13: V_{ID} is differential input voltage referenced to inverting input.

Note 14: Limits guaranteed by design.

Note 15: See the Typical Performance Characteristics and Application Notes sections for more details.

LMC6462 Dual/LMC6464 Quad

Micropower, Rail-to-Rail Input and Output CMOS Operational Amplifier

General Description

The LMC6462/4 is a micropower version of the popular LMC6482/4, combining Rail-to-Rail Input and Output Range with very low power consumption.

The LMC6462/4 provides an input common-mode voltage range that exceeds both rails. The rail-to-rail output swing of the amplifier, guaranteed for loads down to 25 k Ω , assures maximum dynamic signal range. This rail-to-rail performance of the amplifier, combined with its high voltage gain makes it unique among rail-to-rail amplifiers. The LMC6462/4 is an excellent upgrade for circuits using limited common-mode range amplifiers.

The LMC6462/4, with guaranteed specifications at 3V and 5V, is especially well-suited for low voltage applications. A quiescent power consumption of 60 μ W per amplifier (at $V_S = 3V$) can extend the useful life of battery operated systems. The amplifier's 150 fA input current, low offset voltage of 0.25 mV, and 85 dB CMRR maintain accuracy in battery-powered systems.

Features

(Typical unless otherwise noted)

- Ultra Low Supply Current: 20 μ A/Amplifier
- Guaranteed Characteristics at 3V and 5V
- Rail-to-Rail Input Common-Mode Voltage Range
- Rail-to-Rail Output Swing (within 10 mV of rail, $V_S = 5V$ and $R_L = 25 k\Omega$)
- Low Input Current: 150 fA
- Low Input Offset Voltage: 0.25 mV

Applications

- Battery Operated Circuits
- Transducer Interface Circuits
- Portable Communication Devices
- Medical Applications
- Battery Monitoring

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF. All pins rated per method 3015.6 of MIL-STD-883. This is a class 2 device rating.

Note 3: Applies to both single supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of ± 30 mA over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A)/\theta_{JA}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: $V^+ = 15V$, $V_{CM} = 7.5V$ and R_L connected to 7.5V. For Sourcing tests, $7.5V \leq V_O \leq 11.5V$. For Sinking tests, $3.5V \leq V_O \leq 7.5V$.

Note 8: Do not short circuit output to V^+ , when V^+ is greater than 13V or reliability will be adversely affected.

Note 9: $V^+ = 15V$. Connected as Voltage Follower with 10V step input. Number specified is the slower of either the positive or negative slew rates.

Note 10: Input referred, $V^+ = 15V$ and $R_L = 100$ k Ω connected to 7.5V. Each amp excited in turn with 1 kHz to produce $V_O = 12$ V_{pp}.

Note 11: Connected as Voltage Follower with 2V step input. Number specified is the slower of either the positive or negative slew rates.

Note 12: Limiting input pin current is only necessary for input voltages that exceed absolute maximum input voltage ratings.

Note 13: Guaranteed limits are dictated by tester limitations and not device performance. Actual performance is reflected in the typical value.

Note 14: For guaranteed Military Temperature Range parameters see RETSMC6462/4X.

LMC6482

CMOS Dual Rail-To-Rail Input and Output Operational Amplifier

General Description

The LMC6482 provides a common-mode range that extends to both supply rails. This rail-to-rail performance combined with excellent accuracy, due to a high CMRR, makes it unique among rail-to-rail input amplifiers.

It is ideal for systems, such as data acquisition, that require a large input signal range. The LMC6482 is also an excellent upgrade for circuits using limited common-mode range amplifiers such as the TLC272 and TLC277.

Maximum dynamic signal range is assured in low voltage and single supply systems by the LMC6482's rail-to-rail output swing. The LMC6482's rail-to-rail output swing is guaranteed for loads down to 600Ω.

Guaranteed low voltage characteristics and low power dissipation make the LMC6482 especially well-suited for battery-operated systems.

LMC6482 is also available in MSOP package which is almost half the size of a SO-8 device.

See the LMC6484 data sheet for a Quad CMOS operational amplifier with these same features.

Features

(Typical unless otherwise noted)

- Rail-to-Rail Input Common-Mode Voltage Range (Guaranteed Over Temperature)
- Rail-to-Rail Output Swing (within 20 mV of supply rail, 100 kΩ load)
- Guaranteed 3V, 5V and 15V Performance
- Excellent CMRR and PSRR: 82 dB
- Ultra Low Input Current: 20 fA
- High Voltage Gain ($R_L = 500\text{ k}\Omega$): 130 dB
- Specified for 2 kΩ and 600Ω loads
- Available in MSOP Package

Applications

- Data Acquisition Systems
- Transducer Amplifiers
- Hand-held Analytic Instruments
- Medical Instrumentation
- Active Filter, Peak Detector, Sample and Hold, pH Meter, Current Source
- Improved Replacement for TLC272, TLC277

3V Single Supply Buffer Circuit

T.H.D.	Total Harmonic Distortion	$F = 10\text{ kHz}$, $A_V = -2$ $R_L = 10\text{ k}\Omega$, $V_O = 2\text{ V}_{\text{PP}}$	0.01				%

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF. All pins rated per method 3015.6 of MIL-STD-883. This is a Class 1 device rating.

AC Electrical Characteristics (Continued)

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of ±30 mA over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A)/\theta_{JA}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: $V^+ = 15V$, $V_{CM} = 7.5V$ and R_L connected to 7.5V. For Sourcing tests, $7.5V \leq V_O \leq 11.5V$. For Sinking tests, $3.5V \leq V_O \leq 7.5V$.

Note 8: Do not short circuit output to V^+ , when V^+ is greater than 13V or reliability will be adversely affected.

Note 9: $V^+ = 15V$. Connected as Voltage Follower with 10V step input. Number specified is the slower of either the positive or negative slew rates.

Note 10: Input referred, $V^+ = 15V$ and $R_L = 100\text{ k}\Omega$ connected to 7.5V. Each amp excited in turn with 1 kHz to produce $V_O = 12\text{ V}_{pp}$.

Note 11: Connected as voltage Follower with 2V step input. Number specified is the slower of either the positive or negative slew rates.

Note 12: Limiting input pin current is only necessary for input voltages that exceed absolute maximum input voltage ratings.

Note 13: Guaranteed limits are dictated by tester limitations and not device performance. Actual performance is reflected in the typical value.

Note 14: For guaranteed Military Temperature parameters see RETS6482X.

LMC6484

CMOS Quad Rail-to-Rail Input and Output Operational Amplifier

General Description

The LMC6484 provides a common-mode range that extends to both supply rails. This rail-to-rail performance combined with excellent accuracy, due to a high CMRR, makes it unique among rail-to-rail input amplifiers.

It is ideal for systems, such as data acquisition, that require a large input signal range. The LMC6484 is also an excellent upgrade for circuits using limited common-mode range amplifiers such as the TLC274 and TLC279.

Maximum dynamic signal range is assured in low voltage and single supply systems by the LMC6484's rail-to-rail output swing. The LMC6484's rail-to-rail output swing is guaranteed for loads down to 600Ω.

Guaranteed low voltage characteristics and low power dissipation make the LMC6484 especially well-suited for battery-operated systems.

See the LMC6482 data sheet for a Dual CMOS operational amplifier with these same features.

Features

(Typical unless otherwise noted)

- Rail-to-Rail Input Common-Mode Voltage Range (Guaranteed Over Temperature)
- Rail-to-Rail Output Swing (within 20 mV of supply rail, 100 kΩ load)
- Guaranteed 3V, 5V and 15V Performance
- Excellent CMRR and PSRR: 82 dB
- Ultra Low Input Current: 20 fA
- High Voltage Gain ($R_L = 500 \text{ k}\Omega$): 130 dB
- Specified for 2 kΩ and 600Ω loads

Applications

- Data Acquisition Systems
- Transducer Amplifiers
- Hand-held Analytic Instruments
- Medical Instrumentation
- Active Filter, Peak Detector, Sample and Hold, pH Meter, Current Source
- Improved Replacement for TLC274, TLC279

3V Single Supply Buffer Circuit

LMC6492 Dual/LMC6494 Quad CMOS Rail-to-Rail Input and Output Operational Amplifier

General Description

The LMC6492/LMC6494 amplifiers were specifically developed for single supply applications that operate from -40°C to $+125^{\circ}\text{C}$. This feature is well-suited for automotive systems because of the wide temperature range. A unique design topology enables the LMC6492/LMC6494 common-mode voltage range to accommodate input signals beyond the rails. This eliminates non-linear output errors due to input signals exceeding a traditionally limited common-mode voltage range. The LMC6492/LMC6494 signal range has a high CMRR of 82 dB for excellent accuracy in non-inverting circuit configurations.

The LMC6492/LMC6494 rail-to-rail input is complemented by rail-to-rail output swing. This assures maximum dynamic signal range which is particularly important in 5V systems.

Ultra-low input current of 150 fA and 120 dB open loop gain provide high accuracy and direct interfacing with high impedance sources.

Features

(Typical unless otherwise noted)

- Rail-to-Rail input common-mode voltage range, guaranteed over temperature
- Rail-to-Rail output swing within 20 mV of supply rail, 100 k Ω load
- Operates from 5V to 15V supply
- Excellent CMRR and PSRR 82 dB
- Ultra low input current 150 fA
- High voltage gain ($R_L = 100\text{ k}\Omega$) 120 dB
- Low supply current (@ $V_S = 5\text{V}$) 500 $\mu\text{A}/\text{Amplifier}$
- Low offset voltage drift 1.0 $\mu\text{V}/^{\circ}\text{C}$

Applications

- Automotive transducer amplifier
- Pressure sensor
- Oxygen sensor
- Temperature sensor
- Speed sensor

T.H.D.	Total Harmonic Distortion	$F = 1\text{ kHz}$, $A_V = -2$ $R_L = 10\text{ k}\Omega$, $V_O = -4.1\text{ V}_{\text{PP}}$	0.01			%
		$F = 10\text{ kHz}$, $A_V = -2$ $R_L = 10\text{ k}\Omega$, $V_O = 8.5\text{ V}_{\text{PP}}$ $V^+ = 10\text{V}$	0.01			

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature at 150°C. Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{J(\text{max})}$, θ_{JA} and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(\text{max})} - T_A)/\theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$ and R_L connected to 7.5V. For Sourcing tests, $7.5\text{V} \leq V_O \leq 11.5\text{V}$. For Sinking tests, $3.5\text{V} \leq V_O \leq 7.5\text{V}$.

Note 8: Do not short circuit output to V^+ , when V^+ is greater than 13V or reliability will be adversely affected.

Note 9: $V^+ = 15\text{V}$. Connected as voltage follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 10: Input referred, $V^+ = 15\text{V}$ and $R_L = 100\text{ k}\Omega$ connected to 7.5V. Each amp excited in turn with 1 kHz to produce $V_O = 12\text{ V}_{\text{PP}}$.

Note 11: Guaranteed limits are dictated by tester limits and not device performance. Actual performance is reflected in the typical value.

LMC6572/LMC6574 Dual and Quad Low Voltage (2.7V and 3V) Operational Amplifier

General Description

Low voltage operation and low power dissipation make the LMC6574/2 ideal for battery-powered systems.

3V amplifier performance is backed by 2.7V guarantees to ensure operation throughout battery lifetime. These guarantees also enable analog circuits to operate from the same 3.3V supply used for digital logic.

Battery life is maximized because each amplifier dissipates only micro-watts of power.

The LMC6574/2 does not sacrifice functionality for low voltage operation. The LMC6574/2 generates 120 dB of open-loop gain just like a conventional amplifier, but the LMC6574/2 can do this from a 2.7V supply.

These amplifiers are designed with features that optimize low voltage operation. The output voltage swings rail-to-rail to maximize signal-to-noise ratio and dynamic signal range. The common-mode input voltage range extends from 800 mV below the positive supply to 100 mV below ground.

This device is built with National's advanced Double-Poly Silicon-Gate CMOS process.

LMC6572 is also available in MSOP package which is almost half the size of a SO-8 device.

Features

(Typical unless otherwise noted)

- Guaranteed 2.7V and 3V Performance
- Rail-to-Rail Output Swing (within 5 mV of supply rail, 100 kΩ load)
- Ultra-Low Supply Current: 40 μA/Amplifier
- Low Cost
- Ultra-Low Input Current: 20 fA
- High Voltage Gain @ $V_S=2.7V$, $R_L=100\text{ k}\Omega$: 120 dB
- Specified for 100 kΩ and 5 kΩ loads
- Available in MSOP Package

Applications

- Transducer Amplifier
- Portable or Remote Equipment
- Battery-Operated Instruments
- Data Acquisition Systems
- Medical Instrumentation
- Improved Replacement for TLV2322 and TLV2324

Note 9: Input referred, $V^+ = 3\text{V}$ and $R_L = 100\text{ k}\Omega$ connected to 1.5V . Each amp excited in turn with 1 kHz to produce $V_O = 2\text{ V}_{PP}$.

LMC660

CMOS Quad Operational Amplifier

General Description

The LMC660 CMOS Quad operational amplifier is ideal for operation from a single supply. It operates from +5V to +15V and features rail-to-rail output swing in addition to an input common-mode range that includes ground. Performance limitations that have plagued CMOS amplifiers in the past are not a problem with this design. Input V_{OS} , drift, and broadband noise as well as voltage gain into realistic loads (2 k Ω and 600 Ω) are all equal to or better than widely accepted bipolar equivalents.

This chip is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LMC662 datasheet for a dual CMOS operational amplifier with these same features.

Features

- Rail-to-rail output swing
- Specified for 2 k Ω and 600 Ω loads
- High voltage gain: 126 dB
- Low input offset voltage: 3 mV
- Low offset voltage drift: 1.3 $\mu\text{V}/^\circ\text{C}$

- Ultra low input bias current: 2 fA
- Input common-mode range includes V^-
- Operating range from +5V to +15V supply
- $I_{SS} = 375 \mu\text{A}/\text{amplifier}$; independent of V^+
- Low distortion: 0.01% at 10 kHz
- Slew rate: 1.1 V/ μs
- Available in extended temperature range (-40°C to $+125^\circ\text{C}$); ideal for automotive applications
- Available to Standard Military Drawing specification

Applications

- High-impedance buffer or preamplifier
- Precision current-to-voltage converter
- Long-term integrator
- Sample-and-Hold circuit
- Peak detector
- Medical instrumentation
- Industrial controls
- Automotive sensors

AC Electrical Characteristics

Unless otherwise specified, all limits guaranteed for $T_J = 25^\circ\text{C}$. **Boldface** limits apply at the temperature extremes. $V^+ = 5\text{V}$, $V^- = 0\text{V}$, $V_{CM} = 1.5\text{V}$, $V_O = 2.5\text{V}$ and $R_L > 1\text{M}$ unless otherwise specified.

Parameter	Conditions	Typ (Note 4)	LMC660AI	LMC660C	Units
			Limit (Note 4)	Limit (Note 4)	
Slew Rate	(Note 6)	1.1	0.8	0.8	V/ μs
			0.6	0.7	min
Gain-Bandwidth Product		1.4			MHz
Phase Margin		50			Deg
Gain Margin		17			dB
Amp-to-Amp Isolation	(Note 7)	130			dB
Input Referred Voltage Noise	$F = 1\text{ kHz}$	22			$\text{nV}/\sqrt{\text{Hz}}$
Input Referred Current Noise	$F = 1\text{ kHz}$	0.0002			$\text{pA}/\sqrt{\text{Hz}}$

AC Electrical Characteristics (Continued)

Unless otherwise specified, all limits guaranteed for $T_J = 25^\circ\text{C}$. **Boldface** limits apply at the temperature extremes. $V^+ = 5\text{V}$, $V^- = 0\text{V}$, $V_{\text{CM}} = 1.5\text{V}$, $V_O = 2.5\text{V}$ and $R_L > 1\text{M}$ unless otherwise specified.

Parameter	Conditions	Typ (Note 4)	LMC660AI	LMC660C	Units
			Limit (Note 4)	Limit (Note 4)	
Total Harmonic Distortion	$F = 10\text{ kHz}$, $A_V = -10$, $R_L = 2\text{ k}\Omega$, $V_O = 8\text{ V}_{\text{PP}}$, $V^+ = 15\text{V}$	0.01			%

Note 1: Applies to both single supply and split supply operation. Continuous short circuit operation at elevated ambient temperature and/or multiple Op Amp shorts can result in exceeding the maximum allowed junction temperature of 150°C . Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 2: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(max)}} - T_A)/\theta_{\text{JA}}$.

Note 3: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 4: Typical values represent the most likely parametric norm. Limits are guaranteed by testing or correlation.

Note 5: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$ and R_L connected to 7.5V . For Sourcing tests, $7.5\text{V} \leq V_O \leq 11.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_O \leq 7.5\text{V}$.

Note 6: $V^+ = 15\text{V}$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 7: Input referred. $V^+ = 15\text{V}$ and $R_L = 10\text{ k}\Omega$ connected to $V^+/2$. Each amp excited in turn with 1 kHz to produce $V_O = 13\text{ V}_{\text{PP}}$.

Note 8: Human body model, $1.5\text{ k}\Omega$ in series with 100 pF .

Note 9: A military RETS electrical test specification is available on request. At the time of printing, the LMC660AMJ/883 RETS spec complied fully with the **boldface** limits in this column. The LMC660AMJ/883 may also be procured to a Standard Military Drawing specification.

Note 10: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A)/\theta_{\text{JA}}$.

Note 11: All numbers apply for packages soldered directly into a PC board.

Note 12: Do not connect output to V^+ when V^+ is greater than 13V or reliability may be adversely affected.

LMC662

CMOS Dual Operational Amplifier

General Description

The LMC662 CMOS Dual operational amplifier is ideal for operation from a single supply. It operates from +5V to +15V and features rail-to-rail output swing in addition to an input common-mode range that includes ground. Performance limitations that have plagued CMOS amplifiers in the past are not a problem with this design. Input V_{OS} , drift, and broadband noise as well as voltage gain into realistic loads (2 k Ω and 600 Ω) are all equal to or better than widely accepted bipolar equivalents.

This chip is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LMC660 datasheet for a Quad CMOS operational amplifier with these same features.

Features

- Rail-to-rail output swing
- Specified for 2 k Ω and 600 Ω loads
- High voltage gain: 126 dB
- Low input offset voltage: 3 mV
- Low offset voltage drift: 1.3 $\mu\text{V}/^\circ\text{C}$

- Ultra low input bias current: 2 fA
- Input common-mode range includes V^-
- Operating range from +5V to +15V supply
- $I_{SS} = 400 \mu\text{A}/\text{amplifier}$; independent of V^+
- Low distortion: 0.01% at 10 kHz
- Slew rate: 1.1 V/ μs
- Available in extended temperature range (-40°C to $+125^\circ\text{C}$); ideal for automotive applications
- Available to a Standard Military Drawing specification

Applications

- High-impedance buffer or preamplifier
- Precision current-to-voltage converter
- Long-term integrator
- Sample-and-hold circuit
- Peak detector
- Medical instrumentation
- Industrial controls
- Automotive sensors

Total Harmonic Distortion	$F = 10\text{ kHz}$, $A_V = -10$ $R_L = 2\text{ k}\Omega$, $V_O = 8\text{ V}_{\text{PP}}$ $V^+ = 15\text{V}$	0.01			%

AC Electrical Characteristics (Continued)

Note 1: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature and/or multiple Op Amp shorts can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of ±30 mA over long term may adversely affect reliability.

Note 2: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A) / \theta_{JA}$.

Note 3: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 4: Typical values represent the most likely parametric norm. Limits are guaranteed by testing or correlation.

Note 5: $V^+ = 15V$, $V_{CM} = 7.5V$ and R_L connected to 7.5V. For Sourcing tests, $7.5V \leq V_O \leq 11.5V$. For Sinking tests, $2.5V \leq V_O \leq 7.5V$.

Note 6: $V^+ = 15V$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 7: Input referred. $V^+ = 15V$ and $R_L = 10 k\Omega$ connected to $V^+/2$. Each amp excited in turn with 1 kHz to produce $V_O = 13 V_{pp}$.

Note 8: Human body model, 1.5 k Ω in series with 100 pF.

Note 9: A military RETS electrical test specification is available on request. At the time of printing, the LMC662AMJ/883 RETS spec complied fully with the **boldface** limits in this column. The LMC662AMJ/883 may also be procured to a Standard Military Drawing specification.

Note 10: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A) / \theta_{JA}$.

Note 11: All numbers apply for packages soldered directly into a PC board.

Note 12: Do not connect output to V^+ when V^+ is greater than 13V or reliability may be adversely affected.

LMC7101

Tiny Low Power Operational Amplifier with Rail-To-Rail Input and Output

General Description

The LMC7101 is a high performance CMOS operational amplifier available in the space saving SOT 23-5 Tiny package. This makes the LMC7101 ideal for space and weight critical designs. The performance is similar to a single amplifier of the LMC6482/4 type, with rail-to-rail input and output, high open loop gain, low distortion, and low supply currents.

The main benefits of the Tiny package are most apparent in small portable electronic devices, such as mobile phones, pagers, notebook computers, personal digital assistants, and PCMCIA cards. The tiny amplifiers can be placed on a board where they are needed, simplifying board layout.

Features

- Tiny SOT23-5 package saves space—typical circuit layouts take half the space of SO-8 designs
- Guaranteed specs at 2.7V, 3V, 5V, 15V supplies
- Typical supply current 0.5 mA at 5V
- Typical total harmonic distortion of 0.01% at 5V
- 1.0 MHz gain-bandwidth
- Similar to popular LMC6482/4
- Input common-mode range includes V^- and V^+
- Tiny package outside dimensions—120 x 118 x 56 mils, 3.05 x 3.00 x 1.43 mm

Applications

- Mobile communications
- Notebooks and PDAs
- Battery powered products
- Sensor interface

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature at 150°C.

Note 4: The maximum power dissipation is a function of $T_{J(\text{max})}$, θ_{JA} and T_A . The maximum allowable power dissipation at any ambient temperature is $PD = (T_{J(\text{max})} - T_A)/\theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: $V^+ = 15\text{V}$, $V_{\text{CM}} = 1.5\text{V}$ and R_L connect to 7.5V. For Sourcing tests, $7.5\text{V} \leq V_O \leq 12.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_O \leq 7.5\text{V}$.

Note 8: $V^+ = 15\text{V}$. Connected as a Voltage Follower with a 10V step input. Number specified is the slower of the positive and negative slew rates. $R_L = 100\text{ k}\Omega$ connected to 7.5V. Amp excited with 1 kHz to produce $V_O = 10\text{ V}_{\text{PP}}$.

Note 9: Do not short circuit output to V^+ when V^+ is greater than 12V or reliability will be adversely affected.

LMC7111

Tiny CMOS Operational Amplifier with Rail-to-Rail Input and Output

General Description

The LMC7111 is a micropower CMOS operational amplifier available in the space saving SOT 23-5 package. This makes the LMC7111 ideal for space and weight critical designs. The wide common-mode input range makes it easy to design battery monitoring circuits which sense signals above the V^+ supply. The main benefits of the Tiny package are most apparent in small portable electronic devices, such as mobile phones, pagers, and portable computers. The tiny amplifiers can be placed on a board where they are needed, simplifying board layout.

Features

- Tiny SOT23-5 package saves space
- Very wide common mode input range

- Specified at 2.7V, 5V, and 10V
- Typical supply current 25 μ A at 5V
- 50 kHz gain-bandwidth at 5V
- Similar to popular LMC6462
- Output to within 20 mV of supply rail at 100k load
- Good capacitive load drive

Applications

- Mobile communications
- Portable computing
- Current sensing for battery chargers
- Voltage reference buffering
- Sensor interface
- Stable bias for GaAs RF amps

Note 19: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 20: Human body model, 1.5 k Ω in series with 100 pF.

Note 21: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature at 150°C.

Note 22: The maximum power dissipation is a function of $T_{J(\text{max})}$, θ_{JA} and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(\text{max})} - T_A)/\theta_{JA}$. All numbers apply for packages soldered directly into a PC board.

Note 23: Typical Values represent the most likely parametric norm.

Note 24: All limits are guaranteed by testing or statistical analysis.

Note 25: $V^+ = 10\text{V}$, $V_{\text{CM}} = 5\text{V}$ and R_L connected to 5V. For Sourcing tests, $5\text{V} \leq V_O \leq 10\text{V}$. For Sinking tests, $0.5\text{V} \leq V_O \leq 5\text{V}$.

Note 26: Connected as Voltage Follower with 1.0V step input. Number specified is the slower of the positive and negative slew rates. Input referred, $V^+ = 10\text{V}$ and $R_L = 100\text{ k}\Omega$ connected to 5V. Amp excited with 1 kHz to produce $V_O = 2\text{ V}_{\text{pp}}$.

Note 27: Operation near absolute maximum limits will adversely affect reliability.

LMC8101

Rail-to-Rail Input and Output, 2.7V Op Amp in micro SMD package with Shutdown

General Description

The LMC8101 is a Rail-to-Rail Input and Output high performance CMOS operational amplifier. The LMC8101 is ideal for low voltage (2.7V to 10V) applications requiring Rail-to-Rail inputs and output. The LMC8101 is supplied in the die sized micro SMD as well as the 8 pin MSOP packages. The micro SMD package requires 75% less board space as compared to the SOT23-5 package. The LMC8101 is an upgrade to the industry standard LMC7101.

The LMC8101 incorporates a simple user controlled methodology for shutdown. This allows ease of use while reducing the total supply current to 1nA typical. This extends battery life where power saving is mandated. The shutdown input threshold can be set relative to either V^+ or V^- using the SL pin (see Application Note section for details).

Other enhancements include improved offset voltage limit, three times the output current drive and lower 1/f noise when compared to the industry standard LMC7101 Op Amp. This makes the LMC8101 ideal for use in many battery powered, wireless communication and industrial applications.

Features

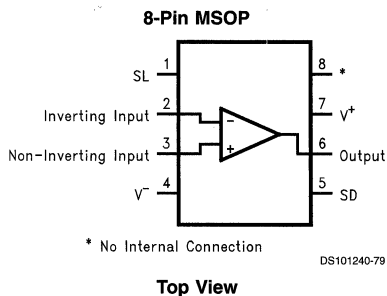

$V_S = 2.7V$, $T_A = 25^\circ C$, R_L to $V^+/2$, Typical values unless specified.

- Rail-to-Rail Inputs
- Rail-to-Rail Output Swing Within 35mV of Supplies ($R_L = 2k\Omega$)
- Packages Offered:
 - micro SMD package 1.39mm x 1.41mm
 - MSOP package 3.0mm x 4.9mm
- Low Supply Current <1mA (max)
- Shutdown Current 1 μ A (max)
- Versatile Shutdown feature 10 μ s turn-on
- Output Short Circuit Current 10mA
- Offset Voltage ± 5 mV (max)
- Gain-Bandwidth 1MHz
- Supply Voltage Range 2.7V-10V
- THD 0.18%
- Voltage Noise 36 $\frac{nV}{\sqrt{Hz}}$

Applications

- Portable Communication (voice, data)
- Cellular Phone Power Amp Control Loop
- Buffer AMP
- Active Filters
- Battery Sense
- VCO Loop

Connection Diagrams

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

ESD Tolerance	2KV (Note 2) 200V (Note 13)
V_{IN} differential	+/-Supply Voltage
Output Short Circuit Duration	(Notes 3, 11)
Supply Voltage ($V^+ - V^-$)	12V
Voltage at Input/Output pins	$V^+ +0.8V, V^- -0.8V$
Current at Input Pin	+/-10mA
Current at Output Pin (Notes 3, 12)	+/-80mA
Current at Power Supply pins	+/-80mA

Storage Temperature Range	-65°C to +150°C
Junction Temperature (Note 4)	+150°C

+/-5V Electrical Characteristics (Continued)

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5k Ω in series with 100pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature at 150°C. Output currents in excess of 40mA over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A)/\theta_{JA}$. All numbers apply for packages soldered directly onto a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: Positive current corresponds to current flowing into the device.

Note 8: Slew rate is the slower of the rising and falling slew rates.

Note 9: Shutdown Turn-on and Turn-off times are defined as the time required for the output to reach 90% and 10%, respectively, of its final peak to peak swing when set for Rail to Rail output swing with a 100KHz sine wave, 2K Ω load, and $A_V = +10$.

Note 10: Limiting input pin current is only necessary for input voltages that exceed absolute maximum input voltage ratings.

Note 11: Short circuit test is a momentary test. See Note 12.

Note 12: Output short circuit duration is infinite for $V_S < 6V$. Otherwise, extended period output short circuit may damage the device.

Note 13: machine Model, 0 Ω in series with 200pF.

Application Notes

Shutdown features:

The LMC8101 is capable of being turned off in order to conserve power. Once in shutdown, the device supply current is drastically reduced (1 μ A maximum) and the output will be "Tri-stated".

The shutdown feature of the LMC8101 is designed for flexibility. The threshold level of the SD input can be referenced to either V^- or V^+ by setting the level on the SL input. When the SL input is connected to V^- , the SD threshold level is referenced to V^- and vice versa. This threshold will be about 1.5V from the supply tied to the SL pin. So, for this example, the device will be in shutdown as long as the SD pin voltage is within 1V of V^- . In order to ensure that the device would not "chatter" between active and shutdown states, hysteresis is built into the SD pin transition (see *Figure 1* for an illustration of this feature). The shutdown threshold and hysteresis level are independent of the supply voltage. *Figure 1* illustration applies equally well to the case when SL is tied to V^+ and the horizontal axis is referenced to V^+ instead. The SD pin should not be set within the voltage range from 1.1V to 1.9V of the selected supply voltage since this is a transition region and the device status will be undetermined.

FIGURE 1. Supply Current vs. 'SD' Voltage

Table 1, below, summarizes the status of the device when the SL and SD pins are connected directly to V^- or V^+ :

TABLE 1. LMC8101 Status Summary

SL	SD	LMC8101 Status
V^-	V^-	Shutdown
V^-	V^+	Active
V^+	V^+	Shutdown
V^+	V^-	Active

In case shutdown operation is not needed, as can be seen in Table 1, the two pins SL and SD can simply be connected to opposite supply nodes to achieve "Active" operation. The SL and SD should always be tied to a node; if left unconnected, these high impedance inputs will float to an undetermined state and the device status will be undetermined as well.

With the device in shutdown, once "Active" operation is initiated, there will be a finite amount of time required before the device output is settled to its final value. This time is less than 15 μ s. In addition, there may be some output spike during this time while the device is transitioning into a fully operational state. Some applications may be sensitive to this output spike and proper precautions should be taken in order to ensure proper operation at all times.

Tiny Package:

The LMC8101 is available in the micro SMD package as well as the 8 pin MSOP package. The micro SMD package requires approximately 1/4 the board area of a SOT23. This package is less than 1mm in height allowing it to be placed in absolute minimum height clearance areas such as cellular handsets, LCD panels, PCMCIA cards, etc. More information about the micro SMD package can be found at: <http://www.national.com/appinfo/microsmd>.

Application Notes (Continued)

Conversion Boards:

In order to ease the evaluation of tiny packages such as the micro SMD, there is a conversion board (LMC8101CONV) available to board designers. This board converts a micro SMD device into an 8 pin DIP package (see *Figure 2*, Conversion Board Pin out diagram) for easier handling and evaluation. This board can be ordered from National Semiconductor by contacting <http://www.national.com>.

FIGURE 2. micro SMD Conversion Board pin-out

Increased Output Current:

Compared to the LMC7101, the LMC8101 has an improved output stage capable of up to three times larger output sourcing and sinking current. This improvement would allow a larger output voltage swing range compared to the LMC7101 when connected to relatively heavy loads. For lower supply voltages this is an added benefit since it increases the output swing range. For example, the LMC8101 can typically swing 2.5Vpp with 2mA sourcing and sinking output current ($V_s = 2.7V$) whereas the LMC7101 output swing would be limited to 1.9Vpp under the same conditions. Also, compared to the LMC7101 in the SOT23 package, the LMC8101 can dissipate more power because both the MSOP and the micro SMD packages have 40% better heat dissipation capability.

Lower 1/f noise:

The dominant input referred noise term for the LMC8101 is the input noise voltage. Input noise current for this device is of no practical significance unless the equivalent resistance it looks into is 5M Ω or higher.

The LMC8101's low frequency noise is significantly lower than that of the LMC7101. For example, at 10Hz, the input referred spot noise voltage density is 85 nV \sqrt{Hz} as compared to about 200nV \sqrt{Hz} for the LMC7101. Over a frequency range of 0.1Hz to 100Hz, the total noise of the LMC8101 will be approximately 60% less than that of the LMC7101.

Lower THD:

When connected to heavier loads, the LMC8101 has lower THD compared to the LMC7101. For example, with 5V supply at 10KHz and 2Vpp swing ($A_v = -2$), the LMC8101 THD (0.2%) is 60% less than the LMC7101's. The LMC8101 THD can be kept below 0.1% with 3Vpp at the output for up to 10KHz (refer to the Typical Characteristics Plots).

Improving the Cap load drive capability:

This can be accomplished in several ways:

- Output resistive loading increase:

The Phase Margin increases with increasing load (refer to the Typical Characteristics Plots). When driving capacitive loads, stability can generally be improved by allowing some output current to flow through a load. For example, the cap load drive capability can be increased from 8200pF to 16000pF if the output load is increased from 5K Ω to 600 Ω ($A_v = +10$, 25% overshoot limit, 10V supply).

- Isolation resistor between output and cap load:

This resistor will isolate the feedback path (where excessive phase shift due to output capacitance can cause instability) from the capacitive load. With a 10V supply, a 100 Ω isolation resistor allows unlimited capacitive load without oscillation compared to only 300pF without this resistor ($A_v = +1$).

- Higher supply voltage:

Operating the LMC8101 at higher supply voltages allows higher cap load tolerance. At 10V, the LMC8101's low supply voltage cap load limit of 300pF improves to about 600pF ($A_v = +1$).

- Closed loop gain increase:

As with all Op Amps, the capacitive load tolerance of the LMC8101 increases with increasing closed loop gain. In applications where the load is mostly capacitive and the resistive loading is light, stability increases when the LMC8101 is operated at a closed loop gain larger than +1.

LMV101/102/105/110 Fixed-Gain Amplifiers

General Description

The LMV101/102/105/110 fixed-gain amplifier family integrates a rail-to-rail op amp, two internal gain-setting resistors and a $V^{+}/2$ bias circuit into one ultra tiny package, SC70-5 or SOT23-5. Fixed inverting gains of -1, -2, -5, and -10 are available.

The core op amp in this series is an LMV321, which provides rail-to-rail output swing, excellent speed-power ratio, 1MHz bandwidth, and 1V/ μ s of slew rate with low supply current.

The LMV101/102/105/110 family reduces external component count. It is the most cost effective solution for applications where low voltage operation, low power consumption, space savings, and reliable performance are needed. It enables the design of small portable electronic devices, and allows the designer to place the device closer to the signal source to reduce noise pickup and increase signal integrity.

Features

(For 5V Supply, Typical Unless Otherwise Noted)

- Fixed inverting gain available -1, -2, -5, -10
- DC gain accuracy @2.7V supply
 - LMV101/102/105 2% (typ)
 - LMV110 6% (typ)
- Space saving packages SC70-5 & SOT23-5
- Industrial temperature range -40°C to +85°C
- Low supply current 130 μ A
- Rail-to-Rail output swing
- Guaranteed 2.7V and 5V performance

Applications

- General purpose portable devices
- Mobile communications
- Battery powered electronics
- Active filters
- Microphone preamplifiers

Typical Application

Absolute Maximum Ratings (Note 1)

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, $1.5\text{k}\Omega$ in series with 100pF . Machine model, 0Ω in series with 100pF .

Note 3: Shorting circuit output to V^+ will adversely affect reliability.

Note 4: Shorting circuit output to V^- will adversely affect reliability.

Note 5: The maximum power dissipation is a function of $T_{J(\text{max})}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(\text{max})} - T_A) / \theta_{JA}$. All numbers apply for packages soldered directly into a PC board.

Note 6: Typical Values represent the most likely parametric norm.

Note 7: All limits are guaranteed by testing or statistical analysis.

Note 8: Number specified is the slower of the positive and negative slew rates.

LMV111

Operational Amplifier with Bias Network

General Description

The LMV111 integrates a rail-to-rail op amp with a $V^+/2$ bias circuit into one ultra tiny package, SC70-5 or SOT23-5. The core op amp of the LMV111 is an LMV321, which provides rail-to-rail output swing, excellent speed-power ratio, 1MHz bandwidth, and 1V/ μ s of slew rate with low supply current.

The LMV111 reduces external component count. It is a cost effective solution for applications where low voltage operation, low power consumption, space saving, and reliable performance are needed. It enables the design of small portable electronic devices, and allows the designer to place the device closer to the signal source to reduce noise pickup and increase signal integrity.

Features

(For 5V Supply, Typical Unless Otherwise Noted)

- Resistor ratio matching 1% (typ)
- Space saving package SC70-5 & SOT23-5
- Industrial temp. range -40°C to +85°C
- Low supply current 130 μ A
- Gain-bandwidth product 1MHz
- Rail-to-Rail output swing
- Guaranteed 2.7V and 5V performance

Applications

- General purpose portable devices
- Active filters
- Mobile communications
- Battery powered electronics
- Microphone preamplifiers

LMV321/LMV358/LMV324 Single/Dual/Quad General Purpose, Low Voltage, Rail-to-Rail Output Operational Amplifiers

General Description

The LMV358/324 are low voltage (2.7–5.5V) versions of the dual and quad commodity op amps, LM358/324, which currently operate at 5–30V. The LMV321 is the single version.

The LMV321/358/324 are the most cost effective solutions for the applications where low voltage operation, space saving and low price are needed. They offer specifications that meet or exceed the familiar LM358/324. The LMV321/358/324 have rail-to-rail output swing capability and the input common-mode voltage range includes ground. They all exhibit excellent speed-power ratio, achieving 1 MHz of bandwidth and 1 V/ μ s of slew rate with low supply current.

The LMV321 is available in space saving SC70-5, which is approximately half the size of SOT23-5. The small package saves space on pc boards, and enables the design of small portable electronic devices. It also allows the designer to place the device closer to the signal source to reduce noise pickup and increase signal integrity.

The chips are built with National's advanced submicron silicon-gate BiCMOS process. The LMV321/358/324 have bipolar input and output stages for improved noise performance and higher output current drive.

Features

(For $V^+ = 5V$ and $V^- = 0V$, Typical Unless Otherwise Noted)

- Guaranteed 2.7V and 5V Performance
- No Crossover Distortion
- Space Saving Package SC70-5 2.0x2.1x1.0mm
- Industrial Temp. Range -40°C to $+85^\circ\text{C}$
- Gain-Bandwidth Product 1MHz
- Low Supply Current

LMV321	130 μ A
LMV358	210 μ A
LMV324	410 μ A

LMV710 and LMV711

Low Power, RRIO Operational Amplifiers with High Output Current Drive and Shutdown Option

General Description

The LMV710 and LMV711 are BiCMOS operational amplifiers with a CMOS input stage. Both devices have greater than RR input common mode voltage range, rail-to-rail output and high output current drive. They offer a bandwidth of 5MHz and a slew rate of 5V/μs.

On the LMV711, a separate shutdown pin can be used to disable the device and reduces the supply current to 0.2μA (typical). The LMV711 features a turn on time of less than 10μs. It is an ideal solution for power sensitive applications, such as cellular phone, pager, palm computer, etc.

The LMV710 is offered in the space saving SOT23-5 Tiny package. The LMV711 is offered in the space saving SOT23-6 Tiny package.

The LMV710/711 are designed to meet the demands of low power, low cost, and small size required by cellular phones and similar battery powered portable electronics.

Features

(For 5 Supply, Typical Unless Otherwise Noted).

- Low offset voltage 3mV, max
- Gain-bandwidth product 5MHz, typ
- Slew rate 5V/μs, typ
- Space saving packages SOT23-5 and SOT23-6
- Turn on time from shutdown <10μs
- Industrial temperature range -40°C to +85°C
- Supply current in shutdown mode 0.2μA, typ
- Guaranteed 2.7V and 5V Performance
- Unity gain stable
- Rail-to-rail input and output
- Capable of driving 600Ω load

Applications

- Wireless phones
- GSM/TDMA/CDMA power amp control
- AGC, RF power detector
- Temperature compensation
- Wireless LAN
- Bluetooth
- HomeRF

Typical Application

$$V_{OUT} = \frac{R_{SENSE} \cdot R_3}{R_1} \cdot I_{Charge} = 1\Omega \cdot I_{Charge}$$

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100pF. Machine model, 0 Ω in series with 100pF.

Note 3: Shorting circuit output to V^+ will adversely affect reliability.

Note 4: Shorting circuit output to V^- will adversely affect reliability.

Note 5: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_{A} . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(max)}} - T_{\text{A}})/\theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 6: Typical values represent the most likely parametric norm.

Note 7: All limits are guaranteed by testing or statistical analysis.

Note 8: Number specified is the slower of the positive and negative slew rates.

LMV721/LMV722

10MHz, Low Noise, Low Voltage, and Low Power Operational Amplifier

General Description

The LMV721 (Single) and LMV722 (Dual) are low noise, low voltage, and low power op amps, that can be designed into a wide range of applications. The LMV721/LMV722 has a unity gain bandwidth of 10MHz, a slew rate of 5V/us, and a quiescent current of 930uA/amplifier at 2.2V.

The LMV721/722 are designed to provide optimal performance in low voltage and low noise systems. They provide rail-to-rail output swing into heavy loads. The input common-mode voltage range includes ground, and the maximum input offset voltage are 3.5mV (Over Temp.) for the LMV721/LMV722. Their capacitive load capability is also good at low supply voltages. The operating range is from 2.2V to 5.5V.

The chip is built with National's advanced Submicron Silicon-Gate BiCMOS process. The single version, LMV721, is available in 5 pin SOT23-5 and a SC-70 (new) package. The dual version, LMV722, is available in a SO-8 and MSOP-8 package.

Features

(For Typical, 5 V Supply Values; Unless Otherwise Noted)

- Guaranteed 2.2V and 5.0V Performance
- Low Supply Current LMV721/2 930uA/amplifier @ 2.2V
- High Unity-Gain Bandwidth 10MHz
- Rail-to-Rail Output Swing
 - @ 600Ω load 120mV from either rail at 2.2V
 - @ 2kΩ load 50mV from either rail at 2.2V
- Input Common Mode Voltage Range Includes Ground
- Silicon Dust™, SC70-5 Package 2.0x2.0x1.0 mm
- Input Voltage Noise 9 nV/√Hz @ f = 1KHz

Applications

- Cellular and Cordless Phones
- Active Filter and Buffers
- Laptops and PDAs
- Battery Powered Electronics

A Battery Powered Microphone Preamplifier

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF. Machine model, 200 Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150 $^\circ\text{C}$. Output currents in excess of 30 mA over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_{A} . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(max)}} - T_{\text{A}}) / \theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: Connected as voltage follower with 1V step input. Number specified is the slower of the positive and negative slew rate.

LMV751

Low Noise, Low Vos, Single Op Amp

General Description

The LMV751 is a high performance CMOS operational amplifier intended for applications requiring low noise and low input offset voltage. It offers modest bandwidth of 4.5MHz for very low supply current and is unity gain stable.

The output stage is able to drive high capacitance, up to 1000pF and source or sink 8mA output current.

It is supplied in the space saving SOT23-5 Tiny package.

The LMV751 is designed to meet the demands of small size, low power, and high performance required by cellular phones and similar battery operated portable electronics.

Features

- Low Noise 6.5nV Rt-Hz typ.
- Low Vos (0.05mV typ.)
- Wideband 4.5MHz GBP typ.
- Low Supply Current 500uA typ.
- Low Supply Voltage 2.7V to 5.0V
- Ground-referenced Inputs
- Unity gain stable
- Small Package

Applications

- Cellular Phones
- Portable Equipment
- Radio Systems

LMV821 Single/ LMV822 Dual/ LMV824 Quad

Low Voltage, Low Power, R-to-R Output, 5 MHz Op Amps

General Description

The LMV821/LMV822/LMV824 bring performance and economy to low voltage / low power systems. With a 5 MHz unity-gain frequency and a guaranteed 1.4 V/ μ s slew rate, the quiescent current is only 220 μ A/amplifier (2.7 V). They provide rail-to-rail (R-to-R) output swing into heavy loads (600 Ω Guarantees). The input common-mode voltage range includes ground, and the maximum input offset voltage is 3.5mV (Guaranteed). They are also capable of comfortably driving large capacitive loads (refer to the application notes section).

The LMV821 (single) is available in the ultra tiny SC70-5 package, which is about half the size of the previous title holder, the SOT23-5.

Overall, the LMV821/LMV822/LMV824 (Single/Dual/Quad) are low voltage, low power, performance op amps, that can be designed into a wide range of applications, at an economical price.

Features

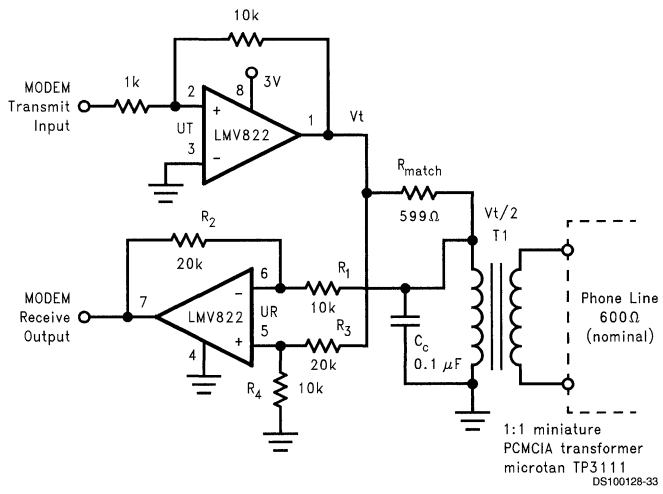

- (For Typical, 5 V Supply Values; Unless Otherwise Noted)
- Ultra Tiny, SC70-5 Package 2.0 x 2.0 x 1.0 mm

- Guaranteed 2.5 V, 2.7 V and 5 V Performance
- Maximum VOS 3.5 mV (Guaranteed)
- VOS Temp. Drift 1 μ V/°C
- GBW product @ 2.7 V 5 MHz
- I_{Supply} @ 2.7 V 220 μ A/Amplifier
- Minimum SR 1.4 V/ μ s (Guaranteed)
- CMRR 90 dB
- PSRR 85 dB
- Rail-to-Rail (R-to-R) Output Swing
 - @600 Ω Load 160 mV from rail
 - @10 k Ω Load 55 mV from rail
- V_{CM} @ 5 V -0.3 V to 4.3 V
- Stable with High Capacitive Loads (Refer to Application Section)

Applications

- Cordless Phones
- Cellular Phones
- Laptops
- PDAs
- PCMCIA

Telephone-line Transceiver for a PCMCIA Modem Card

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, $1.5\text{ k}\Omega$ in series with 100 pF . Machine model, 200Ω in series with 100 pF .

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C . Output currents in excess of 45 mA over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{J(\text{max})}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(\text{max})} - T_A) / \theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: $V^+ = 5\text{V}$. Connected as voltage follower with 3V step input. Number specified is the slower of the positive and negative slew rates.

Note 8: Input referred, $V^+ = 5\text{V}$ and $R_L = 100\text{ k}\Omega$ connected to 2.5V . Each amp excited in turn with 1 kHz to produce $V_O = 3\text{ V}_{\text{PP}}$.

LMV921/LMV922/LMV924

Single, Dual and Quad 1.8V, 1MHz, Low Power Operational Amplifiers with Rail-To-Rail Input and Output

General Description

The LMV921 Single/LMV922 Dual/LMV924 Quad are guaranteed to operate from +1.8V to +5.0V supply voltages and have rail-to-rail input and output. This rail-to-rail operation enables the user to make full use of the entire supply voltage range. The input common mode voltage range extends 300mV beyond the supplies and the output can swing rail-to-rail unloaded and within 100mV from the rail with 600 Ω load at 1.8V supply. The LMV921/LMV922/LMV924 are optimized to work at 1.8V which make them ideal for portable two-cell battery-powered systems and single cell Li-Ion systems.

The LMV921/LMV922/LMV924 exhibit excellent speed-power ratio, achieving 1MHz gain bandwidth product at 1.8V supply voltage with very low supply current. The LMV921/LMV922/LMV924 are capable of driving 600 Ω load and up to 1000pF capacitive load with minimal ringing. The LMV921/LMV922/LMV924's high DC gain of 100dB makes them suitable for low frequency applications.

The LMV921 (Single) is offered in a space saving SC70-5 and SOT23-5 packages. The SC70-5 package is only 2.0X2.1X1.0mm. These small packages are ideal solutions for area constrained PC boards and portable electronics such as cellphones and PDAs.

Features

(Typical 1.8V Supply Values; Unless Otherwise Noted)

- Guaranteed 1.8V, 2.7V and 5V specifications
- Rail-to-Rail input & output swing
 - w/600 Ω load 100 mV from rail
 - w/2k Ω load 30 mV from rail
- V_{CM} 300mV beyond rails
- 90dB gain w/600 Ω load
- Supply current 145 μ A/amplifier
- Gain bandwidth product 1MHz
- LMV921 Maximum V_{OS} 6mV
- LMV921 available in Ultra Tiny, SC70-5 package
- LMV922 available in MSOP-8 package
- LMV924 available in TSSOP-14 package

Applications

- Cordless/cellular phones
- Laptops
- PDAs
- PCMCIA
- Portable/battery-powered electronic Equipment
- Supply current Monitoring
- Battery monitoring

Supply Current vs. Supply Voltage (LMV921)

Gain and Phase Margin vs. Frequency

Output Voltage Swing vs. Supply Voltage

Absolute Maximum Ratings (Note 1)

	Amp-to-Amp Isolation	(Note 8)	140	dB

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF. Machine model, 200 Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of 45 mA over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_{A} . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(max)}} - T_{\text{A}})/\theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: $V^+ = 5\text{V}$. Connected as voltage follower with 5V step input. Number specified is the slower of the positive and negative slew rates.

Note 8: Input referred, $V^+ = 5\text{V}$ and $R_L = 100\text{k}\Omega$ connected to 2.5V. Each amp excited in turn with 1kHz to produce $V_O = 3V_{\text{PP}}$.

LP324/LP2902

Micropower Quad Operational Amplifier

General Description

The LP324 series consists of four independent, high gain internally compensated micropower operational amplifiers. These amplifiers are specially suited for operation in battery systems while maintaining good input specifications, and extremely low supply current drain. In addition, the LP324 has an input common mode range, and output source range which includes ground, making it ideal in single supply applications.

These amplifiers are ideal in applications which include portable instrumentation, battery backup equipment, and other circuits which require good DC performance and low supply current.

Features

- Low supply current: 125 μ A (max)
- Low offset voltage: 2 mV (max)
- Low input bias current: 4 nA (max)
- Input common mode to GND
- Interfaces to CMOS logic
- Wide supply range: $3V < V^+ < 32V$
- Small Outline Package available
- Pin-for-pin compatible with LM324

Connection Diagram

Electrical Characteristics (Note 6) (Continued)

Symbol	Parameter	Conditions	LP2902 (Note 9)			LP324			Units Limits
			Typ	Tested Limit (Note 7)	Design Limit (Note 8)	Typ	Tested Limit (Note 7)	Design Limit (Note 8)	
V_{os} Drift			10			10			$\mu\text{V}/\text{C}^\circ$
I_{os} Drift			10			10			pA/C°
GBW	Gain Bandwidth Product		100			100			KHz
S_r	Slew Rate		50			50			V/mS

Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Note 2: The input voltage is not allowed to go more than -0.3V below V^- (GND) as this will turn on a parasitic transistor causing large currents to flow through the device.

Note 3: Short circuits from the output to GND can cause excessive heating and eventual destruction. The maximum sourcing output current is approximately 30 mA independent of the magnitude of V^+ . At values of supply voltage in excess of $15 V_{DC}$, continuous short-circuit to GND can exceed the power dissipation ratings (particularly at elevated temperatures) and cause eventual destruction. Destructive dissipation can result from simultaneous shorts on all amplifiers.

Note 4: For operation at elevated temperatures, these devices must be derated based on a thermal resistance of θ_{JA} and T_j max. $T_j = T_A + \theta_{JA}P_D$.

Note 5: The LP2902 may be operated from $-40^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$, and the LP324 may be operated from $0^\circ\text{C} \leq T_A \leq +70^\circ\text{C}$.

Note 6: **Boldface** numbers apply at temperature extremes. All other numbers apply only at $T_A = T_j = 25^\circ\text{C}$, $V^+ = 5\text{V}$, $V_{cm} = V/2$, and $R_L = 100\text{k}$ connected to GND unless otherwise specified.

Note 7: Guaranteed and 100% production tested.

Note 8: Guaranteed (but not 100% production tested) over the operating supply voltage range (3.0V to 32V for the LP324, LP324, and 3.0V to 26V for the LP2902), and the common mode range (0V to $V^+ - 1.5\text{V}$), unless otherwise specified. These limits are not used to calculate outgoing quality levels.

Note 9: The LP2902 operating supply range is 3V to 26V, and is not tested above 26V.

Note 10: The test circuit used consists of the human body model of 100 pF in series with 1500 Ω .

LPC660

Low Power CMOS Quad Operational Amplifier

General Description

The LPC660 CMOS Quad operational amplifier is ideal for operation from a single supply. It features a wide range of operating voltages from +5V to +15V and features rail-to-rail output swing in addition to an input common-mode range that includes ground. Performance limitations that have plagued CMOS amplifiers in the past are not a problem with this design. Input V_{OS} , drift, and broadband noise as well as voltage gain (into 100 k Ω and 5 k Ω) are all equal to or better than widely accepted bipolar equivalents, while the power supply requirement is typically less than 1 mW.

This chip is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LPC662 datasheet for a Dual CMOS operational amplifier and LPC661 datasheet for a single CMOS operational amplifier with these same features.

Applications

- High-impedance buffer
- Precision current-to-voltage converter

- Long-term integrator
- High-impedance preamplifier
- Active filter
- Sample-and-Hold circuit
- Peak detector

Features

- Rail-to-rail output swing
- Micropower operation: (1 mW)
- Specified for 100 k Ω and 5 k Ω loads
- High voltage gain: 120 dB
- Low input offset voltage: 3 mV
- Low offset voltage drift: 1.3 $\mu\text{V}/^\circ\text{C}$
- Ultra low input bias current: 2 fA
- Input common-mode includes V^-
- Operation range from +5V to +15V
- Low distortion: 0.01% at 1 kHz
- Slew rate: 0.11 V/ μs
- Full military temp. range available

Application Circuit

Sine-Wave Oscillator

DS010547-10

Oscillator frequency is determined by R1, R2, C1, and C2:

$$f_{\text{OSC}} = 1/2\pi RC$$

where $R = R1 = R2$ and $C = C1 = C2$.

Absolute Maximum Ratings (Note 3)

AC Electrical Characteristics

Unless otherwise specified, all limits guaranteed for $T_J = 25^\circ\text{C}$. **Boldface** limits apply at the temperature extremes. $V^+ = 5\text{V}$, $V^- = 0\text{V}$, $V_{\text{CM}} = 1.5\text{V}$, $V_{\text{O}} = 2.5$, and $R_L > 1\text{M}$ unless otherwise specified.

Parameter	Conditions	Typ	LPC660AM	LPC660AI	LPC660I	Units
			LPC660AMJ/883			
			Limit (Notes 4, 8)	Limit (Note 4)	Limit (Note 4)	
Slew Rate	(Note 6)	0.11	0.07	0.07	0.05	V/ μs
			0.04	0.05	0.03	min
Gain-Bandwidth Product		0.35				MHz
Phase Margin		50				Deg
Gain Margin		17				dB
Amp-to-Amp Isolation	(Note 7)	130				dB
Input Referred Voltage Noise	$F = 1\text{ kHz}$	42				$\text{nV}/\sqrt{\text{Hz}}$
Input Referred Current Noise	$F = 1\text{ kHz}$	0.0002				$\text{pA}/\sqrt{\text{Hz}}$
Total Harmonic Distortion	$F = 1\text{ kHz}$, $A_V = -10$ $R_L = 100\text{ k}\Omega$, $V_{\text{O}} = 8\text{ V}_{\text{PP}}$	0.01				%

Note 1: Applies to both single supply and split supply operation. Continuous short circuit operation at elevated ambient temperature and/or multiple Op Amp shorts can result in exceeding the maximum allowed junction temperature of 150°C . Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 2: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} and T_{A} . The maximum allowable power dissipation at any ambient temperature is $P_{\text{D}} = (T_{\text{J(max)}} - T_{\text{A}})/\theta_{\text{JA}}$.

Note 3: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 4: Limits are guaranteed by testing or correlation.

Note 5: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$ and R_L connected to 7.5V . For Sourcing tests, $7.5\text{V} \leq V_{\text{O}} \leq 11.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_{\text{O}} \leq 7.5\text{V}$.

Note 6: $V^+ = 15\text{V}$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 7: Input referred. $V^+ = 15\text{V}$ and $R_L = 100\text{ k}\Omega$ connected to $V^+/2$. Each amp excited in turn with 1 kHz to produce $V_{\text{O}} = 13\text{ V}_{\text{PP}}$.

Note 8: A military RETS electrical test specification is available on request. At the time of printing, the LPC660AMJ/883 RETS specification complied fully with the **boldface** limits in this column. The LPC660AMJ/883 may also be procured to a Standard Military Drawing specification.

Note 9: For operating at elevated temperatures, the device must be derated based on the thermal resistance θ_{JA} with $P_{\text{D}} = (T_{\text{J}} - T_{\text{A}})/\theta_{\text{JA}}$.

Note 10: All numbers apply for packages soldered directly into a PC board.

Note 11: Do not connect output to V^+ when V^+ is greater than 13V or reliability may be adversely affected.

LPC661

Low Power CMOS Operational Amplifier

General Description

The LPC661 CMOS operational amplifier is ideal for operation from a single supply. It features a wide range of operating supply voltage from +5V to +15V, rail-to-rail output swing and an input common-mode range that includes ground. Performance limitations that have plagued CMOS amplifiers in the past are not a problem with this design. Input V_{OS} , drift, and broadband noise as well as voltage gain (into 100 k Ω and 5 k Ω) are all equal to or better than widely accepted bipolar equivalents, while the supply current requirement is typically 55 μ A.

This chip is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LPC660 datasheet for a Quad CMOS operational amplifier or the LPC662 data sheet for a Dual CMOS operational amplifier with these same features.

Features

(Typical unless otherwise noted)

- Rail-to-rail output swing

- Low supply current 55 μ A
- Specified for 100 k Ω and 5 k Ω loads
- High voltage gain 120 dB
- Low input offset voltage 3 mV
- Low offset voltage drift 1.3 μ V/ $^{\circ}$ C
- Ultra low input bias current 2 fA
- Input common-mode range includes GND
- Operating range from +5V to +15V
- Low distortion 0.01% at 1 kHz
- Slew rate 0.11 V/ μ s

Applications

- High-impedance buffer
- Precision current-to-voltage converter
- Long-term integrator
- High-impedance preamplifier
- Active filter
- Sample-and-Hold circuit
- Peak detector

Application Circuits

$f_0 = 10$ Hz
 $Q = 2.1$
 Gain = 18.9 dB

$f_c = 1$ Hz
 $d = 1.414$
 Gain = 1.57

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage ($V^+ - V^-$)	16V
Differential Input Voltage	\pm Supply Voltage
Output Short Circuit to V^+	(Notes 2, 9)
Output Short Circuit to V^-	(Note 2)
Storage Temperature Range	-65°C to $+150^\circ\text{C}$
Lead Temperature (Soldering, 10 sec.)	260°C
Junction Temperature (Note 3)	150°C
Power Dissipation	(Note 3)
ESD Rating ($C=100\text{ pF}$, $R=1.5\text{ k}\Omega$)	1000V
Current at Input Pin	$\pm 5\text{ mA}$

Current at Output Pin	$\pm 18\text{ mA}$
Voltage Input/Output Pin	(V^+) $+0.3\text{V}$, (V^-) -0.3V
Current at Power Supply Pin	35 mA

Operating Ratings (Note 1)

Supply Voltage	$4.75\text{V} \leq V^+ \leq 15.5\text{V}$
Junction Temperature Range	
LPC661AM	$-55^\circ\text{C} \leq T_J \leq +125^\circ\text{C}$
LPC661AI	$-40^\circ\text{C} \leq T_J \leq +85^\circ\text{C}$
LPC661I	$-40^\circ\text{C} \leq T_J \leq +85^\circ\text{C}$
Power Dissipation	(Note 7)
Thermal Resistance (θ_{JA}) (Note 8)	
8-Pin DIP	101°C/W
8-Pin SO	165°C/W

DC Electrical Characteristics

The following specifications apply for $V^+ = 5\text{V}$, $V^- = 0\text{V}$, $V_{CM} = 1.5\text{V}$, $V_O = 2.5\text{V}$, and $R_L = 1\text{M}$ unless otherwise noted. **Bold-face** limits apply at the temperature extremes; all other limits $T_J = 25^\circ\text{C}$.

Symbol	Parameter	Conditions	Typ	LPC661AM Limit (Note 4)	LPC661AI Limit (Note 4)	LPC661I Limit (Note 4)	Units (Limit)

AC Electrical Characteristics (Continued)

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: Applies to both single supply and split supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150 °C. Output currents in excess of ± 30 mA over long term may adversely affect reliability.

Note 3: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A) / \theta_{JA}$.

Note 4: Limits are guaranteed by testing or correlation.

Note 5: $V_+ = 15V$, $V_{CM} = 7.5V$ and R_L connected to 7.5V. For sourcing tests, $7.5V \leq V_O \leq 11.5V$. For sinking tests, $2.5V \leq V_O \leq 7.5V$.

Note 6: $V_+ = 15V$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 7: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_D = (T_J - T_A) / \theta_{JA}$.

Note 8: All numbers apply for packages soldered directly into a PC board.

Note 9: Do not connect output to V^+ when V^+ is greater than 13V or reliability may be adversely affected.

LPC662

Low Power CMOS Dual Operational Amplifier

General Description

The LPC662 CMOS Dual operational amplifier is ideal for operation from a single supply. It features a wide range of operating voltage from +5V to +15V, rail-to-rail output swing in addition to an input common-mode range that includes ground. Performance limitations that have plagued CMOS amplifiers in the past are not a problem with this design. Input V_{OS} , drift, and broadband noise as well as voltage gain (into 100 k Ω and 5 k Ω) are all equal to or better than widely accepted bipolar equivalents, while the power supply requirement is typically less than 0.5 mW.

This chip is built with National's advanced Double-Poly Silicon-Gate CMOS process.

See the LPC660 datasheet for a Quad CMOS operational amplifier and LPC661 for a single CMOS operational amplifier with these same features.

Applications

- High-impedance buffer
- Precision current-to-voltage converter

- Long-term integrator
- High-impedance preamplifier
- Active filter
- Sample-and-Hold circuit
- Peak detector

Features

- Rail-to-rail output swing
- Micropower operation (<0.5 mW)
- Specified for 100 k Ω and 5 k Ω loads
- High voltage gain 120 dB
- Low input offset voltage 3 mV
- Low offset voltage drift 1.3 μ V/ $^{\circ}$ C
- Ultra low input bias current 2 fA
- Input common-mode includes GND
- Operating range from +5V to +15V
- Low distortion 0.01% at 1 kHz
- Slew rate 0.11 V/ μ s
- Full military temperature range available

Application Circuit

Absolute Maximum Ratings (Note 3)

Note 1: Applies to both single supply and split supply operation. Continuous short circuit operation at elevated ambient temperature and/or multiple Op Amp shorts can result in exceeding the maximum allowed junction temperature of 150°C . Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 2: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_{A} . The maximum allowable power dissipation at any ambient temperature is $P_{\text{D}} = (T_{\text{J(max)}} - T_{\text{A}})/\theta_{\text{JA}}$.

Note 3: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 4: Limits are guaranteed by testing or correlation.

Note 5: $V^+ = 15\text{V}$, $V_{\text{CM}} = 7.5\text{V}$ and R_{L} connected to 7.5V . For Sourcing tests, $7.5\text{V} \leq V_{\text{O}} \leq 11.5\text{V}$. For Sinking tests, $2.5\text{V} \leq V_{\text{O}} \leq 7.5\text{V}$.

Note 6: $V^+ = 15\text{V}$. Connected as Voltage Follower with 10V step input. Number specified is the slower of the positive and negative slew rates.

Note 7: Input referred. $V^+ = 15\text{V}$ and $R_{\text{L}} = 100\text{ k}\Omega$ connected to $V^+/2$. Each amp excited in turn with 1 kHz to produce $V_{\text{O}} = 13\text{ V}_{\text{PP}}$.

Note 8: A military RETS electrical test specification is available on request. At the time of printing, the LPC662AMJ/883 RETS specification complied fully with the **boldface** limits in this column. The LPC662AMJ/883 may also be procured to a Standard Military Drawing specification.

Note 9: For operating at elevated temperatures the device must be derated based on the thermal resistance θ_{JA} with $P_{\text{D}} = (T_{\text{J}} - T_{\text{A}})/\theta_{\text{JA}}$.

Note 10: All numbers apply for packages soldered directly into a PC board.

Note 11: Do not connect output to V^+ when V^+ is greater than 13V or reliability may be adversely affected.

LPV321 Single/LPV358 Dual/LPV324 Quad

General Purpose, Low Voltage, Low Power, Rail-to-Rail Output Operational Amplifiers

General Description

The LPV321/358/324 are low power (9 μ A per channel at 5.0V) versions of the LMV321/358/324 op amps. This is another addition to the LMV321/358/324 family of commodity op amps.

The LPV321/358/324 are the most cost effective solutions for the applications where low voltage, low power operation, space saving and low price are needed. The LPV321/358/324 have rail-to-rail output swing capability and the input common-mode voltage range includes ground. They all exhibit excellent speed-power ratio, achieving 152 KHz of bandwidth with a supply current of only 9 μ A.

The LPV321 is available in space saving SC70-5, which is approximately half the size of SOT23-5. The small package saves space on pc boards, and enables the design of small portable electronic devices. It also allows the designer to place the device closer to the signal source to reduce noise pickup and increase signal integrity.

The chips are built with National's advanced submicron silicon-gate BiCMOS process. The LPV321/358/324 have bipolar input and output stages for improved noise performance and higher output current drive.

Features

(For $V^+ = 5V$ and $V^- = 0V$, Typical Unless Otherwise Noted)

- Guaranteed 2.7V and 5V Performance
- No Crossover Distortion
- Space Saving Package
- Industrial Temp. Range: SC70-5
-40°C to +85°C
- Gain-Bandwidth Product: 152KHz
- Low Supply Current

LPV321	9 μ A
LPV358	15 μ A
LPV324	28 μ A
- Rail-to-Rail Output Swing @ 100k Ω Load

$V^+ - 3.5mV$
$V^- + 90mV$
- V_{CM} : -0.2V to $V^+ - 0.8V$

Applications

- Active Filters
- General Purpose Low Voltage Applications
- General Purpose Portable Devices

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

ESD Tolerance (Note 2)	
Machine Model	100V
Human Body Model	2000V
Differential Input Voltage	± Supply Voltage
Supply Voltage (V ⁺ -V ⁻)	5.5V
Output Short Circuit to V ⁺	(Note 3)
Output Short Circuit to V ⁻	(Note 4)
Soldering Information	
Infrared or Convection (20 sec)	235°C
Storage Temp. Range	-65°C to 150°C

Junction Temp. (T_J, max) (Note 5) 150°C

Operating Ratings (Note 1)

Supply Voltage	2.7V to 5V
Temperature Range	-40°C ≤ T _J ≤ 85°C
Thermal Resistance (θ _{JA})(Note 10)	
5-pin SC70-5	478°C/W
5-pin SOT23-5	265°C/W
8-Pin SOIC	190°C/W
8-Pin MSOP	235°C/W
14-Pin SOIC	145°C/W
14-Pin TSSOP	155°C/W

2.7V DC Electrical Characteristics

Unless otherwise specified, all limits guaranteed for T_J = 25°C, V⁺ = 2.7V, V⁻ = 0V, V_{CM} = 1.0V, V_O = V⁺/2 and R_L > 1 MΩ.

Symbol	Parameter	Conditions	Typ (Note 6)	Limit (Note 7)	Units
V _{OS}	Input Offset Voltage		1.2	7	mV max
TCV _{OS}	Input Offset Voltage Average Drift		2		µV/°C
I _B	Input Bias Current		1.7	50	nA max
I _{OS}	Input Offset Current		0.6	40	nA max
CMRR	Common Mode Rejection Ratio	0V ≤ V _{CM} ≤ 1.7V	70	50	dB min
PSRR	Power Supply Rejection Ratio	2.7V ≤ V ⁺ ≤ 5V V _O = 1V, V _{CM} = 1V	65	50	dB min
V _{CM}	Input Common-Mode Voltage Range	For CMRR ≥ 50dB	-0.2	0	V min
			1.9	1.7	V max
V _O	Output Swing	R _L = 100kΩ to 1.35V	V ⁺ -3	V ⁺ -100	mV min
			80	180	mV max
I _S	Supply Current	LPV321	4	8	µA max
		LPV358 Both amplifiers	8	16	µA max
		LPV324 All four amplifiers	16	24	µA max

2.7V AC Electrical Characteristics

Unless otherwise specified, all limits guaranteed for $T_J = 25^\circ\text{C}$, $V^+ = 2.7\text{V}$, $V^- = 0\text{V}$, $V_{\text{CM}} = 1.0\text{V}$, $V_O = V^+/2$ and $R_L > 1\text{M}\Omega$.

Symbol	Parameter	Conditions	Typ (Note 6)	Limit (Note 7)	Units
GBWP	Gain-Bandwidth Product	$C_L = 22\text{pF}$	112		KHz
Φ_m	Phase Margin		97		Deg
G_m	Gain Margin		35		dB
e_n	Input-Referred Voltage Noise	$f = 1\text{kHz}$	178		$\frac{\text{nV}}{\sqrt{\text{Hz}}}$
i_n	Input-Referred Current Noise	$f = 1\text{kHz}$	0.50		$\frac{\text{pA}}{\sqrt{\text{Hz}}}$

5V DC Electrical Characteristics

Unless otherwise specified, all limits guaranteed for $T_J = 25^\circ\text{C}$, $V^+ = 5\text{V}$, $V^- = 0\text{V}$, $V_{\text{CM}} = 2.0\text{V}$, $V_O = V^+/2$ and $R_L > 1\text{M}\Omega$.

Boldface limits apply at the temperature extremes.

Symbol	Parameter	Conditions	Typ (Note 6)	Limit (Note 7)	Units
V_{OS}	Input Offset Voltage		1.5	7 10	mV max
TCV_{OS}	Input Offset Voltage Average Drift		2		$\mu\text{V}/^\circ\text{C}$
I_B	Input Bias Current		2	50 60	nA max
I_{OS}	Input Offset Current		0.6	40 50	nA max
CMRR	Common Mode Rejection Ratio	$0\text{V} \leq V_{\text{CM}} \leq 4\text{V}$	71	50	dB min
PSRR	Power Supply Rejection Ratio	$2.7\text{V} \leq V^+ \leq 5\text{V}$ $V_O = 1\text{V}$, $V_{\text{CM}} = 1\text{V}$	65	50	dB min
V_{CM}	Input Common-Mode Voltage Range	For CMRR $\geq 50\text{dB}$	-0.2	0	V min
			4.2	4	V max
A_V	Large Signal Voltage Gain (Note 8)	$R_L = 100\text{k}\Omega$	100	15 10	V/mV min
V_O	Output Swing	$R_L = 100\text{k}\Omega$ to 2.5V	$V^+ - 3.5$	$V^+ - 100$ $V^+ - 200$	mV min
			90	180 220	mV max
I_O	Output Short Circuit Current	Sourcing, $V_O = 0\text{V}$	17	2	mA min
		Sinking, $V_O = 5\text{V}$	72	20	mA min
I_S	Supply Current	LPV321	9	12 15	μA max
		LPV358 Both amplifiers	15	20 24	μA max
		LPV324 All four amplifiers	28	42 46	μA max

5V AC Electrical Characteristics

Unless otherwise specified, all limits guaranteed for $T_J = 25^\circ\text{C}$, $V^+ = 5\text{V}$, $V^- = 0\text{V}$, $V_{\text{CM}} = 2.0\text{V}$, $V_O = V^+/2$ and $R_L > 1\text{M}\Omega$. **Boldface** limits apply at the temperature extremes.

Symbol	Parameter	Conditions	Typ (Note 6)	Limit (Note 7)	Units
SR	Slew Rate	(Note 9)	0.1		V/ μs
GBWP	Gain-Bandwidth Product	$C_L = 22\text{ pF}$	152		KHz
Φ_m	Phase Margin		87		Deg
G_m	Gain Margin		19		dB
e_n	Input-Referred Voltage Noise	$f = 1\text{ kHz}$	146		$\frac{\text{nV}}{\sqrt{\text{Hz}}}$
i_n	Input-Referred Current Noise	$f = 1\text{ kHz}$	0.30		$\frac{\text{pA}}{\sqrt{\text{Hz}}}$

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF. Machine model, 0 Ω in series with 200 pF.

Note 3: Shorting output to V^+ will adversely affect reliability.

Note 4: Shorting output to V^- will adversely affect reliability.

Note 5: The maximum power dissipation is a function of $T_{J(\text{max})}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(\text{max})} - T_A) / \theta_{JA}$. All numbers apply for packages soldered directly into a PC board.

Note 6: Typical values represent the most likely parametric norm.

Note 7: All limits are guaranteed by testing or statistical analysis.

Note 8: R_L is connected to V^- . The output voltage is $0.5\text{V} \leq V_O \leq 4.5\text{V}$.

Note 9: Connected as voltage follower with 3V step input. Number specified is the slower of the positive and negative slew rates.

Note 10: All numbers are typical, and apply for packages soldered directly onto a PC board in still air.

TL082

Wide Bandwidth Dual JFET Input Operational Amplifier

General Description

These devices are low cost, high speed, dual JFET input operational amplifiers with an internally trimmed input offset voltage (BI-FET II™ technology). They require low supply current yet maintain a large gain bandwidth product and fast slew rate. In addition, well matched high voltage JFET input devices provide very low input bias and offset currents. The TL082 is pin compatible with the standard LM1558 allowing designers to immediately upgrade the overall performance of existing LM1558 and most LM358 designs.

These amplifiers may be used in applications such as high speed integrators, fast D/A converters, sample and hold circuits and many other circuits requiring low input offset voltage, low input bias current, high input impedance, high slew rate and wide bandwidth. The devices also exhibit low noise and offset voltage drift.

Features

- Internally trimmed offset voltage: 15 mV
- Low input bias current: 50 pA
- Low input noise voltage: 16nV/√Hz
- Low input noise current: 0.01 pA/√Hz
- Wide gain bandwidth: 4 MHz
- High slew rate: 13 V/μs
- Low supply current: 3.6 mA
- High input impedance: 10¹²Ω
- Low total harmonic distortion: ≤0.02%
- Low 1/f noise corner: 50 Hz
- Fast settling time to 0.01%: 2 μs

Typical Connection

Connection Diagram

Simplified Schematic

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	±18V
Power Dissipation	(Note 2)
Operating Temperature Range	0°C to +70°C
$T_{J(MAX)}$	150°C
Differential Input Voltage	±30V

Input Voltage Range (Note 3)	±15V
Output Short Circuit Duration	Continuous
Storage Temperature Range	-65°C to +150°C
Lead Temp. (Soldering, 10 seconds)	260°C

ESD rating to be determined.

Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

DC Electrical Characteristics (Note 5)

Symbol	Parameter	Conditions	TL082C			Units
			Min	Typ	Max	
V_{OS}	Input Offset Voltage	$R_S = 10\text{ k}\Omega$, $T_A = 25^\circ\text{C}$ Over Temperature		5	15 20	mV mV
$\Delta V_{OS}/\Delta T$	Average TC of Input Offset Voltage	$R_S = 10\text{ k}\Omega$		10		$\mu\text{V}/^\circ\text{C}$
I_{OS}	Input Offset Current	$T_J = 25^\circ\text{C}$, (Notes 5, 6) $T_J \leq 70^\circ\text{C}$		25	200 4	pA nA
I_B	Input Bias Current	$T_J = 25^\circ\text{C}$, (Notes 5, 6) $T_J \leq 70^\circ\text{C}$		50	400 8	pA nA
R_{IN}	Input Resistance	$T_J = 25^\circ\text{C}$		10^{12}		Ω
A_{VOL}	Large Signal Voltage Gain	$V_S = \pm 15\text{V}$, $T_A = 25^\circ\text{C}$ $V_O = \pm 10\text{V}$, $R_L = 2\text{ k}\Omega$ Over Temperature	25 15	100		V/mV V/mV
V_O	Output Voltage Swing	$V_S = \pm 15\text{V}$, $R_L = 10\text{ k}\Omega$	±12	±13.5		V
V_{CM}	Input Common-Mode Voltage Range	$V_S = \pm 15\text{V}$	±11	+15 -12		V V
CMRR	Common-Mode Rejection Ratio	$R_S \leq 10\text{ k}\Omega$	70	100		dB
PSRR	Supply Voltage Rejection Ratio	(Note 7)	70	100		dB
I_S	Supply Current			3.6	5.6	mA

AC Electrical Characteristics (Note 5)

Symbol	Parameter	Conditions	TL082C			Units
			Min	Typ	Max	
	Amplifier to Amplifier Coupling	$T_A = 25^\circ\text{C}$, $f = 1\text{Hz}-20\text{kHz}$ (Input Referred)		-120		dB
SR	Slew Rate	$V_S = \pm 15\text{V}$, $T_A = 25^\circ\text{C}$	8	13		V/ μs
GBW	Gain Bandwidth Product	$V_S = \pm 15\text{V}$, $T_A = 25^\circ\text{C}$		4		MHz
e_n	Equivalent Input Noise Voltage	$T_A = 25^\circ\text{C}$, $R_S = 100\Omega$, $f = 1000\text{Hz}$		25		nV/ $\sqrt{\text{Hz}}$
i_n	Equivalent Input Noise Current	$T_j = 25^\circ\text{C}$, $f = 1000\text{Hz}$		0.01		pA/ $\sqrt{\text{Hz}}$
THD	Total Harmonic Distortion	$A_V = +10$, $R_L = 10\text{k}$, $V_O = 20\text{V}_p - p$, $\text{BW} = 20\text{Hz}-20\text{kHz}$		<0.02		%

Note 2: For operating at elevated temperature, the device must be derated based on a thermal resistance of 115°C/W junction to ambient for the N package.

Note 3: Unless otherwise specified the absolute maximum negative input voltage is equal to the negative power supply voltage.

Note 4: The power dissipation limit, however, cannot be exceeded.

Note 5: These specifications apply for $V_S = \pm 15\text{V}$ and $0^\circ\text{C} \leq T_A \leq +70^\circ\text{C}$. V_{OS} , I_B and I_{OS} are measured at $V_{CM} = 0$.

Note 6: The input bias currents are junction leakage currents which approximately double for every 10°C increase in the junction temperature, T_j . Due to the limited production test time, the input bias currents measured are correlated to junction temperature. In normal operation the junction temperature rises above the ambient temperature as a result of internal power dissipation, P_D . $T_j = T_A + \theta_{JA} P_D$ where θ_{JA} is the thermal resistance from junction to ambient. Use of a heat sink is recommended if input bias current is to be kept to a minimum.

Note 7: Supply voltage rejection ratio is measured for both supply magnitudes increasing or decreasing simultaneously in accordance with common practice. $V_S = \pm 6\text{V}$ to $\pm 15\text{V}$.

Amplifier/Buffer Mode

CFB	Current Feedback
VFB	Voltage Feedback
BUF	Closed Loop Buffer
PGB	Programmable Gain Buffer

Note 1: Closed Loop Gain used to specify most parameters.

Note 2: Spec. Supply Range is the range of total supply voltage where operation is possible but parameters are not necessarily guaranteed. Refer to datasheets for more details.

Note 3: Crosstalk tested at 10MHz, 2V_{pp}.

Note 4: Harmonic Distortion at 5MHz, 2V_{pp}.

High Speed Op Amp Definition Of Terms

Mode:

Voltage Feedback: The traditional Op Amp topology where an output signal is generated in response to the voltage difference between the two inputs.

Current Feedback: Op amp which generates an output signal in response to the current flowing into the inverting input node (transimpedance gain function). This topology offers operational advantages in certain areas, compared to the traditional voltage feedback.

Close Loop Buffer: High input impedance and low output impedance amplifier with a fixed gain of +1 used for isolation, or increased output drive, or capacitive load drive, etc. usually, no gain setting resistor are required.

Programmable Gain Buffer: Op Amp with gain setting resistors integrated on the die with possible gains of +1, +2, or -1 using simple external connections. Ideal for minimizing external component count, minimizing signal lead lengths, and simplifying designs.

Gain:

Open Loop Gain

Voltage feedback Op Amp: The open loop gain is specified at DC and is defined as the ratio of an output voltage change to an input voltage change. Also referred to as differential voltage gain (no feedback or input networks added). When specified using a sinusoidal waveform, it varies in magnitude and phase relative to frequency.

Current Feedback Op Amp: Ratio of output voltage change to Inverting input current change (transimpedance gain). When specified using a sinusoidal waveform, it varies in magnitude and phase relative to frequency.

Closed Loop Gain: Defined as the ratio of an output voltage change to an input voltage change after feedback and input networks are added. Usually, external resistors are used to set this parameter.

Frequency Domain Response:

-3dB Bandwidth (or small signal bandwidth (ssbw)): The frequency at which the closed loop amplifier small signal magnitude response is 3dB below its nominal value at low frequency. Sometimes specified for various signal amplitudes.

Gain Bandwidth Product: Arithmetic Product of a given input frequency and the op amp open loop gain at that frequency (usually specified in MHz, voltage feedback amplifiers only.) For an ideal op amp, this is a constant for all frequency after the dominant pole frequency, but other poles and zeroes in the forward path could make the number vary with frequency.

Unity Gain Frequency: The frequency at which a voltage feedback op amp gain is 1 (0dB). For an ideal op amp, this is equal to the Gain Bandwidth product.

Gain Flatness: Specified as "Peaking" and "Rolloff" numbers in dB over a given frequency band, its a measure of an op amp's closed loop frequency response gain flatness. Phase margin, Gain margin, and sufficient loop gain are the most important parameters affecting these specifications.

Linear Phase Deviation: Specified over a given frequency band, it is a measure of how close an op amp's closed loop phase response follows a linear relationship with respect to frequency.

Differential Gain and Phase: Differential Gain refers to change in gain with level and differential Phase refers to change in phase with level. Both parameters are used in video broadcast applications as a measure of consistency of video signal relative to changes in illumination.

Time Domain Response:

Rise an Fall Times: The time it takes the output voltage to change between 10% and 90% voltage levels when driven with a small signal step input. Correlates to frequency domain small signal bandwidth.

Overshoot: Related to Rise and Fall time measurement. Specified in percentage.

Slew Rate: Maximum rate at which an overdriven op amp can change its output. Overdriving an op amp means exceeding its input voltage amplitude and/or frequency thresholds.

Settling Time: The time between the initiation of the input step function and the time when the output voltage has settled to within a specified error band of the final output voltage.

Distortion and Noise Response:

Harmonic Distortion: Unwanted spurious signals generated at the output of an amplifier due to nonlinearity in the signal flow path. With sinusoidal input, these spurs will occur at integer multiples of the input frequency.

Intercept point: The fundamental output power where the specified distortion term (2nd, 3rd, or 3rd order Intermodulation) is equal in power to this fundamental value power.

Input Voltage Noise (e_n) & Input Current Noise (i_n): Input referred noise sources used to model the noise behavior of an Op Amp.

Static DC Performance:

Supply Current (I_{CC}): The current required from the power supply to operate the op amp with no load and its output mid-way between the supplies.

Output Current: the current available at the output of the op amp to drive a load. Usually a function of input over-drive, output voltage relative to supplies, and temperature. Sourcing and Sinking characteristics could be different.

Static DC Performance: (Continued)

Specified Supply Range: Specified supply range are the power supply voltages required to power the op amp.

Input Offset Voltage (V_{OS}): The voltage which must be applied between the input terminals to obtain zero output voltage.

CLC111

Ultra-High Slew-Rate, Closed-Loop Buffer

General Description

The CLC111 is a high-performance, closed-loop, monolithic buffer designed for applications requiring very high-frequency signals. The CLC111's high performance includes an extremely fast 800MHz small signal bandwidth (0.5_{pp}) and an ultra high (3500V/ μ s) slew rate while requiring only 10.5mA quiescent current. Signal fidelity is maintained with low harmonic distortion (-62dBc 2nd and 3rd harmonics at 20MHz). These performance characteristics are for a demanding 100 Ω load.

Featuring a patented closed-loop design, the CLC111 offers nearly ideal unity-gain (0.996) with a very low (1.4 Ω) output impedance. The CLC111 is ideally suited for buffering video signals with its 0.15%/0.04° differential gain and phase performance at 4.43MHz. Power sensitive applications will benefit from the CLC111's excellent performance on reduced or single supply voltages.

Constructed using an advanced, complementary bipolar process and National's proven high-performance architectures, the CLC111 is available in several versions to meet a variety of requirements.

Enhanced Solutions (Military/Aerospace)

SMD Number: contact factory

Space level versions also available.

For more information, visit <http://www.national.com/mil>

Features

- Very wideband (800MHz)
- Ultra-high (3500V/ μ s) slew rate

- Very low output impedance (1.4 Ω)
- Low (-62dBc) 2nd/3rd harmonics @ 20MHz
- 60mA output current (\pm 5 supplies)
- Single supply operation (0 to 3V supply min.)
- Evaluation boards and Spice models

Applications

- Video switch buffers
- Test point drivers
- High frequency active filters
- Wideband DC clamping buffer
- High-speed peak detector circuits

CLC114

Quad, Low-Power Video Buffer

General Description

The CLC114 is a high-performance, closed-loop quad buffer intended for power sensitive applications. Requiring only 30mW of quiescent power dissipation per channel ($\pm 5V$ supplies), the CLC114 offers a small signal bandwidth of 200MHz (0.5Vpp) and a slew rate of 450V/ μs .

Designed specifically for high density crosspoint switch and analog multiplexer applications, the CLC114 offers excellent linearity and wide channel isolation (62dB @ 10MHz). Driving a typical crosspoint switch load, the CLC114 offers differential gain and phase performance of 0.08% and 0.1% gain flatness through 30MHz is typically 0.1dB.

With its patented closed-loop topology, the CLC114 has significant performance advantages over conventional open-loop designs. Applications requiring low output impedance and true unity gain stability through very high frequencies (active filters, dynamic load buffering, etc.) Will benefit from the CLC114's superior performance.

Constructed using an advanced, complementary bipolar process and National's proven high-speed architectures, the CLC114 is available in several versions to meet a variety of requirements.

CLC400

Fast Settling, Wideband Low-Gain Monolithic Op Amp

General Description

The CLC400 is a high-speed, fast-setting operational amplifier designed for low-gain applications. Constructed using a unique, proprietary design and an advanced complementary bipolar process, the CLC400 offers performance far beyond that normally offered by ordinary monolithic op amps. In addition, unlike many other high-speed op amps the CLC400 offers both high performance and stability without the need for compensation circuitry — even at a gain of +1.

The fast 12ns settling to 0.05% and its ability to drive capacitive loads makes the CLC400 an ideal flash A/D driver. The wide bandwidth of 200MHz and the very linear phase ensure unsurpassed signal fidelity. Systems employing digital to analog converters also benefit from the use of the CLC400 — especially if linearity and drive levels are important to system performance.

The CLC400 provides a simple, high performance solution for video distribution and line driving applications. The 50mA output current and guaranteed specifications for 100Ω loads provide ample drive capability and assured performance.

The CLC400 is based on **National's** proprietary op amp topology that uses current feedback instead of the usual voltage feedback. This unique design has many advantages over conventional designs (such as settling time that is relatively independent of gain), yet it is used in basically the same way (see the gain equations in *Figure 1* and *Figure 2*). However, an understanding of the topology will aid in achieving the best performance. The following discussion will proceed for the non-inverting gain configuration with the inverting mode analysis being very similar.

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-89970

Space level versions also available.

For more information, visit <http://www.national.com/mil>

Features

- -3dB bandwidth of 200MHz
- 0.05% settling in 12ns
- Low Power, 150mW
- Low distortion, -60dBc at 20MHz
- Stable without compensation
- Overload and short circuit protected
- ± 1 to ± 8 closed-loop gain range

Applications

- Flash, precision A/D conversion
- Video distribution
- Line drivers
- D/A current-to-voltage conversion
- Photodiode, CCD preamps
- IF processors
- High-speed communications

CLC401

Fast Settling, Wideband High-Gain Monolithic Op Amp

General Description

The CLC401 is a wideband, fast-settling op amp designed for applications requiring gains greater than ± 7 . Constructed using an advanced complementary bipolar process and a proprietary design, the CLC401 features dynamic performance far beyond that of typical high-speed monolithic op amps. For example, at a gain of +20, the -3dB bandwidth is 150MHz and the rise/fall time is only 2.5ns.

The wide bandwidth and linear phase (0.2° deviation from linear at 50MHz) and a very flat gain response makes the CLC401 ideal for many digital communication system applications. For example, demodulators need both DC coupling and high-frequency amplification-requirements that are ordinarily difficult to meet.

The very fast 10ns settling to 0.1% and the ability to drive capacitive loads lend themselves well to flash A/D applications. Systems employing D/A converters also benefit from the settling time and also by the fact that current-to-voltage transimpedance amplification is easily accomplished.

The CLC401 provides a quick, effective design solution. Its stable operation over the entire ± 7 to ± 50 gain range precludes the need for external compensation. And, unlike many other high speed-op amps, the CLC401's power dissipation of 150mW is compatible with designs which must limit total power dissipation or power supply requirements.

The CLC401 is based on **National's** proprietary op amp topology that uses current feedback instead of the usual voltage feedback. This unique design has many advantages over conventional designs (such as settling time that is relatively independent of gain), yet it is used in basically the same way (see the gain equations in *Figure 1* and *Figure 2*). However, an understanding of the topology will aid in achieving the best performance. The discussion below will proceed for the non-inverting gain configuration with the inverting mode analysis being very similar.

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-89973

Space level versions also available.

For more information, visit <http://www.national.com/mil>

Features

- -3dB bandwidth of 150MHz
- 0.1%settling in 10ns
- Low Power, 150mW
- Overload and short circuit protected
- Stable without compensation
- Recommended gain range, ± 7 to ± 50

Applications

- Flash, precision A/D conversion
- Photodiode, CCD preamps
- IF processors
- High-speed modems, radios
- Line drivers
- DC-coupled log amplifiers
- High-speed communications

CLC404

Wideband, High-Slew Rate, Monolithic Op Amp

General Description

The CLC404 is a high-speed, monolithic op amp that combines low power consumption (110mW typical, 120mW maximum) with superior large signal performance. Operating off of $\pm 5V$ supplies, the CLC404 demonstrates a large-signal bandwidth ($5V_{PP}$ output) of 166MHz. The bandwidth performance, along with other speed characteristics such as rise and fall time (2.1ns for a 5V step), is nearly identical to the small signal performance since slew rate is not limiting factor in the CLC404 design.

With its 175MHz bandwidth and 10ns settling (0.2%), the CLC404 is ideal for driving ultra-fast flash A/D converters. The 0.5° deviation from linear phase, coupled with -53dBc 2nd harmonic distortion and -60dBc 3rd harmonic distortion (both at 20MHz), is well suited for many digital and analog communication applications. These same characteristics, along with 70mA output current, differential gain of 0.07%, and differential phase at 0.03°, make the CLC404 an appropriate high-performance solution for video distribution and line driving applications.

Constructed using an advanced, complementary bipolar process and proven current feedback topologies, the CLC404 provides performance far beyond that of other monolithic op amps. The CLC404 is available in several versions to meet a variety of requirements.

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-90994

Space level versions also available.

For more information, visit <http://www.national.com/mil>

Features

- 165MHz large signal bandwidth ($5V_{PP}$)
- 2600V/ μs slew rate
- Low Power: 110mW
- Low distortion: -53dBc at 20MHz
- 10ns settling to 0.2%
- 0.07% diff. gain, 0.03% diff. phase

Applications

- Fast A/D conversion
- Line drivers
- Video distribution
- High-speed communications
- Radar, IF processors

CLC405

Low-Cost, Low-Power, 110MHz Op Amp with Disable

General Description

The CLC405 is a low-cost, wideband (110MHz) op amp featuring a TTL-compatible disable which quickly switches off in 18ns and back on in 40ns. While disabled, the CLC405 has a very high input/output impedance and its total power consumption drops to a mere 8mW. When enabled, the CLC405 consumes only 35mW and can source or sink an output current of 60mA. These features make the CLC405 a versatile, high-speed solution for demanding applications that are sensitive to both power and cost.

Utilizing National's proven architectures, this current feedback amplifier surpasses the performance of alternative solutions and sets new standards for low power at a low price. This power conserving op amp achieves low distortion with -72dBc and -70dBc for second and third harmonics respectively. Many high source impedance applications will benefit from the CLC405's $6\text{M}\Omega$ input impedance. And finally, designers will have a bipolar part with an exceptionally low 100nA non-inverting bias current.

With 0.1dB flatness to 50MHz and low differential gain and phase errors, the CLC405 is an ideal part for professional video processing and distribution. However, the 110MHz -3dB bandwidth ($A_v=+2$) coupled with a $350\text{V}/\mu\text{s}$ slew rate also make the CLC405 a perfect choice in cost-sensitive applications such as video monitors, fax machines, copiers, and CATV systems.

Features

- Low-cost
- Very low input bias current: 100nA
- High input impedance: $6\text{M}\Omega$
- 110MHz -3dB bandwidth ($A_v=+2$)
- Low power: $I_{cc}=3.5\text{mA}$

- Ultra-fast enable/disable times
- High output current: 60mA

Applications

- Desktop video systems
- Multiplexers
- Video distribution
- Flash A/D driver
- High-speed switch/driver
- High-source impedance applications
- Peak detector circuits
- Professional video processing
- High resolution monitors

CLC406

Wideband, Low-Power Monolithic Op Amp

General Description

The CLC406 is a wideband monolithic operational amplifier designed for low-gain applications where power and cost are of primary concern. Operating from $\pm 5V$ supplies, the CLC406 consumes only 50mW of power yet maintains a 160MHz small signal bandwidth and a 1500V/ μs slew rate. Benefiting from National's current feedback architecture, the CLC406 offers a gain range of ± 1 to ± 10 while providing stable, oscillation free operation without external compensation, even at unity gain.

With its exceptional differential gain and phase typically 0.02% and 0.02° at 3.58MHz, the CLC406 is designed to meet the performance and cost requirements of high volume composite video applications. The CLC406's large signal bandwidth, high slew rate and high drive capability are features well suited for RGB video applications.

Providing a 12ns settling time to 0.05% (1/2 LSB in 10-bit systems) and -68/-75dBc 2nd/3rd harmonic distortion ($2V_{PP}$ at 10MHz, $R_L = 1k\Omega$), the CLC406 is an excellent choice as a buffer or driver for high speed A/D and D/A converter systems.

Commercial remote sensing applications and battery powered radio transceivers requiring a high performance, low power amplifier will find the CLC406 to be an attractive, cost-effective solution.

Constructed using an advanced, complementary bipolar process and National's proven current feedback architectures, the CLC406 is available in several versions to meet a variety of requirements.

Features

- 160MHz small signal bandwidth
- 50mW power ($\pm 5V$ supplies)
- 0.02%/0.02° differential gain/phase
- 12ns settling to 0.05%
- 1500V/ μs slew rate
- 2.2ns rise and fall time ($2V_{PP}$)
- 70mA output current

Applications

- Video distribution amp
- HDTV amplifier
- Flash A/D driver
- D/A transimpedance buffer
- Pulse amplifier
- Photodiode amp
- LAN amplifier

CLC409

Very Wideband, Low Distortion Monolithic Op Amp

General Description

The CLC409 is a very wideband, DC coupled monolithic operational amplifier designed specifically for wide dynamic range systems requiring exceptional signal fidelity. Benefiting from National's current feedback architecture, the CLC409 offers a gain range of ± 1 to ± 10 while providing stable, oscillation free operation without external compensation, even at unity gain.

With its 350MHz small signal bandwidth ($V_{OUT} = 2V_{PP}$), 10-bit distortion levels through 20MHz ($R_L = 100\Omega$) 8-bit distortion levels through 60MHz, $2.2nV/\sqrt{Hz}$ input referred noise and 13.5mA supply current, the CLC409 is the ideal driver or buffer for high speed flash A/D and D/A converters.

Wide dynamic range systems such as radar and communication receivers requiring a wideband amplifier offering exceptional signal purity will find the CLC409's low input referred noise and low harmonic and intermodulation distortion make it an attractive high speed solution.

Constructed using an advanced, complimentary bipolar process and **National's** proven current feedback architecture, the CLC409 is available in several versions to meet a variety of requirements.

CLC410

Fast Settling, Video Op Amp with Disable

General Description

The current-feedback CLC410 is a fast-settling, wideband, monolithic op amp with fast disable/enable feature. Designed for low-gain applications ($A_V = \pm 1$ to ± 8), the CLC410 consumes only 160mW of power (180mW max) yet provides a -3dB bandwidth of 200MHz ($A_V = +2$) and 0.05% settling in 12ns (15ns max). Plus, the disable feature provides fast turn-on (100ns) and turn-off (200ns). In addition, the CLC410 offers both high performance and stability without compensation - even at a gain of +1.

The CLC410 provides a simple, high-performance solution for video switching and distribution applications, especially where analog buses benefit from use of the disable function to "multiplex" signals onto the bus. Differential gain/phase of 0.01%/0.01° provide high fidelity and the 60mA output current offers ample drive capability.

The CLC410's fast settling, low distortion, and high drive capabilities make it an ideal ADC driver. The low 160mW quiescent power consumption and very low 40mW disabled power consumption suggest use where power is critical and/or "system off" power consumption must be minimized.

The CLC410 is available in several versions to meet a variety of requirements. A three-letter suffix determines the version.

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-90600

Space level versions also available.

Features

- -3dB bandwidth of 200MHz
- 0.05% settling in 12ns
- Low Power, 160mW (40mW disabled)
- Low distortion, -60dBc at 20MHz
- Fast disable (200ns)
- Differential gain/phase: 0.01%/0.01°
- ± 1 to ± 8 closed-loop gain range

Applications

- Video switching and distribution
- Analog bus driving (with disable)
- Low power "standby" using Disable
- Fast, precision A/D conversion
- D/A current-to-voltage conversion
- IF processors
- High-speed communications

CLC411

High-Speed Video Op Amp with Disable

General Description

The CLC411 combines a state-of-the-art complementary bipolar process with National's patented current-feedback architecture to provide a very high-speed op amp operating from $\pm 15\text{V}$ supplies. Drawing only 11mA quiescent current, the CLC411 provides a 200 MHz small signal bandwidth and a 2300V/ μs slew rate while delivering a continuous 70mA current output with $\pm 4.5\text{V}$ output swing. The CLC411's high-speed performance includes a 15ns settling time to 0.1% (2V step) and a 2.3ns rise and fall time (6V step).

The CLC411 is designed to meet the requirements of professional broadcast video systems including composite video and high definition television. The CLC411 exceeds the HDTV standard for gain flatness to 30MHz with its $\pm 0.05\text{dB}$ flat frequency response and exceeds composite video standards with its very low differential gain and phase errors of 0.02%, 0.03°. The CLC411 is the op amp of choice for all video systems requiring upward compatibility from NTSC and PAL to HDTV.

The CLC411 features a very fast disable/enable (10ns/55ns) allowing the multiplexing of high-speed signals onto an analog bus through the common output connections of multiple CLC411's. Using the same signal source to drive disable/enable pins is easy since "break-before-make" is guaranteed.

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-94566

CLC412

Dual Wideband Video Op Amp

General Description

The CLC412 combines a high-speed complementary bipolar process with National's current-feedback topology to produce a very high-speed dual op amp. The CLC412 provides a 250 MHz small-signal bandwidth at a gain of +2V/V and a 1300V/ μ s slew rate while consuming only 50mW per amplifier from \pm 5V supplies.

The CLC412 offers exceptional video performance with its 0.02% and 0.02° differential gain and phase errors for NTSC and PAL video signals while driving one back terminated 75 Ω load. The CLC412 also offers a flat gain response of 0.1dB to 30MHz and very low channel-to-channel crosstalk of -76dB at 10MHz. Additionally, each amplifier can deliver a 70mA continuous output current. This level of performance makes the CLC412 an ideal dual op amp for high-density broadcast-quality video systems

The CLC412's two very well-matched amplifiers support a number of applications such as differential line drivers and receivers. In addition, the CLC412 is well suited for Sallen Ken active filters in applications such as anti-aliasing filters for high-speed A/D converters. Its small 8-pin SOIC package, low power requirement, low noise and distortion allow the CLC412 to serve portable RF applications such as IQ-channels.

Features

- Wide bandwidth: 330MHz ($A_V = +1V/V$); 250MHz ($A_V = +2V/V$)
- 0.1dB gain flatness to 30MHz

- Low power: 5mA/channel
- Very low diff. gain, phase: 0.02%, 0.02°
- -76dB channel-to-channel crosstalk (10MHz)
- Fast slew rate: 1300V/ μ s
- Unity-gain stable

Applications

- HDTV, NTSC & PAL video systems
- Video switching and distribution
- IQ amplifiers
- Wideband active filters
- Cable drivers
- DC coupled single-to-differential conversions

CLC414

Quad, Low-Power Monolithic Op Amp

General Description

The CLC414 is a low-power, quad, monolithic operational amplifier designed for intermediate-gain applications where power and cost per channel are of primary concern. Benefiting from National's current feedback architecture, the CLC414 offers a gain range of ± 1 to ± 10 while providing stable, oscillation-free operation without external compensation, even at unity gain.

Operating from ± 5 supplies, the CLC414 consumes only 25mW of power per channel, yet maintains a 90MHz small-signal bandwidth and a 1000V/ μ s slew rate. The CLC414 also provides wide channel isolation with its 70dB crosstalk (input referred at 5MHz). Applications requiring a high-density solution to high-speed amplification such as active filters and instrumentation diff amps will benefit from the CLC414's four integrated, wideband op amps in one 14-pin package.

Commercial remote-sensing applications and battery powered radio transceivers requiring high performance, low-power will find the CLC414 to be an attractive, cost-effective solution. In composite video switching and distribution applications, the CLC414 offers differential gain and phase performance of 0.1%, 0.12° at 3.58MHz.

The lower power CLC414 and the wideband CLC415 are quad versions of the CLC406. Both of these quads afford the designer lower power consumption and lower cost per channel with the additional benefit of requiring less board space per amplifier.

Construction using an advanced, complementary bipolar process and National's proven current feedback architecture, the CLC414 is available in several versions to meet a variety of requirements.

CLC415

Quad, Wideband Monolithic Op Amp

General Description

The CLC415 is a wideband, quad, monolithic operational amplifier designed for intermediate-gain applications where power and cost per channel are primary concern. Benefiting from **National's** current feedback architecture, the CLC415 offers a gain range of ± 1 to ± 10 while providing stable, oscillation-free operation without external compensation, even at unity gain.

Operating from $\pm 5V$ supplies, the CLC415 consumes only 50mW of power per channel, yet maintains a 160MHz small-signal bandwidth and a 1500V/ μ s slew rate. High density applications requiring an integrated solution will enjoy the CLC415's 70dB channel isolation (input referred 5MHz).

With its exceptional differential gain and phase, typically 0.03% and 0.03° @ 3.58MHz, the CLC415 is designed to meet the performance and cost per channel requirements of high volume composite video applications. The CLC415's large-signal bandwidth, high slew rate and high drive capability are features well suited for RGB-video applications.

The CLC415 is a quad version of the high speed CLC406 while the CLC414 is a lower power quad version of the same. Both of these quads afford the designer lower power consumption and lower cost per channel with the additional benefit of requiring less board space per amplifier.

Constructed using an advanced, complementary bipolar process and **National's** proven current feedback architectures. The CLC415 is available in several versions to meet a variety of requirements.

CLC420

High-Speed, Voltage Feedback Op Amp

General Description

The CLC420 is an operational amplifier designed for applications requiring matched inputs, integration or transimpedance amplification. Utilizing voltage feedback architecture, the CLC420 offers a 300MHz bandwidth, a 1100V/ μ s slew rate and a 4mA supply current (power consumption of 40mW, \pm 5V supplies).

Applications such as differential amplifiers will benefit from 70dB common mode rejection ratio and an input offset current of 0.2 μ A. With its unity-gain stability, 2pA/ \sqrt Hz current noise and 3 μ A of input bias current, the CLC420 is designed to meet the needs of filter applications and log amplifiers. The low input offset current and current noise, combined with a settling time of 18ns to 0.01% make the CLC420 ideal for D/A converters, pin diode receivers and photo multipliers amplifiers. All applications will find 70dB power supply rejection ratio attractive.

Features

- 300MHz small signal bandwidth
- 1100V/ μ s slew rate
- Unity-gain stability
- Low distortion, -60dBc at 20MHz
- 0.01% settling in 18ns
- 0.2 μ A input offset current
- 2pA/ \sqrt Hz current noise

Applications

- Active filters/integrators
- Differential amplifiers
- Pin diode receivers
- Log amplifiers
- D/A converters
- Photo multiplier amplifiers

CLC425

Ultra Low Noise Wideband Op Amp

General Description

The CLC425 combines a wide bandwidth (**1.9GBW**) with a very low input noise ($1.05\text{nV}/\sqrt{\text{Hz}}$, $1.6\text{pA}/\sqrt{\text{Hz}}$) and low dc errors ($100\mu\text{V}$ V_{OS} , $2\mu\text{V}/^\circ\text{C}$ drift) to provide a very precise, wide dynamic-range op amp offering closed-loop gains of ≥ 10 .

Singularly suited for very wideband high-gain operation, the CLC425 employs a traditional voltage-feedback topology providing all the benefits of balanced inputs, such as low offsets and drifts, as well as a 96dB open-loop gain, a 100dB CMRR and a 95dB PSRR.

The CLC425 also offers great flexibility with its externally adjustable supply current, allowing designers to easily choose the optimum set of power, bandwidth, noise and distortion performance. Operating from $\pm 5\text{V}$ power supplies, the CLC425 defaults to a 15mA quiescent current, or by adding one external resistor, the supply current can be adjusted to less than 5mA.

The CLC425's combination of ultra-low noise, wide gain-bandwidth, high slew rate and low dc errors will enable applications in areas such as medical diagnostic ultrasound, magnetic tape & disk storage, communications and opto-electronics to achieve maximum high-frequency signal-to-noise ratios.

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-93259

Features

- 1.9GHz gain-bandwidth product
- $1.05\text{nV}/\sqrt{\text{Hz}}$ input voltage noise
- $0.8\text{pA}/\sqrt{\text{Hz}}$ @ $I_{CC} \leq 5\text{mA}$

- $100\mu\text{V}$ input offset voltage, $2\mu\text{V}/^\circ\text{C}$ drift
- $350\text{V}/\mu\text{s}$ slew rate
- 15mA to 5mA adjustable supply current
- Gain range ± 10 to $\pm 1,000\text{V}/\text{V}$
- Evaluation boards & simulation macromodel
- 0.9dB NF @ $R_s = 700\Omega$

Applications

- Instrumentation sense amplifiers
- Ultrasound pre-amps
- Magnetic tape & disk pre-amps
- Photo-diode transimpedance amplifiers
- Wide band active filters
- Low noise figure RF amplifiers
- Professional audio systems
- Low-noise loop filters for PLLs

CLC426

Wideband, Low-Noise, Voltage Feedback Op Amp

2

General Description

The National CLC426 combines an enhanced voltage-feedback architecture with an advanced complimentary bipolar process to provide a high-speed op amp with very low noise ($1.6\text{nV}/\sqrt{\text{Hz}}$ & $2.0\text{pA}/\sqrt{\text{Hz}}$) and distortion ($-62\text{dBc}/-68\text{dBc}$ 2nd/3rd harmonics at $1V_{pp}$ and 10MHz).

Providing a wide 230MHz gain-bandwidth product, a fast $400\text{V}/\mu\text{s}$ slew rate and very quick 16ns settling time to 0.05% , the CLC426 is the ideal choice for high speed applications requiring a very wide dynamic range such as an input buffer for high-resolution analog-to-digital converters.

The CLC426 is internally compensated for gains $\geq 2V/V$ and can easily be externally compensated for unity-gain stability in applications such as wideband low-noise integrators. The CLC426 is also equipped with external supply current adjustment which allows the user to optimize power, bandwidth, noise and distortion performance for each application.

The CLC426's combination of speed, low noise and distortion and low dc errors will allow high-speed signal conditioning applications to achieve the highest signal-to-noise performance. To reduce design times and assist board layout, the CLC426 is supported by an evaluation board and SPICE simulation model available from National.

For even higher gain-bandwidth voltage-feedback op amps see the 1.9GHz CLC425 ($A_v \geq 10V/V$) or the 5.0GHz CLC422 ($A_v \geq 30V/V$).

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-94597

*Space level versions also available.

*For more information, visit <http://www.national.com/mil>

- Ultra-low input voltage noise: $1.6\text{nV}/\sqrt{\text{Hz}}$
- Very low harmonic distortion: $-62/-68\text{dBc}$
- Fast slew rate: $400\text{V}/\mu\text{s}$
- Adjustable supply current
- Dual ± 2.5 to $\pm 5\text{V}$ or single 5 to 12V supplies
- Externally compensatable

Applications

- Active filters & integrators
- Ultrasound
- Low-power portable video
- ADC/DAC buffer
- Wide dynamic range amp
- Differential amps
- Pulse/RF amp

CLC428

Dual Wideband, Low-Noise, Voltage Feedback Op Amp

General Description

The National CLC428 is a very high-speed dual op amp that offers a traditional voltage-feedback topology featuring unity-gain stability and slew enhanced circuitry. The CLC428's ultra low noise and very low harmonic distortion combine to form a very wide dynamic-range op amp that operates from a single (5 to 12V) or dual ($\pm 5V$) power supply.

Each of the CLC428's closely matched channels provides a 160MHz unity-gain bandwidth with an ultra low input voltage noise density ($2nV/\sqrt{Hz}$). Very low 2nd/3rd harmonic distortion (-62dB) make the CLC428 a perfect wide dynamic-range amplifier for matched I/Q channels.

With its fast and accurate settling (16ns to 0.1%), the CLC428 is also an excellent choice for wide-dynamic range, anti-aliasing filters to buffer the inputs of hi-resolution analog-to-digital converters. Combining the CLC428's two tightly-matched amplifiers in a single eight-pin SOIC reduces cost and board space for many composite amplifier applications such as active filters, differential line drivers/receivers, fast peak detectors and instrumentation amplifiers.

To reduce design times and assist in board layout, the CLC428 is supported by an evaluation board and a SPICE simulation model available from National.

Features

- Wide unity-gain bandwidth: 160MHz
- Ultra-low noise: $2.0nV/\sqrt{Hz}$
- Low Distortion: -78dBc 2nd (2MHz)
- Low Distortion: -62/-72dBc (10MHz)

- Settling time: 16ns to 0.1
- Supply voltage range: ± 2.5 to ± 5 or single supply
- High output current: $\pm 70mA$

Applications

- General purpose dual op amp
- Low noise integrators
- Low noise active filters
- Diff-in/diff-out instrumentation amp
- Driver/receiver for transmission systems
- High-speed detectors I/Q channel amplifiers

CLC430

General Purpose 100MHz Op Amp with Disable

General Description

The CLC430 is a low-cost, wideband monolithic amplifier for general purpose applications. The CLC430 utilizes National's patented current feedback circuit topology to provide an op amp with a slew rate of 2000V/ μ s, 100MHz unity-gain bandwidth and fast output disable function. Like all current feedback op amps, the CLC430 allows the frequency response to be optimized (or adjusted) by the selection of the feedback resistor. For demanding video applications, the 0.1dB bandwidth to 20MHz and differential gain/phase of 0.03%/0.05° make the CLC430 the preferred component for broadcast quality NTSC and PAL video systems.

The large voltage swing ($28V_{PP}$), continuous output current (84mA) and slew rate (2000V/ μ s) provide high-fidelity signal conditioning for applications such as CCDs, transmission lines and low impedance circuits. Even driving loads of 100 Ω , the CLC430 provides very low 2nd and 3rd harmonic distortion at 1MHz (-76/-82dBc).

Video distribution, multimedia and general purpose applications will benefit from the CLC430's wide bandwidth and disable feature. Power is reduced and the output becomes a high impedance when disabled. The wide gain range of the CLC430 makes this general purpose op amp an improved solution for circuits such as active filters, differential-to-single-ended drivers, DAC transimpedance amplifiers and MOSFET drivers.

Features

- 0.1dB gain flatness to 20MHz ($A_V = +2$)
- 100MHz bandwidth ($A_V = +1$)
- 2000V/ μ s slew rate

- 0.03%/0.05° differential gain/phase
- $\pm 5V$, $\pm 15V$ or single supplies
- 100ns disable to high-impedance output
- Wide gain range
- Low cost

Applications

- Video distribution
- CCD clock driver
- Multimedia systems
- DAC output buffers
- Imaging systems

CLC431/432

Dual Wideband Monolithic Op Amp with Disable

General Description

The CLC431 and CLC432 current-feedback amplifiers provide wide bandwidths and high slew rates for applications where board density and power are key considerations. These amplifiers provide DC-coupled small signal bandwidths exceeding 92MHz while consuming only 7mA per channel. Operating from $\pm 15V$ supplies, the CLC431/432's enhanced slew rate circuitry delivers large-signal bandwidths without output voltage swings up to $28V_{pp}$. A wide range of bandwidth-intensive gains are made possible by virtue of the CLC431 and CLC432's current-feedback topology.

The large common-mode input range and fast settling time (70ns to 0.05%) make these amplifiers well suited for CCD & data telecommunication applications. The disable of the CLC431 can accommodate ECL or TTL logic levels or a wide range of user definable inputs. With its fast enable/disable time ($0.2\mu s/1\mu s$) and high channel isolation of 70dB at 10MHz, the CLC431 can easily be configured as a 2:1 MUX. Many high performance video applications requiring signal gain and/or switching will be satisfied with the CLC431/432 due to their very low differential gain and phase errors (less than 0.1% and 0.1°; $A_V = +2V/V$ at 4.3MHz into 150 Ω load). Quick 8ns rise and fall times on 10V pulses allow the CLC431/432 to drive either twisted pair or coaxial transmission lines over long distances.

The CLC431/432's combination of low input voltage noise, wide common-mode input voltage range and large output voltage swings make them especially well suited for wide dynamic range signal processing applications

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-94725

CLC440

High-Speed, Low-Power, Voltage Feedback Op Amp

General Description

The CLC440 is a wideband, low-power, voltage feedback op amp that offers 750MHz unity-gain bandwidth, 1500 μ s slew rate, and 90mA output current. For video applications, the CLC440 sets new standards for voltage feedback monolithics by offering the impressive combination of 0.015% differential gain and 0.025° differential phase errors while dissipating a mere 70mW.

The CLC440 incorporates the proven properties of Comlinear's current feedback amplifiers (high bandwidth, fast slewing, etc.) into a "classical" voltage feedback architecture. This amplifier possesses truly differential and fully symmetrical inputs both having a high 900k Ω impedance with matched low input bias currents. Furthermore, since the CLC440 incorporates voltage feedback, a specific R_f is not required for stability. This flexibility in choosing R_f allows for numerous applications in wideband filtering and integration.

Unlike several other high-speed voltage feedback op amps, the CLC440 operates with a wide range of dual or single supplies allowing for use in a multitude of applications with limited supply availability. The CLC440's low 3.5nV/ $\sqrt{\text{Hz}}$ (e_n) and 2.5pA/ $\sqrt{\text{Hz}}$ (i_n) noise sets a very low noise floor.

Features

- Unity-gain stable
- High unity-gain bandwidth: 750MHz
- Ultra-low differential gain: 0.015%
- Very low differential phase: 0.025°
- Low power: 70mW
- Extremely fast slew rate: 1500V/ μ s
- High output current: 90mA

- Low noise: 3.5nV/ $\sqrt{\text{Hz}}$
- Dual $\pm 2.5\text{V}$ to $\pm 6\text{V}$ or single 5V to 12V supplies

Applications

- Professional video
- Graphics workstations
- Test equipment
- Video switching & routing
- Communications
- Medical imaging
- A/D drivers
- Photo diode transimpedance amplifiers
- Improved replacement for CLC420 or OPA620

CLC446

400MHz, 50mW Current-Feedback Op Amp

General Description

The National CLC446 is a very high-speed unity-gain-stable current-feedback op amp that is designed to deliver the highest levels of performance from a mere 50mW quiescent power. It provides a very wide 400MHz bandwidth, a 2000V/ μ s slew rate and 900ps rise/fall times. The CLC446 achieves its superior speed-vs-power using an advanced complementary bipolar IC process and National's current-feedback architecture.

The CLC446 is designed to drive video loads with very low differential gain and phase errors (0.02%, 0.03°). Combined with its very low power (50mW), the CLC446 makes an excellent choice for NTSC/PAL video switchers and routers. With its very quick edge rates (900ps) and high slew rate (2000V/ μ s), the CLC446 also makes an excellent choice for high-speed, high-resolution component RGB video systems.

The CLC446 makes an excellent low-power high-resolution A/D converter driver with its very fast 9ns settling time (to 0.1%) and low harmonic distortion.

The combination of high performance and low power make the CLC446 useful in many high-speed general purpose applications. Its current-feedback architecture maintains consistent performance over a wide gain range and signal levels. DC gain and bandwidth can be set independently. Also, either maximally flat AC response or linear phase response can be emphasized.

Features

- 400MHz bandwidth ($A_v=+2$)
- 5mA supply current
- 0.02%, 0.03° differential gain, phase
- 2000V/ μ s slew rate
- 9ns settling to 0.1%
- 0.05dB gain flatness to 100MHz
- -65/-78dBc HD2/HD3

Applications

- High resolution video
- A/D driver
- Medical imaging
- Video switchers & routers
- RF/IF amplifier
- Communications
- Instrumentation

CLC449

1.1GHz Ultra-Wideband Monolithic Op Amp

General Description

The CLC449 is an ultra-high-speed monolithic op amp, with a typical -3dB bandwidth of 1.1GHz at a gain of $+2$. This wideband op amp supports rise and fall times less than 1ns , settling time of 6ns (to 0.2%) and slew rate of $2500\text{V}/\mu\text{s}$. The CLC449 achieves 2nd harmonic distortion of -68dBc at 5MHz at a low supply current of only 12mA . These performance advantages have been achieved through improvements in National's proven current feedback topology combined with a high-speed complementary bipolar process.

The DC to 1.2GHz bandwidth of the CLC449 is suitable for many IF and RF applications as a versatile op amp building block for replacement of AC coupled discrete designs. Operational amplifier function such as active filters, gain blocks, differentiation, addition, subtraction and other signal conditioning functions take full advantage of the CLC449's unity-gain stable closed-loop performance.

The CLC449 performance provides greater headroom for lower frequency applications such as component video, high-resolution workstation graphics, and LCD displays. The amplifier's 0.1dB gain flatness to beyond 200MHz , plus 0.8ns 2V rise and fall times are ideal for improved time domain performance. In addition, the $0.03\%/0.02^\circ$ differential gain/phase performance allows system flexibility for handling standard NTSC and PAL signals.

In applications using high-speed flash A/D and D/A converters, the CLC449 provides the necessary wide bandwidth (1.1GHz), settling (6ns to 0.02%) and low distortion into 50Ω loads to improve SFDR.

Features

- 1.1GHz small-signal bandwidth ($A_v = +2$)
- $2500\text{V}/\mu\text{s}$ slew rate
- 0.03% , 0.02° D_G , D_ϕ
- 6ns settling time to 0.2%
- 3rd order intercept, 30dBm @ 70MHz
- Dual $\pm 5\text{V}$ or single 10V supply
- High output current: 80mA
- 2.5dB noise figure

Applications

- High performance RGB video
- RF/IF amplifier
- Instrumentation
- Medical electronics
- Active filters
- High-speed A/D driver
- High-speed D/A buffer

CLC450

Single Supply, Low-Power, High Output, Current Feedback Amplifier

General Description

The CLC450 has a new output stage that delivers high output drive current (100mA), but consumes minimal quiescent supply current (1.5mA) from a single 5V supply. Its current feedback architecture, fabricated in an advanced complementary bipolar process, maintains consistent performance over a wide range of gains and signal levels, and has a linear-phase response up to one half of the -3dB frequency.

The CLC450 offers superior dynamic performance with a 100MHz small-signal bandwidth, 280V/ μ s slew rate and 6.1ns rise/fall times ($2V_{step}$). The combination of low quiescent power, high output current drive, and high-speed performance make the CLC450 well suited for many battery-powered personal communication/computing systems.

The ability to drive low-impedance, highly capacitive loads, makes the CLC450 ideal for single ended cable applications. It also drives low impedance loads with minimum distortion. The CLC450 will drive a 100 Ω load with only -75/-64dBc second/third harmonic distortion ($A_V = +2$, $V_{out} = 2V_{pp}$, $f = 1\text{MHz}$). With a 25 Ω load, and the same conditions, it produces only -70/-60dBc second/third harmonic distortion. It is also optimized for driving high currents into single-ended transformers and coils.

When driving the input of high-resolution A/D converters, the CLC450 provides excellent -79/-75dBc second/third harmonic distortion ($A_V = +2$, $V_{out} = 2V_{pp}$, $f = 1\text{MHz}$, $R_L = 1\text{k}\Omega$) and fast settling time.

Available in SOT23-5, the CLC450 is ideal for applications where space is critical.

Features

- 100mA output current
- 1.5mA supply current
- 100MHz bandwidth ($A_V = +2$)

- -79/-75dBc HD2/HD3 (1MHz)
- 20ns settling to 0.05%
- 280V/ μ s slew rate
- Stable for capacitive loads up to 1000pf
- Single 5V to ± 5 V supplies
- Available in Tiny SOT23-5 package

Applications

- Coaxial cable driver
- Twisted pair driver
- Transformer/Coil Driver
- High capacitive load driver
- Video line driver
- Portable/battery-powered applications
- A/D driver

CLC452

Single Supply, Low-Power, High Output, Current Feedback Amplifier

General Description

The CLC452 has a new output stage that delivers high output drive current (100mA), but consumes minimal quiescent supply current (3.0mA) from a single 5V supply. Its current feedback architecture, fabricated in an advanced complementary bipolar process, maintains consistent performance over a wide range of gains and signal levels, and has a linear-phase response up to one half of the -3dB frequency.

The CLC452 offers superior dynamic performance with a 130MHz small-signal bandwidth, 400V/ μs slew rate and 4.5ns rise/fall times ($2V_{\text{step}}$). The combination of low quiescent power, high output current drive, and high-speed performance make the CLC452 well suited for many battery-powered personal communication/computing systems.

The ability to drive low-impedance, high capacitive loads, makes the CLC452 ideal for single ended cable applications. It also drives low impedance loads with minimum distortion. The CLC452 will drive a 100 Ω load with only $-75/-74\text{dBc}$ second/third harmonic distortion ($A_V = +2$, $V_{\text{out}} = 2V_{\text{pp}}$, $f = 1\text{MHz}$). With a 25 Ω load, and the same conditions, it produces only $-65/-77\text{dBc}$ second/third harmonic distortion. It is also optimized for driving high currents into single-ended transformers and coils.

When driving the input of high-resolution A/D converters, the CLC452 provides excellent $-78/-85\text{dBc}$ second/third harmonic distortion ($A_V = +2$, $V_{\text{out}} = 2V_{\text{pp}}$, $f = 1\text{MHz}$, $R_L = 1\text{k}\Omega$) and fast settling time.

Available in SOT23-5, the CLC452 is ideal for applications where space is critical.

Features

- 100mA output current
- 3.0mA supply current
- 130MHz bandwidth ($A_V = +2$)

- $-78/-85\text{dBc}$ HD2/HD3 (1MHz)
- 25ns settling to 0.05%
- 400V/ μs slew rate
- Stable for capacitive loads up to 1000pF
- Single 5V to $\pm 5\text{V}$ supplies
- Available in Tiny SOT23-5 package

CLC501

High-Speed, Output Clamping Op Amp

General Description

The CLC501 is a high-speed current-feedback op amp with the unique feature of output voltage clamping. This feature allows both the maximum positive (V_{high}) and negative (V_{low}) output voltage levels to be established. This is useful in a number of applications in which "downstream" circuitry must be protected from over driving input signals. Not only can this prevent damage to downstream circuitry, but can also reduce time delays since saturation is avoided. The CLC501's very fast 1ns overload/clamping recovery time is useful in applications in which information-containing signals follow overdriving signals.

Engineers designing high-resolution, subranging A/D systems have long sought an amplifier capable of meeting the demanding requirements of the residue amplifier function. Amplifiers providing the residue function must not only settle quickly, but recover from overdrive quickly, protect the second stage A/D, and provide high fidelity at relatively high gain settings. The CLC501, which excels in these areas, is the ideal design solution in this onerous application. To further support this application, the CLC501 is both characterized and tested at a gain setting of +32—the most common gain setting for residue amplifier applications.

The CLC501's other features provide a quick, high-performance design solution. Since the CLC501's current feedback design requires no external compensation, designers need not spend their time designing compensation networks. The small 8-pin package and low, 180mW power consumption make the CLC501 ideal in numerous applications having small power and size budgets.

The CLC501 is available in several versions to meet a variety of requirements. A three-letter suffix determines the version:

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-94597

*Space level version also available.

*For more information, visit <http://www.national.com/mil>

Features

- Output clamping (V_{high} and V_{low})
- 1ns recovery from clamping/overdrive
- 0.05% settling in 12ns
- Characterized and guaranteed at $A_v = +32$
- Low power, 180mW

Applications

- Residue amplifier in high-accuracy, subranging A/D systems
- High-speed communications
- Output clamping applications
- Pulse amplitude modulation systems

CLC502

Clamping, Low-Gain Op Amp with Fast 14-bit Settling

General Description

The CLC502 is an operational amplifier designed for low-gain applications requiring output voltage clamping. This feature allows the designer to set maximum positive and negative output voltage levels for the amplifier – thus allowing the CLC502 to protect downstream circuitry, such as delicate converter systems from destructive transients or signals which would otherwise cause saturation. The overload recovery time of only 8ns permits systems to resume operation quickly after overdrive.

High-accuracy systems will also benefit from the CLC502's fast, accurate settling. Settling to 0.0025% in 25ns (32ns guaranteed over temperature), the CLC502 is ideal as the input amplifier in high-accuracy (12 bits and above) A/D systems. Unlike most other high-speed op amps, the CLC502 is free of settling tails. And, as the settling plots show, settling to 0.01% accuracy is an even faster 18ns typical.

The CLC502 is also useful in other applications which require low-gain amplification (± 1 to ± 8) and the clamping or overload recovery features. For example, even low-resolution imaging circuits, which often have to cope with overloading signal levels, can benefit from clamping and overload recovery.

The CLC502 is available in several versions to meet a variety of requirements. A three-letter suffix determines the version:

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-91743

*Space level versions also available.

*For more information, visit <http://www.national.com/mil>

Features

- Output clamping with fast recovery
- 0.0025% settling in 25ns (32ns max)
- Low power, 170mW
- Low distortion. -50dBc at 20MHz

Applications

- Output clamping applications
- High-accuracy A/D systems (12-14 bits)
- High-accuracy D/A converters
- Pulse amplitude modulation systems

Clamped Pulse Response (8x Overdrive)

Time (10 ns/div)

CLC505

High-Speed, Programmable-Supply Current, Monolithic Op Amp

General Description

The CLC505 is a monolithic, high-speed op amp with a unique combination of high performance, low power consumption, and flexibility of application. The supply current is programmable over a 10 to 1 continuous range with a single resistor, R_p . This feature enables the amplifier to be used in a wide variety of high-performance applications. Typical performance at any supply current is exceptional:

Parameter	Supply Current (I_{CC})			Units
	9mA	3.4mA	1mA	
-3dB bandwidth	150	100	50	MHz
settling time	12	14	35	nsec
slew rate	1700	1200	800	V/ μ sec
output current	45	25	7	mA

The CLC505's combination of high performance, low power consumption, and large signal performance makes the CLC505 ideal for a wide variety of remote site equipment applications, such as battery-powered test instrumentation and communications gear. Some other power applications are video switching matrices, ATE, and phased-array radar systems.

The CLC505 has been designed for ease of use and has been specified to ensure design confidence and final system predictability. The product performance is specified for 1mA, 3mA ad 9mA supply current. The CLC505 is available in 8-pin Dip SOIC packages offered for the industrial temperature range.

Enhanced Solutions (Military/Aerospace)
 SMD Number: contact factory
 Space level versions also available.

For more information, visit <http://www.national.com/ml>

Features

- 10mW power consumption with 50MHz BW
- Single-resistor programming of supply current
- 3.4mA I_{CC} provides 100MHz bandwidth and 14ns settling (0.05%)
- Fast disable capability
- 0.04% differential gain at $I_{CC} = 3.4mA$
- 0.06% differential phase at $I_{CC} = 3.4mA$

Applications

- Low-power/battery applications
- Remote site instrumentation
- Mobile communications gear
- Video switching matrix
- Phased-array radar

CLC520 Amplifier with Voltage Controlled Gain, AGC +Amp +

General Description

The CLC520 is a wideband DC-coupled amplifier with voltage-controlled gain (AGC). The amplifier has a high-impedance, differential signal input; a high-bandwidth, gain control input; and a single-ended voltage output. Signal channel performance is outstanding with 160MHz small signal bandwidth, 0.5 degree linear phase deviation (to 60MHz) and 0.04% signal nonlinearity at 4V_{PP} output.

Gain-control is very flexible and easy to use. Maximum gain may be set over a nominal range of 2 to 100 with one external resistor. In addition, the gain-control input provides more than 40dB of voltage-controlled gain adjustment from the maximum gain setting. For example, a CLC520 may be set for a maximum gain of 2 (or 6dB) for a voltage-controlled gain range from 40dB to less than 34dB. Alternatively, the CLC520 could be set for a maximum gain of 10 or (40dB) for a voltage-controlled gain range from 40dB to less than 0dB.

The gain-control bandwidth of 100MHz is superb for AGC/ALC loop stabilization. And since the gain is minimum with a zero volt input and maximum with a +2 volt input, driving the control input is easy.

Finally, the CLC520 differential inputs, and ground-referenced voltage output take the trouble out of designing DC-coupled AGC circuits for display normalizers; signal leveling automatic circuits; etc.

Enhanced Solutions (Military/Aerospace)

SMD Number: 5962-91694

CLC522

Wideband Variable-Gain Amplifier

General Description

The CLC522 variable gain amplifier (VGA) is a dc-coupled, two-quadrant multipliers with differential voltage inputs and a single-ended voltage output. Two input buffers and an output operational amplifier are integrated with the multiplier core and make the CLC522 a complete VGA system that does not require external buffering.

The CLC522 provides the flexibility of externally setting the maximum gain with only two external resistors. Greater than 40dB gain control is easily achieved through a single high impedance voltage input. The CLC522 provides a linear (in Volts per Volt) relationship between the amplifier's gain and the gain-control input voltage.

The CLC522's maximum gain may be set anywhere over a nominal range of 2V/V to 100V/V. The gain control input then provides attenuation from the maximum setting. For example, set for a maximum gain of 100V/V, the CLC522 will provide a 100V/V to 1V/V gain control range by sweeping the gain control input voltage from +1 to -0.98V.

Set at a maximum gain of 10V/V, the CLC522 provides a 165MHz signal channel bandwidth and a 165MHz gain control bandwidth. Gain nonlinearity over a 40dB gain range is 0.5

and gain accuracy at $A_{V_{max}} = 10V/V$ is typically $\pm 0.3\%$.

Features

- 330MHz signal bandwidth: $A_{V_{max}} = 2$
- 165MHz gain-control bandwidth
- 0.3° to 60MHz linear phase deviation
- 0.04% (-68dB) signal-channel non-linearity

- >40dB gain-adjustment range
- Differential or single-end voltage inputs
- Single-ended voltage output

Applications

- Variable attenuators
- Pulse amplitude equalizers
- HF modulators
- Automatic gain control & leveling loops
- Video production switching
- Differential line receivers
- Voltage controlled filters

CLC5506

Gain Trim Amplifier (GTA)

General Description

The CLC5506 is a low-noise amplifier with programmable gain for use in cellular base stations, WLL, radar and RF/IF subsystems where gain-control is required to increase the dynamic range. The CLC5506 allows designers to compensate for manufacturing component tolerances and temperature variations in receiver front ends. Maximum amplifier gain is set at 26dB. A three-line MICROWIRE serial interface allows 16dB of attenuation from the max gain setting in precise 0.25dB steps.

The CLC5506 uses a differential input and output, allowing large output swings on a single 5V rail. The differential output is well suited for impedance matching networks driving SAW filters or directly driving differential input analog to digital converters (ADC). The differential output also makes it possible to drive transformers allowing designers the ability to match a wide variety of transmission lines. The output amplifier has excellent output drive with low distortion.

Digital control of the CLC5506 is accomplished using MICROWIRE Interface. Data Out and a Load Enable are incorporated so that more than one CLC5506/channel may be programmed per system.

The CLC5506 maintains a 600MHz performance bandwidth over its entire gain and attenuation range from +10dB to +26dB. Gain control is divided into 64 equal steps of 0.25dB and is dB-linear. Output drive and distortion performance are excellent; In a 50Ω system, the third-order output intercept point is +22dBm at nominal gain of 18dB at 25°C. The CLC5506 operates over the industrial temperature range of -40°C to +85°C.

Features

- 600MHz bandwidth
- 26dB maximum gain @ 150MHz
- 16dB gain control range
- Attenuation step size: 0.25dB
- 4.8dB noise figure @ 26dB
- +22dBm output IP3 @ 18dB gain
- Digital "dB Linear" gain control
- Supply voltage: 5V
- Supply current: 75mA
- Supply shutdown: 35μA
- Package: SOIC-14
- Typical at 25°C

Applications

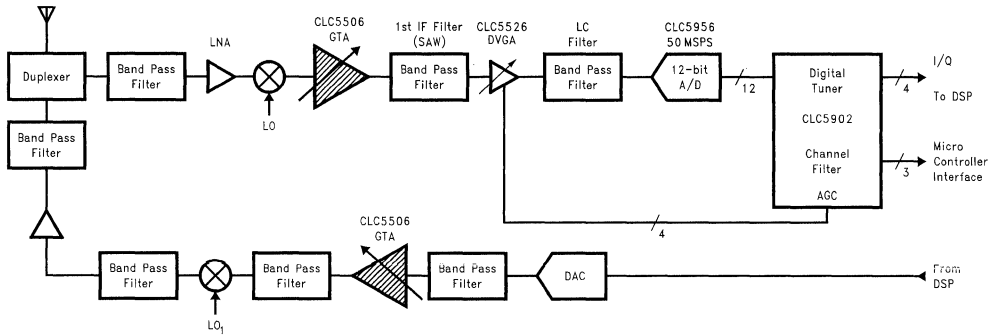

- Cellular base-stations
- Base station repeater
- Wireless Local Loop
- Radar
- Receivers
- IF amplifiers
- Digital IF receiver
- Software radio
- Satellite communications

CLC5509

Ultra-Low Noise Preamplifier

General Description

The CLC5509 is a high performance, ultra-low noise preamplifier designed for applications requiring unconditional stability for wide ranges of complex input loads. Both input impedance and gain are externally adjustable, which make it simple to interface to piezoelectric ultrasound transducers. The CLC5509 preamplifier's low $0.58nV/\sqrt{Hz}$ total input noise makes it ideal for noise sensitive front ends. The high repeatability in group delay over voltage and temperature translates into precision edge measurements for Doppler applications.

The IC consists of an emitter input, common base amplifier stage followed by a low distortion, closed loop buffer. The Noise Figure can be user programmed by controlling the emitter current (I_{BIAS1}) which sets emitter resistance r_e . External negative feedback creates a well controlled input impedance to allow a near noiseless active input transmission line termination. The preamp is stable against changes in source impedance of 50 to 200Ω over temperature and supply variations, with gains from 14dB to 26dB. The CLC5509 preamp architecture is also well suited for use with magneto-resistive tape or disk drive heads. In these applications the head bias current can be reused to bias the preamp. The part is packaged in an 8-pin plastic SOIC, and runs off $\pm 5V$ supplies. External biasing is required for the input signal path.

The CLC5509 is constructed using an advanced complementary bipolar process and National Semiconductor's proven high performance architectures.

Features

- $0.58nV/\sqrt{Hz}$ total input noise @ 12MHz
- >3.0dB Noise figure advantage over shunt termination
- <.5ns group delay repeatability
- High cutoff -3dB @ 33MHz
- Low cutoff -3dB @ 0.5MHz
- 2.0dB noise figure @ 50Ω
- -60dBc intermod for $2V_{PP}$ @ 5MHz
- Programmable noise figure vs. I_{BIAS1}
- Supply current: 11mA
- Available in 8-pin SOIC

Applications

- Ultrasound preamp
- Tape drive preamp
- Disk drive preamp

CLC5523

Low-Power, Variable Gain Amplifier

General Description

The CLC5523 is a low power, wideband, DC-coupled, voltage-controlled gain amplifier. It provides a voltage-controlled gain block coupled with a current feedback output amplifier. High impedance inputs and minimum dependence of bandwidth on gain make the CLC5523 easy to use in a wide range of applications. This amplifier is suitable as a continuous gain control element in a variety of electronic systems which benefit from a wide bandwidth of 250MHz and high slew rate of 1800V/ μ s, with only 135mW of power dissipation.

Input impedances in the megaohm range on both the signal and gain control inputs simplify driving the CLC5523 in any application. The CLC5523 can be configured to use pin 3 as a low impedance input making it an ideal interface for current inputs. By using the CLC5523's inverting configuration in which R_G is driven directly, inputs which exceed the device's input voltage range may be used.

The gain control input (V_G) with a 0 to 2V input range, and a linear-in-dB gain control, simplifies the implementation of AGC circuits. The gain control circuit can adjust the gain as fast as 4dB/ns. Maximum gains from 2 to 100 are accurately and simply set by two external resistors while attenuation of up to 80dB from this gain can be achieved.

The extremely high slew rate of 1800V/ μ s and wide bandwidth provides high speed rise and fall times of 2.0ns, with settling time for a 2 volt step of only 22ns to 0.2%. In time domain applications where linear phase is important with gain adjust, the internal current mode circuitry maintains low deviation of delay over a wide gain adjust range.

Features

- Low power: 135mW
- 250MHz, -3dB bandwidth
- Slew rate 1800V/ μ s
- Gain flatness 0.2d @ 75MHz
- Rise & fall times 2.0ns
- Low input voltage noise $4nV/\sqrt{Hz}$

Applications

- Automatic gain control
- Voltage controlled filters
- Automatic signal leveling for A/D
- Amplitude modulation
- Variable gain transimpedance

CLC5526

Digital Variable Gain Amplifier (DVGA)

General Description

The CLC5526 is a high performance, digitally controlled, variable-gain amplifier (DVGA). It has been designed for use in a broad range of mixed signal and digital communication applications such as mobile radio, cellular base stations and back-channel modems where automatic-gain-control (AGC) is required to increase system dynamic range.

The CLC5526 has differential input and output, allowing large signal swings on a single 5V rail. The input impedance is 200Ω. The differential output impedance is 600Ω and is designed to drive a 1 kΩ differential load. The output amplifier has excellent intermodulation performance. The CLC5526 is designed to accept signals from RF elements and maintain a terminated impedance environment.

The CLC5526 maintains a 350 MHz bandwidth over its entire gain and attenuation range from +30 dB to -12 dB. Internal clamping ensures very fast overdrive recovery. Two tone intermodulation distortion is excellent: at 150 MHz, 1 V_{pp} it is -64 dBc.

Input signals to the CLC5526 are scaled by an accurate, differential R-2R resistive ladder with an input impedance of 200Ω. A scaled version of the input is selected under digital control and passed to the internal amplifier. The input common mode level is set at 2.4V via a bandgap referenced bias generator which can be overridden by an external input.

Following the resistive ladder is a fixed, 30 dB gain amplifier. The output stage common mode voltage of the CLC5526 is set to 3V, by internal, positive supply connected resistors.

Digital control of the CLC5526 is accomplished by a 3-bit parallel gain control input and a data valid pin to latch the data. If the data is not latched, the DVGA is transparent to gain control updates. All digital inputs are TTL/CMOS compatible.

A shutdown input reduces the CLC5526 supply current to a few mA. During shutdown, the input termination is maintained and current attenuation settings are held.

The CLC5526 operates over the industrial temperature range of -40°C to +85°C. The part is available in a 20-pin SSOP package.

Features

- 350 MHz bandwidth
- Differential input and output
- Gain control: parallel w/data latching
- Supply voltage: +5V
- Supply current: 48 mA

Key Specifications

- Low two tone intermod:
 - distortion: -64 dBc @ 1 V_{pp}, 150 MHz
 - 24.5 dBm IP3, 150 MHz
- Low noise: 2.5 nV/√Hz (max gain), 9.3 dB noise figure (max gain)
- Wide gain range: +30 dB to -12 dB
- Gain step size: 6 dB

Applications

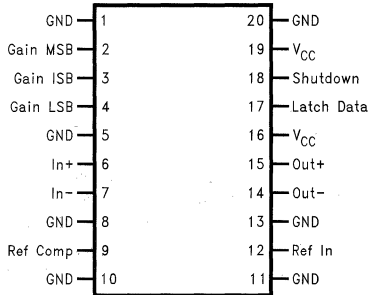

- Cellular/PCS base stations
- IF sampling receivers
- Infrared/CCD imaging
- Back-channel modems
- Electro-optics
- Instrumentation
- Medical imaging
- High definition video

CLC5602

Dual, High Output, Video Amplifier

General Description

The National CLC5602 has a new output stage that delivers high output drive current (130mA), but consumes minimal quiescent supply current (1.5mA/ch) from a single 5V supply. Its current feedback architecture, fabricated in an advanced complementary bipolar process, maintains consistent performance over a wide range of gains and signal levels, and has a linear-phase response up to one half of the -3dB frequency.

The CLC5602 offers a 0.1dB gain flatness to 22MHz and differential gain and phase errors of 0.06 and 0.02%. These features are ideal for professional and consumer video applications.

The CLC5602 offers superior dynamic performance with a 135MHz small-signal bandwidth, 300V/ μs slew rate and a 5.7ns rise/fall times ($2V_{\text{step}}$). The combination of low quiescent power, high output current drive, and high-speed performance make the CLC5602 well suited for many battery-powered personal communication/computing systems.

The ability to drive low-impedance, highly capacitive loads, makes the CLC5602 ideal for single ended cable applications. It also drives low impedance loads with minimum distortion. The CLC5602 will drive a 100 Ω load with only $-86/-85\text{dBc}$ second/third harmonic distortion ($A_V=+2$, $V_{\text{out}}=2V_{\text{pp}}$, $f=1\text{MHz}$). With a 25 Ω load, and the same conditions, it produces only $-86/-72\text{dBc}$ second/third harmonic distortion.

The CLC5602 can also be used for driving differential-input step-up transformers for applications such as Asynchronous Digital Subscriber Lines (ADSL) or High-Bit-Rate Digital Subscriber Lines (HDSL).

When driving the input of high-resolution A/D converters, the CLC5602 provides excellent $-87/-95\text{dBc}$ second/third harmonic distortion ($A_V=+2$, $V_{\text{out}}=2V_{\text{pp}}$, $f=1\text{MHz}$, $R_L=1\text{k}\Omega$) and fast settling time.

- 0.06%, 0.02° differential gain, phase
- 1.5mA/ch supply current
- 135MHz bandwidth ($A_V=+2$)
- $-87/-95\text{dBc}$ HD2/HD3 (1MHz)
- 15ns settling to 0.05%
- 300V/ μs slew rate
- Stable for capacitive loads up to 1000pf
- Single 5V or $\pm 5\text{V}$ supplies

Applications

- Video line driver
- ADSL/HDSL driver
- Coaxial cable driver
- UTP differential line driver
- Transformer/coil driver
- High capacitive load driver
- Portable/battery-powered applications
- Differential A/D driver

CLC5612

Dual, High Output, Programmable Gain Buffer

General Description

The CLC5612 is a dual, low-cost, high-speed (90MHz) buffer which features user-programmable gains of +2, +1, and -1/V. The CLC5612 also has a new output stage that delivers high output drive current (130mA), but consumes minimal quiescent supply current (1.5mA/ch) from a single 5V supply. Its current feedback architecture, fabricated in an advanced complementary bipolar process, maintains consistent performance over a wide range of gains and signal levels, and has a linear-phase response up to one half of the -3dB frequency.

The CLC5612 offers 0.1dB gain flatness to 18MHz and differential gain and phase errors of 0.15% and 0.02°. These features are ideal for professional and consumer video applications.

The CLC5612 offers superior dynamic performance with a 90MHz small-signal bandwidth, 290V/μs slew rate and 6.2ns rise/fall times (2V_{step}). The combination of low quiescent power, high output current drive, and high-speed performance make the CLC5612 well suited for many battery-powered personal communication/computing systems.

The ability to drive low-impedance, highly capacitive loads, makes the CLC5612 ideal for single ended cable applications. It also drives low impedance loads with minimum distortion. The CLC5612 will drive a 100Ω load with only -74/-86dBc second/third harmonic distortion (A_v=+2, V_{out}=2V_{pp}, f=1MHz). With a 25Ω load, and the same conditions, it produces only -70/-67dBc second/third harmonic distortion. It is also optimized for driving high currents into single-ended transformers and coils.

When driving the input of high-resolution A/D converters, the CLC5612 provides excellent -87/-93dBc second/third harmonic distortion (A_v=+2, V_{out}, f=1MHz, R_L=1kΩ) and fast settling time.

- 0.15%, 0.02° differential gain, phase
- 1.5mA/ch supply current
- 90MHz bandwidth (A_v = +2)
- -87/-93dBc HD2/HD3 (1MHz)
- 17ns settling to 0.05%
- 290V/μs slew rate
- Stable for capacitive loads up to 1000pf
- Single 5V to ±5V supplies

Applications

- Video line driver
- Coaxial cable driver
- Twisted pair driver
- Transformer/coil driver
- High capacitive load driver
- Portable/battery-powered applications
- A/D driver

CLC5622

Dual, High Output, Video Amplifier

General Description

The National CLC5622 has a new output stage that delivers high output drive current (130mA), but consumes minimal quiescent supply current (3.0mA/ch) from a single 5V supply. Its current feedback architecture, fabricated in an advanced complementary bipolar process, maintains consistent performance over a wide range of gains and signal levels, and has a linear-phase response up to one half of the -3dB frequency.

The CLC5622 offers 0.1dB gain flatness to 30MHz and differential gain and phase errors of 0.05% and 0.02°. These features are ideal for professional and consumer video applications.

The CLC5622 offers superior dynamic performance with a 160MHz small-signal bandwidth, 370V/μs slew rate and 4.4ns rise/fall times (2V_{step}). The combination of low quiescent power, high output current drive, and high-speed performance make the CLC5622 well suited for many battery-powered personal communication/computing systems.

The ability to drive low-impedance, highly capacitive loads, makes the CLC5622 ideal for single ended cable applications. It also drives low impedance loads with minimum distortion. The CLC5622 will drive a 100Ω load with only -95/-95dBc second/third harmonic distortion (A_v=+2, V_{out}=2V_{pp}, f=1MHz). With a 25Ω load, and the same conditions, it produces only -72/-77dBc second/third harmonic distortion.

The CLC5622 can also be used for driving differential-input step-up transformers for applications such as Asynchronous Digital Subscriber Lines (ADSL) or High-Bit-Rate Digital Subscriber Lines (HDSL).

When driving the input of high-resolution A/D converters, the CLC5622 provides excellent -90/-97dBc second/third harmonic distortion (A_v=+2, V_{out}=2V_{pp}, f=1MHz, R_L=1kΩ) and fast settling time.

- 0.05%, 0.03° differential gain, phase
- 3.0mA/ch supply current
- 160MHz bandwidth (A_v=+2)
- -90/-97dBc HD2/HD3 (1MHz)
- 18ns settling to 0.05%
- 370V/μs slew rate
- Stable for capacitive loads up to 1000pf
- Single 5V or ±5V supplies

Applications

- Video line driver
- ADSL/HDSL driver
- Coaxial cable driver
- UTP differential line driver
- Transformer/coil driver
- High capacitive load driver
- Portable/battery-powered applications
- Differential A/D driver

CLC5623

Triple, High Output, Video Amplifier

General Description

The CLC5623 has a new output stage that delivers high output drive current (130mA), but consumes minimal quiescent supply current (3.0mA/ch) from a single 5V supply. Its current feedback architecture, fabricated in an advanced complementary bipolar process, maintains consistent performance over a wide range of gains and signal levels, and has a linear-phase response up to one half of the -3dB frequency.

The CLC5623 offers 0.1dB gain flatness to 15MHz and differential gain and phase errors of 0.06% and 0.06°. These features are ideal for professional and consumer video applications.

The CLC5623 offers superior dynamic performance with a 148MHz small-signal bandwidth, 370V/μs slew rate and 4.4ns rise/fall times ($2V_{step}$). The combination of low quiescent power, high output current drive, and high-speed performance make the CLC5623 well suited for many battery-powered personal communication/computing systems.

The ability to drive low-impedance, high capacitive loads, with minimum distortion, makes the CLC5623 ideal for cable applications. The CLC5623 will drive a 100Ω load with only -78/-94dBc second/third harmonic distortion ($A_v=+2$, $V_{out}=2V_{pp}$, $f=1\text{MHz}$). With a 25Ω load, and the same conditions, it produces only -82/-96dBc second/third harmonic distortion.

The CLC5623 can also be used for driving differential-input step-up transformers for applications such as Asynchronous Digital Subscriber Lines (ADSL) or High-Bit-Rate Digital Subscriber Lines (HDSL).

When driving the input of high-resolution A/D converters, the CLC5623 provides excellent -86/-96dBc second/third harmonic distortion ($A_v=+2$, $V_{out}=2V_{pp}$, $f=1\text{MHz}$, $R_L=1\text{k}\Omega$) and fast settling time.

- 0.06%, 0.06° differential gain, phase
- 3.0mA/ch supply current
- 148MHz bandwidth ($A_v=+2$)
- -86/-96dBc HD2/HD3 (1MHz)
- 18ns settling to 0.05%
- 370V/μs slew rate
- Stable for capacitive loads up to 1000pf
- Single 5V or ±5V supplies

Applications

- Video line driver
- ADSL/HDSL driver
- Coaxial cable driver
- UTP differential line driver
- Transformer/coil driver
- High capacitive load driver
- Portable/battery-powered applications
- Differential A/D driver

CLC5632

Dual, High Output, Programmable Gain Buffer

General Description

The CLC5632 is a dual, low-cost, high-speed (130MHz) buffer which features user-programmable gains of +2, +1, and -1V/V. The CLC5632 also has a new output stage that delivers high output drive current (130mA), but consumes minimal quiescent supply current (3.0mA/ch) from a single 5V supply. Its current feedback architecture, fabricated in an advanced complementary bipolar process, maintains consistent performance over a wide range of gains and signal levels, and has a linear-phase response up to one half of the -3dB frequency.

The CLC5632 offers 0.1dB gain flatness to 30MHz and differential gain and phase errors of 0.08% and 0.02°. These features are ideal for professional and consumer video applications.

The CLC5632 offers superior dynamic performance with a 130MHz small-signal bandwidth, 410V/μs slew rate and 5.0ns rise/fall times (2V_{step}). The combination of low quiescent power, high output current drive, and high-speed performance make the CLC5632 well suited for many battery-powered personal communication/computing systems. The ability to drive low-impedance, highly capacitive loads, makes the CLC5632 ideal for single ended cable applications. It also drives low impedance loads with minimum distortion. The CLC5632 will drive a 100Ω load with only -82/-69dBc second/third harmonic distortion (A_v=+2, V_{OUT}=2V_{PP}, f=1MHz). With a 25Ω load, and the same conditions, it produces only -71/-73dBc second/third harmonic distortion. It is also optimized for driving high currents into single-ended transformers and coils. When driving the input of high-resolution A/D converters, the CLC5632 provides excellent -86/-96dBc second/third harmonic distortion (A_v = +2, V_{OUT} = 2V_{PP}, f = 1MHz, R_L = 1kΩ) and fast settling time.

- 0.02° differential gain, phase
- 3.0mA/ch supply current
- 130MHz bandwidth (A_v=+2)
- -86/-96dBc HD2/HD3 (1MHz)

CLC5644

Low-Power, Low-Cost, Quad Operational Amplifier

General Description

The CLC5644 is a quad, current feedback operational amplifier that is perfect for many cost-sensitive applications that require high performance, especially when power dissipation is critical. Not only does the CLC5644 offer excellent economy in board space, but has an excellent performance vs power tradeoff which yields a 170MHz Small Signal Bandwidth while dissipating only 25mW. Applications requiring significant density of high speed devices such as video routers, matrix switches and high-order active filters will benefit from the configuration of the CLC5644 and the low channel-to-channel crosstalk of 76dB at 1MHz.

The CLC5644 provides excellent performance for video applications. Differential gain and phase of 0.04% and 0.07° makes this device well suited for many professional composite video systems, but consumer applications will also be able to take advantage of these features due to the device's low cost. The CLC5644 offers superior dynamic performance with a small signal bandwidth of 170MHz and slew rate of 1000V/μs. These attributes are well suited for many component video applications such as driving RGB signals down significant lengths of cable. These and many other applications can also take advantage of the 0.1dB flatness to 25MHz.

Combining wide bandwidth with low cost makes the CLC5644 an attractive option for active filters. SAW filters are often used in IF filters in the 10's of MHz range, but higher order filters designed around a quad operational amplifier may offer an economical alternative to the typical SAW approach and offer greater freedom in the selection of filter parameters. National Semiconductor's Comlinear Products Group has published a wide array of literature on active filters and a list of these publications can be found on the last page of this datasheet.

- 1000 V/μs slew rate
- 2.5mA/channel supply current
- -72/-79dBc HD2/HD3 (5MHz)
- 0.04%, 0.07° differential gain, phase
- 70mA output current
- 16ns settling to 0.1%

Applications

- Portable equipment
- Video switchers & routers
- Video line driver
- Active filters
- IF amplifier
- Twisted pair driver/receiver

Non-Inverting Frequency Response

CLC5654

Very High-Speed, Low-Cost, Quad Operational Amplifier

General Description

The CLC5654 is a quad, current feedback operational amplifier that is perfect for many cost-sensitive applications that require high performance. This device also offers excellent economy in board space and power, consuming only 5mA per amplifier while providing 70mA of output current capability. Applications requiring significant density of high speed devices such as video routers, matrix switches and high-order active filters will benefit from the configuration of the CLC5654 and the low channel-to-channel crosstalk of 70dB at 5MHz.

The CLC5654 provides excellent performance for video applications. Differential gain and phase of 0.03% and 0.03° makes this device well suited for many professional composite video systems, but consumer applications will also be able to take advantage of these features due to the device's low cost. The CLC5654 offers superior dynamic performance with a small signal bandwidth of 450MHz and slew rate of 2000V/ μ s. These attributes are well suited for many component video applications such as driving RGB signals down significant lengths of cable. These and many other applications can also take advantage of the 0.1dB flatness to 40MHz.

Combining wide bandwidth with low cost makes the CLC5654 an attractive option for active filters. SAW filters are often used in IF filters in the 10's of MHz range, but higher order filters designed around a quad operational amplifier may offer an economical alternative to the typical SAW approach and offer greater freedom in the selection of filter parameters. National Semiconductor's Comlinear Products Group has published a wide array of literature on active filters and a list of these publications can be found on the last page of this datasheet.

- 2000 V/ μ s slew rate
- 5mA/channel supply current
- -71/-82dBc HD2/HD3 (5MHz)
- 0.03%, 0.03° differential gain, phase
- 70mA output current
- 12ns settling to 0.1%

Applications

- High performance RGB video
- Video switches & routers
- Video line driver
- Active filters
- IF amplifier
- Twisted pair driver/receiver

CLC5665

Low Distortion Amplifier with Disable

2

General Description

The CLC5665 is a low-cost, wideband amplifier that provides very low 2nd and 3rd harmonic distortion at 1MHz (-89/-92dBc). The great slew rate of 1800V/ μ s, bandwidth of 90MHz ($A_v=+1$) and fast disable make it an excellent choice for many high speed multiplexing applications. Like all current feedback op amps, the CLC5665 allows the frequency response to be optimized (or adjusted) by the selection of the feedback resistor. For demanding video applications, the 0.1 dB bandwidth to 20MHz and differential gain/phase of 0.05%/0.05° make the CLC5665 the preferred component for broadcast quality NTSC and PAL video systems.

The large voltage swing (28V_{pp}), continuous output current (85mA) and slew rate (1800V/ μ s) provide high-fidelity signal conditioning for applications such as CCDs, transmission lines and low impedance circuits.

xDSL, video distribution, multimedia and general purpose applications will benefit from the CLC5665's wide bandwidth and disable feature. Power is reduced and the output becomes a high impedance when disabled. The wide gain range of the CLC5665 makes this general purpose op amp an improved solution for circuits such as active filters, differential-to-single-ended drivers, DAC transimpedance amplifiers and MOSFET drivers.

Features

- 0.1dB gain flatness to 20MHz ($A_v=+2$)
- 90MHz bandwidth ($A_v=+1$)
- Large signal BW 25MHz
- 1800V/ μ s slew rate
- 0.05%/0.05° differential gain/phase
- $\pm 5V$, $\pm 15V$ or single supplies

- 200ns disable to high-impedance output
- Wide gain range
- -89/-92dBc HD2/HD3 ($R_L=500\Omega$)
- Low cost

Applications

- xDSL driver
- Twisted pair driver
- Cable driver
- Video distribution
- CCD clock driver
- Multimedia systems
- DAC output buffers
- Imaging systems

Non-Inverting Frequency Response

CLC5801

High Speed Low Noise Voltage Feedback Amplifier

General Description

The CLC5801 is a low-cost, wideband voltage feedback amplifier excellent for low noise applications. It combines a wide bandwidth of 420MHz with very low noise ($2\text{nV}/\sqrt{\text{Hz}}$, $1.8\text{pA}/\sqrt{\text{Hz}}$) and low DC errors ($100\mu\text{V } V_{\text{OS}}$) making it an excellent precision high speed op amp offering closed-loop gains of ≥ 10 .

The CLC5801 employs a traditional voltage-feedback topology and provides all the benefits of balanced inputs, such as low offsets and drifts, as well as 96dB open-loop gain, 95dB CMRR and a 90dB PSRR. Providing a wide 420MHz bandwidth at a gain of $A_v = 10$, a fast $300\text{V}/\mu\text{s}$ slew rate, the CLC5801 is well suited for wide band active filters and low noise loop filters for PLLs.

The low noise, wide gain-bandwidth, high slew rate and low DC errors enable applications such as medical diagnostic ultrasound, magnetic tape and disk storage, communications and optoelectronics that require maximum high-frequency signal-to-noise ratios. Low noise and offset make the CLC5801 an ideal preamplifier for CD-ROMs and receivers.

The CLC5801 consumes 16mA of supply current and can be used in either dual 5V systems or single supply applications. It can easily drive a 100Ω load to within 1.6V of either rail.

The CLC5801 is available in both SOIC-8 and the tiny SOT23-5.

Features

($T_A = 25^\circ\text{C}$, $V_S = \pm 5\text{V}$, $R_L = 100\Omega$ Typical unless specified).

- 420MHz, -3dB bandwidth ($A_v = 10$)
- $2\text{nV}/\sqrt{\text{Hz}}$ input voltage noise
- $1.8\text{pA}/\sqrt{\text{Hz}}$ input current noise
- $100\mu\text{V}$ input offset voltage
- $300\text{V}/\mu\text{s}$ slew rate
- 16mA supply current
- 18ns settling time

Applications

- Ultrasound preamplifier
- CD-ROM preamplifier
- Photo-diode transimpedance amplifier
- Low-noise loop filters for PLLs
- High-performance receivers
- ADC preamplifier

CLC5802

Dual Low-Noise, Voltage Feedback Op Amp

General Description

The CLC5802 is a dual op amp that offers a traditional voltage-feedback topology featuring unity-gain stability. Low noise and very low harmonic distortion combine to form a very wide dynamic-range op amp that operates within a power supply range of 5V to 12V.

Each of the CLC5802's closely matched channels provides a 140MHz unity-gain bandwidth with a very low input voltage noise density ($4\text{nV}/\sqrt{\text{Hz}}$). Low 2nd/3rd harmonic distortion ($-69/-66\text{dBc}$) as well as high channel-to-channel isolation (-61dB) make the CLC5802 a perfect wide dynamic-range amplifier for I/Q channels and other application which require low distortion and matching. With its fast and accurate settling (18ns to 0.1%), the CLC5802 is also a excellent choice for wide-dynamic range, anti-aliasing filters to buffer the inputs of hi-resolution analog-to-digital converters. Combining the CLC5802 two tightly-matched amplifiers in a single eight-pin SOIC reduces cost and board space for many composite amplifier applications such as active filters, differential line drivers/receivers, fast peak detectors and instrumentation amplifiers.

Features

($T_A = 25^\circ\text{C}$, $V_S = \pm 5\text{V}$, $R_L = 100\Omega$, Typical unless specified).

- Wide unity-gain bandwidth: 140MHz
- Ultra-low noise: $4\text{nV}/\sqrt{\text{Hz}}$, $2\text{pA}/\sqrt{\text{Hz}}$
- Low distortion: $-69/-66\text{dBc}$ (5MHz)
- Settling time: 18ns to 0.1%
- High output current: $\pm 70\text{mA}$
- Supply voltage range: 5V to 12V

Applications

- General purpose dual op amp
- Low noise active filters
- Low noise integrators
- High-speed detectors
- Diff-in/diff-out instrumentation amp
- I/Q channel amplifiers
- Driver/receiver for transmission systems

Typical Application

LM6121/LM6221/LM6321

High Speed Buffer

General Description

These high speed unity gain buffers slew at 800 V/ μ s and have a small signal bandwidth of 50 MHz while driving a 50 Ω load. They can drive \pm 300 mA peak and do not oscillate while driving large capacitive loads. The LM6121 family are monolithic ICs which offer performance similar to the LH0002 with the additional features of current limit and thermal shutdown.

These buffers are built with National's VIP™ (Vertically Integrated PNP) process which provides fast PNP transistors that are true complements to the already fast NPN devices. This advanced junction-isolated process delivers high speed performance without the need for complex and expensive dielectric isolation.

Features

- High slew rate: 800 V/ μ s
- Wide bandwidth: 50 MHz
- Slew rate and bandwidth 100% tested
- Peak output current: \pm 300 mA
- High input impedance: 5 M Ω
- LH0002H pin compatible
- No oscillations with capacitive loads
- 5V to \pm 15V operation guaranteed
- Current and thermal limiting
- Fully specified to drive 50 Ω lines

Applications

- Line Driving
- Radar
- Sonar

LM6161/LM6261/LM6361

High Speed Operational Amplifier

General Description

The LM6161 family of high-speed amplifiers exhibits an excellent speed-power product in delivering 300 V/ μ s and 50 MHz unity gain stability with only 5 mA of supply current. Further power savings and application convenience are possible by taking advantage of the wide dynamic range in operating supply voltage which extends all the way down to +5V. These amplifiers are built with National's VIP™ (Vertically Integrated PNP) process which provides fast PNP transistors that are true complements to the already fast NPN devices. This advanced junction-isolated process delivers high speed performance without the need for complex and expensive dielectric isolation.

Features

- High slew rate 300 V/ μ s

- High unity gain freq 50 MHz
- Low supply current 5 mA
- Fast settling 120 ns to 0.1%
- Low differential gain <0.1%
- Low differential phase 0.1°
- Wide supply range 4.75V to 32V
- Stable with unlimited capacitive load
- Well behaved; easy to apply

Applications

- Video amplifier
- High-frequency filter
- Wide-bandwidth signal conditioning
- Radar
- Sonar

LM6162

High Speed Operational Amplifier

General Description

The LM6162 family of high-speed amplifiers exhibits an excellent speed-power product, delivering 300 V/ μ s and 100 MHz gain-bandwidth product (stable for gains as low as +2 or -1) with only 5 mA of supply current. Further power savings and application convenience are possible by taking advantage of the wide dynamic range in operating supply voltage which extends all the way down to +5V.

These amplifiers are built with National's VIP™ (Vertically Integrated PNP) process which provides fast transistors that are true complements to the already fast NPN devices. This advanced junction-isolated process delivers high speed performance without the need for complex and expensive dielectric isolation.

Features

- High slew rate: 300 V/ μ s

- High gain-bandwidth product: 100 MHz
- Low supply current: 5 mA
- Fast settling time: 120 ns to 0.1%
- Low differential gain: <0.1%
- Low differential phase: <0.1°
- Wide supply range: 4.75V to 32V
- Stable with unlimited capacitive load
- Well behaved; easy to apply

Applications

- Video amplifier
- Wide-bandwidth signal conditioning for image processing (FAX, scanners, laser printers)
- Hard disk drive preamplifier
- Error amplifier for high-speed switching regulator

LM6164/LM6264/LM6364

High Speed Operational Amplifier

General Description

The LM6164 family of high-speed amplifiers exhibits an excellent speed-power product in delivering 300V per μ s and 175 MHz GBW (stable down to gains as low as +5) with only 5 mA of supply current. Further power savings and application convenience are possible by taking advantage of the wide dynamic range in operating supply voltage which extends all the way down to +5V.

These amplifiers are built with National's VIP™ (Vertically Integrated PNP) process which produces fast PNP transistors that are true complements to the already fast NPN devices. This advanced junction-isolated process delivers high speed performance without the need for complex and expensive dielectric isolation.

Features

- High slew rate: 300 V/ μ s
- High GBW product: 175 MHz
- Low supply current: 5 mA
- Fast settling: 100 ns to 0.1%
- Low differential gain: <0.1%
- Low differential phase: <0.1°
- Wide supply range: 4.75V to 32V
- Stable with unlimited capacitive load

Applications

- Video amplifier
- Wide-bandwidth signal conditioning
- Radar
- Sonar

LM6165/LM6265/LM6365 High Speed Operational Amplifier

General Description

The LM6165 family of high-speed amplifiers exhibits an excellent speed-power product in delivering 300 V/ μ s and 725 MHz GBW (stable for gains as low as +25) with only 5 mA of supply current. Further power savings and application convenience are possible by taking advantage of the wide dynamic range in operating supply voltage which extends all the way down to +5V.

These amplifiers are built with National's VIP™ (Vertically Integrated PNP) process which produces fast PNP transistors that are true complements to the already fast NPN devices. This advanced junction-isolated process delivers high speed performance without the need for complex and expensive dielectric isolation.

Features

- High slew rate: 300 V/ μ s
- High GBW product: 725 MHz
- Low supply current: 5 mA
- Fast settling: 80 ns to 0.1%
- Low differential gain: <0.1%
- Low differential phase: <0.1°
- Wide supply range: 4.75V to 32V
- Stable with unlimited capacitive load

Applications

- Video amplifier
- Wide-bandwidth signal conditioning
- Radar
- Sonar

LM6171

High Speed Low Power Low Distortion Voltage Feedback Amplifier

General Description

The LM6171 is a high speed unity-gain stable voltage feedback amplifier. It offers a high slew rate of 3600V/ μ s and a unity-gain bandwidth of 100 MHz while consuming only 2.5 mA of supply current. The LM6171 has very impressive AC and DC performance which is a great benefit for high speed signal processing and video applications.

The ± 15 V power supplies allow for large signal swings and give greater dynamic range and signal-to-noise ratio. The LM6171 has high output current drive, low SFDR and THD, ideal for ADC/DAC systems. The LM6171 is specified for ± 5 V operation for portable applications.

The LM6171 is built on National's advanced VIP™ III (Vertically Integrated PNP) complementary bipolar process.

Features

(Typical Unless Otherwise Noted)

- Easy-To-Use Voltage Feedback Topology
- Very High Slew Rate: 3600V/ μ s
- Wide Unity-Gain-Bandwidth Product: 100 MHz
- -3 dB Frequency @ $A_V = +2$: 62 MHz
- Low Supply Current: 2.5 mA
- High CMRR: 110 dB
- High Open Loop Gain: 90 dB
- Specified for ± 15 V and ± 5 V Operation

Applications

- Multimedia Broadcast Systems
- Line Drivers, Switchers
- Video Amplifiers
- NTSC, PAL® and SECAM Systems
- ADC/DAC Buffers
- HDTV Amplifiers
- Pulse Amplifiers and Peak Detectors
- Instrumentation Amplifier
- Active Filters

Typical Performance Characteristics

Closed Loop Frequency Response vs Supply Voltage ($A_V = +1$)

Large Signal Pulse Response
 $A_V = +1, V_S = \pm 15$

LM6172

Dual High Speed, Low Power, Low Distortion, Voltage Feedback Amplifiers

General Description

The LM6172 is a dual high speed voltage feedback amplifier. It is unity-gain stable and provides excellent DC and AC performance. With 100 MHz unity-gain bandwidth, 3000V/ μ s slew rate and 50 mA of output current per channel, the LM6172 offers high performance in dual amplifiers; yet it only consumes 2.3 mA of supply current each channel.

The LM6172 operates on ± 15 V power supply for systems requiring large voltage swings, such as ADSL, scanners and ultrasound equipment. It is also specified at ± 5 V power supply for low voltage applications such as portable video systems.

The LM6172 is built with National's advanced VIP™ III (Vertically Integrated PNP) complementary bipolar process. See the LM6171 datasheet for a single amplifier with these same features.

Features

(Typical Unless Otherwise Noted)

- Easy to Use Voltage Feedback Topology
- High Slew Rate 3000V/ μ s
- Wide Unity-Gain Bandwidth 100 MHz
- Low Supply Current 2.3 mA/Channel
- High Output Current 50 mA/channel
- Specified for ± 15 V and ± 5 V Operation

Applications

- Scanner I-to-V Converters
- ADSL/HDSL Drivers
- Multimedia Broadcast Systems
- Video Amplifiers
- NTSC, PAL® and SECAM Systems
- ADC/DAC Buffers
- Pulse Amplifiers and Peak Detectors

LM6181

100 mA, 100 MHz Current Feedback Amplifier

General Description

The LM6181 current-feedback amplifier offers an unparalleled combination of bandwidth, slew-rate, and output current. The amplifier can directly drive up to 100 pF capacitive loads without oscillating and a 10V signal into a 50Ω or 75Ω back-terminated coax cable system over the full industrial temperature range. This represents a radical enhancement in output drive capability for an 8-pin DIP high-speed amplifier making it ideal for video applications.

Built on National's advanced high-speed VIP™ II (Vertically Integrated PNP) process, the LM6181 employs current-feedback providing bandwidth that does not vary dramatically with gain; 100 MHz at $A_v = -1$, 60 MHz at $A_v = -10$. With a slew rate of 2000V/μs, 2nd harmonic distortion of -50 dBc at 10 MHz and settling time of 50 ns (0.1%) the LM6181 dynamic performance makes it ideal for data acquisition, high speed ATE, and precision pulse amplifier applications.

Features

(Typical unless otherwise noted)

- Slew rate: 2000 V/μs
- Settling time (0.1%): 50 ns
- Characterized for supply ranges: ±5V and ±15V
- Low differential gain and phase error: 0.05%, 0.04°
- High output drive: ±10V into 100Ω
- Guaranteed bandwidth and slew rate
- Improved performance over EL2020, OP160, AD844, LT1223 and HA5004

Applications

- Coax cable driver
- Video amplifier
- Flash ADC buffer
- High frequency filter
- Scanner and Imaging systems

Typical Application

Cable Driver

DS011328-1

DS011328-2

LM6182

Dual 100 mA Output, 100 MHz Current Feedback Amplifier

General Description

The LM6182 dual current feedback amplifier offers an unparalleled combination of bandwidth, slew-rate, and output current. Each amplifier can directly drive a 2V signal into a 50Ω or 75Ω back-terminated coax cable system over the full industrial temperature range. This represents a radical enhancement in output drive capability for a dual 8-pin high-speed amplifier making it ideal for video applications.

Built on National's advanced high-speed VIP II™ (Vertically Integrated PNP) process, the LM6182 employs current-feedback providing bandwidth that does not vary dramatically with gain; 100 MHz at $A_v = -1$, 60 MHz at $A_v = -10$. With a slew rate of 2000 V/μsec, 2nd harmonic distortion of -50 dBc at 10 MHz and settling time of 50 ns (0.1%), the two independent amplifiers of the LM6182 offer performance that is ideal for data acquisition, high-speed ATE, and precision pulse amplifier applications.

See the LM6181 data sheet for a single amplifier with these same features.

Features

(Typical unless otherwise noted)

- Slew Rate: 2000 V/μs
- Closed Loop Bandwidth: 100 MHz
- Settling Time (0.1%): 50 ns
- Low Differential Gain and Phase Error: 0.05%, 0.04°
 $R_L = 150\Omega$
- Low Offset Voltage: 2 mV
- High Output Drive: $\pm 10V$ into 150Ω
- Characterized for Supply Ranges: $\pm 5V$ and $\pm 15V$
- Improved Performance over OP260 and LT1229

Applications

- Coax Cable Driver
- Professional Studio Video Equipment
- Flash ADC Buffer
- PC and Workstation Video Boards
- Facsimile and Imaging Systems

Typical Application

LM7121

235 MHz Tiny Low Power Voltage Feedback Amplifier

General Description

The LM7121 is a high performance operational amplifier which addresses the increasing AC performance needs of video and imaging applications, and the size and power constraints of portable applications.

The LM7121 can operate over a wide dynamic range of supply voltages, from 5V (single supply) up to $\pm 15V$ (see the Application Information section for more details). It offers an excellent speed-power product delivering 1300V/ μs and 235 MHz Bandwidth (-3 dB, $A_v = +1$). Another key feature of this operational amplifier is stability while driving unlimited capacitive loads.

Due to its Tiny SOT23-5 package, the LM7121 is ideal for designs where space and weight are the critical parameters. The benefits of the Tiny package are evident in small portable electronic devices, such as cameras, and PC video cards. Tiny amplifiers are so small that they can be placed anywhere on a board close to the signal source or near the input to an A/D converter.

Features

(Typical unless otherwise noted) $V_S = \pm 15V$

- Easy to use voltage feedback topology
- Stable with unlimited capacitive loads
- Tiny SOT23-5 package—typical circuit layout takes half the space of SO-8 designs
- Unity gain frequency: 175 MHz
- Bandwidth (-3 dB, $A_v = +1$, $R_L = 100\Omega$): 235 MHz
- Slew rate: 1300V/ μs
- Supply Voltages SO-8: 5V to $\pm 15V$
SOT23-5: 5V to $\pm 5V$
- Characterized for: $+5V$, $\pm 5V$, $\pm 15V$
- Low supply current: 5.3 mA

Applications

- Scanners, color fax, digital copiers
- PC video cards
- Cable drivers
- Digital cameras
- ADC/DAC buffers
- Set-top boxes

LM7131

Tiny High Speed Single Supply Operational Amplifier

General Description

The LM7131 is a high speed bipolar operational amplifier available in a tiny SOT23-5 package. This makes the LM7131 ideal for space and weight critical designs. Single supply voltages of 3V and 5V provides good video performance, wide bandwidth, low distortion, and high PSRR and CMRR. This makes the amplifier an excellent choice for desktop and portable video and computing applications. The amplifier is supplied in surface mount 8-pin and tiny SOT23-5 packages.

Tiny amplifiers are so small they can be placed anywhere on a board close to the signal source or next to an A-to-D input. Good high speed performance at low voltage makes the LM7131 a preferred part for battery powered designs.

Features

- Tiny SOT23-5 package saves space-typical circuit layouts take half the space of SO-8 designs.

- Guaranteed specs at 3V, 5V, and $\pm 5V$ supplies
- Typical supply current 7.0 mA at 5V, 6.5 mA at 3V
- 4V output swing with +5V single supply
- Typical total harmonic distortion of 0.1% at 4 MHz
- 70 MHz Gain-Bandwidth Product
- 90 MHz -3 dB bandwidth at 3V and 5V, Gain = +1
- Designed to drive popular video A/D converters
- 40 mA output can drive 50 Ω loads
- Differential gain and phase 0.25% and 0.75° at $A_v = +2$

Applications

- Driving video A/D converters
- Video output for portable computers and PDAs
- Desktop teleconferencing
- High fidelity digital audio
- Video cards

LM7171

Very High Speed, High Output Current, Voltage Feedback Amplifier

General Description

The LM7171 is a high speed voltage feedback amplifier that has the slewing characteristic of a current feedback amplifier; yet it can be used in all traditional voltage feedback amplifier configurations. The LM7171 is stable for gains as low as +2 or -1. It provides a very high slew rate at 4100V/ μ s and a wide unity-gain bandwidth of 200 MHz while consuming only 6.5 mA of supply current. It is ideal for video and high speed signal processing applications such as HDSL and pulse amplifiers. With 100 mA output current, the LM7171 can be used for video distribution, as a transformer driver or as a laser diode driver.

Operation on ± 15 V power supplies allows for large signal swings and provides greater dynamic range and signal-to-noise ratio. The LM7171 offers low SFDR and THD, ideal for ADC/DAC systems. In addition, the LM7171 is specified for ± 5 V operation for portable applications.

The LM7171 is built on National's advanced VIP™ III (Vertically integrated PNP) complementary bipolar process.

Features

(Typical Unless Otherwise Noted)

- Easy-To-Use Voltage Feedback Topology
- Very High Slew Rate: 4100V/ μ s
- Wide Unity-Gain Bandwidth: 200 MHz
- -3 dB Frequency @ $A_V = +2$: 220 MHz
- Low Supply Current: 6.5 mA
- High Open Loop Gain: 85 dB
- High Output Current: 100 mA
- Differential Gain and Phase: 0.01%, 0.02°
- Specified for ± 15 V and ± 5 V Operation

Applications

- HDSL and ADSL Drivers
- Multimedia Broadcast Systems
- Professional Video Cameras
- Video Amplifiers
- Copiers/Scanners/Fax
- HDTV Amplifiers
- Pulse Amplifiers and Peak Detectors
- CATV/Fiber Optics Signal Processing

Typical Performance

Large Signal Pulse Response

The 8-Bit COP8™ Family: Optimized for Value

CPU/Instruction Set Features

- 10 MHz, 15 MHz or 20 MHz from 10 MHz oscillator
- 0.5, 0.67, or 1 μ s instruction cycle time
- Up to 14 multi-sourced vectored interrupt servicing each interrupt source with independent vector
- Versatile and easy to use instruction set
- 8-bit stack pointer (SP)—(Stack in RAM)
- Two 8-bit register indirect memory pointers (B,X)
- High code efficiency with majority of instructions being single byte/single cycle (77%)
- True bit manipulation
- BCD arithmetic instructions

Peripheral Features (Vary by Device)

- On-chip Flash up to 32 kbytes
- On-chip ROM from 768 bytes to 32 kbytes
- On-chip OTP EPROM up to 32 kbytes
- On-chip RAM from 64 to 1 kbytes
- On-chip EEPROM up to 512 bytes
- Virtual EEPROM on Flash devices
- Up to three 16-bit multi-function timers, each with two 16-bit registers supporting
 - Processor independent PWM mode
 - External event counter mode
 - Input capture mode
- Idle timer
- Multi-Input Wakeup (up to 8 wakeup pins) with optional interrupts (8)
- Full duplex USART
- CAN interface
- A/D (8 or 10 bit)
- Analog function block with single-scope A/D capability
- Analog comparators
- WATCHDOG™ and clock monitor logic

- MICROWIRE/PLUS™ serial I/O
- Brown out detection
- Power-On-Reset
- Multiply/Divide function

I/O Features

- Memory mapped I/O
- Software selectable I/O
 - TRI-STATE® outputs
 - Push-Pull outputs
 - Weak Pull-Up input
 - High impedance input
- Schmitt trigger inputs
- High current outputs
- Pin efficient (i.e., 40 pins in 44-pin package are devoted to useful I/O)
- Packing:
 - 16 to 68 pins
 - SOIC, DIP, PLCC, and QFP
 - Chip-Scale and μ SMD

Fully Static CMOS

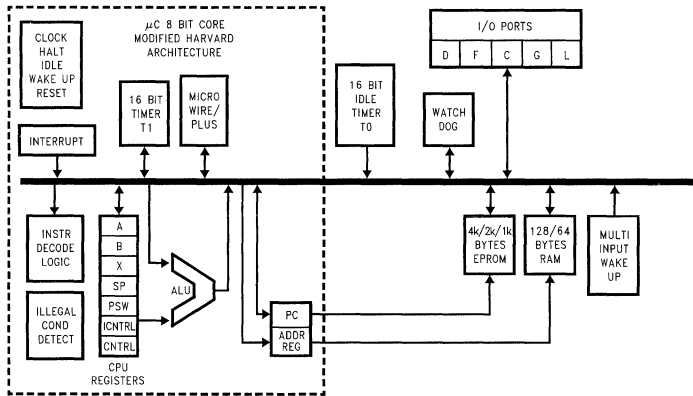

- Low current drain (typically < 1 μ A in HALT)
- Two power saving modes: HALT and IDLE
- Single supply operation: 2.3V to 6.0V
- Temperature ranges: 0°C to +70°C, -40°C to +85°C, and -55°C to +125°C

Development Support

- Eraseable, OTP and Flash devices
- Real time emulation and full program debug offered by MetaLink Development System

Development Support (Continued)

Embedded Control: Practical Solutions to Real Problems

Microcontrollers have played an important role in the semiconductor industry for quite some time. Unlike microprocessors, which typically address a range of more computation intensive, general purpose applications, microcontrollers are based on a central processing unit, data memory and input/output circuitry that are designed primarily for specific, single function applications.

During the 1970s, microcontrollers were initially used in simple applications such as calculators and digital watches, but the combination of decreasing costs and increasing integration and performance has created many new application opportunities over the years. Even as the bulk of application growth occurs in the 8-bit arena, the same issues that system designers were concerned with in the 4-bit world continue in force today. These include cost/performance tradeoffs, low power and low voltage capabilities, time to market, space/pin efficiency, and ease of design.

- **Cost/Performance.** A price difference of just a few pennies can be the gating factor in today's 8-bit design decisions. Manufacturers must offer a wide range of cost/performance options in order to meet customer demands.
- **Low Power and Low Voltage.** The increasing range of mobile and/or battery-powered applications is placing a premium on low-power, low-voltage, CMOS and BiCMOS embedded control solutions.
- **Time to Market.** The microcontroller's architecture, functionality, and feature set have a major influence on product design cycles in today's competitive market, with its shrinking windows of opportunity.
- **Space/Pin Efficiency.** Real estate and board configuration considerations demand maximum space and I/O pin efficiency, particularly given today's high integration and small product form factors.
- **Ease of Design.** A familiar and easy to use application design environment—including complete development tool support—is one of the driving factors affecting today's 8-bit microcontroller design decisions.

All of these issues must be considered when searching for the appropriate 8-bit microcontroller to meet specific application needs.

National Semiconductor has been a prominent player in the worldwide microcontroller market, and its COP8 family of products spans today's range of applications, providing customers with a wealth of options at every price/performance point in the 8-bit microcontroller market.

Designers can select from a variety of building blocks centered around a common memory-mapped core and modified Harvard architecture. These building blocks include ROM, RAM, user programmable memory, USART, comparator, A/D, and I/O functions.

The COP8 family incorporates 0.5/0.67/1 μ s instruction cycle times, WATCHDOG and clock monitors, multi-input wake up circuitry and National's MICROWIRE/PLUS interface. In addition, National's COP8 microcontrollers are available in a wide variety of temperature range configurations from -55°C through $+125^{\circ}\text{C}$ —optimizing them for rugged industrial and military applications.

COP8 Benefits

The COP8 family provides designers with a number of features that result in substantial benefits. These include a code-efficient instruction set, low power/voltage features, efficient I/O, a flexible and configurable design methodology, robust design tools, and electromagnetic interference (EMI) control.

The COP8 family's compact, efficient and easy-to-program instruction set enables designers to reduce time to market for their products. Thanks to the instruction set, efficient ROM utilization lowers costs while providing the opportunity to integrate additional functionality on-chip. Low voltage operation, low current drain, multi-input wakeup and several power saving modes reduce power consumption for today's increasing range of handheld, battery-driven applications. An array of user-friendly development tools—including hardware from MetaLink, and state-of-the-industry assemblers, and C compilers help design engineers save valuable development time.

National's Configurable Controller Methodology (CCM) for the COP8 family creates "whole products" that are bug-free, fully tested and characterized, and supported by a range of documentation and hardware/software tools. National devel-

COP8 Benefits (Continued)

oped CCM because the majority of customer requests for new products have typically called for reconfigurations of existing proven blocks—such as RAM, ROM, timers, comparators, USARTs, and I/O.

EMI Reduction Technology

COP8 products incorporate circuitry that guards against electromagnetic interference—an increasing problem in today's microcontroller board designs. National's patented EMI reduction technology offers low EMI clock circuitry, EMI-optimized pinouts, gradual turn-on outputs (GTO), and on-chip choke device to help customers circumvent many of the EMI issues influencing embedded control designs.

In-System Programming And Virtual EEPROM

The Flash based devices include a program in a boot ROM that provides the capability, through the MICROWIRE/PLUS serial interface, to erase, program and read the contents of the Flash memory.

Additional routines are included in the boot ROM, which can be called by the user program, to enable the user to customize the in system software update capability if MICROWIRE/PLUS is not desired.

Additional functions will copy blocks of data between the RAM and the Flash Memory. These functions provide a virtual EEPROM capability by allowing the user to emulate a variable amount of EEPROM by initializing nonvolatile variables from the Flash Memory and occasionally restoring these variables to the Flash Memory.

The contents of the boot ROM have been defined by National. Execution of code from the boot ROM is dependent on the state of the FLEX bit in the Option Register on exit from RESET. If the FLEX bit is a zero, the Flash Memory is assumed to be empty and execution from the boot ROM begins.

Dual Clock And Clock Doubler

Some devices include a versatile clocking system and two oscillator circuits designed to drive a crystal or ceramic resonator. The primary oscillator operates at high speed up to 10 MHz. The secondary oscillator is optimized for operation at 32.768 kHz.

The user can, through specified transition sequences, switch execution between the high speed and low speed oscillators. The unused oscillator can then be turned off to minimize power dissipation. If the low speed oscillator is not used, the pins are available as general purpose bidirectional ports.

The operation of the CPU will use a clock at twice the frequency of the selected oscillator (up to 20 MHz for high speed operation and 65.536 kHz for low speed operation).

True In-System Emulation

On-chip emulation capability has been added to Flash based devices which allows the user to perform true in-system emulation using final production boards and devices. This simplifies testing and evaluation of software in real environmental conditions. The user, merely by providing for a standard connector which can be bypassed by jumpers on the final application board, can provide for software and hardware debugging using actual production units.

Core Architecture

All COP8 devices use a modified Harvard architecture, which means that program memory and data memory are accessed separately using independent address/data buses. This type of architecture offers the advantage of faster operation because the next instruction can be fetched from program memory while the current data memory transfer operation is carried out. The COP8 architecture is a "modified" Harvard version because data tables can be accessed from program memory by using a special instruction, Load Accumulator Indirect (LAID).

The core CPU has an 8-bit accumulator (A), a 15-bit program counter (PC), two 8-bit data pointers (B and X), an 8-bit stack pointer (SP), an 8-bit processor status word (PSW), an 8-bit control register (CNTRL), and a bank of general-purpose 8-bit registers. All RAM, I/O ports, and registers (except for the accumulator and program counter) are mapped into the data memory address space.

The COP8 device communicates with other devices through several configurable I/O ports or through the MICROWIRE/PLUS serial I/O interface. The I/O ports are designated by letter names such as Port C, Port D, Port G, Port I, and Port L. The number of ports and port pins vary with the device type and package type.

All COP8 devices have at least one 16-bit, general-purpose timer that can be programmed to operate in any of three modes: Pulse Width Modulation (PWM), external event counter, or input capture mode. Many COP8 devices have two or more of these timers and/or special-purpose timers such as the IDLE mode timer.

Peripheral Blocks

Several different on-chip peripheral devices are available in different COP8 devices, with multiple peripherals available in some versions of COP8 devices. Some of the peripheral blocks available are:

- Comparator
- Analog-to-Digital Converter
- Universal Synchronous/Asynchronous Receiver/Transmitter (USART)
- Controller Area Network (CAN) Interface
- Hardware Multiply/Divide

Typically, the inputs and outputs of the peripherals are "alternate functions" of the programmable I/O ports of the COP8 device. In other words, the port pins can be programmed to operate as general-purpose inputs and outputs or as special-purpose inputs and outputs for the supported peripheral device.

Instruction Set

The COP8 offers a powerful and efficient instruction set. Most instructions are one byte long and take one instruction cycle to execute, resulting in compact, efficient programs. Several single-byte instructions are available that carry out multiple operations. For example, the single-byte DRSZ instruction decrements a specified register and skips the next instruction if the result is zero.

The instruction set offers a variety of addressing modes. For reading or writing data, the device offers the following addressing modes: direct, register B or X indirect, register B or X indirect with post-incrementing/decrementing, immediate, immediate short, and indirect from program memory. For

Instruction Set (Continued)

transfer of program control, the device offers the following addressing modes: jump relative, jump absolute, jump absolute long, and jump indirect.

The COP8 allows any individual bit in data memory address space to be set, reset, and tested, including bits in the memory-mapped I/O ports and registers.

COP8 Families

The COP8 line of 8-bit microcontrollers is divided into two families called the "Basic Core" and "Feature Core." The Basic Core devices are for lower-end, lower-cost applications that require less memory and simpler peripheral devices; whereas the Feature Core devices are for applications that require more memory and more-advanced peripheral devices. However, both families share the same basic architecture and basic instruction set.

Basic Core devices have from 768 bytes to 4k bytes of ROM, EPROM or Flash and 64 or 128 bytes of RAM; and one 16-bit timer. A HALT mode is available to shut down the device during periods of inactivity. Devices typically have 20 or 28 pins. Simple peripheral devices such as a comparator are offered in the family.

Feature Core devices have from 2k to 32 kbytes of ROM and 128 to 1 kbytes of RAM; and at least two 16-bit timers. The Feature instruction set offers nine additional instructions to support vectored interrupts, pushing/popping the stack, and additional types of logic operations. In addition to the HALT mode, another power-down mode is available called the IDLE mode, which allows certain time-monitoring sections to operate while the rest of the device is shut down. All Feature Core devices offer Multi-Input Wakeup, which provides separate inputs for edge-triggered maskable interrupts or for exiting from the HALT or IDLE mode. Devices typically have 28, 40, or 44 pins. Advanced peripheral devices such as an A/D Converter, USART, and/or CAN Interface are offered in the family.

One-Time Programmable (OTP) Devices

All COP8 devices are supported by One-Time Programmable (OTP) devices of the same or increased capability. OTP devices are field-programmable using standard programming equipment. They are useful not only for prototypes and limited-production runs, but for the shortest time to market and for the ability to quickly make revisions or correct bugs, OTP COP8 devices offer an attractive choice for final production.

OTP COP8 devices offer low-voltage operation and program memory security. Security is achieved by programming a bit in the device that makes the program memory unreadable from outside the chip.

COP8SAx7, and COP8SGx7 OTP Devices

Recent additions to the COP8 Feature Family are the COP8SAx7 and COP8SGx7 OTP devices: the COP8SAA7, COP8SAB7, COP8SAC7, COP8SGE7, and COP8SGR7.

These devices offer an unusual combination of OTP memory, low price, and a rich set of features:

- Low cost 8-bit OTP microcontroller
- Very small packaging

- Quiet Design (low radiated emissions)
- Multi-Input Wakeup pins with optional interrupts
- 1k to 32k OTP program memory
- 8 bytes of user storage space in EPROM
- User selectable clock options
- Zero external component operation
- Internal Power-On Reset—user selectable
- WATCHDOG and Clock Monitor Logic—user selectable
- Up to 12 high current outputs

ROM Products

COP912C

8-Bit Microcontroller

General Description

Note: COP8SA devices are instruction set and pinout compatible supersets of the COP912C devices, and are replacements for these in new designs when possible.

The COP912C ROM based microcontrollers are integrated COP8(tm) Base core devices with smaller memory (768 bytes), and fewer on-board features. These single-chip CMOS devices are suited for lower-functionality applications where system cost is of prime consideration. Pin and software compatible (different Vcc range) 4k/32k OTP versions are available (COP87LxxCJ/RJ Family). Erasable windowed versions are available for use with a range of COP8(tm) software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10MHz CKI with 2.5us(912C) or 2us(912CH) instruction cycle, one multi-function 16-bit timer/counter with PWM, MICROWIRE/PLUS(tm) serial I/O, power saving HALT mode, three clock modes, high current outputs, software selectable I/O options, multi-volt operation and 20 pin packages.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature	Comments
COP912C	768 ROM	64	16	20 DIP/SOIC	0 to +70°C	2.3v - 4.0v
COP912CH	768ROM	64	16	20 DIP/SOIC	0 to +70°C	4.0v - 5.5v

Key Features

- Lowest cost COP8 microcontroller
- 16-bit multi-function timer supporting
 - PWM mode
 - External event counter mode
 - Input capture mode
- 768 bytes of ROM
- 64 bytes of RAM

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE® Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- Schmitt trigger inputs on Port G
- MICROWIRE/PLUS™ Serial I/O
- Packages: 20 DIP/SO with 16 I/O pins

CPU/Instruction Set Features

- Instruction cycle time of 2 μ s for COP912CH and 2.5 μ s for COP912C
- Three multi-sourced interrupts servicing
 - External Interrupt with selectable edge
 - Timer interrupt
 - Software interrupt

- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Memory Pointers (B, X)

Fully Static CMOS

- Low current drain (typically < 1 μ A)
- Single supply operation: 2.3V to 4.0V or 4.0V to 5.5V
- Temperature range: 0°C to +70°C

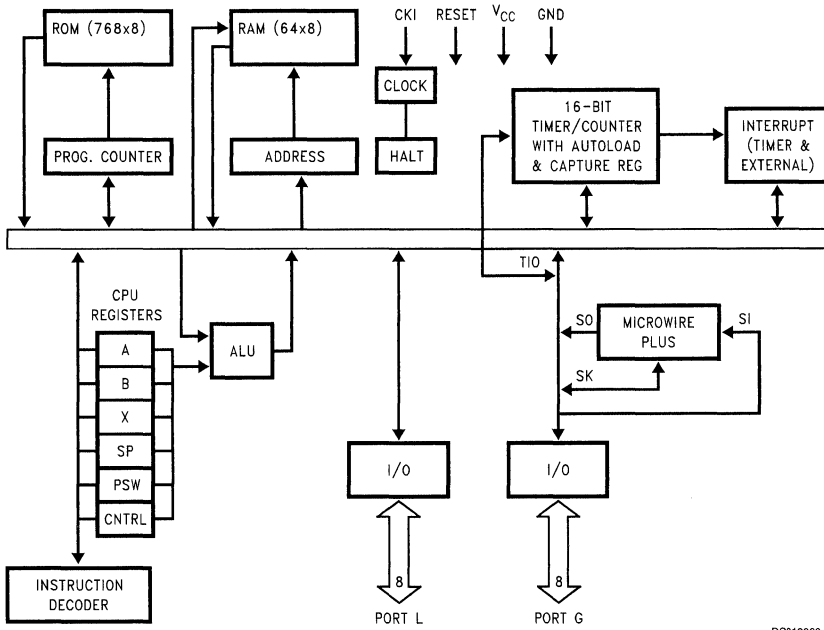

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink Development System

Applications

- Electronic keys and switches
- Remote Control
- Timers
- Alarms
- Small industrial control units
- Low cost slave controllers
- Temperature meters
- Small domestic appliances
- Toys and games

COP820C/840C Family

8-Bit CMOS ROM Based Microcontrollers with 1k or 2k Memory

General Description

Note: COP8SA devices are instruction set and pinout compatible supersets of the COP800C Family devices, and are replacements for these in new designs when possible.

The COP820C/840C Family ROM based microcontrollers are integrated COP8™ Base core devices with smaller memory (1k/2k), and fewer on-board features. These single-chip CMOS devices are suited for lower-functionality applications where system cost is of prime consideration. Pin and software compatible (different V_{CC} range) 4k/32k OTP ver-

sions are available (COP87LxxCJ/RJ Family). Erasable windowed versions are available for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 Hz CKI with 1 μ s instruction cycle, one multi-function 16-bit timer/counter with PWM, MICROWIRE/PLUS™ serial I/O, power saving HALT mode, three clock modes, high current outputs, software selectable I/O options, 2.3v-6.0v operation and 20/28 pin packages.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature	Comments
COP620C	1k ROM	64	24	28 DIP/SOIC	-55 to +125°C	4.5v - 5.5v
COP820C	1k ROM	64	24	28 DIP/SOIC	-40 to +85°C	
COP920C	1k ROM	64	24	28 DIP/SOIC	0 to +70°C	2.3v-4.0v, CH=4.0v-6.0v
COP622C	1k ROM	64	16	20 DIP/SOIC	-55 to +125°C	4.5v - 5.5v
COP822C	1k ROM	64	16	20 DIP/SOIC	-40 to +85°C	
COP922C	1k ROM	64	16	20 DIP/SOIC	0 to +70°C	2.3v-4.0v, CH=4.0v-6.0v
COP640C	2k ROM	128	24	28 DIP/SOIC	-55 to +125°C	4.5v - 5.5v
COP840C	2k ROM	128	24	28 DIP/SOIC	-40 to +85°C	
COP940C	2k ROM	128	24	28 DIP/SOIC	0 to +70°C	2.3v-4.0v, CH=4.0v-6.0v
COP642C	2k ROM	128	16	20 DIP/SOIC	-55 to +125°C	4.5v - 5.5v
COP842C	2k ROM	128	16	20 DIP/SOIC	-40 to +85°C	
COP942C	2k ROM	128	16	20 DIP/SOIC	0 to +70°C	2.3v-4.0v, CH=4.0v-6.0v

Key Features

- 16-bit multi-function timer supporting
 - PWM mode
 - External event counter mode
 - Input capture mode
- 1024 bytes ROM/64 bytes RAM-COP820C
- 2048 bytes ROM/128 bytes RAM-COP840C

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE® Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- High current outputs
- Schmitt trigger inputs on Port G
- MICROWIRE/PLUS serial I/O
- Packages:
 - 20 DIP/SO with 16 I/O pins

— 28 DIP/SO with 24 I/O pins

CPU/Instruction Set Feature

- 1 μ s instruction cycle time
- Three multi-source interrupts servicing
 - External interrupt with selectable edge
 - Timer interrupt
 - Software interrupt
- Versatile and easy to use instruction set
- 8-bit Stack point (SP)—stack in RAM
- Two 8-bit Register Indirect Memory Pointers (B, X)

Fully Static CMOS

- Low current drain (typically < 1 μ A)
- Single supply operation: 2.5V to 6.0V
- Temperature range: 0°C to +70°C, -40°C to +85°C, -55°C to +125°C

Fully Static CMOS (Continued)

- Real time emulation and full program debug offered by MetaLink's Development System

Development Support

- Emulation and OTP devices

COP680C/COP681C/COP682C/COP880C/COP881C/ COP882C/COP980C/COP981C/COP982C

Microcontrollers

General Description

The COP680C/COP681C/COP682C/COP880C/COP881C/COP882C/COP980C/COP981C and COP982C are members of the COPS™ microcontroller family. They are fully static parts, fabricated using double-metal silicon gate microCMOS technology. This low cost microcontroller is a complete microcomputer containing all system timing, interrupt logic, ROM, RAM, and I/O necessary to implement dedicated control functions in a variety of applications. Features include an 8-bit memory mapped architecture, MICROWIRE/PLUS™ serial I/O, a 16-bit timer/counter with capture register and a multi-sourced interrupt. Each I/O pin has software selectable options to adapt the device to the specific application. The part operates over a voltage range of 2.5 to 6.0V. High throughput is achieved with an efficient, regular instruction set operating at a 1 microsecond per instruction rate.

Key Features

- — 16-bit multi-function timer supporting
 - PWM mode
 - External event counter mode
 - Input capture mode
- 4 kbytes of ROM
- 128 bytes of RAM

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE®, Push-Pull, Weak Pull-Up Input, High Impedance Input)
- High current outputs (8 pins)

- Schmitt trigger inputs on Port G
- MICROWIRE PLUS serial I/O
- Packages:
 - 20 DIP/SO with 16 I/O pins
 - 28 DIP/SO with 24 I/O pins
 - 40 DIP, 36 I/O pins
 - 44 PLCC, 36 I/O pins

CPU/Instruction Set Features

- 1 μ s instruction cycle time
- Three multi-source interrupts servicing
 - External interrupt with selectable edge
 - Timer interrupt
 - Software interrupt
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B and X)

Fully Static CMOS

- Low current drain (typically $< 1 \mu$ A)
- Single supply operation: 2.5V to 6.0V
- Temperature ranges: 0°C to 70°C, -40°C to +85°C, -55°C to +125°C.

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink's development system

COP820CJ/COP840CJ Family

8-Bit CMOS ROM Based Microcontrollers with 1k or 2k Memory, Comparator and Brown Out Detector

General Description

The COP820CJ/840CJ Family ROM based microcontrollers are integrated COP8™ Base core devices with 1k or 2k memory, an Analog comparator and Brownout detection. These single-chip CMOS devices are suited for lower-functionality applications where power and voltage fluctuations are a consideration. Pin and software compatible (no Brownout; different Vcc range) 4k/32k OTP versions are available (COP87LxxCJ/RJ Family) for pre-production, and for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10MHz CKI with 1us instruction cycle, one multi-function 16-bit timer/counter, MICROWIRE/PLUS™ serial I/O, one analog comparator, power saving HALT mode, MIWU, on-chip R/C oscillator capacitor (COP840CJ), high current outputs, software selectable I/O options, WATCHDOG™ timer, modulator/timer, Brownout detector, Power on Reset, 2.5v-6.0v operation, and 16/20/28 pin packages.

In this datasheet, the term COP820CJ refers to packages including the COP820CJ, COP822CJ, and COP823CJ; and COP840CJ refers to COP840CJ, COP842CJ, COP940CJ, and COP942CJ.

Devices included in this data sheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature	Comments
COP820CJ	1k ROM	64	24	28 DIP/SOIC	-40 to +85°C	
COP822CJ	1k ROM	54	16	20 DIP/SOIC	-40 to +85°C	
COP823CJ	1k ROM	64	12	16 SOIC	-40 to +85°C	
COP840CJ	2k ROM	128	24	28 DIP/SOIC	-40 to +85°C	Low EMI
COP940CJ	2k ROM	128	24	28 DIP/SOIC	-0 to +70°C	2.5V-4.5V, CJH = 4V-6V
COP842CJ	2k ROM	128	16	20 DIP/SOIC	-40 to +85°C	
COP942CJ	2k ROM	128	16	20 DIP/SOIC	-0 to +70°C	2.5V-4.5V, CJH = 4V-6V

Key Features

- Multi-Input Wake Up (on the 8-bit Port L)
- Brown out detector
- Analog comparator
- Modulator/timer (High speed PWM for IR transmission)
- 16-bit multi-function timer supporting
 - PWM mode
 - External event counter mode
 - Input capture mode
- 1024 or 2048 bytes of ROM
- 64 or 128 bytes of RAM
- Quiet design (low radiated emissions)
- Integrated capacitor for the R/C oscillator for COP840CJ

- Schmitt trigger inputs on Port G
- MICROWIRE/PLUS serial I/O

CPU/Instruction Set Feature

- 1 μs instruction cycle time
- Three multi-source vectored interrupts servicing
 - External interrupt with selectable edge
 - Timer interrupt
 - Software interrupt
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit register indirect data memory pointers (B, X)

Fully Static CMOS

- Low current drain (typically < 1 μA)
- Single supply operation: 2.5V to 6.0V
- Temperature ranges: -0°C to +70°C and -40°C to +85°C

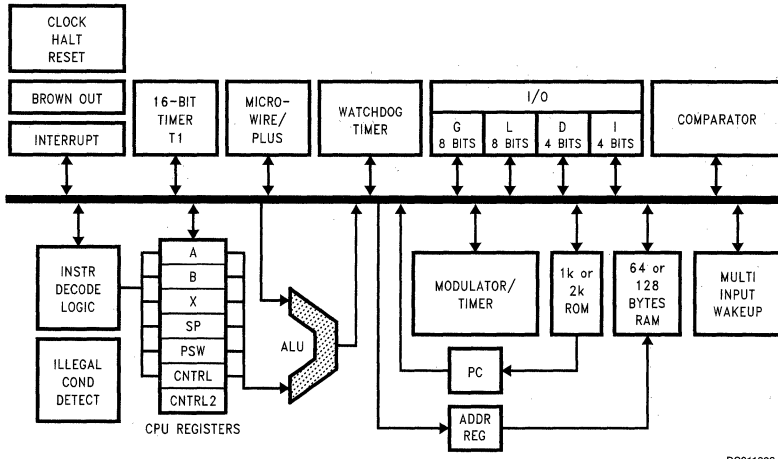

I/O Features

- Software selectable I/O options (TRI-STATE® output, push-pull output, weak pull-up input, high impedance input)
- High current outputs (8 pins)
- Packages
 - 16 SO with 12 I/O pins for COP820CJ
 - 20 DIP/SO with 16 I/O pins
 - 28 DIP/SO with 24 I/O pins

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink Development System

COP688CL/COP684CL, COP888CL/COP884CL, COP988CL/COP984CL 8-Bit Microcontroller

General Description

The COP888 family of microcontrollers uses an 8-bit single chip core architecture fabricated with National Semiconductor's M²CMOS™ process technology. The COP888CL is a member of this expandable 8-bit core processor family of microcontrollers.

It is a fully static part, fabricated using double-metal silicon gate microCMOS technology. Features include an 8-bit memory mapped architecture, MICROWIRE/PLUS serial I/O, two 16-bit timer/counters supporting three modes (Processor Independent PWM generation, External Event counter, and Input Capture mode capabilities), and two power savings modes (HALT and IDLE), both with a multi-sourced wakeup/interrupt capability. This multi-sourced interrupt capability may also be used independent of the HALT or IDLE modes. Each I/O pin has software selectable configurations. The device operates over a voltage range of 2.5V to 6V. High throughput is achieved with an efficient, regular instruction set operating at a maximum of 1 μ s per instruction rate.

Key Features

- Two 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- 4 kbytes of on-chip ROM
- 128 bytes of on-chip RAM

Additional Peripheral Features

- Idle Timer
- Multi-input Wake Up (MIWU) with optional interrupts (8)
- WATCHDOG™ and Clock Monitor logic
- MICROWIRE/PLUS™ serial I/O

I/O Features

- Memory mapped I/O

- Software selectable I/O options (TRI-STATE® Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- High current outputs
- Schmitt trigger inputs on port G
- Packages:
 - 44 PLCC with 40 I/O pins
 - 40 DIP with 36 I/O pins
 - 28 DIP with 24 I/O pins
 - 28 SO with 24 I/O pins

CPU/Instruction Set Feature

- 1 μ s instruction cycle time
- Ten multi-source vectored interrupts servicing
 - External Interrupt with selectable edge
 - Idle Timer T0
 - Timers (Each with 2 interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - Default VIS (default interrupt)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B, X)

Fully Static CMOS

- Low current drain (typically < 1 μ A)
- Single supply operation: 2.5V to 6.0V
- Temperature ranges: 0°C to +70°C, -40°C to +85°C, -55°C to +125°C

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink Development System

COP8SE Family

8-Bit CMOS ROM Based and OTP Microcontrollers with 4k Memory and 128 Bytes EERAM

General Description

The COP8SEx5 Family ROM based microcontrollers are highly integrated COP8™ Feature core devices with 4k memory and advanced features including EERAM. COP8SER7 devices are pin and software compatible (different V_{CC} range), 32k OTP (One Time Programmable) versions for engineering development use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI with 1 μ s instruction cycle, 128 bytes of EE-

RAM, one multi-function 16-bit timer/counter, idle timer with MIWU, MICROWIRE/PLUS™, serial I/O, crystal or R/C oscillator, two power saving HALT/IDLE modes, Schmitt trigger inputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, Low EMI 2.7V to 5.5V operation, and 16/20 pin packages.

Devices included in this data sheet are:

Device	OSC	Memory (bytes)	RAM (bytes)	EERAM	I/O Pins	Package	Temperature
COP8SEC5		4k ROM	128	128 bytes	12/16	16/20 SOIC	-40 to +85°C, -40 to +135°C
COP8SER7-XE	xtal	32k OTP EPROM	128	128 bytes	16	20 SOIC	-40 to +85°C, Engineering
COP8SER7-RE	R/C	32k OTP EPROM	128	128 bytes	16	20 SOIC	-use only

Key Features

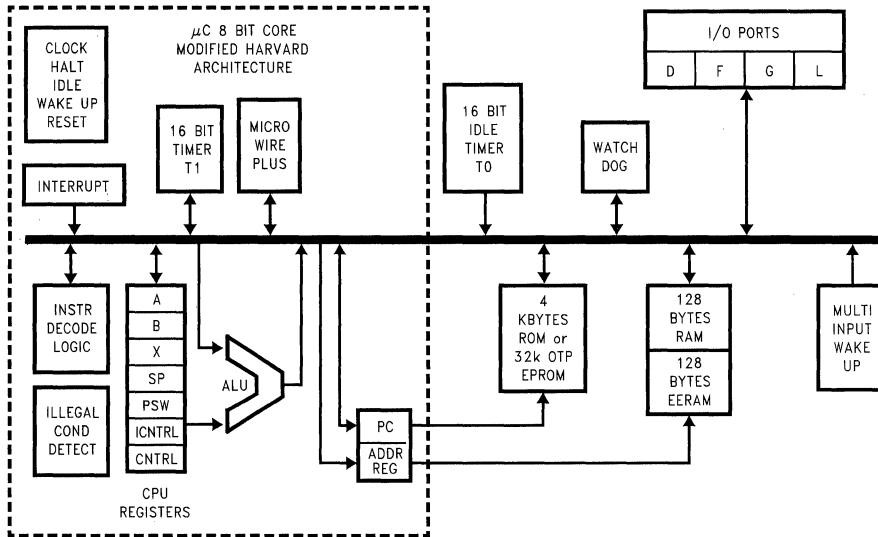

- 256 bytes data memory
 - 128 bytes RAM
 - 128 bytes EERAM
- OTP with security feature (SER7)
- Quiet Design (low radiated emissions)
- Multi-Input Wakeup pins with optional interrupts (8 pins)
- User selectable clock options:
 - R/C oscillator
 - Crystal oscillator

Other Features

- Fully static CMOS, with low current drain
- Available with Crystal (-XE) or RC (-RE) oscillator
- Two power saving modes: HALT and IDLE
- 1 μ s instruction cycle time
- 4k bytes on-board masked ROM or 32k bytes OTP
- Single supply operation: 2.7V — 5.5V
- MICROWIRE/PLUS Serial Peripheral Interface Compatible
- Nine multi-source vectored interrupts servicing
 - EERAM write complete
 - External interrupt
 - Idle Timer T0
 - One Timer (with 2 Interrupts)
 - MICROWIRE/PLUS Serial Interface
 - Multi-Input Wake Up

- Software Trap
- Default VIS
- Idle Timer with programmable interrupt interval
- One 16 bit timer with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- 8-bit Stack Pointer SP (stack in RAM)
- Two 8-bit Register Indirect Data Memory Pointers
- Versatile instruction set
- True bit manipulation
- Memory mapped I/O
- BCD arithmetic instructions
- WATCHDOG and Clock Monitor logic
- Software selectable I/O options:
 - TRI-STATE® Output:
 - Push-Pull Output
 - Weak Pull Up Input
 - High Impedance Input
- Schmitt trigger inputs on ports G and L
- Temperature ranges:
 - -40°C to +85°C
 - -40°C to +135°C (SEC5 only)
- Packaging: 16, and 20 SO (SEC5); 20 SO (SER7)
- Real time emulation and full program debug offered by MetaLink Development System

FIGURE 1. Block Diagram

1.0 Device Description

1.1 ARCHITECTURE

The COP8 family is based on a modified Harvard architecture, which allows data tables to be accessed directly from program memory. This is very important with modern microcontroller-based applications, since program memory is usually ROM or EPROM, while data memory is usually RAM. Consequently data tables need to be contained in non-volatile memory, so they are not lost when the microcontroller is powered down. Non-memory for the storage of data variables is provided by the EERAM in the COP8SEC5 and COP8SER7. In a Harvard architecture, instruction fetch and memory data transfers can be overlapped with a two stage pipeline, which allows the next instruction to be fetched from program memory while the current instruction is being executed using data memory. This is not possible with a Von Neumann single-address bus architecture.

The COP8 family supports a software stack scheme that allows the user to incorporate many subroutine calls. This capability is important when using High Level Languages. With a hardware stack, the user is limited to a small fixed number of stack levels.

1.2 INSTRUCTION SET

In today's 8-bit microcontroller application arena cost/performance, flexibility and time to market are several of the key issues that system designers face in attempting to build well-engineered products that compete in the marketplace. Many of these issues can be addressed through the manner in which a microcontroller's instruction set handles processing tasks. And that's why the COP8 family offers a unique and code-efficient instruction set—one that provides the flexibility, functionality, reduced costs and faster time to market that today's microcontroller based products require.

Code efficiency is important because it enables designers to pack more on-chip functionality into less program memory

space (ROM/OTP). Selecting a microcontroller with less program memory size translates into lower system costs, and the added security of knowing that more code can be packed into the available program memory space.

1.2.1 Key Instruction Set Features

The COP8 family incorporates a unique combination of instruction set features, which provide designers with optimum code efficiency and program memory utilization.

Single Byte/Single Cycle Code Execution

The efficiency is due to the fact that the majority of instructions are of the single byte variety, resulting in minimum program space. Because compact code does not occupy a substantial amount of program memory space, designers can integrate additional features and functionality into the microcontroller program memory space. Also, the majority instructions executed by the device are single cycle, resulting in minimum program execution time. In fact, 77% of the instructions are single byte single cycle, providing greater code and I/O efficiency, and faster code execution.

1.2.2 Many Single-Byte, Multifunction Instructions

The COP8 instruction set utilizes many single-byte, multifunction instructions. This enables a single instruction to accomplish multiple functions, such as DRSZ, DCOR, JID, LD (Load) and X (Exchange) instructions with post-incrementing and post-decrementing, to name just a few examples. In many cases, the instruction set can simultaneously execute as many as three functions with the same single-byte instruction.

JID: (Jump Indirect); Single byte instruction; decodes external events and jumps to corresponding service routines (analogous to "DO CASE" statements in higher level languages).

LAID: (Load Accumulator-Indirect); Single byte look up table instruction provides efficient data path from the program

1.0 Device Description (Continued)

memory to the CPU. This instruction can be used for table lookup and to read the entire program memory for checksum calculations.

RETSK: (Return Skip); Single byte instruction allows return from subroutine and skips next instruction. Decision to branch can be made in the subroutine itself, saving code.

AUTOINC/DEC: (Auto-Increment/Auto-Decrement); These instructions use the two memory pointers B and X to efficiently process a block of data (analogous to "FOR NEXT" in higher level languages).

1.2.3 Bit-Level Control

Bit-level control over many of the microcontroller's I/O ports provides a flexible means to ease layout concerns and save board space. All members of the COP8 family provide the ability to set, reset and test any individual bit in the data memory address space, including memory-mapped I/O ports and associated registers.

1.2.4 Register Set

Three memory-mapped pointers handle register indirect addressing and software stack pointer functions. The memory data pointers allow the option of post-incrementing or post-decrementing with the data movement instructions (LOAD/EXCHANGE). And 15 memory-mapped registers allow designers to optimize the precise implementation of certain specific instructions.

1.3 PACKAGING/PIN EFFICIENCY

Real estate and board configuration considerations demand maximum space and pin efficiency, particularly given today's high integration and small product form factors. Microcontroller users try to avoid using large packages to get the I/O needed. Large packages take valuable board space and increase device cost, two trade-offs that microcontroller designs can ill afford.

The COP8 family offers a wide range of packages and does not waste pins: up to 90.9% (or 40 pins in the 44-pin package, these packages are not available on all COP8 devices) are devoted to useful I/O.

COP888FH

8-Bit CMOS ROM Based Microcontrollers with 12k Memory, Comparators, USART and Hardware Multiply/Divide

General Description

The COP888FH Family of ROM based microcontrollers are highly integrated COP8™ Feature core devices with 12k memory and advanced features including Analog comparators, and Hardware Multiply/Divide. These single-chip CMOS devices are suited for more complex applications requiring a full featured controller, low EMI, two comparators, a full-duplex USART, and hardware multiply/divide functions. COP87L88FH devices are pin and software compatible (different V_{CC} range) 16k OTP (One Time Programmable) versions for pre-production, and for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI with 1 μ s instruction cycle, hardware multiply/divide functions, three multi-function 16-bit timer/counters with PWM, full duplex USART, MICROWIRE/PLUS™, two Analog comparators, two power saving HALT/IDLE modes, MIWU, idle timer, high current outputs, software selectable options WATCHDOG™ and clock/oscillator mode, low EMI 2.5V to 5.5V operation, and 28/40/44 pin packages.

Devices included in this data sheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature	Comments
COP684FH	12k ROM	512	24	28 DIP/SOIC	-55 to +125°C	4.5V to 5.5V
COP884FH	12k ROM	512	24	28 DIP/SOIC	-40 to +85°C	
COP984FH	12k ROM	512	24	28 DIP/SOIC	0 to +70°C	2.5V to 4.0V, FHH=4.0V to 6.0V
COP688FH	12k ROM	512	36/40	40 DIP, 44 PLCC	-55 to +125°C	4.5V to 5.5V
COP888FH	12k ROM	512	36/40	40 DIP, 44 PLCC	-40 to +85°C	
COP988FH	12k ROM	512	36/40	40 DIP, 44 PLCC	0 to +70°C	2.5V to 4.0V, FHH=4.0V to 6.0V

Key Features

- Hardware Multiply/Divide Functions
- Full duplex USART
- Three 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- Quiet design (low radiated emissions)
- 12 kbytes on-board ROM
- 512 bytes on-board RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wakeup (MIWU) with optional interrupts (8)
- Two analog comparators
- WATCHDOG and Clock Monitor logic
- MICROWIRE/PLUS serial I/O

I/O Features

- Software selectable I/O options (TRI-STATE®, Push-Pull, Weak Pull-Up, and High Impedance Input)
- Schmitt trigger inputs on ports G and L
- Packages:
 - 40 DIP with 36 I/O pins

- 44 PLCC with 40 I/O pins
- 28 DIP/SO with 24 I/O pins

CPU/Instruction Set Features

- 1 μ s instruction cycle time
- Fourteen multi-source vectored interrupts servicing
 - External Interrupt
 - Idle Timer T0
 - Three Timers (Each with 2 Interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - USART (2)
 - Default VIS (default interrupt)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B and X)

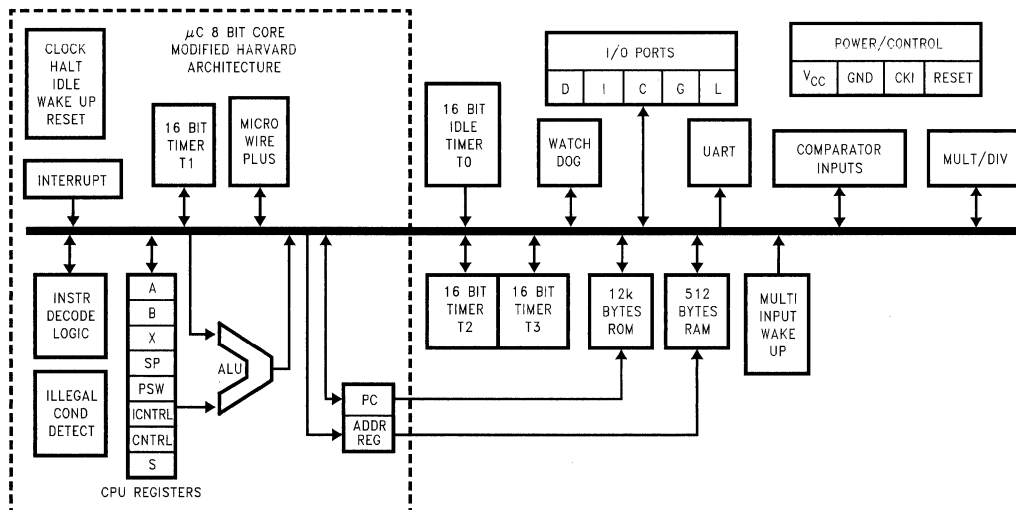

Fully Static CMOS

- Low current drain (typically $5 \mu\text{A}$)
- Two power saving modes: HALT and IDLE
- Single supply operation: 2.5V–5.5V
- Temperature ranges: 0°C to +70°C,
–40°C to +85°C
–55°C to +125°C

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink Development System

COP888xG/CS Family

8-Bit CMOS ROM Based Microcontrollers with 4k to 24k Memory, Comparators and USART

General Description

Note: COP8SG devices are form-fit-function compatible supersets of the COP888xG/CL/CS Family devices, and are replacements for these in new designs, and design upgrades with minimum effort.

The COP888xG ROM based microcontrollers are highly integrated COP8™ Feature core devices with larger memory (4k to 24k) and advanced features including two Analog comparators. These single-chip CMOS devices are suited for more complex applications requiring a full featured controller with a range of memory sizes, low EMI (except EG), comparators, and a full-duplex USART. Pin and software compatible (different V_{CC} range) 8k to 32k OTP (One Time

Programmable) versions are available (COP8SGx7 Family). Erasable windowed versions are available for use with a range of software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI with 1 μ s instruction cycle, three multi-function 16-bit timer/counters, full-duplex USART, MICROWIRE/PLUS™ serial I/O, two Analog comparators, two power saving HALT/IDLE modes, idle timer, MIWU, high current outputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, low EMI 2.5V to 5.5V operation, and 28/40/44 pin packages.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature	Comments
COP684CS	4k ROM	192	24	28 DIP/SOIC	-55 to +125°C	4.5V - 5.5V

COP688GG	16k ROM	512	36/40	40 DIP, 44 PLCC/PQFP	-55 to +125°C	4.5V - 5.5V
COP888GG	16k ROM	512	36/40	40 DIP, 44 PLCC/PQFP	-40 to +85°C	
COP688HG	20k ROM	512	36/40	40 DIP, 44 PLCC	-55 to +125°C	4.5V - 5.5V
COP888HG	20k ROM	512	36/40	40 DIP, 44 PLCC	-40 to +85°C	
COP688KG	24k ROM	512	36/40	40 DIP, 44 PLCC	-55 to +125°C	4.5V - 5.5V
COP888KG	24k ROM	512	36/40	40 DIP, 44 PLCC	-40 to +85°C	

Key Features

- Full duplex USART
- Three 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode

- Quiet design (low radiated emissions)
- 4 to 24 kbytes on-board ROM
- 128 to 512 bytes on-board RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wake-Up (MIWU) with optional interrupts (8)

Additional Peripheral Features

(Continued)

- Two analog comparators (one for the CS series)
- WATCHDOG and Clock Monitor logic
- MICROWIRE/PLUS serial I/O

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE® Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- Up to 8 high current outputs
- Schmitt trigger inputs on ports G and L
- Packages:
 - 44 PQFP with 40 I/O pins
 - 44 PLCC with 40 I/O pins
 - 40 DIP with 36 I/O pins
 - 28 DIP/SOIC with 24 I/O pins

CPU/Instruction Set Features

- 1 μ s instruction cycle time
- Versatile and easy to use instruction set
- Up to fourteen multi-source vectored interrupts servicing

- External Interrupt with selectable edge
- Idle Timer T0
- Three Timers (one timer for the CS series)(each with 2 interrupts)
- MICROWIRE/PLUS
- Multi-Input Wake-Up
- Software Trap
- USART (2)
- Default VIS (default interrupt)
- 8-bit Stack Pointer SP—(stack in RAM)
- Two 8-bit Register Indirect Data Memory Pointers (B and X)

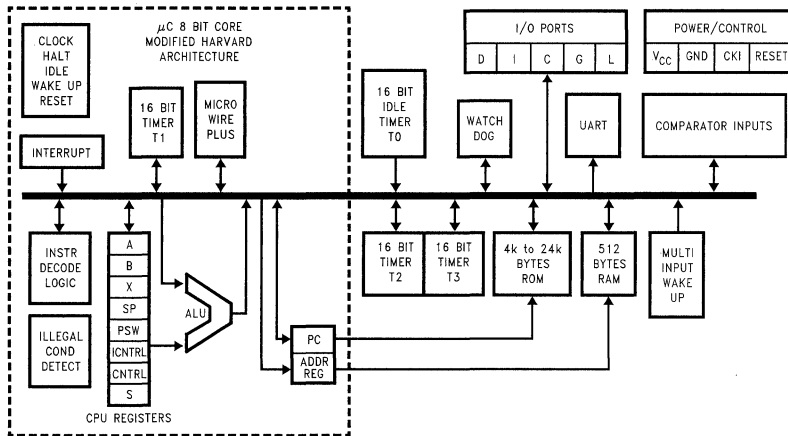

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Low current drain (typically $<1 \mu$ A)
- Single supply operation: 2.5V–5.5V (COP88x)
- Temperature ranges:
 - 0°C to +70°C, -40°C to +85°C, and -55°C to +125°C

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink's Development System

COP884BC/COP885BC

8-Bit CMOS ROM Based Microcontrollers with 2k Memory, Comparators, and CAN Interface

General Description

The COP884BC ROM based microcontrollers are highly integrated COP8™ Feature core devices with 2k memory and advanced features including a CAN 2.0B (passive) interface and two Analog comparators. These single-chip CMOS devices are suited for applications requiring a full featured controller with a CAN interface, low EMI, and an 8-bit 39 kHz PWM timer. COP87L84BC devices are pin and software compatible 16k OTP (One Time Programmable) versions for pre-production, and for use with a range of COP8 software and hardware development tools.

Features include an 8-bit memory mapped architecture, 10 MHz CKI (crystal osc) with 1 μ s instruction cycle, one multi-function 16-bit timer/counter, 8-bit 39 kHz PWM timer with 2 outputs, CAN 2.0B (passive) interface, MICROWIRE/PLUS™ serial I/O, two Analog comparators, two power saving HALT/IDLE modes, idle timer, MIWU, software selectable I/O options, Power on Reset, low EMI 4.5V to 5.5V operation, and 20/28 pin packages.

Note: A companion device with CAN interface, more I/O and memory, A/D, and USART is the COP888EB.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP684BC	2k ROM	64	18	28 SOIC	-55 to +125°C
COP884BC	2k ROM	64	18	28 SOIC	-40 to +85°C
COP685BC	2k ROM	64	10	20 SOIC	-55 to +125°C
COP885BC	2k ROM	64	10	20 SOIC	-40 to +85°C

Key Features

- CAN 2.0B (passive) Interface
- Power On Reset (selectable)
- One 16-bit timer, with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- High speed, constant resolution 8-bit PWM/frequency monitor timer with 2 output pins
- 2048 bytes on-board ROM
- 64 bytes on-board RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wake Up (MIWU) with optional interrupts (7)
- Two analog comparators
- MICROWIRE/PLUS serial I/O

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE® Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- Schmitt trigger inputs on ports G and L
- Packages: 28 SO with 18 I/O pins and 20 SO with 10 I/O pins

CPU/Instruction Set Features

- 1 μ s instruction cycle time
- Eleven multi-source vectored interrupts servicing
 - External Interrupt
 - Idle Timer T0
 - Timer T1 (with 2 Interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - PWM Timer
 - CAN Interface (with 3 interrupts)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B and X)

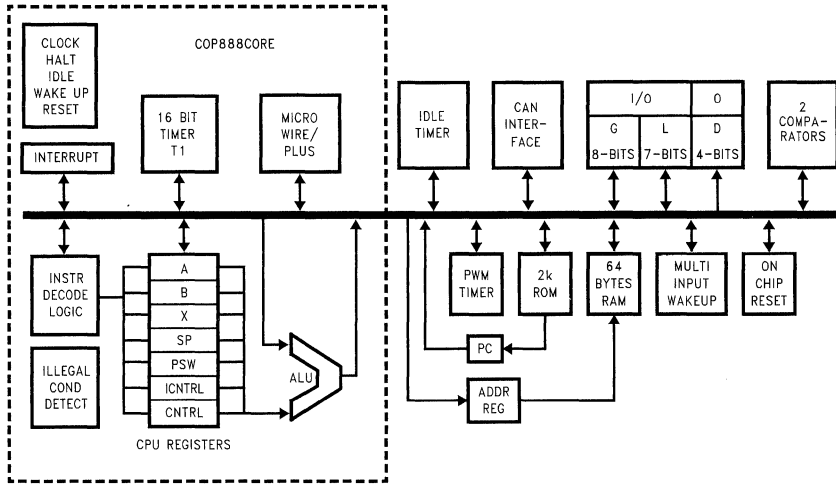

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Low current drain (typically <1 μ A)
- Single supply operation: 4.5V–5.5V
- Temperature ranges: -40°C to +85°C, -55°C to +125°C

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink Development Systems

COP888EB

8-Bit CMOS ROM Based Microcontrollers with 8k Memory, CAN Interface, 8-Bit A/D, and USART

General Description

The COP888EB ROM based microcontrollers are highly integrated COP8™ Feature core devices with 8k memory and advanced features including a CAN 2.0B (passive) interface, A/D and USART. These single-chip CMOS devices are suited for applications requiring a full featured controller with a CAN interface, low EMI, and versatile communications interfaces. COP87L8EB/RB devices are pin and software compatible 16k or 32k OTP (One Time Programmable) versions for pre-production, and for use with a range of COP8 software and hardware development tools.

Features include an 8-bit memory mapped architecture, 10 MHz CKI with 1µs instruction cycle, two multi-function 16-bit timer/counters, WATCHDOG™ and Clock Monitor, CAN 2.0B (passive) interface, MICROWIRE/PLUS™ serial I/O, SPI master/slave interface, fully buffered USART, 8-bit A/D with 8 channels, two power saving HALT/IDLE modes, MIWU, idle timer, software selectable I/O options, low EMI 4.5V to 5.5V operation, and 44/68 pin packages.

Note: A companion device with CAN interface, less I/O and memory, and PWM timer is the COP888BC.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP688EB	8k ROM	192	31	44 PLCC	-55 to +125°C
COP888EB	8k ROM	192	31	44 PLCC	-40 to +85°C
COP689EB	8k ROM	192	58	68 PLCC	-55 to +125°C
COP889EB	8k ROM	192	58	68 PLCC	-40 to +85°C

Key Features

- CAN bus interface, with Software Power save mode
- 8-bit A/D Converter with 8 channels
- Fully buffered USART
- Multi-input wake up (MIWU) on both Port L and M
- SPI Compatible Master/Slave Interface
- Quiet Design (Low Radiated Emissions)
- 8096 bytes of on-board ROM
- 192 bytes of on-board RAM

- Timers (T1 and T2) (4 Interrupts)
- MICROWIRE/PLUS and SPI
- Multi-input Wake up
- Software Trap
- CAN interface (3 interrupts)
- USART (2 Inputs)

- Versatile easy to use instruction set
- 8-bit stack pointer (SP) (Stack in RAM)
- Two 8-bit Register Indirect Memory Pointers (B, X)

Additional Peripheral Features

- Idle timer (programmable)
- Two 16-bit timer, with two 16-bit registers supporting
 - Processor independent PWM mode
 - External Event counter mode
 - Input capture mode
- WATCHDOG and Clock Monitor
- MICROWIRE/PLUS serial I/O

Fully Static CMOS

- Two power saving modes: HALT, IDLE
- Single supply operation: 4.5V to 5.5V
- Temperature ranges: -40°C to +85°C and -55°C to +125°C

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink Development System

I/O Features

- Software selectable I/O options (TRI-STATE® outputs, Push pull outputs, Weak pull up input, High impedance input)
- Schmitt trigger inputs on Port G, L and M
- Packages: 44 PLCC with 31 I/O pins
68 PLCC with 58 I/O pins

CPU/Instruction Set Features

- 1 µs instruction cycle time
- Fourteen multi-sourced vectored interrupts servicing
 - External interrupt
 - Idle Timer T0

Basic Functional Description

- CAN I/F—CAN serial bus interface block as described in the CAN specification part 2.0B (Passive)
 - Interface rates up to 250k bit/s are supported utilizing standard message identifiers
- Programmable double buffered USART
- A/D—8-bit, 8 channel, 1-LSB Resolution, with improved Source Impedance and improved channel to channel cross talk immunity
- Multi-Input-Wake-Up (MIWU)—edge selectable wake-up and interrupt capability via input port and CAN interface (Port L, Port M and CAN I/F); supports Wake-Up capability on SPI, USART, and T2 capture
- Port C—8-bit bi-directional I/O port
- Port D—8-bit Output port with high current drive capability (10 mA)
- Port F—8-bit bidirectional I/O
- Port G—8-bit bidirectional I/O port, including alternate functions for:
 - MICROWIRE™ Input and Output
 - Timer 1 Input or Output (Depending on mode selected)
 - External Interrupt input
 - WATCHDOG Output
- Port I—8-bit input port combining either digital input, or up to eight A/D input channels
- Port L—8-bit bidirectional I/O port, including alternate functions for:
 - USART Transmit/Receive I/O
 - Multi-input-wake up (MIWU on all pins)
- Port M—8-bit I/O port, with the following alternate function
 - SPI Interface
 - MIWU
 - CAN Interface Wake-up (MSB)
 - Timer 2 Input or Output (Depending on mode selected)
- Port N—8-bit bidirectional I/O
 - SPI Slave Select Expander
- Two 16-bit multi-function Timer counters (T1 and T2) plus supporting registers
 - (I/P Capture, PWM and Event Counting)
- Idle timer—Provides a basic time-base counter, (with interrupt) and automatic wake up from IDLE mode programmable
- MICROWIRE/PLUS—MICROWIRE serial peripheral interface, supporting both Master and Slave operation
- HALT and IDLE—Software programmable low current modes
 - HALT—Processor stopped, Minimum current
 - IDLE—Processor semi-active more than 60% power saving
- 8 kBytes ROM and 192 bytes of on board static RAM
- SPI Master/Slave interface includes 12 bytes Transmit and 12 bytes Receive FIFO Buffers. Operates up to 1M Bit/S
- On board programmable WATCHDOG and CLOCK Monitor

Applications

- Automobile Body Control and Comfort System
- Integrated Driver Information Systems
- Steering Wheel Control
- Car Radio Control Panel
- Sensor/Actuator Applications in Automotive and Industrial Control

COP888CF

8-Bit CMOS ROM Based Microcontrollers with 4k Memory and A/D Converter

General Description

The COP888CF ROM based microcontrollers are highly integrated COP8™ Feature core devices with 4k memory and advanced features including an A/D Converter. These single-chip CMOS devices are suited for applications requiring a full featured controller with an 8-bit A/D converter. Pin and software compatible (different V_{CC} range) 16k/32k OTP (One Time Programmable) versions are available (COP87L88CF Family) for pre-production, and for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI with 1 μs instruction cycle, two multi-function 16-bit timer/counters, MICROWIRE/PLUS™ serial I/O, one 8-bit/8-channel A/D converter with prescaler and both differential and single ended modes, crystal or R/C oscillator, two power saving HALT/IDLE modes, idle timer, MIWU, high current outputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, 2.5V to 6.0V operation and 28/40/44 pin packages.

Devices included in this datasheet are:

Device	Memory	RAM	I/O Pins	Packages	Temperature
COP884CF	4k bytes ROM	128 bytes	22	28 DIP/SOIC	-40 to +85°C
COP984CF	4k bytes ROM	128 bytes	22	28 DIP/SOIC	-0 to +70°C
COP888CF	4k bytes ROM	128 bytes	34/38	40 DIP, 44 PLCC	-40 to +85°C
COP988CF	4k bytes ROM	128 bytes	34/38	40 DIP, 44 PLCC	-0 to +70°C

Key Features

- A/D converter (8-bit, 8-channel, with prescaler and both differential and single ended modes)
- Two 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- 4 kbytes of on-chip ROM
- 128 bytes of on-chip RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wake Up (MIWU) with optional interrupts (8)
- WATCHDOG and Clock Monitor logic
- MICROWIRE/PLUS serial I/O

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE®Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- High current outputs
- Packages:
 - 44 PLCC with 38 I/O pins
 - 40 DIP with 34 I/O pins
 - 28 DIP/SO with 22 I/O pins

- Schmitt trigger inputs on Port G

CPU/Instruction Set Feature

- 1 μs instruction cycle time
- Ten multi-source vectored interrupts servicing
 - External interrupt with selectable edge
 - Idle Timer T0
 - Two Timers (Each with 2 interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - Default VIS (default interrupt)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B, X)

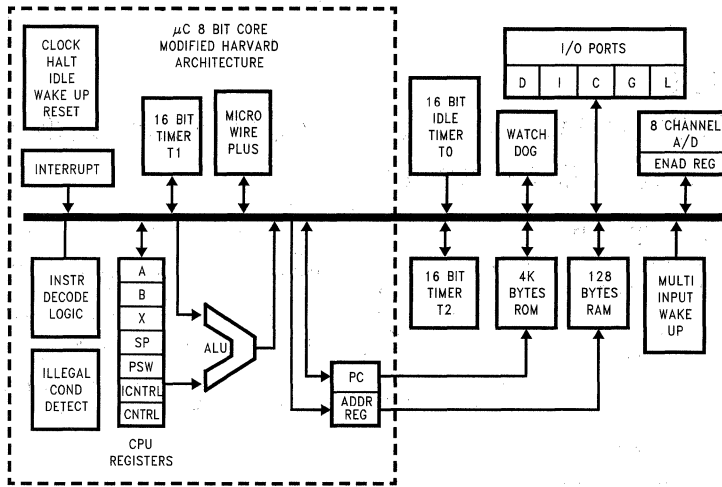

Fully Static CMOS

- Low current drain (typically < 1 μA)
- Single supply operation: 2.5V to 6.0V
- Temperature ranges: 0°C to +70°C, and -40°C to +85°C

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink Development System

COP888GD

8-Bit CMOS ROM Based Microcontrollers with 16k Memory and 8-Channel A/D

General Description

The COP888GD ROM based microcontrollers are highly integrated COP8™ Feature core devices with 16k memory and advanced features including an A/D Converter. These multi-chip CMOS devices are suited for applications requiring a full featured controller with an 8-bit A/D converter, and as pre-production devices for a masked ROM design. Pin and software compatible 16k or 32k OTP EPROM versions are available (COP87L88GD/RD Family) for pre-production, and for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI with 1 μ s instruction cycle, three multi-function 16-bit timer/counters, MICROWIRE/PLUS™ serial I/O, one 8-bit/8-channel A/D converter with prescaler and both differential and single ended modes, two power saving HALT/IDLE modes, MIWU, idle timer, high current outputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, 2.5V to 5.5V operation, program code security, and 44 pin package.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature	Comments
COP688GD	16k ROM	256	40	44 PLCC	-55 to +125°C	4.5V to 5.5V
COP888GD	16k ROM	256	40	44 PLCC	-40 to +85°C	2.5V to 5.5V
COP988GD	16k ROM	256	40	44 PLCC	0 to +70°C	2.5V to 4.0V, GDH = 4.0V to 6.0V

Key Features

- 8-channel A/D converter with prescaler and both differential and single ended modes
- Three 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- Quiet design (low radiated emissions)
- 16 kbytes on-board ROM
- 256 bytes on-board RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wakeup (MIWU) with optional interrupts (8)
- WATCHDOG and clock monitor logic
- MICROWIRE/PLUS serial I/O

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE® Output, Push-Pull Output, Weak Pull Up Input, High Impedance Input)
- Schmitt trigger inputs on ports G and L
- Package:
 - 44 PLCC with 40 I/O pins

CPU/Instruction Set Features

- 1 μ s instruction cycle time
- Twelve multi-source vectored interrupts servicing
 - External Interrupt
 - Idle Timer T0
 - Three Timers (each with 2 Interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - Default VIS (default interrupt)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP) – stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B and X)

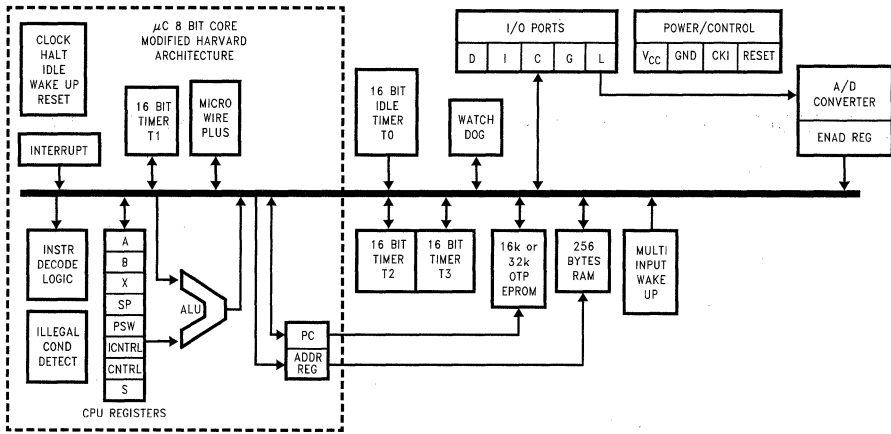

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Single supply operation: 2.5V to 5.5V
- Temperature range: -0°C to +70°C and -40°C to +85°C

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink Development System

COP8ACC Family

8-Bit CMOS ROM Based and OTP Microcontrollers with 4k or 16k Memory and High Resolution A/D

General Description

The COP8ACC Family ROM based microcontrollers are highly integrated COP8™ Feature core devices with 4k memory and advanced features including a High-Resolution A/D. These single-chip CMOS devices are suited for applications requiring a full featured, low EMI controller with an A/D (only one external capacitor required). COP8ACC7 devices are pin and software compatible (different V_{CC} range) 16k OTP EPROM versions for pre-production. Erasable windowed versions are available for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 4 MHz CKI with 2.5 μ s instruction cycle, 6 channel A/D with 12-bit resolution, analog capture timer, analog current source and $V_{CC}/2$ reference, one multi-function 16-bit timer/counter, MICROWIRE/PLUS serial I/O, two power saving HALT/IDLE modes, MIWU, high current outputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, Low EMI 2.5V to 5.5V operation and 20/28 pin packages. Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP8ACC5xxx9	4k ROM	128	15/23	20 SOIC, 28 DIP/SOIC	0 to +70°C
COP8ACC5xxx8	4k ROM	128	15/23	20 SOIC, 28 DIP/SOIC	-40 to +85°C
COP8ACC7xxx9	16k OTP EPROM	128	15/23	20 SOIC, 28 DIP/SOIC	0 to +70°C
COP8ACC7xxx8	16k OTP EPROM	128	15/23	20 SOIC, 28 DIP/SOIC	-40 to +85°C

Key Features

- Analog Function Block with 12-bit A/D including
 - Analog comparator with seven input mux
 - Constant Current Source and $V_{CC}/2$ Reference
 - 16-bit capture timer (upcounter) clocked from CKI with auto reset on timer startup
- Quiet design (reduced radiated emissions)
- 4096 bytes on-board ROM or 16,384 OTP EPROM with security feature
- 128 bytes on-board RAM

Additional Peripheral Features

- Idle Timer
- One 16-bit timer with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- Multi-Input Wake-Up (MIWU) with optional interrupts
- WATCHDOG and clock monitor logic
- MICROWIRE/PLUS™ serial I/O with programmable shift clock-polarity

I/O Features

- Software selectable I/O options (Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- High current outputs
- Schmitt Trigger inputs on ports G and L
- Packages: 28 DIP/SO with 23 I/O pins, 20 SO with 15 I/O pins

CPU/Instruction Set Features

- 2.5 μ s instruction cycle time
- Eight multi-source vectored interrupt servicing
 - External Interrupt
 - Idle Timer T0
 - Timer T1 associated Interrupts
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - Default VIS
 - A/D (Capture Timer)
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Registers Indirect Data Memory Pointers (B and X)

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Single supply operation: 2.5V to 5.5V for COP8ACC5
- Single supply operation: 2.7V to 5.5V for COP8ACC7
- Temperature ranges: 0°C to +70°C, -40°C to +85°C

Development System

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink development system

Applications

- Battery Chargers
- Appliances
- Data Acquisition systems

COP888EK

8-Bit CMOS ROM Based Microcontrollers with 8k Memory, Comparator, and Single-slope A/D Capability

General Description

The COP888EK ROM based microcontrollers are highly integrated COP8™ Feature core devices with 8k memory and advanced features including a Multi-Input Comparator and Single-slope A/D capability. These single-chip CMOS devices are suited for applications requiring a full featured, low EMI controller with an analog comparator, current source, and voltage reference. The COP87L88EK/RK Family devices are pin and software compatible (different V_{CC} range) 16k or 32k OTP (One Time Programmable) versions for pre-production, and for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI with 1 μ s instruction cycle, three multi-function 16-bit timer/counters with PWM, MICROWIRE/PLUS™ serial I/O, one analog comparator with seven input multiplexor, an analog current source and V_{CC} reference, two power saving HALT/IDLE modes, idle timer, MIWU, high current outputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, Low EMI 2.5V to 6.0V operation and 28/40/44 pin packages.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature	Comments
COP684EK	8k ROM	256	24	28 DIP/SOIC	-55 to +125°C	4.5V - 5.5V
COP884EK	8k ROM	256	24	28 DIP/SOIC	-40 to +85°C	
COP984EK	8k ROM	256	24	28 DIP/SOIC	0 to +70°C	2.5V - 4.0V, EKH=4.0V - 6.0V
COP688EK	8k ROM	256	36/40	40 DIP, 44 PLCC	-55 to +125°C	4.5V - 5.5V
COP888EK	8k ROM	256	36/40	40 DIP, 44 PLCC	-40 to +85°C	
COP988EK	8k ROM	256	36/40	40 DIP, 44 PLCC	0 to +70°C	2.5V - 4.0V, EKH=4.0V - 6.0V

Key Features

- Analog function block with
 - Analog comparator with seven input multiplexor
 - Constant current source and $V_{CC}/2$ reference
- Three 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- 8 kbytes of on-chip ROM
- 256 bytes of on-chip RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wake Up (MIWU) with optional interrupts (8)
- WATCHDOG and Clock Monitor logic
- MICROWIRE/PLUS serial I/O

I/O Features

- Software selectable I/O options (TRI-STATE™ Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- High current outputs
- Schmitt trigger inputs on Port G and L
- Packages: 44 PLCC with 40 I/O pins, 40 DIP with 36 I/O pins, and 28 DIP/SO with 24 I/O pins

CPU/Instruction Set Feature

- 1 μ s instruction cycle time
- Twelve multi-source vectored interrupts servicing
 - External Interrupt with selectable edge
 - Idle Timer T0
 - Three Timers (Each with 2 interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - Default VIS (default interrupt)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B, X)

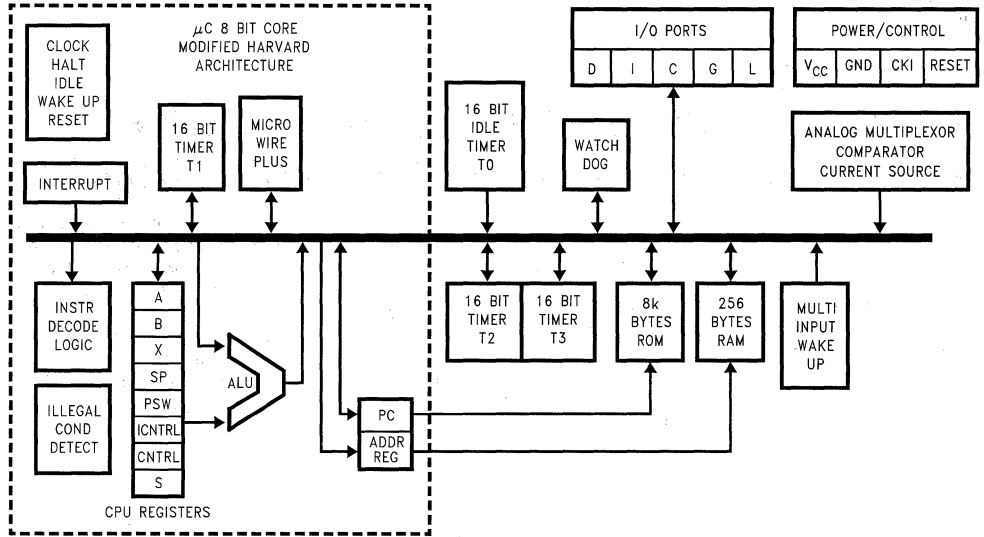

Fully Static CMOS

- Single supply operation: 2.5V to 6.0V
- Temperature ranges: 0°C to +70°C, -40°C to +85°C, and -55°C to +125°C

Development Support

- Emulation and OTP devices
- Real time emulation and full program debug offered by MetaLink Development System

COP888GW

8-Bit Microcontroller with Pulse Train Generators and Capture Modules

General Description

The COP888 family of microcontrollers uses an 8-bit single chip core architecture fabricated with National Semiconductor's M²CMOS™ process technology. The COP888GW is a member of this expandable 8-bit core processor family of microcontrollers. It is a fully static part, fabricated using double-metal silicon gate microCMOS technology.

Features include an 8-bit memory mapped architecture, MICROWIRE/PLUS™ serial I/O, two 16-bit timer/counters supporting three modes (Processor Independent PWM generation, External Event counter and Input Capture mode capabilities), four independent 16-bit pulse train generators with 16-bit prescalers, two independent 16-bit input capture modules with 8-bit prescalers, multiply and divide functions, full duplex UART, and two power savings modes (HALT and IDLE), both with a multi-sourced wake up/interrupt capability. This multi-sourced interrupt capability may also be used independent of the HALT or IDLE modes.

Each I/O pin has software selectable configurations. The devices operate over a voltage range of 2.5V–6V. High throughput is achieved with an efficient, regular instruction set operating at a maximum of 1 μs per instruction rate. The device has low EMI emissions. Low radiated emissions are achieved by gradual turn-on output drivers and internal I_{CC} filters on the chip logic and crystal oscillator. The device is available in 68-pin PLCC package.

Key Features

- Two 16-bit input capture modules with 8-bit prescalers
- Four Pulse Train Generators with 16-bit prescalers
- Full duplex UART
- Two 16-bit timers, each with two 16-bit registers supporting:
 - Processor independent PWM mode
 - External event counter mode
 - Input capture mode
- Quiet design (low radiated emissions)
- 16 kbytes on-board ROM
- 512 bytes on-board RAM

Additional Peripheral Features

- Idle Timer

- Multi-Input Wake-Up (MIWU) with optional interrupts (8)
- MICROWIRE/PLUS™ serial I/O

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE® Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- Schmitt trigger inputs on port G
- Package: 68-pin PLCC

CPU/Instruction Set Features

- 1 μs instruction cycle time
- Fourteen multi-source vectored interrupts servicing:
 - External Interrupt with selectable edge
 - Idle Timer T0
 - Two Timers (each with 2 interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake-Up
 - Software Trap
 - UART (2)
 - Capture Timers
 - Counters (one vector for all four counters)
 - Default VIS (default interrupt)
- Versatile and easy-to-use instruction set
- 8-bit Stack Pointer SP—(stack in RAM)
- Two 8-bit register indirect data memory pointers (B and X)

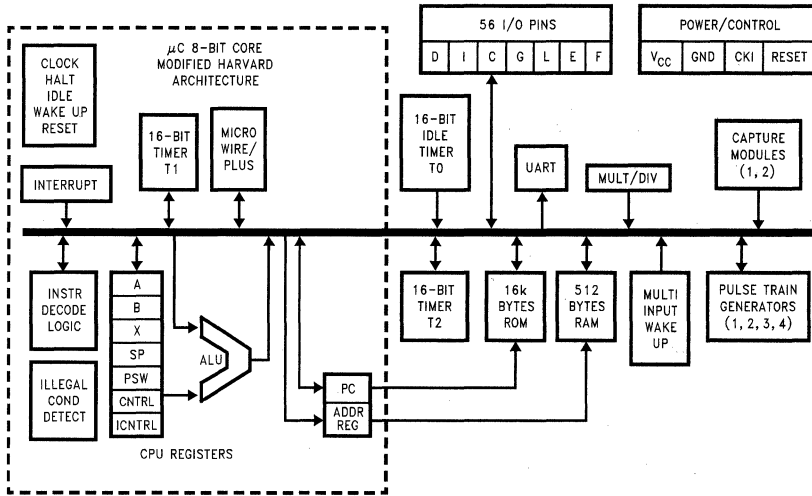

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Low current drain (typically <1 μA)
- Single supply operation: 2.5V–5.5V
- Temperature range: –40°C to +85°C

Development Support

- Emulation and OTP device
- Real time emulation and full program debug offered by MetaLink's Development System

OTP Products

PRELIMINARY

COP87LxxCJ/RJ Family

8-Bit CMOS OTP Microcontrollers with 4k or 32k Memory and Comparator

General Description

The COP87LxxCJ/RJ Family OTP (One Time Programmable) microcontrollers are integrated COP8™ Base core devices with 4k or 32k memory, and an Analog comparator (no brownout). These multi-chip CMOS devices are suited for lower-functionality applications, and as pre-production devices for a ROM design. Low cost, pin and software compatible (plus Brownout) 1k or 2k ROM versions are available (COP820CJ/840CJ Family). Versions are available for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI with 1µs instruction cycle, three clock op-

tions (-1 = crystal; -2 = external; -3 = internal RC), one multi-function 16-bit timer/counter, MICROWIRE/PLUS™ serial I/O, one analog comparator, power saving HALT mode with multi-sourced wakeup/interrupt capability, on-chip R/C oscillator capacitor, high current outputs, software selectable I/O options, WATCHDOG™ timer, modulator/timer, Power on Reset, program code security, 2.7V to 5.5V operation and 20/28 pin packages.

In this datasheet, the term COP87L20CJ refers to the COP87L20CJ, and COP87L22CJ. COP840CJ refers to the COP87L40CJ, COP87L42CJ, COP87L40RJ, and COP87L42RJ.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP87L20CJ	4k OTP EPROM	64	24	28 DIP/SOIC	-40 to +85°C
COP87L22CJ	4k OTP EPROM	64	16	20 DIP/SOIC	-40 to +85°C
COP87L40CJ	4k OTP EPROM	128	24	28 DIP/SOIC	-40 to +85°C
COP87L42CJ	4k OTP EPROM	128	16	20 DIP/SOIC	-40 to +85°C
COP87L40RJ	32k OTP EPROM	128	24	28 DIP/SOIC	-40 to +85°C
COP87L42RJ	32k OTP EPROM	128	16	20 DIP/SOIC	-40 to +85°C

Key Features

- Multi-Input Wakeup (on the 8-bit Port L)
- Analog comparator
- Modulator/Timer (high speed PWM timer for IR transmission)
- 16-bit multi-function timer supporting
 - PWM mode
 - External event counter mode
 - Input capture mode
- Integrated capacitor for the R/C oscillator
- 4 or 32 kbyte on-board OTP EPROM with security feature
- 64 or 128 bytes on-chip RAM

I/O Features

- Software selectable I/O options (TRI-STATE®, Push-Pull, Weak Pull-Up Input, High Impedance Input)
- High current outputs (8 pins)
- Schmitt trigger inputs on Port G
- MICROWIRE/PLUS serial I/O
- Packages:
 - 20 DIP/SO with 16 I/O pins
 - 28 DIP/SO with 24 I/O pins

CPU/Instruction Set Features

- 1 µs instruction cycle time
- Three multi-source interrupts servicing
 - External interrupt with selectable edge
 - Timer interrupt
 - Software interrupt
- Versatile and easy to use instruction set
- 8-bit stack pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B and X)

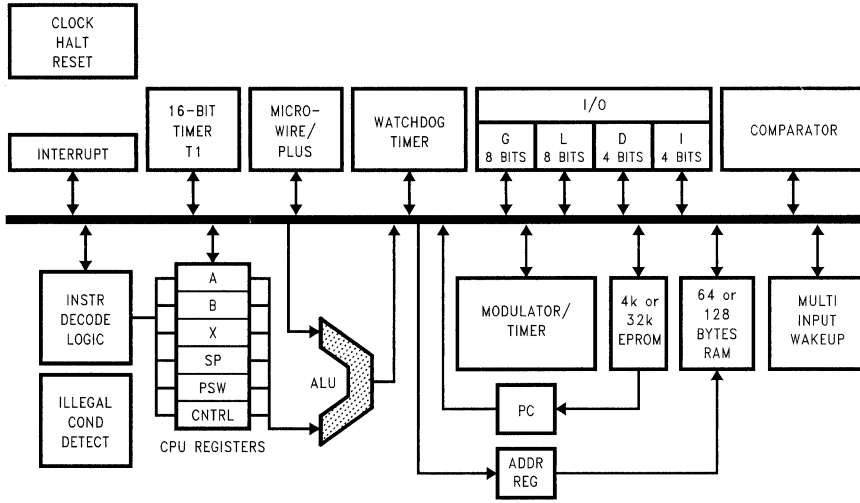

Fully Static CMOS

- Low current drain (typically <1 µA)
- Single supply operation: 2.7V to 5.5V
- Temperature range: -40°C to +85°C

Development Support

- Emulation device for the COP820CJ/COP840CJ
- Real time emulation and full program debug offered by MetaLink Development Systems

COP8SA Family

8-Bit CMOS ROM Based and One-Time Programmable (OTP) Microcontroller with 1k to 4k Memory, Power On Reset, and Very Small Packaging

General Description

Note: COP8SAx devices are instruction set and pin compatible supersets of the COP800 Family devices, and are replacements for these in new designs when possible.

The COP8SAx Rom based and OTP microcontrollers are highly integrated COP8™ feature core devices, with 1k to 4k memory and advanced features including low EMI. These single-chip CMOS devices are suited for low cost applications requiring a full featured controller, low EMI, and POR. 100% form-fit-function compatible OTP versions are available with 1k, 2k, and 4k memory, and in a variety of packages including 28-pin CSP. Erasable windowed versions are available for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI with 1 μ s instruction cycle, one multi-function 16-bit timer/counter with PWM output, MICROWIRE/PLUS™ serial I/O, two power saving HALT/IDLE modes, MIWU, idle timer, on-chip R/C oscillator, 12 high current outputs, user selectable options (WATCHDOG™, 4 clock/oscillator modes, power-on-reset), low EMI 2.7V to 5.5V operation, and 16/20/28/40/44 pin packages.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP8SAA5	1k ROM	64	12/16/24	16/20/28 DIP/SOIC	0 to +70°C, -40 to +85°C, -40 to +125°C
COP8SAB5	2k ROM	128	16/24	20/28 DIP/SOIC	0 to +70°C, -40 to +85°C, -40 to +125°C
COP8SAC5	4k ROM	128	16/24/36/40	20/28 DIP/SOIC, 28 CSP, 40 DIP, 44 PLCC/QFP	0 to +70°C, -40 to +85°C, -40 to +125°C
COP8SAA7	1k OTP EPROM	64	12/16/24	16/20/28 DIP/SOIC	0 to +70°C, -40 to +85°C, -40 to +125°C
COP8SAB7	2k OTP EPROM	128	16/24	20/28 DIP/SOIC	0 to +70°C, -40 to +85°C, -40 to +125°C
COP8SAC7	4k OTP EPROM	128	16/24	20/28 DIP/SOIC, 28 CSP, 40 DIP, 44 PLCC/QFP	0 to +70°C, -40 to +85°C, -40 to +125°C
COP8SAA7SLB9	1k OTP EPROM	64	24	28 CSP	0 to +70°C
COP8SAB7SLB9	2k OTP EPROM	128	24	28 CSP	0 to +70°C
COP8SAC7SLB9	4k OTP EPROM	128	24	28 CSP	0 to +70°C
COP8SAC7-Q3	4k EPROM	128	16/24/36	20/28/40 DIP	Room Temp. Only
COP8SAC7-J3	4k EPROM	128	40	44 PLCC	Room Temp. Only

Key Features

- Low cost 8-bit OTP microcontroller
- OTP program space with read/write protection (fully secured)
- Quiet Design (low radiated emissions)
- Multi-Input Wakeup pins with optional interrupts (4 to 8 pins)
- 8 bytes of user storage space in EPROM

- User selectable clock options
 - Crystal/Resonator options
 - Crystal/Resonator option with on-chip bias resistor
 - External oscillator
 - Internal R/C oscillator
- Internal Power-On Reset—user selectable
- WATCHDOG and Clock Monitor Logic—user selectable
- Up to 12 high current outputs

CPU Features

- Versatile easy to use instruction set
- 1 μ s instruction cycle time
- Eight multi-source vectored interrupts servicing
 - External interrupt
 - Idle Timer T0
 - One Timer (with 2 interrupts)
 - MICROWIRE/PLUS Serial Interface
 - Multi-Input Wake Up
 - Software Trap
 - Default VIS (default interrupt)
- 8-bit Stack Pointer SP (stack in RAM)
- Two 8-bit Register Indirect Data Memory Pointers
- True bit manipulation
- Memory mapped I/O
- BCD arithmetic instructions

Peripheral Features

- Multi-Input Wakeup Logic
- One 16-bit timer with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- Idle Timer
- MICROWIRE/PLUS Serial Interface (SPI Compatible)

I/O Features

- Software selectable I/O options
 - TRI-STATE® Output
 - Push-Pull Output
 - Weak Pull Up Input
 - High Impedance Input
- Schmitt trigger inputs on ports G and L
- Up to 12 high current outputs
- Pin efficient (i.e., 40 pins in 44-pin package are devoted to useful I/O)

Fully Static CMOS Design

- Low current drain (typically < 4 μ A)
- Single supply operation: 2.7V to 5.5V
- Two power saving modes: HALT and IDLE

Temperature Ranges

0°C to +70°C, -40°C to +85°C, and -40°C to +125°C

Development Support

- Windowed packages for DIP and PLCC
- Real time emulation and full program debug offered by MetaLink Development System

Block Diagram

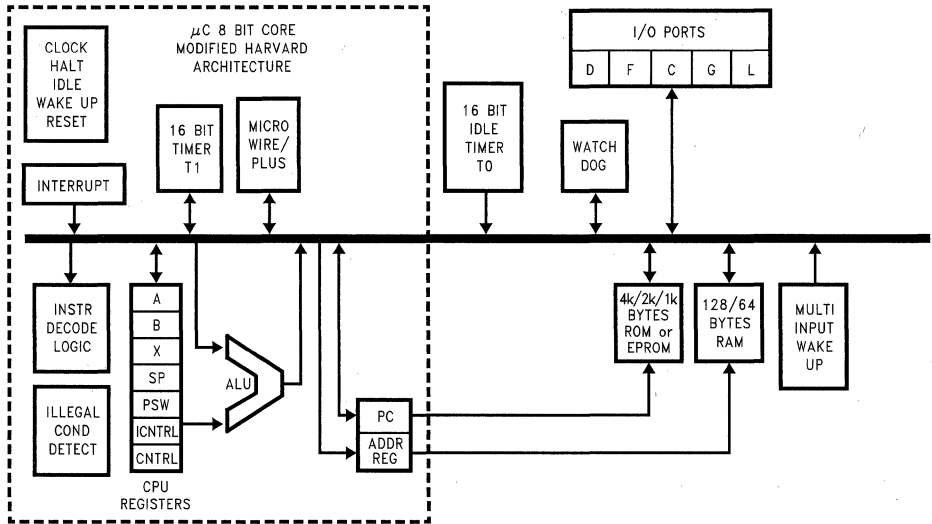

FIGURE 1. COP8SAx Block Diagram

DS012838-1

General Description (Continued)

Key features include an 8-bit memory mapped architecture, a 16-bit timer/counter with two associated 16-bit registers supporting three modes (Processor Independent PWM generation, External Event counter, and Input Capture capabilities), two power saving HALT/IDLE modes with a multi-sourced wakeup/interrupt capability, on-chip R/C oscillator, high current outputs, user selectable options such as WATCHDOG, Oscillator configuration, and power-on-reset.

1.1 EMI REDUCTION

The COP8SAx family of devices incorporates circuitry that guards against electromagnetic interference—an increasing problem in today's microcontroller board designs. National's patented EMI reduction technology offers low EMI clock circuitry, gradual turn-on output drivers (GTOs) and internal I_{CC} smoothing filters, to help circumvent many of the EMI issues influencing embedded control designs. National has achieved 15 dB–20 dB reduction in EMI transmissions when designs have incorporated its patented EMI reducing circuitry.

1.2 ARCHITECTURE

The COP8SAx family is based on a modified Harvard architecture, which allows data tables to be accessed directly from program memory. This is very important with modern microcontroller-based applications, since program memory is usually ROM or EPROM, while data memory is usually RAM. Consequently data tables usually need to be contained in ROM or EPROM, so they are not lost when the microcontroller is powered down. In a modified Harvard architecture, instruction fetch and memory data transfers can be overlapped with a two stage pipeline, which allows the next instruction to be fetched from program memory while the current instruction is being executed using data memory. This is not possible with a Von Neumann single-address bus architecture.

The COP8SAx family supports a software stack scheme that allows the user to incorporate many subroutine calls. This capability is important when using High Level Languages. With a hardware stack, the user is limited to a small fixed number of stack levels.

1.3 INSTRUCTION SET

In today's 8-bit microcontroller application arena cost/performance, flexibility and time to market are several of the key issues that system designers face in attempting to build well-engineered products that compete in the marketplace. Many of these issues can be addressed through the manner in which a microcontroller's instruction set handles processing tasks. And that's why COP8 family offers a unique and code-efficient instruction set—one that provides the flexibility, functionality, reduced costs and faster time to market that today's microcontroller based products require.

Code efficiency is important because it enables designers to pack more on-chip functionality into less program memory space (ROM/OTP). Selecting a microcontroller with less program memory size translates into lower system costs, and the added security of knowing that more code can be packed into the available program memory space.

1.3.1 Key Instruction Set Features

The COP8SAx family incorporates a unique combination of instruction set features, which provide designers with optimum code efficiency and program memory utilization.

Single Byte/Single Cycle Code Execution

The efficiency is due to the fact that the majority of instructions are of the single byte variety, resulting in minimum program space. Because compact code does not occupy a substantial amount of program memory space, designers can integrate additional features and functionality into the microcontroller program memory space. Also, the majority instructions executed by the device are single cycle, resulting in minimum program execution time. In fact, 77% of the instructions are single byte single cycle, providing greater code and I/O efficiency, and faster code execution.

1.3.2 Many Single-Byte, Multifunction Instructions

The COP8SAx instruction set utilizes many single-byte, multifunction instructions. This enables a single instruction to accomplish multiple functions, such as DRSZ, DCOR, JID, and LOAD/EXCHANGE instructions with post-incrementing and post-decrementing, to name just a few examples. In many cases, the instruction set can simultaneously execute as many as three functions with the same single-byte instruction.

JID: (Jump Indirect); Single byte instruction; decodes external events and jumps to corresponding service routines (analogous to "DO CASE" statements in higher level languages).

LAIID: (Load Accumulator-Indirect); Single byte look up table instruction provides efficient data path from the program memory to the CPU. This instruction can be used for table lookup and to read the entire program memory for checksum calculations.

RETSK: (Return Skip); Single byte instruction allows return from subroutine and skips next instruction. Decision to branch can be made in the subroutine itself, saving code.

AUTOINC/DEC: (Auto-Increment/Auto-Decrement); These instructions use the two memory pointers B and X to efficiently process a block of data (analogous to "FOR NEXT" in higher level languages).

1.3.3 Bit-Level Control

Bit-level control over many of the microcontroller's I/O ports provides a flexible means to ease layout concerns and save board space. All members of the COP8 family provide the ability to set, reset and test any individual bit in the data memory address space, including memory-mapped I/O ports and associated registers. Three memory-mapped pointers handle register indirect addressing and software stack pointer functions. The memory data pointers allow the option of post-incrementing or post-decrementing with the data movement instructions (LOAD/EXCHANGE). And 15 memory-mapped registers allow designers to optimize the precise implementation of certain specific instructions.

1.4 PACKAGING/PIN EFFICIENCY

Real estate and board configuration considerations demand maximum space and pin efficiency, particularly given today's high integration and small product form factors. Microcontroller users try to avoid using large packages to get the I/O needed. Large packages take valuable board space and increases device cost, two trade-offs that microcontroller designs can ill afford.

The COP8 family offers a wide range of packages and do not waste pins: up to 90.9% (or 40 pins in the 44-pin package) are devoted to useful I/O.

COP87L88CL

8-Bit One-Time Programmable (OTP) Microcontroller

General Description COP8SG devices are form-fit-function compatible supersets of the COP87L88CL Family devices, and are replacements for these in new designs, and design upgrades with minimum effort.

The COP87L88CL OTP microcontrollers are larger memory (16k), highly integrated COP8™ Feature core devices, with advanced features. These multi-chip CMOS devices are suited for applications requiring a full featured controller with a high I/O pincount, and as pre-production devices for a masked ROM design. Lower cost pin and software compatible 4k ROM versions are available (COP888CL/988CL).

Family features include an 8-bit memory mapped architecture, 10MHz CKI with 1 μ s instruction cycle, two multi-function 16-bit timer/counters, MICROWIRE/PLUS™ serial I/O, two power saving HALT/IDLE modes, idle timer, MIWU, high current outputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, 2.7v-5.5v operation, program code security, and 28/40/44 pin packages.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature	Comments
COP87L84CL	16k OTP	128	24	28 DIP/SOIC	-40 to +85°C	Use COP8SGx7
COP87L88CL	16k OTP	128	36/40	40 DIP, 44 PLCC	-40 to +85°C	Use COP8SGx7

Key Features

- Two 16-bit timers, each with two 16-bit registers supporting:
 - Processor independent PWM mode
 - External event counter mode
 - Input capture mode
- 4 kbytes on-board EEPROM with security feature
- 128 bytes on-board RAM

Additional Peripheral Features

- Idle timer
- Multi-Input Wake-Up (MIWU) with optional interrupts (8)
- WATCHDOG™ and clock monitor logic
- MICROWIRE/PLUS™ serial I/O

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE® output, push-pull output, weak pull-up input, high impedance input)
- Schmitt trigger inputs on ports G and L
- Packages:
 - 44 PLCC with 39 I/O pins
 - 40 DIP with 33 I/O pins
 - 28 DIP with 24 I/O pins
 - 28 SO with 24 I/O pins (contact local sales office for availability)

CPU/Instruction Set Features

- 1 μ s instruction cycle time
- Ten multi-source vectored interrupts servicing
 - External interrupt
 - Idle timer T0
 - Two timers (each with 2 Interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software trap
 - Default VIS (default interrupt)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer SP—stack in RAM
- Two 8-bit register indirect data memory pointers (B and X)

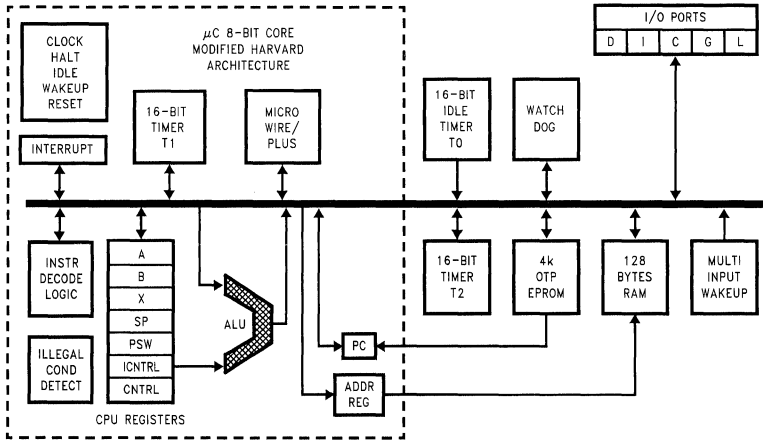

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Single supply operation: 2.7V–5.5V
- Temperature range: –40°C to +85°C

Development Support

- Emulation device for the COP888CL/COP884CL
- Real time emulation and full program debug offered by MetaLink Development System

COP8SG Family

8-Bit CMOS ROM Based and OTP Microcontrollers with 8k to 32k Memory, Two Comparators and USART

General Description

The COP8SGx5 Family ROM based microcontrollers are highly integrated COP8™ Feature core devices with 8k to 32k memory and advanced features including Analog comparators, and zero external components. These single-chip CMOS devices are suited for more complex applications requiring a full featured controller with larger memory, low EMI, two comparators, and a full-duplex USART. COP8SGx7 devices are 100% form-fit-function compatible 8k or 32k OTP (One Time Programmable) versions for use in production or development.

Erasable windowed versions are available for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 15 MHz CKI with 0.67 μ s instruction cycle, 14 interrupts, three multi-function 16-bit timer/counters with PWM, full duplex USART, MICROWIRE/PLUS™, two analog comparators, two power saving HALT/DLE modes, MIWU, idle timer, on-chip R/C oscillator, high current outputs, user selectable options (WATCHDOG™, 4 clock/oscillator modes, power-on-reset), 2.7V to 5.5V operation, program code security, and 28/40/44 pin packages.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP8SGE5	8k ROM	256	24/36/40	28 DIP/SOIC, 40 DIP, 44 PLCC/QFP/CSP	-40 to +85°C, -40 to +125°C
COP8SGG5	16k ROM	512	24/36/40	28 DIP/SOIC, 40 DIP, 44 PLCC/QFP/CSP 28 DIP/SOIC, 40 DIP, 44 PLCC/QFP	-40 to +85°C, -40 to +125°C
COP8SGH5	20k ROM	512	24/36/40	28 DIP/SOIC, 40 DIP, 44 PLCC/QFP/CSP 28 DIP/SOIC, 40 DIP, 44 PLCC/QFP	-40 to +85°C, -40 to +125°C
COP8SGK5	24k ROM	512	24/36/40	28 DIP/SOIC, 40 DIP, 44 PLCC/QFP/CSP 28 DIP/SOIC, 40 DIP, 44 PLCC/QFP	-40 to +85°C, -40 to +125°C
COP8SGR5	32k ROM	512	24/36/40	28 DIP/SOIC, 40 DIP, 44 PLCC/QFP/CSP 28 DIP/SOIC, 40 DIP, 44 PLCC/QFP	-40 to +85°C, -40 to +125°C
COP8SGE7	8k OTP EPROM	256	24/36/40	28 DIP/SOIC, 40 DIP, 44 PLCC/QFP/CSP 28 DIP/SOIC, 40 DIP, 44 PLCC/QFP	-40 to +85°C, -40 to +125°C
COP8SGR7	32k OTP EPROM	512	24/36/40	28 DIP/SOIC, 40 DIP, 44 PLCC/QFP/CSP 28 DIP/SOIC, 40 DIP, 44 PLCC/QFP	-40 to +85°C, -40 to +125°C
COP8SGR7-Q3	32k EPROM	512	24/36/40	28 DIP/SOIC, 40 DIP, 44 PLCC/QFP	Room Temp.

Key Features

- Low cost 8-bit microcontroller
- Quiet Design (low radiated emissions)
- Multi-Input Wakeup pins with optional interrupts (8 pins)
- Mask selectable clock options
 - Crystal oscillator
 - Crystal oscillator option with on-chip bias resistor
 - External oscillator
 - Internal R/C oscillator
- Internal Power-On-Reset—user selectable
- WATCHDOG and Clock Monitor Logic—user selectable
- Eight high current outputs

- 256 or 512 bytes on-board RAM
- 8k to 32k ROM or OTP EPROM with security feature

CPU Features

- Versatile easy to use instruction set
- 0.67 μ s instruction cycle time

CPU Features (Continued)

- Fourteen multi-source vectored interrupts servicing
 - External interrupt / Timers T0 — T3
 - MICROWIRE/PLUS Serial Interface
 - Multi-Input Wake Up
 - Software Trap
 - USART (2; 1 receive and 1 transmit)
 - Default VIS (default interrupt)
- 8-bit Stack Pointer SP (stack in RAM)
- Two 8-bit Register Indirect Data Memory Pointers
- True bit manipulation
- BCD arithmetic instructions

Peripheral Features

- Multi-Input Wakeup Logic
- Three 16-bit timers (T1 — T3), each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event Counter mode
 - Input Capture mode
- Idle Timer (T0)
- MICROWIRE/PLUS Serial Interface (SPI Compatible)
- Full Duplex USART

- Two Analog Comparators

I/O Features

- Software selectable I/O options (TRI-STATE® Output, Push-Pull Output, Weak Pull-Up Input, and High Impedance Input)
- Schmitt trigger inputs on ports G and L
- Eight high current outputs
- Packages: 28 SO with 24 I/O pins, 40 DIP with 36 I/O pins, 44 PLCC, PQFP and CSP with 40 I/O pins

Fully Static CMOS Design

- Low current drain (typically < 4 μ A)
- Two power saving modes: HALT and IDLE

Temperature Range

- -40°C to $+85^{\circ}\text{C}$, -40°C to $+125^{\circ}\text{C}$

Development Support

- Windowed packages for DIP and PLCC
- Real time emulation and full program debug offered by MetaLink Development System

1.0 Device Description

1.1 ARCHITECTURE

The COP8 family is based on a modified Harvard architecture, which allows data tables to be accessed directly from program memory. This is very important with modern microcontroller-based applications, since program memory is usually ROM or EPROM, while data memory is usually RAM. Consequently data tables need to be contained in non-volatile memory, so they are not lost when the microcontroller is powered down. In a modified Harvard architecture, instruction fetch and memory data transfers can be overlapped with a two stage pipeline, which allows the next instruction to be fetched from program memory while the current instruction is being executed using data memory. This is not possible with a Von Neumann single-address bus architecture.

The COP8 family supports a software stack scheme that allows the user to incorporate many subroutine calls. This capability is important when using High Level Languages. With a hardware stack, the user is limited to a small fixed number of stack levels.

1.2 INSTRUCTION SET

In today's 8-bit microcontroller application arena cost/performance, flexibility and time to market are several of the key issues that system designers face in attempting to build well-engineered products that compete in the marketplace. Many of these issues can be addressed through the manner in which a microcontroller's instruction set handles processing tasks. And that's why COP8 family offers a unique and code-efficient instruction set—one that provides the flexibility, functionality, reduced costs and faster time to market that today's microcontroller based products require.

Code efficiency is important because it enables designers to pack more on-chip functionality into less program memory space. Selecting a microcontroller with less program memory size translates into lower system costs, and the added security of knowing that more code can be packed into the available program memory space.

1.2.1 Key Instruction Set Features

The COP8 family incorporates a unique combination of instruction set features, which provide designers with optimum code efficiency and program memory utilization.

Single Byte/Single Cycle Code Execution

The efficiency is due to the fact that the majority of instructions are of the single byte variety, resulting in minimum program space. Because compact code does not occupy a substantial amount of program memory space, designers can integrate additional features and functionality into the microcontroller program memory space. Also, the majority instructions executed by the device are single cycle, resulting in minimum program execution time. In fact, 77% of the instructions are single byte single cycle, providing greater code and I/O efficiency, and faster code execution.

1.2.2 Many Single-Byte, Multifunction Instructions

The COP8 instruction set utilizes many single-byte, multifunction instructions. This enables a single instruction to accomplish multiple functions, such as DRSZ, DCOR, JID, LD (Load) and X (Exchange) instructions with post-incrementing and post-decrementing, to name just a few examples. In

many cases, the instruction set can simultaneously execute as many as three functions with the same single-byte instruction.

JID: (Jump Indirect); Single byte instruction; decodes external events and jumps to corresponding service routines (analogous to "DO CASE" statements in higher level languages).

LAID: (Load Accumulator-Indirect); Single byte look up table instruction provides efficient data path from the program memory to the CPU. This instruction can be used for table lookup and to read the entire program memory for checksum calculations.

RETSK: (Return Skip); Single byte instruction allows return from subroutine and skips next instruction. Decision to branch can be made in the subroutine itself, saving code.

AUTOINC/DEC: (Auto-Increment/Auto-Decrement); These instructions use the two memory pointers B and X to efficiently process a block of data (analogous to "FOR NEXT" in higher level languages).

1.2.3 Bit-Level Control

Bit-level control over many of the microcontroller's I/O ports provides a flexible means to ease layout concerns and save board space. All members of the COP8 family provide the ability to set, reset and test any individual bit in the data memory address space, including memory-mapped I/O ports and associated registers.

1.2.4 Register Set

Three memory-mapped pointers handle register indirect addressing and software stack pointer functions. The memory data pointers allow the option of post-incrementing or post-decrementing with the data movement instructions (LOAD/EXCHANGE). And 15 memory-mapped registers allow designers to optimize the precise implementation of certain specific instructions.

1.3 EMI REDUCTION

The COP8SGx5 family of devices incorporates circuitry that guards against electromagnetic interference—an increasing problem in today's microcontroller board designs. National's patented EMI reduction technology offers low EMI clock circuitry, gradual turn-on output drivers (GTOs) and internal I_{CC} smoothing filters, to help circumvent many of the EMI issues influencing embedded control designs. National has achieved 15 dB–20 dB reduction in EMI transmissions when designs have incorporated its patented EMI reducing circuitry.

1.4 PACKAGING/PIN EFFICIENCY

Real estate and board configuration considerations demand maximum space and pin efficiency, particularly given today's high integration and small product form factors. Microcontroller users try to avoid using large packages to get the I/O needed. Large packages take valuable board space and increases device cost, two trade-offs that microcontroller designs can ill afford.

The COP8 family offers a wide range of packages and do not waste pins: up to 90.9% (or 40 pins in the 44-pin package) are devoted to useful I/O.

COP87L88FH

8-Bit CMOS OTP Microcontrollers with 16k Memory, Comparators, USART and Hardware Multiply/Divide

General Description

The COP87L88FH OTP (One Time Programmable) microcontrollers are highly integrated COP8™ Feature core devices with 16k memory and advanced features including Analog comparators, and Hardware Multiply/Divide. These multi-chip CMOS devices are suited for applications requiring a full featured controller with comparators, a full-duplex USART, and hardware multiply/divide functions, and as pre-production devices for a masked ROM design. Lower cost pin and software compatible 12k ROM versions are available (COP888FH), as well as a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI (-XE = crystal oscillator; -TE = external clock) with 1 μ s instruction cycle, hardware multiply/divide functions, three multi-function 16-bit timer/counters with PWM, full duplex USART, MICROWIRE/PLUS™, two Analog comparators, two power saving HALT/IDLE modes, MIWU, idle timer, WATCHDOG™ and clock monitor logic, low EMI 2.7V to 5.5V operation, and 28/40/44 pin packages.

Devices included in this data sheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP87L84FH	16k OTP EPROM	512	24	28 DIP/SOIC	-40 to +85°C
COP87L88FH	16k OTP EPROM	512	36/40	40 DIP, 44 PLCC	-40 to +85°C

Key Features

- Hardware Multiply/Divide Functions
- Full duplex USART
- Three 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- 16 bytes on-board EPROM with security features
- 512 bytes on-board RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wakeup (MIWU) with optional interrupts (8)
- Two analog comparators
- WATCHDOG and Clock Monitor logic
- MICROWIRE/PLUS serial I/O

I/O Features

- Software selectable I/O options (TRI-STATE® , Push-Pull, Weak Pull-Up, and High Impedance)
- Schmitt trigger inputs on ports G and L
- Packages:
 - 40 DIP with 36 I/O pins
 - 44 PLCC with 40 I/O pins
 - 28 DIP/SO with 24 I/O pins

CPU/Instruction Set Features

- 1 μ s instruction cycle time
- Fourteen multi-source vectored interrupts servicing
 - External Interrupt
 - Idle Timer T0
 - Three Timers (Each with 2 Interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - USART (2)
 - Default VIS (default interrupt)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B and X)

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Single supply operation: 2.7V–5.5V
- Temperature ranges: –40°C to +85°C

Development Support

- Emulation device for COP888FH
- Real time emulation and full program debug offered by MetaLink Development System

COP87L84BC

8-Bit CMOS OTP Microcontrollers with 16k Memory, Comparators, and CAN Interface

General Description

The COP87L84BC OTP (One Time Programmable) microcontrollers are highly integrated COP8™ Feature core devices with 16k OTP EPROM memory and advanced features including a CAN 2.0B (passive) interface and two Analog comparators. These multi-chip CMOS devices are suited for applications requiring a full featured controller with a CAN interface, and 8-bit 39 kHz PWM timer, and as pre-production devices for a masked ROM design. Pin and software compatible 2k ROM versions are available (COP884BC) with a range of COP8 software and hardware development tools.

Features include an 8-bit memory mapped architecture, 10 MHz CKI (-XE = crystal oscillator) with 1 μ s instruction cycle, one multi-function 16-bit timer/counter, 8-bit 39 kHz PWM timer with 2 outputs, CAN 2.0B (passive) interface, MICROWIRE/PLUS™ serial I/O, two Analog comparators, two power saving HALT/IDLE modes, idle timer, MIWU, software selectable I/O options, low EMI 4.5V to 5.5V operation, and 28 pin packages.

Note: The companion devices with CAN interface, more I/O and memory, A/D, and USART are the COP87L88EB/RB. Device included in this datasheet is:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP87L84BC	16k OTP EPROM	64	18	28 SOIC	-40 to +85°C

Key Features

- CAN 2.0B (passive) Interface
- One 16-bit timer, with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- High speed, constant resolution 8-bit PWM/frequency monitor timer with 2 output pins
- 16 kbytes on-board OTP EPROM with security feature
- 64 bytes on-board RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wake Up (MIWU) with optional interrupts (7)
- Two analog comparators
- MICROWIRE/PLUS serial I/O

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE® Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- Schmitt trigger inputs on ports G and L
- Packages: 28 SO with 18 I/O pins

CPU/Instruction Set Features

- 1 μ s instruction cycle time
- Eleven multi-source vectored interrupts servicing
 - External Interrupt
 - Idle Timer T0
 - Timer T1 (with 2 Interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - PWM Timer
 - CAN Interface (with 3 interrupts)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B and X)

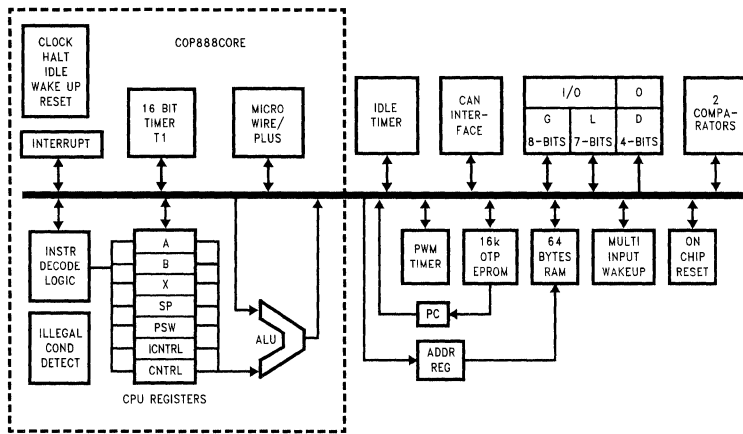

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Single supply operation: 4.5V–5.5V
- Temperature ranges: -40°C to +85°C

Development Support

- Emulation device for COP884BC/COP885BC
- Real time emulation and full program debug offered by MetaLink Development Systems

COP87L88EB/RB Family

8-Bit CMOS OTP Microcontrollers with 16k or 32k Memory, CAN Interface, 8-Bit A/D, and USART

General Description

The COP87L88EB/RB Family OTP (One Time programmable) microcontrollers are highly integrated COP8™ Feature core devices with 16k or 32k memory and advanced features including a CAN 2.0B (passive) interface, A/D and USART. These multi-chip CMOS devices are suited for applications requiring a full featured controller with a CAN interface, low EMI, and versatile communications interfaces, and as pre-production devices for ROM designs. Pin and software compatible 8k ROM versions (COP888EB) are available as well as a range of COP8 software and hardware development tools.

Features include an 8-bit memory mapped architecture, 10 MHz CKI (-XE = crystal oscillator) with 1µs instruction cycle, two multi-function 16-bit timer/counters, WATCHDOG and clock monitor, idle timer, CAN 2.0B (passive) interface, MICROWIRE/PLUS™ serial I/O, SPI master/slave interface, fully buffered USART, 8 bit A/D with 8 channels, two power saving HALT/IDLE modes, MIWU, software selectable I/O options, low EMI 4.5V to 5.5V operation, program code security, and 44/68 pin packages.

Note: A companion device with CAN interface, less I/O and memory, A/D, and PWM timer is the COP87L84BC.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP87L88EB	16k OTP EPROM	192	35	44 PLCC	-40 to +85°C
COP87L89EB	16k OTP EPROM	192	58	68 PLCC	-40 to +85°C
COP87L88RB	32k OTP EPROM	192	35	44 PLCC	-40 to +85°C
COP87L89RB	32k OTP EPROM	192	58	68 PLCC	-40 to +85°C

Key Features

- CAN 2.0B (passive) bus interface, with Software Power save mode
- 8-bit A/D Converter with 8 channels
- Fully buffered USART
- Multi-input wake up (MIWU) on both Port L and M
- SPI Compatible Master/Slave Interface
- 16 or 32 kbytes of on-board OTP EPROM with security feature

Note: Mask ROMed device with equivalent on-chip features and program memory size of 8k is available.

- 192 bytes of on-board RAM

Additional Peripheral Features

- Idle timer (programmable)
- Two 16-bit timer, with two 16-bit registers supporting
 - Processor independent PWM mode
 - External Event counter mode
 - Input capture mode
- WATCHDOG™ and Clock Monitor
- MICROWIRE/PLUS serial I/O

I/O Features

- Software selectable I/O options (TRI-STATE® outputs, Push pull outputs, Weak pull up input, High impedance input)
- Schmitt trigger inputs on Port G, L and M
- Packages: 44 PLCC with 35 I/O pins;
68 PLCC with 58 I/O pins

CPU/Instruction Set Features

- 1 µs instruction cycle time
- Fourteen multi-sourced vectored interrupts servicing
 - External interrupt
 - Idle Timer T0
 - Timers (T1 and T2) (4 Interrupts)
 - MICROWIRE/PLUS and SPI
 - Multi-input Wake up
 - Software Trap
 - CAN interface (3 interrupts)
 - USART (2 Inputs)
- Versatile easy to use instruction set
- 8-bit stacker pointer (SP) (Stack in RAM)
- Two 8-bit RegisterR Indirect Memory Pointers (B, X)

Fully Static CMOS

- Two power saving modes: HALT, IDLE
- Single supply operation: 4.5V to 5.5V
- Temperature range: -40°C to +85°C

Development Support

- Emulation device for COP888EB
- Real time emulation and full program debug offered by MetaLink Development System

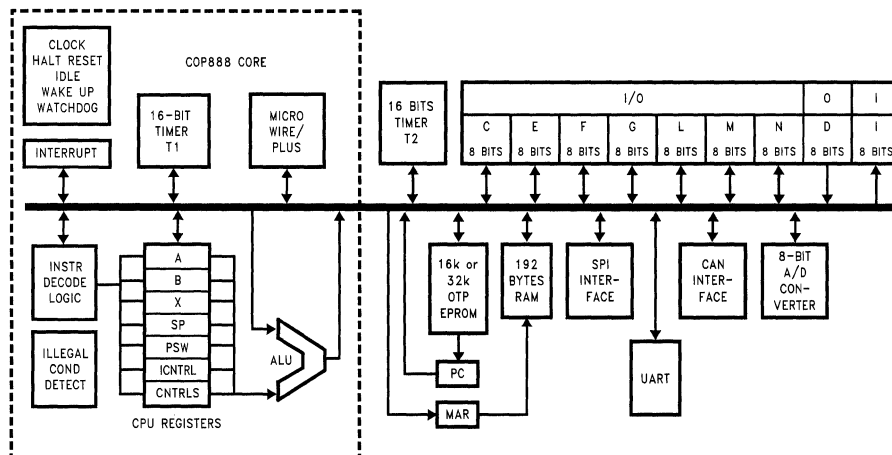

Basic Functional Description

- CAN I/F—CAN serial bus interface block as described in the CAN specification part 2.0B (Passive)
 - Interface rates up to 250k bit/s are supported utilizing standard message identifiers
- Programmable double buffered USART
- A/D—8-bit, 8 channel, 1-LSB Resolution, with improved Source Impedance and improved channel to channel cross talk immunity
- Multi-Input-Wake-Up (MIWU)—edge selectable wake-up and interrupt capability via input port and CAN interface (Port L, Port M and CAN I/F); supports Wake-Up capability on SPI, USART, and T2
- Port C—8-bit bi-directional I/O port
- Port D—8-bit Output port with high current drive capability (10 mA)
- Port F—8-bit bidirectional I/O
- Port G—8-bit bidirectional I/O port, including alternate functions for:
 - MICROWIRE™ Input and Output
 - Timer 1 Input or Output (Depending on mode selected)
 - External Interrupt input
 - WATCHDOG Output
- Port I—8-bit input port combining either digital input, or up to eight A/D input channels
- Port L—8-bit bidirectional I/O port, including alternate functions for:
 - USART Transmit/Receive I/O
 - Multi-input-wake up (MIWU on all pins)
- Port M—8-bit I/O port, with the following alternate function
 - SPI Interface
 - MIWU
- CAN Interface Wake-up (MSB)
- Timer 2 Input or Output (Depending on mode selected)
- Port N—8-bit bidirectional I/O
 - SPI Slave Select Expander
- Two 16-bit multi-function Timer counters (T1 and T2) plus supporting registers
 - (I/P Capture, PWM and Event Counting)
- Idle timer—Provides a basic time-base counter, (with interrupt) and automatic wake up from IDLE mode programmable
- MICROWIRE/PLUS—MICROWIRE serial peripheral interface, supporting both Master and Slave operation
- HALT and IDLE—Software programmable low current modes
 - HALT—Processor stopped, Minimum current
 - IDLE—Processor semi-active more than 60% power saving
- 16 or 32 kbytes OTP EPROM and 192 bytes of on board static RAM
- SPI Master/Slave interface includes 12 bytes Transmit and 12 bytes Receive FIFO Buffers. Operates up to 1M Bit/S
- On board programmable WATCHDOG and CLOCK Monitor

Applications

- Automobile Body Control and Comfort System
- Integrated Driver Information Systems
- Steering Wheel Control
- Car Radio Control Panel
- Sensor/Actuator Applications in Automotive and Industrial Control

COP87L88CF

8-Bit CMOS OTP Microcontrollers with 16k Memory and A/D Converter

General Description

The COP87L88CF OTP (One Time Programmable) microcontrollers are highly integrated COP8™ Feature core devices with 16k memory and advanced features including an A/D converter. These multi-chip CMOS devices are suited for applications requiring a full featured controller with an 8-bit A/D converter, and as pre-production devices for a masked ROM design. Lower cost pin and software compatible 16k ROM versions are available (COP888CF) as well as a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI (-XE = crystal oscillator) with 1 μ s instruction cycle, two multi-function 16-bit timer/counters, MICROWIRE/PLUS™ serial I/O, one 8-bit/8-channel A/D converter with prescaler and both differential and single ended modes, two power saving HALT/IDLE modes, idle timer, MIWU, high current outputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, 2.7V to 5.5V operation and 28/40/44 pin packages.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP87L84CF	16k OTP EPROM	128	24	28 DIP/SOIC	-40 to +85°C
COP87L88CF	16k OTP EPROM	128	36/40	40 DIP, 44 PLCC	-40 to +85°C

Key Features

- A/D converter (8-bit, 8-channel, with prescaler and both differential and single ended modes)
- Two 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- 16 kbytes on-board OTP EPROM with security feature
- 128 bytes on-board RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wake Up (MIWU) with optional interrupts (8)
- WATCHDOG and Clock Monitor logic
- MICROWIRE/PLUS serial I/O

I/O Features

- Software selectable I/O options (TRI-STATE™ Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- High current outputs
- Packages:
 - 44 PLCC with 38 I/O pins
 - 40 DIP with 34 I/O pins
 - 28 DIP/SO with 22 I/O pins

- Schmitt trigger inputs on Port G

CPU/Instruction Set Feature

- 1 μ s instruction cycle time
- Ten multi-source vectored interrupts servicing
 - External interrupt with selectable edge
 - Idle Timer T0
 - Two Timers (Each with 2 interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - Default VIS (default interrupt)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B, X)

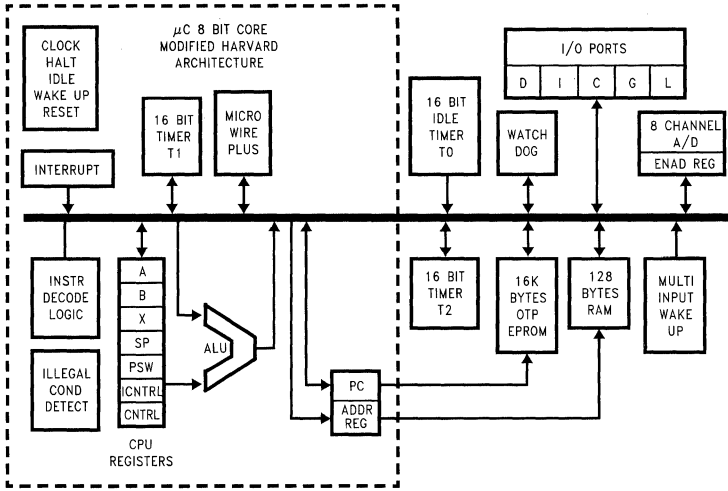

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Single supply operation: 2.7V to 5.5V
- Temperature ranges: -40°C to +85°C

Development Support

- Emulation device for the COP888CF/COP884CF
- Real time emulation and full program debug offered by MetaLink Development System

COP87L88GD/RD Family

8-Bit CMOS OTP Microcontrollers with 16k or 32k Memory and 8-Channel A/D with Prescaler

General Description

The COP87L88GD/RD OTP (One Time Programmable) Family microcontrollers are highly integrated COP8™ Feature core devices with 16k or 32k memory and advanced features including an A/D Converter. These multi-chip CMOS devices are suited for applications requiring a full featured controller with an 8-bit A/D converter, and as pre-production devices for a masked ROM design. Pin and software compatible 16k ROM versions are available (COP888GD), as well as a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI (-XE = crystal oscillator) with 1 μ s instruction cycle, three multi-function 16-bit timer/counters, MICROWIRE/PLUS™ serial I/O, one 8-bit/8-channel A/D converter with prescaler and both differential and single ended modes, two power saving HALT/IDLE modes, MIWU, idle timer, high current outputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, 2.7V to 5.5V operation, program code security, and 44 pin package.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP87L88GD	16k EPROM	256	40	44 PLCC	-40 to +85°C
COP87L88RD	32k EPROM	256	40	44 PLCC	-40 to +85°C

Key Features

- 8-channel A/D converter with prescaler and both differential and single ended modes
- Idle Timer with 5 selectable Wake-Up periods
- Three 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- 16 or 32 kbytes on-board OTP EPROM with security feature
- 256 bytes on-board RAM

Additional Peripheral Features

- Multi-Input Wakeup (MIWU) with optional interrupts (8)
- WATCHDOG and clock monitor logic
- MICROWIRE/PLUS serial I/O

I/O Features

- Memory mapped I/O
- Software selectable I/O options (TRI-STATE® Output, Push-Pull Output, Weak Pull Up Input, High Impedance Input)
- Schmitt trigger inputs on ports G and L
- Package:
 - 44 PLCC with 40 I/O pins

CPU/Instruction Set Features

- 1 μ s instruction cycle time
- Twelve multi-source vectored interrupts servicing
 - External Interrupt
 - Idle Timer T0
 - Three Timers (each with 2 Interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - Default VIS (default interrupt)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP) – stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B and X)

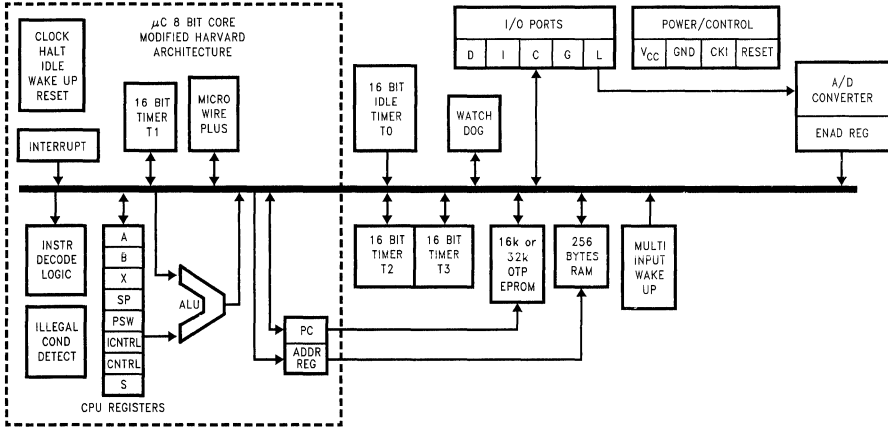

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Single supply operation: 2.7V to 5.5V
- Temperature range: -40°C to +85°C

Development Support

- Emulation device for COP888GD
- Real time emulation and full program debug offered by MetaLink Development System

COP87L88EK/RK Family

8-Bit CMOS OTP Microcontrollers with 8k or 32k Memory, Comparator, and Single-slope A/D Capability

General Description

The COP87L88EK/RK Family OTP (One Time Programmable) microcontrollers are highly integrated COP8™ Feature core devices with 16k or 32k memory and advanced features including a Multi-Input Comparator and Single-slope A/D capability. These multi-chip CMOS devices are suited for applications requiring a full featured, low EMI controller with an analog comparator, current source, and voltage reference, and as pre-production devices for a masked ROM design. Lower cost pin and software compatible 8k ROM versions (COP888EK) are available for use with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10 MHz CKI (-XE = crystal oscillator) with 1 μ s instruction cycle, three multi-function 16-bit timer/counters with PWM, MICROWIRE/PLUS™ serial I/O, one analog comparator with seven input multiplexor, an analog current source and $V_{CC}/2$ reference, two power saving HALT/IDLE modes, idle timer, MIWU, high current outputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, 2.7V to 5.5V operation and 28/40/44 pin packages.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP87L84EK	16k OTP EPROM	256	24	28 DIP/SOIC	-40 to +85°C
COP87L88EK	16k OTP EPROM	256	36/40	40 DIP, 44 PLCC	-40 to +85°C
COP87L84RK	32k OTP EPROM	256	24	28 DIP/SOIC	-40 to +85°C
COP87L88RK	32k OTP EPROM	256	36/40	40 DIP, 44 PLCC	-40 to +85°C

Key Features

- Analog function block with
 - Analog comparator with seven input multiplexor
 - Constant current source and $V_{CC}/2$ reference
- Three 16-bit timers, each with two 16-bit registers supporting:
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- 8 or 32 kbytes on-board EPROM with security feature
- 256 bytes on-board RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wake Up (MIWU) with optional interrupts (8)
- WATCHDOG and Clock Monitor logic
- MICROWIRE/PLUS serial I/O

I/O Features

- Software selectable I/O options (TRI-STATE™ Output, Push-Pull Output, Weak Pull-Up Input, High Impedance Input)
- Packages:
 - 44 PLCC with 40 I/O pins
 - 40 DIP with 36 I/O pins
 - 28 DIP/SO with 24 I/O pins

- Schmitt trigger inputs on Port G and L

CPU/Instruction Set Feature

- 1 μ s instruction cycle time
- Twelve multi-source vectored interrupts servicing
 - External Interrupt with selectable edge
 - Idle Timer T0
 - Three Timers (Each with 2 interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake Up
 - Software Trap
 - Default VIS (default interrupt)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit Register Indirect Data Memory Pointers (B, X)

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Single supply operation: 2.7V to 5.5V
- Temperature ranges: -40°C to +85°C

Development Support

- Emulation devices for the COP888EK/COP884EK
- Real time emulation and full program debug offered by MetaLink Development System

COP87L88RW

8-Bit One-Time Programmable (OTP) Microcontroller with Pulse Train Generators and Capture Modules

General Description

The COP87L88RW OTP microcontrollers are large memory (32k), highly integrated COP8™ Feature core devices, with advanced features including including Pulse Train Generators, Capture Modules, and hardware multiply/divide. These multi-chip CMOS devices are suited for applications requiring a full featured controller with high I/O pincount, pulse generation and capture, and a full-duplex USART, and for pre-production devices for ROM designs. Pin and software compatible 16k ROM versions are available (COP888GW), along with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, 10MHz CKI with 1 μ s instruction cycle, hardware multiply/divide functions, two 100ns capture modules, four pulse train generators with 16 bit prescalers, two multi-function 16-bit timer/counters, idle timer, full-duplex USART, MICROWIRE/PLUS™ serial I/O, two power saving HALT/IDLE modes, MIWU, high current outputs, software selectable I/O options, 2.7v-5.5v operation, program code security, and 68 pin packages.

Devices included in this datasheet are:

Device	Memory (bytes)	RAM (bytes)	I/O Pins	Packages	Temperature
COP87L88RW	32k OTP	512	64	68 PLCC	-40 to +85°C

Key Features

- Multiply/divide functions
- Full duplex UART
- Four pulse train generators with 16-bit prescalers
- Two 16-bit input capture modules with 8-bit prescalers
- Two 16-bit timers, each with two 16-bit registers supporting
 - Processor independent PWM mode
 - External event counter mode
 - Input capture mode
- 32 kbytes on-board OTP EPROM with security feature
 - Note: Mask ROMed devices with equivalent on-chip features and program memory sizes of 16k is available.
- 512 bytes on-board RAM

Additional Peripheral Features

- Idle Timer
- Multi-Input Wake-Up (MIWU) with optional interrupts (8)
- WATCHDOG™ and clock monitor logic
- MICROWIRE/PLUS serial I/O

I/O Features

- Memory mapped I/O
- Software selectable I/O options
 - TRI-STATE® output
 - Push-pull output
 - Weak pull-up input
 - High impedance input
- Schmitt trigger inputs on ports G and L

- Package: 68 PLCC with I/O pins

CPU/Instruction Set Features

- 1 μ s instruction cycle time
- Fourteen multi-source vectored interrupts servicing
 - External interrupt
 - Idle timer T0
 - Two timers (each with 2 interrupts)
 - MICROWIRE/PLUS
 - Multi-Input Wake-Up
 - Software trap
 - UART (2)
 - Default VIS
 - Capture timers
 - Counters (one vector for all four counters)
- Versatile and easy to use instruction set
- 8-bit Stack Pointer (SP)—stack in RAM
- Two 8-bit register indirect data memory pointers (B and X)

Fully Static CMOS

- Two power saving modes: HALT and IDLE
- Single supply operation: 2.7V to 5.5V
- Temperature range: -40°C to +85°C

Development Support

- Emulation device for the COP888GW
- Real time emulation and full program debug offered by MetaLink's Development System

Flash Products

COP8SBR9/COP8SCR9/COP8SDR9

8-Bit CMOS Flash Based Microcontroller with 32k Memory, Virtual EEPROM and Brownout

General Description

The COP8SBR9/SCR/SDR9 Flash based microcontrollers are highly integrated COP8™ Feature core devices, with 32k Flash memory and advanced features including Virtual EEPROM, High Speed Timers, USART, and Brownout Reset. This single-chip CMOS device is suited for applications requiring a full featured, in-system reprogrammable controller with large memory and low EMI. The same device is used for development, pre-production and volume production with a range of COP8 software and hardware development tools.

Family features include an 8-bit memory mapped architecture, in-system programmability (ISP), clock-doubled

10 MHz CKI for 20 MHz operation with 0.5 µs instruction cycle, dual clock operation for reduced power consumption, Virtual EEPROM using Flash Memory to store data, three multi-function 16-bit timer/counters (two with 50 ns resolution), programmable idle timer with MIWU, USART with on-chip Baud Rate Generator, MICROWIRE/PLUS™ serial I/O, two power saving HALT/IDLE modes, Schmitt trigger inputs, software selectable I/O options, WATCHDOG™ timer and Clock Monitor, Low EMI 2.7V–5.5V operation with Brownout Reset, and 44/68 pin packages.

Device	Program Memory (bytes)	RAM (bytes)	Brownout Voltage	I/O Pins	Packages	Temperature
COP8SBR9	32k Flash Memory	1k	2.7V to 2.9V	39, 63	44/68 PLCC	-40°C to +85°C
COP8SCR9	32k Flash Memory	1k	4.17V to 4.5V	39, 63	44/68 PLCC	-40°C to +85°C
COP8SDR9	32k Flash Memory	1k	No Brownout	39, 63	44/68 PLCC	-40°C to +85°C

Key Features

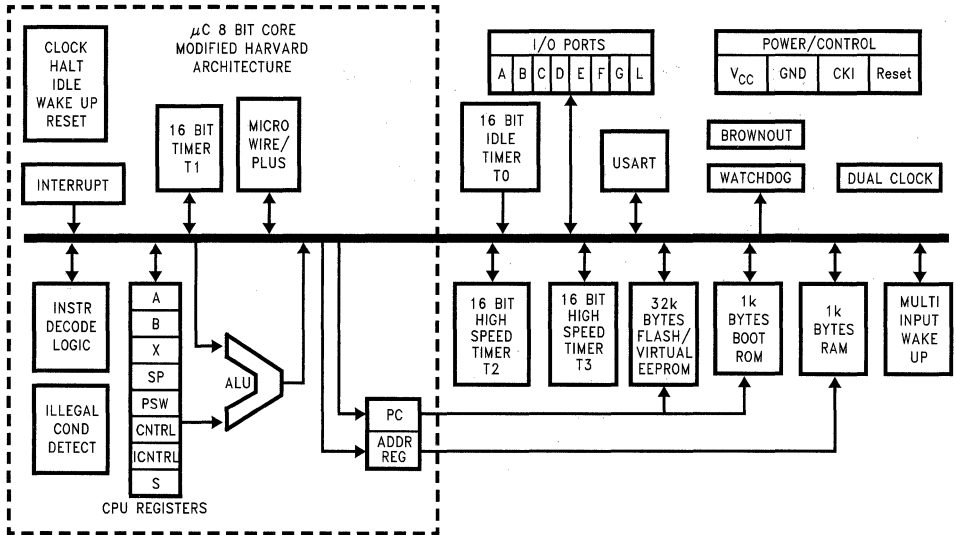

- 32 kbytes Flash Program Memory with Security Feature
- Virtual EEPROM using Flash Program Memory
- 1 kbyte volatile RAM
- USART
- In-System Programmability of Flash Memory
- Dual Clock Operation providing Enhanced Power Save Modes

Other Features

- Three 16-bit timers:
 - Timers T2 and T3 can operate at high speed (50 ns resolution)
 - Processor Independent PWM mode
 - External Event counter mode
 - Input Capture mode
- Brown-out Reset (COP8SBR9/CCR)
- Single supply operation: 2.7V–5.5V
- Quiet Design (low radiated emissions)
- Multi-Input Wake-up with optional interrupts
- MICROWIRE/PLUS (Serial Peripheral Interface Compatible)
- Clock Doubler for 20 MHz operation from 10 MHz Oscillator

- Thirteen multi-source vectored interrupts servicing:
 - External Interrupt
 - USART (2)
 - Idle Timer T0
 - Three Timers (each with 2 interrupts)
 - MICROWIRE/PLUS Serial peripheral interface
 - Multi-Input Wake Up
 - Software Trap
- Idle Timer with programmable interrupt interval
- 8-bit Stack Pointer SP (stack in RAM)
- Two 8-bit Register Indirect Data Memory Pointers
- True bit manipulation
- WATCHDOG and Clock Monitor logic
- Software selectable I/O options
 - TRI-STATE® Output/High Impedance Input
 - Push-Pull Output
 - Weak Pull Up Input
- Schmitt trigger inputs on I/O ports
- High Current I/Os
- Temperature range: -40°C to +85°C
- Packaging: 44 and 68 PLCC
- True In-System, Real time emulation and full program debug offered by MetaLink's Development Systems

Ordering Information

FIGURE 1. Part Numbering Scheme

1.0 General Description

1.1 EMI REDUCTION

The COP8SBR9/CCR/CDR devices incorporate circuitry that guards against electromagnetic interference - an increasing problem in today's microcontroller board designs. National's patented EMI reduction technology offers low EMI clock circuitry, gradual turn-on output drivers (GTOs) and internal lcc smoothing filters, to help circumvent many of the EMI issues influencing embedded control designs. National has achieved 15 dB–20 dB reduction in EMI transmissions when designs have incorporated its patented EMI reducing circuitry.

1.2 IN-SYSTEM PROGRAMMING AND VIRTUAL EEPROM

The device includes a program in a boot ROM that provides the capability, through the MICROWIRE/PLUS serial interface, to erase, program and read the contents of the Flash memory.

Additional routines are included in the boot ROM, which can be called by the user program, to enable the user to customize in system software update capability if MICROWIRE/PLUS is not desired.

Additional functions will copy blocks of data between the RAM and the Flash Memory. These functions provide a virtual EEPROM capability by allowing the user to emulate a variable amount of EEPROM by initializing nonvolatile variables from the Flash Memory and occasionally restoring these variables to the Flash Memory.

The contents of the boot ROM have been defined by National. Execution of code from the boot ROM is dependent on the state of the FLEX bit in the Option Register on exit from RESET. If the FLEX bit is a zero, the Flash Memory is assumed to be empty and execution from the boot ROM begins. For further information on the FLEX bit, refer to Section 4.5, Option Register.

1.3 DUAL CLOCK AND CLOCK DOUBLER

The device includes a versatile clocking system and two oscillator circuits designed to drive a crystal or ceramic resonator. The primary oscillator operates at high speed up to 10 MHz. The secondary oscillator is optimized for operation at 32.768 kHz.

The user can, through specified transition sequences (please refer to *7.0 Power Saving Features*), switch execution between the high speed and low speed oscillators. The unused oscillator can then be turned off to minimize power dissipation. If the low speed oscillator is not used, the pins are available as general purpose bidirectional ports.

The operation of the CPU will use a clock at twice the frequency of the selected oscillator (up to 20 MHz for high speed operation and 65.536 kHz for low speed operation). This doubled clock will be referred to in this document as 'MCLK'. The frequency of the selected oscillator will be referred to as CKI. Instruction execution occurs at one tenth the selected MCLK rate.

1.4 TRUE IN-SYSTEM EMULATION

On-chip emulation capability has been added which allows the user to perform true in-system emulation using final production boards and devices. This simplifies testing and evaluation of software in real environmental conditions. The user, merely by providing for a standard connector which can

be bypassed by jumpers on the final application board, can provide for software and hardware debugging using actual production units.

1.5 ARCHITECTURE

The COP8 family is based on a modified Harvard architecture, which allows data tables to be accessed directly from program memory. This is very important with modern microcontroller-based applications, since program memory is usually ROM or EPROM, while data memory is usually RAM. Consequently constant data tables need to be contained in non-volatile memory, so they are not lost when the microcontroller is powered down. In a modified Harvard architecture, instruction fetch and memory data transfers can be overlapped with a two stage pipeline, which allows the next instruction to be fetched from program memory while the current instruction is being executed using data memory. This is not possible with a Von Neumann single-address bus architecture.

The COP8 family supports a software stack scheme that allows the user to incorporate many subroutine calls. This capability is important when using High Level Languages. With a hardware stack, the user is limited to a small fixed number of stack levels.

1.6 INSTRUCTION SET

In today's 8-bit microcontroller application arena cost/performance, flexibility and time to market are several of the key issues that system designers face in attempting to build well-engineered products that compete in the marketplace. Many of these issues can be addressed through the manner in which a microcontroller's instruction set handles processing tasks. And that's why the COP8 family offers a unique and code-efficient instruction set - one that provides the flexibility, functionality, reduced costs and faster time to market that today's microcontroller based products require.

Code efficiency is important because it enables designers to pack more on-chip functionality into less program memory space (ROM, OTP or Flash). Selecting a microcontroller with less program memory size translates into lower system costs, and the added security of knowing that more code can be packed into the available program memory space.

1.6.1 Key Instruction Set Features

The COP8 family incorporates a unique combination of instruction set features, which provide designers with optimum code efficiency and program memory utilization.

1.6.2 Single Byte/Single Cycle Code Execution

The efficiency is due to the fact that the majority of instructions are of the single byte variety, resulting in minimum program space. Because compact code does not occupy a substantial amount of program memory space, designers can integrate additional features and functionality into the microcontroller program memory space. Also, the majority instructions executed by the device are single cycle, resulting in minimum program execution time. In fact, 77% of the instructions are single byte single cycle, providing greater code and I/O efficiency, and faster code execution.

1.6.3 Many Single-Byte, Multi-Function Instructions

The COP8 instruction set utilizes many single-byte, multi-function instructions. This enables a single instruction to accomplish multiple functions, such as DRSZ, DCOR, JID, LD (Load) and X (Exchange) instructions with post-incrementing and post-decrementing, to name just a few examples. In

1.0 General Description (Continued)

many cases, the instruction set can simultaneously execute as many as three functions with the same single-byte instruction.

JID: (Jump Indirect); Single byte instruction decodes external events and jumps to corresponding service routines (analogous to "DO CASE" statements in higher level languages).

LAID: (Load Accumulator-Indirect); Single byte look up table instruction provides efficient data path from the program memory to the CPU. This instruction can be used for table lookup and to read the entire program memory for checksum calculations.

RETSK: (Return Skip); Single byte instruction allows return from subroutine and skips next instruction. Decision to branch can be made in the subroutine itself, saving code.

AUTOINC/DEC: (Auto-Increment/Auto-Decrement); These instructions use the two memory pointers B and X to efficiently process a block of data (simplifying "FOR NEXT" or other loop structures in higher level languages).

1.6.4 Bit-Level Control

Bit-level control over many of the microcontroller's I/O ports provides a flexible means to ease layout concerns and save board space. All members of the COP8 family provide the ability to set, reset and test any individual bit in the data memory address space, including memory-mapped I/O ports and associated registers.

1.6.5 Register Set

Three memory-mapped pointers handle register indirect addressing and software stack pointer functions. The memory data pointers allow the option of post-incrementing or post-decrementing with the data movement instructions (LOAD/EXCHANGE). And 15 memory-mapped registers allow designers to optimize the precise implementation of certain specific instructions.

1.7 PACKAGING/PIN EFFICIENCY

Real estate and board configuration considerations demand maximum space and pin efficiency, particularly given today's high integration and small product form factors. Microcontroller users try to avoid using large packages to get the I/O needed. Large packages take valuable board space and increases device cost, two trade-offs that microcontroller designs can ill afford.

The COP8 family offers a wide range of packages and do not waste pins: up to 90.9% (or 40 pins in the 44-pin package) are devoted to useful I/O.

Audio Power Amplifiers

LM1875

20W Audio Power Amplifier

General Description

The LM1875 is a monolithic power amplifier offering very low distortion and high quality performance for consumer audio applications.

The LM1875 delivers 20 watts into a 4Ω or 8Ω load on $\pm 25V$ supplies. Using an 8Ω load and $\pm 30V$ supplies, over 30 watts of power may be delivered. The amplifier is designed to operate with a minimum of external components. Device overload protection consists of both internal current limit and thermal shutdown.

The LM1875 design takes advantage of advanced circuit techniques and processing to achieve extremely low distortion levels even at high output power levels. Other outstanding features include high gain, fast slew rate and a wide power bandwidth, large output voltage swing, high current capability, and a very wide supply range. The amplifier is internally compensated and stable for gains of 10 or greater.

Features

- Up to 30 watts output power
- A_{VO} typically 90 dB
- Low distortion: 0.015%, 1 kHz, 20 W
- Wide power bandwidth: 70 kHz
- Protection for AC and DC short circuits to ground
- Thermal protection with parole circuit
- High current capability: 4A
- Wide supply range 16V-60V
- Internal output protection diodes
- 94 dB ripple rejection
- Plastic power package TO-220

Applications

- High performance audio systems
- Bridge amplifiers
- Stereo phonographs
- Servo amplifiers
- Instrument systems

Typical Applications

LM1876 Overture™ Audio Power Amplifier Series

Dual 20W Audio Power Amplifier with Mute and Standby Modes

General Description

The LM1876 is a stereo audio amplifier capable of delivering typically 20W per channel of continuous average output power into a 4Ω or 8Ω load with less than 0.1% THD+N.

Each amplifier has an independent smooth transition fade-in/out mute and a power conserving standby mode which can be controlled by external logic.

The performance of the LM1876, utilizing its Self Peak Instantaneous Temperature (°Ke) (SPIKe™) protection circuitry, places it in a class above discrete and hybrid amplifiers by providing an inherently, dynamically protected Safe Operating Area (SOA). SPIKe protection means that these parts are safeguarded at the output against overvoltage, undervoltage, overloads, including thermal runaway and instantaneous temperature peaks.

Key Specifications

- THD+N at 1kHz at 2 x 15W continuous average output power into 4Ω or 8Ω: 0.1% (max)
- THD+N at 1kHz at continuous average output power of 2 x 20W into 8Ω: 0.009% (typ)
- Standby current: 4.2mA (typ)

Features

- SPIKe protection
- Minimal amount of external components necessary
- Quiet fade-in/out mute mode
- Standby-mode
- Isolated 15-lead TO-220 package
- Non-Isolated 15-lead TO-220 package
- Wide supply range 20V - 64V

Applications

- High-end stereo TVs
- Component stereo
- Compact stereo

Typical Application

DS012072-1

FIGURE 1. Typical Audio Amplifier Application Circuit

LM1877

Dual Audio Power Amplifier

General Description

The LM1877 is a monolithic dual power amplifier designed to deliver 2W/channel continuous into 8 Ω loads. The LM1877 is designed to operate with a low number of external components, and still provide flexibility for use in stereo phonographs, tape recorders and AM-FM stereo receivers, etc. Each power amplifier is biased from a common internal regulator to provide high power supply rejection, and output Q point centering. The LM1877 is internally compensated for all gains greater than 10.

Features

- 2W/channel
- -65 dB ripple rejection, output referred
- -65 dB channel separation, output referred

- Wide supply range, 6V–24V
- Very low cross-over distortion
- Low audio band noise
- AC short circuit protected
- Internal thermal shutdown

Applications

- Multi-channel audio systems
- Stereo phonographs
- Tape recorders and players
- AM-FM radio receivers
- Servo amplifiers
- Intercom systems
- Automotive products

LM2876

Overture™ Audio Power Amplifier Series

High-Performance 40W Audio Power Amplifier w/Mute

General Description

The LM2876 is a high-performance audio power amplifier capable of delivering 40W of continuous average power to an 8Ω load with 0.1% THD+N from 20Hz–20kHz.

The performance of the LM2876, utilizing its Self Peak Instantaneous Temperature (*Ke) (SPiKe™) protection circuitry, puts it in a class above discrete and hybrid amplifiers by providing an inherently, dynamically protected Safe Operating Area (SOA). SPiKe protection means that these parts are completely safeguarded at the output against overvoltage, undervoltage, overloads, including shorts to the supplies, thermal runaway, and instantaneous temperature peaks.

The LM2876 maintains an excellent signal-to-noise ratio of greater than 95dB (min) with a typical low noise floor of 2.0μV. It exhibits extremely low THD+N values of 0.06% at the rated output into the rated load over the audio spectrum, and provides excellent linearity with an IMD (SMPTE) typical rating of 0.004%.

Features

- 40W continuous average output power into 8Ω
- 75W instantaneous peak output power capability
- Signal-to-Noise Ratio ≥ 95 dB(min)
- An input mute function
- Output protection from a short to ground or to the supplies via internal current limiting circuitry
- Output over-voltage protection against transients from inductive loads
- Supply under-voltage protection, not allowing internal biasing to occur when $IV_{EE1} + IV_{CC1} \leq 12V$, thus eliminating turn-on and turn-off transients
- 11-lead TO-220 package
- Wide supply range 20V - 72V

Applications

- Component stereo
- Compact stereo
- Self-powered speakers
- Surround-sound amplifiers
- High-end stereo TVs

Typical Application

DS011775-1

* Optional components dependent upon specific design requirements. Refer to the External Components Description section for a component functional description.

LM380

2.5W Audio Power Amplifier

General Description

The LM380 is a power amplifier for consumer applications. In order to hold system cost to a minimum, gain is internally fixed at 34 dB. A unique input stage allows ground referenced input signals. The output automatically self-centers to one-half the supply voltage.

The output is short circuit proof with internal thermal limiting. The package outline is standard dual-in-line. The LM380N uses a copper lead frame. The center three pins on either side comprise a heat sink. This makes the device easy to use in standard PC layouts.

Uses include simple phonograph amplifiers, intercoms, line drivers, teaching machine outputs, alarms, ultrasonic drivers, TV sound systems, AM-FM radio, small servo drivers, power converters, etc.

A selected part for more power on higher supply voltages is available as the LM384. For more information see AN-69.

Features

- Wide supply voltage range: 10V-22V
- Low quiescent power drain: 0.13W ($V_S = 18V$)
- Voltage gain fixed at 50
- High peak current capability: 1.3A
- Input referenced to GND
- High input impedance: 150k Ω
- Low distortion
- Quiescent output voltage is at one-half of the supply voltage
- Standard dual-in-line package

Connection Diagrams (Dual-In-Line Packages, Top View)

LM384

5W Audio Power Amplifier

General Description

The LM384 is a power audio amplifier for consumer applications. In order to hold system cost to a minimum, gain is internally fixed at 34 dB. A unique input stage allows ground referenced input signals. The output automatically self-centers to one-half the supply voltage.

The output is short-circuit proof with internal thermal limiting. The package outline is standard dual-in-line. A copper lead frame is used with the center three pins on either side comprising a heat sink. This makes the device easy to use in standard p-c layout.

Uses include simple phonograph amplifiers, intercoms, line drivers, teaching machine outputs, alarms, ultrasonic drivers, TV sound systems, AM-FM radio, sound projector systems, etc. See AN-69 for circuit details.

Features

- Wide supply voltage range: 12V to 26V
- Low quiescent power drain
- Voltage gain fixed at 50
- High peak current capability: 1.3A
- Input referenced to GND
- High input impedance: 150k Ω
- Low distortion: 0.25% ($P_O=4W$, $R_L=8\Omega$)
- Quiescent output voltage is at one half of the supply voltage
- Standard dual-in-line package

Schematic Diagram

DS007843-3

LM386

Low Voltage Audio Power Amplifier

General Description

The LM386 is a power amplifier designed for use in low voltage consumer applications. The gain is internally set to 20 to keep external part count low, but the addition of an external resistor and capacitor between pins 1 and 8 will increase the gain to any value from 20 to 200.

The inputs are ground referenced while the output automatically biases to one-half the supply voltage. The quiescent power drain is only 24 milliwatts when operating from a 6 volt supply, making the LM386 ideal for battery operation.

Features

- Battery operation
- Minimum external parts
- Wide supply voltage range: 4V–12V or 5V–18V
- Low quiescent current drain: 4mA
- Voltage gains from 20 to 200
- Ground referenced input
- Self-centering output quiescent voltage
- Low distortion: 0.2% ($A_V = 20$, $V_S = 6V$, $R_L = 8\Omega$, $P_O = 125mW$, $f = 1kHz$)
- Available in 8 pin MSOP package

Applications

- AM-FM radio amplifiers
- Portable tape player amplifiers
- Intercoms
- TV sound systems
- Line drivers
- Ultrasonic drivers
- Small servo drivers
- Power converters

LM3875 Overture™ Audio Power Amplifier Series

High-Performance 56W Audio Power Amplifier

General Description

The LM3875 is a high-performance audio power amplifier capable of delivering 56W of continuous average power to an 8Ω load with 0.1% THD+N from 20Hz to 20kHz.

The performance of the LM3875, utilizing its Self Peak Instantaneous Temperature (™) (SPIKe™) protection circuitry, puts it in a class above discrete and hybrid amplifiers by providing an inherently, dynamically protected Safe Operating Area (SOA). SPIKe protection means that these parts are completely safeguarded at the output against overvoltage, undervoltage, overloads, caused by shorts to the supplies, thermal runaway, and instantaneous temperature peaks.

The LM3875 maintains an excellent signal-to-noise ratio of greater than 95dB(min) with a typical low noise floor of 2.0μV. It exhibits extremely low THD+N values of 0.06% at the rated output into the rated load over the audio spectrum, and provides excellent linearity with an IMD (SMPTE) typical rating of 0.004%.

Features

- 56W continuous average output power into 8Ω
- 100W instantaneous peak output power capability
- Signal-to-Noise Ratio >95dB (min)
- Output protection from a short to ground or to the supplies via internal current limiting circuitry
- Output over-voltage protection against transients from inductive loads
- Supply under-voltage protection, not allowing internal biasing to occur when $|V_{+}| + |V_{-}| \leq 12V$, thus eliminating turn-on and turn-off transients
- 11 lead TO-220 package
- Wide supply voltage range: $|V_{+}| + |V_{-}| = 20V$ to 84V

Applications

- Component or compact stereos
- Self-powered speakers
- Surround-sound amplifiers
- High-end stereo TVs

Typical Application

DS011449-1

*Optional components dependent upon specific design requirements. Refer to the External Components Description section for a component function description.

LM3876 Overture™

Audio Power Amplifier Series

High-Performance 56W Audio Power Amplifier w/Mute

General Description

The LM3876 is a high-performance audio power amplifier capable of delivering 56W of continuous average power to an 8Ω load with 0.1% THD+N from 20Hz–20kHz.

The performance of the LM3876, utilizing its Self Peak Instantaneous Temperature (°Ke) (**SPiKe™**) protection circuitry, puts it in a class above discrete and hybrid amplifiers by providing an inherently, dynamically protected Safe Operating Area (SOA). **SPiKe** protection means that these parts are completely safeguarded at the output against overvoltage, undervoltage, overloads, including shorts to the supplies, thermal runaway, and instantaneous temperature peaks.

The LM3876 maintains an excellent signal-to-noise ratio of greater than 95dB (min) with a typical low noise floor of 2.0μV. It exhibits extremely low THD+N values of 0.06% at the rated output into the rated load over the audio spectrum, and provides excellent linearity with an IMD (SMPTE) typical rating of 0.004%.

Features

- 56W continuous average output power into 8Ω
- 100W instantaneous peak output power capability
- Signal-to-Noise Ratio ≥ 95 dB(min)
- An input mute function
- Output protection from a short to ground or to the supplies via internal current limiting circuitry
- Output over-voltage protection against transients from inductive loads
- Supply under-voltage protection, not allowing internal biasing to occur when $|V_{EE}| + |V_{CC}| \leq 12V$, thus eliminating turn-on and turn-off transients
- 11-lead TO-220 package
- Wide supply range 20V - 94V

Applications

- Component stereo
- Compact stereo
- Self-powered speakers
- Surround-sound amplifiers
- High-end stereo TVs

Typical Application

DS011832-1

*Optional components dependent upon specific design requirements. Refer to the External Components Description section for a component functional description.

LM3886 Overture™ Audio Power Amplifier Series

High-Performance 68W Audio Power Amplifier w/Mute

General Description

The LM3886 is a high-performance audio power amplifier capable of delivering 68W of continuous average power to a 4Ω load and 38W into 8Ω with 0.1% THD+N from 20Hz–20kHz.

The performance of the LM3886, utilizing its Self Peak Instantaneous Temperature (°Ke) (**SPiKe™**) protection circuitry, puts it in a class above discrete and hybrid amplifiers by providing an inherently, dynamically protected Safe Operating Area (SOA). **SPiKe** protection means that these parts are completely safeguarded at the output against overvoltage, undervoltage, overloads, including shorts to the supplies, thermal runaway, and instantaneous temperature peaks.

The LM3886 maintains an excellent signal-to-noise ratio of greater than 92dB with a typical low noise floor of 2.0μV. It exhibits extremely low THD+N values of 0.03% at the rated output into the rated load over the audio spectrum, and provides excellent linearity with an IMD (SMPTE) typical rating of 0.004%.

Features

- 68W cont. avg. output power into 4Ω at $V_{CC} = \pm 28V$

- 38W cont. avg. output power into 8Ω at $V_{CC} = \pm 28V$
- 50W cont. avg. output power into 8Ω at $V_{CC} = \pm 35V$
- 135W instantaneous peak output power capability
- Signal-to-Noise Ratio $\geq 92dB$
- An input mute function
- Output protection from a short to ground or to the supplies via internal current limiting circuitry
- Output over-voltage protection against transients from inductive loads
- Supply under-voltage protection, not allowing internal biasing to occur when $|V_{EE}| + |V_{CC}| \leq 12V$, thus eliminating turn-on and turn-off transients
- 11-lead TO-220 package
- Wide supply range 20V - 94V

Applications

- Component stereo
- Compact stereo
- Self-powered speakers
- Surround-sound amplifiers
- High-end stereo TVs

Typical Application

DS011833-1

*Optional components dependent upon specific design requirements. Refer to the External Components Description section for a component functional description.

LM4651 & LM4652 Overture™ Audio Power Amplifier 170W Class D Audio Power Amplifier Solution

General Description

The IC combination of the LM4651 driver and the LM4652 power MOSFET provides a high efficiency, Class D subwoofer amplifier solution.

The LM4651 is a fully integrated conventional pulse width modulator driver IC. The IC contains short circuit, under voltage, over modulation, and thermal shut down protection circuitry. It contains a standby function, which shuts down the pulse width modulation and minimizes supply current. The LM4652 is a fully integrated H-bridge power MOSFET IC in a TO-220 power package. Together, these two IC's form a simple, compact high power audio amplifier solution complete with protection normally seen only in Class AB amplifiers. Few external components and minimal traces between the IC's keep the PCB area small and aids in EMI control.

The near rail-to-rail switching amplifier substantially increases the efficiency compared to Class AB amplifiers. This high efficiency solution significantly reduces the heat sink size compared to a Class AB IC of the same power level. This two-chip solution is optimum for powered subwoofers and self powered speakers.

Key Specifications

- Output power into 4Ω with < 10% THD. 170W (Typ)
- THD at 10W, 4Ω, 10 – 500Hz. < 0.3% THD (Typ)
- Maximum efficiency at 125W 85% (Typ)
- Standby attenuation. >100dB (Min)

Features

- Conventional pulse width modulation.
- Externally controllable switching frequency.
- 50kHz to 200kHz switching frequency range.
- Integrated error amp and feedback amp.
- Turn-on soft start and under voltage lockout.
- Over modulation protection (soft clipping).
- Short circuit current limiting and thermal shutdown protection.
- 15 Lead TO-220 isolated package.
- Self checking protection diagnostic.

Applications

- Powered subwoofers for home theater and PC's
- Car booster amplifier
- Self-powered speakers

LM4663 Boomer® Audio Power Amplifier Series

2 Watt Stereo Class D Audio Power Amplifier with Stereo Headphone Amplifier
General Description

The LM4663 is a fully integrated single supply, high efficiency Class D audio power amplifier solution. The LM4663 utilizes a continuous time delta-sigma modulation technique that lowers output noise and THD when compared to conventional pulse width modulators.

The LM4663 also features a stereo headphone amplifier that delivers 80mW into a 32Ω headset with less than 0.5% THD. The LM4663 has two stereo inputs that can be selected to drive either the headphone amplifier or the Class D amplifier. All amplifiers are protected with thermal shutdown.

In standby mode, the LM4663 draws an extremely low 2μA supply current. With a 4Ω load, the IC's efficiency for a 250mW power level is 69%, reaching 83% at a power level of 2W. The IC features click and pop reduction circuitry that minimizes audible popping during device turn-on and turn-off. The LM4663 is available in a 24-lead TSSOP package, ideal for portable and desktop computer applications.

Key Specifications

- P_O at THD+N=1% 2.1W (typ)
- THD+N at 1kHz at 1 Watt into 4Ω (Power Amp) 0.2% (typ)

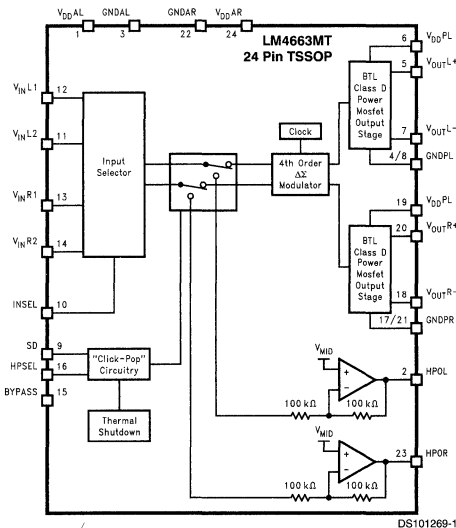

- Efficiency at 2 Watt into 4Ω 83% (typ)
- Efficiency at 250mW into 4Ω 69% (typ)
- Total quiescent power supply current 22mA (typ)
- Total shutdown power supply current 2μA (typ)
- THD+N 1kHz, 20mW, 32Ω (Headphone) 0.15% (typ)
- Single supply range 4.5V to 5.5V

Features

- Delta-sigma modulator.
- Two stereo input selector.
- "Click and pop" suppression circuitry.
- Micropower shutdown mode.
- 24 lead TSSOP package (No heatsink required).
- Stereo headphone amplifier.

Applications

- Portable computers
- Desktop computers
- Multimedia Monitors

LM4700

Overture™ Audio Power Amplifier Series

30W Audio Power Amplifier with Mute and Standby Modes

General Description

The LM4700 is an audio power amplifier capable of delivering typically 30W of continuous average output power into an 8Ω load with less than 0.1% THD+N.

The LM4700 has an independent smooth transition fade-in/out mute and a power conserving standby mode which can be controlled by external logic.

The performance of the LM4700, utilizing its Self Peak Instantaneous Temperature (°Ke) (SPIKe™) protection circuitry, places it in a class above discrete and hybrid amplifiers by providing an inherently, dynamically protected Safe Operating Area (SOA). SPIKe protection means that these parts are completely safeguarded at the output against overvoltage, undervoltage, overloads, including thermal runaway and instantaneous temperature peaks.

Key Specifications

- THD+N at 1kHz at continuous average output power of 25W into 8Ω: 0.1% (max)
- THD+N from 20Hz to 20kHz at 30W of continuous average output power into 8Ω: 0.08% (typ)
- Standby current: 2.1mA (typ)

Features

- SPIKe Protection
- Minimal amount of external components necessary
- Quiet fade-in/out mute function
- Power conserving standby-mode
- Isolated 11-lead TO-220 package
- Wide supply range 20V - 66V

Applications

- Component stereo
- Compact stereo

Typical Application

DS012369-1

*Optional components dependent upon specific design requirements. Refer to the External Components Description section for a component functional description.

LM4701 Overture™ Audio Power Amplifier Series

30W Audio Power Amplifier with Mute and Standby Modes

General Description

The LM4701 is an audio power amplifier capable of delivering typically 30W of continuous average output power into an 8Ω load with less than 0.1% THD+N.

The LM4701 has an independent smooth transition fade-in/out mute and a power conserving standby mode which can be controlled by external logic.

The performance of the LM4701, utilizing its Self Peak Instantaneous Temperature (°Ke) (**SPIKe™**) protection circuitry, places it in a class above discrete and hybrid amplifiers by providing an inherently, dynamically protected Safe Operating Area (SOA). **SPIKe** protection means that these parts are completely safeguarded at the output against over-voltage, undervoltage, overloads, including thermal runaway and instantaneous temperature peaks.

Key Specifications

- THD+N at 1kHz at continuous average output power of 25W into 8Ω: 0.1% (max)
- THD+N from 20Hz to 20kHz at 30W of continuous average output power into 8Ω: 0.08% (typ)
- Standby current: 2.1mA (typ)

Features

- **SPIKe** Protection
- Minimal amount of external components necessary
- Quiet fade-in/out mute function
- Power conserving standby-mode
- Non-Isolated 9-lead TO-220 package
- Wide supply range 20V - 66V

Applications

- TVs
- Component stereo
- Compact stereo

LM4752

Stereo 11W Audio Power Amplifier

General Description

The LM4752 is a stereo audio amplifier capable of delivering 11W per channel of continuous average output power to a 4Ω load, or 7W per channel into 8Ω using a single 24V supply at 10% THD+N.

The LM4752 is specifically designed for single supply operation and a low external component count. The gain and bias resistors are integrated on chip, resulting in a 11W stereo amplifier in a compact 7 pin TO220 package. High output power levels at both 20V and 24V supplies and low external component count offer high value for compact stereo and TV applications. A simple mute function can be implemented with the addition of a few external components.

Key Specifications

- Output power at 10% THD+N with 1kHz into 4Ω at $V_{CC} = 24V$: 11W (typ)
- Output power at 10% THD+N with 1kHz into 8Ω at $V_{CC} = 24V$: 7W (typ)
- Closed loop gain: 34dB (typ)
- P_O at 10% THD+N @ 1 kHz into 4Ω single-ended TO-263 package at $V_{CC} = 12V$: 2.5W (typ)

- P_O at 10% THD+N @ 1kHz into 8Ω bridged TO-263 package at $V_{CC} = 12V$: 5W (typ)

Features

- Drives 4Ω and 8Ω loads
- Internal gain resistors ($A_V = 34$ dB)
- Minimum external component requirement
- Single supply operation
- Internal current limiting
- Internal thermal protection
- Compact 7-lead TO-220 package
- Low cost-per-watt
- Wide supply range 9V - 40V

Applications

- Compact stereos
- Stereo TVs
- Mini component stereos
- Multimedia speakers

LM4753

Dual 10W Audio Power Amplifier w/Mute, Standby and Volume Control

General Description

The LM4753 is a stereo audio amplifier capable of delivering 10W/channel at 10% distortion into a 8Ω load. The power amp has an internally set gain of 30 dB. A 0V–5V DC controlled volume block provides 80 dB of attenuation from input to line-out. Line outputs are available after the volume control for signal routing.

The amplifier has a smooth transition fade-in/out mute and a power conserving standby function which are controlled through TTL or CMOS logic. Both functions provide over 75 dB of attenuation.

The LM4753 maintains an excellent Signal-to-Noise ratio of greater than 70 dB with a low noise floor less than 2 mV. The IC also maintains above 50 dB of channel separation.

The LM4753 is available in a 15-lead non-isolated plastic package and is designed for use in TV applications requiring single supply operation.

Key Specifications

- Output power into 8Ω at 10% THD 10W
- Maximum operating voltage 28V
- Power output stage Noise floor 2 mV
- Line output Noise floor 55 μV
- 0V–5V DC controlled volume attenuation 80 dB
- Mute attenuation 75 dB
- Standby-mode supply current 7 mA

Features

- Quiet fade-in/out mute function
- Stereo variable line-out pins
- AC output short circuit protection
- Thermal shutdown protection

Applications

- Stereo TVs
- Component stereo
- Compact stereo

LM4755

Stereo 11W Audio Power Amplifier with Mute

General Description

The LM4755 is a stereo audio amplifier capable of delivering 11W per channel of continuous average output power to a 4Ω load or 7W per channel into 8Ω using a single 24V supply at 10% THD+N. The internal mute circuit and pre-set gain resistors provide for a very economical design solution.

Output power specifications at both 20V and 24V supplies and low external component count offer high value to consumer electronic manufacturers for stereo TV and compact stereo applications. The LM4755 is specifically designed for single supply operation.

Key Specifications

- Output power at 10% THD with 1kHz into 4Ω at $V_{CC} = 24V$: 11W (typ)
- Output power at 10% THD with 1kHz into 8Ω at $V_{CC} = 24V$: 7W (typ)
- Closed loop gain: 34dB (typ)
- P_O at 10% THD+N @ 1kHz into 4Ω single-ended TO-263 package at $V_{CC}=12V$: 2.5W (typ)

- P_O at 10% THD+N @ 1kHz into 8Ω bridged TO-263 package at $V_{CC}=12V$: 5W (typ)

Features

- Drives 4Ω and 8Ω loads
- Integrated mute function
- Internal Gain Resistors
- Minimal external components needed
- Single supply operation
- Internal current limiting and thermal protection
- Compact 9-lead TO-220 package
- Wide supply range 9V - 40V

Applications

- Stereos TVs
- Compact stereos
- Mini component stereos

LM4765 Overture™

Audio Power Amplifier Series Dual 30W Audio Power Amplifier with Mute and Standby Modes

General Description

The LM4765 is a stereo audio amplifier capable of delivering typically 30W per channel of continuous average output power into an 8Ω load with less than 0.1% THD+N.

Each amplifier has an independent smooth transition fade-in/out mute and a power conserving standby mode which can be controlled by external logic.

The performance of the LM4765, utilizing its Self Peak Instantaneous Temperature (°Ke) (SPIKe™) protection circuitry, places it in a class above discrete and hybrid amplifiers by providing an inherently, dynamically protected Safe Operating Area (SOA). SPIKe protection means that these parts are safeguarded at the output against overvoltage, undervoltage, overloads, including thermal runaway and instantaneous temperature peaks.

Key Specifications

- THD+N at 1kHz at 2 x 25W continuous average output power into 8Ω : 0.1% (max)
- THD+N at 1kHz at continuous average output power of 2 x 30W into 8Ω : 0.009% (typ)
- Standby current: 6.5mA (typ)

Features

- SPIKe Protection
- Minimal amount of external components necessary
- Quiet fade-in/out mute mode
- Standby-mode
- Non-Isolated 15-lead TO-220 package
- Wide supply range 20V - 66V

Applications

- High-end stereo TVs
- Component stereo
- Compact stereo

Typical Application

LM4766 Overture™

Audio Power Amplifier Series Dual 40W Audio Power Amplifier with Mute

General Description

The LM4766 is a stereo audio amplifier capable of delivering typically 40W per channel with the non-isolated 'T' package and 30W per channel with the isolated 'TF' package of continuous average output power into an 8Ω load with less than 0.1% (THD+N).

The performance of the LM4766, utilizing its Self Peak Instantaneous Temperature (°Ke) (SPIKe™) Protection Circuitry, places it in a class above discrete and hybrid amplifiers by providing an inherently, dynamically protected Safe Operating Area (SOA). SPIKe Protection means that these parts are safeguarded at the output against overvoltage, undervoltage, overloads, including thermal runaway and instantaneous temperature peaks.

Each amplifier within the LM4766 has an independent smooth transition fade-in/out mute that minimizes output pops. The IC's extremely low noise floor at 2μV and its extremely low THD+N value of 0.06% at the rated power make the LM4766 optimum for high-end stereo TVs or minicomponent systems.

Key Specifications

- THD+N at 1kHz at 2 x 30W continuous average output power into 8Ω: 0.1% (max)
- THD+N at 1kHz at continuous average output power of 2 x 30W into 8Ω: 0.009% (typ)

Features

- SPIKe Protection
- Minimal amount of external components necessary
- Quiet fade-in/out mute mode
- Non-Isolated 15-lead TO-220 package
- Wide Supply Range 20V - 78V

Applications

- High-end stereo TVs
- Component stereo
- Compact stereo

LM4808 Boomer® Audio Power Amplifier Series

Dual 105 mW Headphone Amplifier

General Description

The LM4808 is a dual audio power amplifier capable of delivering 105 mW per channel of continuous average power into a 16 Ω load with 0.1% (THD+N) from a 5V power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components using surface mount packaging. Since the LM4808 does not require bootstrap capacitors or snubber networks, it is optimally suited for low-power portable systems.

The unity-gain stable LM4808 can be configured by external gain-setting resistors.

Key Specifications

- THD+N at 1 kHz at 105 mW continuous average output power into 16 Ω 0.1% (max)
- THD+N at 1 kHz at 70 mW continuous average output power into 32 Ω 0.1% (typ)
- Output power at 0.1% THD+N at 1 kHz into 32 Ω 70mW (typ)

Features

- SOP and MSOP surface mount packaging
- Switch on/off click suppression
- Excellent power supply ripple rejection
- Unity-gain stable
- Minimum external components

Applications

- Headphone Amplifier
- Personal Computers
- Microphone Preamplifier

Typical Application

DS101276-1

*Refer to the **Application Information** Section for information concerning proper selection of the input and output coupling capacitors.

LM4830

Two-Way Audio Amplification System with Volume Control

General Description

The LM4830 is an integrated solution for two-way audio amplification. It contains a bridge-connected audio power amplifier capable of delivering 1W of continuous average power to an 8Ω load with less than 1% THD from a 5V power supply. It also has the capability of driving 100 mW into a single-ended 32Ω impedance for headset operation. There is a 30 dB attenuator in front of a bridged power amplifier with 6 dB of gain. The attenuation is controlled through 4 bits of parallel digital control; 15 steps of 2 dB each.

The device also contains a microphone preamp with two selectable inputs. Mic2 is selected when HS is high and A1 is in single-ended mode. Mic1 is selected when HS is low and A1 is in bridged mode. This configuration is optimum for switching between an internal system speaker and external headset with microphone. The device also incorporates a buffer used for driving capacitive loads.

The LM4830 also provides a low-current consumption shutdown mode making it optimally suited for low-power portable systems. In addition, the device has an internal thermal shutdown protection mechanism.

Key Specifications

- THD at 1W cont. avg P_O into 8Ω: 1% (max)
- Instantaneous peak output power: 1.4W
- Shutdown current: 0.5 μA (typ)
- Supply voltage range: $2.7V \leq V_{DD} \leq 5.5V$

Features

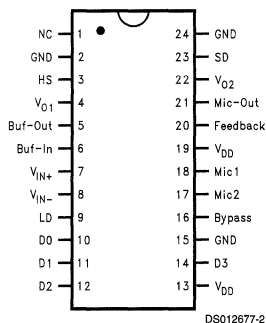

- 4-bit digital control for 30 dB of volume attenuation
- Two selectable microphone inputs
- High performance microphone preamp
- Extra buffer for driving long cables
- No bootstrap capacitors or snubber circuits are necessary
- Small Outline (SO) packaging
- Thermal shutdown protection circuitry

Applications

- Hands-free phone systems
- Mobile phone accessories
- Desktop conference phones
- Portable computers
- Teleconference computer applications

LM4831 Boomer® Audio Power Amplifier Series Multimedia Computer Audio Chip

General Description

The LM4831 is a monolithic integrated circuit that provides a stereo three input mixer, two stereo input analog multiplexer, a stereo line out and a dual 1W bridged audio power amplifier. In addition, a low noise microphone preamp is included on-chip.

The LM4831 is ideal for multimedia computers since it incorporates an input mixer, analog multiplexer, and configurable stereo audio power amplifier, as well as a microphone preamp stage. This combination allows for all of the analog audio processing to be enclosed in a 44-pin TQFP package.

The LM4831 features an externally controlled, low-power consumption shutdown mode, as well as both headphone and docking station modes. To temporarily override the shutdown mode and allow audio signals to be amplified, the LM4831 provides four "beep" pins.

Key Specifications

- THD+N at 1W into 8Ω 0.6% (typ)
- Microphone Input Referred Noise 10μV (typ)
- Supply Current - Bridged Mode 16mA (typ)
- Shutdown Current 2μA (typ)

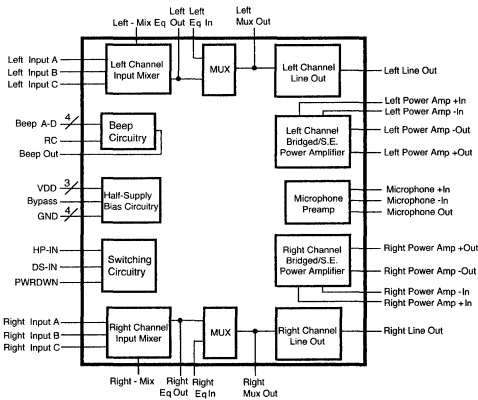

Features

- Stereo 1W audio power amplifier
- "Click and pop" suppression circuitry
- Stereo three input mixer
- Shutdown mode
- Multiple operating modes—bridged, single-ended and docking station modes
- Internal mux for switching in/out external filter
- Beep circuitry for "wake-up" while in shutdown
- 44 Pin TQFP Packaging

Applications

- Portable and Desktop Computers

LM4832 Boomer® Audio Power Amplifier Series

Digitally Controlled Tone and Volume Circuit with Stereo Audio Power Amplifier, Microphone Preamp Stage and National 3D Sound

General Description

The LM4832 is a monolithic integrated circuit that provides volume and tone (bass and treble) controls as well as a stereo audio power amplifier capable of producing 250 mW (typ) into 8 Ω or 90 mW (typ) into 32 Ω with less than 1.0% THD. In addition, a two input microphone preamp stage, with volume control, capable of driving a 1 k Ω load is implemented on chip.

The LM4832 also features National's 3D Sound circuitry which can be externally adjusted via a simple RC network. For maximum system flexibility, the LM4832 has an externally controlled, low-power consumption shutdown mode, and an independent mute for power and microphone amplifiers.

Boomer® audio integrated circuits were designed specifically to provide high quality audio while requiring few external components. Since the LM4832 incorporates tone and volume controls, a stereo audio power amplifier and a microphone preamp stage, it is optimally suited to multimedia monitors and desktop computer applications.

Key Specifications

■ Output Power at 10% into 8 Ω	350mW (typ)
■ Output Power at 10% into 32 Ω	100mW (typ)
■ THD+N at 75mW into 32 Ω at 1kHz	0.5% (max)
■ Microphone Input Referred Noise	7 μ V (typ)
■ Supply Current	13mA (typ)
■ Shutdown Current	4 μ A (typ)

Features

- Independent Left and Right Output Volume Controls
- Treble and Bass Control
- National 3D Sound
- I²C Compatible Interface
- Two Microphone Inputs with Selector
- Software Controlled Shutdown Function

Applications

- Multimedia Monitors
- Portable and Desktop Computers

LM4834 Boomer® Audio Power Amplifier Series

1.75W Audio Power Amplifier with DC Volume Control and Microphone Preamp

General Description

The LM4834 is a monolithic integrated circuit that provides DC volume control, and a bridged audio power amplifier capable of producing 1.75W into 4Ω with less than 1.0% (THD). In addition, the headphone/lineout amplifier is capable of driving 70 mW into 32Ω with less than 0.1%(THD). The LM4834 incorporates a volume control and an input microphone preamp stage capable of driving a 1 kΩ load impedance.

Boomer® audio integrated circuits were designed specifically to provide high quality audio while requiring a minimum amount of external components in surface mount packaging. The LM4834 incorporates a DC volume control, a bridged audio power amplifier and a microphone preamp stage, making it optimally suited for multimedia monitors and desktop computer applications.

The LM4834 features an externally controlled, low-power consumption shutdown mode, and both a power amplifier and headphone mute for maximum system flexibility and performance.

Key Specifications

- THD at 1.1W continuous average output power into 8Ω at 1kHz 0.5% (max)
- Output Power into 4Ω at 1.0% THD+N 1.75W (typ)
- THD at 70mW continuous average output power into 32Ω at 1kHz 0.1% (typ)
- Shutdown Current 1.0μA (max)
- Supply Current 17.5mA (typ)

Features

- PC98 Compliant
- "Click and Pop" suppression circuitry
- Stereo line level outputs with mono input capability for system beeps
- Microphone preamp with buffered power supply
- DC Volume Control Interface
- Thermal shutdown protection circuitry

Applications

- Multimedia Monitors
- Desktop and Portable Computers

LM4835 Boomer® Audio Power Amplifier Series

Stereo 2W Audio Power Amplifiers with DC Volume Control and Selectable Gain

General Description

The LM4835 is a monolithic integrated circuit that provides DC volume control, and stereo bridged audio power amplifiers capable of producing 2W into 4Ω (Note 1) with less than 1.0% THD or 2.2W into 3Ω (Note 2) with less than 1.0% THD.

Boomer® audio integrated circuits were designed specifically to provide high quality audio while requiring a minimum amount of external components. The LM4835 incorporates a DC volume control, stereo bridged audio power amplifiers and a selectable gain or bass boost, making it optimally suited for multimedia monitors, portable radios, desktop, and portable computer applications.

The LM4835 features an externally controlled, low-power consumption shutdown mode, and both a power amplifier and headphone mute for maximum system flexibility and performance.

Note 1: When properly mounted to the circuit board, the LM4835MTE will deliver 2W into 4Ω. The LM4835MT will deliver 1.1W into 8Ω. See the Application Information section for LM4835MTE usage information.

Note 2: An LM4835MTE which has been properly mounted to the circuit board and forced-air cooled will deliver 2.2W into 3Ω.

Key Specifications

- P_O at 1% THD+N
 - into 3Ω (LM4835MTE) 2.2W (typ)
 - into 4Ω (LM4835MTE) 2.0W (typ)
 - into 8Ω (LM4835) 1.1W (typ)
- Single-ended mode THD+N at 85mW into 32Ω 1.0% (typ)
- Shutdown current 0.7μA (typ)

Features

- PC98 Compliant
- DC Volume Control Interface
- System BEEP Detect
- Stereo switchable bridged/single-ended power amplifiers
- Selectable internal/external gain and bass boost configurable
- "Click and pop" suppression circuitry
- Thermal shutdown protection circuitry

Applications

- Portable and Desktop Computers
- Multimedia Monitors
- Portable Radios, PDAs, and Portable TVs

LM4836 Boomer® Audio Power Amplifier Series

Stereo 2W Audio Power Amplifiers

with DC Volume Control, Bass Boost, and Input Mux

General Description

The LM4836 is a monolithic integrated circuit that provides DC volume control, and stereo bridged audio power amplifiers capable of producing 2W into 4Ω (Note 1) with less than 1.0% THD+N, or 2.2W into 3Ω (Note 2) with less than 1.0% THD+N.

Boomer® audio integrated circuits were designed specifically to provide high quality audio while requiring a minimum amount of external components. The LM4836 incorporates a DC volume control, stereo bridged audio power amplifiers, selectable gain or bass boost, and an input mux making it optimally suited for multimedia monitors, portable radios, desktop, and portable computer applications.

The LM4836 features an externally controlled, low-power consumption shutdown mode, and both a power amplifier and headphone mute for maximum system flexibility and performance.

Note 1: When properly mounted to the circuit board, the LM4836MTE will deliver 2W into 4Ω. The LM4836MT will deliver 1.1W into 8Ω. See the Application Information section for LM4836MTE usage information.

Note 2: An LM4836MTE which has been properly mounted to the circuit board and forced-air cooled will deliver 2.2W into 3Ω.

Key Specifications

- P_O at 1% THD+N
 - into 3Ω (LM4836MTE) 2.2W (typ)
 - into 4Ω (LM4836MTE) 2.0W (typ)
 - into 8Ω (LM4836) 1.1W (typ)
- Single-ended mode THD+N at 85mW into 32Ω 1.0% (typ)
- Shutdown current 0.2μA (typ)

Features

- PC98 and PC99 Compliant
- DC Volume Control Interface
- Input mux
- System Beep Detect
- Stereo switchable bridged/single-ended power amplifiers
- Selectable internal/external gain and bass boost configurable
- "Click and pop" suppression circuitry
- Thermal shutdown protection circuitry

Applications

- Portable and Desktop Computers
- Multimedia Monitors
- Portable Radios, PDAs, and Portable TVs

LM4850 Boomer® Audio Power Amplifier Series

Mono 1.5 W / Stereo 300 mW Power Amplifier

General Description

The LM4850 is an audio power amplifier capable of delivering 1.5W (typ) of continuous average power into a mono 4Ω bridged-tied load (BTL) with 1% THD+N or 95mW per channel of continuous average power into stereo 32Ω single-ended (SE) loads with 1% THD+N, using a 5V power supply.

The LM4850 can automatically switch between mono BTL and stereo SE modes utilizing a headphone sense pin. It is ideal for any system that provides both a monaural speaker output and a stereo line or headphone output.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components. Since the LM4850 does not require bootstrap capacitors or snubber networks, it is optimally suited for low-power portable systems.

The LM4850 features an externally controlled, micropower consumption shutdown mode and thermal shutdown protection. The unity-gain stable LM4850's gain is set by external gain-setting resistors.

Key Specifications

■ THD+N at 1kHz, 1.5W into 4Ω BTL	1% (typ)
■ THD+N at 1kHz, 1.1W into 8Ω BTL	1% (typ)
■ THD+N at 1kHz, 300mW into 8Ω SE	1% (typ)
■ THD+N at 1kHz, 95mW into 32Ω SE	1% (typ)
■ Single Supply Operation	2.4 to 5.5V
■ Shutdown Current	44μA (typ)

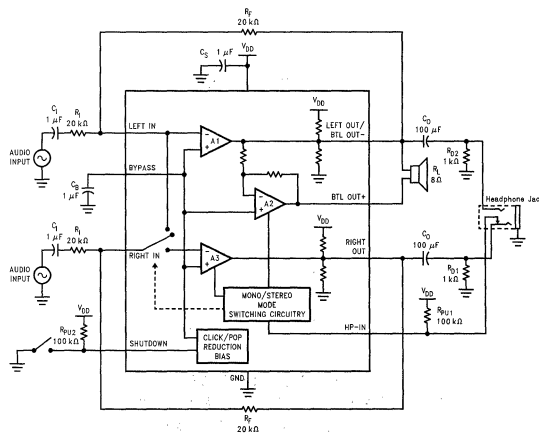

Features

- Mono 1.5W BTL or stereo 300mW output
- Headphone sense
- "Click and pop" suppression circuitry
- No bootstrap capacitors required
- Thermal shutdown protection
- Unity-gain stable
- Low shutdown current

Applications

- Portable computers
- Desktop computers
- PDA's
- Handheld games
- Cell phones

Typical Application

DS200010-01

LM4860 Boomer® Audio Power Amplifier Series

Series 1W Audio Power Amplifier with Shutdown Mode

General Description

The LM4860 is a bridge-connected audio power amplifier capable of delivering 1W of continuous average power to an 8 Ω load with less than 1% THD+N over the audio spectrum from a 5V power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components using surface mount packaging. Since the LM4860 does not require output coupling capacitors, bootstrap capacitors or snubber networks, it is optimally suited for low-power portable systems.

The LM4860 features an externally controlled, low-power consumption shutdown mode, as well as an internal thermal shutdown protection mechanism. It also includes two headphone control inputs and a headphone sense output for external monitoring.

The unity-gain stable LM4860 can be configured by external gain setting resistors for differential gains of up to 10 without the use of external compensation components. Higher gains may be achieved with suitable compensation.

Key Specifications

- THD+N at 1W continuous average output power into 8 Ω : 1% (max)
- Instantaneous peak output power: >2W
- Shutdown current: 0.6 μ A (typ)

Features

- No output coupling capacitors, bootstrap capacitors, or snubber circuits are necessary
- Small Outline (SO) packaging
- Compatible with PC power supplies
- Thermal shutdown protection circuitry
- Unity-gain stable
- External gain configuration capability
- Two headphone control inputs and headphone sensing output

Applications

- Personal computers
- Portable consumer products
- Cellular phones
- Self-powered speakers
- Toys and games

Typical Application

LM4861 Boomer® Audio Power Amplifier Series

1.1W Audio Power Amplifier with Shutdown Mode

General Description

The LM4861 is a bridge-connected audio power amplifier capable of delivering 1.1W of continuous average power to an 8Ω load with 1% THD+N using a 5V power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components using surface mount packaging. Since the LM4861 does not require output coupling capacitors, bootstrap capacitors, or snubber networks, it is optimally suited for low-power portable systems.

The LM4861 features an externally controlled, low-power consumption shutdown mode, as well as an internal thermal shutdown protection mechanism.

The unity-gain stable LM4861 can be configured by external gain-setting resistors for differential gains of up to 10 without the use of external compensation components. Higher gains may be achieved with suitable compensation.

Key Specifications

- THD+N for 1kHz at 1W continuous average output power into 8Ω 1.0% (max)
- Output power at 10% THD+N at 1kHz into 8Ω 1.5W (typ)
- Shutdown Current 0.6μA (typ)

Features

- No output coupling capacitors, bootstrap capacitors, or snubber circuits are necessary
- Small Outline (SO) packaging
- Compatible with PC power supplies
- Thermal shutdown protection circuitry
- Unity-gain stable
- External gain configuration capability

Applications

- Personal computers
- Portable consumer products
- Self-powered speakers
- Toys and games

Typical Application

LM4862 Boomer® Audio Power Amplifier Series

675 mW Audio Power Amplifier with Shutdown Mode

General Description

The LM4862 is a bridge-connected audio power amplifier capable of delivering typically 675mW of continuous average power to an 8Ω load with 1% THD+N from a 5V power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components. Since the LM4862 does not require output coupling capacitors, bootstrap capacitors, or snubber networks, it is optimally suited for low-power portable systems.

The LM4862 features an externally controlled, low-power consumption shutdown mode, as well as an internal thermal shutdown protection mechanism.

The unity-gain stable LM4862 can be configured by external gain-setting resistors.

Key Specifications

- THD+N for 500mW continuous average output power at 1kHz into 8Ω 1% (max)
- Output power at 10% THD+N at 1kHz into 8Ω 825mW (typ)
- Shutdown Current 0.7μA (typ)

Features

- No output coupling capacitors, bootstrap capacitors or snubber circuits are necessary
- Small Outline or DIP packaging
- Unity-gain stable
- External gain configuration capability
- Pin compatible with LM4861

Applications

- Portable computers
- Cellular phones
- Toys and games

Typical Application

DS012342-1

*Refer to the **Application Information** section for information concerning proper selection of the input coupling capacitor.

LM4863 Boomer® Audio Power Amplifier Series

Dual 2.2W Audio Amplifier Plus Stereo Headphone Function

General Description

The LM4863 is a dual bridge-connected audio power amplifier which, when connected to a 5V supply, will deliver 2.2W to a 4Ω load (Note 1) or 2.5W to a 3Ω load (Note 2) with less than 1.0% THD+N. In addition, the headphone input pin allows the amplifiers to operate in single-ended mode when driving stereo headphones.

Boomer audio power amplifiers were designed specifically to provide high quality output power from a surface mount package while requiring few external components. To simplify audio system design, the LM4863 combines dual bridge speaker amplifiers and stereo headphone amplifiers on one chip.

The LM4863 features an externally controlled, low-power consumption shutdown mode, a stereo headphone amplifier mode, and thermal shutdown protection. It also utilizes circuitry to reduce "clicks and pops" during device turn-on.

Note 1: An LM4863MTE or LM4863LQ that has been properly mounted to a circuit board will deliver 2.2W into 4Ω. The other package options for the LM4863 will deliver 1.1W into 8Ω. See the Application Information sections for further information concerning the LM4863MTE and LM4863LQ.

Note 2: An LM4863MTE or LM4863LQ that has been properly mounted to a circuit board and forced-air cooled will deliver 2.5W into 3Ω.

Key Specifications

- P_O at 1% THD+N
- LM4863LQ, 3Ω, 4Ω loads 2.5W(typ), 2.2W(typ)
- LM4863MTE, 3Ω, 4Ω loads 2.5W(typ), 2.2W(typ)
- LM4863MTE, 8Ω load 1.1W(typ)
- LM4863, 8Ω 1.1W(typ)
- Single-ended mode THD+N at 75mW into 32Ω 0.5%(max)
- Shutdown current 0.7μA(typ)
- Supply voltage range 2.0V to 5.5V

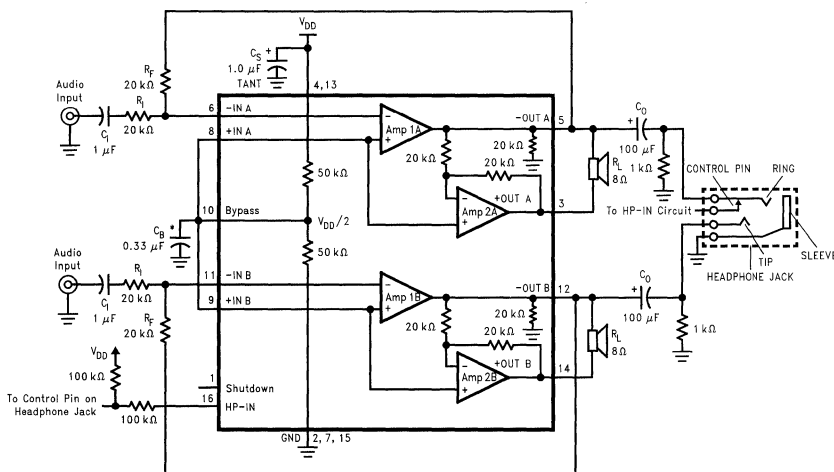

Features

- Stereo headphone amplifier mode
- "Click and pop" suppression circuitry
- Unity-gain stable
- Thermal shutdown protection circuitry
- SOIC, DIP, TSSOP and exposed-DAP TSSOP and LLP packages

Applications

- Multimedia monitors
- Portable and desktop computers
- Portable televisions

Typical Application

DS012881-1

LM4864 Boomer® Audio Power Amplifier Series

300 mW Audio Power Amplifier with Shutdown Mode

General Description

The LM4864 is a bridged audio power amplifier capable of delivering 300mW of continuous average power into an 8Ω load with 1% THD+N from a 5V power supply.

Boomer® audio power amplifiers were designed specifically to provide high quality output power from a low supply voltage while requiring a minimal amount of external components. Since the LM4864 does not require output coupling capacitors, bootstrap capacitors or snubber networks, it is optimally suited for low-power portable applications.

The LM4864 features an externally controlled, low power consumption shutdown mode, and thermal shutdown protection.

The closed loop response of the unity-gain stable LM4864 can be configured by external gain-setting resistors. The device is available in multiple package types to suit various applications.

Key Specifications

- THD+N at 1kHz for 300mW continuous average output power into 8Ω 1.0% (max)
- THD+N at 1kHz for 300mW continuous average output power into 16Ω 1.0% (max)
- Shutdown current 0.7μA (typ)

Features

- MSOP, SOP, and DIP packaging
- No output coupling capacitors, bootstrap capacitors, or snubber circuits are necessary
- Thermal shutdown protection circuitry
- Unity-gain stable
- External gain configuration capability

Applications

- Cellular phones
- Personal computers
- General purpose audio

LM4865 Boomer® Audio Power Amplifier Series

750 mW Audio Power Amplifier with DC Volume Control and Headphone Switch

General Description

The LM4865 is a mono bridged audio power amplifier with DC voltage volume control. The LM4865 is capable of delivering 750mW of continuous average power into an 8Ω load with less than 1% THD when powered by a 5V power supply. Switching between bridged speaker mode and headphone (single ended) mode is accomplished using the headphone sense pin. To conserve power in portable applications, the LM4865's micropower shutdown mode ($I_Q = 0.7\mu\text{A}$, typ) is activated when less than 300mV is applied to the DC Vol/SD pin.

Boomer audio power amplifiers are designed specifically to provide high power audio output while maintaining high fidelity. They require few external components and operate on low supply voltages.

Applications

- GSM phones and accessories, DECT, office phones
- Hand held radio

- Other portable audio devices

Key Specifications

- P_O at 1.0% THD+N into 8Ω SO, micro SMD 750mW (typ)
- P_O at 10% THD+N into 8Ω SO, micro SMD 1W (typ)
- Shutdown current 0.7μA(typ)
- Supply voltage range 2.7V to 5.5V

Features

- DC voltage volume control
- Headphone amplifier mode
- "Click and pop" suppression
- Shutdown control when volume control pin is low
- Thermal shutdown protection

Typical Application

LM4870 Boomer® Audio Power Amplifier Series

1.1W Audio Power Amplifier with Shutdown Mode

General Description

The LM4870 is a bridge-connected audio power amplifier capable of delivering 1.1W of continuous average power to an 8Ω load with less than 0.5% THD+N over the audio spectrum from a 5V power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal number of external components. Since the LM4870 does not require output coupling capacitors, bootstrap capacitors or snubber networks, it is optimally suited for low-power portable systems.

The LM4870 features an externally controlled, low-power consumption shutdown mode, as well as an internal thermal shutdown protection mechanism. It also includes two headphone control inputs and a headphone sense output for external monitoring. The LM4870 is unity-gain stable and the gain is set using external resistors.

Key Specifications

- THD+N at 1W into 8Ω 0.5% (max)
- Output power into 8Ω at 1kHz at 10% THD+N 1.5W (typ)
- Shutdown Current 0.6μA (typ)

Features

- No output coupling capacitors, bootstrap capacitors, or snubber circuits are necessary
- Small Outline (SOIC) power packaging
- Unity-gain stable
- External gain configuration capability

Applications

- Personal computers
- Desktop computers
- Low voltage audio system

Typical Application

LM4871 Boomer® Audio Power Amplifier Series

1.1W Audio Power Amplifier with Shutdown Mode

General Description

The LM4871 is a bridge-connected audio power amplifier capable of delivering typically 1.1W of continuous average power to an 8Ω load with 0.5% (THD) from a 5V power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components. Since the LM4871 does not require output coupling capacitors, bootstrap capacitors, or snubber networks, it is optionally suited for low-power portable systems.

The LM4871 features an externally controlled, low-power consumption shutdown mode, as well as an internal thermal shutdown protection mechanism.

The unity-gain stable LM4871 can be configured by external gain-setting resistors.

Key Specifications

- THD at 1kHz at 1W continuous average output power into 8Ω 0.5% (max)
- Output power at 10% THD+N at 1kHz into 8Ω 1.5W (typ)
- Shutdown Current 0.6μA (typ)
- Supply voltage range 2.0V to 5.5V

Features

- No output coupling capacitors, bootstrap capacitors, or snubber circuits are necessary
- Small Outline or DIP packaging
- Unity-gain stable
- External gain configuration capability
- Pin compatible with LM4861

Applications

- Portable Computers
- Desktop Computers
- Low Voltage Audio Systems

Typical Application

DS100008-1

LM4872 Boomer® Audio Power Amplifier Series

1 Watt Audio Power Amplifier in micro SMD package

General Description

The LM4872 is a bridge-connected audio power amplifier capable of delivering 1 W of continuous average power to an 8Ω load with less than .2% (THD) from a 5V power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components. Since the LM4872 does not require output coupling capacitors or bootstrap capacitors. It is optimally suited for low-power portable applications.

The LM4872 features an externally controlled, low-power consumption shutdown mode, as well as an internal thermal shutdown protection mechanism.

The unity-gain stable LM4872 can be configured by external gain-setting resistors.

Key Specifications

- Power Output at 0.2% THD 1W (typ)
- Shutdown Current 0.01μA (typ)

Features

- micro SMD package (see App. note AN-1112)
- 5V - 2V operation
- No output coupling capacitors or bootstrap capacitors.
- Unity-gain stable
- External gain configuration capability

Applications

- Cellular Phones
- Portable Computers
- Low Voltage Audio Systems

Typical Application

LM4873 Boomer® Audio Power Amplifier Series

Dual 2.1W Audio Amplifier Plus Stereo Headphone Function

General Description

The LM4873 is a dual bridge-connected audio power amplifier which, when connected to a 5V supply, will deliver 2.1W to a 4Ω load (Note 1) or 2.4W to a 3Ω load (Note 2) with less than 1.0% THD+N. In addition, the headphone input pin allows the amplifiers to operate in single-ended mode when driving stereo headphones. A MUX control pin allows selection between the two stereo sets of amplifier inputs. The MUX control can also be used to select two different closed-loop responses.

Boomer audio power amplifiers were designed specifically to provide high quality output power from a surface mount package while requiring few external components. To simplify audio system design, the LM4873 combines dual bridge speaker amplifiers and stereo headphone amplifiers on one chip.

The LM4873 features an externally controlled, low-power consumption shutdown mode, a stereo headphone amplifier mode, and thermal shutdown protection. It also utilizes circuitry to reduce "clicks and pops" during device turn-on.

Note 1: An LM4873MTE-1, LM4873MTE, or LM4873LQ that has been properly mounted to a circuit board will deliver 2.1W into 4Ω. The other package options for the LM4873 will deliver 1.1W into 8Ω. See the Application Information sections for further information concerning the LM4873MTE-1, LM4873MTE, and the LM4873LQ.

Note 2: An LM4873MTE-1, LM4873MTE, or LM4873LQ that has been properly mounted to a circuit board and forced-air cooled will deliver 2.4W into 3Ω.

Key Specifications

- P_O at 1% THD+N
 - LM4873LQ, 3Ω, 4Ω loads 2.4W(typ), 2.1W(typ)
 - LM4873MTE-1, 3Ω, 4Ω loads 2.4W(typ), 2.1W(typ)
 - LM4873MTE, 4Ω 1.9W(typ)
 - LM4873, 8Ω 1.1W(typ)
- Single-ended mode THD+N at 75mW into 32Ω 0.5%(max)
- Shutdown current 0.7μA(typ)
- Supply voltage range 2V to 5.5V

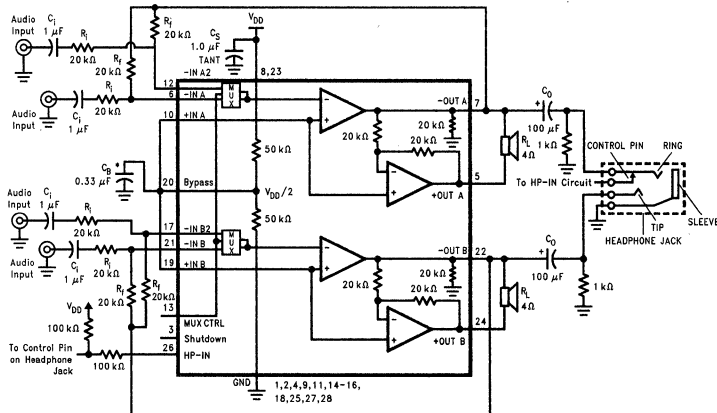

Features

- Input mux control and two separate inputs per channel
- Stereo headphone amplifier mode
- "Click and pop" suppression circuitry
- Thermal shutdown protection circuitry
- TSSOP and exposed-DAP TSSOP and LLP packages

Applications

- Multimedia monitors
- Portable and desktop computers
- Portable audio systems

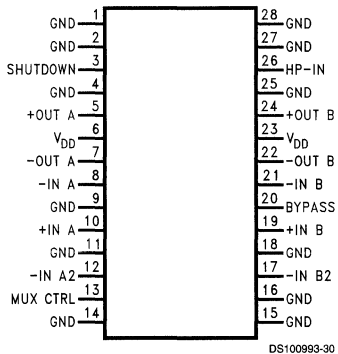

Typical Application

DS100993-31

Note: Pin out shown for the 28-pin Exposed-DAP TSSOP package. Refer to the Connection Diagrams for the pin out of the 20-pin Exposed-DAP TSSOP and Exposed-DAP LLP packages.

LM4876 Boomer® Audio Power Amplifier Series

1.1W Audio Power Amplifier with Logic Low Shutdown

General Description

The LM4876 is a single 5V supply bridge-connected audio power amplifier capable of delivering 1.1W (typ) of continuous average power to an 8Ω load with 0.5% THD+N.

Like other audio amplifiers in the Boomer series, the LM4876 is designed specifically to provide high quality output power with a minimal amount of external components. The LM4876 does not require output coupling capacitors, bootstrap capacitors, or snubber networks. It is perfectly suited for low-power portable systems.

The LM4876 features an active low externally controlled, micro-power shutdown mode. Additionally, the LM4876 features an internal thermal shutdown protection mechanism. For PCB space efficiency, the LM4876 is available in MSOP and SO surface mount packages.

The unity-gain stable LM4876's closed loop gain is set using external resistors.

Key Specifications

- THD+N at 1kHz for 1W continuous average output power into 8Ω 0.5% (max)
- Output power at 1kHz into 8Ω with 10% THD+N 1.5W (typ)
- Shutdown current 0.01μA (typ)
- Supply voltage range 2.0V to 5.5V

Features

- Does not require output coupling capacitors, bootstrap capacitors, or snubber circuits
- 10-pin MSOP and 8-pin SO packages
- Unity-gain stable
- External gain set

Applications

- Mobile Phones
- Portable Computers
- Desktop Computers
- Low-Voltage Audio Systems

LM4877 Boomer® Audio Power Amplifier Series

1 Watt Audio Power Amplifier in micro SMD package with Shutdown Logic Low

General Description

The LM4877 is a bridge-connected audio power amplifier capable of delivering 1 W of continuous average power to an 8Ω load with less than .2% (THD) from a 5V power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components. Since the LM4877 does not require output coupling capacitors or bootstrap capacitors. It is optimally suited for low-power portable applications.

The LM4877 features an externally controlled, low-power consumption shutdown mode, as well as an internal thermal shutdown protection mechanism.

The unity-gain stable LM4877 can be configured by external gain-setting resistors.

Key Specifications

- Power Output at 0.2% THD 1W (typ)
- Shutdown Current 0.01μA (typ)

Features

- micro SMD package (see App. note AN-1112)
- 5V - 2V operation
- No output coupling capacitors or bootstrap capacitors.
- Unity-gain stable
- External gain configuration capability

Applications

- Cellular Phones
- Portable Computers
- Low Voltage Audio Systems

Typical Application

DS101290-1

LM4880 Boomer® Audio Power Amplifier Series

Dual 250 mW Audio Power Amplifier with Shutdown Mode

General Description

The LM4880 is a dual audio power amplifier capable of delivering typically 250mW per channel of continuous average power to an 8Ω load with 0.1% THD+N using a 5V power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components using surface mount packaging.

Since the LM4880 does not require bootstrap capacitors or snubber networks, it is optimally suited for low-power portable systems.

The LM4880 features an externally controlled, low-power consumption shutdown mode, as well as an internal thermal shutdown protection mechanism.

The unity-gain stable LM4880 can be configured by external gain-setting resistors.

Key Specifications

- THD+N at 1kHz at 200mW continuous average output power into 8Ω: 0.1% (max)

- THD+N at 1kHz at 85mW continuous average output power into 32Ω: 0.1% (typ)
- Output power at 10% THD+N at 1kHz into 8Ω: 325mW (typ)
- Shutdown current: 0.7μA (typ)
- 2.7V to 5.5V supply voltage range

Features

- No bootstrap capacitors or snubber circuits are necessary
- Small Outline (SO) and DIP packaging
- Unity-gain stable
- External gain configuration capability

Applications

- Headphone Amplifier
- Personal Computers
- CD-ROM Players

Typical Application

DS012343-1

*Refer to the **Application Information** section for information concerning proper selection of the input and output coupling capacitors.

LM4881 Boomer® Audio Power Amplifier Series

Dual 200 mW Headphone Amplifier with Shutdown Mode

General Description

The LM4881 is a dual audio power amplifier capable of delivering 200mW of continuous average power into an 8Ω load with 0.1% THD+N from a 5V power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components using surface mount packaging. Since the LM4881 does not require bootstrap capacitors or snubber networks, it is optimally suited for low-power portable systems.

The LM4881 features an externally controlled, low power consumption shutdown mode which is virtually clickless and popless, as well as an internal thermal shutdown protection mechanism.

The unity-gain stable LM4881 can be configured by external gain-setting resistors.

Key Specifications

- THD+N at 1kHz at 125mW continuous average output power into 8Ω 0.1% (max)
- THD+N at 1kHz at 75mW continuous average output power into 32Ω 0.02% (typ)
- Output power at 10% THD+N at 1kHz into 8Ω 300mW (typ)
- Shutdown Current 0.7μA (typ)
- Supply voltage range 2.7V to 5.5V

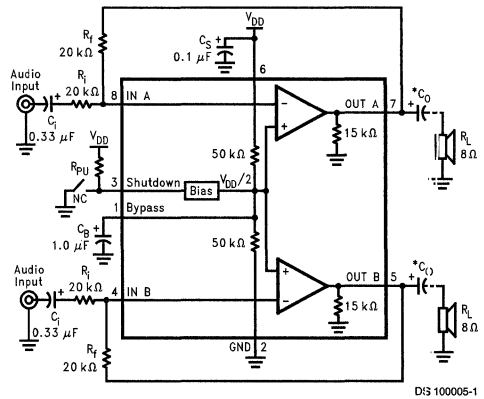

Features

- MSOP surface mount packaging
- Unity-gain stable
- External gain configuration capability
- Thermal shutdown protection circuitry
- No bootstrap capacitors, or snubber circuits are necessary

Applications

- Headphone Amplifier
- Personal Computers
- Microphone Preamplifier

Typical Application

*Refer to the Application Information Section for information concerning proper selection of the input and output coupling capacitors.

LM4882 Boomer® Audio Power Amplifier Series

250mW Audio Power Amplifier with Shutdown Mode

General Description

The LM4882 is a single-ended audio power amplifier capable of delivering 250mW of continuous average power into an 8Ω load with 1% THD+N from a 5V power supply.

Boomer® audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components using surface mount packaging. Since the LM4882 does not require bootstrap capacitors or snubber networks, it is optimally suited for low-power portable systems.

The LM4882 features an externally controlled, low power consumption shutdown mode which is virtually clickless and popless, as well as an internal thermal shutdown protection mechanism.

The unity-gain stable LM4882 can be configured by external gain-setting resistors.

Key Specifications

- THD+N at 1kHz at 250mW continuous average output power into 8Ω 1.0% (max)
- Output Power at 1% THD+N at 1kHz into 4Ω 380mW (typ)
- THD+N at 1kHz at 85mW continuous average output power into 32Ω 0.1% (typ)
- Shutdown Current 0.7μA (typ)

Features

- MSOP surface mount packaging
- "Click and Pop" Suppression Circuitry
- Supply voltages from 2.4V–5.5V
- Operating Temperature –40°C to 85°C
- Unity-gain stable
- External gain configuration capability
- No bootstrap capacitors, or snubber circuits are necessary

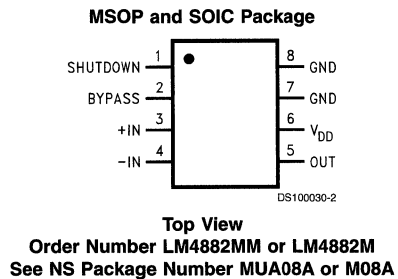

Applications

- Personal Computers
- Cellular Phones
- General Purpose Audio

Typical Application

FIGURE 1. Typical Audio Amplifier Application Circuit

LM4890 Boomer® Audio Power Amplifier Series

1 Watt Audio Power Amplifier

General Description

The LM4890 is an audio power amplifier primarily designed for demanding applications in mobile phones and other portable communication device applications. It is capable of delivering 1 watt of continuous average power to an 8Ω BTL load with less than 1% distortion (THD+N) from a $5V_{DC}$ power supply.

Boomer audio power amplifiers were designed specifically to provide high quality output power with a minimal amount of external components. The LM4890 does not require output coupling capacitors or bootstrap capacitors, and therefore is ideally suited for mobile phone and other low voltage applications where minimal power consumption is a primary requirement.

The LM4890 features a low-power consumption shutdown mode, which is achieved by driving the shutdown pin with logic low. Additionally, the LM4890 features an internal thermal shutdown protection mechanism.

The LM4890 contains advanced pop & click circuitry which eliminates noises which would otherwise occur during turn-on and turn-off transitions.

The LM4890 is unity-gain stable and can be configured by external gain-setting resistors.

Key Specifications

- Improved PSRR at 217Hz 66dB
- Power Output at 5.0V & 1% THD 1.0W(typ.)
- Power Output at 3.3V & 1% THD 400mW(typ.)
- Shutdown Current 0.1 μ A(typ.)

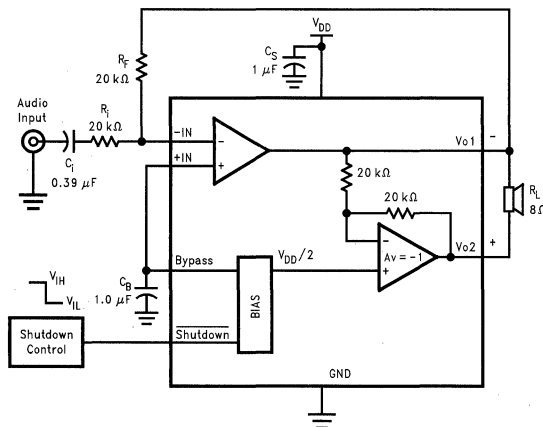

Features

- Available in space-saving packages micro SMD, MSOP and SOIC
- Ultra low current shutdown mode
- Can drive capacitive loads up to 500 pF
- Improved pop & click circuitry eliminates noises during turn-on and turn-off transitions
- 2.0 - 5.5V operation
- No output coupling capacitors, snubber networks or bootstrap capacitors required
- Unity-gain stable
- External gain configuration capability

Applications

- Mobile Phones
- PDAs
- Portable electronic devices

LM675 Power Operational Amplifier

General Description

The LM675 is a monolithic power operational amplifier featuring wide bandwidth and low input offset voltage, making it equally suitable for AC and DC applications.

The LM675 is capable of delivering output currents in excess of 3 amps, operating at supply voltages of up to 60V. The device overload protection consists of both internal current limiting and thermal shutdown. The amplifier is also internally compensated for gains of 10 or greater.

Features

- 3A current capability
- A_{VO} typically 90 dB
- 5.5 MHz gain bandwidth product
- 8 V/ μ s slew rate
- Wide power bandwidth 70 kHz

- 1 mV typical offset voltage
- Short circuit protection
- Thermal protection with parolc circuit (100% tested)
- 16V–60V supply range
- Wide common mode range
- Internal output protection diodes
- 90 dB ripple rejection
- Plastic power package TO-220

Applications

- High performance power op amp
- Bridge amplifiers
- Motor speed controls
- Servo amplifiers
- Instrument systems

Typical Applications

Audio Controls and Signal Processing

LM1036

Dual DC Operated Tone/Volume/Balance Circuit

General Description

The LM1036 is a DC controlled tone (bass/treble), volume and balance circuit for stereo applications in car radio, TV and audio systems. An additional control input allows loudness compensation to be simply effected.

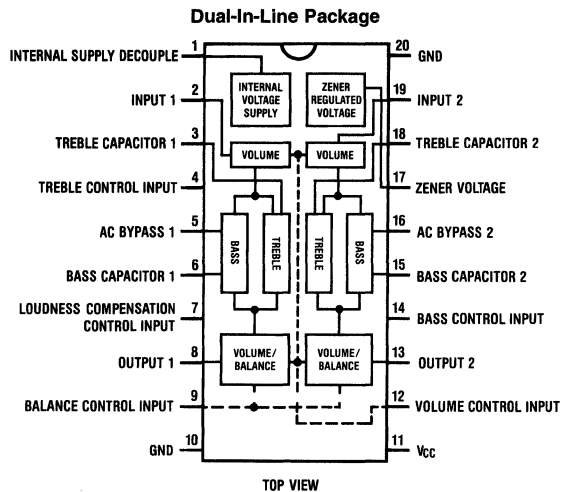

Four control inputs provide control of the bass, treble, balance and volume functions through application of DC voltages from a remote control system or, alternatively, from four potentiometers which may be biased from a zener regulated supply provided on the circuit.

Each tone response is defined by a single capacitor chosen to give the desired characteristic.

Features

- Wide supply voltage range, 9V to 16V
- Large volume control range, 75 dB typical
- Tone control, ± 15 dB typical
- Channel separation, 75 dB typical
- Low distortion, 0.06% typical for an input level of 0.3 Vrms
- High signal to noise, 80 dB typical for an input level of 0.3 Vrms
- Few external components required

LM1971 Overture™ Audio Attenuator Series

Digitally Controlled 62 dB Audio Attenuator with/Mute

General Description

The LM1971 is a digitally controlled single channel audio attenuator fabricated on a CMOS process. Attenuation is variable in 1 dB steps from 0 dB to -62 dB. A mute function disconnects the input from the output, providing over 100 dB of attenuation.

The performance of the device is exhibited by its ability to change attenuation levels without audible clicks or pops. In addition, the LM1971 features a low Total Harmonic Distortion (THD) of 0.0008%, and a Dynamic Range of 115 dB, making it suitable for digital audio needs. The LM1971 is available in both 8-pin plastic DIP or SO packages.

The LM1971 is controlled by a TTL/CMOS compatible 3-wire serial digital interface. The active low LOAD line enables the data input registers while the CLOCK line provides system timing. Its DATA pin receives serial data on the rising edge of each CLOCK pulse, allowing the desired attenuation setting to be selected.

Key Specifications

- Total harmonic distortion 0.0008% (typ)
- Frequency response > 200 kHz (-3 dB) (typ)
- Attenuation range (excluding mute) 62 dB (typ)
- Dynamic range 115 dB (typ)
- Mute attenuation 102 dB (typ)

Features

- 3-wire serial interface
- Mute function
- Click and pop free attenuation changes
- 8-pin plastic DIP and SO packages available

Applications

- Communication systems
- Cellular Phones and Pagers
- Personal computer audio control
- Electronic music (MIDI)
- Sound reinforcement systems
- Audio mixing automation

Typical Application

DS012353-1

LM1972

μPot™ 2-Channel 78dB Audio Attenuator with Mute

General Description

The LM1972 is a digitally controlled 2-channel 78dB audio attenuator fabricated on a CMOS process. Each channel has attenuation steps of 0.5dB from 0dB–47.5dB, 1.0dB steps from 48dB–78dB, with a mute function attenuating 104dB. Its logarithmic attenuation curve can be customized through software to fit the desired application.

The performance of a μPot is demonstrated through its excellent Signal-to-Noise Ratio, extremely low (THD+N), and high channel separation. Each μPot contains a mute function that disconnects the input signal from the output, providing a minimum attenuation of 96dB. Transitions between any attenuation settings are pop free.

The LM1972's 3-wire serial digital interface is TTL and CMOS compatible; receiving data that selects a channel and the desired attenuation level. The Data-Out pin of the LM1972 allows multiple μPots to be daisy-chained together, reducing the number of enable and data lines to be routed for a given application.

- Frequency response: 100 kHz (–3dB) (min)
- Attenuation range (excluding mute): 78dB (typ)
- Differential attenuation: ±0.25dB (max)
- Signal-to-noise ratio (ref. 4 Vrms): 110dB (min)
- Channel separation: 100dB (min)

Features

- 3-wire serial interface
- Daisy-chain capability
- 104dB mute attenuation
- Pop and click free attenuation changes

Applications

- Automated studio mixing consoles
- Music reproduction systems
- Sound reinforcement systems
- Electronic music (MIDI)
- Personal computer audio control

Key Specifications

- Total Harmonic Distortion + Noise: 0.003% (max)

Typical Application

DS011978-1

LM1973

μPot™3-Channel 76dB Audio Attenuator with Mute

General Description

The LM1973 is a digitally controlled 3-channel 76dB audio attenuator fabricated on a CMOS process. Each channel has attenuation steps of 0.5dB from 0dB–15.5dB, 1.0dB steps from 16dB–47dB, and 2.0dB steps from 48dB–76dB, with a mute function attenuating 104dB. Its logarithmic attenuation curve can be customized through software to fit the desired application.

The performance of a μPot™ is demonstrated through its excellent Signal-to-Noise Ratio, extremely low (THD+N), and high channel separation. Each μPot contains a mute function that disconnects the input signal from the output, providing a minimum attenuation of 96dB. Transitions between any attenuation settings are pop free.

The LM1973's 3-wire serial digital interface is TTL and CMOS compatible; receiving data that selects a channel and the desired attenuation level. The Data-Out pin of the LM1973 allows multiple μPots to be daisy-chained together, reducing the number of enable and data lines to be routed for a given application.

Key Specifications

- Total Harmonic Distortion + Noise: 0.003% (max)
- Frequency response: 100 kHz (–3dB) (min)
- Attenuation range (excluding mute): 76dB (typ)
- Differential attenuation: ±0.25dB (max)
- Signal-to-noise ratio (ref. 4 Vrms): 110dB (min)
- Channel separation: 110dB (typ)

Features

- 3-wire serial interface
- Daisy-chain capability
- 104dB mute attenuation
- Pop and click free attenuation changes

Applications

- Automated studio mixing consoles
- Music reproduction systems
- Sound reinforcement systems
- Electronic music (MIDI)
- Personal computer audio control

LM3914

Dot/Bar Display Driver

General Description

The LM3914 is a monolithic integrated circuit that senses analog voltage levels and drives 10 LEDs, providing a linear analog display. A single pin changes the display from a moving dot to a bar graph. Current drive to the LEDs is regulated and programmable, eliminating the need for resistors. This feature is one that allows operation of the whole system from less than 3V.

The circuit contains its own adjustable reference and accurate 10-step voltage divider. The low-bias-current input buffer accepts signals down to ground, or V^- , yet needs no protection against inputs of 35V above or below ground. The buffer drives 10 individual comparators referenced to the precision divider. Indication non-linearity can thus be held typically to $\frac{1}{2}\%$, even over a wide temperature range.

Versatility was designed into the LM3914 so that controller, visual alarm, and expanded scale functions are easily added on to the display system. The circuit can drive LEDs of many colors, or low-current incandescent lamps. Many LM3914s can be "chained" to form displays of 20 to over 100 segments. Both ends of the voltage divider are externally available so that 2 drivers can be made into a zero-center meter. The LM3914 is very easy to apply as an analog meter circuit. A 1.2V full-scale meter requires only 1 resistor and a single 3V to 15V supply in addition to the 10 display LEDs. If the 1 resistor is a pot, it becomes the LED brightness control. The simplified block diagram illustrates this extremely simple external circuitry.

When in the dot mode, there is a small amount of overlap or "fade" (about 1 mV) between segments. This assures that at no time will all LEDs be "OFF", and thus any ambiguous display is avoided. Various novel displays are possible.

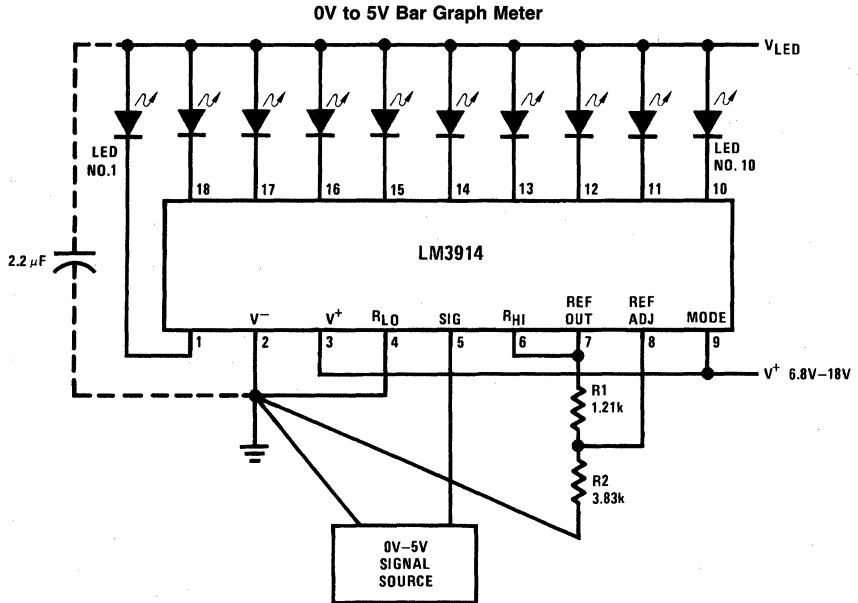

Much of the display flexibility derives from the fact that all outputs are individual, DC regulated currents. Various effects can be achieved by modulating these currents. The individual outputs can drive a transistor as well as a LED at the same time, so controller functions including "staging" control can be performed. The LM3914 can also act as a programmer, or sequencer.

The LM3914 is rated for operation from 0°C to +70°C. The LM3914N-1 is available in an 18-lead molded (N) package. The following typical application illustrates adjusting of the reference to a desired value, and proper grounding for accurate operation, and avoiding oscillations.

Features

- Drives LEDs, LCDs or vacuum fluorescents
- Bar or dot display mode externally selectable by user
- Expandable to displays of 100 steps
- Internal voltage reference from 1.2V to 12V
- Operates with single supply of less than 3V
- Inputs operate down to ground
- Output current programmable from 2 mA to 30 mA
- No multiplex switching or interaction between outputs
- Input withstands $\pm 35V$ without damage or false outputs
- LED driver outputs are current regulated, open-collectors
- Outputs can interface with TTL or CMOS logic
- The internal 10-step divider is floating and can be referenced to a wide range of voltages

Typical Applications

$$\text{Ref Out } V = 1.25 \left(1 + \frac{R_2}{R_1} \right)$$

$$I_{\text{LED}} \approx \frac{12.5}{R_1}$$

Note: Grounding method is typical of *all* uses. The 2.2 μF tantalum or 10 μF aluminum electrolytic capacitor is needed if leads to the LED supply are 6" or longer.

LM3915

Dot/Bar Display Driver

General Description

The LM3915 is a monolithic integrated circuit that senses analog voltage levels and drives ten LEDs, LCDs or vacuum fluorescent displays, providing a logarithmic 3 dB/step analog display. One pin changes the display from a bar graph to a moving dot display. LED current drive is regulated and programmable, eliminating the need for current limiting resistors. The whole display system can operate from a single supply as low as 3V or as high as 25V.

The IC contains an adjustable voltage reference and an accurate ten-step voltage divider. The high-impedance input buffer accepts signals down to ground and up to within 1.5V of the positive supply. Further, it needs no protection against inputs of $\pm 35V$. The input buffer drives 10 individual comparators referenced to the precision divider. Accuracy is typically better than 1 dB.

The LM3915's 3 dB/step display is suited for signals with wide dynamic range, such as audio level, power, light intensity or vibration. Audio applications include average or peak level indicators, power meters and RF signal strength meters. Replacing conventional meters with an LED bar graph results in a faster responding, more rugged display with high visibility that retains the ease of interpretation of an analog display.

The LM3915 is extremely easy to apply. A 1.2V full-scale meter requires only one resistor in addition to the ten LEDs. One more resistor programs the full-scale anywhere from 1.2V to 12V independent of supply voltage. LED brightness is easily controlled with a single pot.

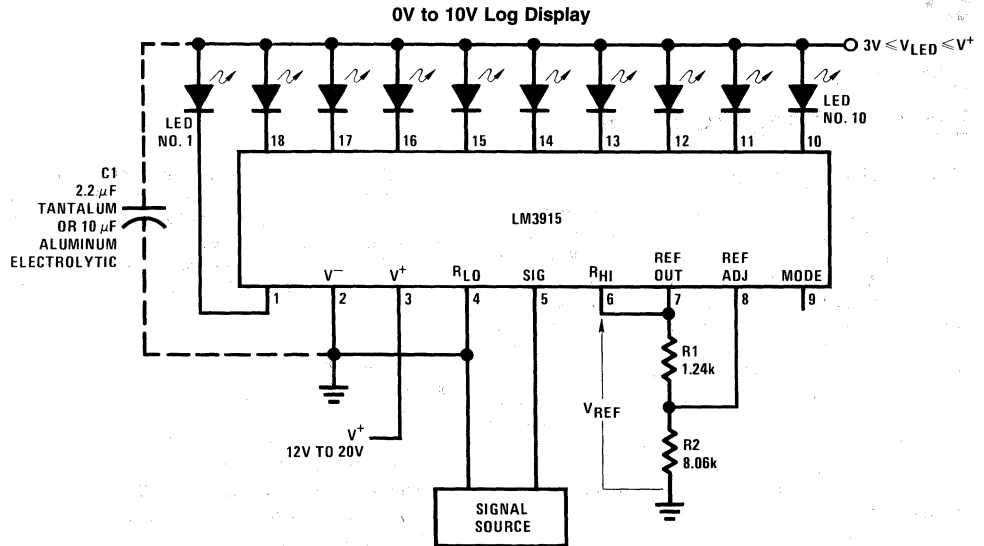

The LM3915 is very versatile. The outputs can drive LCDs, vacuum fluorescents and incandescent bulbs as well as LEDs of any color. Multiple devices can be cascaded for a dot or bar mode display with a range of 60 or 90 dB. LM3915s can also be cascaded with LM3914s for a linear/log display or with LM3916s for an extended-range UV meter.

Features

- 3 dB/step, 30 dB range
- Drives LEDs, LCDs, or vacuum fluorescents
- Bar or dot display mode externally selectable by user
- Expandable to displays of 90 dB
- Internal voltage reference from 1.2V to 12V
- Operates with single supply of 3V to 25V
- Inputs operate down to ground
- Output current programmable from 1 mA to 30 mA
- Input withstands $\pm 35V$ without damage or false outputs
- Outputs are current regulated, open collectors
- Directly drives TTL or CMOS
- The internal 10-step divider is floating and can be referenced to a wide range of voltages

The LM3915 is rated for operation from 0°C to +70°C. The LM3915N-1 is available in an 18-lead molded DIP package.

Typical Applications

DS905104-1

Notes: Capacitor C1 is required if leads to the LED supply are 6" or longer.

Circuit as shown is wired for dot mode. For bar mode, connect pin 9 to pin 3. V_{LED} must be kept below 7V or dropping resistor should be used to limit IC power dissipation.

$$V_{REF} = 1.25V \left(1 + \frac{R_2}{R_1} \right) + R_2 \times 80 \mu A$$

$$I_{LED} = \frac{12.5V}{R_1} + \frac{V_{REF}}{2.2 k\Omega}$$

LM3916

Dot/Bar Display Driver

General Description

The LM3916 is a monolithic integrated circuit that senses analog voltage levels and drives ten LEDs, LCDs or vacuum fluorescent displays, providing an electronic version of the popular VU meter. One pin changes the display from a bar graph to a moving dot display. LED current drive is regulated and programmable, eliminating the need for current limiting resistors. The whole display system can operate from a single supply as low as 3V or as high as 25V.

The IC contains an adjustable voltage reference and an accurate ten-step voltage divider. The high-impedance input buffer accepts signals down to ground and up to within 1.5V of the positive supply. Further, it needs no protection against inputs of $\pm 35V$. The input buffer drives 10 individual comparators referenced to the precision divider. Accuracy is typically better than 0.2 dB.

Audio applications include average or peak level indicators, and power meters. Replacing conventional meters with an LED bar graph results in a faster responding, more rugged display with high visibility that retains the ease of interpretation of an analog display.

The LM3916 is extremely easy to apply. A 1.2V full-scale meter requires only one resistor in addition to the ten LEDs. One more resistor programs the full-scale anywhere from 1.2V to 12V independent of supply voltage. LED brightness is easily controlled with a single pot.

The LM3916 is very versatile. The outputs can drive LCDs, vacuum fluorescents and incandescent bulbs as well as LEDs of any color. Multiple devices can be cascaded for a dot or bar mode display for increased range and/or resolution. Useful in other applications are the linear LM3914 and the logarithmic LM3915.

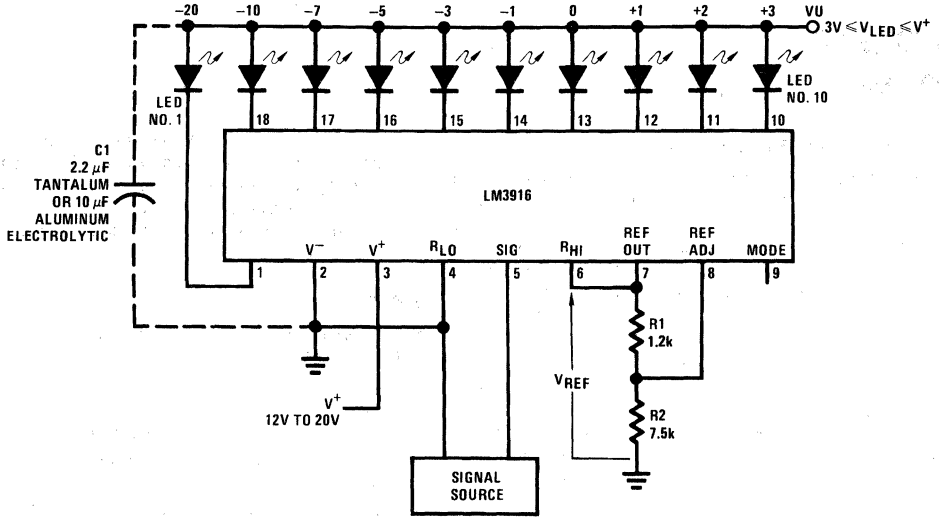

Features

- Fast responding electronic VU meter
- Drivers LEDs, LCDs, or vacuum fluorescents
- Bar or dot display mode externally selectable by user
- Expandable to displays of 70 dB
- Internal voltage reference from 1.2V to 12V
- Operates with single supply of 3V to 25V
- Inputs operate down to ground
- Output current programmable from 1 mA to 30 mA
- Input withstands $\pm 35V$ without damage or false outputs
- Outputs are current regulated, open collectors
- Directly drives TTL or CMOS
- The internal 10-step divider is floating and can be referenced to a wide range of voltages

The LM3916 is rated for operation from 0°C to +70°C. The LM3916N-1 is available in an 18-lead molded DIP package.

Typical Applications

0V to 10V VU Meter

DS007971-1

$$V_{REF} = 1.25V \left(1 + \frac{R2}{R1} \right) + R2 \times 80 \mu A$$

$$I_{LED} = \frac{12.5V}{R1} + \frac{V_{REF}}{2.2 k\Omega}$$

Notes: Capacitor C1 is required if leads to the LED supply are 6" or longer.

Circuit as shown is wired for dot mode. For bar mode, connect pin 9 to pin 3. V_{LED} must be kept below 7V or dropping resistor should be used to limit IC power dissipation.

LM4610

Dual DC Operated Tone/Volume/Balance Circuit with National 3-D Sound

General Description

The LM4610 is a DC controlled tone (bass/treble), volume and balance circuit for stereo applications in car radio, TV and audio systems. It also features National's 3D-Sound Circuitry which can be externally adjusted via a simple RC Network. An additional control input allows loudness compensation to be simply effected.

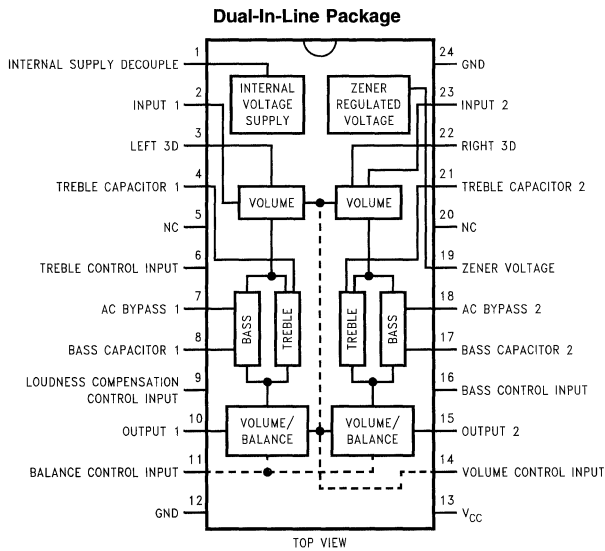

Four control inputs provide control of the bass, treble, balance and volume functions through application of DC voltages from a remote control system or, alternatively, from four potentiometers which may be biased from a zener regulated supply provided on the circuit.

Each tone response is defined by a single capacitor chosen to give the desired characteristic.

Features

- National 3-D Sound
- Wide supply voltage range, 9V to 16V
- Large volume control range, 75 dB typical
- Tone control, ± 15 dB typical
- Channel separation, 75 dB typical
- Low distortion, 0.06% typical for an input level of 0.3 V_{rms}
- High signal to noise, 80 dB typical for an input level of 0.3 V_{rms}
- Few external components required

Block and Connection Diagram

Order Number LM4610N
See NS Package Number N24A

LM565/LM565C

Phase Locked Loop

General Description

The LM565 and LM565C are general purpose phase locked loops containing a stable, highly linear voltage controlled oscillator for low distortion FM demodulation, and a double balanced phase detector with good carrier suppression. The VCO frequency is set with an external resistor and capacitor, and a tuning range of 10:1 can be obtained with the same capacitor. The characteristics of the closed loop system—bandwidth, response speed, capture and pull in range—may be adjusted over a wide range with an external resistor and capacitor. The loop may be broken between the VCO and the phase detector for insertion of a digital frequency divider to obtain frequency multiplication.

The LM565H is specified for operation over the -55°C to $+125^{\circ}\text{C}$ military temperature range. The LM565CN is specified for operation over the 0°C to $+70^{\circ}\text{C}$ temperature range.

Features

- 200 ppm/ $^{\circ}\text{C}$ frequency stability of the VCO
- Power supply range of ± 5 to ± 12 volts with 100 ppm/% typical

- 0.2% linearity of demodulated output
- Linear triangle wave with in phase zero crossings available
- TTL and DTL compatible phase detector input and square wave output
- Adjustable hold in range from $\pm 1\%$ to $> \pm 60\%$

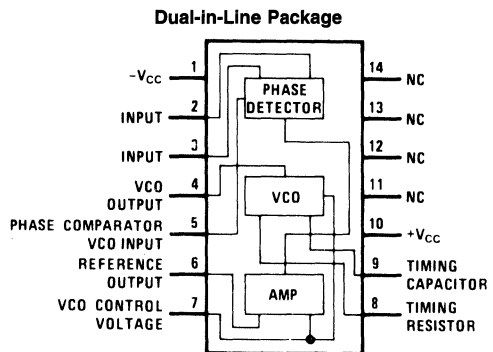

Applications

- Data and tape synchronization
- Modems
- FSK demodulation
- FM demodulation
- Frequency synthesizer
- Tone decoding
- Frequency multiplication and division
- SCA demodulators
- Telemetry receivers
- Signal regeneration
- Coherent demodulators

LM567/LM567C Tone Decoder

General Description

The LM567 and LM567C are general purpose tone decoders designed to provide a saturated transistor switch to ground when an input signal is present within the passband. The circuit consists of an I and Q detector driven by a voltage controlled oscillator which determines the center frequency of the decoder. External components are used to independently set center frequency, bandwidth and output delay.

Features

- 20 to 1 frequency range with an external resistor
- Logic compatible output with 100 mA current sinking capability
- Bandwidth adjustable from 0 to 14%

- High rejection of out of band signals and noise
- Immunity to false signals
- Highly stable center frequency
- Center frequency adjustable from 0.01 Hz to 500 kHz

Applications

- Touch tone decoding
- Precision oscillator
- Frequency monitoring and control
- Wide band FSK demodulation
- Ultrasonic controls
- Carrier current remote controls
- Communications paging decoders

LMC1982

Digitally-Controlled Stereo Tone and Volume Circuit with Two Selectable Stereo Inputs

General Description

The LMC1982 is a monolithic integrated circuit that provides volume, balance, tone (bass and treble), enhanced stereo, and loudness controls and selection between two pairs of stereo inputs. These functions are digitally controlled through a three-wire communication interface. There are two digital inputs for easy interface to other audio peripherals such as stereo decoders. The LMC1982 is designed for line level input signals (300 mV–2V) and has a maximum gain of –0.5 dB. Volume is set at minimum and tone controls are flat when supply voltage is first applied.

Low noise and distortion result from using analog switches and poly-silicon resistor networks in the signal path.

Additional tone control can be achieved using the LMC835 stereo 7-band graphic equalizer connected to the LMC1982's SELECT OUT/SELECT IN external processor loop.

Features

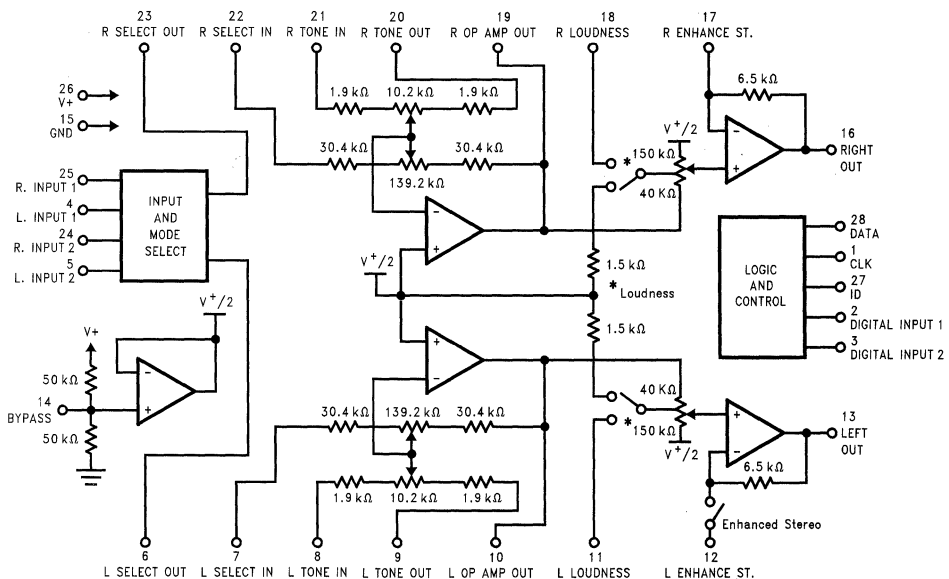

- Low noise and distortion
- Two pairs of stereo inputs

- Enhanced stereo function
- Loudness compensation
- 40 position 2 dB/step volume attenuator plus mute
- Independent left and right volume controls
- Low noise-suitable for use with DNR® and Dolby® noise reduction
- External processor loop
- Signal handling suitable for compact discs
- Pop-free switching
- Serially programmable: INTERMETAL bus (IM) interface
- 6V to 12V single supply operation
- 28 Pin DIP or PLCC package

Applications

- Stereo television
- Music reproduction systems
- Sound reinforcement systems
- Electronic music (MIDI)
- Personal computer audio control

LMC1983

Digitally-Controlled Stereo Tone and Volume Circuit with Three Selectable Stereo Inputs

General Description

The LMC1983 is a monolithic integrated circuit that provides volume, balance, tone (bass and treble), loudness controls and selection between three pairs of stereo inputs. These functions are digitally controlled through a three-wire communication interface. There are two digital inputs for easy interface to other audio peripherals such as stereo decoders. The LMC1983 is designed for line level input signals (300 mV–2V) and has a maximum gain of –0.5 dB. Volume is set at minimum and tone controls are flat when supply voltage is first applied.

Low noise and distortion result from using analog switches and poly-silicon resistor networks in the signal path.

Additional tone control can be achieved using the LMC835 stereo 7-band graphic equalizer connected to the LMC1983's SELECT OUT/SELECT IN external processor loop.

Features

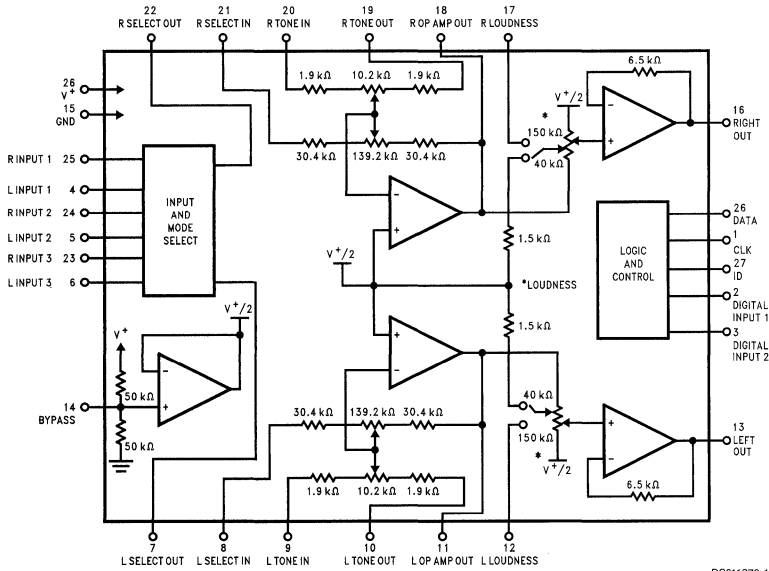

- Low noise and distortion

- Three pairs of stereo inputs
- Loudness compensation
- 40 position 2 dB/step volume attenuator plus mute
- Independent left and right volume controls
- Low noise-suitable for use with DNR® and Dolby® noise reduction
- External processor loop
- Signal handling suitable for compact discs
- Pop-free switching
- Serially programmable: INTERMETAL bus (IM) interface
- 6V to 12V single supply operation
- 28 Pin DIP or PLCC Package

Applications

- Stereo television
- Music reproduction systems
- Sound reinforcement systems
- Electronic music (MIDI)
- Personal computer audio control

LMC567

Low Power Tone Decoder

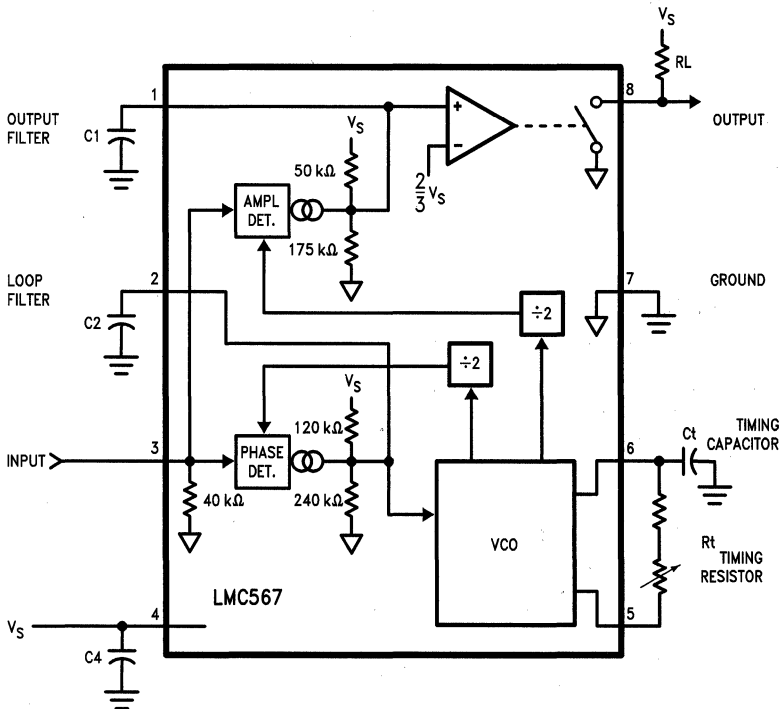

General Description

The LMC567 is a low power general purpose LCMOS™ tone decoder which is functionally similar to the industry standard LM567. It consists of a twice frequency voltage-controlled oscillator (VCO) and quadrature dividers which establish the reference signals for phase and amplitude detectors. The phase detector and VCO form a phase-locked loop (PLL) which locks to an input signal frequency which is within the control range of the VCO. When the PLL is locked and the input signal amplitude exceeds an internally pre-set threshold, a switch to ground is activated on the output pin. External components set up the oscillator to run at twice the input frequency and determine the phase and amplitude filter time constants.

Features

- Functionally similar to LM567
- 2V to 9V supply voltage range
- Low supply current drain
- No increase in current with output activated
- Operates to 500 kHz input frequency
- High oscillator stability
- Ground-referenced input
- Hysteresis added to amplitude comparator
- Out-of-band signals and noise rejected
- 20 mA output current capability

Block Diagram (with External Components)

Order Number LMC567CM or LMC567CN
See NS Package Number M08A or N08E

DS008670-1

LMC568

Low Power Phase-Locked Loop

General Description

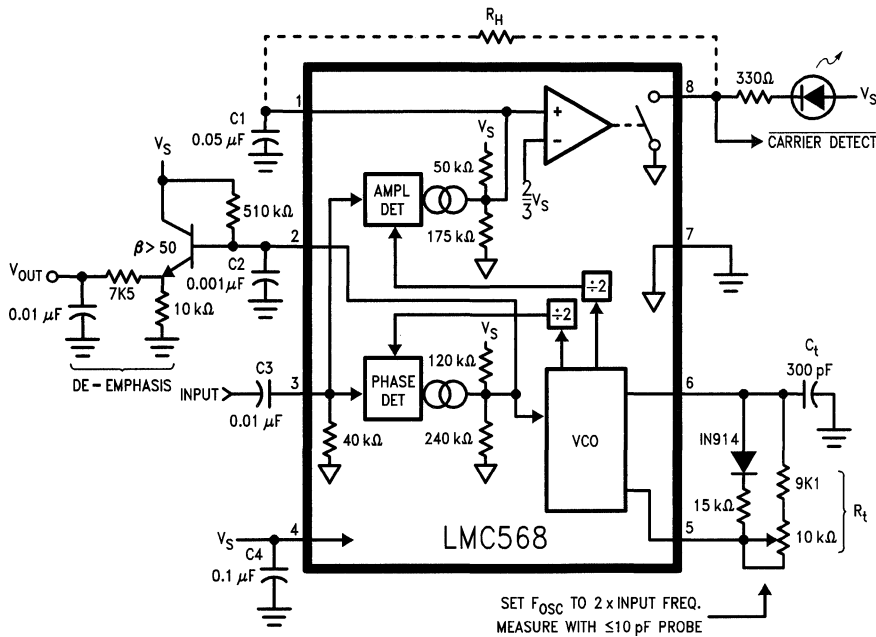

The LMC568 is an amplitude-linear phase-locked loop consisting of a linear VCO, fully balanced phase detectors, and a carrier detect output. LCMOS™ technology is employed for high performance with low power consumption.

The VCO has a linearized control range of $\pm 30\%$ to allow demodulation of FM and FSK signals. Carrier detect is indicated when the PLL is locked to an input signal greater than 26 mVrms. LMC568 applications include FM SCA and TV second audio program decoders, FSK data demodulators, and voice pagers.

Features

- Demodulates $\pm 15\%$ deviation FM/FSK signals
- Carrier Detect Output with hysteresis
- Operation to 500 kHz input frequency
- Low THD—0.5% typ. for $\pm 10\%$ deviation
- 2V to 9V supply voltage range
- Low supply current drain

Typical Application (100 kHz input frequency, refer to notes pg. 3)

LF411

Low Offset, Low Drift JFET Input Operational Amplifier

General Description

These devices are low cost, high speed, JFET input operational amplifiers with very low input offset voltage and guaranteed input offset voltage drift. They require low supply current yet maintain a large gain bandwidth product and fast slew rate. In addition, well matched high voltage JFET input devices provide very low input bias and offset currents. The LF411 is pin compatible with the standard LM741 allowing designers to immediately upgrade the overall performance of existing designs.

These amplifiers may be used in applications such as high speed integrators, fast D/A converters, sample and hold circuits and many other circuits requiring low input offset voltage and drift, low input bias current, high input impedance, high slew rate and wide bandwidth.

Features

- Internally trimmed offset voltage: 0.5 mV(max)
- Input offset voltage drift: 80 $\mu\text{V}/^\circ\text{C}$ (max)
- Low input bias current: 50 pA
- Low input noise current: 0.01 pA/ $\sqrt{\text{Hz}}$
- Wide gain bandwidth: 3 MHz(min)
- High slew rate: 10V/ μs (min)
- Low supply current: 1.8 mA
- High input impedance: $10^{12}\Omega$
- Low total harmonic distortion: $\leq 0.02\%$
- Low 1/f noise corner: 50 Hz
- Fast settling time to 0.01%: 2 μs

Typical Connection

LF412

Low Offset, Low Drift Dual JFET Input Operational Amplifier

General Description

These devices are low cost, high speed, JFET input operational amplifiers with very low input offset voltage and guaranteed input offset voltage drift. They require low supply current yet maintain a large gain bandwidth product and fast slew rate. In addition, well matched high voltage JFET input devices provide very low input bias and offset currents. The LF412 dual is pin compatible with the LM1558, allowing designers to immediately upgrade the overall performance of existing designs.

These amplifiers may be used in applications such as high speed integrators, fast D/A converters, sample and hold circuits and many other circuits requiring low input offset voltage and drift, low input bias current, high input impedance, high slew rate and wide bandwidth.

Features

- Internally trimmed offset voltage: 1 mV (max)
- Input offset voltage drift: 10 $\mu\text{V}/^\circ\text{C}$ (max)
- Low input bias current: 50 pA
- Low input noise current: 0.01 pA/ $\sqrt{\text{Hz}}$
- Wide gain bandwidth: 3 MHz (min)
- High slew rate: 10V/ μs (min)
- Low supply current: 1.8 mA/Amplifier
- High input impedance: $10^{12}\Omega$
- Low total harmonic distortion $\leq 0.02\%$
- Low 1/f noise corner: 50 Hz
- Fast settling time to 0.01%: 2 μs

Detailed Schematic

LM6142 and LM6144

17 MHz Rail-to-Rail Input-Output Operational Amplifiers

General Description

Using patent pending new circuit topologies, the LM6142/44 provides new levels of performance in applications where low voltage supplies or power limitations previously made compromise necessary. Operating on supplies of 1.8V to over 24V, the LM6142/44 is an excellent choice for battery operated systems, portable instrumentation and others.

The greater than rail-to-rail input voltage range eliminates concern over exceeding the common-mode voltage range. The rail-to-rail output swing provides the maximum possible dynamic range at the output. This is particularly important when operating on low supply voltages.

High gain-bandwidth with 650 μ A/Amplifier supply current opens new battery powered applications where previous higher power consumption reduced battery life to unacceptable levels. The ability to drive large capacitive loads without oscillating functionally removes this common problem.

Features

At $V_S = 5V$. Typ unless noted.

- Rail-to-rail input CMVR $-0.25V$ to $5.25V$
- Rail-to-rail output swing $0.005V$ to $4.995V$
- Wide gain-bandwidth: 17 MHz at 50 kHz (typ)
- Slew rate:
 - Small signal, $5V/\mu s$
 - Large signal, $30V/\mu s$
- Low supply current 650 μ A/Amplifier
- Wide supply range 1.8V to 24V
- CMRR 107 dB
- Gain 108 dB with $R_L = 10k$
- PSRR 87 dB

Applications

- Battery operated instrumentation
- Depth sounders/fish finders
- Barcode scanners
- Wireless communications
- Rail-to-rail in-out instrumentation amps

Connection Diagrams

LM833

Dual Audio Operational Amplifier

General Description

The LM833 is a dual general purpose operational amplifier designed with particular emphasis on performance in audio systems.

This dual amplifier IC utilizes new circuit and processing techniques to deliver low noise, high speed and wide bandwidth without increasing external components or decreasing stability. The LM833 is internally compensated for all closed loop gains and is therefore optimized for all preamp and high level stages in PCM and HiFi systems.

The LM833 is pin-for-pin compatible with industry standard dual operational amplifiers.

Features

- Wide dynamic range: 140dB
- Low input noise voltage: 4.5nV/√Hz
- High slew rate: 7 V/μs (typ); 5V/μs (min)
- High gain bandwidth: 15MHz (typ); 10MHz (min)
- Wide power bandwidth: 120KHz
- Low distortion: 0.002%
- Low offset voltage: 0.3mV
- Large phase margin: 60°
- Available in 8 pin MSOP package

Schematic Diagram (1/2 LM833)

Connection Diagram

LM837

Low Noise Quad Operational Amplifier

General Description

The LM837 is a quad operational amplifier designed for low noise, high speed and wide bandwidth performance. It has a new type of output stage which can drive a 600Ω load, making it ideal for almost all digital audio, graphic equalizer, preamplifiers, and professional audio applications. Its high performance characteristics also make it suitable for instrumentation applications where low noise is the key consideration.

The LM837 is internally compensated for unity gain operation. It is pin compatible with most other standard quad op amps and can therefore be used to upgrade existing systems with little or no change.

Features

- High slew rate 10 V/μs (typ); 8 V/μs (min)
- Wide gain bandwidth product 25 MHz (typ); 15 MHz (min)
- Power bandwidth 200 kHz (typ)
- High output current ±40 mA
- Excellent output drive performance >600Ω
- Low input noise voltage 4.5 nV/√Hz
- Low total harmonic distortion 0.0015%
- Low offset voltage 0.3 mV

LM1894

Dynamic Noise Reduction System DNR®

General Description

The LM1894 is a stereo noise reduction circuit for use with audio playback systems. The DNR system is non-complementary, meaning it does not require encoded source material. The system is compatible with virtually all prerecorded tapes and FM broadcasts. Psychoacoustic masking, and an adaptive bandwidth scheme allow the DNR to achieve 10 dB of noise reduction. DNR can save circuit board space and cost because of the few additional components required.

Features

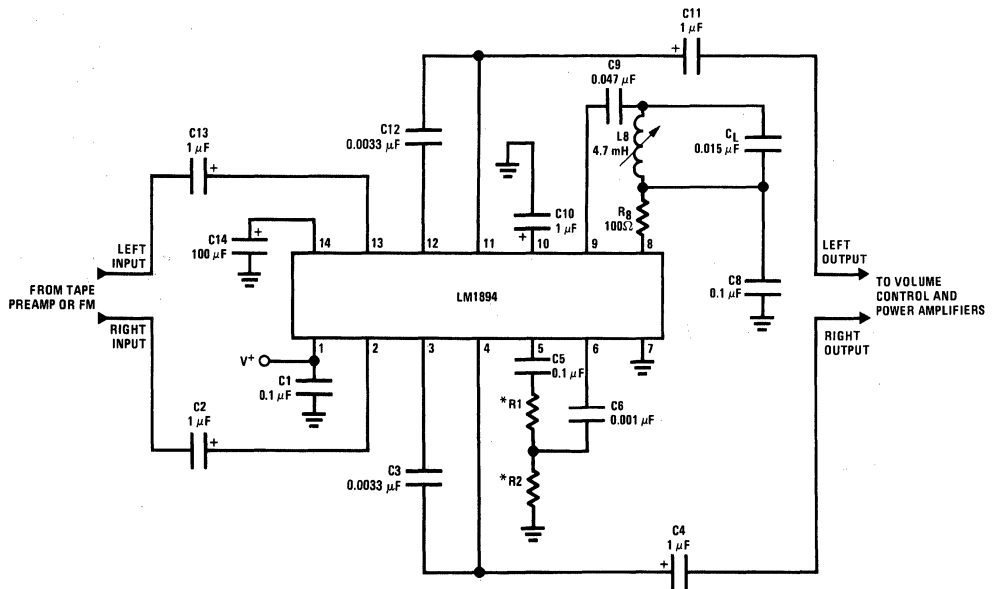

- Non-complementary noise reduction, "single ended"
- Low cost external components, no critical matching

- Compatible with all prerecorded tapes and FM
- 10 dB effective tape noise reduction CCIR/ARM weighted
- Wide supply range, 4.5V to 18V
- 1 Vrms input overload

Applications

- Automotive radio/tape players
- Compact portable tape players
- Quality HI-FI tape systems
- VCR playback noise reduction
- Video disc playback noise reduction

Typical Application

*R1 + R2 = 1 kΩ total.
See Application Hints.

Audio Codecs

LM4540

AC '97 Codec with National 3D Sound

General Description

The LM4540 is an audio codec for PC systems which performs the analog-intensive function of the Analog Codec '97 Rev 1.03 architecture. Using 18-Bit $\Sigma\Delta$ A/D and D/A converters, the LM4540 provides 90dB of dynamic range.

The LM4540 was designed specifically to provide a high quality audio path and provide all analog functionality in a PC audio system. It features full duplex stereo A/D's and D/A's and an analog mixer with 2 stereo and 3 mono inputs, each of which has separate gain, attenuation and mute control. In addition, the LM4540 provides National's 3D Sound stereo enhancement technology.

The LM4540 features AC-Link, a synchronous, fixed rate serial bus for connection to the digital AC '97 Controller. The separation of the analog and digital functions of the AC '97 architecture allows for system design flexibility and increased overall performance.

Key Specifications

■ Analog Mixer Dynamic Range	95dB (typ)
■ D/A Dynamic Range	89dB (typ)
■ A/D Dynamic Range	90dB (typ)

Features

- Audio Codec '97 compliant
- Stereo 18-Bit $\Sigma\Delta$ A/D's and D/A's with 128X oversampling
- National's 3D Sound circuitry
- Power management support
- Digital Interface 3V and 5V compliant

Applications

- PC Audio Systems Requiring Only 2 Stereo Inputs (CD, Line) and 3 Mono Inputs (Mic, Phone, PC BEEP)

Block Diagram

LM4545

AC '97 Codec with Stereo Headphone Amplifier and National 3D Sound

General Description

The LM4545 is an audio codec for PC systems which performs the analog-intensive function of the Analog Codec '97 Rev 1.03 Architecture. Using 18-Bit $\Sigma\Delta$ A/D and D/A converters, the LM4545 provides 90dB of dynamic range.

The LM4545 was designed specifically to provide a high quality audio path and provide all analog functionality in a PC audio system. It features full duplex stereo A/D's and D/A's and an analog mixer with 4 stereo and 3 mono inputs, each of which has separate gain, attenuation and mute control. In addition, the LM4545 provides a stereo headphone amplifier with an independent gain control and National's 3D Sound stereo enhancement technology.

The LM4545 features AC-Link, a synchronous, fixed rate serial bus for connection to the digital AC '97 Controller. The separation of the analog and digital functions of the AC '97 architecture allows for system design flexibility and increased overall performance.

Key Specifications

■ Analog Mixer Dynamic Range	95dB (typ)
■ D/A Dynamic Range	89dB (typ)
■ A/D Dynamic Range	90dB (typ)
■ Headphone THD+N at 50mW into 32 Ω	0.02% (typ)

Features

- Audio Codec '97 compliant
- Stereo 18-Bit $\Sigma\Delta$ A/D's and D/A's with 128X oversampling
- Stereo headphone amp with separate gain control
- National's 3D Sound circuitry
- Power management support
- Digital Interface 3V and 5V compliant

Applications

- Desktop PC Audio Systems
- Portable PC Audio Systems
- Mobile PC Audio Solutions

LM4546

AC '97 Rev 2 Codec with Sample Rate Conversion and National 3D Sound

General Description

The LM4546 is an audio codec for PC systems which is fully PC98 compliant and performs the analog intensive functions of the AC97 Rev 2 architecture. Using 18-bit Sigma-Delta A/D's and D/A's, the LM4546 provides 90dB of Dynamic Range.

The LM4546 was designed specifically to provide a high quality audio path and provide all analog functionality in a PC audio system. It features full duplex stereo A/D's and D/A's and an analog mixer with 2 stereo and 3 mono inputs, each of which has separate gain, attenuation and mute control. The LM4546 also provides National's 3D Sound stereo enhancement.

The LM4546 supports variable sample rate conversion as defined in the AC97 Rev2 specification. The sample rate for the A/D and D/A can be programmed separately to convert any rate between 4kHz - 48kHz with a resolution of 1Hz. The AC97 architecture separates the analog and digital functions of the PC audio system allowing both for system design flexibility and increased performance.

Key Specifications

■ Analog Mixer Dynamic Range	97dB (typ)
■ D/A Dynamic Range	89dB (typ)
■ A/D Dynamic Range	90dB (typ)

Features

- AC'97 Rev 2 compliant
- National's 3D Sound circuitry
- High quality Sample Rate Conversion (SRC) from 4kHz to 48kHz in 1Hz increments
- Multiple Codec support
- Advanced power management support
- Digital 3V and 5V compliant

Applications

- Desktop PC Audio Systems
- Portable PC Systems
- Mobile PC Systems

LM4548

AC '97 Rev 2 Codec with Sample Rate Conversion and National 3D Sound

General Description

The LM4548 is an audio codec for PC systems which is fully PC98 compliant and performs the analog intensive functions of the AC97 Rev2 architecture. Using 18-bit Sigma-Delta A/D's and D/A's, the LM4548 provides 90dB of Dynamic Range.

The LM4548 was designed specifically to provide a high quality audio path and provide all analog functionality in a PC audio system. It features full duplex stereo A/D's and D/A's and an analog mixer with 4 stereo and 3 mono inputs, each of which has separate gain, attenuation and mute control. The LM4548 also provides the additional True Line-Level output and National's 3D Sound stereo enhancement.

The LM4548 supports variable sample rate conversion as defined in the AC97 Rev2 specification. The sample rate for the A/D and D/A can be programmed separately to convert any rate between 4kHz - 48kHz with a resolution of 1Hz. The AC97 architecture separates the analog and digital functions of the PC audio system allowing both for system design flexibility and increased performance.

Key Specifications

■ Analog Mixer Dynamic Range	97dB (typ)
■ D/A Dynamic Range	89dB (typ)
■ A/D Dynamic Range	90dB (typ)

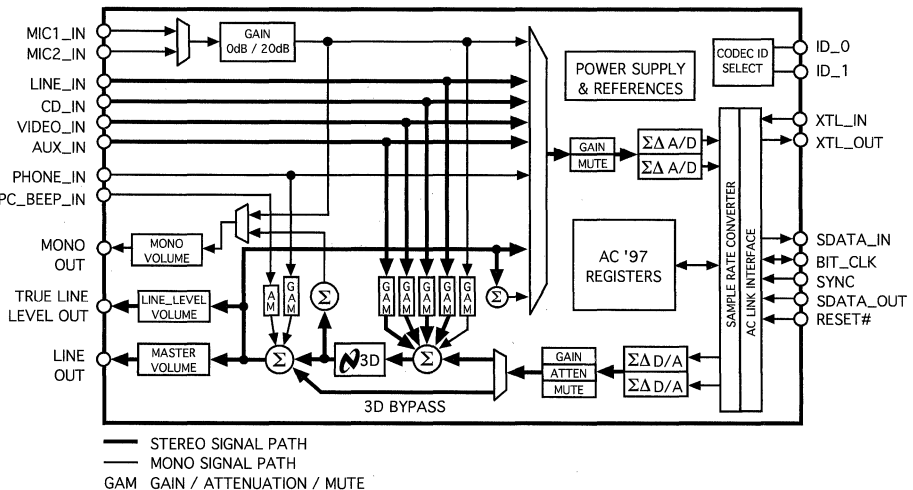

Features

- AC'97 Rev2 compliant
- National's 3D Sound circuitry
- High quality Sample Rate Conversion (SRC) from 4kHz to 48kHz in 1Hz increments.
- Multiple Codec Support
- True Line Level Output with volume control in addition to standard Line Out
- Advanced power management support
- Digital 3V and 5V compliant

Applications

- Desktop PC Audio Systems
- Portable PC Systems
- Mobile PC Systems

LM4549

AC '97 Rev 2.1 Codec with Sample Rate Conversion and National 3D Sound

General Description

The LM4549 is an audio codec for PC systems which is fully PC98 compliant and performs the analog intensive functions of the AC'97 Rev2.1 architecture. Using 18-bit Sigma-Delta A/D's and D/A's, the LM4549 provides 90dB of Dynamic Range.

The LM4549 was designed specifically to provide a high quality audio path and provide all analog functionality in a PC audio system. It features full duplex stereo A/D's and D/A's and an analog mixer with 4 stereo and 3 mono inputs, each of which has separate gain, attenuation and mute control. The codec features a second Line Output known as True Line Level Out that is identical to Line Out but with independent volume control. The LM4549 also features National's 3D Sound stereo enhancement and variable sample rate conversion. The sample rate for the A/D and D/A can be programmed separately with a resolution of 1Hz to convert any rate between 4kHz-48kHz.

The AC97 architecture separates the analog and digital functions of the PC audio system allowing both for system design flexibility and increased performance.

Key Specifications

- Analog Mixer Dynamic Range 97dB (typ)
- D/A Dynamic Range 89dB (typ)
- A/D Dynamic Range 90dB (typ)

Features

- AC'97 Rev 2.1 compliant
- National's 3D Sound circuitry
- High quality Sample Rate Conversion (SRC) from 4kHz to 48kHz in 1Hz increments.
- Multiple Codec Support
- External Amplifier Power Down (EAPD) control from codec
- PC-Beep passthrough to Line Out while reset is held active low
- True Line Level Output with volume control independent of Line Out
- Digital 3V and 5V compliant

Applications

- Desktop PC Audio Systems on PCI cards, AMR cards, or with motherboard chips sets featuring AC-Link
- Portable PC Systems as on MDC cards, or with a chipset or accelerator featuring AC-Link

Note 1: OC = Open Collector, PP = Push-Pull

Note 2: Specifications are at $T_A = 25^\circ\text{C}$ & $V_S = +5\text{V}$.

Note 3: Package Code Key (Letter = Package Type, Number = # of Pins)

Code Letter	Package Type
E	LCC
H/G	Metal Can
J/D	Ceramic Dual-in-Line
M	SOIC
MT	TSSOP
MM	MSOP
M5	SOT23-5
M7	SC70-5
N	Plastic Dual-in-Line (PDIP)
W	Flatpak
WG	Ceramic SOIC

Note 4: Temperature Ranges:

C = 0 to 70°C

I = -40 to 85°C

M = -55 to 125°C

Voltage Comparator Definition Of Terms

Input Current (I_B or I_{IN}): The average of the two input currents.

Input Offset Current (I_{OS}): The difference of currents between the two input terminals.

Input Offset Voltage (V_{OS}): The DC error voltage which exists between the input terminals due to non-ideal balancing of the input stage.

Input Voltage Range (V_{CM}): Typically the range of voltages on the input terminals for which the comparator's performance is specified.

Logic threshold Voltage (V_T): The voltage that exceeds the input offset voltage causing the output to change state.

Offset Voltage Temperature Coefficient (TCV_{OS}): The average rate of change in offset voltage for junction temperature variation over a specified temperature range.

Offset Current Temperature Coefficient (TCI_{OS}): The average rate of change in offset current for junction temperature variation over a specified temperature range.

Output High Voltage (V_{OH}): The high DC output voltage with output driven high with specified output current.

Output Low Voltage (V_{OL}): The low DC output voltage with the output driven low with specified sinking current.

Output Leakage Current ($I_{LEAKAGE}$): The current into the output terminal with the output driven high. Applies to open collector or open drain outputs.

Output Resistance (R_O): The apparent output resistance of a comparator, typically illustrated with an ideal comparator with zero output resistance in series with an output resistor, R_{out} , measured under DC conditions.

Output Sink Current (I_{SC-}): The maximum negative current that can be sunk by the comparator.

Output Source Current (I_{SC+}): The maximum positive current that can be sourced by the comparator with push/pull output state.

Power Consumption: The power required to operate the comparator with no output load.

Response Time (t_r): The interval between the application of an input step function and the time when the output crosses the logic threshold voltage.

Saturation Voltage (V_{SAT}): The low DC voltage of an open collector output with the output driven low with specified sinking current.

Strobe Current: The current out of the strobe terminal when it is a zero logic level.

Strobe Output Level: The comparator DC output voltage, independent of input conditions, when the strobe is active.

Strobe "ON" Voltage: The maximum voltage on the strobe terminal required forcing the output to the specified high state independent of the input voltage.

Strobe "OFF" Voltage: The minimum voltage on the strobe terminal that will guarantee that it does not interfere with the operation of the comparator.

Strobe Release Time: The time required for the output to rise to the logic threshold voltage after the strobe terminal has been driven from zero to a logic one level and the input is at a level that would drive the output low.

Supply current (I_S): The current required from the positive or negative supply to operate the comparator with no output load.

Voltage Gain (A_V): The ratio of the change in output voltage to the change in voltage between the input terminals producing it.

Voltage Overdrive: The input step voltage that goes beyond the minimum drive required to change the output state from one logic level to the opposite logic level.

NOTE: All parameters are under specific conditions.

LM111/LM211/LM311 Voltage Comparator

1.0 General Description

The LM111, LM211 and LM311 are voltage comparators that have input currents nearly a thousand times lower than devices like the LM106 or LM710. They are also designed to operate over a wider range of supply voltages: from standard $\pm 15\text{V}$ op amp supplies down to the single 5V supply used for IC logic. Their output is compatible with RTL, DTL and TTL as well as MOS circuits. Further, they can drive lamps or relays, switching voltages up to 50V at currents as high as 50 mA.

Both the inputs and the outputs of the LM111, LM211 or the LM311 can be isolated from system ground, and the output can drive loads referred to ground, the positive supply or the negative supply. Offset balancing and strobe capability are provided and outputs can be wire OR'ed. Although slower than the LM106 and LM710 (200 ns response time vs 40 ns)

the devices are also much less prone to spurious oscillations. The LM111 has the same pin configuration as the LM106 and LM710.

The LM211 is identical to the LM111, except that its performance is specified over a -25°C to $+85^\circ\text{C}$ temperature range instead of -55°C to $+125^\circ\text{C}$. The LM311 has a temperature range of 0°C to $+70^\circ\text{C}$.

2.0 Features

- Operates from single 5V supply
- Input current: 150 nA max. over temperature
- Offset current: 20 nA max. over temperature
- Differential input voltage range: $\pm 30\text{V}$
- Power consumption: 135 mW at $\pm 15\text{V}$

3.0 Typical Applications (Note 3)

Offset Balancing

DS005704-36

Strobing

DS005704-37

Note: Do Not Ground Strobe Pin. Output is turned off when current is pulled from Strobe Pin.

Increasing Input Stage Current (Note 1)

DS005704-38

Note 1: Increases typical common mode slew from $7.0\text{V}/\mu\text{s}$ to $18\text{V}/\mu\text{s}$.

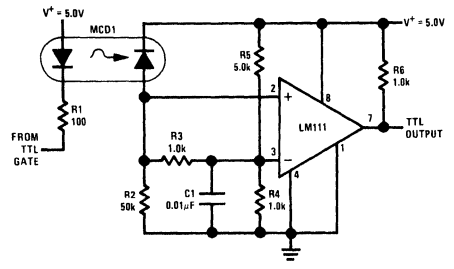

Detector for Magnetic Transducer

DS005704-39

3.0 Typical Applications (Note 3) (Continued)

Digital Transmission Isolator

DS005704-40

Relay Driver with Strobe

DS005704-41

*Absorbs inductive kickback of relay and protects IC from severe voltage transients on V⁺ line.

Note: Do Not Ground Strobe Pin.

Strobing off Both Input and Output Stages (Note 2)

DS005704-42

Note: Do Not Ground Strobe Pin.

Note 2: Typical input current is 50 pA with inputs strobed off.

Note 3: Pin connections shown on schematic diagram and typical applications are for H08 metal can package.

Positive Peak Detector

DS005704-23

Zero Crossing Detector Driving MOS Logic

DS005704-24

*Solid tantalum

4.0 Absolute Maximum Ratings for the LM111/LM211 (Note 10)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Total Supply Voltage (V_{S4})	36V
Output to Negative Supply Voltage (V_{74})	50V
Ground to Negative Supply Voltage (V_{14})	30V
Differential Input Voltage	$\pm 30V$
Input Voltage (Note 4)	$\pm 15V$
Output Short Circuit Duration	10 sec

Operating Temperature Range

LM111	-55°C to 125°C
LM211	-25°C to 85°C

Lead Temperature (Soldering, 10 sec)	260°C
Voltage at Strobe Pin	$V^+ - 5V$

Soldering Information

Dual-In-Line Package	
Soldering (10 seconds)	260°C
Small Outline Package	
Vapor Phase (60 seconds)	215°C
Infrared (15 seconds)	220°C

See AN-450 "Surface Mounting Methods and Their Effect on Product Reliability" for other methods of soldering surface mount devices.

ESD Rating (Note 11)	300V
----------------------	------

Electrical Characteristics (Note 6)

for the LM111 and LM211

Parameter	Conditions	Min	Typ	Max	Units
Input Offset Voltage (Note 7)	$T_A = 25^\circ\text{C}$, $R_S \leq 50\text{k}$		0.7	3.0	mV
Input Offset Current	$T_A = 25^\circ\text{C}$		4.0	10	nA
Input Bias Current	$T_A = 25^\circ\text{C}$		60	100	nA
Voltage Gain	$T_A = 25^\circ\text{C}$	40	200		V/mV
Response Time (Note 8)	$T_A = 25^\circ\text{C}$		200		ns
Saturation Voltage	$V_{IN} \leq -5\text{ mV}$, $I_{OUT} = 50\text{ mA}$ $T_A = 25^\circ\text{C}$		0.75	1.5	V
Strobe ON Current (Note 9)	$T_A = 25^\circ\text{C}$		2.0	5.0	mA
Output Leakage Current	$V_{IN} \geq 5\text{ mV}$, $V_{OUT} = 35V$ $T_A = 25^\circ\text{C}$, $I_{STROBE} = 3\text{ mA}$		0.2	10	nA
Input Offset Voltage (Note 7)	$R_S \leq 50\text{ k}$			4.0	mV
Input Offset Current (Note 7)				20	nA
Input Bias Current				150	nA
Input Voltage Range	$V^+ = 15V$, $V^- = -15V$, Pin 7 Pull-Up May Go To 5V	-14.5	13.8, -14.7	13.0	V
Saturation Voltage	$V^+ \geq 4.5V$, $V^- = 0$ $V_{IN} \leq -6\text{ mV}$, $I_{OUT} \leq 8\text{ mA}$		0.23	0.4	V
Output Leakage Current	$V_{IN} \geq 5\text{ mV}$, $V_{OUT} = 35V$		0.1	0.5	μA
Positive Supply Current	$T_A = 25^\circ\text{C}$		5.1	6.0	mA
Negative Supply Current	$T_A = 25^\circ\text{C}$		4.1	5.0	mA

Note 4: This rating applies for $\pm 15V$ supplies. The positive input voltage limit is 30V above the negative supply. The negative input voltage limit is equal to the negative supply voltage or 30V below the positive supply, whichever is less.

Note 5: The maximum junction temperature of the LM111 is 150°C, while that of the LM211 is 110°C. For operating at elevated temperatures, devices in the H08 package must be derated based on a thermal resistance of 165°C/W, junction to ambient, or 20°C/W, junction to case. The thermal resistance of the dual-in-line package is 110°C/W, junction to ambient.

Note 6: These specifications apply for $V_S = \pm 15V$ and Ground pin at ground, and $-55^\circ\text{C} \leq T_A \leq 125^\circ\text{C}$, unless otherwise stated. With the LM211, however, all temperature specifications are limited to $-25^\circ\text{C} \leq T_A \leq 85^\circ\text{C}$. The offset voltage, offset current and bias current specifications apply for any supply voltage from a single 5V supply up to $\pm 15V$ supplies.

Note 7: The offset voltages and offset currents given are the maximum values required to drive the output within a volt of either supply with a 1 mA load. Thus, these parameters define an error band and take into account the worst-case effects of voltage gain and R_S .

Note 8: The response time specified (see definitions) is for a 100 mV input step with 5 mV overdrive.

Note 9: This specification gives the range of current which must be drawn from the strobe pin to ensure the output is properly disabled. Do not short the strobe pin to ground; it should be current driven at 3 to 5 mA.

Note 10: Refer to RETS111X for the LM111H, LM111J and LM111J-8 military specifications.

Note 11: Human body model, 1.5 k Ω in series with 100 pF.

5.0 Absolute Maximum Ratings for the LM311 (Note 12)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Total Supply Voltage (V_{B4})	36V
Output to Negative Supply Voltage (V_{74})	40V
Ground to Negative Supply Voltage (V_{14})	30V
Differential Input Voltage	$\pm 30V$
Input Voltage (Note 13)	$\pm 15V$
Power Dissipation (Note 14)	500 mW
ESD Rating (Note 19)	300V
Output Short Circuit Duration	10 sec

Operating Temperature Range	0° to 70°C
Storage Temperature Range	-65°C to 150°C
Lead Temperature (soldering, 10 sec)	260°C
Voltage at Strobe Pin	$V^+ - 5V$
Soldering Information	
Dual-In-Line Package	
Soldering (10 seconds)	260°C

Infrared (15 seconds)	220°C
See AN-450 "Surface Mounting Methods and Their Effect on Product Reliability" for other methods of soldering surface mount devices.	

Electrical Characteristics (Note 15) for the LM311

Parameter	Conditions	Min	Typ	Max	Units
Input Offset Voltage (Note 16)	$T_A = 25^\circ C, R_S \leq 50k$		2.0	7.5	mV
Input Offset Current (Note 16)	$T_A = 25^\circ C$		6.0	50	nA
Input Bias Current	$T_A = 25^\circ C$		100	250	nA
Voltage Gain	$T_A = 25^\circ C$	40	200		V/mV
Response Time (Note 17)	$T_A = 25^\circ C$		200		ns
Saturation Voltage	$V_{IN} \leq -10 mV, I_{OUT} = 50 mA$ $T_A = 25^\circ C$		0.75	1.5	V
Strobe ON Current (Note 18)	$T_A = 25^\circ C$		2.0	5.0	mA
Output Leakage Current	$V_{IN} \geq 10 mV, V_{OUT} = 35V$ $T_A = 25^\circ C, I_{STROBE} = 3 mA$ $V^- = Pin 1 = -5V$		0.2	50	nA
Input Offset Voltage (Note 16)	$R_S \leq 50K$			10	mV
Input Offset Current (Note 16)				70	nA
Input Bias Current				300	nA
Input Voltage Range		-14.5	13.8, -14.7	13.0	V
Saturation Voltage	$V^+ \geq 4.5V, V^- = 0$ $V_{IN} \leq -10 mV, I_{OUT} \leq 8 mA$		0.23	0.4	V
Positive Supply Current	$T_A = 25^\circ C$		5.1	7.5	mA
Negative Supply Current	$T_A = 25^\circ C$		4.1	5.0	mA

Note 12: "Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits."

Note 13: This rating applies for $\pm 15V$ supplies. The positive input voltage limit is 30V above the negative supply. The negative input voltage limit is equal to the negative supply voltage or 30V below the positive supply, whichever is less.

Note 14: The maximum junction temperature of the LM311 is 110°C. For operating at elevated temperature, devices in the H08 package must be derated based on a thermal resistance of 165°C/W, junction to ambient, or 20°C/W, junction to case. The thermal resistance of the dual-in-line package is 100°C/W, junction to ambient.

Note 15: These specifications apply for $V_S = \pm 15V$ and Pin 1 at ground, and $0^\circ C < T_A < +70^\circ C$, unless otherwise specified. The offset voltage, offset current and bias current specifications apply for any supply voltage from a single 5V supply up to $\pm 15V$ supplies.

Note 16: The offset voltages and offset currents given are the maximum values required to drive the output within a volt of either supply with 1 mA load. Thus, these parameters define an error band and take into account the worst-case effects of voltage gain and R_S .

Note 17: The response time specified (see definitions) is for a 100 mV input step with 5 mV overdrive.

Note 18: This specification gives the range of current which must be drawn from the strobe pin to ensure the output is properly disabled. Do not short the strobe pin to ground; it should be current driven at 3 to 5 mA.

Note 19: Human body model, 1.5 k Ω in series with 100 pF.

LM119/LM219/LM319 High Speed Dual Comparator

General Description

The LM119 series are precision high speed dual comparators fabricated on a single monolithic chip. They are designed to operate over a wide range of supply voltages down to a single 5V logic supply and ground. Further, they have higher gain and lower input currents than devices like the LM710. The uncommitted collector of the output stage makes the LM119 compatible with RTL, DTL and TTL as well as capable of driving lamps and relays at currents up to 25 mA.

The LM319A offers improved precision over the standard LM319, with tighter tolerances on offset voltage, offset current, and voltage gain.

Although designed primarily for applications requiring operation from digital logic supplies, the LM119 series are fully specified for power supplies up to $\pm 15V$. It features faster response than the LM111 at the expense of higher power dis-

sipation. However, the high speed, wide operating voltage range and low package count make the LM119 much more versatile than older devices like the LM711.

The LM119 is specified from $-55^{\circ}C$ to $+125^{\circ}C$, the LM219 is specified from $-25^{\circ}C$ to $+85^{\circ}C$, and the LM319A and LM319 are specified from $0^{\circ}C$ to $+70^{\circ}C$.

Features

- Two independent comparators
- Operates from a single 5V supply
- Typically 80 ns response time at $\pm 15V$
- Minimum fan-out of 2 each side
- Maximum input current of $1 \mu A$ over temperature
- Inputs and outputs can be isolated from system ground
- High common mode slew rate

Operating Temperature Range

LM119	-55°C to 125°C
LM219	-25°C to 85°C

Electrical Characteristics (Note 5)

Parameter	Conditions	LM119/LM219			Units
		Min	Typ	Max	
Input Offset Voltage (Note 6)	$T_A = 25^\circ\text{C}$, $R_S \leq 5\text{k}$		0.7	4.0	mV
Input Offset Current (Note 6)	$T_A = 25^\circ\text{C}$		30	75	nA
Input Bias Current	$T_A = 25^\circ\text{C}$		150	500	nA
Voltage Gain	$T_A = 25^\circ\text{C}$ (Note 8)	10	40		V/mV
Response Time (Note 7)	$T_A = 25^\circ\text{C}$, $V_S = \pm 15\text{V}$		80		ns
Saturation Voltage	$V_{IN} \leq -5\text{ mV}$, $I_{OUT} = 25\text{ mA}$ $T_A = 25^\circ\text{C}$		0.75	1.5	V
Output Leakage Current	$V_{IN} \geq 5\text{ mV}$, $V_{OUT} = 35\text{V}$ $T_A = 25^\circ\text{C}$		0.2	2	μA
Input Offset Voltage (Note 6)	$R_S \leq 5\text{k}$			7	mV
Input Offset Current (Note 6)				100	nA
Input Bias Current				1000	nA
Input Voltage Range	$V_S = \pm 15\text{V}$ $V^+ = 5\text{V}$, $V^- = 0$	-12 1	±13	+12 3	V V
Saturation Voltage	$V^+ \geq 4.5\text{V}$, $V^- = 0$ $V_{IN} \leq -6\text{ mV}$, $I_{SINK} \leq 3.2\text{ mA}$ $T_A \geq 0^\circ\text{C}$ $T_A \leq 0^\circ\text{C}$		0.23	0.4 0.6	V V
Output Leakage Current	$V_{IN} \geq 5\text{ mV}$, $V_{OUT} = 35\text{V}$, $V^- = V_{GND} = 0\text{V}$		1	10	μA
Differential Input Voltage				±5	V
Positive Supply Current	$T_A = 25^\circ\text{C}$, $V^+ = 5\text{V}$, $V^- = 0$		4.3		mA
Positive Supply Current	$T_A = 25^\circ\text{C}$, $V_S = \pm 15\text{V}$		8	11.5	mA
Negative Supply Current	$T_A = 25^\circ\text{C}$, $V_S = \pm 15\text{V}$		3	4.5	mA

Note 3: For supply voltages less than ±15V the absolute maximum input voltage is equal to the supply voltage.

Note 4: The maximum junction temperature of the LM119 is 150°C, while that of the LM219 is 110°C. For operating at elevated temperatures, devices in the H10 package must be derated based on a thermal resistance of 160°C/W, junction to ambient, or 19°C/W, junction to case. The thermal resistance of the J14 and N14 packages is 100°C/W, junction to ambient.

Note 5: These specifications apply for $V_S = \pm 15\text{V}$, and the Ground pin at ground, and $-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$, unless otherwise stated. With the LM219, however, all temperature specifications are limited to $-25^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$. The offset voltage, offset current and bias current specifications apply for any supply voltage from a single 5V supply up to ±15V supplies. Do not operate the device with more than 16V from ground to V_S .

Note 6: The offset voltages and offset currents given are the maximum values required to drive the output within a volt of either supply with a 1 mA load. Thus, these parameters define an error band and take into account the worst case effects of voltage gain and input impedance.

Note 7: The response time specified (see definitions) is for a 100 mV input step with 5 mV overdrive.

Note 8: Output is pulled up to 15V through a 1.4 kΩ resistor.

Note 9: Refer to RETS119X for LM119H/883 and LM119J/883 specifications.

Absolute Maximum Ratings

LM319A/319 (Note 9)

Input Offset Current (Note 13)				300			300	nA
Input Bias Current				1000			1200	nA
Input Voltage Range	$V_S = \pm 15\text{V}$ $V^+ = 5\text{V}$, $V^- = 0$	1	±13		1	±13		V
Saturation Voltage	$V^+ \geq 4.5\text{V}$, $V^- = 0$ $V_{IN} \leq -10\text{ mV}$, $I_{SINK} \leq 3.2\text{ mA}$		0.3	0.4		0.3	0.4	V
Differential Input Voltage				±5			±5	V
Positive Supply Current	$T_A = 25^\circ\text{C}$, $V^+ = 5\text{V}$, $V^- = 0$		4.3			4.3		mA
Positive Supply Current	$T_A = 25^\circ\text{C}$, $V_S = \pm 15\text{V}$		8	12.5		8	12.5	mA
Negative Supply Current	$T_A = 25^\circ\text{C}$, $V_S = \pm 15\text{V}$		3	5		3	5	mA

Note 10: For supply voltages less than ±15 the absolute maximum input voltage is equal to the supply voltage.

Note 11: The maximum junction temperature of the LM319A and LM319 is 85°C. For operating at elevated temperatures, devices in the H10 package must be derated based on a thermal resistance of 160°C/W, junction to ambient, or 19°C/W, junction to case. The thermal resistance of the N14 and J14 package is 100°C/W, junction to ambient. The thermal resistance of the M14 package is 115°C/W, junction to ambient.

Note 12: These specifications apply for $V_S = \pm 15\text{V}$, and $0^\circ\text{C} \leq T_A \leq 70^\circ\text{C}$, unless otherwise stated. The offset voltage, offset current and bias current specifications apply for any supply voltage from a single 5V supply up to ±15V supplies. Do not operate the device with more than 16V from ground to V_S .

Note 13: The offset voltages and offset currents given are the maximum values required to drive the output within a volt of either supply with a 1 mA load. Thus, these parameters define an error band and take into account the worst case effects of voltage gain and input impedance.

Note 14: The response time specified is for a 100 mV input step with 5 mV overdrive.

Note 15: Output is pulled up to 15V through a 1.4 kΩ resistor.

LM139/LM239/LM339/LM2901/LM3302

Low Power Low Offset Voltage Quad Comparators

General Description

The LM139 series consists of four independent precision voltage comparators with an offset voltage specification as low as 2 mV max for all four comparators. These were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage. These comparators also have a unique characteristic in that the input common-mode voltage range includes ground, even though operated from a single power supply voltage.

Application areas include limit comparators, simple analog to digital converters; pulse, squarewave and time delay generators; wide range VCO; MOS clock timers; multivibrators and high voltage digital logic gates. The LM139 series was designed to directly interface with TTL and CMOS. When operated from both plus and minus power supplies, they will directly interface with MOS logic— where the low power drain of the LM339 is a distinct advantage over standard comparators.

- Reduced V_{OS} drift over temperature
- Eliminates need for dual supplies
- Allows sensing near GND
- Compatible with all forms of logic
- Power drain suitable for battery operation

Features

- Wide supply voltage range
 - LM139/139A Series 2 to 36 V_{DC} or ± 1 to $\pm 18 V_{DC}$
 - LM2901: 2 to 36 V_{DC} or ± 1 to $\pm 18 V_{DC}$
 - LM3302: 2 to 28 V_{DC} or ± 1 to $\pm 14 V_{DC}$
- Very low supply current drain (0.8 mA) — independent of supply voltage
- Low input biasing current: 25 nA
- Low input offset current: ± 5 nA
- Offset voltage: ± 3 mV
- Input common-mode voltage range includes GND
- Differential input voltage range equal to the power supply voltage
- Low output saturation voltage: 250 mV at 4 mA
- Output voltage compatible with TTL, DTL, ECL, MOS and CMOS logic systems

Advantages

- High precision comparators

One-Shot Multivibrator with Input Lock Out

Differential Input Voltage	Keep all $V_{IN}'s \geq 0 V_{DC}$ (or V^- , if used), (Note 8)			36		36				28	V_{DC}

Note 1: For operating at high temperatures, the LM339/LM339A, LM2901, LM3302 must be derated based on a 125°C maximum junction temperature and a thermal resistance of 95°C/W which applies for the device soldered in a printed circuit board, operating in a still air ambient. The LM239 and LM139 must be derated based on a 150°C maximum junction temperature. The low bias dissipation and the "ON-OFF" characteristic of the outputs keeps the chip dissipation very small ($P_D \leq 100 mW$), provided the output transistors are allowed to saturate.

Note 2: Short circuits from the output to V^+ can cause excessive heating and eventual destruction. When considering short circuits to ground, the maximum output current is approximately 20 mA independent of the magnitude of V^+ .

Note 3: This input current will only exist when the voltage at any of the input leads is driven negative. It is due to the collector-base junction of the input PNP transistors becoming forward biased and thereby acting as input diode clamps. In addition to this diode action, there is also lateral NPN parasitic transistor action on the IC chip. This transistor action can cause the output voltages of the comparators to go to the V^+ voltage level (or to ground for a large overdrive) for the time duration that an input is driven negative. This is not destructive and normal output states will re-establish when the input voltage, which was negative, again returns to a value greater than $-0.3 V_{DC}$ (at 25°C).

Note 4: These specifications are limited to $-55^\circ C \leq T_A \leq 125^\circ C$, for the LM139/LM139A. With the LM239/LM239A, all temperature specifications are limited to $-25^\circ C \leq T_A \leq 85^\circ C$, the LM339/LM339A temperature specifications are limited to $0^\circ C \leq T_A \leq 70^\circ C$, and the LM2901, LM3302 temperature range is $-40^\circ C \leq T_A \leq 85^\circ C$.

Note 5: The direction of the input current is out of the IC due to the PNP input stage. This current is essentially constant, independent of the state of the output so no loading change exists on the reference or input lines.

Note 6: The input common-mode voltage or either input signal voltage should not be allowed to go negative by more than 0.3V. The upper end of the common-mode voltage range is $V^+ - 1.5V$ at 25°C, but either or both inputs can go to $+30 V_{DC}$ without damage (25V for LM3302), independent of the magnitude of V^+ .

Note 7: The response time specified is a 100 mV input step with 5 mV overdrive. For larger overdrive signals 300 ns can be obtained, see typical performance characteristics section.

Note 8: Positive excursions of input voltage may exceed the power supply level. As long as the other voltage remains within the common-mode range, the comparator will provide a proper output state. The low input voltage state must not be less than $-0.3 V_{DC}$ (or $0.3 V_{DC}$ below the magnitude of the negative power supply, if used) (at 25°C).

Note 9: At output switch point, $V_O = 1.4 V_{DC}$, $R_S = 0\Omega$ with V^+ from $5 V_{DC}$ to $30 V_{DC}$; and over the full input common-mode range ($0 V_{DC}$ to $V^+ - 1.5 V_{DC}$), at 25°C. For LM3302, V^+ from $5 V_{DC}$ to $28 V_{DC}$.

Note 10: Refer to RETS139AX for LM139A military specifications and to RETS139X for LM139 military specifications.

LM160/LM360

High Speed Differential Comparator

General Description

The LM160/LM360 is a very high speed differential input, complementary TTL output voltage comparator with improved characteristics over the μ A760/ μ A760C, for which it is a pin-for-pin replacement. The device has been optimized for greater speed, input impedance and fan-out, and lower input offset voltage. Typically delay varies only 3 ns for overdrive variations of 5 mV to 400 mV.

Complementary outputs having minimum skew are provided. Applications involve high speed analog to digital converters and zero-crossing detectors in disk file systems.

Features

- Guaranteed high speed: 20 ns max
- Tight delay matching on both outputs
- Complementary TTL outputs
- High input impedance
- Low speed variation with overdrive variation
- Fan-out of 4
- Low input offset voltage
- Series 74 TTL compatible

				θ _{JC}	25°C/W	

Note 6: The device may be damaged if used beyond the maximum ratings.

Note 7: Measurements are made in AC Test Circuit, Fanout = 1

Note 8: Refer to RETS 160X for LM160H, LM160J-14 and LM160J military specifications.

Note 9: Human body model, 1.5 kΩ in series with 100 pF.

LM161/LM361 High Speed Differential Comparators

General Description

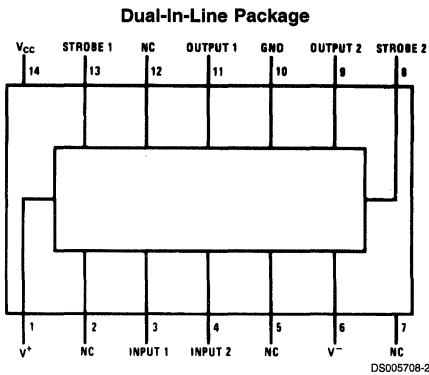

The LM161/LM361 is a very high speed differential input, complementary TTL output voltage comparator with improved characteristics over the SE529/NE529 for which it is a pin-for-pin replacement. The device has been optimized for greater speed performance and lower input offset voltage. Typically delay varies only 3 ns for over-drive variations of 5 mV to 500 mV. It may be operated from op amp supplies ($\pm 15V$).

Complementary outputs having maximum skew are provided. Applications involve high speed analog to digital converters and zero-crossing detectors in disk file systems.

Features

- Independent strobes
- Guaranteed high speed: 20 ns max
- Tight delay matching on both outputs
- Complementary TTL outputs
- Operates from op amp supplies: $\pm 15V$
- Low speed variation with overdrive variation
- Low input offset voltage
- Versatile supply voltage range

Note 5: Human body model, 1.5 k Ω in series with 100 pF.

LM193/LM293/LM393/LM2903

Low Power Low Offset Voltage Dual Comparators

General Description

The LM193 series consists of two independent precision voltage comparators with an offset voltage specification as low as 2.0 mV max for two comparators which were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage. These comparators also have a unique characteristic in that the input common-mode voltage range includes ground, even though operated from a single power supply voltage.

Application areas include limit comparators, simple analog to digital converters; pulse, squarewave and time delay generators; wide range VCO; MOS clock timers; multivibrators and high voltage digital logic gates. The LM193 series was designed to directly interface with TTL and CMOS. When operated from both plus and minus power supplies, the LM193 series will directly interface with MOS logic where their low power drain is a distinct advantage over standard comparators.

Advantages

- High precision comparators

- Reduced V_{OS} drift over temperature
- Eliminates need for dual supplies
- Allows sensing near ground
- Compatible with all forms of logic
- Power drain suitable for battery operation

Features

- Wide supply
 - Voltage range: 2.0V to 36V
 - single or dual supplies: $\pm 1.0V$ to $\pm 18V$
- Very low supply current drain (0.4 mA) — independent of supply voltage
- Low input biasing current: 25 nA
- Low input offset current: ± 5 nA
- Maximum offset voltage: ± 3 mV
- Input common-mode voltage range includes ground
- Differential input voltage range equal to the power supply voltage
- Low output saturation voltage; 250 mV at 4 mA
- Output voltage compatible with TTL, DTL, ECL, MOS and CMOS logic systems

Note 1: For operating at high temperatures, the LM393/LM393A and LM2903 must be derated based on a 125°C maximum junction temperature and a thermal resistance of 170°C/W which applies for the device soldered in a printed circuit board, operating in a still air ambient. The LM193/LM193A/LM293/LM293A must be derated based on a 150°C maximum junction temperature. The low bias dissipation and the "ON-OFF" characteristic of the outputs keeps the chip dissipation very small (P_D ≤ 100 mW), provided the output transistors are allowed to saturate.

Note 2: Short circuits from the output to V⁺ can cause excessive heating and eventual destruction. When considering short circuits to ground, the maximum output current is approximately 20 mA independent of the magnitude of V⁺.

Note 3: This input current will only exist when the voltage at any of the input leads is driven negative. It is due to the collector-base junction of the input PNP transistors becoming forward biased and thereby acting as input diode clamps. In addition to this diode action, there is also lateral NPN parasitic transistor action on the IC chip. This transistor action can cause the output voltages of the comparators to go to the V⁺ voltage level (or to ground for a large overdrive) for the time duration that an input is driven negative. This is not destructive and normal output states will re-establish when the input voltage, which was negative, again returns to a value greater than -0.3V.

Note 4: These specifications are limited to -55°C ≤ T_A ≤ +125°C, for the LM193/LM193A. With the LM293/LM293A all temperature specifications are limited to -25°C ≤ T_A ≤ +85°C and the LM393/LM393A temperature specifications are limited to 0°C ≤ T_A ≤ +70°C. The LM2903 is limited to -40°C ≤ T_A ≤ +85°C.

Electrical Characteristics (Continued)

Note 5: The direction of the input current is out of the IC due to the PNP input stage. This current is essentially constant, independent of the state of the output so no loading change exists on the reference or input lines.

Note 6: The input common-mode voltage or either input signal voltage should not be allowed to go negative by more than 0.3V. The upper end of the common-mode voltage range is $V^+ - 1.5V$ at 25°C, but either or both inputs can go to 36V without damage, independent of the magnitude of V^+ .

Note 7: The response time specified is for a 100 mV input step with 5 mV overdrive. For larger overdrive signals 300 ns can be obtained, see typical performance characteristics section.

Note 8: Positive excursions of input voltage may exceed the power supply level. As long as the other voltage remains within the common-mode range, the comparator will provide a proper output state. The low input voltage state must not be less than $-0.3V$ (or 0.3V below the magnitude of the negative power supply, if used).

Note 9: At output switch point, $V_O \approx 1.4V$, $R_S = 0\Omega$ with V^+ from 5V to 30V; and over the full input common-mode range (0V to $V^+ - 1.5V$), at 25°C.

Note 10: Refer to RETS193AX for LM193AH military specifications and to RETS193X for LM193H military specifications.

LM392

Low Power Operational Amplifier/Voltage Comparator

General Description

The LM392 series consists of 2 independent building block circuits. One is a high gain, internally frequency compensated operational amplifier, and the other is a precision voltage comparator. Both the operational amplifier and the voltage comparator have been specifically designed to operate from a single power supply over a wide range of voltages. Both circuits have input stages which will common-mode input down to ground when operating from a single power supply. Operation from split power supplies is also possible and the low power supply current is independent of the magnitude of the supply voltage.

Application areas include transducer amplifier with pulse shaper, DC gain block with level detector, VCO, as well as all conventional operational amplifier or voltage comparator circuits. Both circuits can be operated directly from the standard 5 V_{DC} power supply voltage used in digital systems, and the output of the comparator will interface directly with either TTL or CMOS logic. In addition, the low power drain makes the LM392 extremely useful in the design of portable equipment.

Advantages

- Eliminates need for dual power supplies
- An internally compensated op amp and a precision comparator in the same package
- Allows sensing at or near ground

- Power drain suitable for battery operation
- Pin-out is the same as both the LM358 dual op amp and the LM393 dual comparator

Features

- Wide power supply voltage range
 - Single supply: 3V to 32V
 - Dual supply: $\pm 1.5V$ to $\pm 16V$
- Low supply current drain — essentially independent of supply voltage: 600 μA
- Low input biasing current: 50 nA
- Low input offset voltage: 2 mV
- Low input offset current: 5 nA
- Input common-mode voltage range includes ground
- Differential input voltage range equal to the power supply voltage

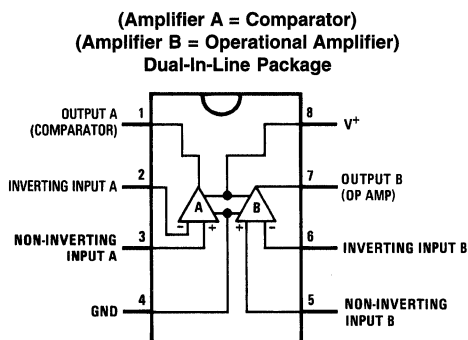

ADDITIONAL OP AMP FEATURES

- Internally frequency compensated for unity gain
- Large DC voltage gain: 100 dB
- Wide bandwidth (unity gain): 1 MHz
- Large output voltage swing: 0V to $V^+ - 1.5V$

ADDITIONAL COMPARATOR FEATURES

- Low output saturation voltage: 250 mV at 4 mA
- Output voltage compatible with all types of logic systems

	$V_{IN(-)} = 0$, $V_{IN(+)} \geq 1 V_{DC}$, $V_o = 30 V_{DC}$			1.0	μA

Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Note 2: For operating at temperatures above 25°C , the LM392 must be derated based on a 125°C maximum junction temperature and a thermal resistance of $122^\circ\text{C}/\text{W}$ which applies for the device soldered in a printed circuit board, operating in still air ambient. The dissipation is the total of both amplifiers—use external resistors, where possible, to allow the amplifier to saturate or to reduce the power which is dissipated in the integrated circuit.

Note 3: Short circuits from the output to V^+ can cause excessive heating and eventual destruction. When considering short circuits to ground, the maximum output current is approximately 40 mA for the op amp and 30 mA for the comparator independent of the magnitude of V^+ . At values of supply voltage in excess of 15V, continuous short circuits can exceed the power dissipation ratings and cause eventual destruction.

Note 4: This input current will only exist when the voltage at any of the input leads is driven negative. It is due to the collector-base junction of the input PNP transistors becoming forward biased and thereby acting as input diode clamps. In addition to this diode action, there is also lateral NPN parasitic transistor action on the IC chip. This transistor action can cause the output voltages of the amplifiers to go to the V^+ voltage level (or to ground for a large overdrive) for the time duration that an input is driven negative. This is not destructive and normal output states will re-establish when the input voltage, which was negative, again returns to a value greater than -0.3V (at 25°C).

Note 5: These specifications apply for $V^+ = 5\text{V}$, unless otherwise stated. For the LM392, temperature specifications are limited to $0^\circ\text{C} \leq T_A \leq +70^\circ\text{C}$.

Note 6: At output switch point, $V_O \cong 1.4\text{V}$, $R_S = 0\Omega$ with V^+ from 5V to 30V; and over the full input common-mode range (0V to $V^+ - 1.5\text{V}$).

Note 7: The direction of the input current is out of the IC due to the PNP input stage. This current is essentially constant, independent of the state of the output so no loading change exists on the input lines.

Note 8: The input common-mode voltage or either input signal voltage should not be allowed to go negative by more than 0.3V. The upper end of the common-mode voltage range is $V^+ - 1.5\text{V}$, but either or both inputs can go to 32V without damage.

Note 9: Due to proximity of external components, insure that coupling is not originating via the stray capacitance between these external parts. This typically can be detected as this type of capacitive coupling increases at higher frequencies.

Note 10: Positive excursions of input voltage may exceed the power supply level. As long as the other input voltage remains within the common-mode range, the comparator will provide a proper output state. The input voltage to the op amp should not exceed the power supply level. The input voltage state must not be less than -0.3V (or 0.3V below the magnitude of the negative power supply, if used) on either amplifier.

Note 11: The response time specified is for a 100 mV input step with 5 mV overdrive. For larger overdrive signals 300 ns can be obtained.

LM613 Dual Operational Amplifiers, Dual Comparators, and Adjustable Reference

General Description

The LM613 consists of dual op-amps, dual comparators, and a programmable voltage reference in a 16-pin package. The op-amps out-performs most single-supply op-amps by providing higher speed and bandwidth along with low supply current. This device was specifically designed to lower cost and board space requirements in transducer, test, measurement, and data acquisition systems.

Combining a stable voltage reference with wide output swing op-amps makes the LM613 ideal for single supply transducers, signal conditioning and bridge driving where large common-mode-signals are common. The voltage reference consists of a reliable band-gap design that maintains low dynamic output impedance (1Ω typical), excellent initial tolerance (0.6%), and the ability to be programmed from 1.2V to 6.3V via two external resistors. The voltage reference is very stable even when driving large capacitive loads, as are commonly encountered in CMOS data acquisition systems.

As a member of National's Super-Block™ family, the LM613 is a space-saving monolithic alternative to a multi-chip solution, offering a high level of integration without sacrificing performance.

Features

OP AMP

- Low operating current (Op Amp): 300 μ A
- Wide supply voltage range: 4V to 36V
- Wide common-mode range: V^- to ($V^+ - 1.8V$)
- Wide differential input voltage: $\pm 36V$
- Available in plastic package rated for Military Temp. Range Operation

REFERENCE

- Adjustable output voltage: 1.2V to 6.3V
- Tight initial tolerance available: $\pm 0.6\%$
- Wide operating current range: 17 μ A to 20 mA
- Tolerant of load capacitance

Applications

- Transducer bridge driver
- Process and mass flow control systems
- Power supply voltage monitor
- Buffered voltage references for A/D's

Note 1: Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device beyond its rated operating conditions.

Note 2: Input voltage above V^+ is allowed. As long as one input pin voltage remains inside the common-mode range, the comparator will deliver the correct output.

Note 3: More accurately, it is excessive current flow, with resulting excess heating, that limits the voltages on all pins. When any pin is pulled a diode drop below V^- , a parasitic NPN transistor turns ON. No latch-up will occur as long as the current through that pin remains below the Maximum Rating. Operation is undefined and unpredictable when any parasitic diode or transistor is conducting.

Note 4: Simultaneous short-circuit of multiple comparators while using high supply voltages may force junction temperature above maximum, and thus should not be continuous.

Note 5: Junction temperature may be calculated using $T_{\text{J}} = T_{\text{A}} + P_{\text{D}} \theta_{\text{JA}}$. The given thermal resistance is worst-case for packages in sockets in still air. For packages soldered to copper-clad board with dissipation from one comparator or reference output transistor, nominal θ_{JA} is $90^\circ\text{C}/\text{W}$ for the N package, and $135^\circ\text{C}/\text{W}$ for the WM package.

Note 6: Human body model, 100 pF discharged through a 1.5 k Ω resistor.

Note 7: Typical values in standard typeface are for $T_{\text{J}} = 25^\circ\text{C}$; values in **bold face type** apply for the full operating temperature range. These values represent the most likely parametric norm.

Note 8: All limits are guaranteed at room temperature (standard type face) or at operating temperature extremes (**bold type face**).

Note 9: Slew rate is measured with the op amp in a voltage follower configuration. For rising slew rate, the input voltage is driven from 5V to 25V, and the output voltage transition is sampled at 10V and @ 20V. For falling slew rate, the input voltage is driven from 25V to 5V, and the output voltage transition is sampled at 20V and 10V.

Note 10: V_{R} is the Cathode-to-feedback voltage, nominally 1.244V.

Note 11: Average reference drift is calculated from the measurement of the reference voltage at 25°C and at the temperature extremes. The drift, in ppm/ $^\circ\text{C}$, is $10^6 \cdot \Delta V_{\text{R}} / (V_{\text{R}(25^\circ\text{C})} \cdot \Delta T_{\text{J}})$, where ΔV_{R} is the lowest value subtracted from the highest, $V_{\text{R}(25^\circ\text{C})}$ is the value at 25°C , and ΔT_{J} is the temperature range. This parameter is guaranteed by design and sample testing.

Note 12: Hysteresis is the change in V_{R} caused by a change in T_{J} , after the reference has been "dehysteresized". To dehysteresize the reference; that is minimize the hysteresis to the typical value, its junction temperature should be cycled in the following pattern, spiraling in toward 25°C : 25°C , 85°C , -40°C , 70°C , 0°C , 25°C .

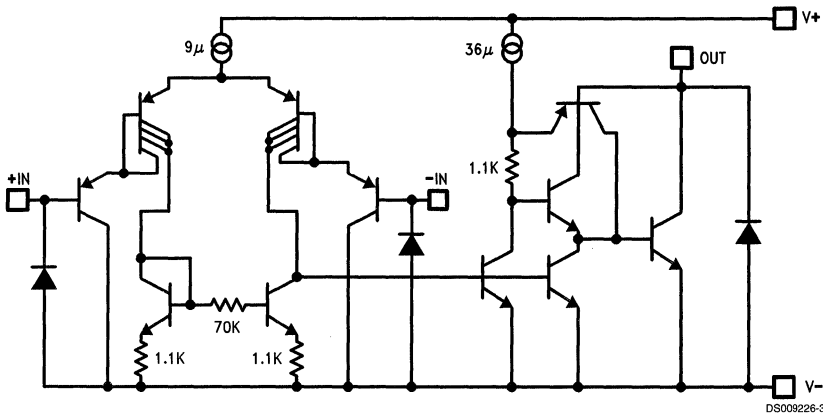

Note 13: Low contact resistance is required for accurate measurement.

Reference/Bias

LM6511

180 ns 3V Comparator

General Description

The LM6511 voltage comparator is ideal for analog-digital interface circuitry when only a +3V or +3.3V supply is available. The open-collector output permits signal compatibility with a wide variety of digital families: +5V CMOS, +3V CMOS, TTL and so on. Supply voltage may range from 2.7V to 36V between supply voltage leads. The LM6511 operates with little power consumption ($P_{diss} < 9.45 \text{ mW}$ at $V^+ = +2.7\text{V}$ and $V^- = 0\text{V}$).

This voltage comparator offers many features that are available in traditional sub-microsecond comparators: output sync strobe, inputs and output may be isolated from system ground, and wire-ORing. Also, the LM6511 uses the industry-standard, single comparator pinout configuration.

Features

(Typical unless otherwise noted)

- Operates at +2.7V, +3V, +3.3V, +5V
- Low Power consumption $< 9.45 \text{ mW}$ @ $V^+ = 2.7\text{V}$ (max)
- Fast Response Time of 180 ns

Applications

- Portable Equipment
- Cellular Phones
- Digital Level Shifting

AC Electrical Characteristics

Unless otherwise specified, all limits guaranteed for T_J = 25°C. **Boldface** limits apply at the temperature extremes. V⁺ = 2.7V, V⁻ = 0V, 50Ω ≤ R_L ≤ 50kΩ, and I_L = 1.0 mA unless otherwise specified

Symbol	Parameter	Conditions	Typical	LM6511	Units (Limits)
				Limit	
T _R	Response Time	(Note 4)	180		ns

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating ratings indicate conditions the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed.

Note 2: The positive input voltage limit is 30V above the negative supply voltage. The negative input voltage limit is equal to the negative supply voltage or 30V below the positive supply voltage, whichever is less.

Note 3: The offset voltage and offset current limits are the maximum values required to drive the output within a volt of either supply with a 1 mA load. Therefore, these parameters define an error band and take into account the worst-case effects of voltage gain and input impedance.

Note 4: This specification is for a 100 mV input step with a 25 mV overdrive.

Note 5: This specification gives the range of current which must be drawn from the strobe pin to ensure the output is properly disabled. Do not short the strobe pin to ground; it should be current driven at 3 mA to 5 mA.

LMC6762

Dual MicroPower Rail-To-Rail Input CMOS Comparator with Push-Pull Output

General Description

The LMC6762 is an ultra low power dual comparator with a maximum supply current of 10 μA /comparator. It is designed to operate over a wide range of supply voltages, from 2.7V to 15V. The LMC6762 has guaranteed specs at 2.7V to meet the demands of 3V digital systems.

The LMC6762 has an input common-mode voltage range which exceeds both supplies. This is a significant advantage in low-voltage applications. The LMC6762 also features a push-pull output that allows direct connections to logic devices without a pull-up resistor.

A quiescent power consumption of 50 μW /amplifier (@ $V^+ = 5\text{V}$) makes the LMC6762 ideal for applications in portable phones and hand-held electronics. The ultra-low supply current is also independent of power supply voltage. Guaranteed operation at 2.7V and a rail-to-rail performance makes this device ideal for battery-powered applications.

Refer to the LMC6772 datasheet for an open-drain version of this device.

Features

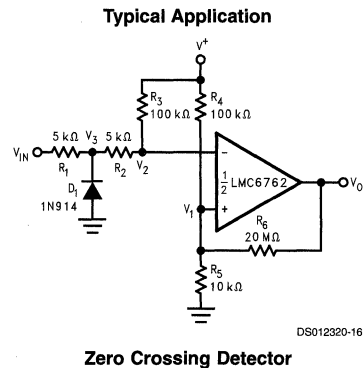

(Typical unless otherwise noted)

- Low power consumption (max): $I_S = 10 \mu\text{A}/\text{comp}$
- Wide range of supply voltages: 2.7V to 15V
- Rail-to-rail input common mode voltage range
- Rail-to-rail output swing (Within 100 mV of the supplies, @ $V^+ = 2.7\text{V}$, and $I_{\text{LOAD}} = 2.5 \text{ mA}$)
- Short circuit protection: 40 mA
- Propagation delay (@ $V^+ = 5\text{V}$, 100 mV overdrive): 4 μs

Applications

- Laptop computers
- Mobile phones
- Metering systems
- Hand-held electronics
- RC timers
- Alarm and monitoring circuits
- Window comparators, multivibrators

t_{FALL}	Fall Time	$f = 10\text{ kHz}$, $C_L = 50\text{ pF}$, Overdrive = 10 mV (Notes 9, 10)	0.3			μs
t_{PHL}	Propagation Delay (High to Low)	$f = 10\text{ kHz}$, $C_L = 50\text{ pF}$ (Notes 9, 10)	Overdrive = 10 mV	10		μs
			Overdrive = 100 mV	4		μs
		$V^+ = 2.7\text{V}$, $f = 10\text{ kHz}$, $C_L = 50\text{ pF}$ (Notes 9, 10)	Overdrive = 10 mV	10		μs
			Overdrive = 100 mV	4		μs
t_{PLH}	Propagation Delay (Low to High)	$f = 10\text{ kHz}$, $C_L = 50\text{ pF}$ (Notes 9, 10)	Overdrive = 10 mV	6		μs
			Overdrive = 100 mV	4		μs
		$V^+ = 2.7\text{V}$, $f = 10\text{ kHz}$, $C_L = 50\text{ pF}$ (Notes 9, 10)	Overdrive = 10 mV	7		μs
			Overdrive = 100 mV	4		μs

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the electrical characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A)/\theta_{JA}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: Do not short circuit output to V^+ , when V^+ is greater than 12V or reliability will be adversely affected.

Note 8: Input Offset Voltage Average Drift is calculated by dividing the accelerated operating life drift average by the equivalent operational time. The Input Offset Voltage Average Drift represents the input offset voltage change at worst-case input conditions.

Note 9: C_L includes the probe and jig capacitance.

Note 10: The rise and fall times are measured with a 2V input step. The propagation delays are also measured with a 2V input step.

LMC6772

Dual Micropower Rail-To-Rail Input CMOS Comparator with Open Drain Output

General Description

The LMC6772 is an ultra low power dual comparator with a maximum $10 \mu\text{A}/\text{comparator}$ power supply current. It is designed to operate over a wide range of supply voltages, with a minimum supply voltage of 2.7V.

The common mode voltage range of the LMC6772 exceeds both the positive and negative supply rails, a significant advantage in single supply applications. The open drain output of the LMC6772 allows for wired-OR configurations. The open drain output also offers the advantage of allowing the output to be pulled to any voltage rail up to 15V, regardless of the supply voltage of the LMC6772.

The LMC6772 is targeted for systems where low power consumption is the critical parameter. Guaranteed operation at supply voltages of 2.7V and rail-to-rail performance makes this comparator ideal for battery-powered applications.

Refer to the LMC6762 datasheet for a push-pull output stage version of this device.

Features

(Typical unless otherwise noted)

- Low power consumption (max): $I_S = 10 \mu\text{A}/\text{comp}$
- Wide range of supply voltages: 2.7V to 15V
- Rail-to-Rail Input Common Mode Voltage Range
- Open drain output
- Short circuit protection: 40 mA
- Propagation delay (@ $V_S = 5\text{V}$, 100 mV overdrive): $5 \mu\text{s}$

Applications

- Laptop computers
- Mobile phones
- Metering systems
- Hand-held electronics
- RC timers
- Alarm and monitoring circuits
- Window comparators, multivibrators

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the electrical characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF. The output pins of the two comparators (pin 1 and pin 7) have an ESD tolerance of 1.5 kV. All other pins have an ESD tolerance of 2 kV.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(max)}} - T_A)/\theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: Do not short circuit output to V^+ , when V^+ is $> 12\text{V}$ or reliability will be adversely affected.

Note 8: Limiting input pin current is only necessary for input voltages that exceed absolute maximum input voltage ratings.

Note 9: C_L includes the probe and jig capacitance. The rise time, fall time and propagation delays are measured with a 2V input step.

Note 10: Input offset voltage Average Drift is calculated by dividing the accelerated operating life drift average by the equivalent operational time. The input offset voltage average drift represents the input offset voltage change at worst-case input conditions.

LMC7211

Tiny CMOS Comparator with Rail-to-Rail Input and Push-Pull Output

General Description

The LMC7211 is a micropower CMOS comparator available in the space saving SOT23-5 package. This makes the comparator ideal for space and weight critical designs. The LMC7211 is supplied in two offset voltage grades, 5 mV and 15 mV.

The main benefits of the Tiny package are most apparent in small portable electronic devices, such as mobile phones, pagers, notebook computers, personal digital assistants, and PCMCIA cards. The rail-to-rail input voltage makes the LMC7211 a good choice for sensor interfacing, such as light detector circuits, optical and magnetic sensors, and alarm and status circuits.

The Tiny Comparator's outside dimensions (length x width x height) of 3.05mm x 3.00mm x 1.43mm allow it to fit into tight spaces on PC boards.

See the LMC7221 for a comparator with an open-drain output.

Features

- Tiny SOT 23-5 package saves space
- Package is less than 1.43 mm thick
- Guaranteed specs at 2.7V, 5V, 15V supplies
- Typical supply current 7 μ A at 5V
- Response time of 4 μ s at 5V
- Push-pull output
- Input common-mode range beyond V^- and V^+
- Low input current

Applications

- Battery Powered Products
- Notebooks and PDAs
- PCMCIA cards
- Mobile Communications
- Alarm and Security circuits
- Direct Sensor Interface
- Replaces amplifiers used as comparators with better performance and lower current

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of $\pm 30\text{ mA}$ over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_{A} . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(max)}} - T_{\text{A}})/\theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: Limiting input pin current is only necessary for input voltages that exceed absolute maximum input voltage rating.

Note 8: Do not short circuit output to V^+ , when V^+ is greater than 12V or reliability will be adversely affected.

Note 9: C_I includes the probe and jig capacitance.

Note 10: Input offset voltage average drift is calculated by dividing the accelerated operating life V_{OS} drift by the equivalent operational time. This represents worst case input conditions and includes the first 30 days of drift.

Note 11: Input step voltage for propagation delay measurement is 2V.

LMC7215/LMC7225

Micro-Power, Rail-to-Rail CMOS Comparators with Push-Pull/Open-Drain Outputs and TinyPak™ Package

General Description

The LMC7215/LMC7225 are ultra low power comparators with a maximum of 1 μA power supply current. They are designed to operate over a wide range of supply voltages, from 2V to 8V.

The LMC7215/LMC7225 have a greater than rail-to-rail common mode voltage range. This is a real advantage in single supply applications.

The LMC7215 features a push-pull output stage. This feature allows operation with absolute minimum amount of power consumption when driving any load.

The LMC7225 features an open drain output. By connecting an external resistor, the output of the comparator can be used as a level shifter to any desired voltage to as high as 15V.

The LMC7215/LMC7225 are designed for systems where low power consumption is the critical parameter.

Guaranteed operation over the full supply voltage range of 2.7V to 5V and rail-to-rail performance makes this comparator ideal for battery-powered applications.

Features

(Typical unless otherwise noted)

- Ultra low power consumption 0.7 μA
- Wide range of supply voltages 2V to 8V
- Input common-mode range beyond V_+ and V_-
- Open collector and push-pull output
- High output current drive: (@ $V_S = 5\text{V}$) 45 mA
- Propagation delay (@ $V_S = 5\text{V}$, 10 mV overdrive) 25 μs
- Tiny SOT23-5 package
- Latch-up resistance >300 mA

Applications

- Laptop computers
- Mobile phones
- Metering systems
- Hand-held electronics
- RC timers
- Alarm and monitoring circuits
- Window comparators, multivibrators

		$V^+ = 2.7\text{V}$ (Notes 8, 9)	Overdrive = 10 mV	17	22	μs
			Overdrive = 100 mV	11	16	

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C .

Note 4: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{\text{J(max)}} - T_A)/\theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: CMRR measured at $V_{\text{CM}} = 0\text{V}$ to 2.5V and 2.5V to 5V when $V_S = 5\text{V}$, $V_{\text{CM}} = 0.2\text{V}$ to 1.35V and 1.35V to 2.7V when $V_S = 2.7\text{V}$. This eliminates units that have large V_{OS} at the V_{CM} extremes and low or opposite V_{OS} at $V_{\text{CM}} = V_S/2$.

Note 8: All measurements made at 10 kHz. A 100 k Ω pull-up resistor was used when measuring the LMC7225. $C_{\text{LOAD}} = 50\text{ pF}$ including the test jig and scope probe. The rise times of the LMC7225 are a function of the R-C time constant.

Note 9: Input step voltage for the propagation measurements is 100 mV.

Note 10: Do not short the output of the LMC7225 to voltages greater than 10V or damage may occur.

LMC7221

Tiny CMOS Comparator with Rail-To-Rail Input and Open Drain Output

General Description

The LMC7221 is a micropower CMOS comparator available in the space saving SOT23-5 package. This makes this comparator ideal for space and weight critical designs. The LMC7221 is also available in the SO-8 package. The LMC7221 is supplied in two offset voltage grades, 5 mV and 15 mV.

The open drain output can be pulled up with a resistor to a voltage which can be higher or lower than the supply voltage—this makes the part useful for mixed voltage systems.

For a tiny comparator with a push-pull output, please see the LMC7211 datasheet.

Features

- Tiny SOT 23-5 package saves space
- Package is less than 1.43 mm thick

- Guaranteed specs at 2.7V, 5V, 15V supplies
- Typical supply current 7 μ A at 5V
- Response time of 4 μ s at 5V
- LMC7221 — open drain output
- Input common-mode range beyond V₋ and V₊
- Low input current

Applications

- Mixed voltage battery powered products
- Notebooks and PDAs
- PCMCIA cards
- Mobile communications
- Alarm and security circuits
- Driving low current LEDs
- Direct sensor interface

			100 mV	4		
		$V^+ = 2.7\text{V}$, $f = 10\text{ kHz}$, $C_L = 50\text{ pF}$, 5 k Ω Pullup (Note 9)	10 mV	7		μs
			100 mV	4		

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics.

Note 2: Human body model, 1.5 k Ω in series with 100 pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of $\pm 30\text{ mA}$ may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{\text{J(max)}}$, θ_{JA} , and T_{A} . The maximum allowable power dissipation at any ambient temperature is

Note 5: $P_D = (T_{\text{J(max)}} - T_{\text{A}})/\theta_{\text{JA}}$. All numbers apply for packages soldered directly into a PC board.

Note 6: Typical values represent the most likely parametric norm.

Note 7: All limits are guaranteed by testing or statistical analysis.

Note 8: Limiting input pin current is only necessary for input voltages which exceed the absolute maximum input voltage rating.

Note 9: Do not short circuit the output to V^+ when V^+ is greater than 12V or reliability will be adversely affected.

Note 10: C_L includes the probe and test jig capacitance.

Note 11: Input offset voltage average drift is calculated by dividing the accelerated operating life V_{OS} drift by the equivalent operational time. This represents worst case input conditions and includes the first 30 days of drift.

Note 12: Input step voltage for propagation delay measurement is 2V.

LMV331 Single / LMV393 Dual / LMV339 Quad General Purpose, Low Voltage, TinyPak™ Comparators

General Description

The LMV393 and LMV339 are low voltage (2.7-5V) versions of the dual and quad comparators, LM393/339, which are specified at 5-30V. The LMV331 is the single version, which is available in space saving SC70-5 and SOT23-5 packages. SC70-5 is approximately half the size of SOT23-5.

The LMV393 is available in 8-pin SOIC and 8-pin MSOP. The LMV339 is available in 14-pin SOIC and 14-pin TSSOP.

The LMV331/393/339 is the most cost-effective solution where space, low voltage, low power and price are the primary specification in circuit design for portable consumer products. They offer specifications that meet or exceed the familiar LM393/339 at a fraction of the supply current.

The chips are built with National's advanced Submicron Silicon-Gate BiCMOS process. The LMV331/393/339 have bipolar input and output stages for improved noise performance.

Features

(For 5V Supply, Typical Unless Otherwise Noted)

- Space Saving SC70-5 Package (2.0 x 2.1 x 1.0 mm)
- Space Saving SOT23-5 Package (3.00 x 3.01 x 1.43 mm)
- Guaranteed 2.7V and 5V Performance
- Industrial Temperature Range -40°C to +85°C
- Low Supply Current 60µA/Channel
- Input Common Mode Voltage Range Includes Ground
- Low Output Saturation Voltage 200 mV

Applications

- Mobile Communications
- Notebooks and PDA's
- Battery Powered Electronics
- General Purpose Portable Device
- General Purpose Low Voltage Applications

Typical Applications

Squarewave Oscillator

DS100080-8

DS100080-24

LMV7219

7 nsec, 2.7V to 5V Comparator with Rail-to Rail Output

General Description

The LMV7219 is a low-power, high-speed comparator with internal hysteresis. The LMV7219 operating voltage ranges from 2.7V to 5V with push/pull rail-to-rail output. This device achieves a 7ns propagation delay while consuming only 1.1mA of supply current at 5V.

The LMV7219 inputs have a common mode voltage range that extends 200mV below ground, allowing ground sensing. The internal hysteresis ensures clean output transitions even with slow-moving inputs signals.

The LMV7219 is available in the SC70-5 and SOT23-5 packages, which are ideal for systems where small size and low power are critical.

Features

($V_S = 5V$, $T_A = 25^\circ C$, Typical values unless specified)

- Propagation delay 7ns
- Low supply current 1.1mA
- Input common mode voltage range extends 200mV below ground
- Ideal for 2.7V and 5V single supply applications
- Internal hysteresis ensures clean switching
- Fast rise and fall time 1.3ns
- Available in space-saving packages:
 - 5-pin SC70-5
 - SOT23-5

Applications

- Portable and battery-powered systems
- Scanners
- Set top boxes
- High speed differential line receiver
- Window comparators
- Zero-crossing detectors
- High-speed sampling circuits

Typical Application

DS101054-1

5V Electrical Characteristics (Continued)

Unless otherwise specified, all limits guaranteed for $T_J = 25^\circ\text{C}$, $V_{CM} = V^+/2$, $V^+ = 5\text{V}$, $V^- = 0\text{V}$, $C_L = 10\text{pF}$ and $R_L > 1\text{M}\Omega$ to V^- . **Boldface** limits apply at the temperature extremes.

Symbol	Parameter	Conditions	Typ (Note 5)	Limit (Note 6)	Units
t_{PD}	Propagation Delay	Overdrive = 5mV $V_{CM} = 0\text{V}$ (Note 7)	9		ns max
		Overdrive = 15mV $V_{CM} = 0\text{V}$ (Note 7)	8	20	
		Overdrive = 50mV $V_{CM} = 0\text{V}$ (Note 7)	7	19	
t_{SKEW}	Propagation Delay Skew	(Note 8)	0.4		ns
t_r	Output Rise Time	10% to 90%	1.3		ns
t_f	Output Fall Time	90% to 10%	1.25		ns

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical characteristics.

Note 2: Human body model, 1.5k Ω in series with 100pF. Machine model, 200 Ω in series with 100pF.

Note 3: Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of $\pm 30\text{mA}$ over long term may adversely affect reliability.

Note 4: The maximum power dissipation is a function of $T_{J(\text{max})}$, θ_{JA} , and T_A . The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(\text{max})} - T_A)/\theta_{JA}$. All numbers apply for packages soldered directly into a PC board.

Note 5: Typical Values represent the most likely parametric norm.

Note 6: All limits are guaranteed by testing or statistical analysis.

Note 7: Propagation delay measurements made with 100mV steps. Overdrive is measure relative to V_{TRIP} .

Note 8: Propagation Delay Skew is defined as absolute value of the difference between t_{PDLH} and t_{PDHL} .

Note 9: Limiting input pin current is only necessary for input voltages that exceed absolute maximum input voltage ratings.

Note 10: The LMV7219 comparator has internal hysteresis. The trip points are the input voltage needed to change the output state in each direction. The offset voltage is defined as the average of V_{TRIP+} and V_{TRIP-} , while the hysteresis voltage is the difference of these two.

LP339 Ultra-Low Power Quad Comparator

General Description

The LP339 consists of four independent voltage comparators designed specifically to operate from a single power supply and draw typically 60 μA of power supply drain current over a wide range of power supply voltages. Operation from split supplies is also possible and the ultra-low power supply current is independent of the power supply voltage. These comparators also feature a common-mode range which includes ground, even when operated from a single supply.

Applications include limit comparators, simple analog-to-digital converters, pulse, square and time delay generators; VCO's; multivibrators; high voltage logic gates. The LP339 was specifically designed to interface with the CMOS logic family. The ultra-low supply current makes the LP339 valuable in battery powered applications.

Advantages

- Ultra-low power supply drain suitable for battery applications

- Single supply operation
- Sensing at ground
- Compatible with CMOS logic family
- Pin-out identical to LM339

Features

- Ultra-low power supply current drain (60 μA) — independent of the supply voltage (75 μW /comparator at +5 V_{DC})
- Low input biasing current: 3 nA
- Low input offset current: ± 0.5 nA
- Low input offset voltage: ± 2 mV
- Input common-mode voltage includes ground
- Output voltage compatible with MOS and CMOS logic
- High output sink current capability (30 mA at $V_{\text{O}}=2 V_{\text{DC}}$)
- Supply Input protected against reverse voltages

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

Note 2: For elevated temperature operation, $T_J \text{ max}$ is 125°C for the LP339. θ_{JA} (junction to ambient) is 175°C/W for the LP339N and 120°C/W for the LP339M when either device is soldered in a printed circuit board in a still air environment. The low bias dissipation and the "ON-OFF" characteristic of the outputs keeps the chip dissipation very small ($P_D \leq 100 \text{ mW}$), provided the output transistors are allowed to saturate.

Note 3: Short circuits from the output to V^+ can cause excessive heating and eventual destruction. The maximum output current is approximately 50 mA.

Note 4: This input current will only exist when the voltage at any of the input leads is driven negative. It is due to the collector-base junction of the input PNP transistors becoming forward biased and thereby acting as input clamp diodes. In addition to this diode action, there is also lateral NPN parasitic transistor action on the IC chip. This transistor action can cause the output voltage of the comparators to go to the V_+ voltage level (or to ground for a large input overdrive) for the time duration that an input is driven negative. This is not destructive and normal output states will re-establish when the input voltage, which is negative, again returns to a value greater than $-0.3 V_{DC}$ ($T_A = 25^{\circ}\text{C}$).

Note 5: These specifications apply for $V^+ = 5V_{DC}$ and $0^{\circ}\text{C} \leq T_A \leq 70^{\circ}\text{C}$, unless otherwise stated. The temperature extremes are guaranteed but not 100% production tested. These parameters are not used to calculate outgoing AQL.

Note 6: The direction of the input current is out of the IC due to the PNP input stage. This current is essentially constant, independent of the state of the output, so no loading change exists on the reference or the input lines as long as the common-mode range is not exceeded.

Note 7: The input common-mode voltage or either input voltage should not be allowed to go negative by more than 0.3V. The upper end of the common-mode voltage range is $V^+ - 1.5V$ ($T_A = 25^{\circ}\text{C}$), but either or both inputs can go to $30 V_{DC}$ without damage.

Note 8: The response time specified is for a 100 mV input step with 5 mV overdrive. For larger overdrive signals 1.3 μs can be obtained. See Typical Performance Characteristics section.

Electrical Characteristics (Continued)

Note 9: Positive excursions of input voltage may exceed the power supply level. As long as the other voltage remains within the common-mode range, the comparator will provide a proper output state. The low input voltage state must not be less than $-0.3 V_{DC}$ (or $0.3 V_{DC}$ below the magnitude of the negative power supply, if used) at $T_A=25^\circ\text{C}$.

Note 10: At output switch point, $V_O=1.4\text{V}$, $R_S=0\Omega$ with V^+ from $5 V_{DC}$; and over the full input common-mode range ($0 V_{DC}$ to $V^+-1.5 V_{DC}$).

Note 11: For input signals that exceed V^+ , only the overdriven comparator is affected. With a 5V supply, V_{IN} should be limited to 25V maximum, and a limiting resistor should be used on all inputs that might exceed the positive supply.

Note 12: The output sink current is a function of the output voltage. The LP339 has a bi-modal output section which allows it to sink large currents via a Darlington connection at output voltages greater than approximately $1.5 V_{DC}$ and sink lower currents below this point. (See typical characteristics section and applications section).

A/D Converter Definition Of Terms

ANALOG INPUT BANDWIDTH is a measure of the frequency at which the reconstructed output fundamental drops 3 dB below its low frequency value for a full scale input. The test is performed with f_{IN} equal to 100 kHz plus integer multiples of f_{CLK} . The input frequency at which the output is -3 dB relative to the low frequency input signal is the full power bandwidth.

APERTURE JITTER is the variation in aperture delay from sample to sample. Aperture jitter shows up as input noise.

APERTURE DELAY See Sampling Delay.

BOTTOM OFFSET is the difference between the input voltage that just causes the output code to transition to the first code and the negative reference voltage. Bottom Offset is defined as $E_{OB} = V_{ZT} - V_{RB}$, where V_{ZT} is the first code transition input voltage and V_{RB} is the lower reference voltage. Note that this is different from the normal Zero Scale Error.

CONVERSION LATENCY See PIPELINE DELAY.

CONVERSION TIME is the time required for a complete measurement by an analog-to-digital converter. Since the Conversion Time does not include acquisition time, multiplexer set up time, or other elements of a complete conversion cycle, the conversion time may be less than the Throughput Time.

DC COMMON-MODE ERROR is a specification which applies to ADCs with differential inputs. It is the change in the output code that occurs when the analog voltages on the two inputs are changed by an equal amount. It is usually expressed in LSBs.

DIFFERENTIAL GAIN ERROR is the percentage difference between the output amplitudes of a given amplitude small signal, high frequency sine wave input at two different dc input levels.

DIFFERENTIAL NON-LINEARITY (DNL) is the measure of the maximum deviation from the ideal step size of 1 LSB. DNL is commonly measured at the rated clock frequency with a ramp input.

DIFFERENTIAL PHASE ERROR is the difference in the output phase of a reconstructed small signal sine wave at two different dc input levels.

DYNAMIC SPECIFICATIONS of an ADC are those pertaining to an AC input signal. These include S/N ratio, SNR, SINAD, S/(N+D), ENOB, THD, IMD, FPBW, and SSBW.

EFFECTIVE NUMBER OF BITS (ENOB, or EFFECTIVE BITS) is another method of specifying Signal-to-Noise and Distortion Ratio, or SINAD. ENOB is defined as $(SINAD - 1.76)/6.02$ and says that the converter is equivalent to a perfect ADC of this (ENOB) number of bits.

FULL POWER BANDWIDTH is the frequency at which the reconstructed output fundamental drops 3 dB below its low frequency value for a full scale input. The test is performed with f_{IN} equal to 100 kHz plus integer multiples of f_{CLK} . The input frequency at which the output is -3 dB relative to the low frequency input signal is the full power bandwidth.

FULL SCALE (FS) INPUT RANGE of the ADC is the input range of voltages over which the ADC will digitize that input. For $V_{REF+} = 3.5V$ and $V_{REF-} = 1.5V$, $FS = (V_{REF+}) - (V_{REF-}) = 2.0V$.

FULL SCALE ERROR is a measure of how far the last code transition is from the ideal $1\frac{1}{2}$ LSB below V_{REF+} and is defined as:

$$V_{max} + 1.5 \text{ LSB} - V_{REF+}$$

where V_{max} is the voltage at which the transition to the max code occurs.

FULL SCALE STEP RESPONSE is defined as the time required after V_{IN} goes from V_{REF-} to V_{REF+} , or V_{REF+} to V_{REF-} , and settles sufficiently for the converter to recover and make a conversion with its rated accuracy.

GAIN ERROR (FULL SCALE ERROR) is the difference between the input voltage just causing a transition to positive full scale and $V_{REF} - 1.5 \text{ LSB}$.

GAIN TEMPERATURE COEFFICIENT (FULL SCALE TEMPERATURE COEFFICIENT) is the change in gain error divided by change in temperature. Usually expressed in parts per million per degree Celsius (ppm/°C).

INTEGRAL NON-LINEARITY (INL) is a measure of the deviation of each individual code from a line drawn from zero scale or negative full scale ($\frac{1}{2}$ LSB below the first code transition) through positive full scale ($\frac{1}{2}$ LSB above the last code transition). The deviation of any given code from this straight line is measured from the center of that code value. The end point test method is used. INL is commonly measured at rated clock frequency with a ramp input.

INTERMODULATION DISTORTION (IMD) is the creation of additional spectral components as a result of two sinusoidal frequencies being applied to the ADC input at the same time. It is defined as the ratio of the power in the intermodulation products to the total power in the original frequencies. IMD is usually expressed in dB.

MISSING CODES are those output codes that are skipped or will never appear at the ADC outputs. These codes cannot be reached by any input value.

MSB (MOST SIGNIFICANT BIT) is the bit that has the largest value or weight. Its value is on half of full scale.

OFFSET ERROR is the difference between the ideal LSB transition to the actual transition point.

OUTPUT DELAY is the time delay after the edge of the input clock before the data update is present at the output pins.

OUTPUT HOLD TIME is the length of time that the output data is valid after the edge of the input clock.

OVERRANGE RECOVERY TIME is the time required after V_{IN} goes from AGND to V_{REF+} or V_{IN} goes from V_A to V_{REF-} for the converter to recover and make a conversion with its rated accuracy.

PIPELINE DELAY (LATENCY) is the number of clock cycles between initiation of conversion and when that data is presented to the output driver stage. Data for any given sample is available the Pipeline Delay plus the Output Delay after

that sample is taken. New data is available at every clock cycle, but the data lags the conversion by the Pipeline Delay plus the Output Delay.

PSRR (POWER SUPPLY REJECTION RATIO) is the ratio of the change in dc power supply voltage to the resulting change in Full Scale Error, expressed in dB.

QUANTIZATION ERROR is the error inherent in all A/D conversions. Since even an 'ideal' converter has finite resolution, any analog voltage that falls between two adjacent output codes will result in an output code that is inaccurate by up to $\frac{1}{2}$ LSB.

RATIOMETRIC OPERATION uses the same reference voltage that is used for the ADC to drive the signal source such that the ratio of the output of that signal source to the reference is a constant. When the driving voltage for that source is also used as the voltage reference for the ADC, the ADC output code is a function of the ratio of the signal source output to the reference voltage and, for a limited reference voltage range, is independent of the value of that reference voltage.

RESOLUTION is the smallest analog increment corresponding to a 1 LSB converter code change. For converters, resolution is normally expressed in bits, where the number of digital codes is equal to 2^n . As an example, a 12-bit converter maps the analog signal into $2^{12} = 4096$ digital codes.

SAMPLING (APERTURE) DELAY is the time after the edge of the clock to when the input signal is acquired or held for conversion.

SIGNAL TO NOISE RATIO (SNR) is the ratio, expressed in dB, of the rms value of the input signal at the output to the rms value of the sum of all other spectral components below one-half the sampling frequency, not including harmonics or dc.

SIGNAL TO NOISE PLUS DISTORTION (S/(N+D) or SINAD) is the ratio, expressed in dB, of the rms value of the input signal at the output to the rms value of all of the other spectral components below half the clock frequency, including harmonics but excluding dc.

SPURIOUS FREE DYNAMIC RANGE (SFDR) is the difference, expressed in dB, between the rms values of the input signal at the output and the peak spurious signal, where a spurious signal is any signal present in the output spectrum that is not present at the input.

STATIC SPECIFICATIONS are the specifications of an ADC pertaining to a DC signal input. These include gain error, offset error, and differential and integral linearity errors.

THROUGHPUT RATE is the maximum continuous conversion rate of the ADC.

THROUGHPUT TIME is the inverse of the Throughput Rate.

TOP OFFSET is the difference between the positive reference voltage and the input voltage that just causes the output code to transition to full scale and is defined as $E_{OT} = V_{FT} - V_{REF}$ where V_{FT} is the full scale transition input voltage. Note that this is different from the normal Full Scale Error.

TOTAL HARMONIC DISTORTION (THD) is the ratio, expressed in dB or dBc, of the rms total of the first six harmonic components to the RMS value of the input signal at the output.

TOTAL UNADJUSTED ERROR (TUE) is the maximum deviation of the voltage corresponding to the center of a digital code's associated input voltage span from the ideal case. Total unadjusted error includes offset error, Gain error, and differential and integral nonlinearity errors.

ZERO SCALE OFFSET ERROR is the difference between the ideal input voltage ($\frac{1}{2}$ LSB) and the actual input voltage that just causes a transition from an output code of zero to an output code of one.

ZERO ERROR is the difference between the ideal input voltage ($\frac{1}{2}$ LSB) and the actual input voltage that just causes a transition from an output code of zero to an output code of one.

D/A Converters Definition Of Terms

Differential Nonlinearity: Ideally, any two adjacent digital codes correspond to output analog voltages that are exactly one LSB apart. Differential non-linearity is a measure of the worst case deviation from the ideal 1 LSB step. For example, a DAC with a 1.5 LSB output change for a 1 LSB digital code change exhibits $\frac{1}{2}$ LSB differential non-linearity. Differential non-linearity may be expressed in fractional bits or as a percentage of full scale. A differential non-linearity greater than 1 LSB will lead to a non-monotonic transfer function in a DAC.

Gain Error (Full Scale Error): The difference between the output voltage (or current) with full scale input code and the ideal voltage (or current) that should exist with a full scale input code.

Gain Temperature Coefficient (Full Scale Temperature Coefficient): Change in gain error divided by change in temperature. Usually expressed in parts per million per degree Celsius (ppm/°C).

Integral Nonlinearity (Linearity Error): Worst case deviation from the line between the endpoints (zero and full scale). Can be expressed as a percentage of full scale or in fraction of an LSB.

LSB (Least-Significant Bit): In a binary coded system this is the bit that carries the smallest value or weight. Its value is the full scale voltage (or current) divided by 2^n , where n is the resolution of the converter.

Monotonicity: A monotonic function has a slope whose sign does not change. A monotonic DAC has an output that changes in the same direction (or remains constant) for each increase in the input code. the converse is true for decreasing codes.

MSB (Most Significant Bit): In a binary coded system this is the bit that has the largest value or weight. Its value is one half of full scale.

Multiplying DAC: In a sense, every DAC is a multiplying DAC since the output voltage (or current) is equal to the reference voltage times a constant determined by the digital input code divided by 2^n (n is the number of bits of resolution). In a two quadrant multiplying DAC the reference voltage or the digital input code can change the output voltage polarity. If both the reference voltage and the digital code change the output voltage polarity, four quadrant multiplication exists.

Offset Error (Zero Error): The output voltage that exists when the input digital code is set to give an ideal output of zero volts. All the digital codes in the transfer curve are offset by the same value. Offset error is usually expressed in LSBs.

Power supply Rejection (Power Supply Sensitivity): The sensitivity of a converter to changes in the dc power supply voltages.

Resolution: the smallest analog increment corresponding to a 1 LSB converter code change. For converters, resolution is normally expressed in bits, where the number of analog levels is equal to 2^n .

Settling Time: The time from a change in input code until a DAC's output signal remains within $\pm\frac{1}{2}$ LSB (or some other specified tolerance) of the final value.

ADC0801/ADC0802/ADC0803/ADC0804/ADC0805

8-Bit μ P Compatible A/D Converters

General Description

The ADC0801, ADC0802, ADC0803, ADC0804 and ADC0805 are CMOS 8-bit successive approximation A/D converters that use a differential potentiometric ladder—similar to the 256R products. These converters are designed to allow operation with the NSC800 and INS8080A derivative control bus with TRI-STATE output latches directly driving the data bus. These A/Ds appear like memory locations or I/O ports to the microprocessor and no interfacing logic is needed.

Differential analog voltage inputs allow increasing the common-mode rejection and offsetting the analog zero input voltage value. In addition, the voltage reference input can be adjusted to allow encoding any smaller analog voltage span to the full 8 bits of resolution.

Features

- Compatible with 8080 μ P derivatives—no interfacing logic needed - access time - 135 ns
- Easy interface to all microprocessors, or operates “stand alone”

- Differential analog voltage inputs
- Logic inputs and outputs meet both MOS and TTL voltage level specifications
- Works with 2.5V (LM336) voltage reference
- On-chip clock generator
- 0V to 5V analog input voltage range with single 5V supply
- No zero adjust required
- 0.3" standard width 20-pin DIP package
- 20-pin molded chip carrier or small outline package
- Operates ratiometrically or with 5 V_{DC} , 2.5 V_{DC} , or analog span adjusted voltage reference

Key Specifications

- Resolution 8 bits
- Total error $\pm 1/4$ LSB, $\pm 1/2$ LSB and ± 1 LSB
- Conversion time 100 μ s

ADC08031/ADC08032/ADC08034/ADC08038

8-Bit High-Speed Serial I/O A/D Converters with Multiplexer Options, Voltage Reference, and Track/Hold Function

General Description

The ADC08031/ADC08032/ADC08034/ADC08038 are 8-bit successive approximation A/D converters with serial I/O and configurable input multiplexers with up to 8 channels. The serial I/O is configured to comply with the NSC MICROWIRE™ serial data exchange standard for easy interface to the COPS™ family of controllers, and can easily interface with standard shift registers or microprocessors.

The ADC08034 and ADC08038 provide a 2.6V band-gap derived reference. For devices offering guaranteed voltage reference performance over temperature see ADC08131, ADC08134 and ADC08138.

A track/hold function allows the analog voltage at the positive input to vary during the actual A/D conversion.

The analog inputs can be configured to operate in various combinations of single-ended, differential, or pseudo-differential modes. In addition, input voltage spans as small as 1V can be accommodated.

Applications

- Digitizing automotive sensors
- Process control monitoring
- Remote sensing in noisy environments
- Instrumentation

- Test systems
- Embedded diagnostics

Features

- Serial digital data link requires few I/O pins
- Analog input track/hold function
- 2-, 4-, or 8-channel input multiplexer options with address logic
- 0V to 5V analog input range with single 5V power supply
- No zero or full scale adjustment required
- TTL/CMOS input/output compatible
- On chip 2.6V band-gap reference
- 0.3" standard width 8-, 14-, or 20-pin DIP package
- 14-, 20-pin small-outline packages

Key Specifications

- Resolution: 8 bits
- Conversion time ($f_C = 1 \text{ MHz}$): $8\mu\text{s}$ (max)
- Power dissipation: 20mW (max)
- Single supply: $5V_{DC}$ ($\pm 5\%$)
- Total unadjusted error: $\pm 1/2 \text{ LSB}$ and $\pm 1 \text{ LSB}$
- No missing codes over temperature

ADC08061/ADC08062

500 ns A/D Converter with S/H Function and Input Multiplexer

General Description

Using a patented multi-step A/D conversion technique, the 8-bit ADC08061 and ADC08062 CMOS ADCs offer 500 ns (typ) conversion time, internal sample-and-hold (S/H), and dissipate only 125 mW of power. The ADC08062 has a two-channel multiplexer. The ADC08061/2 family performs an 8-bit conversion using a 2-bit voltage estimator that generates the 2 MSBs and two low-resolution (3-bit) flashes that generate the 6 LSBs.

Input track-and-hold circuitry eliminates the need for an external sample-and-hold. The ADC08061/2 family performs accurate conversions of full-scale input signals that have a frequency range of DC to 300 kHz (full-power bandwidth) without need of an external S/H.

The digital interface has been designed to ease connection to microprocessors and allows the parts to be I/O or memory mapped.

Key Specifications

■ Resolution	8 bits
■ Conversion Time	560 ns max ($\overline{WR-RD}$ Mode)
■ Full Power Bandwidth	300 kHz
■ Throughput rate	1.5 MHz
■ Power Dissipation	100 mW max
■ Total Unadjusted Error	$\pm 1/2$ LSB and ± 1 LSB

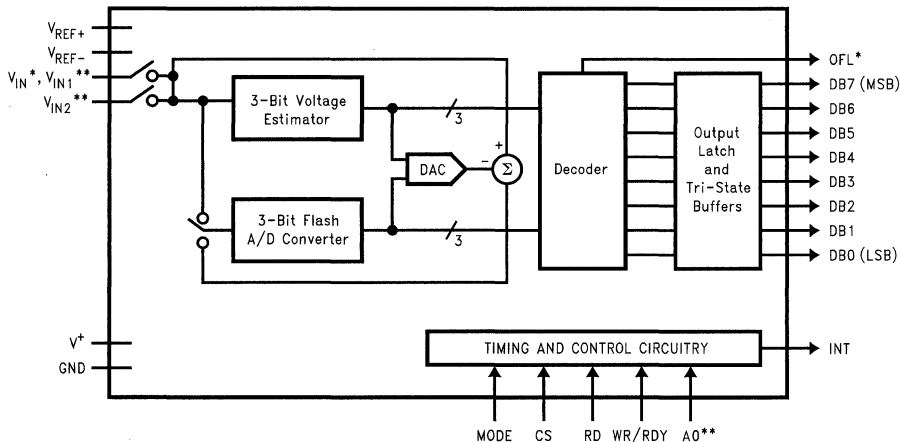

Features

- 1 or 2 input channels
- No external clock required
- Analog input voltage range from GND to V^+
- Overflow output available for cascading (ADC08061)
- ADC08061 pin-compatible with the industry standard ADC0820

Applications

- Mobile telecommunications
- Hard disk drives
- Instrumentation
- High-speed data acquisition systems

Ordering Information

Industrial ($-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$)	Package
ADC08061BIN, ADC08062BIN	N20A
ADC08061CIWM, ADC08062CIWM	M20B

Pin Description

V_{IN+} V_{IN1-8}	These are analog inputs. The input range is $\text{GND} - 50 \text{ mV} \leq V_{\text{INPUT}} \leq V^+ + 50 \text{ mV}$. The ADC08061 has a single input (V_{IN}) and the ADC08062 has a two-channel multiplexer (V_{IN1-2}).
DB0–DB7	TRI-STATE data outputs—bit 0 (LSB) through bit 7 (MSB).
$\overline{\text{WR}}/\text{RDY}$	$\overline{\text{WR}}\text{-RD Mode}$ (Logic high applied to MODE pin) $\overline{\text{WR}}$: With $\overline{\text{CS}}$ low, the conversion is started on the falling edge of $\overline{\text{WR}}$. The digital result will be strobed into the output latch at the end of conversion (see <i>Figures 2, 3, 4</i>). RD Mode (Logic low applied to MODE pin) RDY: This is an open drain output (no internal pull-up device). RDY will go low after the falling edge of $\overline{\text{CS}}$ and return high at the end of conversion.
MODE	Mode: Mode ($\overline{\text{RD}}$ or $\overline{\text{WR}}\text{-RD}$) selection input—This pin is pulled to a logic low through an internal $50 \mu\text{A}$ current sink when left unconnected. $\overline{\text{RD Mode}}$ is selected if the MODE pin is left unconnected or externally forced low. A complete conversion is accomplished by pulling $\overline{\text{RD}}$ low until output data appears. $\overline{\text{WR}}\text{-RD Mode}$ is selected when a high is applied to the MODE pin. A conversion starts with the $\overline{\text{WR}}$ signal's rising edge and then using $\overline{\text{RD}}$ to access the data.
$\overline{\text{RD}}$	$\overline{\text{WR}}\text{-RD Mode}$ (logic high on the MODE pin) This is the active low Read input. With a logic low applied to the $\overline{\text{CS}}$ pin, the TRI-STATE data outputs (DB0–DB7) will be activated when $\overline{\text{RD}}$ goes low (<i>Figures 2, 3, 4</i>). RD Mode (logic low on the MODE pin)

$\overline{\text{INT}}$	With $\overline{\text{CS}}$ low, a conversion starts on the falling edge of $\overline{\text{RD}}$. Output data appears on DB0–DB7 at the end of conversion (see <i>Figures 1, 5</i>). This is an active low output that indicates that a conversion is complete and the data is in the output latch. $\overline{\text{INT}}$ is reset by the rising edge of $\overline{\text{RD}}$.
GND	This is the power supply ground pin. The ground pin should be connected to a "clean" ground reference point.
$V_{\text{REF}+}$ $V_{\text{REF}-}$	These are the reference voltage inputs. They may be placed at any voltage between $\text{GND} - 50 \text{ mV}$ and $V^+ + 50 \text{ mV}$, but $V_{\text{REF}+}$ must be greater than $V_{\text{REF}-}$. Ideally, an input voltage equal to $V_{\text{REF}-}$ produces an output code of 0, and an input voltage greater than $V_{\text{REF}+} - 1.5 \text{ LSB}$ produces an output code of 255. For the ADC08062, an input voltage on any unselected input that exceeds V^+ by more than 100 mV or is below GND by more than 100 mV will create errors in a selected channel that is operating within proper operating conditions.
$\overline{\text{CS}}$	This is the active low Chip Select input. A logic low signal applied to this input pin enables the $\overline{\text{RD}}$ and $\overline{\text{WR}}$ inputs. Internally, the $\overline{\text{CS}}$ signal is ORed with $\overline{\text{RD}}$ and $\overline{\text{WR}}$ signals.
$\overline{\text{OFL}}$	Overflow Output. If the analog input is higher than $V_{\text{REF}+} - \frac{1}{2} \text{ LSB}$, $\overline{\text{OFL}}$ will be low at the end of conversion. It can be used when cascading two ADC08061s to achieve higher resolution (9 bits). This output is always active and does not go into TRI-STATE as DB0–DB7 do. When $\overline{\text{OFL}}$ is set, all data outputs remain high when the ADC08061's output data is read.
NC	No connection.

Pin Description (Continued)

- A0 This logic input is used to select one of the ADC08062's input multiplexer channels. A channel is selected as shown in the table below.

ADC08062 A0	Channel
0	V_{IN1}
1	V_{IN2}

- V⁺ Positive power supply voltage input. Nominal operating supply voltage is +5V. The supply pin should be bypassed with a 10 μ F bead tantalum in parallel with a 0.1 ceramic capacitor. Lead length should be as short as possible.

ADC0808/ADC0809

8-Bit μ P Compatible A/D Converters with 8-Channel Multiplexer

General Description

The ADC0808, ADC0809 data acquisition component is a monolithic CMOS device with an 8-bit analog-to-digital converter, 8-channel multiplexer and microprocessor compatible control logic. The 8-bit A/D converter uses successive approximation as the conversion technique. The converter features a high impedance chopper stabilized comparator, a 256R voltage divider with analog switch tree and a successive approximation register. The 8-channel multiplexer can directly access any of 8-single-ended analog signals.

The device eliminates the need for external zero and full-scale adjustments. Easy interfacing to microprocessors is provided by the latched and decoded multiplexer address inputs and latched TTL TRI-STATE[®] outputs.

The design of the ADC0808, ADC0809 has been optimized by incorporating the most desirable aspects of several A/D conversion techniques. The ADC0808, ADC0809 offers high speed, high accuracy, minimal temperature dependence, excellent long-term accuracy and repeatability, and consumes minimal power. These features make this device ideally suited to applications from process and machine control to consumer and automotive applications. For 16-channel multiplexer with common output (sample/hold port) see ADC0816 data sheet. (See AN-247 for more information.)

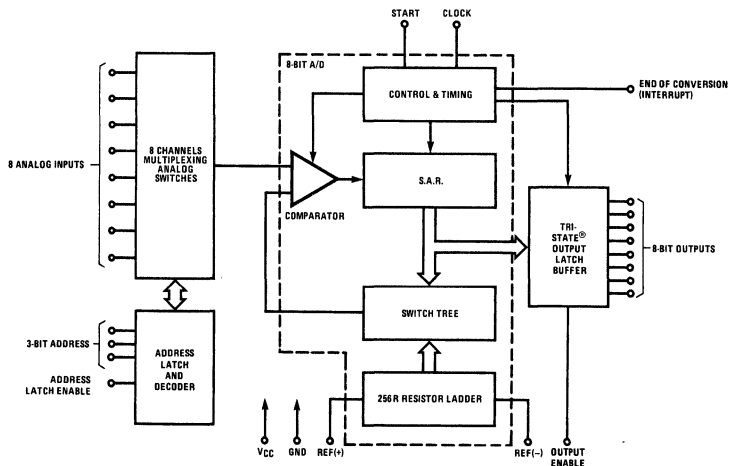

Features

- Easy interface to all microprocessors
- Operates ratiometrically or with 5 V_{DC} or analog span adjusted voltage reference
- No zero or full-scale adjust required
- 8-channel multiplexer with address logic
- 0V to 5V input range with single 5V power supply
- Outputs meet TTL voltage level specifications
- Standard hermetic or molded 28-pin DIP package
- 28-pin molded chip carrier package
- ADC0808 equivalent to MM74C949
- ADC0809 equivalent to MM74C949-1

ADC08100

8-Bit, 100 MSPS, 1.3 mW/MSPS A/D Converter

General Description

The ADC08100 is a low-power, 8-bit, monolithic analog-to-digital converter with an on-chip track-and-hold circuit. Optimized for low cost, low power, small size and ease of use, this product operates at conversion rates of 20 MSPS to 125 MSPS with outstanding dynamic performance over its full operating range while consuming just 1.3 mW per MHz of clock frequency. That's just 130 mW of power at 100 MSPS. Raising the PD pin puts the ADC08100 into a Power Down mode where it consumes just 1 mW.

The unique architecture achieves 7.4 Effective Bits with 40 MHz input frequency. The excellent DC and AC characteristics of this device, together with its low power consumption and single +3V supply operation, make it ideally suited for many imaging and communications applications, including use in portable equipment. Furthermore, the ADC08100 is resistant to latch-up and the outputs are short-circuit proof. The top and bottom of the ADC08100's reference ladder are available for connections, enabling a wide range of input possibilities. The digital outputs are TTL/CMOS compatible with a separate output power supply pin to support interfacing with 3V or 2.5V logic. The digital inputs (CLK and PD) are TTL/CMOS compatible.

The ADC08100 is offered in a 24-lead plastic package (TSSOP) and is specified over the industrial temperature range of -40°C to $+85^{\circ}\text{C}$.

Features

- Single-ended input
- Internal sample-and-hold function
- Low voltage (single +3V) operation
- Small package
- Power-down feature

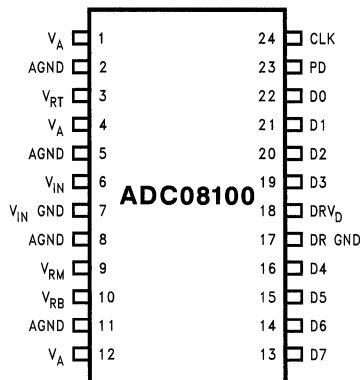

Key Specifications

■ Resolution	8 bits
■ Maximum sampling frequency	100 MSPS (min)
■ DNL	0.4 LSB (typ)
■ ENOB	7.4 bits (typ) at $f_{IN} = 41$ MHz
■ THD	-60 dB (typ)
■ Guaranteed no missing codes	
■ Power consumption	
— Operating:	1.3 mW/MSPS (typ)
— Power down:	1 mW (typ)

Applications

- Flat panel displays
- Projection systems
- Set-top boxes
- Battery-powered instruments
- Communications
- Medical scan converters
- X-ray imaging
- High speed viterbi decoders
- Astronomy

Pin Descriptions and Equivalent Circuits

Pin No.	Symbol	Equivalent Circuit	Description
6	V_{IN}		Analog signal input. Conversion range is V_{RB} to V_{RT} .
3	V_{RT}		Analog Input that is the high (top) side of the reference ladder of the ADC. Nominal range is 1.0V to 2.3V. Voltage on V_{RT} and V_{RB} inputs define the V_{IN} conversion range. Bypass well. See Section 2.0 for more information.
9	V_{RM}		Mid-point of the reference ladder. This pin should be bypassed to a clean, quiet point in the analog ground plane with a 0.1 μ F capacitor.
10	V_{RB}		Analog Input that is the low side (bottom) of the reference ladder of the ADC. Nominal range is 0.0V to ($V_{RT} - 1.0$ V). Voltage on V_{RT} and V_{RB} inputs define the V_{IN} conversion range. Bypass well. See Section 2.0 for more information.

Pin Descriptions and Equivalent Circuits (Continued)

Pin No.	Symbol	Equivalent Circuit	Description
23	PD		Power Down input. When this pin is high, the converter is in the Power Down mode and the data output pins hold the last conversion result.
24	CLK		CMOS/TTL compatible digital clock Input. V_{IN} is sampled on the falling edge of CLK input.
13 thru 16 and 19 thru 22	D0-D7		Conversion data digital Output pins. D0 is the LSB, D7 is the MSB. Valid data is output just after the rising edge of the CLK input.
7	V_{IN} GND		Reference ground for the single-ended analog input, V_{IN} .
1, 4, 12	V_A		Positive analog supply pin. Connect to a clean, quiet voltage source of +3V. V_A should be bypassed with a 0.1 μ F ceramic chip capacitor for each pin, plus one 10 μ F capacitor. See Section 3.0 for more information.
18	DR V_D		Power supply for the output drivers. If connected to V_A , decouple well from V_A .
17	DR GND		The ground return for the output driver supply.
2, 5, 8, 11	AGND		The ground return for the analog supply.

ADC08131/ADC08134/ADC08138

8-Bit High-Speed Serial I/O A/D Converters with Multiplexer Options, Voltage Reference, and Track/Hold Function

General Description

The ADC08131/ADC08134/ADC08138 are 8-bit successive approximation A/D converters with serial I/O and configurable input multiplexers with up to 8 channels. The serial I/O is configured to comply with the NSC MICROWIRE™ serial data exchange standard for easy interface to the COPS™ family of controllers, and can easily interface with standard shift registers or microprocessors.

All three devices provide a 2.5V band-gap derived reference with guaranteed performance over temperature.

A track/hold function allows the analog voltage at the positive input to vary during the actual A/D conversion.

The analog inputs can be configured to operate in various combinations of single-ended, differential, or pseudo-differential modes. In addition, input voltage spans as small as 1V can be accommodated.

Applications

- Digitizing automotive sensors
- Process control/monitoring
- Remote sensing in noisy environments
- Embedded diagnostics

Features

- Serial digital data link requires few I/O pins
- Analog input track/hold function
- 4- or 8-channel input multiplexer options with address logic
- On-chip 2.5V band-gap reference ($\pm 2\%$ over temperature guaranteed)
- No zero or full scale adjustment required
- TTL/CMOS input/output compatible
- 0V to 5V analog input range with single 5V power supply

Key Specifications

- Resolution 8 Bits
- Conversion time ($f_C = 1 \text{ MHz}$) 8 μs (Max)
- Power dissipation 20 mW (Max)
- Single supply 5 V_{DC} ($\pm 5\%$)
- Total unadjusted error $\pm 1/2$ LSB and ± 1 LSB
- Linearity Error ($V_{REF} = 2.5V$) $\pm 1/2$ LSB
- No missing codes (over temperature)
- On-board Reference +2.5V $\pm 1.5\%$ (Max)

ADC0816/ADC0817

8-Bit μ P Compatible A/D Converters with 16-Channel Multiplexer

General Description

The ADC0816, ADC0817 data acquisition component is a monolithic CMOS device with an 8-bit analog-to-digital converter, 16-channel multiplexer and microprocessor compatible control logic. The 8-bit A/D converter uses successive approximation as the conversion technique. The converter features a high impedance chopper stabilized comparator, a 256R voltage divider with analog switch tree and a successive approximation register. The 16-channel multiplexer can directly access any one of 16-single-ended analog signals, and provides the logic for additional channel expansion. Signal conditioning of any analog input signal is eased by direct access to the multiplexer output, and to the input of the 8-bit A/D converter.

The device eliminates the need for external zero and full-scale adjustments. Easy interfacing to microprocessors is provided by the latched and decoded multiplexer address inputs and latched TTL TRI-STATE[®] outputs.

The design of the ADC0816, ADC0817 has been optimized by incorporating the most desirable aspects of several A/D conversion techniques. The ADC0816, ADC0817 offers high speed, high accuracy, minimal temperature dependence, excellent long-term accuracy and repeatability, and consumes minimal power. These features make this device ideally suited to applications from process and machine control to consumer and automotive applications. For similar performance in an 8-channel, 28-pin, 8-bit A/D converter, see the ADC0808, ADC0809 data sheet. (See AN-258 for more information.)

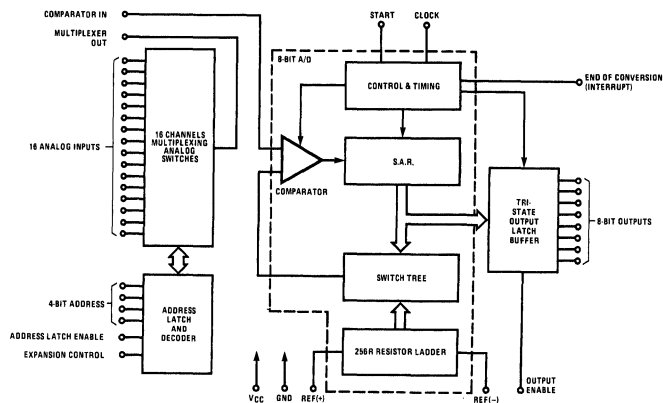

Features

- Easy interface to all microprocessors
- Operates ratiometrically or with 5 V_{DC} or analog span adjusted voltage reference
- 16-channel multiplexer with latched control logic
- Outputs meet TTL voltage level specifications
- 0V to 5V analog input voltage range with single 5V supply
- No zero or full-scale adjust required
- Standard hermetic or molded 40-pin DIP package
- Temperature range -40°C to +85°C or -55°C to +125°C
- Latched TRI-STATE output
- Direct access to "comparator in" and "multiplexer out" for signal conditioning
- ADC0816 equivalent to MM74C948
- ADC0817 equivalent to MM74C948-1

ADC08161

500 ns A/D Converter with S/H Function and 2.5V Bandgap Reference

General Description

Using a patented multi-step A/D conversion technique, the 8-bit ADC08161 CMOS A/D converter offers 500 ns conversion time, internal sample-and-hold (S/H), a 2.5V bandgap reference, and dissipates only 100 mW of power. The ADC08161 performs an 8-bit conversion with a 2-bit voltage estimator that generates the 2 MSBs and two low-resolution (3-bit) flashes that generate the 6 LBSs.

Input signals are tracked and held by the input sampling circuitry, eliminating the need for an external sample-and-hold. The ADC08161 can perform accurate conversions of full-scale input signals at frequencies from DC to typically more than 300 kHz (full power bandwidth) without the need of an external sample-and-hold (S/H).

For ease of interface to microprocessors, this part has been designed to appear as a memory location or I/O port without the need for external interfacing logic.

Key Specifications

- Resolution 8 Bits
- Conversion time (t_{CONV}) 560 ns max (\overline{WR} - \overline{RD} Mode)
- Full power bandwidth 300 kHz (typ)
- Throughput rate 1.5 MHz min
- Power dissipation 100 mW max
- Total unadjusted error $\pm 1/2$ LSB and ± 1 LSB max

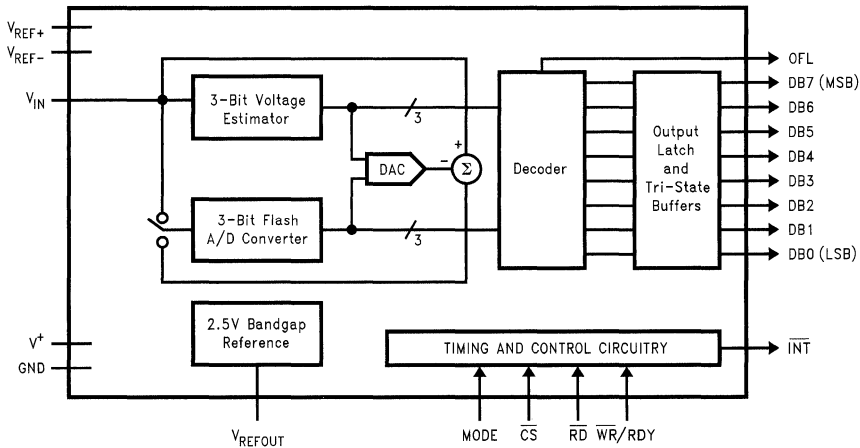

Features

- No external clock required
- Analog input voltage range from GND to V^+
- 2.5V bandgap reference

Applications

- Mobile telecommunications
- Hard-disk drives
- Instrumentation
- High-speed data acquisition systems

Pin Description

V_{IN}	This is the analog input. The input range is $\text{GND} - 50 \text{ mV} \leq V_{\text{INPUT}} \leq V^+ + 50 \text{ mV}$.
DB0–DB7	TRI-STATE data outputs—bit 0 (LSB) through bit 7 (MSB).
$\overline{\text{WR}}/\text{RDY}$	$\overline{\text{WR}}\text{-RD Mode}$ (Logic high applied to MODE pin) $\overline{\text{WR}}$: With $\overline{\text{CS}}$ low, the conversion is started on the rising edge of $\overline{\text{WR}}$. The digital result will be strobed into the output latch at the end of conversion (Figures 2, 3, 4). RD Mode (Logic low applied to MODE pin) RDY: This is an open drain output (no internal pull-up device). RDY will go low after the falling edge of $\overline{\text{CS}}$ and returns high at the end of conversion.
MODE	Mode: Mode (RD or $\overline{\text{WR}}\text{-RD}$) selection input— This pin is pulled to a logic low through an internal $50 \mu\text{A}$ current sink when left unconnected. RD Mode is selected if the MODE pin is left unconnected or externally forced low. A complete conversion is accomplished by pulling RD low until output data appears. $\overline{\text{WR}}\text{-RD Mode}$ is selected when a high is applied to the MODE pin. A conversion starts with the $\overline{\text{WR}}$ signal's rising edge and then using RD to access the data.
$\overline{\text{RD}}$	$\overline{\text{WR}}\text{-RD Mode}$ (logic high on the MODE pin) This is the active low Read input. With a logic low applied to the $\overline{\text{CS}}$ pin, the TRI-STATE data outputs (DB0–DB7) will be activated when $\overline{\text{RD}}$ goes low (Figures 2, 3, 4).

RD Mode (logic low on the MODE pin)

With $\overline{\text{CS}}$ low, a conversion starts on the falling edge of $\overline{\text{RD}}$. Output data appears on DB0–DB7 at the end of conversion (Figures 1, 5).

This is an active low output that indicates that a conversion is complete and the data is in the output latch. $\overline{\text{INT}}$ is reset by the rising edge of $\overline{\text{RD}}$.

This is the power supply ground pin. The ground pin should be connected to a "clean" ground reference point.

These are the reference voltage inputs. They may be placed at any voltage between $\text{GND} - 50 \text{ mV}$ and $V^+ + 50 \text{ mV}$, but $V_{\text{REF+}}$ must be greater than $V_{\text{REF-}}$. Ideally, an input voltage equal to $V_{\text{REF-}}$ produces an output code of 0, and an input voltage greater than $V_{\text{REF+}} - 1.5 \text{ LSB}$ produces an output code of 255.

For the ADC08161 an input voltage that exceeds V^+ by more than 100 mV or is below GND by more than 100 mV will create conversion errors.

This is the active low Chip Select input. A logic low signal applied to this input pin enables the RD and $\overline{\text{WR}}$ inputs. Internally, the $\overline{\text{CS}}$ signal is ORed with RD and $\overline{\text{WR}}$ signals.

Overflow Output. If the analog input is higher than $V_{\text{REF+}}$, $\overline{\text{OFL}}$ will be low at the end of conversion. It can be used when cascading two ADC08161s to achieve higher resolution (9 bits). This output is always active and does not go into TRI-STATE as DB0–DB7 do. When $\overline{\text{OFL}}$ is set, all data outputs remain high when the ADC08061's output data is read.

Positive power supply voltage input. Nominal operating supply voltage is $+5\text{V}$. The supply pin should be bypassed with a $10 \mu\text{F}$ bead tantalum in parallel with a $0.1 \mu\text{F}$ ceramic capacitor. Lead length should be as short as possible.

The internal bandgap reference's 2.5V output is available on this pin. Use a $220 \mu\text{F}$ bypass capacitor between this pin and analog ground.

ADC0820

8-Bit High Speed μ P Compatible A/D Converter with Track/Hold Function

General Description

By using a half-flash conversion technique, the 8-bit ADC0820 CMOS A/D offers a 1.5 μ s conversion time and dissipates only 75 mW of power. The half-flash technique consists of 32 comparators, a most significant 4-bit ADC and a least significant 4-bit ADC.

The input to the ADC0820 is tracked and held by the input sampling circuitry eliminating the need for an external sample-and-hold for signals moving at less than 100 mV/ μ s.

For ease of interface to microprocessors, the ADC0820 has been designed to appear as a memory location or I/O port without the need for external interfacing logic.

Key Specifications

- Resolution 8 Bits
- Conversion Time 2.5 μ s Max (RD Mode)
1.5 μ s Max (WR-RD Mode)
- Low Power 75 mW Max
- Total Unadjusted Error $\pm 1/2$ LSB and ± 1 LSB

Features

- Built-in track-and-hold function
- No missing codes
- No external clocking
- Single supply—5 V_{DC}
- Easy interface to all microprocessors, or operates stand-alone
- Latched TRI-STATE[®] output
- Logic inputs and outputs meet both MOS and T²L voltage level specifications
- Operates ratiometrically or with any reference value equal to or less than V_{CC}
- 0V to 5V analog input voltage range with single 5V supply
- No zero or full-scale adjust required
- Overflow output available for cascading
- 0.3" standard width 20-pin DIP
- 20-pin molded chip carrier package
- 20-pin small outline package
- 20-pin shrink small outline package (SSOP)

ADC0831/ADC0832/ADC0834/ADC0838

8-Bit Serial I/O A/D Converters with Multiplexer Options

General Description

The ADC0831 series are 8-bit successive approximation A/D converters with a serial I/O and configurable input multiplexers with up to 8 channels. The serial I/O is configured to comply with the NSC MICROWIRE™ serial data exchange standard for easy interface to the COPS™ family of processors, and can interface with standard shift registers or μ Ps.

The 2-, 4- or 8-channel multiplexers are software configured for single-ended or differential inputs as well as channel assignment.

The differential analog voltage input allows increasing the common-mode rejection and offsetting the analog zero input voltage value. In addition, the voltage reference input can be adjusted to allow encoding any smaller analog voltage span to the full 8 bits of resolution.

Features

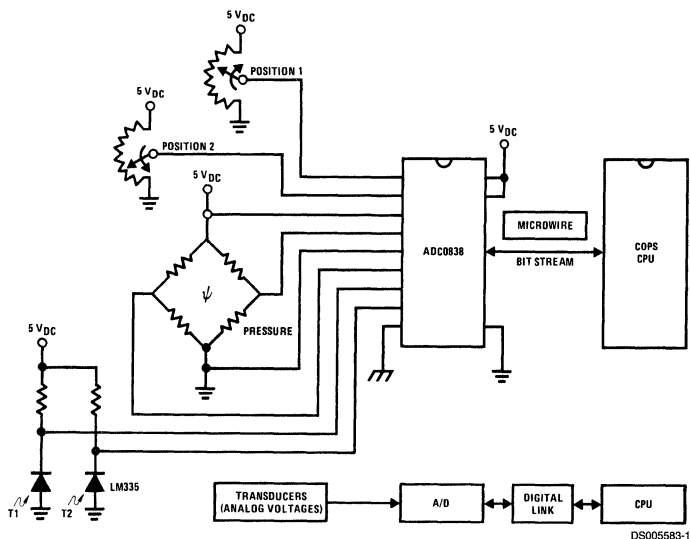

- NSC MICROWIRE compatible—direct interface to COPS family processors
- Easy interface to all microprocessors, or operates “stand-alone”

- Operates ratiometrically or with 5 V_{DC} voltage reference
- No zero or full-scale adjust required
- 2-, 4- or 8-channel multiplexer options with address logic
- Shunt regulator allows operation with high voltage supplies
- 0V to 5V input range with single 5V power supply
- Remote operation with serial digital data link
- TTL/MOS input/output compatible
- 0.3" standard width, 8-, 14- or 20-pin DIP package
- 20 Pin Molded Chip Carrier Package (ADC0838 only)
- Surface-Mount Package

Key Specifications

■ Resolution	8 Bits
■ Total Unadjusted Error	$\pm 1/2$ LSB and ± 1 LSB
■ Single Supply	5 V _{DC}
■ Low Power	15 mW
■ Conversion Time	32 μ s

ADC08351

8-Bit, 42 MSPS, 40 mW A/D Converter

General Description

The ADC08351 is an easy to use low power, low cost, small size, 42 MSPS analog-to-digital converter that digitizes signals to 8 bits. The ADC08351 uses an unique architecture that achieves 7.2 Effective Bits with a 4.4 MHz input and 42 MHz clock frequency and 6.8 Effective Bits with a 21 MHz input and 42 MHz clock frequency. Output formatting is straight binary coding.

To minimize system cost and power consumption, the ADC08351 requires minimal external components and includes input biasing to allow optional a.c. input signal coupling. The user need only provide a +3V supply and a clock. Many applications require no separate reference or driver components.

The excellent dc and ac characteristics of this device, together with its low power consumption and +3V single supply operation, make it ideally suited for many video and imaging applications, including use in portable equipment. Total power consumption is reduced to less than 7 mW in the power-down mode. Furthermore, the ADC08351 is resistant to latch-up and the outputs are short-circuit proof.

Fabricated on a 0.35 micron CMOS process, the ADC08351 is offered in TSSOP and is designed to operate over the commercial temperature range of -20°C to $+85^{\circ}\text{C}$.

Features

- Low Input Capacitance
- Internal Sample-and-Hold Function
- Single +3V Operation
- Power Down Feature
- TRI-STATE Outputs

Key Specifications

- Resolution 8 Bits
- Maximum Sampling Frequency 42 MSPS (min)
- ENOB @ $f_{\text{CLK}} = 42 \text{ MHz}$, $f_{\text{IN}} = 4.4 \text{ MHz}$ 7.2 Bits (typ)
- Guaranteed No Missing Codes
- Power Consumption 40 mW (typ); 48 mW (max)
(Excluding Reference Current)

Applications

- Video Digitization
- Digital Still Cameras
- Set Top Boxes
- Digital Camcorders
- Communications
- Medical Imaging
- Personal Computer Video
- CCD Imaging
- Electro-Optics

Pin Descriptions and Equivalent Circuits

Pin No.	Symbol	Equivalent Circuit	Description
17	V _{IN}		Analog signal input. Conversion range is 0.5 V _{P-P} to 0.68 V _A .
14	V _{REF}		Positive reference voltage input. Operating range of this voltage is 0.75V to V _A . This pin should be bypassed with a 10 μF tantalum or aluminum electrolytic capacitor and a 0.1 μF ceramic chip capacitor.
1	\overline{OE}		CMOS/TTL compatible digital input that, when low, enables the digital outputs of the ADC08351. When high, the outputs are in a high impedance state.
12	CLK		CMOS/TTL compatible digital clock input. V _{IN} is sampled on the falling edge of CLK input.
15	PD		CMOS/TTL compatible digital input that, when high, puts the ADC08351 into the power down mode, where it consumes minimal power. When this pin is low, the ADC08351 is in the normal operating mode.
3 thru 10	D0-D7		Conversion data digital output pins. D0 is the LSB, D7 is the MSB. Valid data is output just after the rising edge of the CLK input. These pins are enabled by bringing the \overline{OE} pin low.

Pin Descriptions and Equivalent Circuits (Continued)

Pin No.	Symbol	Equivalent Circuit	Description
11, 13	V_D		Positive digital supply pin. Connect to a clean, quiet voltage source of +3V. V_A and V_D should have a common supply and be separately bypassed with a 10 μ F tantalum or aluminum electrolytic capacitor and a 0.1 μ F ceramic chip capacitor. See Section 3.0 for more information.
2, 20	DGND		The ground return for the digital supply. AGND and DGND should be connected together close to the ADC08351.
16	V_A		Positive analog supply pin. Connected to a clean, quiet voltage source of +3V. V_A and V_D should have a common supply and be separately bypassed with a 10 μ F tantalum or aluminum electrolytic capacitor and a 0.1 μ F ceramic chip capacitor. See Section 3.0 for more information.
18, 19	AGND		The ground return for the analog supply. AGND and DGND should be connected together close to the ADC08351 package.

ADC0844/ADC0848

8-Bit μ P Compatible A/D Converters with Multiplexer Options

General Description

The ADC0844 and ADC0848 are CMOS 8-bit successive approximation A/D converters with versatile analog input multiplexers. The 4-channel or 8-channel multiplexers can be software configured for single-ended, differential or pseudo-differential modes of operation.

The differential mode provides low frequency input common mode rejection and allows offsetting the analog range of the converter. In addition, the A/D's reference can be adjusted enabling the conversion of reduced analog ranges with 8-bit resolution.

The A/Ds are designed to operate from the control bus of a wide variety of microprocessors. TRI-STATE[®] output latches that directly drive the data bus permit the A/Ds to be configured as memory locations or I/O devices to the microprocessor with no interface logic necessary.

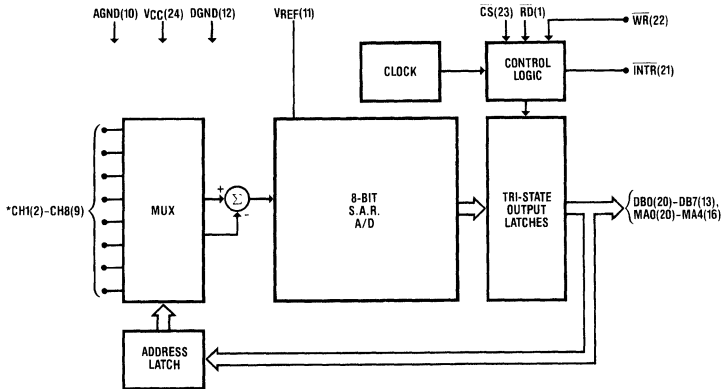

Features

- Easy interface to all microprocessors
- Operates ratiometrically or with 5 V_{DC} voltage reference
- No zero or full-scale adjust required
- 4-channel or 8-channel multiplexer with address logic
- Internal clock
- 0V to 5V input range with single 5V power supply
- 0.3" standard width 20-pin or 24-pin DIP
- 28 Pin Molded Chip Carrier Package

Key Specifications

■ Resolution	8 Bits
■ Total Unadjusted Error	$\pm \frac{1}{2}$ LSB and ± 1 LSB
■ Single Supply	5 V_{DC}
■ Low Power	15 mW
■ Conversion Time	40 μ s

ADC08831/ADC08832

8-Bit Serial I/O CMOS A/D Converters with Multiplexer and Sample/Hold Function

General Description

The ADC08831/ADC08832 are 8-bit successive approximation Analog to Digital converters with 3-wire serial interfaces and a configurable input multiplexer for 2 channels. The serial I/O will interface to COPS™ family of micro-controllers, PLD's, microprocessors, DSP's, or shift registers. The serial I/O is configured to comply with the NSC MICROWIRE™ serial data exchange standard.

To minimize total power consumption, the ADC08831/ADC08832 automatically go into low power mode whenever they are not performing conversions.

A track/hold function allows the analog voltage at the positive input to vary during the actual A/D conversion.

The analog inputs can be configured to operate in various combinations of single-ended, differential, or pseudo-differential modes. The voltage reference input can be adjusted to allow encoding of small analog voltage spans to the full 8-bits of resolution.

Applications

- Digitizing sensors and waveforms
- Process control monitoring

- Remote sensing in noisy environments
- Instrumentation
- Embedded Systems

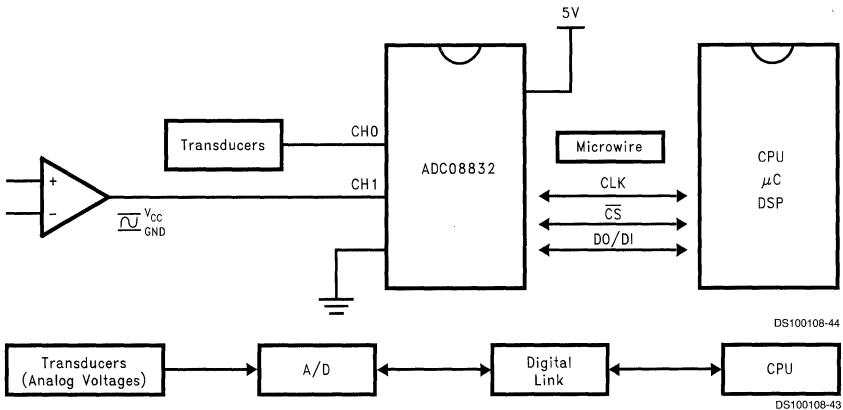

Features

- 3-wire serial digital data link requires few I/O pins
- Analog input track/hold function
- 2-channel input multiplexer option with address logic
- Analog input voltage range from GND to V_{CC}
- No zero or full scale adjustment required
- TTL/CMOS input/output compatible
- Superior pin compatible replacement for ADC0831/2

Key Specifications

- Resolution: 8 bits
- Conversion time ($f_C = 2 \text{ MHz}$): $4\mu\text{s}$ (max)
- Power dissipation: 8.5mW (typ)
- Low power mode: 3.0mW (typ)
- Single supply: $5V_{DC}$
- Total unadjusted error: $\pm 1\text{LSB}$
- No missing codes over temperature

ADC1001

10-Bit μ P Compatible A/D Converter

General Description

The ADC1001 is a CMOS, 10-bit successive approximation A/D converter. The 20-pin ADC1001 is pin compatible with the ADC0801 8-bit A/D family. The 10-bit data word is read in two 8-bit bytes, formatted left justified and high byte first. The six least significant bits of the second byte are set to zero, as is proper for a 16-bit word.

Differential inputs provide low frequency input common mode rejection and allow offsetting the analog range of the converter. In addition, the reference input can be adjusted enabling the conversion of reduced analog ranges with 10-bit resolution.

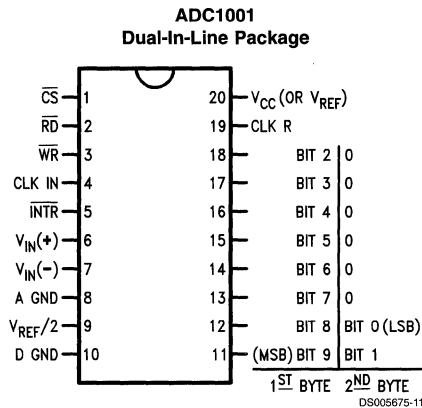

Key Specifications

- Resolution 10 bits
- Linearity error ± 1 LSB
- Conversion time 200 μ S

Features

- ADC1001 is pin compatible with ADC0801 series 8-bit A/D converters
- Compatible with NSC800 and 8080 μ P derivatives—no interfacing logic needed
- Easily interfaced to 6800 μ P derivatives
- Differential analog voltage inputs
- Logic inputs and outputs meet both MOS and TTL voltage level specifications
- Works with 2.5V (LM336) voltage reference
- On-chip clock generator
- 0V to 5V analog input voltage range with single 5V supply
- Operates ratiometrically or with 5 V_{DC} , 2.5 V_{DC} , or analog span adjusted voltage reference
- 0.3" standard width 20-pin DIP package

ADC10030

10-Bit, 30 MSPS, 125 mW A/D Converter with Internal Sample and Hold

General Description

The ADC10030 is a low power, high performance CMOS analog-to-digital converter that digitizes signals to 10 bits resolution at sampling rates up to 30 Msps while consuming a typical 125 mW from a single 5V supply. Reference force and sense pins allow the user to connect an external reference buffer amplifier to ensure optimal accuracy. No missing codes is guaranteed over the full operating temperature range. The unique two-stage architecture achieves 9.1 Effective Bits with a 15 MHz input signal and a 30 MHz clock frequency. Output formatting is straight binary coding.

To ease interfacing to 3V systems, the digital I/O power pins of the ADC10030 can be tied to a 3V power source, making the outputs 3V compatible. When not converting, power consumption can be reduced by pulling the PD (Power Down) pin high, placing the converter into a low power standby state, where it typically consumes less than 4 mW. The ADC10030's speed, resolution and single supply operation makes it well suited for a variety of applications in video, imaging, communications, multimedia and high speed data acquisition. Low power, single supply operation ideally suit the ADC10030 for high speed portable applications, and its speed and resolution are ideal for charge coupled device (CCD) input systems.

The ADC10030 comes in a space saving 32-pin TQFP and operates over the industrial ($-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$) temperature range.

Features

- Internal Sample-and-Hold
- Single +5V Operation
- Low Power Standby Mode
- Guaranteed No Missing Codes
- TRI-STATE Outputs
- TTL/CMOS or 3V Logic Input/Output Compatible

Key Specifications

■ Resolution	10 Bits
■ Conversion Rate	30 Msps
■ ENOB @ 15 MHz Input	9.1 Bits (typ)
■ DNL	0.40 LSB (typ)
■ Conversion Latency	2 Clock Cycles
■ PSRR	56 dB
■ Power Consumption	125 mW (typ)
■ Low Power Standby Mode	<3.5 mW (typ)

Applications

Pin Descriptions and Equivalent Circuits

Pin No.	Symbol	Equivalent Circuit	Description
30	V_{IN}		Analog Input signal to be converted. Conversion range is V_{REF+} S to V_{REF-} S.
31	V_{REF+} F		Analog input that goes to the high side of the reference ladder of the ADC. This voltage should force V_{REF+} S to be in the range of 2.6V to 3.8V.
32	V_{REF+} S		Analog output used to sense the voltage near the top of the ADC reference ladder.
2	V_{REF-} F		Analog input that goes to the low side of the reference ladder of the ADC. This voltage should force V_{REF-} S to be in the range of 1.7V to 2.8V.
1	V_{REF-} S		Analog output used to sense the voltage near the bottom of the ADC reference ladder.
9	CLK		Converter digital clock input. V_{IN} is sampled on the falling edge of CLK input.
8	PD		Power Down input. When this pin is high, the converter is in the Power Down mode and the data output pins are in a high impedance state.
26	\overline{OE}		Output Enable pin. When this pin and the PD pin are low, the output data pins are active. When this pin or the PD pin is high, the data output pins are in a high impedance state.
14 thru 19 and 22 thru 25	D0-D9		Digital Output pins providing the 10-bit conversion results. D0 is the LSB, D9 is the MSB. Data is acquired on the falling edge of the CLK input and valid data is present 2.0 clock cycles plus t_{OD} later.
3, 7, 28	V_A		Positive analog supply pins. These pins should be connected to a clean, quiet voltage source of +5V. V_A and V_D should have a common supply and be separately bypassed with 10 μ F to 50 μ F capacitors in parallel with 0.1 μ F capacitors.
5, 10	V_D		Positive digital supply pins. These pins should be connected to a clean, quiet voltage source of +5V. V_A and V_D should have a common supply and be separately bypassed with 10 μ F to 50 μ F capacitors in parallel with 0.1 μ F capacitors.

Pin Descriptions and Equivalent Circuits (Continued)

Pin No.	Symbol	Equivalent Circuit	Description
12, 21	V _D I/O		Positive supply pins for the digital output drivers. These pins should be connected to a clean, quiet voltage source of +3V to +5V and be separately bypassed with 10 μ F to 50 μ F capacitors.
4, 27, 29	AGND		The ground return for the analog supply. AGND and DGND should be connected together close to the ADC10030 package.
6, 11	DGND		The ground return for the digital supply. AGND and DGND should be connected together close to the ADC10030 package.
13, 20	DGND I/O		The ground return of the digital output drivers.

ADC1005

10-Bit μ P Compatible A/D Converter

General Description

The ADC1005 is a CMOS 10-bit successive approximation A/D converter. The 20-pin ADC1005 outputs 10-bit data in a two-byte format for interface with 8-bit microprocessors.

The ADC1005 has differential inputs to permit rejection of common-mode signals, allow the analog input range to be offset, and also to permit the conversion of signals not referred to ground. In addition, the reference voltage can be adjusted, allowing smaller voltage spans to be measured with 10-bit resolution.

Features

- Easy interface to all microprocessors
- Differential analog voltage inputs
- Operates ratiometrically or with 5 V_{DC} voltage reference or analog span adjusted voltage reference
- 0V to 5V analog input voltage range with single 5V supply
- On-chip clock generator
- TLL/MOS input/output compatible
- 0.3" standard width 20-pin DIP

Key Specifications

- Resolution 10 bits
- Linearity Error $\pm 1/2$ LSB and ± 1 LSB
- Conversion Time 50 μ s

ADC10061/ADC10062/ADC10064

10-Bit 600 ns A/D Converter with Input Multiplexer and Sample/Hold

General Description

Using an innovative, patented multistep* conversion technique, the 10-bit ADC10061, ADC10062, and ADC10064 CMOS analog-to-digital converters offer sub-microsecond conversion times yet dissipate a maximum of only 235 mW. The ADC10061, ADC10062, and ADC10064 perform a 10-bit conversion in two lower-resolution "flashes", thus yielding a fast A/D without the cost, power dissipation, and other problems associated with true flash approaches. The ADC10061 is pin-compatible with the ADC1061 but much faster, thus providing a convenient upgrade path for the ADC1061.

The analog input voltage to the ADC10061, ADC10062, and ADC10064 is sampled and held by an internal sampling circuit. Input signals at frequencies from dc to over 200 kHz can therefore be digitized accurately without the need for an external sample-and-hold circuit.

The ADC10062 and ADC10064 include a "speed-up" pin. Connecting an external resistor between this pin and ground reduces the typical conversion time to as little as 350 ns with only a small increase in linearity error.

For ease of interface to microprocessors, the ADC10061, ADC10062, and ADC10064 have been designed to appear as a memory location or I/O port without the need for external interface logic.

*U.S. Patent Number 4918449

Features

- Built-in sample-and-hold
- Single +5V supply
- 1, 2, or 4-input multiplexer options
- No external clock required
- Speed adjust pin for faster conversions (ADC10062 and ADC10064). See ADC1062/4 for high speed guaranteed performance.

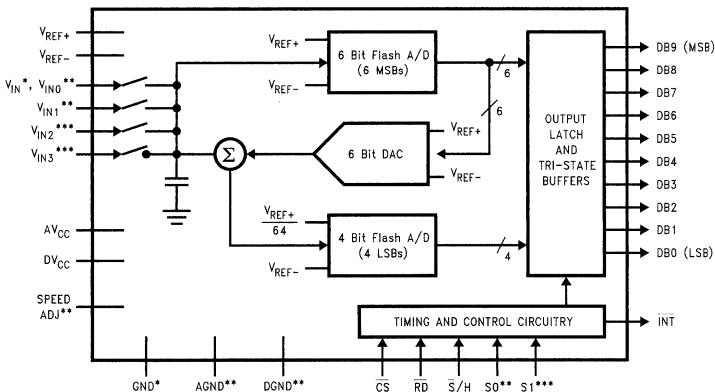

Key Specifications

- | | |
|-------------------------------------|-----------------------------|
| ■ Conversion time to 10 bits | 600 ns typical, |
| ■ | 900 ns max over temperature |
| ■ Sampling Rate | 800 kHz |
| ■ Low power dissipation | 235 mW (max) |
| ■ Total unadjusted error | ±1.0 LSB (max) |
| ■ No missing codes over temperature | |

Applications

- Digital signal processor front ends
- Instrumentation
- Disk drives
- Mobile telecommunications

Pin Descriptions

DV_{CC}, AV_{CC}	These are the digital and analog positive supply voltage inputs. They should always be connected to the same voltage source, but are brought out separately to allow for separate bypass capacitors. Each supply pin should be bypassed with a 0.1 μ F ceramic capacitor in parallel with a 10 μ F tantalum capacitor to ground.	$V_{IN}, V_{IN0},$ $V_{IN1}, V_{IN2},$ V_{IN3}	These are the analog input pins. The ADC10061 has one input (V_{IN}), the ADC10062 has two inputs (V_{IN0} and V_{IN1}), and the ADC10064 has four inputs ($V_{IN0}, V_{IN1}, V_{IN2}$ and V_{IN3}). The impedance of the source should be less than 500 Ω for best accuracy and conversion speed. For accurate conversions, no input pin (even one that is not selected) should be driven more than 50 mV above V_{CC} or 50 mV below ground.
\overline{INT}	This is the active low interrupt output. \overline{INT} goes low at the end of each conversion, and returns to a high state following the rising edge of \overline{RD} .	GND, AGND, DGND	These are the power supply ground pins. The ADC10061 has a single ground pin (GND), and the ADC10062 and ADC10064 have separate analog and digital ground pins (AGND and DGND) for separate bypassing of the analog and digital supplies. The ground pins should be connected to a stable, noise-free system ground. For the devices with two ground pins, both pins should be returned to the same potential.
$\overline{S/H}$	This is the Sample/Hold control input. When this pin is forced low (and \overline{CS} is low), it causes the analog input signal to be sampled and initiates a new conversion.	DB0–DB9	These are the TRI-STATE [®] output pins.
\overline{RD}	This is the active low Read control input. When this \overline{RD} and \overline{CS} are low, any data present in the output registers will be placed on the data bus.	SPEED ADJ	(ADC10062 and ADC10064 only). This pin is normally left unconnected, but by connecting a resistor between this pin and ground, the conversion time can be reduced. See the Typical Performance Curves and the table of Electrical Characteristics.
\overline{CS}	This is the active low Chip Select control input. When low, this pin enables the \overline{RD} and $\overline{S/H}$ pins.		
S0, S1	On the multiple-input devices (ADC10062 and ADC10064), these pins select the analog input that will be connected to the A/D during the conversion. The input is selected based on the state of S0 and S1 when $\overline{S/H}$ makes its High-to-Low transition (See the Timing Diagrams). The ADC10064 includes both S0 and S1. The ADC10062 includes just S0, and the ADC10061 includes neither.		
$V_{REF-},$ V_{REF+}	These are the reference voltage inputs. They may be placed at any voltage between GND and V_{CC} , but V_{REF+} must be greater than V_{REF-} . An input voltage equal to V_{REF-} produces an output code of 0, and an input voltage equal to ($V_{REF+} - 1$ LSB) produces an output code of 1023.		

ADC10154/ADC10158

10-Bit Plus Sign 4 μ s ADCs with 4- or 8-Channel MUX, Track/Hold and Reference

General Description

The ADC10154 and ADC10158 are CMOS 10-bit plus sign successive approximation A/D converters with versatile analog input multiplexers, track/hold function and a 2.5V band-gap reference. The 4-channel or 8-channel multiplexers can be software configured for single-ended, differential or pseudo-differential modes of operation.

The input track/hold is implemented using a capacitive array and sampled-data comparator.

Resolution can be programmed to be 8-bit, 8-bit plus sign, 10-bit or 10-bit plus sign. Lower-resolution conversions can be performed faster.

The variable resolution output data word is read in two bytes, and can be formatted left justified or right justified, high byte first.

Applications

- Process control
- Instrumentation
- Test equipment

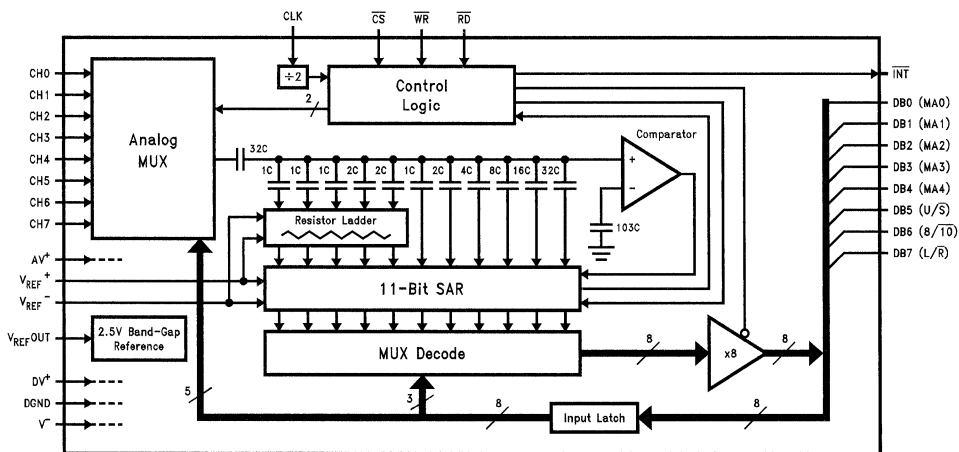

Features

- 4- or 8- channel configurable multiplexer
- Analog input track/hold function
- 0V to 5V analog input range with single +5V power supply
- -5V to +5V analog input voltage range with $\pm 5V$ supplies
- Fully tested in unipolar (single +5V supply) and bipolar (dual $\pm 5V$ supplies) operation
- Programmable resolution/speed and output data format
- Ratiometric or Absolute voltage reference operation
- No zero or full scale adjustment required
- No missing codes over temperature
- Easy microprocessor interface

Key Specifications

- | | |
|-----------------------------------|------------------------|
| ■ Resolution | 10-bit plus sign |

Pin Descriptions

- AV⁺** This is the positive analog supply. This pin should be bypassed with a 0.1 μ F ceramic capacitor and a 10 μ F tantalum capacitor to the system analog ground.
- DV⁺** This is the positive digital supply. This supply pin also needs to be bypassed with 0.1 μ F ceramic and 10 μ F tantalum capacitors to the system digital ground. AV⁺ and DV⁺ should be bypassed separately and tied to same power supply.
- DGND** This is the digital ground. All logic levels are referred to this ground.
- V⁻** This is the negative analog supply. For unipolar operation this pin may be tied to the system analog ground or to a negative supply source. It should not go above DGND by more than 50 mV. When bipolar operation is required, the voltage on this pin will limit the analog input's negative voltage level. In bipolar operation this supply pin needs to be bypassed with 0.1 μ F ceramic and 10 μ F tantalum capacitors to the system analog ground.
- V_{REF}⁺, V_{REF}⁻** These are the positive and negative reference inputs. The voltage difference between V_{REF}⁺ and V_{REF}⁻ will set the analog input voltage span.
- V_{REF}Out** This is the internal band-gap voltage reference output. For proper operation of the voltage reference, this pin needs to be bypassed with a 330 μ F tantalum or electrolytic capacitor.
- CS** This is the chip select input. When a logic low is applied to this pin the WR and RD pins are enabled.
- RD** This is the read control input. When a logic low is applied to this pin the digital outputs are enabled and the INT output is reset high.
- WR** This is the write control input. The rising edge of the signal applied to this pin selects the multiplexer channel and initiates a conversion.
- INT** This is the interrupt output. A logic low at this output indicates the completion of a conversion.
- CLK** This is the clock input. The clock frequency directly controls the duration of the conversion time (for example, in the 10-bit bipolar mode $t_C = 22/f_{CLK}$) and the acquisition time ($t_A = 6/f_{CLK}$).
- DB0(MA0)–DB7 (L/R)** These are the digital data inputs/outputs. DB0 is the least significant bit of the digital output word; DB7 is the most significant bit in the digital output word (see the Output Data Configuration table). MA0 through MA4 are the digital inputs for the multiplexer channel selection (see the Multiplexer Addressing tables). U/S (Unsigned/Signed), 8/10, (8/10-bit resolution) and L/R (Left/Right justification) are the digital input bits that set the A/D's output word format and resolution (see the Output Data Configuration table). The conversion time is modified by the chosen resolution (see Electrical AC Characteristics table). The lower the resolution, the faster the conversion will be.
- CH0–CH7** These are the analog input multiplexer channels. They can be configured as single-ended inputs, differential input pairs, or pseudo-differential inputs (see the Multiplexer Addressing tables for the input polarity assignments).

ADC10221

10-Bit, 15 MSPS, 98 mW A/D Converter with Internal Sample and Hold

General Description

The ADC10221 is the first in a family of low power, high performance CMOS analog-to-digital converters. It can digitize signals to 10 bits resolution at sampling rates up to 20 MSPS (15 MSPS guaranteed) while consuming a typical 98 mW from a single 5V supply. Reference force and sense pins allow the user to connect an external reference buffer amplifier to ensure optimal accuracy. The ADC10221 is guaranteed to have no missing codes over the full operating temperature range. The unique two stage architecture achieves 9.2 Effective Bits with a 10MHz input signal and a 20MHz clock frequency. Output formatting is straight binary coding.

To ease interfacing to 3V systems, the digital I/O power pins of the ADC10221 can be tied to a 3V power source, making the outputs 3V compatible. When not converting, power consumption can be reduced by pulling the PD (Power Down) pin high, placing the converter into a low power standby state, where it typically consumes less than 4 mW. The ADC10221's speed, resolution and single supply operation make it well suited for a variety of applications in video, imaging, communications, multimedia and high speed data acquisition. Low power, single supply operation ideally suit the ADC10221 for high speed portable applications, and its speed and resolution are ideal for charge coupled device (CCD) input systems.

The ADC10221 comes in a space saving 32-pin TQFP and operates over the industrial ($-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$) temperature range.

Features

- Internal Sample-and-Hold
- Single +5V Operation
- Low Power Standby Mode
- Guaranteed No Missing Codes
- TTL/CMOS or 3V Logic Input/Output Compatible

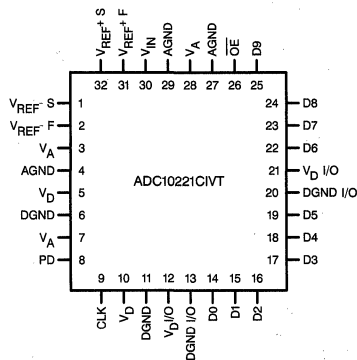

Key Specifications

■ Resolution	10 Bits
■ Conversion Rate	20 MSPS (typ) 15 MSPS (min)
■ ENOB 10 MHz Input, 20 MHz Clock	9.2 Bits (typ)
■ DNL	0.35 LSB (typ)
■ Power Consumption	98 mW (typ)
■ Low Power Standby Mode	<4 mW (typ)

Applications

- Digital Video
- Document Scanners
- Medical Imaging
- Electro-Optics
- Plain Paper Copiers
- CCD Imaging

Pin Descriptions and Equivalent Circuits

Pin No.	Symbol	Equivalent Circuit	Description
Analog I/O			
30	V_{IN}		Analog Input signal to be converted. Conversion range is V_{REF+} S to V_{REF-} S.
31	V_{REF+} F		Analog input that goes to the high side of the reference ladder of the ADC. This voltage should force V_{REF+} S to be in the range of 2.3V to 4.0V.
32	V_{REF+} S		Analog output used to sense the voltage near the top of the ADC reference ladder.
2	V_{REF-} F		Analog input that goes to the low side of the reference ladder of the ADC. This voltage should force V_{REF-} S to be in the range of 1.3V to 3.0V.
1	V_{REF-} S		Analog output used to sense the voltage near the bottom of the ADC reference ladder.
9	CLK		Converter digital clock input. V_{IN} is sampled on the falling edge of CLK input.
8	PD		Power Down input. When this pin is high, the converter is in the Power Down mode and the data output pins are in a high impedance state.
26	\overline{OE}		Output Enable pin. When this pin and the PD pin are low, the output data pins are active. When this pin or the PD pin is high, the output data pins are in a high impedance state.
14 thru 19 and 22 thru 25	D0 -D9		Digital Output pins providing the 10 bit conversion results. D0 is the LSB, D9 is the MSB. Valid data is present just after the falling edge of the CLK input.
3, 7, 28	V_A		Positive analog supply pins. These pins should be connected to a clean, quiet voltage source of +5V. V_A and V_D should have a common supply and be separately bypassed with 10 μ F to 50 μ F capacitors in parallel with 0.1 μ F capacitors.
5, 10	V_D		Positive digital supply pins. These pins should be connected to a clean, quiet voltage source of +5V. V_A and V_D should have a common supply and be separately bypassed with 10 μ F to 50 μ F capacitors in parallel with 0.1 μ F capacitors.

Pin Descriptions and Equivalent Circuits (Continued)

Pin No.	Symbol	Equivalent Circuit	Description
Analog I/O			
12, 21	V _D I/O		Positive supply pins for the digital output drivers. These pins should be connected to a clean, quiet voltage source of +3V to +5V and be separately bypassed with 10μF capacitors.
4, 27, 29	AGND		The ground return for the analog supply. AGND and DGND should be connected together close to the ADC10221 package.
6, 11	DGND		The ground return for the digital supply. AGND and DGND should be connected together close to the ADC10221 package.
13, 20	DGND I/O		The ground return of the digital output drivers.

ADC10321

10-Bit, 20MSPS, 98mW A/D Converter with Internal Sample and Hold

General Description

The ADC10321 is a low power, high performance CMOS analog-to-digital converter that digitizes signals to 10 bits resolution at sampling rates up to 25MSPS while consuming a typical 98mW from a single 5V supply. Reference force and sense pins allow the user to connect an external reference buffer amplifier to ensure optimal accuracy. No missing codes is guaranteed over the full operating temperature range. The unique two stage architecture achieves 9.2 Effective Bits with a 10MHz input signal and a 20MHz clock frequency. Output formatting is straight binary coding.

To ease interfacing to 3V systems, the digital I/O power pins of the ADC10321 can be tied to a 3V power source, making the outputs 3V compatible. When not converting, power consumption can be reduced by pulling the PD (Power Down) pin high, placing the converter into a low power standby state, where it typically consumes less than 4mW. The ADC10321's speed, resolution and single supply operation makes it well suited for a variety of applications in video, imaging, communications, multimedia and high speed data acquisition. Low power, single supply operation ideally suit the ADC10321 for high speed portable applications, and its speed and resolution are ideal for charge coupled device (CCD) input systems.

The ADC10321 comes in a space saving 32-pin TQFP and operates over the industrial ($-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$) temperature range.

ADC10461/ADC10462/ADC10464

10-Bit 600 ns A/D Converter with Input Multiplexer and Sample/Hold

General Description

Using an innovative, patented multistep* conversion technique, the 10-bit ADC10461, ADC10462, and ADC10464 CMOS analog-to-digital converters offer sub-microsecond conversion times yet dissipate a maximum of only 235 mW. The ADC10461, ADC10462, and ADC10464 perform a 10-bit conversion in two lower-resolution "flashes", thus yielding a fast A/D without the cost, power dissipation, and other problems associated with true flash approaches. Dynamic performance (THD, S/N) is guaranteed. The ADC10461 is pin-compatible with the ADC1061 but much faster, thus providing a convenient upgrade path for the ADC1061.

The analog input voltage to the ADC10461, ADC10462, and ADC10464 is sampled and held by an internal sampling circuit. Input signals at frequencies from dc to over 200 kHz can therefore be digitized accurately without the need for an external sample-and-hold circuit.

The ADC10462 and ADC10464 include a "speed-up" pin. Connecting an external resistor between this pin and ground reduces the typical conversion time to as little as 350 ns with only a small increase in linearity error.

For ease of interface to microprocessors, the ADC10461, ADC10462, and ADC10464 have been designed to appear as a memory location or I/O port without the need for external interface logic.

Features

- Built-in sample-and-hold
- Single +5V supply
- 1, 2, or 4-input multiplexer options
- No external clock required
- Speed adjust pin for faster conversions (ADC10462 and ADC10464)

Key Specifications

- Conversion time to 10 bits 600 ns typical
- Sampling Rate 800 kHz
- Low power dissipation 235 mW (max)
- Total harmonic distortion (50 kHz) -60 dB (max)
- No missing codes over temperature

Applications

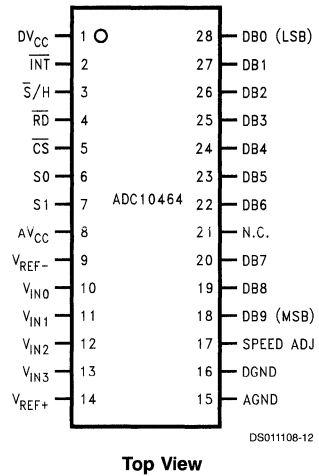

- Digital signal processor front ends
- Instrumentation
- Disk drives
- Mobile telecommunications

Pin Descriptions

DV_{CC}, AV_{CC} These are the digital and analog positive supply voltage inputs. They should always be connected to the same voltage source, but are brought out separately to allow for separate bypass capacitors. Each supply pin should be bypassed with a 0.1 μF ceramic capacitor in parallel with a 10 μF tantalum capacitor to ground.

INT This is the active low interrupt output. $\overline{\text{INT}}$ goes low at the end of each conversion, and returns to a high state following the rising edge of $\overline{\text{RD}}$.

S/H This is the Sample/Hold control input. When this pin is forced low (and $\overline{\text{CS}}$ is low), it causes the analog input signal to be sampled and initiates a new conversion.

RD This is the active low Read control input. When this $\overline{\text{RD}}$ and $\overline{\text{CS}}$ are low, any data present in the output registers will be placed on the data bus.

CS This is the active low Chip Select control input. When low, this pin enables the $\overline{\text{RD}}$ and $\overline{\text{S/H}}$ pins.

S0, S1 On the multiple-input devices (ADC10462 and ADC10464), these pins select the analog input that will be connected to the A/D during the conversion. The input is selected based on the state of S0 and S1 when $\overline{\text{S/H}}$ makes its High-to-Low transition (See the Timing Diagrams). The ADC10464 includes both S0 and S1. The ADC10462 includes just S0, and the ADC10461 includes neither.

V_{REF-}, V_{REF+} These are the reference voltage inputs. They may be placed at any voltage between GND and V_{CC}, but V_{REF+} must be greater than V_{REF-}. An input voltage equal to V_{REF-} produces an output code of 0, and an input voltage equal to (V_{REF+} - 1 LSB) produces an output code of 1023.

V_{IN}, V_{INO}, V_{IN1}, V_{IN2}, V_{IN3} These are the analog input pins. The ADC10461 has one input (V_{IN}), the ADC10462 has two inputs (V_{INO} and V_{IN1}), and the ADC10464 has four inputs (V_{INO}, V_{IN1}, V_{IN2} and V_{IN3}). The impedance of the source should be less than 500Ω for best accuracy and conversion speed. For accurate conversions, no input pin (even one that is not selected) should be driven more than 50 mV above V_{CC} or 50 mV below ground.

GND, AGND, DGND These are the power supply ground pins. The ADC10461 has a single ground pin (GND), and the ADC10462 and ADC10464 have separate analog and digital ground pins (AGND and DGND) for separate bypassing of the analog and digital supplies. The ground pins should be connected to a stable, noise-free system ground. For the devices with two ground pins, both pins should be returned to the same potential.

DB0-DB9 These are the TRI-STATE output pins.

SPEED ADJ (ADC10462 and ADC10464 only). This pin is normally left unconnected, but by connecting a resistor between this pin and ground, the conversion time can be reduced. See the Typical Performance Curves and the table of Electrical Characteristics.

ADC1061

10-Bit High-Speed μ P-Compatible A/D Converter with Track/Hold Function

General Description

Using a modified half-flash conversion technique, the 10-bit ADC1061 CMOS analog-to-digital converter offers very fast conversion times yet dissipates a maximum of only 235 mW. The ADC1061 performs a 10-bit conversion in two lower-resolution "flashes", thus yielding a fast A/D without the cost, power dissipation, and other problems associated with true flash approaches.

The analog input voltage to the ADC1061 is tracked and held by an internal sampling circuit. Input signals at frequencies from DC to greater than 160 kHz can therefore be digitized accurately without the need for an external sample-and-hold circuit.

For ease of interface to microprocessors, the ADC1061 has been designed to appear as a memory location or I/O port without the need for external interface logic.

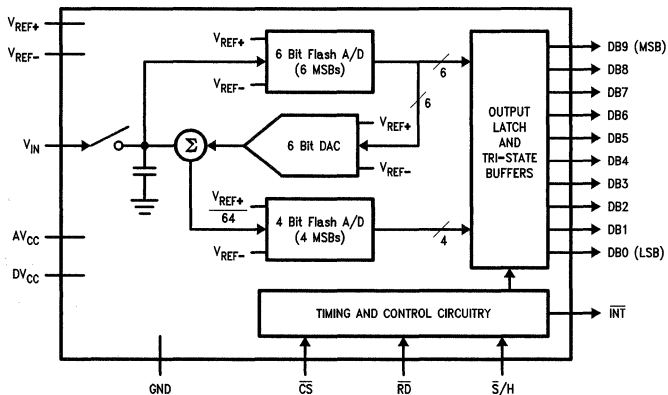

Features

- 1.8 μ s maximum conversion time to 10 bits
- Low power dissipation: 235 mW (maximum)
- Built-in track-and-hold
- No external clock required
- Single +5V supply
- No missing codes over temperature

Applications

- Waveform digitizers
- Disk drives
- Digital signal processor front ends
- Mobile telecommunications

Pin Descriptions

Symbol	Function
DV _{CC} , AV _{CC} (1, 6)	These are the digital and analog positive supply voltage inputs. They should always be connected to the same voltage source, but are brought out separately to allow for separate bypass capacitors. Each supply pin should be bypassed with a 0.1 μF ceramic capacitor in parallel with a 10 μF tantalum capacitor.
$\overline{\text{INT}}$ (2)	This is the active low interrupt output. $\overline{\text{INT}}$ goes low at the end of each conversion, and returns to a high state following the rising edge of $\overline{\text{RD}}$.
$\overline{\text{S}}/\text{H}$ (3)	This is the Sample/Hold control input. When this pin is forced low, it causes the analog input signal to be sampled and initiates a new conversion.
$\overline{\text{RD}}$ (4)	This is the active low Read control input. When this pin is low, any data present in the ADC1061's output registers will be placed on the data bus. In Mode 2, the Read signal must be low until $\overline{\text{INT}}$ goes low. Until $\overline{\text{INT}}$ goes low, the data at the output pins will be incorrect.
$\overline{\text{CS}}$ (5)	This is the active low Chip Select control input. This pin enables the $\overline{\text{S}}/\text{H}$ and $\overline{\text{RD}}$ inputs.
V _{REF-} , V _{REF+} (7, 9)	These are the reference voltage inputs. They may be placed at any voltage between GND – 50 mV and V _{CC} + 50 mV, but V _{REF+} must be greater than V _{REF-} . An input voltage equal to V _{REF-} produces an output code of 0, and an input voltage equal to V _{REF+} – 1LSB produces an output code of 1023.
V _{IN} (8)	This is the analog input pin. The impedance of the source should be less than 500 Ω for best accuracy and conversion speed. To avoid damage to the ADC1061, V _{IN} should not be allowed to extend beyond the power supply voltages by more than 300 mV unless the drive current is limited. For accurate conversions, V _{IN} should not extend more than 50 mV beyond the supply voltages.
GND (10)	This is the power supply ground pin. The ground pin should be connected to a "clean" ground reference point.
DB0–DB9 (11-20)	These are the TRI-STATE output pins.

ADC10662/ADC10664

10-Bit 360 ns A/D Converter with Input Multiplexer and Sample/Hold

General Description

Using an innovative, patented multistep* conversion technique, the 10-bit ADC10662 and ADC10664 are 2- and 4-input CMOS analog-to-digital converters offering sub-microsecond conversion times yet dissipating a maximum of only 235 mW. The ADC10662 and ADC10664 perform a 10-bit conversion in two lower-resolution "flashes", thus yielding a fast A/D without the cost, power dissipation, and other problems associated with true flash approaches. In addition to standard static performance specifications (Linearity, Full-Scale Error, etc.) dynamic performance (THD, S/N) is guaranteed.

The analog input voltage to the ADC10662 and ADC10664 is sampled and held by an internal sampling circuit. Input signals at frequencies from dc to over 250 kHz can therefore be digitized accurately without the need for an external sample-and-hold circuit.

The ADC10662 and ADC10664 include a "speed-up" pin. Connecting an external resistor between this pin and ground reduces the typical conversion time to as little as 360 ns.

For ease of interface to microprocessors, the ADC10662 and ADC10664 have been designed to appear as a memory location or I/O port without the need for external interface logic.

Features

- Built-in sample-and-hold
- Single +5V supply
- 2- or 4-input multiplexer options
- No external clock required

Key Specifications

- Conversion time to 10 bits: 360 ns typical, 466 ns max over temperature
- Sampling Rate: 1.5 MHz (min)
- Low power dissipation: 235 mW (max)
- Total harmonic distortion (50 kHz): -60 dB (max)
- No missing codes over temperature

Applications

- Digital signal processor front ends
- Instrumentation
- Disk drives
- Mobile telecommunications

Pin Descriptions

DV_{CC} , AV_{CC}	These are the digital and analog positive supply voltage inputs. They should always be connected to the same voltage source, but are brought out separately to allow for separate bypass capacitors. Each supply pin should be bypassed with a 0.1 μ F ceramic capacitor in parallel with a 10 μ F tantalum capacitor to ground.	V_{IN0} , V_{IN1} , V_{IN2} , V_{IN3}	These are the analog input pins. The ADC10662 has two inputs (V_{IN0} and V_{IN1}) and the ADC10664 has four inputs (V_{IN0} , V_{IN1} , V_{IN2} and V_{IN3}). The impedance of the source should be less than 500 Ω for best accuracy and conversion speed. For accurate conversions, no input pin (even one that is not selected) should be driven more than 50 mV above V_{CC} or 50 mV below ground.
\overline{INT}	This is the active low interrupt output. \overline{INT} goes low at the end of each conversion, and returns to a high state following the rising edge of \overline{RD} .	GND, AGND, DGND	These are the power supply ground pins. The ADC10662 and ADC10664 have separate analog and digital ground pins (AGND and DGND) for separate bypassing of the analog and digital supplies. The ground pins should be connected to a stable, noise-free system ground. Both pins should be returned to the same potential.
\overline{S}/H	This is the Sample/Hold control input. When this pin is forced low (and \overline{CS} is low), it causes the analog input signal to be sampled and initiates a new conversion.	DB0–DB9	These are the TRI-STATE output pins.
\overline{RD}	This is the active low Read control input. When this \overline{RD} and \overline{CS} are low, any data present in the output registers will be placed on the data bus.	SPEED ADJ	By connecting a resistor between this pin and ground, the conversion time can be reduced. The specifications listed in the table of Electrical Characteristics apply for a speed adjust resistor (R_{SA}) equal to 14.0 k Ω (Mode 1) or 8.26 k Ω (Mode 2). See the Typical Performance Curves and the table of Electrical Characteristics.
\overline{CS}	This is the active low Chip Select control input. When low, this pin enables the \overline{RD} and \overline{S}/H pins.		
S0, S1	These pins select the analog input that will be connected to the A/D during the conversion. The input is selected based on the state of S0 and S1 when \overline{S}/H makes its High-to-Low transition (See the Timing Diagrams). The ADC10664 includes both S0 and S1. The ADC10662 includes just S0.		
V_{REF-} , V_{REF+}	These are the reference voltage inputs. They may be placed at any voltage between GND and V_{CC} , but V_{REF+} must be greater than V_{REF-} . An input voltage equal to V_{REF-} produces an output code of 0, and an input voltage equal to ($V_{REF+} - 1$ LSB) produces an output code of 1023.		

ADC10731/ADC10732/ADC10734/ADC10738

10-Bit Plus Sign Serial I/O A/D Converters with Mux, Sample/Hold and Reference

General Description

This series of CMOS 10-bit plus sign successive approximation A/D converters features versatile analog input multiplexers, sample/hold and a 2.5V band-gap reference. The 1-, 2-, 4-, or 8-channel multiplexers can be software configured for single-ended or differential mode of operation.

An input sample/hold is implemented by a capacitive reference ladder and sampled-data comparator. This allows the analog input to vary during the A/D conversion cycle.

In the differential mode, valid outputs are obtained even when the negative inputs are greater than the positive because of the 10-bit plus sign output data format.

The serial I/O is configured to comply with the NSC MICROWIRE™ serial data exchange standard for easy interface to the COPS™ and HPC™ families of controllers, and can easily interface with standard shift registers and microprocessors.

- Software or hardware power down
- Analog input sample/hold function
- Ratiometric or absolute voltage referencing
- No zero or full scale adjustment required
- No missing codes over temperature
- TTL/CMOS input/output compatible
- Standard DIP and SO packages

Key Specifications

- | | |
|----------------------|---------------------|
| ■ Resolution | 10 bits plus sign |
| ■ Single supply | 5V |
| ■ Power dissipation | 37 mW (Max) |
| ■ In powerdown mode | 18 μ W |
| ■ Conversion time | 5 μ s (Max) |
| ■ Sampling rate | 74 kHz (Max) |
| ■ Band-gap reference | 2.5V \pm 2% (Max) |

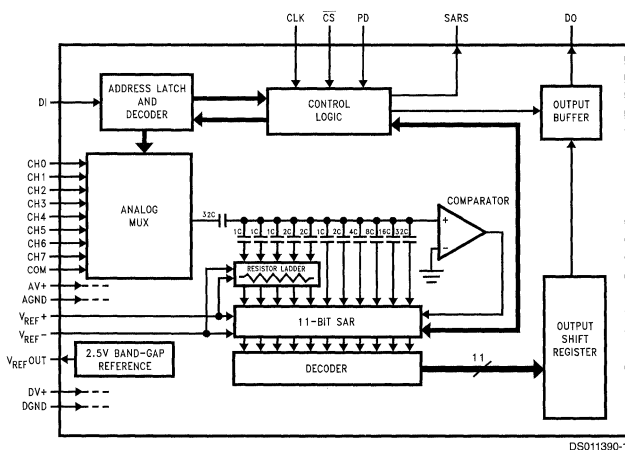

Features

- 0V to 5V analog input range with single 5V power supply
- Serial I/O (MICROWIRE compatible)
- 1-, 2-, 4-, or 8-channel differential or single-ended multiplexer

Applications

- Medical instruments
- Portable and remote instrumentation
- Test equipment

Pin Descriptions

CLK	The clock applied to this input controls the successive approximation conversion time interval, the acquisition time and the rate at which the serial data exchange occurs. The rising edge loads the information on the DI pin into the multiplexer address shift register. This address controls which channel of the analog input multiplexer (MUX) is selected. The falling edge shifts the data resulting from the A/D conversion out on DO. \overline{CS} enables or disables the above functions. The clock frequency applied to this input can be between 5 kHz and 3 MHz.	V_{REF-}	The negative voltage reference input. In order to maintain accuracy, the voltage at this pin must not go below GND - 50 mV or exceed $AV^+ + 50$ mV.
DI	This is the serial data input pin. The data applied to this pin is shifted by CLK into the multiplexer address register. Tables 1, 2, 3 show the multiplexer address assignment.	AV^+, DV^+	These are the analog and digital power supply pins. These pins should be tied to the same power supply and bypassed separately. The operating voltage range of AV^+ and DV^+ is $4.5 V_{DC}$ to $5.5 V_{DC}$.
DO	The data output pin. The A/D conversion result (DB0-SIGN) are clocked out by the falling edge of CLK on this pin.	DGND	This is the digital ground pin.
\overline{CS}	This is the chip select input pin. When a logic low is applied to this pin, the rising edge of CLK shifts the data on DI into the address register. This low also brings DO out of TRI-STATE after a conversion has been completed.	AGND	This is the analog ground pin.
PD	This is the power down input pin. When a logic high is applied to this pin the A/D is powered down. When a low is applied the A/D is powered up.		
SARS	This is the successive approximation register status output pin. When \overline{CS} is high this pin is in TRI-STATE. With \overline{CS} low this pin is active high when a conversion is in progress and active low at all other times.		
CH0-CH7	These are the analog inputs of the MUX. A channel input is selected by the address information at the DI pin, which is loaded on the rising edge of CLK into the address register (see Tables 1, 2, 3). The voltage applied to these inputs should not exceed AV^+ or go below GND by more than 50 mV. Exceeding this range on an unselected channel will corrupt the reading of a selected channel.		
COM	This pin is another analog input pin. It can be used as a "pseudo ground" when the analog multiplexer is single-ended.		
V_{REF+}	This is the positive analog voltage reference input. In order to maintain accuracy, the voltage range V_{REF} ($V_{REF} = V_{REF+} - V_{REF-}$) is $0.5 V_{DC}$ to $5.0 V_{DC}$ and the voltage at V_{REF+} cannot exceed $AV^+ + 50$ mV.		

ADC1173

8-Bit, 3-Volt, 15MSPS, 33mW A/D Converter

General Description

The ADC1173 is a low power, 15 MSPS analog-to-digital converter that digitizes signals to 8 bits while consuming just 33 mW of power (typ). The ADC1173 uses a unique architecture that achieves 7.6 Effective Bits. Output formatting is straight binary coding.

The excellent DC and AC characteristics of this device, together with its low power consumption and +3V single supply operation, make it ideally suited for many video, imaging and communications applications, including use in portable equipment. Furthermore, the ADC1173 is resistant to latchup and the outputs are short-circuit proof. The top and bottom of the ADC1173's reference ladder is available for connections, enabling a wide range of input possibilities.

The ADC1173 is offered in SOIC (EIAJ) and TSSOP. It is designed to operate over the commercial temperature range of -20°C to +75°C.

Features

- Internal Sample-and-Hold Function
- Single +3V Operation
- Internal Reference Bias Resistors
- Industry Standard Pinout
- TRI-STATE® Outputs

Key Specifications

■ Resolution	8 Bits
■ Maximum Sampling Frequency	15 MSPS (min)
■ THD	-56 dB (typ)
■ DNL	±0.8 LSB (max)
■ ENOB at 3.58 MHz Input	7.6 Bits (typ)
■ Guaranteed No Missing Codes	
■ Differential Phase	0.5 Degree (max)
■ Differential Gain	1.5% (typ)
■ Power Consumption	33mW (typ)

(excluding reference current)

Applications

- Video Digitization
- Digital Still Cameras
- Set Top Boxes
- Camcorders
- Personal Computer Video
- Digital Television
- CCD Imaging
- Electro-Optics

Pin Descriptions and Equivalent Circuits

Pin No.	Symbol	Equivalent Circuit	Description
19	V_{IN}		Analog signal input. Conversion range is V_{RB} to V_{RT} .
16	V_{RTS}		Reference Top Bias with internal pull-up resistor. Short this pin to V_{RT} to self bias the reference ladder.
17	V_{RT}		Analog Input that is the high (top) side of the reference ladder of the ADC. Nominal range is 1.0V to AV_{DD} . Voltage on V_{RT} and V_{RB} inputs define the V_{IN} conversion range. Bypass well. See Section 2.0 for more information.
23	V_{RB}		Analog Input that is the low (bottom) side of the reference ladder of the ADC. Nominal range is 0V to 2.0V. Voltage on V_{RT} and V_{RB} inputs define the V_{IN} conversion range. Bypass well. See Section 2.0 for more information.

Pin Descriptions and Equivalent Circuits (Continued)

Pin No.	Symbol	Equivalent Circuit	Description
22	V_{RBS}		Reference Bottom Bias with internal pull down resistor. Short to V_{RB} to self bias the reference ladder.
1	\overline{OE}		CMOS/TTL compatible Digital input that, when low, enables the digital outputs of the ADC1173. When high, the outputs are in a high impedance state.
12	CLK		CMOS/TTL compatible digital clock Input. V_{IN} is sampled on the falling edge of CLK input.
3 thru 10	D0-D7		Conversion data digital Output pins. D0 is the LSB, D7 is the MSB. Valid data is output just after the rising edge of the CLK input. These pins are enabled by bringing the \overline{OE} pin low.
11, 13	DV _{DD}		Positive digital supply pin. Connect to a clean, quiet voltage source of +3V. AV_{DD} and DV_{DD} should have a common source and be separately bypassed with a 10 μ F capacitor and a 0.1 μ F ceramic chip capacitor. See Section 3.0 for more information.
2, 24	DV _{SS}		The ground return for the digital supply. AV_{SS} and DV_{SS} should be connected together close to the ADC1173.
14, 15, 18	AV _{DD}		Positive analog supply pin. Connected to a clean, quiet voltage source of +3V. AV_{DD} and DV_{DD} should have a common source and be separately bypassed with a 10 μ F capacitor and a 0.1 μ F ceramic chip capacitor. See Section 3.0 for more information.
20, 21	AV _{SS}		The ground return for the analog supply. AV_{SS} and DV_{SS} should be connected together close to the ADC1173 package.

ADC1175

8-Bit, 20MHz, 60mW A/D Converter

General Description

The ADC1175 is a low power, 20 Msps analog-to-digital converter that digitizes signals to 8 bits while consuming just 60 mW of power (typ). The ADC1175 uses a unique architecture that achieves 7.5 Effective Bits. Output formatting is straight binary coding.

The excellent DC and AC characteristics of this device, together with its low power consumption and +5V single supply operation, make it ideally suited for many video, imaging and communications applications, including use in portable equipment. Furthermore, the ADC1175 is resistant to latchup and the outputs are short-circuit proof. The top and bottom of the ADC1175's reference ladder is available for connections, enabling a wide range of input possibilities.

The ADC1175 is offered in SOIC (EIAJ) and TSSOP. It is designed to operate over the commercial temperature range of -20°C to +75°C.

Features

- Internal Sample-and-Hold Function
- Single +5V Operation
- Internal Reference Bias Resistors
- Industry Standard Pinout
- TRI-STATE Outputs

Key Specifications

- Resolution 8 Bits
- Maximum Sampling Frequency 20 Msps (min)

ADC1175-50

8-Bit, 50 MSPS, 125 mW A/D Converter

General Description

The ADC1175-50 is a low power, 50 MSPS analog-to-digital converter that digitizes signals to 8 bits while consuming just 125 mW (typ). The ADC1175-50 uses a unique architecture that achieves 6.8 Effective Bits at 25 MHz input and 50 MHz clock frequency. Output formatting is straight binary coding.

The excellent DC and AC characteristics of this device, together with its low power consumption and +5V single supply operation, make it ideally suited for many video and imaging applications, including use in portable equipment. Furthermore, the ADC1175-50 is resistant to latch-up and the outputs are short-circuit proof. The top and bottom of the ADC1175-50's reference ladder is available for connections, enabling a wide range of input possibilities. The low input capacitance (7 pF, typical) makes this device easier to drive than conventional flash converters and the power down mode reduces power consumption to less than 5 mW.

The ADC1175-50 is offered in SOIC (EIAJ), TSSOP and LLP. It is designed to operate over the commercial temperature range of -20°C to $+75^{\circ}\text{C}$.

Features

- Internal Track-and-Hold function
- Single +5V operation
- Internal reference bias resistors

- Industry standard pinout
- Power-down mode (<5 mW)

Key Specifications

- Resolution 8 Bits
- Maximum Sampling Frequency 50 MSPS (min)
- THD 54 dB (typ)
- DNL 0.7 LSB (typ)
- ENOB @ $f_{IN} = 25$ MHz 6.8 Bits (typ)
- Guaranteed No Missing Codes
- Differential Phase 0.5° (typ)
- Differential Gain 1.0% (typ)
- Power Consumption 125 mW (typ), 190 mW (max)
(Excluding Reference Current)

Applications

- Digital Still Cameras
- CCD Imaging
- Electro-Optics
- Medical Imaging
- Communications
- Video Digitization
- Digital Television
- Multimedia

ADC12H030/ADC12H032/ADC12H034/ADC12H038, ADC12030/ADC12032/ADC12034/ADC12038 Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold

General Description

The ADC12030, and ADC12H030 families are 12-bit plus sign successive approximation A/D converters with serial I/O and configurable input multiplexers. The ADC12032/ADC12H032, ADC12034/ADC12H034 and ADC12038/ADC12H038 have 2, 4 and 8 channel multiplexers, respectively. The differential multiplexer outputs and A/D inputs are available on the MUXOUT1, MUXOUT2, A/DIN1 and A/DIN2 pins. The ADC12030/ADC12H030 has a two channel multiplexer with the multiplexer outputs and A/D inputs internally connected. The ADC12030 family is tested with a 5 MHz clock, while the ADC12H030 family is tested with an 8 MHz clock. On request, these A/Ds go through a self calibration process that adjusts linearity, zero and full-scale errors to less than ± 1 LSB each.

The analog inputs can be configured to operate in various combinations of single-ended, differential, or pseudo-differential modes. A fully differential unipolar analog input range (0V to +5V) can be accommodated with a single +5V supply. In the differential modes, valid outputs are obtained even when the negative inputs are greater than the positive because of the 12-bit plus sign output data format.

The serial I/O is configured to comply with the NSC MICROWIRE™. For voltage references see the LM4040 or LM4041.

Features

- Serial I/O (MICROWIRE Compatible)
- 2, 4, or 8 channel differential or single-ended multiplexer
- Analog input sample/hold function
- Power down mode
- Variable resolution and conversion rate
- Programmable acquisition time
- Variable digital output word length and format
- No zero or full scale adjustment required
- Fully tested and guaranteed with a 4.096V reference
- 0V to 5V analog input range with single 5V power supply
- No Missing Codes over temperature

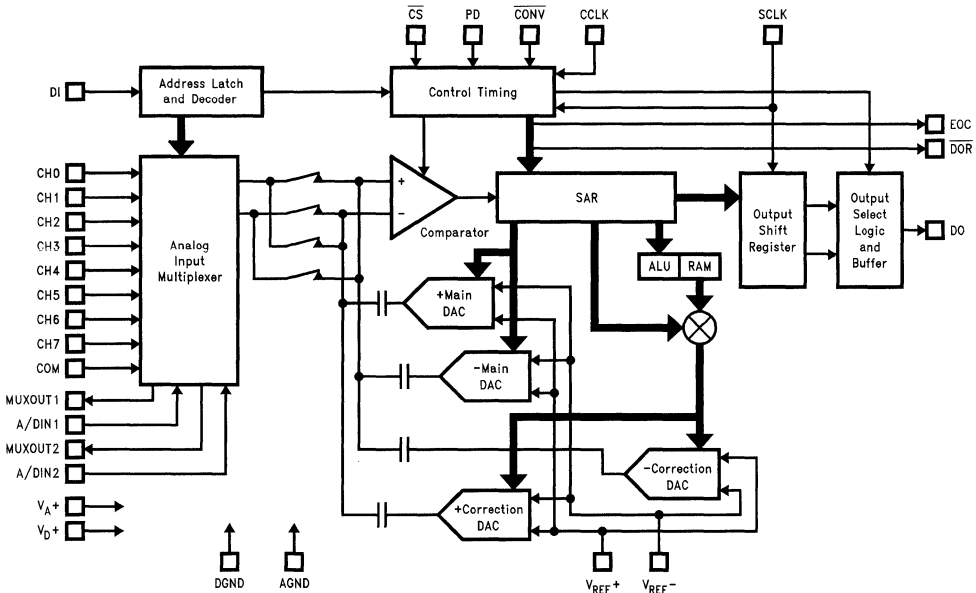

Key Specifications

■ Resolution	12-bit plus sign
■ 12-bit plus sign conversion time	
— ADC12H030 family	5.5 μ s (max)
— ADC12030 family	8.8 μ s (max)
■ 12-bit plus sign throughput time	
— ADC12H030 family	8.6 μ s (max)
— ADC12030 family	14 μ s (max)
■ Integral linearity error	± 1 LSB (max)
■ Single supply	5V $\pm 10\%$
■ Power dissipation	33 mW (max)
— Power down	100 μ W (typ)

Applications

- Medical instruments
- Process control systems
- Test equipment

Pin Descriptions

- CCLK** The clock applied to this input controls the successive approximation conversion time interval and the acquisition time. The rise and fall times of the clock edges should not exceed 1 μs.
- SCLK** This is the serial data clock input. The clock applied to this input controls the rate at which the serial data exchange occurs. The rising edge loads the information on the DI pin into the multiplexer address and mode select shift register. This address controls which channel of the analog input multiplexer (MUX) is selected and the mode of operation for the A/D. With \overline{CS} low the falling edge of SCLK shifts the data resulting from the previous ADC conversion out on DO, with the exception of the first bit of data. When \overline{CS} is low continuously, the first bit of the data is clocked out on the rising edge of EOC (end of conversion). When \overline{CS} is toggled the falling edge of \overline{CS} always clocks out the first bit of data. \overline{CS} should be brought low when SCLK is low. The rise and fall times of the clock edges should not exceed 1 μs.
- DI** This is the serial data input pin. The data applied to this pin is shifted by the rising edge of SCLK into the multiplexer address and

- mode select register. *Table 2* through *Table 5* show the assignment of the multiplexer address and the mode select data.
- DO** The data output pin. This pin is an active push/pull output when \overline{CS} is low. When \overline{CS} is high, this output is TRI-STATE. The A/D conversion result (D0–D12) and converter status data are clocked out by the falling edge of SCLK on this pin. The word length and format of this result can vary (see *Table 1*). The word length and format are controlled by the data shifted into the multiplexer address and mode select register (see *Table 5*).
- EOC** This pin is an active push/pull output and indicates the status of the ADC12030/2/4/8. When low, it signals that the A/D is busy with a conversion, auto-calibration, auto-zero or power down cycle. The rising edge of EOC signals the end of one of these cycles.
- \overline{CS}** This is the chip select pin. When a logic low is applied to this pin, the rising edge of SCLK shifts the data on DI into the address register. This low also brings DO out of TRI-STATE. With \overline{CS} low the falling edge of SCLK shifts the data resulting from the previous ADC conversion out on DO, with the

Pin Descriptions (Continued)

exception of the first bit of data. When \overline{CS} is low continuously, the first bit of the data is clocked out on the rising edge of EOC (end of conversion). When \overline{CS} is toggled the falling edge of \overline{CS} always clocks out the first bit of data. \overline{CS} should be brought low when SCLK is low. The falling edge of \overline{CS} resets a conversion in progress and starts the sequence for a new conversion. When \overline{CS} is brought back low during a conversion, that conversion is prematurely terminated. The data in the output latches may be corrupted. Therefore, when \overline{CS} is brought back low during a conversion in progress the data output at that time should be ignored. \overline{CS} may also be left continuously low. In this case it is imperative that the correct number of SCLK pulses be applied to the ADC in order to remain synchronous. After the ADC supply power is applied it expects to see 13 clock pulses for each I/O sequence. The number of clock pulses the ADC expects is the same as the digital output word length. This word length can be modified by the data shifted in on the DO pin. *Table 5* details the data required.

DOR This is the data output ready pin. This pin is an active push/pull output. It is low when the conversion result is being shifted out and goes high to signal that all the data has been shifted out.

CONV A logic low is required on this pin to program any mode or change the ADC's configuration as listed in the Mode Programming *Table 5* such as 12-bit conversion, 8-bit conversion, Auto Cal, Auto Zero etc. When this pin is high the ADC is placed in the read data only mode. While in the read data only mode, bringing \overline{CS} low and pulsing SCLK will only clock out on DO any data stored in the ADCs output shift register. The data on DI will be neglected. A new conversion will not be started and the ADC will remain in the mode and/or configuration previously programmed. Read data only cannot be performed while a conversion, Auto-Cal or Auto-Zero are in progress.

PD This is the power down pin. When PD is high the A/D is powered down; when PD is low the A/D is powered up. The A/D takes a maximum of 250 μ s to power up after the command is given.

CH0-CH7 These are the analog inputs of the MUX. A channel input is selected by the address information at the DI pin, which is loaded on the rising edge of SCLK into the address register (See *Tables 2, 3, 4*).
The voltage applied to these inputs should not exceed V_{A+} or go below GND. Exceeding this range on an unselected channel will corrupt the reading of a selected channel.

COM This pin is another analog input pin. It is used as a pseudo ground when the analog multiplexer is single-ended.

MUXOUT1, MUXOUT2 These are the multiplexer output pins.

A/DIN1, /DIN2 These are the converter input pins. MUXOUT1 is usually tied to A/DIN1. MUXOUT2 is usually tied to A/DIN2. If external circuitry is placed between MUXOUT1 and A/DIN1, or MUXOUT2 and A/DIN2 it may be necessary to protect these pins. The voltage at these pins should not exceed V_{A+} or go below AGND (see *Figure 5*).

V_{REF+} This is the positive analog voltage reference input. In order to maintain accuracy, the voltage range of V_{REF} ($V_{REF} = V_{REF+} - V_{REF-}$) is $1 V_{DC}$ to $5.0 V_{DC}$ and the voltage at V_{REF+} cannot exceed V_{A+} . See *Figure 6* for recommended bypassing.

V_{REF-} The negative voltage reference input. In order to maintain accuracy, the voltage at this pin must not go below GND or exceed V_{A+} . (See *Figure 6*).

V_{A+}, V_{D+} These are the analog and digital power supply pins. V_{A+} and V_{D+} are not connected together on the chip. These pins should be tied to the same power supply and bypassed separately (see *Figure 6*). The operating voltage range of V_{A+} and V_{D+} is $4.5 V_{DC}$ to $5.5 V_{DC}$.

DGND This is the digital ground pin (see *Figure 6*).

AGND This is the analog ground pin (see *Figure 6*).

ADC12L030/ADC12L032/ADC12L034/ADC12L038

3.3V Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold

General Description

The ADC12L030 family is 12-bit plus sign successive approximation A/D converters with serial I/O and configurable input multiplexers. These devices are fully tested with a single 3.3V power supply. The ADC12L032, ADC12L034 and ADC12L038 have 2, 4 and 8 channel multiplexers, respectively. Differential multiplexer outputs and A/D inputs are available on the MUXOUT1, MUXOUT2, A/DIN1 and A/DIN2 pins. The ADC12L030 has a two channel multiplexer with the multiplexer outputs and A/D inputs internally connected. On request, these A/Ds go through a self calibration process that adjusts linearity, zero and full-scale errors to less than $\pm 1/2$ LSB each.

The analog inputs can be configured to operate in various combinations of single-ended, differential, or pseudo-differential modes. A fully differential unipolar analog input range (0V to +3.3V) can be accommodated with a single +3.3V supply. In the differential modes, valid outputs are obtained even when the negative inputs are greater than the positive because of the 12-bit plus sign two's complement output data format.

The serial I/O is configured to comply with NSC's MICROWIRE™ and Motorola's SPI standards. For voltage references, see the LM4040 or LM4041 data sheets.

Features

- 0V to 3.3V analog input range with single 3.3V power supply
- Serial I/O (MICROWIRE and SPI Compatible)
- 2, 4, or 8 channel differential or single-ended multiplexer
- Analog input sample/hold function
- Power down mode
- Variable resolution and conversion rate
- Programmable acquisition time
- Variable digital output word length and format
- No zero or full scale adjustment required
- Fully tested and guaranteed with a 2.5V reference
- No Missing Codes over temperature

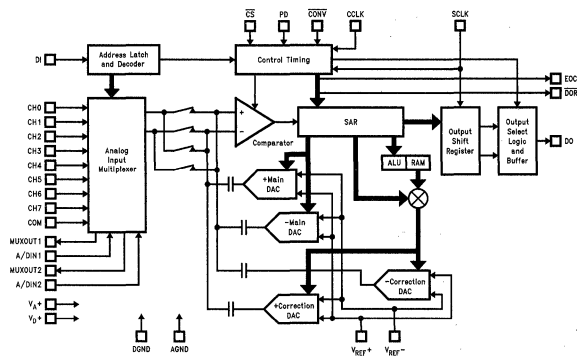

Key Specifications

- | | |
|------------------------------------|-------------------|
| ■ Resolution | 12-bit plus sign |
| ■ 12-bit plus sign conversion time | 8.8 μ s (min) |
| ■ 12-bit plus sign sampling rate | 73 kHz (max) |
| ■ Integral linearity error | ± 1 LSB (max) |
| ■ Single supply | 3.3V $\pm 10\%$ |
| ■ Power dissipation | 15 mW (max) |
| ■ Power down | 40 μ W (typ) |

Applications

- Portable Medical instruments

Pin Descriptions

CCLK	The clock applied to this input controls the successive approximation conversion time interval and the acquisition time. The rise and fall times of the clock edges should not exceed 1 μ s.	
SCLK	This is the serial data clock input. The clock applied to this input controls the rate at which the serial data exchange occurs. The rising edge loads the information on the DI pin into the multiplexer address and mode select shift register. This address controls which channel of the analog input multiplexer (MUX) is selected and the mode of operation for the A/D. With \overline{CS} low the falling edge of SCLK shifts the data resulting from the previous ADC conversion out on DO, with the exception of the first bit of data. When \overline{CS} is low continuously, the first bit of the data is clocked out on the rising edge of EOC (end of conversion). When \overline{CS} is toggled the falling edge of \overline{CS} always clocks out the first bit of data. \overline{CS} should be brought low when SCLK is low. The rise and fall times of the clock edges should not exceed 1 μ s.	
DI	This is the serial data input pin. The data applied to this pin is shifted by the rising edge of SCLK into the multiplexer address and mode select register. Tables 2, 3, 4, 5 show the assignment of the multiplexer address and the mode select data.	
DO	The data output pin. This pin is an active push/pull output when \overline{CS} is Low. When \overline{CS} is High this output is in TRI-STATE. The A/D conversion result (D0–D12) and converter status data are clocked out by the falling edge of SCLK on this pin. The word length and format of this result can vary (see Table 1). The word length and format are controlled by the data shifted into the multiplexer address and mode select register (see Table 5).	
EOC	This pin is an active push/pull output and indicates the status of the ADC12L030/2/4/8. When low, it signals that the A/D is busy with a conversion, auto-calibration, auto-zero or power down cycle. The rising edge of EOC signals the end of one of these cycles.	
\overline{CS}	This is the chip select pin. When a logic low is applied to this pin, the rising edge of SCLK shifts the data on DI into the address register. This low also brings DO out of TRI-STATE. With \overline{CS} low the falling edge of SCLK shifts the data resulting from the previous ADC conversion out on DO, with the exception of the first bit of data. When \overline{CS} is low continuously, the first bit of the data is clocked out on the rising edge of EOC (end of conversion). When \overline{CS} is toggled the falling edge of \overline{CS} always clocks out the first bit of data. \overline{CS} should be brought low when SCLK is low. The falling edge of \overline{CS} resets a conversion in progress and starts the sequence for a new conversion. When \overline{CS} is brought back low during a conversion, that conversion is prematurely ended. The data in the output latches may be corrupted. Therefore, when \overline{CS} is brought back low during a conversion in progress the data output at that	
		time should be ignored. \overline{CS} may also be left continuously low. In this case it is imperative that the correct number of SCLK pulses be applied to the ADC in order to remain synchronous. After the ADC supply power is applied, it expects to see 13 clock pulses for each I/O sequence. The number of clock pulses the ADC expects is the same as the digital output word length. This word length can be modified by the data shifted in on the DO pin. Table 5 details the data required.
		\overline{DOR} This is the data output ready pin. This pin is an active push/pull output. It is low when the conversion result is being shifted out and goes high to signal that all the data has been shifted out.
		\overline{CONV} A logic low is required on this pin to program any mode or change the ADC's configuration as listed in the Mode Programming Table (Table 5) such as 12-bit conversion, 8-bit conversion, Auto Cal, Auto Zero etc. When this pin is high the ADC is placed in the read data only mode. While in the read data only mode, bringing \overline{CS} low and pulsing SCLK will only clock out on DO any data stored in the ADCs output shift register. The data on DI will be neglected. A new conversion will not be started and the ADC will remain in the mode and/or configuration previously programmed. Read data only cannot be performed while a conversion, Auto-Cal or Auto-Zero are in progress.
		PD This is the power down pin. When PD is high the A/D is powered down; when PD is low the A/D is powered up. The A/D takes a maximum of 700 μ s to power up after the command is given.
		CH0–CH7 These are the analog inputs of the MUX. A channel input is selected by the address information at the DI pin, which is loaded on the rising edge of SCLK into the address register (see Tables 2, 3, 4). The voltage applied to these inputs should not exceed V_{A+} or go below GND. Exceeding this range on an unselected channel will corrupt the reading of a selected channel.
		COM This pin is another analog input pin. It is used as a pseudo ground when the analog multiplexer is single-ended.
		MUXOUT1, MUXOUT2 These are the multiplexer output pins.
		A/DIN1, A/DIN2 These are the converter input pins. MUXOUT1 is usually tied to A/DIN1. MUXOUT2 is usually tied to A/DIN2. If external circuitry is placed between MUXOUT1 and A/DIN1, or MUXOUT2 and A/DIN2 it may be necessary to protect these pins. The voltage at these pins should not exceed V_{A+} or go below AGND (see Figure 5).
		V_{REF+} This is the positive analog voltage reference input. In order to maintain accuracy the voltage range of V_{REF} ($V_{REF} = V_{REF+} - V_{REF-}$) is

Pin Descriptions (Continued)

$1 V_{DC}$ to $3.3 V_{DC}$ and the voltage at V_{REF+} cannot exceed V_{A+} . See *Figure 6* for recommended bypassing.

V_{REF-} The negative voltage reference input. In order to maintain accuracy the voltage at this pin must not go below GND or exceed V_{A+} . (See *Figure 6*).

V_{A+}, V_{D+} These are the analog and digital power supply pins. V_{A+} and V_{D+} are not connected together on the chip. These pins should be tied to the same power supply and bypassed separately (see *Figure 6*). The operating voltage range of V_{A+} and V_{D+} is $3.0 V_{DC}$ to $5.5 V_{DC}$.

DGND This is the digital ground pin (see *Figure 6*).

AGND This is the analog ground pin (see *Figure 6*).

ADC12041

12-Bit Plus Sign 216 kHz Sampling Analog-to-Digital Converter

General Description

Operating from a single 5V power supply, the ADC12041 is a 12 bit + sign, parallel I/O, self-calibrating, sampling analog-to-digital converter (ADC). The maximum sampling rate is 216 kHz. On request, the ADC goes through a self-calibration process that adjusts linearity, zero and full-scale errors.

The ADC12041 can be configured to work with many popular microprocessors/microcontrollers and DSPs including National's HPC family, Intel386 and 8051, TMS320C25, Motorola MC68HC11/16, Hitachi 64180 and Analog Devices ADSP21xx.

For complementary voltage references see the LM4040, LM4041 or LM9140.

Features

- Fully differential analog input
- Programmable acquisition times and user-controllable throughput rates
- Programmable data bus width (8/13 bits)
- Built-in Sample-and-Hold
- Programmable auto-calibration and auto-zero cycles

- Low power standby mode
- No missing codes

Key Specifications

($f_{CLK} = 12 \text{ MHz}$)

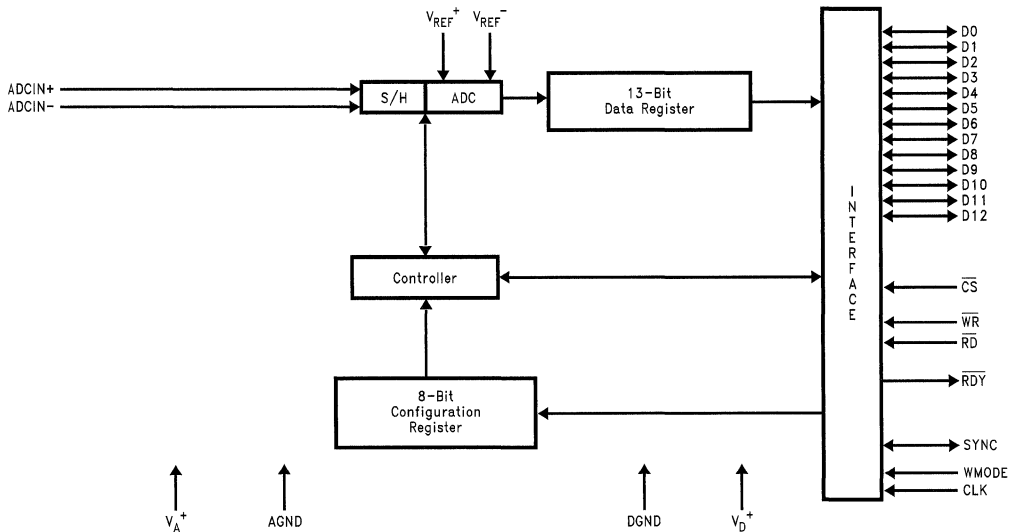

- Resolution
- 13-bit conversion time
- 13-bit throughput rate
- Integral Linearity Error (ILE)
- Single supply
- V_{IN} range
- Power consumption
 - Normal operation
 - Stand-by mode

12-bits + sign
 3.6 μs , max
 216 ksamples/s, min
 $\pm 1 \text{ LSB}$, max
 $+5\text{V} \pm 10\%$
 GND to V_{A+}
 33 mW, max
 75 μW , max

Applications

- Medical instrumentation
- Process control systems
- Test equipment
- Data logging
- Inertial guidance

ADC12041CIV	PLCC
ADC12041CIMS	SSOP

Pin Descriptions

PLCC and SSOP Pkg. Pin Number	Pin Name	Description
5 6	V_{IN+} V_{IN-}	The analog ADC inputs. V_{IN+} is the non-inverting (positive) input and V_{IN-} is the inverting (negative) input into the ADC.
10	V_{REF+}	Positive reference input. The operating voltage range for this input is $1V \leq V_{REF+} \leq V_{A+}$ (see <i>Figure 3</i> and <i>Figure 4</i>). This pin should be bypassed to AGND at least with a parallel combination of a 10 μ F and a 0.1 μ F (ceramic) capacitor. The capacitors should be placed as close to the part as possible.
9	V_{REF-}	Negative reference input. The operating voltage range for this input is $0V \leq V_{REF-} \leq V_{REF+} - 1$ (see <i>Figure 3</i> and <i>Figure 4</i>). This pin should be bypassed to AGND at least with a parallel combination of a 10 μ F and a 0.1 μ F (ceramic) capacitor. The capacitors should be placed as close to the part as possible.
4	WMODE	The logic state of this pin at power-up determines which edge of the write signal (\overline{WR}) will latch in data from the data bus. If tied low, the ADC12041 will latch in data on the rising edge of the \overline{WR} signal. If tied to a logic high, data will be latched in on the falling edge of the \overline{WR} signal. The state of this pin should not be changed after power-up.
27	SYNC	The SYNC pin can be programmed as an input or an output . The Configuration register's bit b4 controls the function of this pin. When programmed as an input pin (b4 = 1), a rising edge on this pin causes the ADC's sample-and-hold to hold the analog input signal and begin conversion. When programmed as an output pin (b4 = 0), the SYNC pin goes high when a conversion begins and returns low when completed.
12–20 23–26	D0–D8 D9–D12	13-bit Data bus of the ADC12041. D12 is the most significant bit and D0 is the least significant. The BW (bus width) bit of the Configuration register (b3) selects between an 8-bit or 13-bit data bus width. When the BW bit is cleared (BW = 0), D7–D0 are active and D12–D8 are always in TRI-STATE®. When the BW bit is set (BW = 1), D12–D0 are active.
28	CLK	The clock input pin used to drive the ADC12041. The operating range is 0.05 MHz to 12 MHz.
1	\overline{WR}	\overline{WR} is the active low WRITE control input pin. A logic low on this pin and the \overline{CS} will enable the input buffers of the data pins D12–D0. The signal at this pin is used by the ADC12041 to latch in data on D12–D0. The sense of the WMODE pin at power-up will determine which edge of the \overline{WR} signal the ADC12041 will latch in data. See WMODE pin description.
2	\overline{RD}	\overline{RD} is the active low read control input pin. A logic low on this pin and \overline{CS} will enable the active output buffers to drive the data bus.
3	\overline{CS}	\overline{CS} is the active low Chip Select input pin. Used in conjunction with the \overline{WR} and \overline{RD} signals to control the active data bus input/output buffers of the data bus.
11	\overline{RDY}	\overline{RDY} is an active low output pin. The signal at this pin indicates when a requested function has begun or ended. Refer to section Functional Description and the digital timing diagrams for more detail.
7	V_{A+}	Analog supply input pin. The device operating supply voltage range is $+5V \pm 10\%$. Accuracy is guaranteed only if the V_{A+} and V_{D+} are connected to the same potential. This pin should be bypassed to AGND with a parallel combination of a 10 μ F and a 0.1 μ F (ceramic) capacitor. The capacitors should be placed as close to the supply pins of the part as possible.
8	AGND	Analog ground pin. This is the device's analog supply ground connection. It should be connected through a low resistance and low inductance ground return to the system power supply.
21	V_{D+}	Digital supply input pins. The device operating supply voltage range is $+5V \pm 10\%$. Accuracy is guaranteed only if the V_{A+} and V_{D+} are connected to the same potential. This pin should be bypassed to DGND with a parallel combination of a 10 μ F and a 0.1 μ F (ceramic) capacitor. The capacitors should be placed as close to the supply pins of the part as possible.
22	DGND	Digital ground pin. This is the device's digital supply ground connection. It should be connected through a low resistance and low inductance ground return to the system power supply.

ADC12048

12-Bit Plus Sign 216 kHz 8-Channel Sampling Analog-to-Digital Converter

General Description

Operating from a single 5V power supply, the ADC12048 is a 12 bit + sign, parallel I/O, self-calibrating, sampling analog-to-digital converter (ADC) with an eight input fully differential analog multiplexer. The maximum sampling rate is 216 kHz. On request, the ADC goes through a self-calibration process that adjusts linearity, zero and full-scale errors.

The ADC12048's 8-channel multiplexer is software programmable to operate in a variety of combinations of single-ended, differential, or pseudo-differential modes. The fully differential MUX and the 12-bit + sign ADC allows for the difference between two signals to be digitized.

The ADC12048 can be configured to work with many popular microprocessors/microcontrollers and DSPs including National's HPC family, Intel386 and 8051, TMS320C25, Motorola MC68HC11/16, Hitachi 64180 and Analog Devices ADSP21xx.

For complementary voltage references see the LM4040, LM4041 or LM9140.

Features

- 8-channel programmable Differential or Single-Ended multiplexer
- Programmable Acquisition Times and user-controllable Throughput Rates

- Programmable data bus width (8/13 bits)

Pin Description

PLCC Pkg. Pin Number	PQFP Pkg. Pin Number	Pin Name	Description
6	44	CH0	The eight analog inputs to the Multiplexer. Active channels are selected based on the contents of bits b3–b0 of the Configuration register. Refer to section titled MUX for more details.
7	1	CH1	
8	2	CH2	
9	3	CH3	
15	9	CH4	
16	10	CH5	
17	11	CH6	
18	12	CH7	
14	8	COM	This pin is another analog input pin used as a pseudo ground when the multiplexer is configured in single-ended mode.
13	7	V _{REF+}	Positive reference input. The operating voltage range for this input is 1V ≤ V _{REF+} ≤ V _{A+} (see Figure 3 and 4). This pin should be bypassed to AGND at least with a parallel combination of a 10 μF and a 0.1 μF (ceramic) capacitors. The capacitors should be placed as close to the part as possible.

Pin Description (Continued)

PLCC Pkg. Pin Number	PQFP Pkg. Pin Number	Pin Name	Description
12	6	V_{REF-}	Negative reference input. The operating voltage range for this input is $0V \leq V_{REF-} \leq V_{REF+} - 1$ (see <i>Figure 3</i> and <i>4</i>). This pin should be bypassed to AGND at least with a parallel combination of a 10 μF and a 0.1 μF (ceramic) capacitor. The capacitors should be placed as close to the part as possible.
19 21	13 15	MUX OUT- MUX OUT+	The inverting (negative) and non-inverting (positive) outputs of the multiplexer. The analog inputs to the MUX selected by bits b3–b0 of the Configuration register appear at these pins.
20 22	14 16	ADCIN- ADCIN+	ADC inputs. The inverting (negative) and non-inverting (positive) inputs into the ADC.
24	18	WMODE	The logic state of this pin at power-up determines which edge of the write signal (\overline{WR}) will latch in data from the data bus. If tied low, the ADC12048 will latch in data on the rising edge of the \overline{WR} signal. If tied to a logic high , data will be latched in on the falling edge of the \overline{WR} signal. The state of this pin should not be changed after power-up.
25	19	SYNC	The SYNC pin can be programmed as an input or an output . The Configuration register's bit b8 controls the function of this pin. When programmed as an input pin (b8 = 1), a rising edge on this pin causes the ADC's sample-and-hold to hold the analog input signal and begin conversion. When programmed as an output pin (b8 = 0), the SYNC pin goes high when a conversion begins and returns low when completed.
26–31 34–40	20–25 29–34	D0–D5 D6–D12	13-bit data bus of the ADC12048. D12 is the most significant bit and D0 is the least significant. The BW (bus width) bit of the Configuration register (b12) selects between an 8-bit or 13-bit data bus width. When the BW bit is cleared (BW = 0), D7–D0 are active and D12–D8 are always in TRI-STATE. When the BW bit is set (BW = 1), D12–D0 are active.
43	37	CLK	The clock input pin used to drive the ADC12048. The operating range is 0.05 MHz to 12 MHz.
44	38	\overline{WR}	\overline{WR} is the active low WRITE control input pin. A logic low on this pin and the \overline{CS} will enable the input buffers of the data pins D12–D0. The signal at this pin is used by the ADC12048 to latch in data on D12–D0. The sense of the WMODE pin at power-up will determine which edge of the \overline{WR} signal the ADC12048 will latch in data. See WMODE pin description.
1	39	\overline{RD}	\overline{RD} is the active low read control input pin. A logic low on this pin and \overline{CS} will enable the active output buffers to drive the data bus.
2	40	\overline{CS}	\overline{CS} is the active low Chip Select input pin. Used in conjunction with the \overline{WR} and \overline{RD} signals to control the active data bus input/output buffers of the data bus.
3	41	\overline{RDY}	\overline{RDY} is an active low output pin. The signal at this pin indicates when a requested function has begun or ended. Refer to section Functional Description and the digital timing diagrams for more detail.
4	42	\overline{STDBY}	This is the standby active low output pin. This pin is low when the ADC12048 is in the standby mode and high when the ADC12048 is out of the standby mode or has been requested to leave the standby mode.
10	4	V_{A+}	Analog supply input pin. The device operating supply voltage range is $+5V \pm 10\%$. Accuracy is guaranteed only if the V_{A+} and V_{D+} are connected to the same potential. This pin should be bypassed to AGND with a parallel combination of a 10 μF and a 0.1 μF (ceramic) capacitor. The capacitors should be placed as close to the supply pins of the part as possible.

Pin Description (Continued)

PLCC Pkg. Pin Number	PQFP Pkg. Pin Number	Pin Name	Description
11	5	AGND	Analog ground pin. This is the device's analog supply ground connection. It should be connected through a low resistance and low inductance ground return to the system power supply.
32 and 41	26 and 35	V _D +	Digital supply input pins. The device operating supply voltage range is +5V ±10%. Accuracy is guaranteed only if the V _A + and V _D + are connected to the same potential. This pin should be bypassed to DGND with a parallel combination of a 10 µF and a 0.1 µF (ceramic) capacitor. The capacitors should be placed as close to the supply pins of the part as possible.
33 and 42	27 and 36	DGND	Digital ground pin. This is the device's digital supply ground connection. It should be connected through a low resistance and low inductance ground return to the system power supply.

ADC12081

12-Bit, 5 MHz Self-Calibrating, Pipelined A/D Converter with Internal Sample & Hold

General Description

The ADC12081 is a monolithic CMOS analog-to-digital converter capable of converting analog input signals into 12-bit digital words at 5 megasamples per second (MSPS). The ADC12081 utilizes an innovative pipeline architecture to minimize die size and power consumption. The ADC12081 uses self-calibration and error correction to maintain accuracy and performance over temperature.

The ADC12081 converter operates on a 5V power supply and can digitize analog input signals in the range of 0 to 2V. A single convert clock controls the conversion operation. All digital I/O is TTL compatible.

The ADC12081 is designed to minimize external components necessary for the analog input interface. An internal sample-and-hold circuit samples the analog input and an internal amplifier buffers the reference voltage input.

The ADC12081 is available in the 32-lead LQFP package and is designed to operate over the extended commercial temperature range of -40°C to +85°C.

Features

- Single 5V power supply
- Simple analog input interface
- Internal Sample-and-hold
- Internal Reference buffer amplifier
- Low power consumption

Key Specifications

■ Resolution	12 Bits
■ Conversion Rate	5 Msp/s (min)
■ DNL	±0.35 LSB (typ)
■ SNR	68 dB (typ)
■ ENOB	10.9 Bits (typ)
■ Analog Input Range	2 V _{pp} (min)
■ Supply Voltage	+5V ±5%
■ Power Consumption, 5 MHz	105 mW (typ)

Applications

- Image processing front end
- PC-based data acquisition
- Scanners
- Fax machines
- Waveform digitizer

Pin Descriptions and Equivalent Circuits #2

No.	Symbol	Equivalent Circuit	Description
2	V_{IN}		Analog signal input. With a 2.0V reference voltage, input signal voltages in the range of 0 to 2.0 Volts will be converted. See section 1.2.
1	V_{REF}		Reference voltage input. This pin should be driven from an accurate, stable reference source in the range of 1.8 to 2.2V and bypassed to a low-noise analog ground with a monolithic ceramic capacitor, nominally 0.01 μ F. See section 1.1.
32	V_{RP}		Positive reference bypass pin. Bypass with a 0.1 μ F capacitor. Do not connect anything else to this pin. See section 3.1
31	V_{RM}		Reference midpoint bypass pin. Bypass with a 0.1 μ F capacitor. Do not connect anything else to this pin. See section 3.1
30	V_{RN}		Negative reference bypass pin. Bypass with a 0.1 μ F capacitor. Do not connect anything else to this pin. See section 3.1
10	CLOCK		Sample Clock input, TTL compatible. Maximum amplitude should not exceed 3V.
8	CAL		Calibration request, active High. Calibration cycle starts when CAL returns to logic low. CAL is ignored during power-down mode. See section 2.2.
7	PD		Power-down, active High, ignored during calibration cycle. See paragraph 2.4
11	\overline{OE}		Output enable control, active low. When this pin is high the data outputs are in Tri-state (high-impedance) mode.
28	OR		Over range indicator. This pin is at a logic High for $V_{IN} < 0$ or for $V_{IN} > V_{REF}$.
29	READY		Device ready indicator, active High. This pin is at a logic Low during a calibration cycle and while the device is in the power down mode.
14-19, 22-27	D0 - D11		Digital output word, CMOS compatible. D0 (pin 14) is LSB, D11 (pin 27) is MSB. Load with no more than 50pF.

Pin Descriptions and Equivalent Circuits #2 (Continued)

No.	Symbol	Equivalent Circuit	Description
3	$V_{IN\ com}$		Analog input common. Connect to a quiet point in analog ground near the driving device. See section 1.2.
5	V_A		Positive analog supply pin. Connect to a clean, quiet voltage source of +5V. V_A and V_D should have a common supply and be separately bypassed with a 5 μ F to 10 μ F capacitor and a 0.1 μ F chip capacitor.
4, 6	AGND		The ground return for the analog supply. AGND and DGND should be connected together close to the ADC12081 package. See section 5.0.
13	V_D		Positive analog supply pin. Connect to a clean, quiet voltage source of +5V. V_A and V_D should have a common supply and be separately bypassed with a 5 μ F to 10 μ F capacitor and a 0.1 μ F chip capacitor.
9, 12	DGND		The ground return for the analog supply. AGND and DGND should be connected together close to the ADC12081 package. See section 5.0
21	$V_D\ I/O$		The digital output driver supply pin. This pin can be operated from a supply voltage of 3V to 5V, but the voltage on this pin should never exceed the V_D supply pin voltage.
20	DGND I/O		The ground return for the output drivers. This pin should be returned to a point in the digital ground that is removed from the other ground pins of the ADC12081.

ADC12130/ADC12132/ADC12138

Self-Calibrating 12-Bit Plus Sign Serial I/O A/D Converters with MUX and Sample/Hold

General Description

The ADC12130, ADC12132 and ADC12138 are 12-bit plus sign successive approximation A/D converters with serial I/O and configurable input multiplexer. The ADC12132 and ADC12138 have a 2 and an 8 channel multiplexer, respectively. The differential multiplexer outputs and A/D inputs are available on the MUXOUT1, MUXOUT2, A/DIN1 and A/DIN2 pins. The ADC12130 has a two channel multiplexer with the multiplexer outputs and A/D inputs internally connected. The ADC12130 family is tested with a 5 MHz clock. On request, these A/Ds go through a self calibration process that adjusts linearity, zero and full-scale errors to typically less than ± 1 LSB each.

The analog inputs can be configured to operate in various combinations of single-ended, differential, or pseudo-differential modes. A fully differential unipolar analog input range (0V to +5V) can be accommodated with a single +5V supply. In the differential modes, valid outputs are obtained even when the negative inputs are greater than the positive because of the 12-bit plus sign output data format.

The serial I/O is configured to comply with the NSC MICROWIRE™. For voltage references, see the LM4040 or LM4041.

Features

- Serial I/O (MICROWIRE, SPI and QSPI Compatible)
- 2 or 8 channel differential or single-ended multiplexer
- Analog input sample/hold function
- Power down mode
- Programmable acquisition time
- Variable digital output word length and format
- No zero or full scale adjustment required
- 0V to 5V analog input range with single 5V power supply

Key Specifications

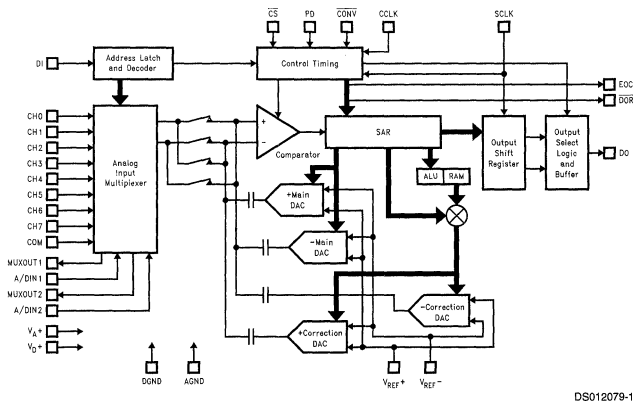

- Resolution: 12-bit plus sign
- 12-bit plus sign conversion time: 8.8 μ s (max)
- 12-bit plus sign throughput time: 14 μ s (max)
- Integral linearity error: ± 2 LSB (max)
- Single supply: 3.3V or 5V $\pm 10\%$
- Power consumption

— 3.3V	15 mW (max)
— 3.3V power down	40 μ W (typ)
— 5V	33 mW (max)
— 5V power down	100 μ W (typ)

Applications

- Pen-based computers
- Digitizers
- Global positioning systems

Pin Descriptions

CCLK	The clock applied to this input controls the successive approximation conversion time interval and the acquisition time. The rise and fall times of the clock edges should not exceed 1 μ s.		
SCLK	This is the serial data clock input. The clock applied to this input controls the rate at which the serial data exchange occurs. The rising edge loads the information on the DI pin into the multiplexer address and mode select shift register. This address controls which channel of the analog input multiplexer (MUX) is selected and the mode of operation for the A/D. With \overline{CS} low, the falling edge of SCLK shifts the data resulting from the previous ADC conversion out on DO, with the exception of the first bit of data. When \overline{CS} is low continuously, the first bit of the data is clocked out on the rising edge of EOC (end of conversion). When \overline{CS} is toggled, the falling edge of \overline{CS} always clocks out the first bit of data. \overline{CS} should be brought low when SCLK is low. The rise and fall times of the clock edges should not exceed 1 μ s.		low during a conversion in progress the data output at that time should be ignored. \overline{CS} may also be left continuously low. In this case it is imperative that the correct number of SCLK pulses be applied to the ADC in order to remain synchronous. After the ADC supply power is applied it expects to see 13 clock pulses for each I/O sequence. The number of clock pulses the ADC expects is the same as the digital output word length. This word length can be modified by the data shifted in on the DO pin. <i>Table 4</i> details the data required.
		\overline{DOR}	This is the data output ready pin. This pin is an active push/pull output. It is low when the conversion result is being shifted out and goes high to signal that all the data has been shifted out.
		\overline{CONV}	A logic low is required on this pin to program any mode or change the ADC's configuration as listed in the Mode Programming Table (<i>Table 4</i>) such as 12-bit conversion, Auto Cal, Auto Zero etc. When this pin is high the ADC is placed in the read data only mode. While in the read data only mode, bringing \overline{CS} low and pulsing SCLK will only clock out on DO any data stored in the ADCs output shift register. The data on DI will be neglected. A new conversion will not be started and the ADC will remain in the mode and/or configuration previously programmed. Read data only cannot be performed while a conversion, Auto-Cal or Auto-Zero are in progress.
DI	This is the serial data input pin. The data applied to this pin is shifted by the rising edge of SCLK into the multiplexer address and mode select register. <i>Table 2</i> through <i>Table 4</i> show the assignment of the multiplexer address and the mode select data.		
DO	The data output pin. This pin is an active push/pull output when \overline{CS} is low. When \overline{CS} is high, this output is TRI-STATE. The A/D conversion result (DB0–DB12) and converter status data are clocked out by the falling edge of SCLK on this pin. The word length and format of this result can vary (see <i>Table 1</i>). The word length and format are controlled by the data shifted into the multiplexer address and mode select register (see <i>Table 4</i>).	PD	This is the power down pin. When PD is high the A/D is powered down; when PD is low the A/D is powered up. The A/D takes a maximum of 700 μ s to power up after the command is given.
		CH0–CH7	These are the analog inputs of the MUX. A channel input is selected by the address information at the DI pin, which is loaded on the rising edge of SCLK into the address register (see <i>Table 2</i> and <i>Table 3</i>). The voltage applied to these inputs should not exceed V_{A+} or go below GND. Exceeding this range on an unselected channel will corrupt the reading of a selected channel.
EOC	This pin is an active push/pull output and indicates the status of the ADC12130/2/8. When low, it signals that the A/D is busy with a conversion, auto-calibration, auto-zero or power down cycle. The rising edge of EOC signals the end of one of these cycles.		
\overline{CS}	This is the chip select pin. When a logic low is applied to this pin, the rising edge of SCLK shifts the data on DI into the address register. This low also brings DO out of TRI-STATE. With \overline{CS} low, the falling edge of SCLK shifts the data resulting from the previous ADC conversion out on DO, with the exception of the first bit of data. When \overline{CS} is low continuously, the first bit of the data is clocked out on the rising edge of EOC (end of conversion). When \overline{CS} is toggled, the falling edge of \overline{CS} always clocks out the first bit of data. \overline{CS} should be brought low when SCLK is low. The falling edge of \overline{CS} resets a conversion in progress and starts the sequence for a new conversion. When \overline{CS} is brought back low during a conversion, that conversion is prematurely terminated. The data in the output latches may be corrupted. Therefore, when \overline{CS} is brought back	COM	This pin is another analog input pin. It is used as a pseudo ground when the analog multiplexer is single-ended.
		MUXOUT1, MUXOUT2	These are the multiplexer output pins.
		A/DIN1, A/DIN2	These are the converter input pins. MUXOUT1 is usually tied to A/DIN1. MUXOUT2 is usually tied to A/DIN2. If external circuitry is placed between MUXOUT1 and A/DIN1, or MUXOUT2 and A/DIN2 it may be necessary to protect these pins. The voltage at these pins should not exceed V_{A+} or go below AGND (see <i>Figure 5</i>).
		V_{REF+}	This is the positive analog voltage reference input. In order to maintain accuracy, the voltage range of V_{REF} ($V_{REF} = V_{REF+} - V_{REF-}$) is

Pin Descriptions (Continued)

V_{REF+} The positive voltage reference input. The voltage at V_{REF+} cannot exceed V_{A+} . See *Figure 6* for recommended bypassing.

V_{REF-} The negative voltage reference input. In order to maintain accuracy, the voltage at this pin must not go below GND or exceed V_{A+} . (See *Figure 6*).

V_{A+} , V_{D+} These are the analog and digital power supply pins. V_{A+} and V_{D+} are not connected together on the chip. These pins should be tied to the same power supply and bypassed separately (see *Figure 6*). The operating voltage range of V_{A+} and V_{D+} is $3.0 V_{DC}$ to $5.5 V_{DC}$.

DGND This is the digital ground pin (see *Figure 6*).

AGND This is the analog ground pin (see *Figure 6*).

ADC12181

12-Bit, 10 MHz Self-Calibrating, Pipelined A/D Converter with Internal Sample & Hold

General Description

The ADC12181 is a monolithic CMOS analog-to-digital converter capable of converting analog input signals into 12-bit digital words at 10 megasamples per second (MSPS). The ADC12181 utilizes an innovative pipeline architecture to minimize die size and power consumption. Self-calibration and error correction maintain accuracy and performance over temperature.

The ADC12181 converter operates on a 5V power supply and can digitize analog input signals in the range of 0 to 2V. A single convert clock controls the conversion operation. All digital I/O is TTL compatible.

The ADC12181 is designed to minimize external components necessary for the analog input interface. An internal sample-and-hold circuit samples the analog input and an internal amplifier buffers the reference voltage input.

The ADC12181 is available in the 32-lead TQFP package and is designed to operate over the extended commercial temperature range of -40°C to +85°C.

Features

- Single 5V power supply
- Simple analog input interface
- Internal Sample-and-hold
- Internal Reference buffer amplifier
- Low power consumption

Key Specifications

■ Resolution	12 Bits
■ Conversion Rate	10 Msps (min)

ADC12281

12-Bit, 20 MSPS Single-Ended Input, Pipelined A/D Converter

General Description

The ADC12281 is a monolithic CMOS analog-to-digital converter capable of converting analog input signals into 12-bit digital words at 20 megasamples per second (MSPS). It utilizes a pipeline architecture to minimize die size and power dissipation. Self-calibration and error correction maintain accuracy and performance over temperature.

The ADC12281 operates on a 5V power supply and can digitize single-ended analog input signals in the range of 0V to 2V. A single convert clock controls the conversion operation and all digital I/O is TTL compatible.

The ADC12281 is designed to minimize external components necessary for the analog input interface. An internal sample-and-hold circuit samples the single-ended analog input and an internal amplifier buffers the reference voltage input.

The Power Down feature reduces power consumption to 20 mW, typical.

The ADC12281 is available in the 32-lead TQFP package and is designed to operate over the industrial temperature range of -40°C to $+85^{\circ}\text{C}$.

Features

- Single 5V power supply
- Single-ended analog input
- Internal sample-and-hold
- Internal reference buffer amplifier
- Low offset and gain errors

Key Specifications

- | | |
|-----------------------------|------------------|
| ■ Resolution | 12 bits |
| ■ Conversion rate | up to 20 MSPS |
| ■ DNL | 0.35 LSB (typ) |
| ■ SNR | 65.5 dB (typ) |
| ■ ENOB | 10.5 bits (typ) |
| ■ Analog input range | $2 V_{PP}$ (min) |
| ■ Supply voltage | $+5V \pm 5\%$ |
| ■ Power consumption, 20 MHz | 443 mW (typ) |

Applications

- Digital signal processing front end
- Digital television
- Radar
- High speed data links
- Waveform digitizers
- Quadrature demodulation

Pin Descriptions and Equivalent Circuits

Pin	Symbol	Equivalent Circuit	Description
2	V_{IN}		Single-ended analog signal input. With a 2.0V reference voltage, input signal voltages in the range of 0V to 2.0V will be converted. See Section 1.2.
1	V_{REF}		Reference voltage input. This pin should be driven from an accurate, stable reference source in the range of 1.8V to 2.2V and bypassed to a low-noise ground with a monolithic ceramic capacitor, nominally 0.01 μF . See Section 1.1.

Pin Descriptions and Equivalent Circuits (Continued)

Pin	Symbol	Equivalent Circuit	Description
32	V_{RP}		Positive reference bypass pin. Bypass with a 0.1 μ F capacitor. Do not connect anything else to this pin. See Section 3.1.
31	V_{RM}		Reference midpoint bypass pin. Bypass with a 0.1 μ F capacitor. Do not connect anything else to this pin. See Section 3.1.
30	V_{RN}		Negative reference bypass pin. Bypass with a 0.1 μ F capacitor. Do not connect anything else to this pin. See Section 3.1.
10	CLOCK		Sample clock input, TTL compatible. Amplitude should not exceed 3 V_{P-P} .
8	CAL		Calibration request, active High. Calibration cycle starts when CAL returns to logic low. CAL is ignored during power-down mode. See Section 2.2.
7	PD		Power-down, active High, ignored during calibration cycle. See paragraph 2.4.
11	\overline{OE}		Output enable control, active low. When this pin is high the data outputs are in TRI-STATE® (high-impedance) mode.
28	OR		Over-range indicator. This pin is at a logic High, for $V_{IN} < 0$ or for $V_{IN} > V_{REF}$.
29	READY		Device ready indicator, active High. This pin will be at a logic Low during a calibration cycle and while the device is in the power down mode.
14–19, 22–27	D0–D11		Digital output word, CMOS compatible. D0 (pin 19) is LSB, D11 (pin 36) is MSB. Load with no more than 25 pF.

Pin Descriptions and Equivalent Circuits (Continued)

Pin	Symbol	Equivalent Circuit	Description
3	$V_{IN\ COM}$		Analog input common. Connect to a quiet point in analog ground near the driving device. See Section 1.2.
5	V_A		Positive analog supply pin. Connect to a clean, quiet voltage source of +5V. V_A and V_D should have a common supply and be separately bypassed with a 5 μ F to 10 μ F capacitor and a 0.1 μ F chip capacitor.
4, 6	AGND		The ground return for the analog supply, AGND and DGND should be connected together close to the ADC12281 package. See Section 5.0.
13	V_D		Positive digital supply pin. Connect to a clean, quiet voltage source of +5V. V_A and V_D should have a common supply and be separately bypassed with a 5 μ F to 10 μ F capacitor and a 0.1 μ F chip capacitor.
9, 12	DGND		The ground return for the digital supply. AGND and DGND should be connected together close to the ADC12281 package. See Section 5.0.
21	$V_D\ I/O$		The digital output driver supply pins. This pin can be operated from a supply voltage of 3V to 5V, but the voltage on this pin should never exceed the V_D supply pin voltage. See Section 3.4.
20	DGND I/O		The ground return for the digital output drivers. This pin should be returned to a point in the digital ground that is removed from the other ground pins of the ADC12281.

ADC14061

Self-Calibrating 14-Bit, 2.5 MSPS, 390 mW A/D Converter

General Description

The ADC14061 is a self-calibrating 14-bit, 2.5 Megasample per second analog to digital converter. It operates on a single +5V supply, consuming just 390mW (typ).

The ADC14061 provides an easy and affordable upgrade from 12 bit converters. The ADC14061 may also be used to replace many hybrid converters with a resultant saving of space, power and cost.

The ADC14061 operates with excellent dynamic performance at input frequencies up to 1/2 the clock frequency. The calibration feature of the ADC14061 can be used to get more consistent and repeatable results over the entire operating temperature range. On-command self-calibration reduces many of the effects of temperature-induced drift, resulting in more repeatable conversions.

The Power Down feature reduces power consumption to less than 2mW.

The ADC14061 comes in a TQFP and is designed to operate over the commercial temperature range of 0°C to +70°C.

Features

- Single +5V Operation
- Auto-Calibration
- Power Down Mode
- TTL/CMOS Input/Output compatible

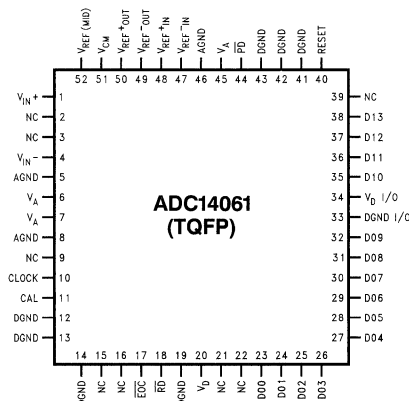

Key Specifications

- | | |
|-----------------------------|-----------------|
| ■ Resolution | 14 Bits |
| ■ Conversion Rate | 2.5 Msps (min) |
| ■ DNL | 0.3 LSB (typ) |
| ■ SNR ($f_{IN} = 500$ kHz) | 80 dB (typ) |
| ■ ENOB | 12.8 Bits (typ) |
| ■ Supply Voltage | +5V \pm 5% |
| ■ Power Consumption | 390mW (typ) |

Applications

- Instrumentation
- PC-Based Data Acquisition
- Data Communications
- Blood Analyzers
- Sonar/Radar

Pin Descriptions and Equivalent Circuits

Pin No.	Symbol	Equivalent Circuit	Description
Analog I/O			
1	V_{IN+}		Non-Inverting analog signal Input. With a 2.0V reference voltage and a 2.0V common mode voltage, V_{CM} , the input signal voltage range is from 1.0 volt to 3.0 Volts.
4	V_{IN-}		Inverting analog signal Input. With a 2.0V reference voltage and a 2.0V common mode voltage, V_{CM} , the input signal voltage range is from 1.0 Volt to 3.0 Volts. The input signal should be balanced for best performance.
48	$V_{REF+ IN}$		Positive reference input. This pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor. V_{REF+} minus $V_{REF- IN}$ should be a minimum of 1.8V and a maximum of 2.2V. The full-scale input voltage is equal to $V_{REF+ IN}$ minus $V_{REF- IN}$.
47	$V_{REF- IN}$		Negative reference input. In most applications this pin should be connected to AGND and the full reference voltage applied to $V_{REF+ IN}$. If the application requires that $V_{REF- IN}$ be offset from AGND, this pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor. $V_{REF+ IN}$ minus $V_{REF- IN}$ should be a minimum of 1.8V and a maximum of 2.2V. The full-scale input voltage is equal to $V_{REF+ IN}$ minus $V_{REF- IN}$.
50	$V_{REF+ OUT}$		Output of the high impedance positive reference buffer. With a 2.0V reference input, and with a V_{CM} of 2.0V, this pin will have a 3.0V output voltage. This pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor in parallel with a 10 μ F capacitor.
49	$REF- OUT$		The output of the negative reference buffer. With a 2.0V reference and a V_{CM} of 2.0V, this pin will have a 1.0V output voltage. This pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor in parallel with a 10 μ F capacitor.
52	$V_{REF (MID)}$		Output of the reference mid-point, nominally equal to 0.4 V_A (2.0V). This pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor. This voltage is derived from V_{CM} .
51	V_{CM}		Input to the common mode buffer, nominally equal to 40% of the supply voltage (2.0V). This pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor. Best performance is obtained if this pin is driven with a low impedance source of 2.0V.

Pin Descriptions and Equivalent Circuits (Continued)

Digital I/O			
10	Clock		Digital clock input. The input voltage is captured t_{AD} after the fall of the clock signal. The range of frequencies for this input is 300 kHz to 2.5 MHz. The clock frequency should not be changed or interrupted during conversion or while reading data output.
11	CAL		CAL is a level-sensitive digital input that, when pulsed high for at least two clock cycles, puts the ADC into the CALIBRATE mode. Calibration should be performed upon ADC power-up (after asserting a reset) and each time the temperature changes by more than 50°C since the ADC14061 was last calibrated. See Section 2.3 for more information.
40	RESET		RESET is a level-sensitive digital input that, when pulsed high for at least 2 CLOCK cycles, results in the resetting of the ADC. This reset pulse must be applied after ADC power-up, before calibration.
18	\overline{RD}		\overline{RD} is the (READ) digital input that, when low, enables the output data buffers. When this input pin is high, the output data bus is in a high impedance state.
44	\overline{PD}		\overline{PD} is the Power Down input that, when low, puts the converter into the power down mode. When this pin is high, the converter is in the active mode.
17	\overline{EOC}		\overline{EOC} is a digital output that, when low, indicates the availability of new conversion results at the data output pins.
23-32 35-38	D00-13		Digital data outputs that make up the 14-bit TRI-STATE conversion results. D00 is the LSB, while D13 is the MSB (SIGN bit) of the two's complement output word.
Analog Power			
6, 7, 45	V_A		Positive analog supply pins. These pins should be connected to a clean, quiet +5V source and bypassed to AGND with 0.1 μ F monolithic capacitors in parallel with 10 μ F capacitors, both located within 1 cm of these power pins.
5, 8, 46	AGND		The ground return for the analog supply. AGND and DGND should be connected together directly beneath the ADC14061 package. See Section 5 (Layout and grounding) for more details).

Pin Descriptions and Equivalent Circuits (Continued)

Digital Power

20	V_D		Positive digital supply pin. This pin should be connected to the same clean, quiet +5V source as is V_A and bypassed to DGND with a 0.1 μ F monolithic capacitor in parallel with a 10 μ F capacitor, both located within 1 cm of the power pin.
12,13 14,19, 41,42, 43	DGND		The ground return for the digital supply. AGND and DGND should be connected together directly beneath the ADC14061 package. See Section 5 (Layout and Grounding) for more details.
34	V_D I/O		Positive digital supply pin for the ADC14061's output drivers. This pin should be connected to a +3V to +5V source and bypassed to DGND I/O with a 0.1 μ F monolithic capacitor. If the supply for this pin is different from the supply used for V_A and V_D , it should also be bypassed with a 10 μ F capacitor. All bypass capacitors should be located within 1 cm of the supply pin.
33	DGND I/O		The ground return for the digital supply for the ADC14061's output drivers. This pin should be connected to the system digital ground, but not be connected in close proximity to the ADC14061's DGND or AGND pins. See Section 5.0 (Layout and Grounding) for more details.
NC			
2, 3, 9, 15, 16, 21, 22, 39	NC		All pins marked NC (no connect) should be left floating. Do not connect the NC pins to ground, power supplies, or any other potential or signal. These pins are used for test in the manufacturing process.

ADC14071

14-Bit, 7 MSPS, 380 mW A/D Converter

General Description

The ADC14071 is a 14-bit, monolithic analog to digital converter capable of conversion rates up to 8 Megasamples per second. This CMOS converter uses a differential, pipelined architecture with digital error correction and an on-chip track-and-hold circuit to maintain superb dynamic performance with input frequencies up to 20MHz. Tested and guaranteed dynamic performance specifications provide the designer with known performance. The ADC14071 operates on a +5V single supply consuming just 380mW (typical). The Power Down feature reduces power consumption to 20mW, typical.

The differential inputs provide a full scale input swing of $\pm V_{REF}$ with the possibility of a single input. Full use of the differential input is recommended for optimum performance. For ease of use, the reference input is single ended. This single-ended reference input is converted on-chip to a differential reference configuration for use by the processing circuitry. Output data format is 14-bit straight binary.

The ADC14071 may be used to replace many hybrid converters with a resultant saving of space, power and cost.

The ADC14071 comes in a 48-pin TQFP and is specified to operate over the industrial temperature range of -40°C to $+85^{\circ}\text{C}$.

Features

- Single +5V Operation
- Power Down Mode
- TTL/CMOS Input/Output Compatible

Key Specifications

- Resolution 14 Bits
- Max Conversion Rate 7 Msps (min)
- DNL ± 0.6 LSB (typ)
- SNR ($f_{IN} = 500$ kHz) 80 dB (typ)
- ENOB ($f_W = 500$ kHz) 12.6 Bits (typ)
- Supply Voltage $+5V \pm 5\%$
- Power Consumption 380 mW (typ)

Applications

- Document Scanners
- Imaging
- Instrumentation
- PC-Based Data Acquisition
- Spectrum Analyzers
- Sonar/Radar
- xDSL
- Wireless Local Loop
- Data Acquisition Systems
- DSP Front End

Pin No.	Symbol	Equivalent Circuit	Description
Analog I/O			
1	V_{IN+}		Non-Inverting analog signal Input. With a 2.0V reference voltage and a 2.0V common mode voltage, V_{CM} , the input signal voltage range is from 1.0 volt to 3.0 Volts.
4	V_{IN-}		Inverting analog signal Input. With a 2.0V reference voltage and a 2.0V common mode voltage, V_{CM} , the input signal voltage range is from 1.0 Volt to 3.0 Volts. The input signal should be balanced for best performance.
48	$V_{REF+ IN}$		Positive reference input. This pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor. V_{REF+} minus $V_{REF- IN}$ should be a minimum of 1.8V and a maximum of 2.2V. The full-scale input voltage is equal to $V_{REF+ IN}$ minus $V_{REF- IN}$.
47	$V_{REF- IN}$		Negative reference input. In most applications this pin should be connected to AGND and the full reference voltage applied to $V_{REF+ IN}$. If the application requires that $V_{REF- IN}$ be offset from AGND, this pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor. $V_{REF+ IN}$ minus $V_{REF- IN}$ should be a minimum of 1.8V and a maximum of 2.2V. The full-scale input voltage is equal to $V_{REF+ IN}$ minus $V_{REF- IN}$.
50	$V_{REF+ OUT}$		Output of the high impedance positive reference buffer. With a 2.0V reference input, and with a V_{CM} of 2.0V, this pin will have a 3.0V output voltage. This pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor in parallel with a 10 μ F capacitor.
49	$V_{REF- OUT}$		The output of the negative reference buffer. With a 2.0V reference and a V_{CM} of 2.0V, this pin will have a 1.0V output voltage. This pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor in parallel with a 10 μ F capacitor.
52	$V_{REF (MID)}$		Output of the reference mid-point, nominally equal to 0.4 V_A (2.0V). This pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor. This voltage is derived from V_{CM} .
51	V_{CM}		Input to the common mode buffer, nominally equal to 40% of the supply voltage (2.0V). This pin should be bypassed to AGND with a 0.1 μ F monolithic capacitor. Best performance is obtained if this pin is driven with a low impedance source of 2.0V.

Pin Descriptions and Equivalent Circuits (Continued)

Pin No.	Symbol	Equivalent Circuit	Description
Digital I/O			
10	CLOCK		Digital clock input. The input voltage is captured t_{AD} after the fall of the clock signal. The range of frequencies for this input is 300 kHz to 2.5 MHz. The clock frequency should not be changed or interrupted during conversion or while reading data output.
11	CAL		CAL is a level-sensitive digital input that, when pulsed high for at least two clock cycles, puts the ADC into the CALIBRATE mode. Calibration should be performed upon ADC power-up (after asserting a reset) and each time the temperature changes by more than 50°C since the ADC16061 was last calibrated. See Section 2.3 for more information.
40	RESET		RESET is a level-sensitive digital input that, when pulsed high for at least 2 CLOCK cycles, results in the resetting of the ADC. This reset pulse must be applied after ADC power-up, before calibration.
18	\overline{RD}		\overline{RD} is the (READ) digital input that, when low, enables the output data buffers. When this input pin is high, the output data bus is in a high impedance state.
44	\overline{PD}		\overline{PD} is the Power Down input that, when low, puts the converter into the power down mode. When this pin is high, the converter is in the active mode.
17	\overline{EOC}		\overline{EOC} is a digital output that, when low, indicates the availability of new conversion results at the data output pins.
21-32 35-38	D00-15		Digital data outputs that make up the 16-bit TRI-STATE conversion results. D00 is the LSB, while D15 is the MSB (SIGN bit) of the two's complement output word.

Analog Power

6, 7, 45	V_A		Positive analog supply pins. These pins should be connected to a clean, quiet +5V source and bypassed to AGND with 0.1 μ F monolithic capacitors in parallel with 10 μ F capacitors, both located within 1 cm of these power pins.
5, 8, 46	AGND		The ground return for the analog supply. AGND and DGND should be connected together directly beneath the ADC16061 package. See Section 5 (Layout and grounding) for more details.

Pin Descriptions and Equivalent Circuits (Continued)

Pin No.	Symbol	Equivalent Circuit	Description
Digital Power			
20	V_D		Positive digital supply pin. This pin should be connected to the same clean, quiet +5V source as is V_A and bypassed to DGND with a 0.1 μF monolithic capacitor in parallel with a 10 μF capacitor, both located within 1 cm of the power pin.
12, 13, 14, 19, 41, 42, 43	DGND		The ground return for the digital supply. AGND and DGND should be connected together directly beneath the ADC16061 package. See Section 5 (Layout and Grounding) for more details.
34	V_D I/O		Positive digital supply pin for the ADC16061's output drivers. This pin should be connected to a +3V to +5V source and bypassed to DGND I/O with a 0.1 μF monolithic capacitor. If the supply for this pin is different from the supply used for V_A and V_D , it should also be bypassed with a 10 μF capacitor. All bypass capacitors should be located within 1 cm of the supply pin.
33	DGND I/O		The ground return for the digital supply for the ADC16061's output drivers. This pin should be connected to the system digital ground, but not be connected in close proximity to the ADC16061's DGND or AGND pins. See Section 5.0 (Layout and Grounding) for more details.
NC			
2, 3, 9, 15, 16, 39	NC		All pins marked NC (no connect) should be left floating. Do not connect the NC pins to ground, power supplies, or any other potential or signal. These pins are used for test in the manufacturing process.

ADCV0831

8 Bit Serial I/O Low Voltage Low Power ADC with Auto Shutdown in a SOT Package

General Description

The ADCV0831 is a low voltage 8-bit successive approximation A/D converter with serial I/O. The I/O is a 3-wire serial interface compatible with NSC's MICROWIRE™ & Motorola's SPI standards. It easily interfaces with standard shift registers or microprocessors.

Low voltage and auto shutdown features make the ADCV0831 ideal for portable battery operated electronic devices. The main benefits are most apparent in small portable electronic devices. The tiny A/D converter can be placed anywhere on the board.

Applications

- Digitizing automotive sensors
- Process control monitoring
- Remote sensing in noisy environments
- Instrumentation
- Test systems
- Embedded diagnostics

Features

- Tiny 6-pin SOT 23 package
- Serial digital data link requires few I/O pins
- Auto Shutdown
- 0V to 3V analog input range with single 3V power supply
- TTL/CMOS input/output compatible

Key Specifications

(For 3V supply, typical, unless otherwise noted.)

- Resolution: 8 bits
- Conversion time ($f_C = 700$ kHz): 16 μ s
- Low power dissipation: 720 μ W
- Single supply: 2.7V to 5V_{DC}
- Linearity error: ± 1.5 LSB over temperature
- No missing codes over temperature
- Shutdown supply current 10nA

CLC5956

12-bit, 65 MSPS Broadband Monolithic A/D Converter

General Description

The CLC5956 is a monolithic 12-bit, 65 MSPS analog-to-digital converter subsystem. The device has been optimized for use in cellular base stations and other applications where high resolution, high sampling rate, wide dynamic range, low power dissipation, and compact size are required. The CLC5956 features differential analog inputs, low jitter differential PECL clock inputs, a low distortion track-and-hold with DC to 300 MHz input bandwidth, a band-gap voltage reference, TTL compatible CMOS output logic, and a proprietary 12-bit multi-stage quantizer. The CLC5956 is fabricated on the ABIC-IV 0.8 micron BiCMOS process. The part features a 73 dB spurious free dynamic range (SFDR) and 67 dB SNR. The wideband track-and-hold allows sampling of IF signals to greater than 250 MHz. The part produces two-tone, dithered, spurious-free dynamic range of 83 dBFS at 75 MHz input frequency. The differential analog input provides excellent common-mode rejection, while the differential PECL clock inputs permit the use of balanced transmission to minimize jitter in distributed systems. The 48-pin TSSOP package provides an extremely small footprint for applications where space is a critical consideration. The CLC5956 operates from a single +5V power supply over the industrial temperature range of -40°C to $+85^{\circ}\text{C}$. National thoroughly tests each part to verify full compliance with the guaranteed specifications.

Features

- Wide dynamic range
- IF sampling capability
- 300 MHz input bandwidth
- Small 48-pin TSSOP
- Single +5V supply
- Low cost

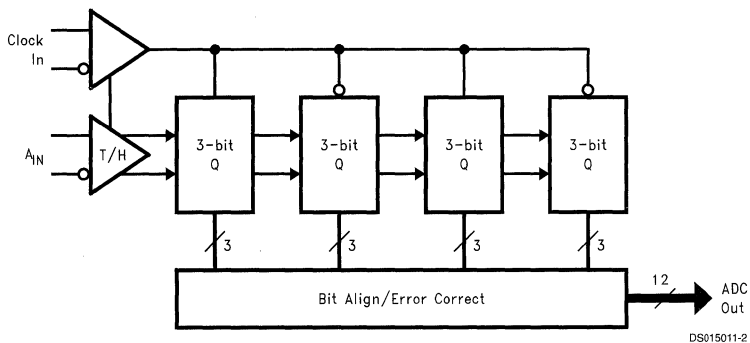

Key Specifications

- | | |
|-------------------------|---------|
| ■ Sample Rate | 65 MSPS |
| ■ SFDR | 73 dBc |
| ■ SFDR with dither | 85 dBFS |
| ■ SNR | 67 dB |
| ■ Low power consumption | 615 mW |

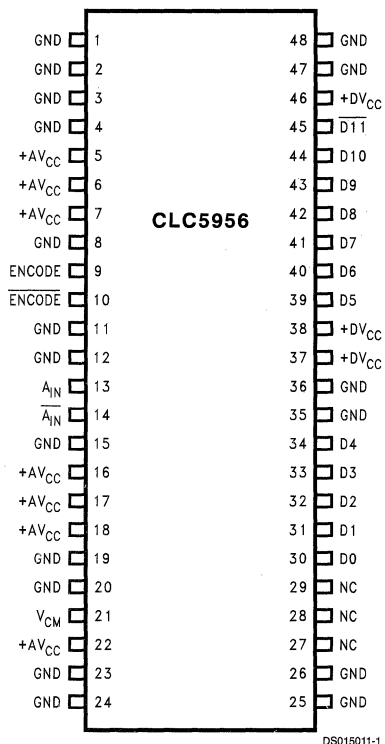

Applications

- Cellular base-stations
- Digital communications
- Infrared/CCD imaging
- IF sampling
- Electro-optics
- Instrumentation
- Medical imaging
- High definition video

Pin Descriptions

Pin Name	Pin No.	Description
$\frac{A_{IN}}{A_{IN}}$	13, 14	Differential input with a common mode voltage of +2.4V. The ADC full scale input is 1.024 V_{PP} on each of the complimentary input signals.
$\frac{ENCODE}{ENCODE}$	9, 10	Differential clock where ENCODE initiates a new data conversion cycle on each rising edge. Logic for these inputs are a 50% duty cycle differential PECL signal.
VCM	21	Internal common mode voltage reference. Nominally +2.4V. Can be used for the input common mode voltage. This voltage is derived from an internal bandgap reference.
$D0-\overline{D11}$	30–34, 39–45	Digital data outputs are CMOS and TTL compatible. D0 is the LSB and $\overline{D11}$ is the MSB. MSB is inverted. Output coding is two's complement.
GND	1–4, 8, 11, 12, 15, 19, 20, 23–26, 35, 36, 47, 48	Circuit ground.
+AV _{CC}	5–7, 16–18, 22	+5V power supply for the analog section. Bypass to ground with a 0.1 μ F capacitor.
+DV _{CC}	37, 38, 46	+5V power supply for the digital section. Bypass to ground with a 0.1 μ F capacitor.

CLC5958

14-Bit, 52 MSPS A/D Converter

General Description

The CLC5958 is a monolithic 14-bit, 52 MSPS analog-to-digital converter. The ultra-wide dynamic range and high sample rate of the device make it an excellent choice for wideband receivers found in multi-channel base-stations. The CLC5958 integrates a low distortion track-and-hold amplifier and a 14-bit multi-stage quantizer on a single die. Other features include differential analog inputs, low jitter differential clock inputs, an internal bandgap voltage reference, and CMOS/TTL compatible outputs. The CLC5958 is fabricated on the National ABIC-V 0.8 micron BiCMOS process.

The CLC5958 features a 90 dB spurious free dynamic range (SFDR) and 70 dB signal-to-noise ratio (SNR). The balanced differential analog inputs ensure low even-order distortion, while the differential clock inputs permit the use of balanced clock signals to minimize clock jitter. The 48-pin CSP package provides an extremely small footprint for applications where space is a critical consideration. The package also provides a very low thermal resistance to ambient. The CLC5958 may be operated with a single +5V power supply. Alternatively, an additional supply may be used to program the digital output levels over the range of +3.3V to +5V. Operation over the industrial temperature range of -40°C to +85°C is guaranteed. National Semiconductor tests each part to verify compliance with the guaranteed specifications.

Features

- Ultra-wide dynamic range
- Excellent performance to Nyquist
- IF sampling capability
- Very small package: 48-pin CSP
- Programmable Output Levels: 3.3V to 5V

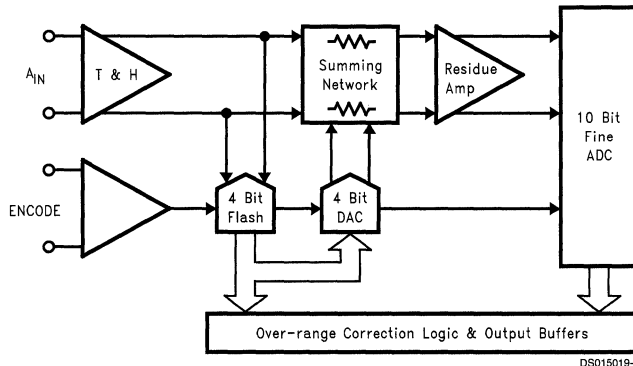

Key Specifications

- | | |
|---------------|----------|
| ■ Sample Rate | 52 MSPS |
| ■ SFDR | 90 dB |
| ■ Noise floor | -72 dBFS |

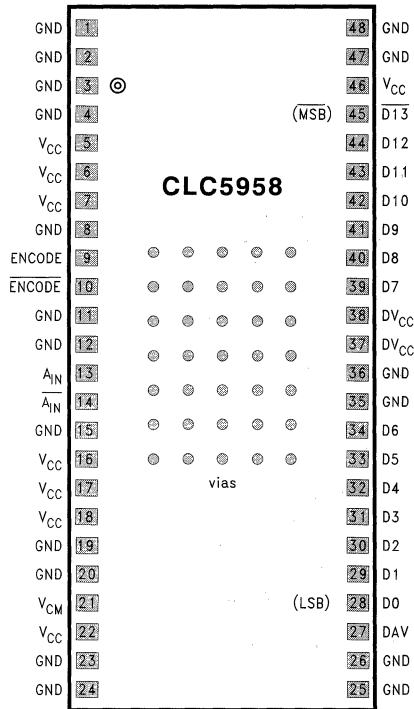

Applications

- Multi-channel basestations
- Multi-standard basestations: GSM, WCDMA, DAMPS, etc.
- Smart antenna systems
- Wireless local loop
- Wideband digital communications

CLC5958PCASM	Evaluation Board

Pin Descriptions

Pin Name	Pin No.	Description
A_{IN} , \overline{A}_{IN}	13, 14	Differential inputs. Self biased at a common mode voltage of +3.25V. The ADC full scale input is 2.048 V_{PP} differential.
\overline{ENCODE} , ENCODE	9, 10	Differential clock inputs. ENCODE initiates a new data conversion cycle on each rising edge. Clock signals may be sinusoidal or square waves with PECL encode levels. The falling edge of ENCODE clocks internal pipeline stages.
$D0$ – $\overline{D13}$	28–34, 39–45	Digital data outputs. CMOS and TTL compatible. D0 is the LSB and $\overline{D13}$ is the inverted MSB. Output coding is two's complement.
DAV	27	Data valid. The rising edge of this signal occurs when output data is valid and may be used to latch data into following circuitry.
V_{CM}	21	Internal analog input common mode voltage reference. Nominally +3.25V. Can be used to establish the analog input common mode voltage for DC coupled applications (DC coupling not recommended, see applications section).
GND	1–4, 8, 11, 12, 15, 19, 20, 23–26, 35, 36, 47, 48 and vias	Circuit ground.
V_{CC}	5–7, 16–18, 22, 46	+5V power supply. Bypass each group of supply pins to ground with a 0.01 μF capacitor.
DV_{CC}	37, 38	+3.3V to +5V power supply for the digital outputs. Establishes the high output level for the digital outputs. Bypass to ground with a 0.1 μF capacitor.

DAC0800/DAC0802

8-Bit Digital-to-Analog Converters

General Description

The DAC0800 series are monolithic 8-bit high-speed current-output digital-to-analog converters (DAC) featuring typical settling times of 100 ns. When used as a multiplying DAC, monotonic performance over a 40 to 1 reference current range is possible. The DAC0800 series also features high compliance complementary current outputs to allow differential output voltages of 20 V_{p-p} with simple resistor loads as shown in *Figure 1*. The reference-to-full-scale current matching of better than ±1 LSB eliminates the need for full-scale trims in most applications while the nonlinearities of better than ±0.1% over temperature minimizes system error accumulations.

The noise immune inputs of the DAC0800 series will accept TTL levels with the logic threshold pin, V_{LC}, grounded. Changing the V_{LC} potential will allow direct interface to other logic families. The performance and characteristics of the device are essentially unchanged over the full ±4.5V to ±18V power supply range; power dissipation is only 33 mW with ±5V supplies and is independent of the logic input states.

The DAC0800, DAC0802, DAC0800C and DAC0802C are a direct replacement for the DAC-08, DAC-08A, DAC-08C, and DAC-08H, respectively.

Features

- Fast settling output current: 100 ns
- Full scale error: ±1 LSB
- Nonlinearity over temperature: ±0.1%
- Full scale current drift: ±10 ppm/°C
- High output compliance: -10V to +18V
- Complementary current outputs
- Interface directly with TTL, CMOS, PMOS and others
- 2 quadrant wide range multiplying capability
- Wide power supply range: ±4.5V to ±18V
- Low power consumption: 33 mW at ±5V
- Low cost

Typical Applications

DAC0808

8-Bit D/A Converter

General Description

The DAC0808 is an 8-bit monolithic digital-to-analog converter (DAC) featuring a full scale output current settling time of 150 ns while dissipating only 33 mW with $\pm 5V$ supplies. No reference current (I_{REF}) trimming is required for most applications since the full scale output current is typically ± 1 LSB of $255 I_{REF}/256$. Relative accuracies of better than $\pm 0.19\%$ assure 8-bit monotonicity and linearity while zero level output current of less than $4 \mu A$ provides 8-bit zero accuracy for $I_{REF} \geq 2$ mA. The power supply currents of the DAC0808 is independent of bit codes, and exhibits essentially constant device characteristics over the entire supply voltage range.

The DAC0808 will interface directly with popular TTL, DTL or CMOS logic levels, and is a direct replacement for the MC1508/MC1408. For higher speed applications, see DAC0800 data sheet.

Features

- Relative accuracy: $\pm 0.19\%$ error maximum
- Full scale current match: ± 1 LSB typ
- Fast settling time: 150 ns typ
- Noninverting digital inputs are TTL and CMOS compatible
- High speed multiplying input slew rate: $8 \text{ mA}/\mu\text{s}$
- Power supply voltage range: $\pm 4.5V$ to $\pm 18V$
- Low power consumption: 33 mW @ $\pm 5V$

DAC0830/DAC0832

8-Bit μ P Compatible, Double-Buffered D to A Converters

General Description

The DAC0830 is an advanced CMOS/Si-Cr 8-bit multiplying DAC designed to interface directly with the 8080, 8048, 8085, Z80®, and other popular microprocessors. A deposited silicon-chromium R-2R resistor ladder network divides the reference current and provides the circuit with excellent temperature tracking characteristics (0.05% of Full Scale Range maximum linearity error over temperature). The circuit uses CMOS current switches and control logic to achieve low power consumption and low output leakage current errors. Special circuitry provides TTL logic input voltage level compatibility.

Double buffering allows these DACs to output a voltage corresponding to one digital word while holding the next digital word. This permits the simultaneous updating of any number of DACs.

The DAC0830 series are the 8-bit members of a family of microprocessor-compatible DACs (MICRO-DAC™).

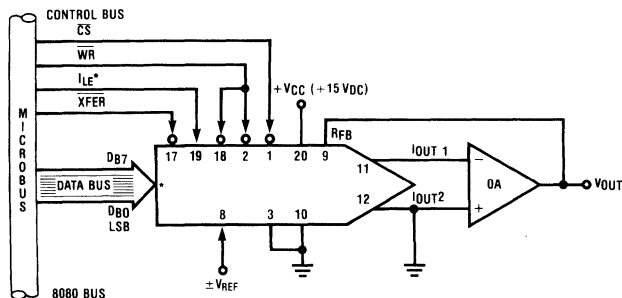

Features

- Double-buffered, single-buffered or flow-through digital data inputs
- Easy interchange and pin-compatible with 12-bit DAC1230 series
- Direct interface to all popular microprocessors
- Linearity specified with zero and full scale adjust only—NOT BEST STRAIGHT LINE FIT.
- Works with ± 10 V reference-full 4-quadrant multiplication
- Can be used in the voltage switching mode
- Logic inputs which meet TTL voltage level specs (1.4V logic threshold)
- Operates "STAND ALONE" (without μ P) if desired
- Available in 20-pin small-outline or molded chip carrier package

Key Specifications

- Current settling time: 1 μ s
- Resolution: 8 bits
- Linearity: 8, 9, or 10 bits (guaranteed over temp.)
- Gain Tempco: 0.0002% FS/°C
- Low power dissipation: 20 mW
- Single power supply: 5 to 15 V_{DC}

LM12454/LM12458/LM12H458

12-Bit + Sign Data Acquisition System with Self-Calibration

General Description

The LM12454, LM12458, and LM12H458 are highly integrated Data Acquisition Systems. Operating on just 5V, they combine a fully-differential self-calibrating (correcting linearity and zero errors) 13-bit (12-bit + sign) analog-to-digital converter (ADC) and sample-and-hold (S/H) with extensive analog functions and digital functionality. Up to 32 consecutive conversions, using two's complement format, can be stored in an internal 32-word (16-bit wide) FIFO data buffer. An internal 8-word RAM can store the conversion sequence for up to eight acquisitions through the LM12(H)458's eight-input multiplexer. The LM12454 has a four-channel multiplexer, a differential multiplexer output, and a differential S/H input. The LM12454 and LM12(H)458 can also operate with 8-bit + sign resolution and in a supervisory "watchdog" mode that compares an input signal against two programmable limits.

Programmable acquisition times and conversion rates are possible through the use of internal clock-driven timers. The reference voltage input can be externally generated for absolute or ratiometric operation or can be derived using the internal 2.5V bandgap reference.

All registers, RAM, and FIFO are directly addressable through the high speed microprocessor interface to either an 8-bit or 16-bit databus. The LM12454 and LM12(H)458 include a direct memory access (DMA) interface for high-speed conversion data transfer.

An evaluation/interface board is available. Order number LM12458EVAL.

Additional applications information can be found in applications notes AN-906, AN-947 and AN-949.

Key Specifications

(f_{CLK} = 5 MHz; 8 MHz, H)

■ Resolution	12-bit + sign or 8-bit + sign
■ 13-bit conversion time	8.8 μ s, 5.5 μ s (H) (max)
■ 9-bit conversion time	4.2 μ s, 2.6 μ s (H) (max)
■ 13-bit Through-put rate	88k samples/s (min), 140k samples/s (H) (min)
■ Comparison time ("watchdog" mode)	2.2 μ s (max), 1.4 μ s (H) (max)
■ ILE	± 1 LSB (max)
■ V_{IN} range	GND to V_A^+
■ Power dissipation	30 mW, 34 mW (H) (max)
■ Stand-by mode	50 μ W (typ)
■ Single supply	3V to 5.5V

Features

- Three operating modes: 12-bit + sign, 8-bit + sign, and "watchdog"
- Single-ended or differential inputs
- Built-in Sample-and-Hold and 2.5V bandgap reference
- Instruction RAM and event sequencer
- 8-channel (LM12(H)458), 4-channel (LM12454) multiplexer
- 32-word conversion FIFO
- Programmable acquisition times and conversion rates
- Self-calibration and diagnostic mode
- 8- or 16-bit wide databus dmicroprocessor or DSP interface

Applications

- Data Logging
- Instrumentation
- Process Control
- Energy Management
- Inertial Guidance

LM12L458

12-Bit + Sign Data Acquisition System with Self-Calibration

General Description

The LM12L458 is a highly integrated 3.3V Data Acquisition System. It combines a fully-differential self-calibrating (correcting linearity and zero errors) 13-bit (12-bit + sign) analog-to-digital converter (ADC) and sample-and-hold (S/H) with extensive analog functions and digital functionality. Up to 32 consecutive conversions, using two's complement format, can be stored in an internal 32-word (16-bit wide) FIFO data buffer. An internal 8-word RAM can store the conversion sequence for up to eight acquisitions through the LM12L458's eight-input multiplexer. The LM12L458 can also operate with 8-bit + sign resolution and in a supervisory "watchdog" mode that compares an input signal against two programmable limits. Programmable acquisition times and conversion rates are possible through the use of internal clock-driven timers.

All registers, RAM, and FIFO are directly addressable through the high speed microprocessor interface to either an 8-bit or 16-bit databus. The LM12L458 includes a direct memory access (DMA) interface for high-speed conversion data transfer.

Applications

- Data Logging
- Process Control
- Energy Management
- Medical Instrumentation

Key Specifications

(f _{CLK} = 6 MHz)	
■ Resolution	12-bit + sign or 8-bit + sign

FPD Link Evaluation Boards

Evaluation boards are available for a nominal charge that demonstrate the basic operation of the FPD Link chipsets. The evaluation boards can be ordered through National's distributors and come assembled with a transmitter board, receiver board, ribbon cable, and instructions.

ORDER NUMBERS	DESCRIPTION
FLink5v8bt-65	5V, 24 bit device, 20-65MHz operation
FLink3v8bt-65	3.3V, 24 bit device, 20-65MHz operation
FLink3v8bt-85	3.3V, 24 bit device, 20-85MHz operation
LDI3v48bt-112	3.3V, 24/48 bit device, 32.5-112/170MHz operation

DS90C363A/DS90CF363A

+3.3V Programmable LVDS Transmitter 18-Bit Flat Panel Display (FPD) Link-65 MHz

+3.3V LVDS Transmitter 18-Bit Flat Panel Display (FPD) Link-65 MHz

1.0 General Description

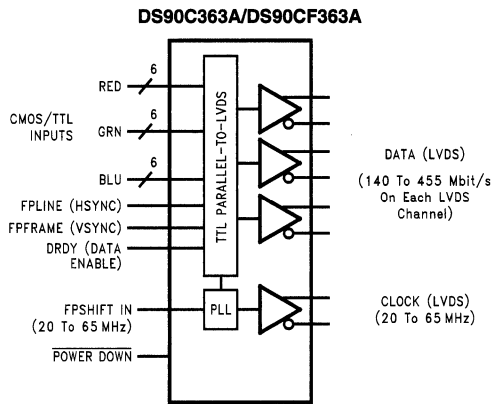

The DS90C363A/DS90CF363A transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. At a transmit clock frequency of 65 MHz, 18 bits of RGB data and 3 bits of LCD timing and control data (FPLINE, FPFRAME, DRDY) are transmitted at a rate of 455 Mbps per LVDS data channel. Using a 65 MHz clock, the data throughput is 170 Mbytes/sec. The DS90C363A transmitter can be programmed for Rising edge strobe or Falling edge strobe through a dedicated pin. The DS90CF363A is fixed as a Falling edge strobe transmitter. A Rising edge or Falling edge strobe transmitter will interoperate with a Falling edge strobe Receiver (DS90CF364) without any translation logic.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

2.0 Features

- 20 to 65 MHz shift clock support
- Rejects $> \pm 3$ ns Jitter from VGA chip with less than 225ps output jitter @65MHz (TJCC)
- Best-in-Class Set & Hold Times on TxINPUTs
- Tx power consumption < 130 mW (typ) @65MHz Grayscale
- $> 50\%$ Less Power Dissipation than BiCMOS Alternatives
- Tx Power-down mode $< 200\mu$ W (max)
- ESD rating > 7 kV (HBM), > 500 V (EIAJ)
- Supports VGA, SVGA, XGA and Dual Pixel SXGA.
- Narrow bus reduces cable size and cost
- Up to 1.3 Gbps throughput
- Up to 170 Megabytes/sec bandwidth
- 345 mV (typ) swing LVDS devices for low EMI
- PLL requires no external components
- Compatible with TIA/EIA-644 LVDS standard
- Low profile 48-lead TSSOP package
- Improved replacement for:
 - SN75LVDS85 — DS90C363A
 - SN75LVDS84 — DS90CF363A

DS90CF363

+3.3V LVDS Transmitter 18-Bit Flat Panel Display (FPD) Link—65 MHz

General Description

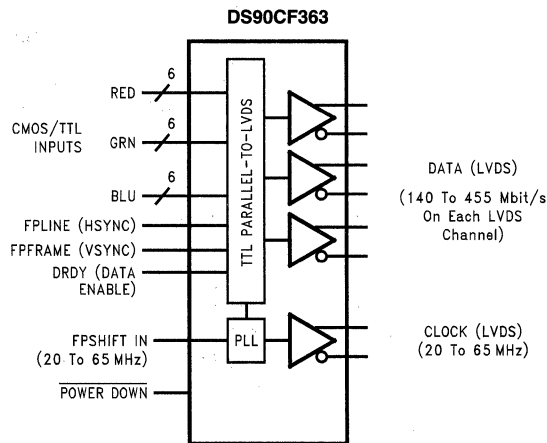

The DS90CF363 transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. At a transmit clock frequency of 65 MHz, 18 bits of RGB data and 3 bits of LCD timing and control data (FPLINE, FPPFRAME, DRDY) are transmitted at a rate of 455 Mbps per LVDS data channel. Using a 65 MHz clock, the data throughputs is 170 Mbytes/sec.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

- 20 to 65 MHz shift clock support
- Single 3.3V supply
- Chipset (Tx + Rx) power consumption < 250 mW (typ)
- Power-down mode (< 0.5 mW total)
- Single pixel per clock XGA (1024x768) ready
- Supports VGA, SVGA, XGA and higher addressability.
- Up to 170 Megabytes/sec bandwidth
- Up to 1.3 Gbps throughput
- Narrow bus reduces cable size and cost
- 290 mV swing LVDS devices for low EMI
- PLL requires no external components
- Low profile 48-lead TSSOP package
- Falling edge data strobe Transmitter
- Compatible with TIA/EIA-644 LVDS standard
- ESD rating > 7 kV
- Operating Temperature: -40°C to +85°C

DS90C363/DS90CF364

+3.3V Programmable LVDS Transmitter 18-Bit Flat Panel Display (FPD) Link—65 MHz, +3.3V LVDS Receiver 18-Bit Flat Panel Display (FPD) Link—65 MHz

General Description

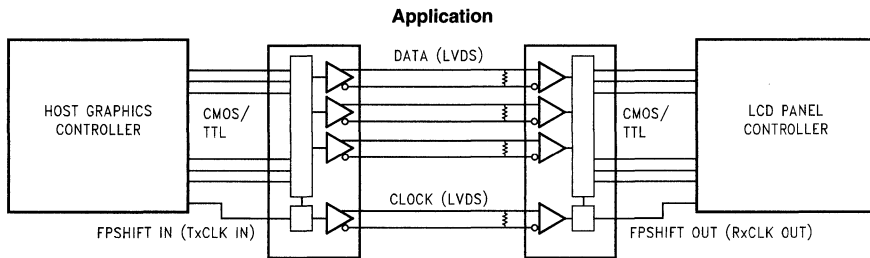

The DS90C363 transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. The DS90CF364 receiver converts the LVDS data streams back into 21 bits of CMOS/TTL data. At a transmit clock frequency of 65 MHz, 18 bits of RGB data and 3 bits of LCD timing and control data (FPLINE, FPFREAME, DRDY) are transmitted at a rate of 455 Mbps per LVDS data channel. Using a 65 MHz clock, the data throughput is 170 Mbytes/sec. The Transmitter is offered with programmable edge data strobes for convenient interface with a variety of graphics controllers. The Transmitter can be programmed for Rising edge strobe or Falling edge strobe through a dedicated pin. A Rising edge Transmitter will interoperate with a Falling edge Receiver (DS90CF364) without any translation logic.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

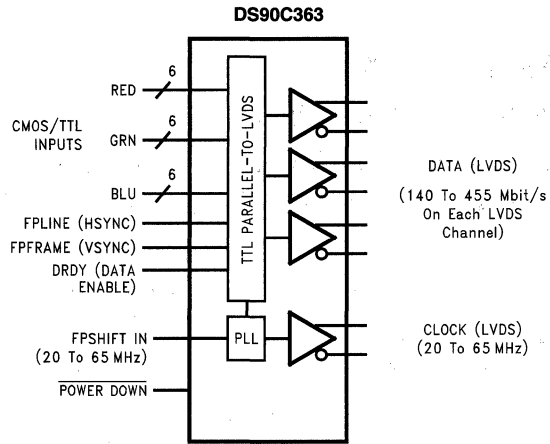

Features

- 20 to 65 MHz shift clock support
- Programmable Transmitter (DS90C363) strobe select (Rising or Falling edge strobe)
- Single 3.3V supply
- Chipset (Tx + Rx) power consumption < 250 mW (typ)
- Power-down mode (< 0.5 mW total)
- Single pixel per clock XGA (1024x768) ready
- Supports VGA, SVGA, XGA and higher addressability.
- Up to 170 Megabyte/sec bandwidth
- Up to 1.3 Gbps throughput
- Narrow bus reduces cable size and cost
- 290 mV swing LVDS devices for low EMI
- PLL requires no external components
- Low profile 48-lead TSSOP package
- Falling edge data strobe Receiver
- Compatible with TIA/EIA-644 LVDS standard
- ESD rating > 7 kV
- Operating Temperature: -40°C to +85°C

+3.3V Programmable LVDS Transmitter 24-Bit Flat Panel Display (FPD) Link-65 MHz

+3.3V LVDS Transmitter 24-Bit Flat Panel Display (FPD) Link-65 MHz

1.0 General Description

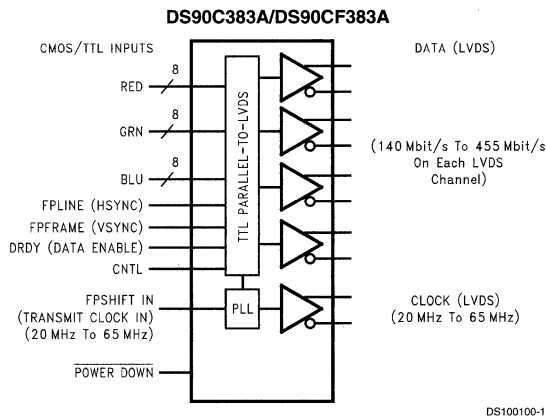

The DS90C383A/DS90CF383A transmitter converts 28 bits of CMOS/TTL data into four LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. Every cycle of the transmit clock 28 bits of input data are sampled and transmitted. At a transmit clock frequency of 65 MHz, 24 bits of RGB data and 3 bits of LCD timing and control data (FPLINE, FPFRAME, DRDY) are transmitted at a rate of 455 Mbps per LVDS data channel. Using a 65 MHz clock, the data throughput is 227 Mbytes/sec. The DS90C383A transmitter can be programmed for Rising edge strobe or Falling edge strobe through a dedicated pin. The DS90CF383A is fixed as a Falling edge strobe transmitter. A Rising edge or Falling edge strobe transmitter will interoperate with a Falling edge strobe Receiver (DS90CF384) without any translation logic.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

2.0 Features

- 20 to 65 MHz shift clock support
- Rejects $> \pm 3$ ns Jitter from VGA chip with less than 225ps output Jitter @65MHz (TJCC)
- Best-in-Class Set & Hold Times on TxINPUTS
- Tx power consumption < 130 mW (typ) @65MHz Grayscale
- $> 50\%$ Less Power Dissipation than BiCMOS Alternatives
- Tx Power-down mode $< 200\mu$ W (max)
- ESD rating > 7 kV (HBM), > 500 V (EIAJ)
- Supports VGA, SVGA, XGA and Dual Pixel SXGA.
- Narrow bus reduces cable size and cost
- Up to 1.8 Gbps throughput
- Up to 227 Megabytes/sec bandwidth
- 345 mV (typ) swing LVDS devices for low EMI
- PLL requires no external components
- Compatible with TIA/EIA-644 LVDS standard
- Low profile 56-lead TSSOP package
- Improved replacement for:

DS90C383/DS90CF384

+3.3V Programmable LVDS Transmitter 24-Bit Flat Panel Display (FPD) Link—65 MHz, +3.3V LVDS Receiver 24-Bit Flat Panel Display (FPD) Link—65 MHz

General Description

The DS90C383 transmitter converts 28 bits of CMOS/TTL data into four LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. Every cycle of the transmit clock 28 bits of input data are sampled and transmitted. The DS90CF384 receiver converts the LVDS data streams back into 28 bits of CMOS/TTL data. At a transmit clock frequency of 65 MHz, 24 bits of RGB data and 3 bits of LCD timing and control data (FPLINE, FPFRAME, DRDY) are transmitted at a rate of 455 Mbps per LVDS data channel. Using a 65 MHz clock, the data throughput is 227 Mbytes/sec. The transmitter is offered with programmable edge data strobes for convenient interface with a variety of graphics controllers. The transmitter can be programmed for Rising edge strobe or Falling edge strobe through a dedicated pin. A Rising edge transmitter will inter-operate with a Falling edge receiver (DS90CF384) without any translation logic. The DS90CF384 is also offered in 64 ball, 0.8mm fine pitch ball grid array (FBGA) package which provides a 44 % reduction in PCB footprint (available Q3, 1999).

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

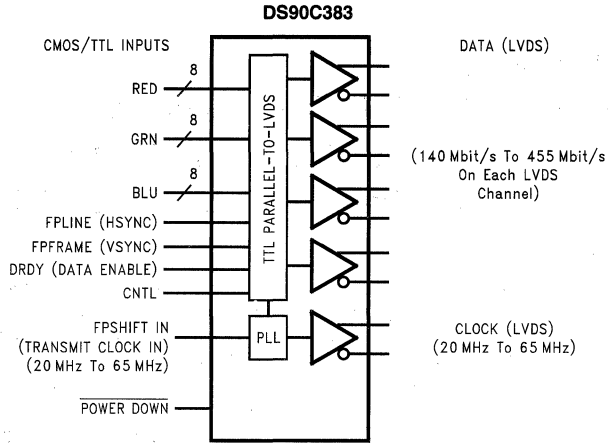

- 20 to 65 MHz shift clock support
- Programmable transmitter (DS90C383) strobe select (Rising or Falling edge strobe)
- Single 3.3V supply
- Chipset (Tx + Rx) power consumption < 250 mW (typ)
- Power-down mode (< 0.5 mW total)
- Single pixel per clock XGA (1024x768) ready
- Supports VGA, SVGA, XGA and higher addressability.
- Up to 227 Megabytes/sec bandwidth
- Up to 1.8 Gbps throughput
- Narrow bus reduces cable size and cost
- 290 mV swing LVDS devices for low EMI
- PLL requires no external components
- Low profile 56-lead TSSOP package.
- DS90CF384 also available in 64 ball, 0.8mm fine pitch ball grid array (FBGA) package
- Falling edge data strobe Receiver
- Compatible with TIA/EIA-644 LVDS standard
- ESD rating >7 kV
- Operating Temperature: -40°C to +85°C

+3.3V LVDS Receiver 24-Bit Flat Panel Display (FPD) Link—65 MHz, +3.3V LVDS Receiver 18-Bit Flat Panel Display (FPD) Link—65 MHz

General Description

The DS90CF384A receiver converts the four LVDS data streams (Up to 1.8 Gbps throughput or 227 Megabytes/sec bandwidth) back into parallel 28 bits of CMOS/TTL data (24 bits of RGB and 4 bits of Hsync, Vsync, DE and CNTL). Also available is the DS90CF364A that converts the three LVDS data streams (Up to 1.3 Gbps throughput or 170 Megabytes/sec bandwidth) back into parallel 21 bits of CMOS/TTL data (18 bits of RGB and 3 bits of Hsync, Vsync and DE). Both Receivers' outputs are Falling edge strobe. A Rising edge or Falling edge strobe transmitter (DS90C383A/DS90C363A) will interoperate with a Falling edge strobe Receiver without any translation logic.

The DS90CF384A / DS90CF364A devices are enhanced over prior generation receivers and provided a wider data valid time on the receiver output.

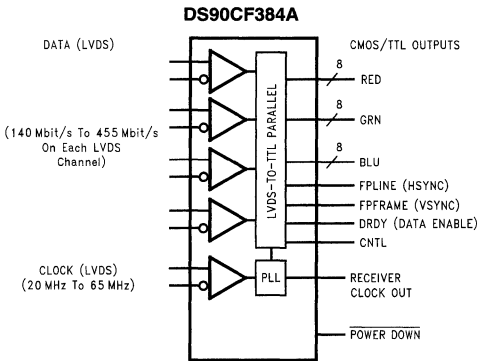

The DS90CF384A is also offered in a 64 ball, 0.8mm fine pitch ball grid array (FBGA) package which provides a 44 % reduction in PCB footprint compared to the 56L TSSOP package.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

- 20 to 65 MHz shift clock support
- 50% duty cycle on receiver output clock
- Best-in-Class Set & Hold Times on RxOUTPUTs
- Rx power consumption <142 mW (typ) @65MHz Grayscale
- Rx Power-down mode <200µW (max)
- ESD rating >7 kV (HBM), >700V (EIAJ)
- Supports VGA, SVGA, XGA and Dual Pixel SXGA.
- PLL requires no external components
- Compatible with TIA/EIA-644 LVDS standard
- Low profile 56-lead or 48-lead TSSOP package
- DS90CF384A is also available in a 64 ball, 0.8mm fine pitch ball grid array (FBGA) package

+3.3V Programmable LVDS Transmitter 24-Bit Flat Panel Display (FPD) Link-85 MHz, +3.3V Programmable LVDS Transmitter 18-Bit Flat Panel Display (FPD) Link-85 MHz

1.0 General Description

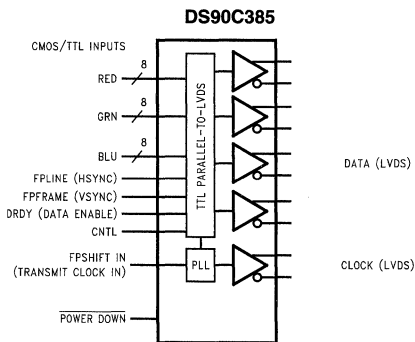

The DS90C385 transmitter converts 28 bits of CMOS/TTL data into four LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. Every cycle of the transmit clock 28 bits of input data are sampled and transmitted. At a transmit clock frequency of 85 MHz, 24 bits of RGB data and 3 bits of LCD timing and control data (FPLINE, FPFRAME, DRDY) are transmitted at a rate of 595 Mbps per LVDS data channel. Using a 85 MHz clock, the data throughput is 297.5 Mbytes/sec. Also available is the DS90C365 that converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. Both transmitters can be programmed for Rising edge strobe or Falling edge strobe through a dedicated pin. A Rising edge or Falling edge strobe transmitter will interoperate with a Falling edge strobe Receiver (DS90CF386/DS90CF366) without any translation logic.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

2.0 Features

- 20 to 85 MHz shift clock support
- Best-in-Class Set & Hold Times on TxINPUTs
- Tx power consumption <130 mW (typ) @85MHz Grayscale
- Tx Power-down mode <200µW (max)
- Supports VGA, SVGA, XGA and Single/Dual Pixel SXGA.
- Narrow bus reduces cable size and cost
- Up to 2.38 Gbps throughput
- Up to 297.5 Megabytes/sec bandwidth
- 345 mV (typ) swing LVDS devices for low EMI
- PLL requires no external components
- Compatible with TIA/EIA-644 LVDS standard
- Low profile 56-lead or 48-lead TSSOP package

+3.3V LVDS Receiver 24-Bit Flat Panel Display (FPD)

Link—85 MHz, +3.3V LVDS Receiver 18-Bit Flat Panel Display (FPD) Link—85 MHz

1.0 General Description

The DS90CF386 receiver converts the four LVDS data streams (Up to 2.38 Gbps throughput or 297.5 Megabytes/sec bandwidth) back into parallel 28 bits of CMOS/TTL data (24 bits of RGB and 4 bits of Hsync, Vsync, DE and CNTL). Also available is the DS90CF366 that converts the three LVDS data streams (Up to 1.785 Gbps throughput or 223 Megabytes/sec bandwidth) back into parallel 21 bits of CMOS/TTL data (18 bits of RGB and 3 bits of Hsync, Vsync and DE). Both Receivers' outputs are Falling edge strobe. A Rising edge or Falling edge strobe transmitter (DS90C385/DS90C365) will interoperate with a Falling edge strobe Receiver without any translation logic.

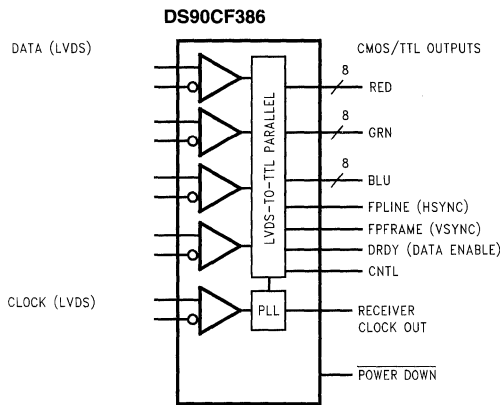

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

2.0 Features

- 20 to 85 MHz shift clock support
- 50% duty cycle on receiver output clock
- Best-in-Class Set & Hold Times on RxOUTPUTs
- Rx power consumption <250 mW (typ) @85MHz Grayscale
- Rx Power-down mode <200µW (max)

DS90C387/DS90CF388

Dual Pixel LVDS Display Interface (LDI)-SVGA/QXGA

General Description

The DS90C387/DS90CF388 transmitter/receiver pair is designed to support dual pixel data transmission between Host and Flat Panel Display up to QXGA resolutions. The transmitter converts 48 bits (Dual Pixel 24-bit color) of CMOS/TTL data into 8 LVDS (Low Voltage Differential Signalling) data streams. Control signals (VSYNC, HSYNC, DE and two user-defined signals) are sent during blanking intervals. At a maximum dual pixel rate of 112MHz, LVDS data line speed is 672Mbps, providing a total throughput of 5.38Gbps (672 Megabytes per second). Two other modes are also supported. 24-bit color data (single pixel) can be clocked into the transmitter at a maximum rate of 170MHz. In this mode, the transmitter provides single-to-dual pixel conversion, and the output LVDS clock rate is 85MHz maximum. The third mode provides inter-operability with FPD-Link devices.

The LDI chipset is improved over prior generations of FPD-Link devices and offers higher bandwidth support and longer cable drive with three areas of enhancement. To increase bandwidth, the maximum pixel clock rate is increased to 112 (170) MHz and 8 serialized LVDS outputs are provided. Cable drive is enhanced with a user selectable pre-emphasis feature that provides additional output current during transitions to counteract cable loading effects. DC balancing on a cycle-to-cycle basis, is also provided to reduce ISI (Inter-Symbol Interference). With pre-emphasis and DC balancing, a low distortion eye-pattern is provided at the receiver end of the cable. A cable deskew capability has been added to deskew long cables of pair-to-pair skew of up to +/-1 LVDS data bit time. These three enhancements allow cables 5 to 10+ meters in length to be driven.

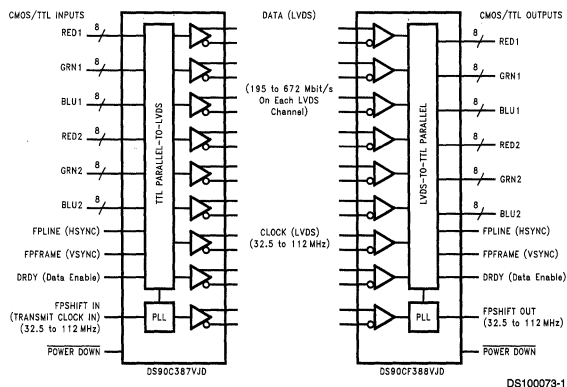

This chipset is an ideal means to solve EMI and cable size problems for high-resolution flat panel applications. It pro-

vides a reliable interface based on LVDS technology that delivers the bandwidth needed for high-resolution panels while maximizing bit times, and keeping clock rates low to reduce EMI and shielding requirements. For more details, please refer to the "Applications Information" section of this datasheet.

Features

- Complies with OpenLDI specification for digital display interfaces
- 32.5 to 112/170MHz clock support
- Supports SVGA through QXGA panel resolutions
- Drives long, low cost cables
- Up to 5.38Gbps bandwidth
- Pre-emphasis reduces cable loading effects
- DC balance data transmission provided by transmitter reduces ISI distortion
- Deskews +/-1 LVDS data bit time of pair-to-pair skew at receiver inputs; intra-pair skew tolerance of 300ps
- Dual pixel architecture supports interface to GUI and timing controller; optional single pixel transmitter inputs support single pixel GUI interface
- Transmitter rejects cycle-to-cycle jitter
- 5V tolerant on data and control input pins
- Programmable transmitter data and control strobe select (rising or falling edge strobe)
- Backward compatible configuration select with FPD-Link
- Optional second LVDS clock for backward compatibility w/ FPD-Link
- Support for two additional user-defined control signals in DC Balanced mode
- Compatible with TIA/EIA - LVDS Standard

DS90C387A/DS90CF388A

Dual Pixel LVDS Display Interface / FPD-Link

General Description

The DS90C387A/DS90CF388A transmitter/receiver pair is designed to support dual pixel data transmission between Host and Flat Panel Display up to QXGA resolutions. The transmitter converts 48 bits (Dual Pixel 24-bit color) of CMOS/TTL data and 3 control bits into 8 LVDS (Low Voltage Differential Signalling) data streams. At a maximum dual pixel rate of 112MHz, LVDS data line speed is 784Mbps, providing a total throughput of 5.7Gbps (714 Megabytes per second).

The LDI chipset is improved over prior generations of FPD-Link devices and offers higher bandwidth support and longer cable drive. To increase bandwidth, the maximum pixel clock rate is increased to 112 MHz and 8 serialized LVDS outputs are provided. Cable drive is enhanced with a user selectable pre-emphasis feature that provides additional output current during transitions to counteract cable loading effects.

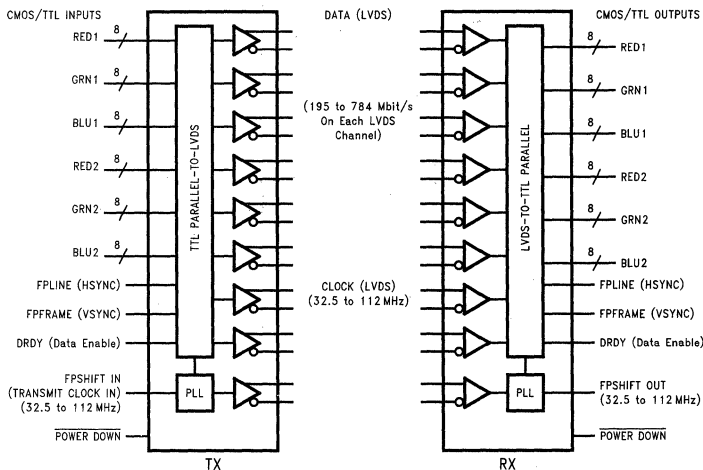

The DS90C387A transmitter provides a second LVDS output clock. Both LVDS clocks are identical. This feature supports backward compatibility with the previous generation of FPD-Link Receivers - the second clock allows the transmitter to interface to panels using a 'dual pixel' configuration of two 24-bit or 18-bit FPD-Link receivers.

This chipset is an ideal means to solve EMI and cable size problems for high-resolution flat panel applications. It provides a reliable interface based on LVDS technology that delivers the bandwidth needed for high-resolution panels while maximizing bit times, and keeping clock rates low to reduce EMI and shielding requirements. For more details, please refer to the "Applications Information" section of this datasheet.

Features

- Supports SVGA through QXGA panel resolutions
- 32.5 to 112/170MHz clock support
- Drives long, low cost cables
- Up to 5.7 Gbps bandwidth
- Pre-emphasis reduces cable loading effects
- Dual pixel architecture supports interface to GUI and timing controller; optional single pixel transmitter inputs support single pixel GUI interface
- Transmitter rejects cycle-to-cycle jitter
- 5V tolerant on data and control input pins
- Programmable transmitter data and control strobe select (rising or falling edge strobe)
- Backward compatible with FPD-Link
- Compatible with TIA/EIA-LVDS Standard

DS90CF561/DS90CF562

LVDS 18-Bit Color Flat Panel Display (FPD) Link

General Description

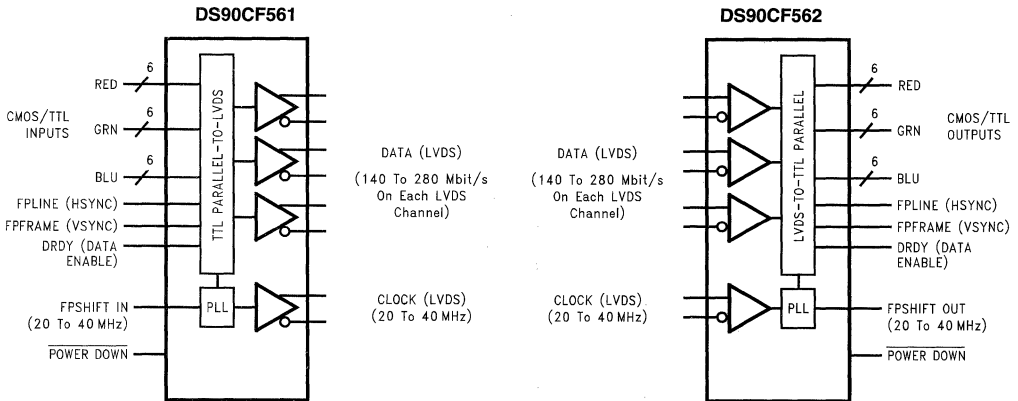

The DS90CF561 transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. The DS90CF562 receiver converts the LVDS data streams back into 21 bits of CMOS/TTL data. At a transmit clock frequency of 40 MHz, 18 bits of RGB data and 3 bits of LCD timing and control data (FPLINE, FPFRAME, DRDY) are transmitted at a rate of 280 Mbps per LVDS data channel. Using a 40 MHz clock, the data throughput is 105 Megabytes per second. These devices are offered with falling edge data strobes for convenient interface with a variety of graphics and LCD panel controllers.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

- Up to 105 Megabyte/sec bandwidth
- Narrow bus reduces cable size and cost
- 290 mV swing LVDS devices for low EMI
- Low power CMOS design
- Power down mode
- PLL requires no external components
- Low profile 48-lead TSSOP package
- Falling edge data strobe
- Compatible with TIA/EIA-644 LVDS standard

DS90CF563/DS90CF564

LVDS 18-Bit Color Flat Panel Display (FPD) Link— 65 MHz

General Description

The DS90CF563 transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. The DS90CF564 receiver converts the LVDS data streams back into 21 bits of CMOS/TTL data. At a transmit clock frequency of 65 MHz, 18 bits of RGB data and 3 bits of LCD timing and control data (FPLINE, FPF, DRDY) are transmitted at a rate of 455 Mbits per LVDS data channel. Using a 65 MHz clock, the data throughput is 171 Mbytes per second. These devices are offered with falling edge data strobes for convenient interface with a variety of graphics and LCD panel controllers.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

- 20 to 65 MHz shift clk support
- Up to 171 Mbytes/s bandwidth
- Cable size is reduced to save cost
- 290 mV swing LVDS devices for low EMI
- Low power CMOS design (< 550 mW typ)
- Power-down mode saves power (< 0.25 mW)
- PLL requires no external components
- Low profile 48-lead TSSOP package
- Falling edge data strobe
- Compatible with TIA/EIA-644 LVDS standard
- Single pixel per clock XGA (1024 x 768)
- Supports VGA, SVGA, XGA and higher
- 1.3 Gbps throughput

DS90CF581

LVDS Transmitter 24-Bit Color Flat Panel Display (FPD) Link

General Description

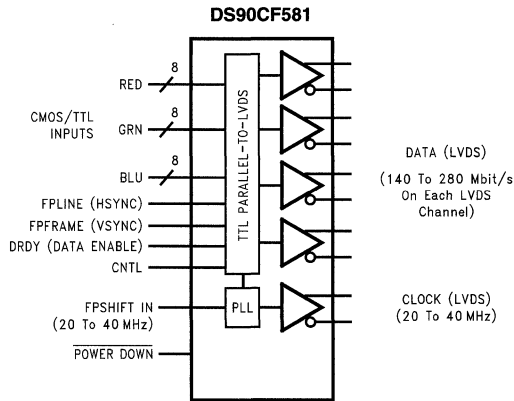

The DS90CF581 transmitter converts 28 bits of CMOS/TTL data into four LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. Every cycle of the transmit clock 28 bits of input data are sampled and transmitted. At a transmit clock frequency of 40 MHz, 24 bits of RGB data and 4 bits of LCD timing and control data (FPLINE, FPFRAME, DRDY, CNTL) are transmitted at a rate of 280 Mbps per LVDS data channel. Using a 40 MHz clock, the data throughput is 140 Megabytes per second. This transmitter is intended to interface to any of the FPD Link receivers.

The chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

- Up to 140 Megabyte/sec Bandwidth
- Narrow bus reduces cable size and cost
- 290 mV swing LVDS devices for low EMI
- Low power CMOS design
- Power-down mode
- PLL requires no external components
- Low profile 56-lead TSSOP package
- Falling edge data strobe
- Compatible with TIA/EIA-644 LVDS standard

DS90CF583/DS90CF584

LVDS 24-Bit Color Flat Panel Display (FPD) Link— 65 MHz

General Description

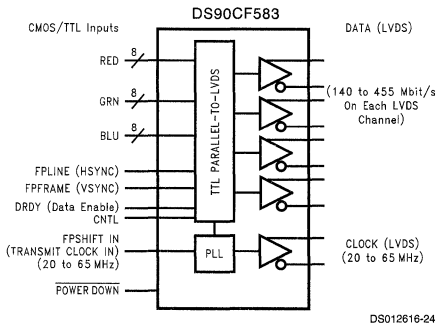

The DS90CF583 transmitter converts 28 bits of CMOS/TTL data into four LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. Every cycle of the transmit clock 28 bits of input data are sampled and transmitted. The DS90CF584 receiver converts the LVDS data streams back into 28 bits of CMOS/TTL data. At a transmit clock frequency of 65 MHz, 24 bits of RGB data and 4 bits of LCD timing and control data (FPLINE, FPFRAME, DRDY, CONTROL) are transmitted at a rate of 455 Mbps per LVDS data channel. Using a 65 MHz clock, the data throughput is 227 Mbytes per second. These devices are offered with falling edge data strobes for convenient interface with a variety of graphics and LCD panel controllers.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

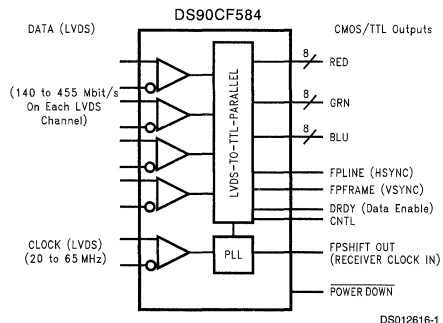

Features

- 20 to 65 MHz shift clk support
- Up to 227 Mbytes/s bandwidth
- Cable size is reduced to save cost
- 290 mV swing LVDS devices for low EMI
- Low power CMOS design (< 550 mW typ)
- Power-down mode saves power (< 0.25 mW)
- PLL requires no external components
- Low profile 56-lead TSSOP package
- Falling edge data strobe
- Compatible with TIA/EIA-644 LVDS standard
- Single pixel per clock XGA (1024 x 768)
- Supports VGA, SVGA, XGA and higher
- 1.8 Gbps throughput

DS012618-3

FPD85310 Panel Timing Controller

General Description

The FPD85310 Panel Timing Controller is an integrated FPD-Link based TFT-LCD timing controller. It resides on the flat panel display and provides the interface signal routing and timing control between graphics or video controllers and a TFT-LCD system. FPD-Link is a low power, low electromagnetic interference interface used between this controller and the host system.

The FPD85310 chip links the panel's system interface to the display via a ten wire LVDS data bus. That data is then routed to the source and gate display drivers. XGA and SVGA resolutions are supported.

The FPD85310 is programmable via an optional external serial EEPROM. Reserved space in the EEPROM is available for display identification information. The system can access the EEPROM to read the display identification data or program initialization values used by the FPD85310.

Features

- FPD-Link System Interface utilizes Low Voltage Differential Signaling (LVDS).
- System programmable via EEPROM
- Suitable for notebook and monitor applications
- 8-bit or 6-bit system interface
- XGA or SVGA capable
- Supports single or dual port column drivers
- Programmable outputs provide customized control for standard or in-house column drivers and row drivers
- Fail-safe operation prevents panel damage with system clock failure
- Programmable skew rate controlled outputs on CD interface for reduced EMI
- Polarity pin reduces CD data bus switching
- CMOS circuitry operates from a 3.3V supply

System Diagram

DS101086-1

FPD87310

Universal Interface XGA Panel Timing Controller with RSDS™ (Reduced Swing Differential Signaling) and FPD-Link

General Description

The FPD87310 Panel Timing Controller is an integrated FPD-Link + RSDS + TFT-LCD Timing Controller. It resides on the Flat Panel Display and provides the interface signal routing and Timing Control between Graphics or Video Controllers and a TFT-LCD system. FPD-Link, a low power, low EMI (ElectroMagnetic Interference) interface is used between this Controller and the Host system.

A RSDS (Reduced Swing Differential Signaling) Column Driver interface is used between the Timing Controller and the Column Drivers.

Programmable, General Purpose Outputs provide Row and Column Driver control. The FPD87310 is configured via metal mask initialization value or an optional external serial EEPROM. Reserved space in the EEPROM is available for display identification information. The system can access the EEPROM to read the display identification data or program initialization values used by the FPD87310.

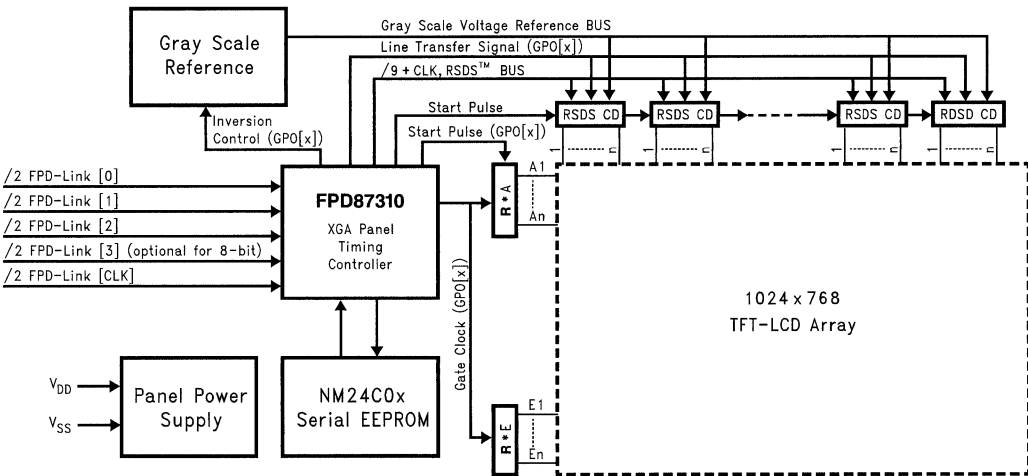

This single 9-bit+CLK differential bus conveys the 18 bits color data for XGA panels at 130 Mb/s when using VESA 60 Hz standard timing.

Features

- RSDS (Reduced Swing Differential Signaling) Column Driver bus for low power and reduced EMI
- Drives RSDS Column Drivers at 130 Mb/s with a 65 MHz clock
- 6- or 8-bit LVDS Video System Interface (FPD-Link)
- 10 General Purpose Outputs for Column/Row Drivers
- Optional EEPROM programming allows fine tuning in development and production environments
- Selectable dual initialization value sets to share parts for the different model panel module
- Ability to drive XGA/SVGA TFT-LCD Systems
- Narrow 9-bit+CLK differential Column Driver Bus minimizes width of Source PCB
- CMOS circuitry operates from a 3.3V supply
- Supports Graphics Controllers with spread spectrum interface feature for lower EMI

LMC6009

9 Channel Buffer Amplifier for TFT-LCD

General Description

The LMC6009 is a CMOS integrated circuit that buffers 9 reference voltages for gamma correction in a Thin Film Transistor Liquid Crystal Display (TFT-LCD). Guaranteed to operate at both 3.3V and 5V supplies, this integrated circuit contains nine, independent unity gain buffers that can source 130 mA into a capacitive load without oscillation.

The LMC6009 is useful for buffering gamma voltages into column drivers that employ the resistor-divider architecture. High output current capability and fast settling characteristics of this device improve display quality by minimizing rise time errors at the outputs of the column driver. The integration of nine buffers and a multiplexer eliminates the need for discrete buffers and a separate multiplexer (MUX) chip on the panel.

The LMC6009 is available in 48-pin surface mount TSSOP.

Features

- Number of inputs 18
- 3.3V and 5V operation
- Supply current 3.5 mA
- Settling time 3 μ s
- A/B channel inputs for asymmetrical Gamma
- Number of outputs 9
- Number of control inputs 1
- Built-in thermal shutdown protection

Applications

- VGA/SVGA TFT-LCD drive circuits
- Electronic Notebooks
- Electronic Games
- Personal Communication Devices
- Personal Digital Assistants (PDA)

Application in VGA/SVGA TFT-LCD

DS1488

Quad Line Driver

General Description

The DS1488 is a quad line driver which converts standard TTL input logic levels through one stage of inversion to output levels which meet EIA Standard RS-232D and CCITT Recommendation V.24.

Features

- Current limited output: ± 10 mA typ
- Power-off source impedance: 300Ω min
- Simple slew rate control with external capacitor
- Flexible operating supply range
- Inputs are TTL/LS compatible

Schematic and Connection Diagrams

Order Number DS1488M or DS1488N
See NS Package Number M14A or N14A

DS14C88

Quad CMOS Line Driver

General Description

The DS14C88, pin-for-pin compatible to the DS1488/MC1488, is a quad line drivers designed to interface data terminal equipment (DTE) with data circuit-terminating equipment (DCE). This device translates standard TTL/CMOS logic levels to levels conforming to EIA-232-D and CCITT V.28 standards.

The device is fabricated in low threshold CMOS metal gate technology. The device provides very low power consumption compared to its bipolar equivalents: 500 μ A (DS14C88) versus 25 mA (DS1488).

The DS14C88 simplifies designs by eliminating the need for external slew rate control capacitors. Slew rate control in accordance with EIA-232D is provided on-chip, eliminating the output capacitors.

Features

- Meets EIA-232D and CCITT V.28 standards
- LOW power consumption
- Wide power supply range: ± 5 V to ± 12 V
- Available in SOIC package

Connection Diagram

Order Number DS14C88N, or DS14C88M
See NS Package Number N14A or M14A

DS1489/DS1489A

Quad Line Receiver

General Description

The DS1489/DS1489A are quad line receivers designed to interface data terminal equipment with data communications equipment. They are constructed on a single monolithic silicon chip. These devices satisfy the specifications of EIA Standard RS-232D. The DS1489/DS1489A meet and exceed the specifications of MC1489/MC1489A and are pin-for-pin replacements.

Features

- Four separate receivers per package
- Programmable threshold
- Built-in input threshold hysteresis
- "Fail safe" operating mode: high output for open inputs
- Inputs withstand $\pm 30V$

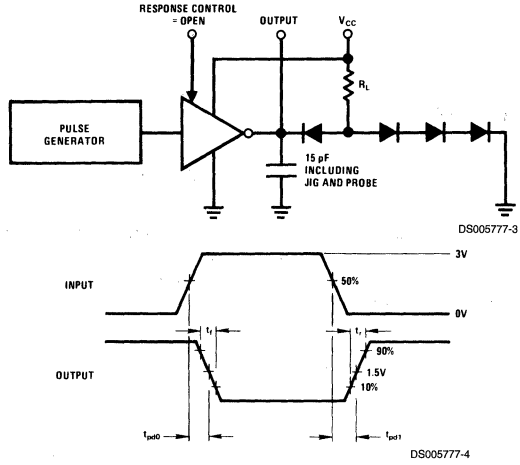

FIGURE 1.

DS14C89A

Quad CMOS Receiver

General Description

The DS14C89A, pin-for-pin compatible to the DS1489A/MC1489A, is a quad receiver designed to interface data terminal equipment (DTE) with data circuit-terminating equipment (DCE). These devices translate levels conforming to EIA-232E and CCITT V.28 standards to TTL/CMOS logic levels.

The device is fabricated in low threshold CMOS metal gate technology. The device provides very low power consumption compared to their bipolar equivalents: 900 μ A (DS14C89A) versus 26 mA (DS1489A).

The DS14C89A provides on chip noise filtering which eliminates the need for external response control filter capacitors.

When replacing the DS1489A with the DS14C89A, the response control filter pins can be tied high, low, or not connected.

Features

- Meets EIA/TIA-232-E and CCITT V.28 Standards
- Failsafe - Output High for Open Input
- LOW Power consumption
- On chip noise filter
- Available in SOIC Package

DS75150

Dual Line Driver

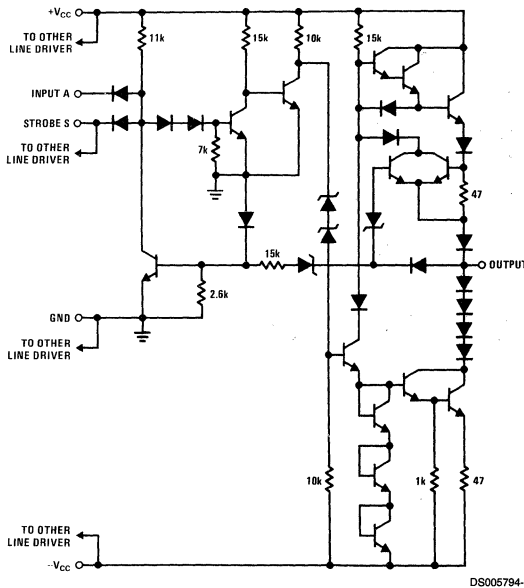

General Description

The DS75150 is a dual monolithic line driver designed to satisfy the requirements of the standard interface between data terminal equipment and data communication equipment as defined by EIA Standard RS-232-C. A rate of 20,000 bits per second can be transmitted with a full 2500 pF load. Other applications are in data-transmission systems using relatively short single lines, in level translators, and for driving MOS devices. The logic input is compatible with most TTL and LS families. Operation is from -12V and $+12\text{V}$ power supplies.

Features

- Withstands sustained output short-circuit to any low impedance voltage between -25V and $+25\text{V}$
- $2\ \mu\text{s}$ max transition time through the -3V to $+3\text{V}$ transition region under full 2500 pF load
- Inputs compatible with most TTL and LS families
- Common strobe input
- Inverting output
- Slew rate can be controlled with an external capacitor at the output
- Standard supply voltages: $\pm 12\text{V}$

Schematic and Connection Diagrams

DS75154

Quad Line Receiver

General Description

The DS75154 is a quad monolithic line receiver designed to satisfy the requirements of the standard interface between data terminal equipment and data communication equipment as defined by EIA Standard RS-232C. Other applications are in relatively short, single-line, point-to-point data transmission systems and for level translators. Operation is normally from a single 5V supply; however, a built-in option allows operation from a 12V supply without the use of additional components. The output is compatible with most TTL and LS circuits when either supply voltage is used.

In normal operation, the threshold-control terminals are connected to the V_{CC1} terminal, pin 15, even if power is being supplied via the alternate V_{CC2} terminal, pin 16. This provides a wide hysteresis loop which is the difference between the positive-going and negative-going threshold voltages. In this mode, if the input voltage goes to zero, the output voltage will remain at the low or high level as determined by the previous input.

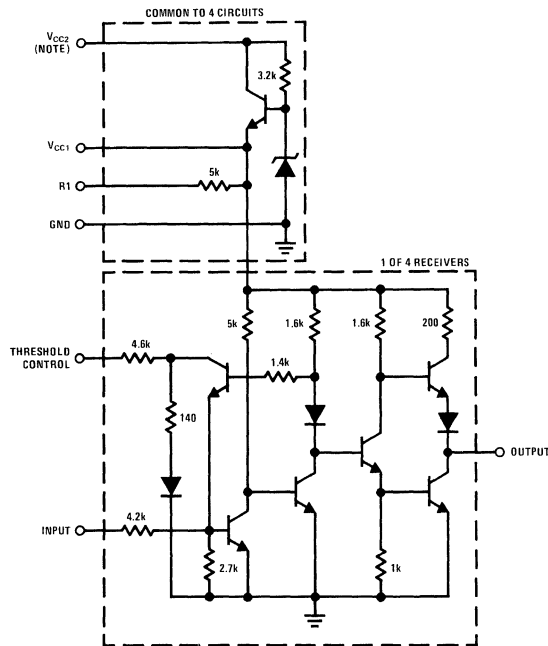

For fail-safe operation, the threshold-control terminals are open. This reduces the hysteresis loop by causing the

negative-going threshold voltage to be above zero. The positive-going threshold voltage remains above zero as it is unaffected by the disposition of the threshold terminals. In the fail-safe mode, if the input voltage goes to zero or an open-circuit condition, the output will go to the high level regardless of the previous input condition.

Features

- Input resistance, 3 k Ω to 7 k Ω over full RS-232C voltage range
- Input threshold adjustable to meet "fail-safe" requirements without using external components
- Inverting output compatible with TTL or LS
- Built-in hysteresis for increased noise immunity
- Output with active pull-up for symmetrical switching speeds
- Standard supply voltage—5V or 12V

Schematic Diagram

DS005795-1

Note: When using V_{CC1} (pin 15), V_{CC2} (pin 16) may be left open or shorted to V_{CC1} . When using V_{CC2} , V_{CC1} must be left open or connected to the threshold control pins.

DS9627 Dual Line Receiver

General Description

The DS9627 is a dual-line receiver which meets the electrical interface specifications of EIA RS-232C and MIL-STD-188C. The input circuitry accommodates $\pm 25V$ input signals and the differential inputs allow user selection of either inverting or non-inverting logic for the receiver operation. The DS9627 provides both a selectable hysteresis range and selectable receiver input resistance. When pin 1 is tied to V^- , the typical switching points are at 2.6V and -2.6V, thus meeting RS-232-C requirements. When pin 1 is open, the typical switching points are at 50 μA and -50 μA , thus satisfying the requirements of MIL-STD-188C LOW level interface. Connecting the RA and/or RB pins to the (-) input yields an input impedance in the range of 3 k Ω to 7 k Ω and satisfies RS-232-C requirements; leaving RA and/or RB pins unconnected, the input resistance will be greater than 6 k Ω to satisfy MIL-STD-188C.

The output circuitry is TTL/DTL compatible and will allow "collector-dotting" to generate the wired-OR function. A TTL/DTL strobe is also provided for each receiver.

Features

- EIA RS-232-C input standards
- MIL-STD-188C input standards
- Variable hysteresis control
- High common mode rejection
- R control (5 k Ω or 10 k Ω)
- Wired-OR capability
- Choice of inverting and non-inverting inputs
- Outputs and strobe TTL compatible

DS14C232

Low Power +5V Powered TIA/EIA-232 Dual Driver/Receiver

General Description

The DS14C232 is a low power dual driver/receiver featuring an onboard DC to DC converter, eliminating the need for $\pm 12V$ power supplies. The device only requires a +5V power supply. I_{CC} is specified at 3.0 mA maximum, making the device ideal for battery and power conscious applications. The drivers' slew rate is set internally and the receivers feature internal noise filtering, eliminating the need for external slew rate and filter capacitors. The device is designed to interface data terminal equipment (DTE) with data circuit-terminating equipment (DCE). The driver inputs and receiver outputs are TTL and CMOS compatible. DS14C232C driver outputs and receiver inputs meet TIA/EIA-232-E (RS-232) and CCITT V.28 standards.

Features

- Pin compatible with industry standard MAX232, LT1081, ICL232 and TSC232
- Single +5V power supply
- Low power— I_{CC} 3.0 mA maximum
- DS14C232C meets TIA/EIA-232-E (RS-232) and CCITT V.28 standards
- CMOS technology
- Receiver Noise Filter
- Package efficiency—2 drivers and 2 receivers
- Available in Plastic DIP, Narrow and Wide SOIC packages
- TIA/EIA-232 compatible extended temperature range option:
 - DS14C232T -40°C to +85°C
 - DS14C232E/J: -55°C to +125°C

DS14C238

Single Supply TIA/EIA-232 4 x 4 Driver/Receiver

General Description

The DS14C238 is a four driver, four receiver device which conforms to the TIA/EIA-232-E standard and CCITT V.28 recommendations. This device eliminates $\pm 12V$ supplies by employing an internal DC-DC converter to generate the necessary output levels from a single +5V supply. Driver slew rate control and receiver noise filtering have also been internalized to eliminate the need for external slew rate control and noise filtering capacitors.

Features

- Conforms to TIA/EIA-232-E and CCITT V.28
- Internal DC-DC converter
- Operates with single +5V supply
- Low power requirement— I_{CC} 10 mA max
- Internal driver slew rate control
- Receiver noise filtering
- Operates above 120 kbits/sec
- Direct replacement for MAX238

Connection Diagram

See NS Package Number **M24B**

Functional Diagram

DS011282-2

DS14C241

Single Supply TIA/EIA-232 4 x 5 Driver/Receiver

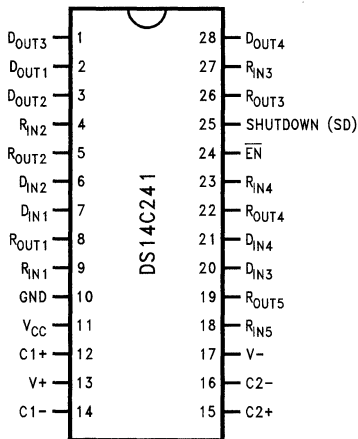

General Description

The DS14C241 is four driver, five receiver device which conforms to the TIA/EIA-232-E standard and CCITT V.28 recommendations. This device eliminates $\pm 12V$ supplies by employing an internal DC-DC converter to generate the necessary output levels from a single +5V supply. Driver slew rate control and receiver noise filtering have also been internalized to eliminate the need for external slew rate control and noise filtering capacitors. With the addition of TRI-STATE[®] receiver outputs and a shutdown mode, device power consumption is kept to a minimum.

Features

- Conforms to TIA/EIA-232-E and CCITT V.28
- Internal DC-DC converter
- Operates with single +5V supply
- Low power requirement— I_{CC} 10 mA max
- Shutdown mode— I_{CX} 10 μA max
- Internal driver slew rate control
- Receiver noise filtering
- Operates above 120 kbits/sec
- TRI-STATE receiver outputs
- Direct replacement for MAX241

DS011281-2

DS14C335

+3.3V Supply TIA/EIA-232 3 x 5 Driver/Receiver

General Description

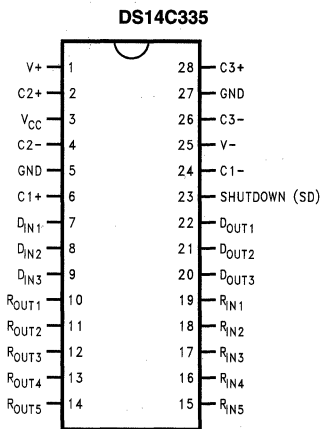

The DS14C335 is three driver, five receiver device which conforms to TIA/EIA-232-E and CCITT V.28 standard specifications. This device employs an internal DC-DC converter to generate the necessary output levels from a +3.3V power supply. A SHUTDOWN (SD) mode reduces the supply current to 10 μ A maximum. In the SD mode, one receiver is active, allowing ring indicator (RI) to be monitored. PC Board space consumption is minimized by the availability of Shrink Small Outline Packaging (SSOP).

This device's low power requirement and small footprint makes it an ideal choice for Laptop and Notebook applications.

Features

- Conforms to TIA/EIA-232-E and CCITT V.28 specifications
- Operates with single +3.3V power supply
- Low power requirement— I_{CC} 20 mA maximum
- SHUTDOWN mode— I_{CX} 10 μ A maximum
- One Receiver (R5) active during SHUTDOWN
- Operates up to 128 kbps—Lap-Link® Compatible
- Flow through pinout
- 4V/ μ s minimum Slew Rate guaranteed
- Inter-operates with +5V UARTs
- Available in 28-lead SSOP EIAJ Type II package

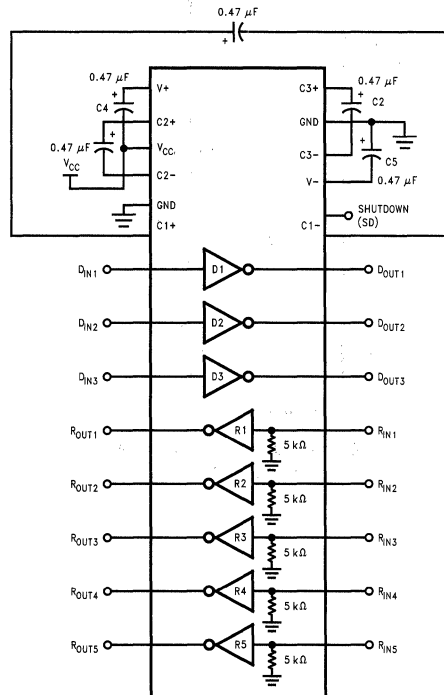

Connection Diagram

Order Number DS14C335MSA
See NS Package Number MSA28

Functional Diagram

DS011734-2

DS14C535

+5V Supply EIA/TIA-232 3 x 5 Driver/Receiver

General Description

The DS14C535 is three driver, five receiver device which conforms to EIA/TIA-232-E and CCITT (ITU-T) V.28 standard specifications. This device employs an internal DC-DC converter to generate the necessary output levels from a +5V power supply. A SHUTDOWN (SD) mode reduces the supply current to 10 μ A maximum. In the SD mode, one receiver is active, allowing ring indicator (RI) to be monitored. PC Board space consumption is minimized by the availability of Shrink Small Outline Packaging (SSOP).

The DS14C535 provides a one-chip solution for the common 9-pin serial RS-232 interface between data terminal and data circuit-terminating equipment.

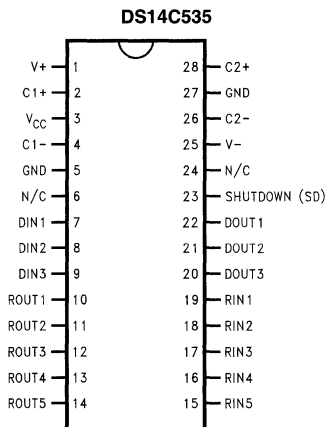

This device allows an easy migration path to the 3.3V DS14C335. The packages are the same. The N/C pins on the DS14C535 are not physically connected to the chip. Board layout for the DS14C335 will accommodate both devices.

This device's low power requirement and small footprint makes it an ideal choice for Laptop and Notebook applications.

Features

- Pin compatible with DS14C335
- Conforms to EIA/TIA-232-E and CCITT (ITU-T) V.28 specifications
- Failsafe receiver outputs high when inputs open
- Operates with single +5V power supply
- Low power requirement— I_{CC} 12 mA maximum
- SHUTDOWN mode— I_{CX} 10 μ A maximum
- One Receiver (R5) active during SHUTDOWN
- Operates up to 128 kbps—Lap-Link® Compatible
- 4V/ μ s minimum Slew Rate guaranteed
- ESD rating of 3 kV on all pins (H, B, M)
- Available in 28-lead SSOP EIAJ Type II package
- Only four 0.1 μ F capacitors required for the DC-DC converter

DS14185

EIA/TIA-232 3 Driver x 5 Receiver

General Description

The DS14185 is a three driver, five receiver device which conforms to the EIA/TIA-232-E standard.

The flow-through pinout facilitates simple non-crossover board layout. The DS14185 provides a one-chip solution for the common 9-pin serial RS-232 interface between data terminal and data communications equipment.

Features

- Replaces one 1488 and two 1489s
- Conforms to EIA/TIA-232-E
- 3 drivers and 5 receivers
- Flow through pinout
- Failsafe receiver outputs
- 20-pin SOIC package
- LapLink® compatible -200 kbps data rate

Connection Diagram

Order Number **DS14185WM**

Functional Diagram

DS14196

EIA/TIA-232 5 Driver x 3 Receiver

General Description

The DS14196 is a five driver, three receiver device which conforms to the EIA/TIA-232-E and the ITU-T V.28 standards.

The flow-through pinout facilitates simple non-crossover board layout. The DS14196 provides a peripheral side one-chip solution for the common 9-pin serial RS-232 interface between data terminals and data communications equipment.

The DS14196 offers optimum performance when used with the DS14185 3 x 5 Driver/Receiver, a host side one-chip solution for the common 9-pin serial RS-232 interface between data terminals and data communications equipment.

Features

- Replaces two 1488s and one 1489
- Conforms to EIA/TIA-232-E and ITU-T V.28
- 5 drivers and 3 receivers
- Flow-through pinout
- Failsafe receiver outputs high when inputs open
- 20-pin wide SOIC package
- LapLink® compatible—230.4 kbps data rate
- Pin compatible with: SN75196, GD75323

Connection Diagram

Order Number DS14196WM

Functional Diagram

DSV14196

+3.3V Supply EIA/TIA-232 5 Driver x 3 Receiver

General Description

The DSV14196/DSV14196T is a five driver, three receiver device which conforms to the EIA/TIA-232-E and the ITU-T V.28 standards.

The flow-through pinout facilitates simple non-crossover board layout. The DSV14196/DSV14196T provides a peripheral side one-chip solution for the common 9-pin serial RS-232 interface between data terminals and data communications equipment.

Features

- Conforms to EIA/TIA-232-E and ITU-T V.28
- 5 drivers and 3 receivers
- Flow-through pinout
- Failsafe receiver outputs high when inputs open
- 20-pin wide SOIC package
- LapLink® compatible—230.4 kbps data rate
- +3.3V Logic Interface
- Commercial temperature range option DSV14196 (0°C to 70°C)
- Industrial temperature range option DSV14196T (-40°C to +85°C)

DS1691A/DS3691 (RS-422/RS-423) Line Drivers with TRI-STATE® Outputs

General Description

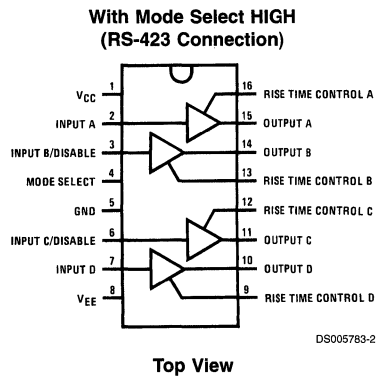

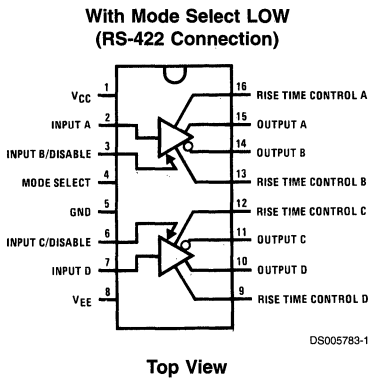

The DS1691A/DS3691 are low power Schottky TTL line drivers designed to meet the requirements of EIA standards RS-422 and RS-423. They feature 4 buffered outputs with high source and sink current capability with internal short circuit protection. A mode control input provides a choice of operation either as 4 single-ended line drivers or 2 differential line drivers. A rise time control pin allows the use of an external capacitor to slow the rise time for suppression of near end crosstalk to other receivers in the cable. Rise time capacitors are primarily intended for waveshaping output signals in the single-ended driver mode. Multipoint applications in differential mode with waveshaping capacitors is not allowed.

With the mode select pin low, the DS1691A/DS3691 are dual-differential line drivers with TRI-STATE outputs. They feature $\pm 10V$ output common-mode range in TRI-STATE mode and 0V output unbalance when operated with $\pm 5V$ supply.

Features

- Dual RS-422 line driver with mode pin low, or quad RS-423 line driver with mode pin high
- TRI-STATE outputs in RS-422 mode
- Short circuit protection for both source and sink outputs
- Outputs will not clamp line with power off or in TRI-STATE
- 100 Ω transmission line drive capability
- Low I_{CC} and I_{EE} power consumption
 - RS-422: $I_{CC} = 9$ mA/driver typ
 - RS-423: $I_{CC} = 4.5$ mA/driver typ; $I_{EE} = 2.5$ mA/driver typ
- Low current PNP inputs compatible with TTL, MOS and CMOS
- Pin compatible with AM26LS30

DS26C31T/DS26C31M CMOS Quad TRI-STATE® Differential Line Driver

General Description

The DS26C31 is a quad differential line driver designed for digital data transmission over balanced lines. The DS26C31T meets all the requirements of EIA standard RS-422 while retaining the low power characteristics of CMOS. The DS26C31M is compatible with EIA standard RS-422; however, one exception in test methodology is taken (Note 8). This enables the construction of serial and terminal interfaces while maintaining minimal power consumption.

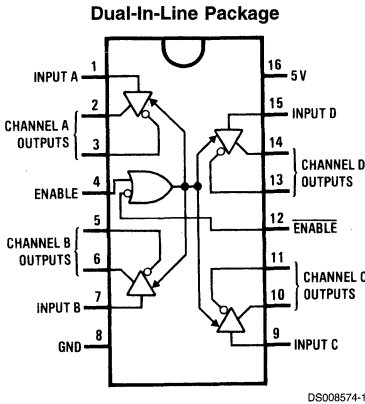

The DS26C31 accepts TTL or CMOS input levels and translates these to RS-422 output levels. This part uses special output circuitry that enables the drivers to power down without loading down the bus. This device has enable and disable circuitry common to all four drivers. The DS26C31 is pin compatible to the AM26LS31 and the DS26LS31.

All inputs are protected against damage due to electrostatic discharge by diodes to V_{CC} and ground.

Features

- TTL input compatible
- Typical propagation delays: 6 ns
- Typical output skew: 0.5 ns
- Outputs will not load line when $V_{CC} = 0V$
- DS26C31T meets the requirements of EIA standard RS-422
- Operation from single 5V supply
- TRI-STATE outputs for connection to system buses
- Low quiescent current
- Available in surface mount
- Mil-Std-883C compliant

DS26LV31T

3V Enhanced CMOS Quad Differential Line Driver

General Description

The DS26LV31T is a high-speed quad differential CMOS driver that meets the requirements of both TIA/EIA-422-B and ITU-T V.11. The CMOS DS26LV31T features low static I_{CC} of 100 μ A MAX which makes it ideal for battery powered and power conscious applications.

Differential outputs have the same V_{OD} guarantee ($\geq 2V$) as the 5V version.

The EN and EN* inputs allow active Low or active High control of the TRI-STATE® outputs. The enables are common to all four drivers. Protection diodes protect all the driver inputs against electrostatic discharge. Outputs have enhanced ESD protection providing greater than 7 kV tolerance. The driver and enable inputs (DI, EN, EN*) are compatible with low voltage LVTTTL and LVC MOS devices.

Features

- Industrial product meets TIA/EIA-422-B (RS-422) and ITU-T V.11 recommendation
- Military product conforms to TIA/EIA-422-B (RS-422)
- Interoperable with existing 5V RS-422 networks
- Industrial and Military temperature range
- Guaranteed V_{OD} of 2V min over operating conditions
- Balanced output crossover for low EMI (typical within 40 mV of 50% voltage level)
- Low power design (330 μ W 3.3V static)
- ESD ≥ 7 kV on cable I/O pins (HBM)
- Guaranteed AC parameter:
 - Maximum driver skew: 2 ns
 - Maximum transition time: 10 ns
- Pin compatible with DS26C31
- Available in SOIC and Cerpack packaging
- Standard Microcircuit Drawing (SMD) 5962-98584

DS26F31M

Quad High Speed Differential Line Drivers

General Description

The DS26F31 is a quad differential line driver designed for digital data transmission over balanced lines. The DS26F31 meets all the requirements of EIA Standard RS-422 and Federal Standard 1020. It is designed to provide unipolar differential drive to twisted-pair or parallel-wire transmission lines.

The DS26F31 offers improved performance due to the use of state-of-the-art L-FAST bipolar technology. The L-FAST technology allows for higher speeds and lower currents by utilizing extremely short gate delay times. Thus, the DS26F31 features lower power, extended temperature range, and improved specifications.

The circuit provides an enable and disable function common to all four drivers. The DS26F31M features TRI-STATE® outputs and logical OR-ed complementary enable inputs. The inputs are all LS compatible and are all one unit load.

The DS26F31M offers optimum performance when used with the DS26F32 Quad Differential Line Receiver.

Features

- Military temperature range
- Output skew—2.0 ns typical
- Input to output delay—10 ns
- Operation from single +5.0V supply
- 16-lead ceramic DIP Package
- Outputs won't load line when $V_{CC} = 0V$
- Output short circuit protection
- Meets the requirements of EIA standard RS-422
- High output drive capability for 100Ω terminated transmission lines

DS26LS31C/DS26LS31M Quad High Speed Differential Line Driver

General Description

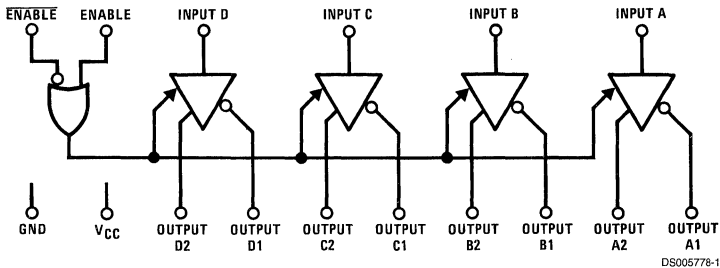

The DS26LS31 is a quad differential line driver designed for digital data transmission over balanced lines. The DS26LS31 meets all the requirements of EIA Standard RS-422 and Federal Standard 1020. It is designed to provide unipolar differential drive to twisted-pair or parallel-wire transmission lines.

The circuit provides an enable and disable function common to all four drivers. The DS26LS31 features TRI-STATE[®] outputs and logically ANDed complementary outputs. The inputs are all LS compatible and are all one unit load.

Features

- Output skew—2.0 ns typical
- Input to output delay—10 ns typical
- Operation from single 5V supply
- Outputs won't load line when $V_{CC} = 0V$
- Four line drivers in one package for maximum package density
- Output short-circuit protection
- Complementary outputs
- Meets the requirements of EIA Standard RS-422
- Pin compatible with AM26LS31
- Available in military and commercial temperature range

DS26C32AT/DS26C32AM

Quad Differential Line Receiver

General Description

The DS26C32A is a quad differential line receiver designed to meet the RS-422, RS-423, and Federal Standards 1020 and 1030 for balanced and unbalanced digital data transmission, while retaining the low power characteristics of CMOS.

The DS26C32A has an input sensitivity of 200 mV over the common mode input voltage range of $\pm 7V$. The DS26C32A features internal pull-up and pull-down resistors which prevent output oscillation on unused channels.

The DS26C32A provides an enable and disable function common to all four receivers, and features TRI-STATE[®] outputs with 6 mA source and sink capability. This product is pin compatible with the DS26LS32A and the AM26LS32.

Features

- CMOS design for low power
- $\pm 0.2V$ sensitivity over input common mode voltage range
- Typical propagation delays: 19 ns
- Typical input hysteresis: 60 mV
- Inputs won't load line when $V_{CC} = 0V$
- Meets the requirements of EIA standard RS-422
- TRI-STATE outputs for connection to system buses
- Available in Surface Mount
- Mil-Std-883C compliant

DS26LV32AT

3V Enhanced CMOS Quad Differential Line Receiver

General Description

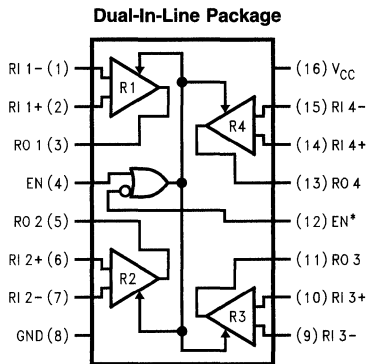

The DS26LV32A is a high speed quad differential CMOS receiver that meets the requirements of both TIA/EIA-422-B and ITU-T V.11. The CMOS DS26LV32AT features typical low static I_{CC} of 9 mA which makes it ideal for battery powered and power conscious applications. The TRI-STATE[®] enables, EN and EN*, allow the device to be active High or active Low. The enables are common to all four receivers.

The receiver output (RO) is guaranteed to be High when the inputs are left open. The receiver can detect signals as low as ± 200 mV over the common mode range of ± 10 V. The receiver outputs (RO) are compatible with TTL and LVCMOS levels.

Features

- Low Power CMOS design (30 mW typical)
- Interoperable with existing 5V RS-422 networks
- Industrial and Military Temperature Range
- Conforms to TIA/EIA-422-B (RS-422) and ITU-T V.11 Recommendation
- 3.3V Operation
- ± 7 V Common Mode Range @ $V_{ID} = 3$ V
- ± 10 V Common Mode Range @ $V_{ID} = 0.2$ V
- Receiver OPEN input failsafe feature
- Guaranteed AC Parameter:
 - Maximum Receiver Skew: 4 ns
 - Maximum Transition Time: 10 ns
- Pin compatible with DS26C32AT
- 32 MHz Toggle Frequency
- > 6.5k ESD Tolerance (HBM)
- Available in SOIC and Cerpack Packaging
- Standard Microcircuit Drawing (SMD) 5962-98585

DS26F32M

Quad Differential Line Receivers

General Description

The DS26F32 is a quad differential line receiver designed to meet the requirements of EIA Standards RS-422 and RS-423, and Federal Standards 1020 and 1030 for balanced and unbalanced digital data transmission.

The DS26F32 offers improved performance due to the use of state-of-the-art L-FAST bipolar technology. The L-FAST technology allows for higher speeds and lower currents by utilizing extremely short gate delay times. Thus, the DS26F32 features lower power, extended temperature range, and improved specifications.

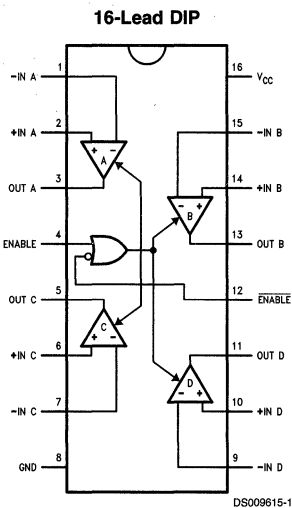

The device features an input sensitivity of 200 mV over the input common mode range of $\pm 7.0V$. The DS26F32 provides an enable function common to all four receivers and TRI-STATE[®] outputs with 8.0 mA sink capability. Also, a fail-safe input/output relationship keeps the outputs high when the inputs are open.

The DS26F32 offers optimum performance when used with the DS26F31 Quad Differential Line Driver.

Features

- Military temperature range
- Input voltage range of $\pm 7.0V$ (differential or common mode) $\pm 0.2V$ sensitivity over the input voltage range
- Meets all the requirements of EIA standards RS-422 and RS-423
- High input impedance (18k typical)
- 30 mV input hysteresis
- Operation from single +5.0V supply
- Input pull-down resistor prevents output oscillation on unused channels
- TRI-STATE outputs, with choice of complementary enables, for receiving directly onto a data bus
- Propagation delay 15 ns typical

DS26LS32AC/DS26LS32C/DS26LS32M/DS26LS33M Quad Differential Line Receivers

General Description

The DS26LS32 and DS26LS32A are quad differential line receivers designed to meet the RS-422, RS-423 and Federal Standards 1020 and 1030 for balanced and unbalanced digital data transmission.

The DS26LS32 and DS26LS32A have an input sensitivity of 200 mV over the input voltage range of $\pm 7V$ and the DS26LS33 have an input sensitivity of 500 mV over the input voltage range of $\pm 15V$.

The DS26LS32A differ in function from the popular DS26LS32 and DS26LS33 in that input pull-up and pull-down resistors are included which prevent output oscillation on unused channels.

Each version provides an enable and disable function common to all four receivers and features TRI-STATE[®] outputs with 8 mA sink capability. Constructed using low power Schottky processing, these devices are available over the full military and commercial operating temperature ranges.

Features

- High differential or common-mode input voltage ranges of $\pm 7V$ on the DS26LS32 and DS26LS32A and $\pm 15V$ on the DS26LS33
- $\pm 0.2V$ sensitivity over the input voltage range on the DS26LS32 and DS26LS32A, $\pm 0.5V$ sensitivity on the DS26LS33
- DS26LS32 and DS26LS32A meet all requirements of RS-422 and RS-423
- 6k minimum input impedance
- 100 mV input hysteresis on the DS26LS32 and DS26LS32A, 200 mV on the DS26LS33
- Operation from a single 5V supply
- TRI-STATE outputs, with choice of complementary output enables for receiving directly onto a data bus

DS34C86T

Quad CMOS Differential Line Receiver

General Description

The DS34C86T is a quad differential line receiver designed to meet the RS-422, RS-423, and Federal Standards 1020 and 1030 for balanced and unbalanced digital data transmission, while retaining the low power characteristics of CMOS. The DS34C86T has an input sensitivity of 200 mV over the common mode input voltage range of $\pm 7V$. Hysteresis is provided to improve noise margin and discourage output instability for slowly changing input waveforms. The DS34C86T features internal pull-up and pull-down resistors which prevent output oscillation on unused channels. Separate enable pins allow independent control of receiver pairs. The TRI-STATE® outputs have 6 mA source and sink capability. The DS34C86T is pin compatible with the DS3486.

Features

- CMOS design for low power
- $\pm 0.2V$ sensitivity over the input common mode voltage range
- Typical propagation delays: 19 ns
- Typical input hysteresis: 60 mV
- Inputs won't load line when $V_{CC} = 0V$
- Meets the requirements of EIA standard RS-422
- TRI-STATE outputs for system bus compatibility
- Available in surface mount
- Open input Failsafe feature, output high for open input

DS34LV86T

3V Enhanced CMOS Quad Differential Line Receiver

General Description

The DS34LV86T is a high speed quad differential CMOS receiver that meets the requirements of both TIA/EIA-422-B and ITU-T V.11. The CMOS DS34LV86T features typical low static I_{CC} of 9 mA which makes it ideal for battery powered and power conscious applications. The TRI-STATE® enables, EN, allow the device to be disabled when not in use to minimize power consumption. The dual enable scheme allows for flexibility in turning receivers on and off.

The receiver output (RO) is guaranteed to be High when the inputs are left open. The receiver can detect signals as low as ± 200 mV over the common mode range of ± 10 V. The receiver outputs (RO) are compatible with TTL and LVCMOS levels.

Features

- Low power CMOS design (30 mW typical)
- Interoperable with existing 5V RS-422 networks
- Industrial temperature range
- Meets TIA/EIA-422-B (RS-422) and ITU-T V.11 recommendation
- 3.3V Operation
- ± 7 V common mode range $V_{ID} = 3$ V
- ± 10 V common mode range $V_{ID} = 0.2$ V
- Receiver OPEN input failsafe feature

DS3486

Quad RS-422, RS-423 Line Receiver

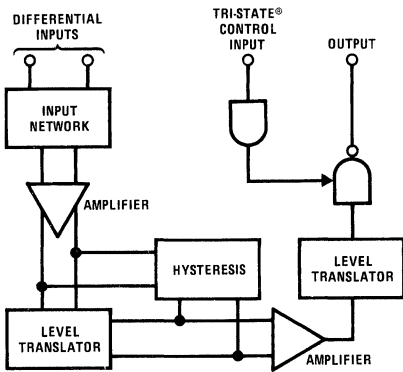

General Description

National's quad RS-422, RS-423 receiver features four independent receivers which comply with EIA Standards for the electrical characteristics of balanced/unbalanced voltage digital interface circuits. Receiver outputs are 74LS compatible, TRI-STATE® structures which are forced to a high impedance state when the appropriate output control pin reaches a logic zero condition. A PNP device buffers each output control pin to assure minimum loading for either logic one or logic zero inputs. In addition, each receiver has internal hysteresis circuitry to improve noise margin and discourage output instability for slowly changing input waveforms.

Features

- Four independent receivers
- TRI-STATE outputs
- Internal hysteresis -140 mV (typ)
- Fast propagation times -19 ns (typ)
- TTL compatible outputs
- 5V supply
- Pin compatible and interchangeable with MC3486

DS34C87T

CMOS Quad TRI-STATE® Differential Line Driver

General Description

The DS34C87T is a quad differential line driver designed for digital data transmission over balanced lines. The DS34C87T meets all the requirements of EIA standard RS-422 while retaining the low power characteristics of CMOS. This enables the construction of serial and terminal interfaces while maintaining minimal power consumption.

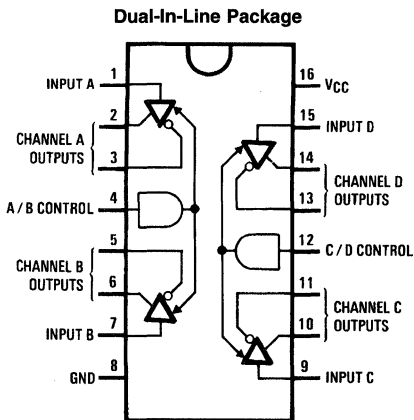

The DS34C87T accepts TTL or CMOS input levels and translates these to RS-422 output levels. This part uses special output circuitry that enables the individual drivers to power down without loading down the bus. This device has separate enable circuitry for each pair of the four drivers. The DS34C87T is pin compatible to the DS3487T.

All inputs are protected against damage due to electrostatic discharge by diodes to V_{CC} and ground.

Features

- TTL input compatible
- Typical propagation delays: 6 ns
- Typical output skew: 0.5 ns
- Outputs won't load line when $V_{CC} = 0V$
- Meets the requirements of EIA standard RS-422
- Operation from single 5V supply
- TRI-STATE outputs for connection to system buses
- Low quiescent current
- Available in surface mount

DS34LV87T

Enhanced CMOS Quad Differential Line Driver

General Description

The DS34LV87T is a high speed quad differential CMOS driver that meets the requirements of both TIA/EIA-422-B and ITU-T V.11. The CMOS DS34LV87T features low static I_{CC} of 100 μA max which makes it ideal for battery powered and power conscious applications. The TRI-STATE® enable, EN, allows the device to be disabled when the device is not in use to minimize power. The dual enable scheme allows for flexibility in turning devices on or off.

Protection diodes protect all the driver inputs against electrostatic discharge. The driver and enable inputs (DI and EN) are compatible with LVTTTL and LVCMOS devices. Differential outputs have the same V_{OD} ($\geq 2\text{V}$) guarantee as the 5V version. The outputs have enhanced ESD Protection providing greater than 7 kV tolerance.

Features

- Meets TIA/EIA-422-B (RS-422) and ITU-T V.11 recommendation
- Interoperable with existing 5V RS-422 networks
- Guaranteed V_{OD} of 2V min over operating conditions
- Balanced output crossover for low EMI (typical within 40 mV of 50% voltage level)
- Low power design (330 μW 3.3V static)
- ESD ≥ 7 kV on cable I/O pins (HBM)
- Industrial temperature range
- Guaranteed AC parameter:
 - Maximum driver skew: 2 ns
 - Maximum transition time: 10 ns
- Pin compatible with DS26C31
- Available in SOIC packaging

DS3487

Quad TRI-STATE® Line Driver

General Description

National's quad RS-422 driver features four independent drivers which comply with EIA Standards for the electrical characteristics of balanced voltage digital interface circuits. The outputs are TRI-STATE structures which are forced to a high impedance state when the appropriate output control pin reaches a logic zero condition. All input pins are PNP buffered to minimize input loading for either logic one or logic zero inputs.

Features

- Four independent drivers
- TRI-STATE® outputs
- Fast propagation times (typ 10 ns)
- TTL compatible
- 5V supply
- Output rise and fall times less than 15 ns
- Pin compatible with DS8924 and MC3487

DS78C20/DS88C20

Dual CMOS Compatible Differential Line Receiver

General Description

The DS78C20 and DS88C20 are high performance, dual differential, CMOS compatible line receivers for both balanced and unbalanced digital data transmission. The inputs are compatible with EIA and Federal Standards.

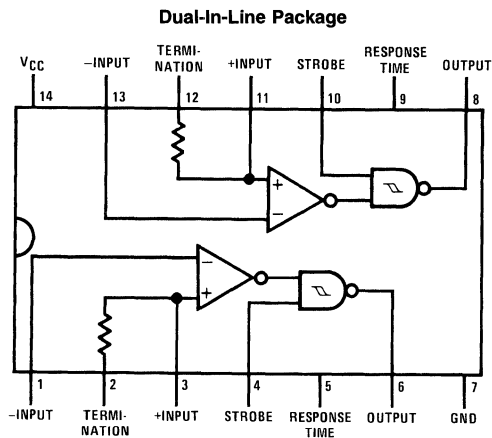

Input specifications meet or exceed those of the popular DS7820/DS8820 line receiver, and the pinout is identical.

A response pin is provided for controlling sensitivity to input noise spikes with an external capacitor. Each receiver includes a 180Ω terminating resistor, which may be used optionally on twisted pair lines. The DS78C20 is specified over a -55°C to +125°C operating temperature range, and the DS88C20 over a 0°C to +70°C range.

Features

- Meets requirements of EIA Standards RS-232-C RS-422 and RS-423, and Federal Standards 1020 and 1030
- Input voltage range of ±15V (differential or common-mode)
- Separate strobe input for each receiver
- ½ V_{CC} strobe threshold for CMOS compatibility
- 5k typical input impedance
- 50 mV input hysteresis
- 200 mV input threshold
- Operation voltage range = 4.5V to 15V
- DS7830/DS8830 recommended driver

Dual CMOS Compatible Differential Line Receiver

General Description

The DS78C120 is a high performance, dual differential, CMOS compatible line receiver for both balanced and unbalanced digital data transmission. The inputs are compatible with EIA, Federal and MIL standards.

Input specifications meet or exceed those of the popular DS7820 line receiver.

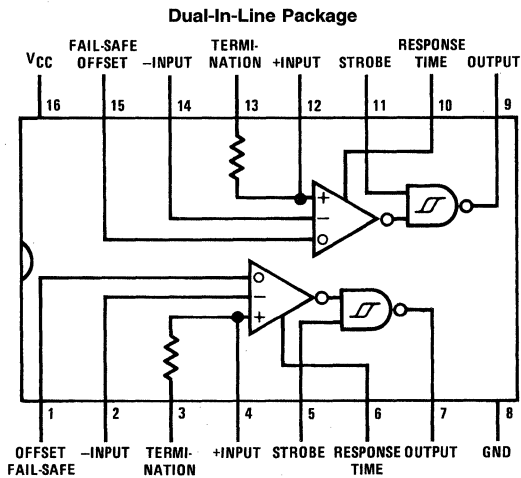

The line receiver will discriminate a ± 200 mV input signal over a common-mode range of ± 10 V and a ± 300 mV signal over a range of ± 15 V.

Circuit features include hysteresis and response control for applications where controlled rise and fall times and/or high frequency noise rejection are desirable. Threshold offset control is provided for fail-safe detection, should the input be open or short. Each receiver includes a 180Ω terminating resistor and the output gate contains a logic strobe for time discrimination. The DS78C120 is specified over a -55°C to $+125^\circ\text{C}$ temperature range.

Features

- Full compatibility with EIA Standards RS232-C, RS422 and RS423, Federal Standards 1020, 1030 and MIL-188-114
- Input voltage range of ± 15 V (differential or common-mode)
- Separate strobe input for each receiver
- $1/2 V_{CC}$ strobe threshold for CMOS compatibility
- 5k typical input impedance
- 50 mV input hysteresis
- 200 mV input threshold
- Operation voltage range = 4.5V to 15V
- Separate fail-safe mode

Connection Diagram

DS78LS120

Dual Differential Line Receiver (Noise Filtering and Fail-Safe)

General Description

The DS78LS120 is a high performance, dual differential, TTL compatible line receiver for both balanced and unbalanced digital data transmission. The inputs are compatible with EIA, Federal and MIL standards.

The line receiver will discriminate a ± 200 mV input signal over a common-mode range of ± 10 V and a ± 300 mV signal over a range of ± 15 V.

Circuit features include hysteresis and response control for applications where controlled rise and fall times and/or high frequency noise rejection are desirable. Threshold offset control is provided for fail-safe detection, should the input be open or short. Each receiver includes an optional 180Ω terminating resistor and the output gate contains a logic strobe for time discrimination. The DS78LS120 is specified over a -55°C to $+125^\circ\text{C}$ temperature range.

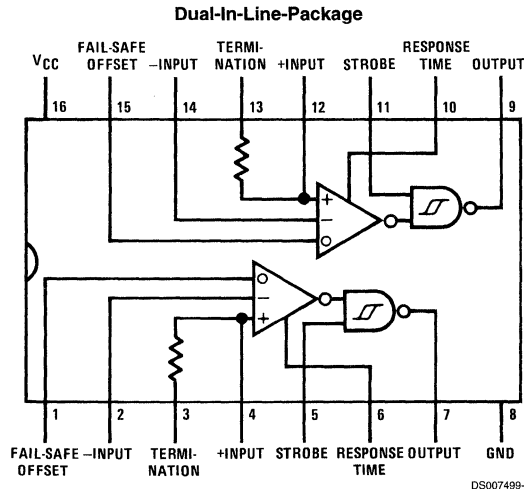

Input specifications meet or exceed those of the popular DS7820 line receiver.

Features

- Meets EIA standards RS232-C, RS422 and RS423, Federal Standards 1020, 1030 and MIL-188-114
- Input voltage range of ± 15 V (differential or common-mode)
- Separate strobe input for each receiver
- 5k typical input impedance
- Optional 180Ω termination resistor
- 50mV input hysteresis
- 200mV input threshold
- Separate fail-safe mode

DS8921/DS8921A/DS8921AT

Differential Line Driver and Receiver Pair

General Description

The DS8921, DS8921A are Differential Line Driver and Receiver pairs designed specifically for applications meeting the ST506, ST412 and ESDI Disk Drive Standards. In addition, these devices meet the requirements of the EIA Standard RS-422.

The DS8921, DS8921A receivers offer an input sensitivity of 200 mV over a $\pm 7V$ common mode operating range. Hysteresis is incorporated (typically 70 mV) to improve noise margin for slowly changing input waveforms.

The DS8921, DS8921A drivers are designed to provide unipolar differential drive to twisted pair or parallel wire transmission lines. Complementary outputs are logically ANDed and provide an output skew of 0.5 ns (typ.) with propagation delays of 12 ns.

The DS8921, DS8921A are designed to be compatible with TTL and CMOS.

Features

- 12 ns typical propagation delay
- Output skew - 0.5 ns typical
- Meet the requirements of EIA Standard RS-422
- Complementary Driver Outputs
- High differential or common-mode input voltage ranges of $\pm 7V$
- $\pm 0.2V$ receiver sensitivity over the input voltage range
- Receiver input hysteresis-70 mV typical
- DS8921AT industrial temperature operation: ($-40^{\circ}C$ to $+85^{\circ}C$)

DS89C21

Differential CMOS Line Driver and Receiver Pair

General Description

The DS89C21 is a differential CMOS line driver and receiver pair, designed to meet the requirements of TIA/EIA-422-A (RS-422) electrical characteristics interface standard. The DS89C21 provides one driver and one receiver in a minimum footprint. The device is offered in an 8-pin SOIC package.

The CMOS design minimizes the supply current to 6 mA, making the device ideal for use in battery powered or power conscious applications.

The driver features a fast transition time specified at 2.2 ns, and a maximum differential skew of 2 ns making the driver ideal for use in high speed applications operating above 10 MHz.

The receiver can detect signals as low as 200 mV, and also incorporates hysteresis for noise rejection. Skew is specified at 4 ns maximum.

The DS89C21 is compatible with TTL and CMOS levels (DI and RO).

Features

- Meets TIA/EIA-422-A (RS-422) and CCITT V.11 recommendation
- LOW POWER design—15 mW typical
- Guaranteed AC parameters:
 - Maximum driver skew 2.0 ns
 - Maximum receiver skew 4.0 ns
- Extended temperature range: -40°C to +85°C
- Available in SOIC packaging
- Operates over 20 Mbps
- Receiver OPEN input failsafe feature

DS8922/DS8922A/DS8923A TRI-STATE® RS-422 Dual Differential Line Driver and Receiver Pairs

General Description

The DS8922/22A and DS8923A are Dual Differential Line Driver and Receiver pairs. These devices are designed specifically for applications meeting the ST506, ST412 and ESDI Disk Drive Standards. In addition, the devices meet the requirements of the EIA Standard RS-422.

These devices offer an input sensitivity of 200 mV over a $\pm 7V$ common mode operating range. Hysteresis is incorporated (typically 70 mV) to improve noise margin for slowly changing input waveforms. An input fail-safe circuit is provided such that if the receiver inputs are open the output assumes the logical one state.

The DS8922A and DS8923A drivers are designed to provide unipolar differential drive to twisted pair or parallel wire transmission lines. Complementary outputs are logically AND'ed and provide an output skew of 0.5 ns (typ.) with propagation delays of 12 ns.

Both devices feature TRI-STATE outputs. The DS8922/22A have independent control functions common to a driver and receiver pair. The DS8923A has separate driver and receiver control functions.

Power up/down circuitry is featured which will TRI-STATE the outputs and prevent erroneous glitches on the transmission lines during system power up or power down operation.

The DS8922/22A and DS8923A are designed to be compatible with TTL and CMOS.

Features

- 12 ns typical propagation delay
- Output skew — ± 0.5 ns typical
- Meets the requirements of EIA Standard RS-422
- Complementary Driver Outputs
- High differential or common-mode input voltage ranges of $\pm 7V$
- $\pm 0.2V$ receiver sensitivity over the input voltage range
- Receiver input fail-safe circuitry
- Receiver input hysteresis — 70 mV typical
- Glitch free power up/down
- TRI-STATE outputs

DS8925

LocalTalk™ Dual Driver/Triple Receiver

General Description

The DS8925 is a dual driver/triple receiver device optimized to provide a single chip solution for a LocalTalk Interface. The device provides one differential TIA/EIA-422 driver, one TIA/EIA-423 single ended driver, one TIA/EIA-422 receiver and two TIA/EIA-423 receivers, all in a surface mount 16 pin package. This device is electrically similar to the 26LS30 and 26LS32 devices.

The drivers feature $\pm 10V$ common mode range, and the differential driver provides TRI-STATEable outputs. The receivers offer ± 200 mV thresholds over the $\pm 10V$ common mode range.

Features

- Single chip solution for LocalTalk port
- Two driver/three receivers per package
- Wide common mode range: $\pm 10V$
- ± 200 mV receiver sensitivity
- 70 mV typical receiver input hysteresis
- Available in SOIC packaging

DS89C386

Twelve Channel CMOS Differential Line Receiver

General Description

The DS89C386 is a high speed twelve channel CMOS differential receiver that meets the requirements of TIA/EIA-422-B. The DS89C386 features low power dissipation of 240 mW typical.

Each TRI-STATE® enable, EN, allows the receiver output to be active or in a Hi-impedance off state. Each enable is common to only two receivers for flexibility and multiplexing of receiver outputs.

The receiver output (RO) is guaranteed to be High when the inputs are left open and unterminated. The receiver can detect signals as low and including ± 200 mV over the common mode range of ± 7 V. The receiver outputs (RO) are compatible with both TTL and CMOS levels.

Features

- Low power design—240 mW typical
- Meets TIA/EIA-422-B (RS-422)
- Receiver OPEN input failsafe feature
- Guaranteed AC parameters:
 - Maximum receiver skew -4 ns
 - Maximum transition time -9 ns
- High Output Drive Capability: ± 6 mA
- Available in SSOP packaging:
 - Requires 30% less PCB space than 3 DS34C86TMs

DS89C387

Twelve Channel CMOS Differential Line Driver

General Description

The DS89C387 is a high speed twelve channel CMOS differential driver that meets the requirements of TIA/EIA-422-B. The DS89C387 features a low I_{CC} specification of 1.5 mA maximum, which makes it ideal for battery powered and power conscious applications. The device replaces three DS34C87s and offers a PC board space savings up to 30%. The twelve channel driver is available in a SSOP package. The device is ideal for wide parallel bus applications.

Each TRI-STATE® enable (EN) allows the driver outputs to be active or in a HI-impedance off state. Each enable is common to only two drivers for flexibility and control. The drivers may be disabled to turn off load current and to save power when data is not being transmitted.

The driver's input (DI) is compatible with both TTL and CMOS signal levels.

Features

- Low power I_{CC} : 1.5 mA maximum
- Meets TIA/EIA-422-B (RS-422)
- Guaranteed AC parameters:
 - Maximum driver skew -3 ns
 - Maximum transition time -10 ns
- Available in SSOP packaging:
 - Requires 30% less PCB space than 3 DS34C87TMs

DS9636A RS-423 Dual Programmable Slew Rate Line Driver

General Description

The DS9636A is a TTL/CMOS compatible, dual, single ended line driver which has been specifically designed to satisfy the requirements of EIA Standard RS-423.

The DS9636A is suitable for use in digital data transmission systems where signal wave shaping is desired. The output slew rates are jointly controlled by a single external resistor connected between the wave shaping control lead (WS) and ground. This eliminates any need for external filtering of the output signals. Output voltage levels and slew rates are independent of power supply variations. Current-limiting is provided in both output states. The DS9636A is designed for nominal power supplies of $\pm 12V$.

Inputs are TTL compatible with input current loading low enough (1/10 UL) to be also compatible with CMOS logic. Clamp diodes are provided on the inputs to limit transients below ground.

Features

- Programmable slew rate limiting
- Meets EIA Standard RS-423
- Commercial or extended temperature range
- Output short circuit protection
- TTL and CMOS compatible inputs

DS9637A

Dual Differential Line Receiver

General Description

The DS9637A is a Schottky dual differential line receiver which has been specifically designed to satisfy the requirements of EIA Standards RS-422 and RS-423. In addition, the DS9637A satisfies the requirements of MIL-STD 188-114 and is compatible with the International Standard CCITT recommendations. The DS9637A is suitable for use as a line receiver in digital data systems, using either single ended or differential, unipolar or bipolar transmission. It requires a single 5V power supply and has Schottky TTL compatible outputs. The DS9637A has an operational input common mode range of $\pm 7V$ either differentially or to ground.

Features

- Dual channel
- Single 5V supply
- Satisfies EIA standards RS-422 and RS423
- Built-in ± 35 mV hysteresis
- High input common mode voltage range
- High input impedance
- TTL compatible outputs
- Schottky technology
- Extended temperature range

DS9638

RS-422 Dual High Speed Differential Line Driver

General Description

The DS9638 is a Schottky, TTL compatible, dual differential line driver designed specifically to meet the EIA Standard RS-422 specifications. It is designed to provide unipolar differential drive to twisted pair or parallel wire transmission lines. The inputs are TTL compatible. The outputs are similar to totem pole TTL outputs, with active pull-up and pull-down. The device features a short circuit protected active pull-up with low output impedance and is specified to drive 50Ω transmission lines at high speed. The mini-DIP provides high package density.

Features

- Single 5V supply
- Schottky technology
- TTL and CMOS compatible inputs
- Output short circuit protection
- Input clamp diodes
- Complementary outputs
- Minimum output skew (<1.0 ns typical)
- 50 mA output drive capability for 50Ω transmission lines
- Meets EIA RS-422 specifications
- Propagation delay of less than 10 ns
- "Glitchless" differential output
- Delay time stable with V_{CC} and temperature variations (<2.0 ns typical) (Figure 3)
- Extended temperature range

DS3883A

BTL 9-Bit Data Transceiver

General Description

The DS3883A is one in a series of transceivers designed specifically for the implementation of high performance Futurebus+ and proprietary bus interfaces. The DS3883A, is a BTL 9-bit Transceiver designed to conform to IEEE 1194.1 (Backplane Transceiver Logic—BTL) as specified in the IEEE 896.2 Futurebus+ specification. Utilization of the DS3883A simplifies the implementation of byte wide address/data with parity lines and also may be used for the Futurebus+ status, tag and command lines.

The DS3883A driver output configuration is an NPN open collector which allows Wired-OR connection on the bus. Each driver output incorporates a Schottky diode in series with its collector to isolate the transistor output capacitance from the bus thus reducing the bus loading in the inactive state. The combined output capacitance of the driver and receiver input is less than 5 pF. The driver also has high sink current capability to comply with the bus loading requirements defined within IEEE 1194.1 BTL specification.

Backplane Transceiver Logic (BTL) is a signaling standard that was invented and first introduced by National Semiconductor, then developed by the IEEE to enhance the performance of backplane buses. BTL compatible transceivers feature low output capacitance drivers to minimize bus loading, a 1V nominal signal swing for reduced power consumption and receivers with precision thresholds for maximum noise immunity. BTL eliminates settling time delays that severely limit TTL bus performance, and thus provide significantly higher bus transfer rates. The backplane bus is intended to be operated with termination resistors (selected to match the bus impedance) connected to 2.1V at both ends. The low voltage is typically 1V.

Separate ground pins are provided for each BTL output to minimize induced ground noise during simultaneous switching. The unique driver circuitry meets the maximum slew rate of 0.5 V/ns which allows controlled rise and fall times to reduce noise coupling to adjacent lines. The transceiver's control and driver inputs are designed with high impedance PNP input structures and are fully TTL compatible.

The receiver is a high speed comparator that utilizes a bandgap reference for precision threshold control allowing maximum noise immunity to the BTL 1V signaling level. Separate QV_{CC} and QGND pins are provided to minimize the effects of high current switching noise. The output is TRI-STATE® and fully TTL compatible.

The DS3883A supports live insertion as defined in 896.2 through the LI (Live Insertion) pin. To implement live insertion the LI pin should be connected to the live insertion power connector. If this function is not supported the LI pin must be tied to the V_{CC} pin. The DS3883A also provides glitch free power up/down protection during power sequencing.

The DS3883A has two types of power connections in addition to the LI pin. They are the Logic V_{CC} (V_{CC}) and the Quiet V_{CC} (QV_{CC}). There are two logic V_{CC} pins on the DS3883 that provide the supply voltage for the logic and control circuitry. Multiple power pins reduce the effects of package inductance and thereby minimize switching noise. As these pins are common to the V_{CC} bus internal to the device, a voltage delta should never exist between these pins and the voltage difference between V_{CC} and QV_{CC} should never exceed ±0.5V because of ESD circuitry.

Additionally, the ESD circuitry between the V_{CC} pins and all other pins except for BTL I/O's and LI pins requires that any voltage on these pins should not exceed the voltage on V_{CC} + 0.5V.

There are three different types of ground pins on the DS3883A. They are the logic ground (GND), BTL grounds (B0GND–B8GND) and the Bandgap reference ground (QGND). All of these ground reference pins are isolated within the chip to minimize the effects of high current switching transients. For optimum performance the QGND should be returned to the connector through a quiet channel that does not carry transient switching current. The GND and B0GND–B8GND should be connected to the nearest backplane ground pin with the shortest possible path.

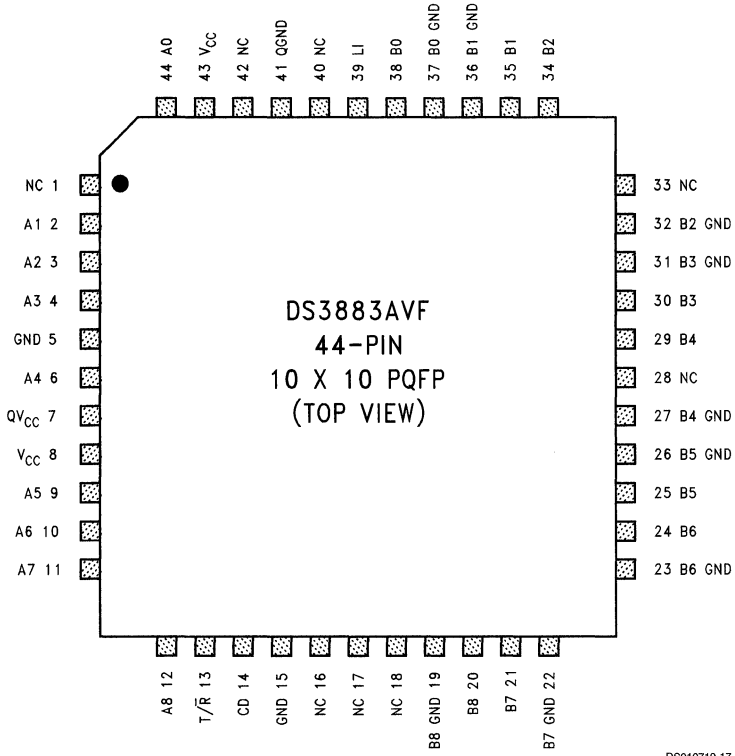

Since many different grounding schemes could be implemented and ESD circuitry exists on the DS3883, it is important to note that any voltage difference between ground pins, QGND, GND or B0GND–B8GND should not exceed ±0.5V including power-up/down sequencing.

When CD (Chip Disable) is high, An and Bn are in a high impedance state. To transmit data (An to Bn) the T/R signal is high. To receive data (Bn to An) the T/R signal is low.

Features

- 9-bit Inverting BTL transceiver meets IEEE 1194.1 standard on Backplane Transceiver Logic (BTL)
- Supports live insertion
- Glitch free power-up/down protection
- Typically less than 5 pF bus-port capacitance
- Low bus-port voltage swing (typically 1V) at 80 mA
- Open collector bus-port output allows Wired-OR
- Controlled rise and fall time to reduce noise coupling
- TTL compatible driver and control inputs
- Built in bandgap reference with separate QV_{CC} and QGND pins for precise receiver thresholds
- Exceeds 2 kV ESD (Human Body Model)
- Individual bus-port ground pins minimize ground bounce
- Tight skew (1 ns typical)

DS010719-17

DS3884A

BTL Handshake Transceiver

General Description

The DS3884A is one in a series of transceivers designed specifically for the implementation of high performance Futurebus+ and proprietary bus interfaces. The DS3884A is a BTL 6-bit Handshake Transceiver designed to conform to IEEE 1194.1 (Backplane Transceiver Logic—BTL) as specified in the IEEE 896.2 Futurebus+ specification.

Features

- Fast propagation delay (3 ns typ)
- 6-bit BTL transceiver
- Selective receiver glitch filtering (FR1–FR3)
- Meets 1194.1 Standard on Backplane Transceiver Logic (BTL)
- Supports live insertion
- Glitch free power-up/down protection
- Typically less than 5 pF bus-port capacitance
- Low Bus-port voltage swing (typically 1V) at 80 mA
- TTL compatible driver and control inputs
- Separate TTL I/O
- Open collector bus-port outputs allow Wired-OR connection
- Controlled rise and fall time to reduce noise coupling to adjacent lines
- Built in Bandgap reference with separate QV_{CC} and QGND pins for precise receiver thresholds
- Exceeds 2 kV ESD testing (Human Body Model)
- Individual Bus-port ground pins
- Product offered in PQFP package styles

DS3886A

BTL 9-Bit Latching Data Transceiver

General Description

The DS3886A is a higher speed, lower power, pin compatible version of the DS3886.

The DS3886A is one in a series of transceivers designed specifically for the implementation of high performance Futurebus+ and proprietary bus interfaces. The DS3886A is a BTL 9-Bit Latching Data Transceiver designed to conform to IEEE 1194.1 (Backplane Transceiver Logic—BTL) as specified in the IEEE 896.2 Futurebus+ specification. The DS3886A incorporates an edge-triggered latch in the driver path which can be bypassed during fall-through mode of operation and a transparent latch in the receiver path. Utilization of the DS3886A simplifies the implementation of byte wide address/data with parity lines and also may be used for the Futurebus+ status, tag and command lines.

The DS3886A driver output configuration is an NPN open collector which allows Wired-OR connection on the bus. Each driver output incorporates a Schottky diode in series with its collector to isolate the transistor output capacitance from the bus, thus reducing the bus loading in the inactive state. The combined output capacitance of the driver output and receiver input is less than 5 pF. The driver also has high sink current capability to comply with the bus loading requirements defined within IEEE 1194.1 BTL specification.

Backplane Transceiver Logic (BTL) is a signaling standard that was invented and first introduced by National Semiconductor, then developed by the IEEE to enhance the performance of backplane buses. BTL compatible transceivers feature low output capacitance drivers to minimize bus loading, a 1V nominal signal swing for reduced power consumption and receivers with precision thresholds for maximum noise immunity. The BTL standard eliminates settling time delays that severely limit TTL bus performance, and thus provide significantly higher bus transfer rates. The backplane bus is intended to be operated with termination resistors (selected to match the bus impedance) connected to 2.1V at both ends. The low voltage is typically 1V.

Separate ground pins are provided for each BTL output to minimize induced ground noise during simultaneous switching.

The unique driver circuitry meets the maximum slew rate of 0.5 V/ns which allows controlled rise and fall times to reduce noise coupling to adjacent lines.

The transceiver's high impedance control and driver inputs are fully TTL compatible.

The receiver is a high speed comparator that utilizes a Bandgap reference for precision threshold control, allowing maximum noise immunity to the BTL 1V signaling level. Separate V_{CC} and QGND pins are provided to minimize the effects of high current switching noise. The output is TRI-STATE® and fully TTL compatible.

The DS3886A supports live insertion as defined in IEEE 896.2 through the LI (Live Insertion) pin. To implement live insertion the LI pin should be connected to the live insertion power connector. If this function is not supported, the LI pin

must be tied to the V_{CC} pin. The DS3886A also provides glitch free power up/down protection during power sequencing.

The DS3886A has two types of power connections in addition to the LI pin. They are the Logic V_{CC} (V_{CC}) and the Quiet V_{CC} (QV_{CC}). There are two Logic V_{CC} pins on the DS3886A that provide the supply voltage for the logic and control circuitry. Multiple connections are provided to reduce the effects of package inductance and thereby minimize switching noise. As these pins are common to the V_{CC} bus internal to the device, a voltage delta should never exist between these pins and the voltage difference between V_{CC} and QV_{CC} should never exceed $\pm 0.5V$ because of ESD circuitry.

When CD (Chip Disable) is high, An is in high impedance state and Bn is high. To transmit data (An to Bn) the T/\bar{R} signal is high.

When RBYP is high, the positive edge triggered flip-flop is in the transparent mode. When RBYP is low, the positive edge of the ACLK signal clocks the data.

In addition, the ESD circuitry between the V_{CC} pins and all other pins except for BTL I/O's and LI pins requires that any voltage on these pins should not exceed the voltage on $V_{CC} + 0.5V$.

There are three different types of ground pins on the DS3886A; the logic ground (GND), BTL grounds (B0GND–B8GND) and the Bandgap reference ground (QGND). All of these ground reference pins are isolated within the chip to minimize the effects of high current switching transients. For optimum performance the QGND should be returned to the connector through a quiet channel that does not carry transient switching current. The GND and B0GND–B8GND should be connected to the nearest backplane ground pin with the shortest possible path.

Since many different grounding schemes could be implemented and ESD circuitry exists on the DS3886A, it is important to note that any voltage difference between ground pins, QGND, GND or B0GND–B8GND should not exceed $\pm 0.5V$ including power up/down sequencing.

The DS3886A is offered in 44-pin PLCC, and 44-pin PQFP high density package styles.

Features

- Fast propagation delay (3ns typ)
- 9-BIT BTL Latched Transceiver
- Driver incorporates edge triggered latches
- Receiver incorporates transparent latches
- Meets IEEE 1194.1 Standard on Backplane Transceiver Logic (BTL)
- Supports Live Insertion
- Glitch free Power-up/down protection
- Typically less than 5 pF Bus-port capacitance
- Low Bus-port voltage swing (typically 1V) at 80 mA
- Exceeds 2 KV ESD testing (Human Body Model)

Features (Continued)

- Open collector Bus-port outputs allows Wired-OR connection
- Controlled rise and fall time to reduce noise coupling to adjacent lines
- TTL compatible Driver and Control inputs

- Built in Bandgap reference with separate QV_{CC} and QGND pins for precise receiver thresholds
- Individual Bus-port ground pins
- Product offered in PLCC and PQFP package styles
- Tight skew (0.5 ns typical)

DS38C86A

CMOS BTL 9-Bit Latching Data Transceiver

General Description

The DS38C86A is a 9-bit BTL Latching Data Transceiver designed specifically for proprietary bus interfaces. The device is implemented in CMOS technology, and delivers all of the performance of its Bi-CMOS counterparts while consuming less than half of the power supply current of the DS3886A. The DS38C86A conforms to the IEEE 11941.1 (Backplane Transceiver Logic - BTL) Standard.

The DS38C86A incorporates an edge-triggered latch in the driver path which can be bypassed during fall-through mode of operation and a transparent latch in the receiver path. The DS38C86A driver output configuration is an open drain which allows Wired-OR connection on the bus. A unique design reduces the bus loading to 3 pF typical. The driver also has high sink current capability to comply with the bus loading requirements defined within IEEE 11941.1 BTL specification.

Backplane Transceiver Logic (BTL) is a signaling standard that was invented and first introduced by National Semiconductor, then developed by the IEEE to enhance the performance of backplane buses. BTL transceivers feature low output capacitance drivers to minimize bus loading, a 1V nominal signal swing for reduced power consumption and receivers with precision thresholds for maximum noise immunity. The BTL standard eliminates settling time delays that severely limit TTL bus performance, and thus provide significantly higher bus transfer rates. The backplane bus is intended to be operated with termination resistors (selected to match the bus impedance) connected to a 2.1V at both ends. The low voltage is typically 1V.

The DS38C86A provides an alternative to high power Bipolar and BiCMOS devices with the use of CMOS technology. The CMOS technology enables the DS38C86A to operate at 50% of the I_{CC} required by the Bi-CMOS DS3886A. This can have a major impact on system power consumption. For example, if a backplane is 128 bits wide, 16 devices (9 bits each) required per card. Also assume the backplane is one rack with 20 slots. Power dissipation savings for this application is calculated by the following equation:

$$P = I_{CC}\text{-savings} \times \text{Power supply voltage} \times \text{number of devices}$$

$$P = 32 \text{ mA} \times 5.5\text{V} \times 320 = 56 \text{ Watts}$$

The power dissipation savings may increase even more when; the system bus is wider than 128 bits, there are multiple racks in the system, or if the system includes a hot backup. This may double the power dissipation savings.

Separate ground pins are provided for each BTL output minimize induced ground noise during simultaneous switching.

The unique driver circuitry provides a maximum slew rate of 0.9V/ns which allows controlled rise and fall times to reduce noise coupling to adjacent lines.

The transceiver's high impedance control and driver inputs are fully TTL compatible.

The receiver is a high speed comparator that utilizes a Bandgap reference for precision threshold control allowing maximum immunity to the BTL 1V signaling level.

Separate QV_{CC} and QGND pins are provided to minimize the effects of high current switching noise. The receiver output is TRI-STATE® and fully TTL compatible.

The DS38C86A supports live insertion as defined in IEEE 896.2 through the LI (Live Insertion) pin. To implement live insertion the LI pin should be connected to the live insertion power connector. If this function is not supported, the LI pin must be tied to the V_{CC} pin. The DS38C86A also provides glitch free power up/down protection during power sequencing.

The DS38C86A has two types of power connections in addition to the LI pin. They are the Logic V_{CC} (V_{CC}) and the Quiet V_{CC} (QV_{CC}). There are two Logic V_{CC} pins on the DS38C86A that provide the supply voltage for the logic and control circuitry. Multiple connections are provided to reduce the effects of package inductance and thereby minimize switching noise. A voltage delta between V_{CC} and QV_{CC} should never exceed $\pm 0.5\text{V}$ because of ESD circuitry.

When CD (Chip Disable) is high, An is in high impedance state and Bn is high. To transmit data (An to Bn), the T/\bar{R} signal is high.

When RBYP is high, the positive edge triggered flip-flop is in the transparent mode. When RBYP is low, the positive edge of the ACLK signal clocks the data.

In addition, the ESD circuitry between the V_{CC} pins and all other pins except for BTL I/O's and LI pins requires that any voltage on these pins should not exceed the voltage on $V_{CC} + 0.5\text{V}$.

There are three different types of ground pins on the DS38C86A; the logic ground (GND), BTL grounds (B0GND-B8GND) and the Bandgap reference ground (QGND). All of these ground reference pins are isolated within the chip to minimize the effects of high current switching transients. For optimum performance the QGND should be returned to the connector through a quiet channel that does not carry transient switching current. The GND and B0GND-B8GND should be connected to the nearest backplane ground pin with the shortest possible path.

Since many different grounding schemes could be implemented and ESD circuitry exists on the DS38C86A, it is important to note that any voltage between ground pins, QGND, GND or B0GND-B8GND should not exceed $\pm 0.5\text{V}$ including power up/down sequencing.

The DS38C86A is offered in a 48-pin 7 x 7 space saving PQFP package.

Features

- >50% Less I_{CC} than Bi-CMOS DS3886A
- 9-Bit inverting BTL latching transceiver
- Meets IEEE 1194.1 Standard on Backplane Transceiver Logic (BTL)
- Very low bus-port capacitance—3 pF typical
- Supports live insertion
- Glitch free power-up/down protection
- Fast propagation delays
 - An to Bn (Fall-Thru Mode) 6.0 ns max
 - Bn to An (Bypass Mode) 7.0 ns max
- 1V Signal swings with 80 mA sink capability
- Open drain bus-port outputs allow Wired-OR connection
- Controlled rise and fall time to reduce noise coupling to adjacent lines
- TTL compatible Driver and Control inputs
- Built in Bandgap reference with separate QV_{CC} and QGND pins for precise receiver thresholds
- Individual bus-port ground pins
- Tight skew—
 - Driver 2.0 ns max
 - Receiver 2.5 ns max

DS3893A BTL TURBOTRANSCEIVER™

General Description

The TURBOTRANSCEIVER is designed for use in very high speed bus systems. The bus terminal characteristics of the TURBOTRANSCEIVER are referred to as "Backplane Transceiver Logic" (BTL). BTL is a new logic signaling standard that has been developed to enhance the performance of backplane buses. BTL compatible transceivers feature low output capacitance drivers to minimize bus loading, a 1V nominal signal swing for reduced power consumption and receivers with precision thresholds for maximum noise immunity. This new standard eliminates the settling time delays, that severely limit the TTL bus performance, to provide significantly higher bus transfer rates.

The TURBOTRANSCEIVER is compatible with the requirements of the proposed IEEE 896 Futurebus draft standard. It is similar to the DS3896/97 BTL TRAPEZOIDAL™ Transceivers but the trapezoidal feature has been removed to improve the propagation delay. A stripline backplane is therefore required to reduce the crosstalk induced by the faster rise and fall times. This device can drive a 10Ω load with a typical propagation delay of 3.5 ns for the driver and 5 ns for the receiver.

When multiple devices are used to drive a parallel bus, the driver enables can be tied together and used as a common control line to get on and off the bus. The driver enable delay is designed to be the same as the driver propagation delay in order to provide maximum speed in this configuration. The low input current on the enable pin eases the drive required for the common control line.

The bus driver is an open collector NPN with a Schottky diode in series to isolate the transistor output capacitance from the bus when the driver is in the inactive state. The active output low voltage is typically 1V. The bus is intended to be operated with termination resistors (selected to match the bus impedance) to 2.1V at both ends. Each of the resistors can be as low as 20Ω.

Features

- Fast single ended transceiver (typical driver enable and receiver propagation delays are 3.5 ns and 5 ns)
- Backplane Transceiver Logic (BTL) levels (1V logic swing)
- Less than 5 pF bus-port capacitance
- Drives densely loaded backplanes with equivalent load impedances down to 10Ω
- 4 transceivers in 20 pin PCC package
- Specially designed for stripline backplanes
- Separate bus ground returns for each driver to minimize ground noise
- High impedance, MOS and TTL compatible inputs
- TRI-STATE™ control for receiver outputs
- Built-in bandgap reference provides accurate receiver threshold
- Glitch free power up/down protection on all outputs
- Oxide isolated bipolar technology

DS3896/DS3897

BTL Trapezoidal™ Transceivers

General Description

These advanced transceivers are specifically designed to overcome problems associated with driving a densely populated backplane, and thus provide significant improvement in both speed and data integrity. Their low output capacitance, low output signal swing and noise immunity features make them ideal for driving low impedance buses with minimum power consumption.

The DS3896 is an octal high speed schottky bus transceiver with common control signals, whereas the DS3897 is a quad device with independent driver input and receiver output pins. The DS3897 has a separate driver disable for each driver and is, therefore, suitable for arbitration lines. The separate driver disable pins (En) feature internal pull ups and may be left open if not required. On the other hand, the DS3896 provides high package density for data/address lines.

The open collector drivers generate precise trapezoidal waveforms, which are relatively independent of capacitive loading conditions on the outputs. This significantly reduces noise coupling to adjacent lines. In addition, the receivers use a low pass filter in conjunction with a high speed comparator, to further enhance the noise immunity and provide equal rejection to both negative and positive going noise pulses on the bus.

To minimize bus loading, these devices also feature a schottky diode in series with the open collector output that isolates the driver output capacitance in the disabled state. The output low voltage is typically "1V" and the output high level is intended to be 2V. This is achieved by terminating the bus

with a pull up resistor to 2V at both ends. The device can drive an equivalent DC load of 18.5Ω (or greater) in the above configuration.

These signalling requirements, including a 1 volt signal swing, low output capacitance and precise receiver thresholds are referred to as Bus Transceiver Logic (BTL).

Features

- 8 bit DS3896 transceiver provides high package density
- 4 bit DS3897 transceiver provides separate driver input and receiver output pins
- BTL compatible
- Less than 5 pF output capacitance for minimal bus loading
- 1 Volt bus signal swing reduces power consumption
- Trapezoidal driver waveforms ($t_r, t_f \approx 6$ ns typical) reduce noise coupling to adjacent lines
- Temperature insensitive receiver thresholds track the bus logic high level to maximize noise immunity in both high and low states
- Guaranteed A.C. specifications on noise immunity and propagation delay over the specified temperature and supply voltage range
- Open collector driver output allows wire-or connection
- Advanced low power schottky technology
- Glitch free power up/down protection on driver and receiver outputs
- TTL compatible driver and control inputs and receiver outputs

DS75110A Dual Line Drivers

General Description

The DS75110A is a dual line driver with independent channels, common supply and ground terminals featuring constant current outputs. These drivers are designed for optimum performance when used with the DS75107, DS75108 line receivers.

The output current of the DS75110A is nominally 12 mA and may be switched to either of two output terminals with the appropriate logic levels at the driver input.

Separate or common control inputs are provided for increased logic versatility. These control or inhibit inputs allow the output current to be switched off (inhibited) by applying low logic levels to the control inputs. The output current in the inhibit mode, $I_{O(Off)}$, is specified so that minimum line loading is induced. This is highly desirable in system applications using parity line data communications.

Features

- Improved stability over supply voltage and temperature ranges
- Constant current, high impedance outputs
- High speed: 15 ns max propagation delay
- Standard supply voltages
- Inhibitor available for driver selection
- High common mode output voltage range (-3.0V to 10V)
- TTL input compatibility

DS7830

Dual Differential Line Driver

General Description

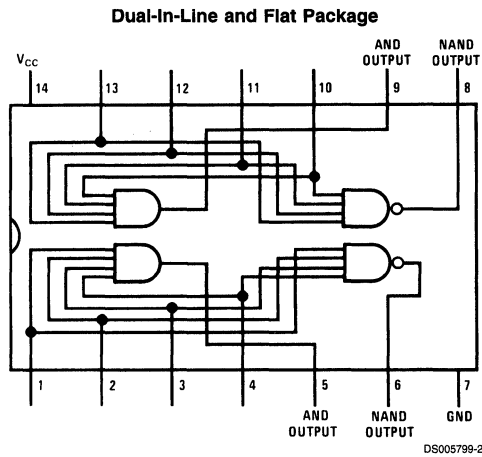

The DS7830 is a dual differential line driver that also performs the dual four-input NAND or dual four-input AND function.

TTL (Transistor-Transistor-Logic) multiple emitter inputs allow this line driver to interface with standard TTL systems. The differential outputs are balanced and are designed to drive long lengths of coaxial cable, strip line, or twisted pair transmission lines with characteristic impedances of 50Ω to 500Ω . The differential feature of the output eliminates troublesome ground-loop errors normally associated with single-wire transmissions.

Features

- Single 5V power supply
- Diode protected outputs for termination of positive and negative voltage transients
- Diode protected inputs to prevent line ringing
- High speed
- Short circuit protection

DS7831/DS8832 Dual TRI-STATE® Line Driver

General Description

Through simple logic control, the DS7831/DS8832 can be used as either a quad single-ended line driver or a dual differential line driver. They are specifically designed for party line (bus-organized) systems. The DS8832 does not have the V_{CC} clamp diodes found on the DS7831.

The DS7831 is specified for operation over the -55°C to $+125^{\circ}\text{C}$ military temperature range. The DS8832 is specified for operation over the 0°C to $+70^{\circ}\text{C}$ temperature range.

Features

- Series 54/74 compatible
- 17 ns propagation delay
- Very low output impedance—high drive capability
- 40 mA sink and source currents
- Gating control to allow either single-ended or differential operation
- High impedance output state which allows many outputs to be connected to a common bus line

DS1603 TRI-STATE® Dual Receiver

General Description

The DS16033 is a dual differential TRI-STATE line receiver designed for a broad range of system applications. It features a high input impedance and low input current which reduces the loading effects on a digital transmission line, making it ideal for use in party line systems and general purpose applications like transducer preamplifiers, level translators and comparators.

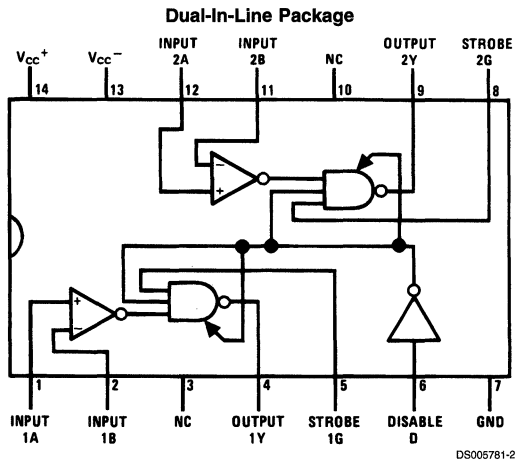

The receivers feature a ± 25 mV input sensitivity specified over a ± 3 V common mode range. Input protection diodes are incorporated in series with the collectors of the differential stage. These diodes are useful in applications that have multiple V_{CC+} supplies or V_{CC+} supplies that are turned off thus avoiding signal clamping. In addition, TTL compatible strobe and control lines are provide for flexibility in the application.

The DS1603 is pin compatible with the DS75107 dual line receiver.

Features

- Diode protected input stage for power "OFF" condition
- 17 ns typ high speed
- TTL compatible
- ± 25 mV input sensitivity
- ± 3 V input common-mode range
- High-input impedance with normal V_{CC} , or $V_{CC} = 0$ V
- Strobes for channel selection
- TRI-STATE outputs for high speed buses

DS3650

Quad Differential Line Receivers

General Description

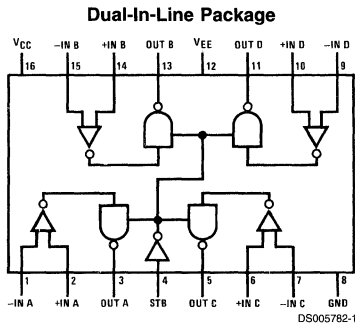

The DS3650 is TTL compatible quad high speed circuits intended primarily for line receiver applications. Switching speeds have been enhanced over conventional line receivers by the use of Schottky technology, and TRI-STATE® strobing is incorporated offering a high impedance output state for bussed organizations.

The DS3650 has active pull-up outputs and offers a TRI-STATE strobe.

Features

- High speed
- TTL compatible
- Input sensitivity: ± 25 mV
- TRI-STATE outputs for high speed busses
- Standard supply voltages: ± 5 V
- Pin and function compatible with MC3450

DS75107

Dual Line Receiver

General Description

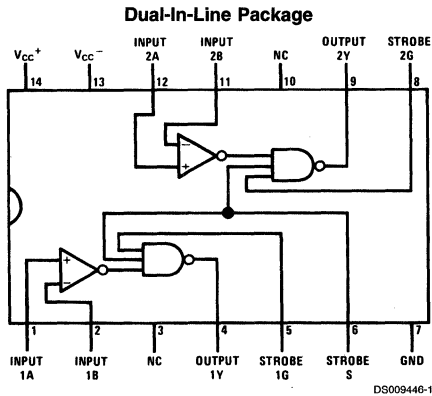

The product described herein is a TTL compatible dual high speed circuit intended for sensing in a broad range of system applications. While the primary usage will be for line receivers of MOS sensing, the product may effectively be used as a voltage comparator, level translator, window detector, transducer preamplifier, and in other sensing applications. As a digital line receiver the product is applicable with the SN55109/SN75109 and μ A75110/DS75110 companion drivers, or may be used in other balanced or unbalanced party-line data transmission systems.

Input protection diodes are incorporated in series with the collectors of the differential input stage. These diodes are useful in certain applications that have multiple V_{CC+} supplies or V_{CC+} supplies that are turned off.

Features

- Diode protected input stage for power "OFF" condition
- 17 ns typ high speed
- TTL compatible
- ± 10 mV or ± 25 mV input sensitivity
- ± 3 V input common-mode range
- High input impedance with normal V_{CC} , or $V_{CC} = 0$ V
- Strokes for channel selection
- Dual circuits
- Sensitivity gntd. over full common-mode range
- Logic input clamp diodes—meets both "A" and "B" version specifications
- ± 5 V standard supply voltages

DS7820A/DS8820A Dual Line Receiver

General Description

The DS7820A and the DS8820A are improved performance digital line receivers with two completely independent units fabricated on a single silicon chip. Intended for use with digital systems connected by twisted pair lines, they have a differential input designed to reject large common mode signals while responding to small differential signals. The output is directly compatible with TTL or LS integrated circuits.

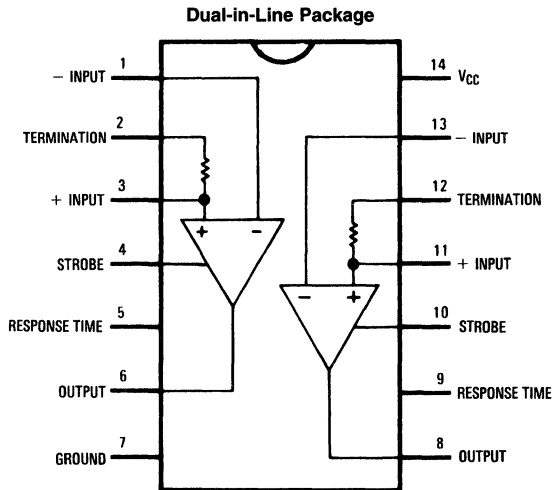

The response time can be controlled with an external capacitor to reject input noise spikes. The output state is a logic "1" for both inputs open. Termination resistors for the twisted pair line are also included in the circuit. Both the DS7820A and the DS8820A are specified, worst case, over their full

operating temperature range (-55°C to $+125^{\circ}\text{C}$ and 0°C to 70°C respectively), over the entire input voltage range, for $\pm 10\%$ supply voltage variations.

Features

- Operation from a single +5V logic supply
- Input voltage range of $\pm 15\text{V}$
- Strobe low forces output to "1" state
- High input resistance
- Fanout of ten with TTL integrated circuits
- Outputs can be wire OR'ed
- Series 54/74 compatible

DS9622 Dual Line Receiver

General Description

The DS9622 is a dual line receiver designed to discriminate a worst case logic swing of 2V from a $\pm 10V$ common mode noise signal or ground shift. A 1.5V threshold is built into the differential amplifier to offer a TTL compatible threshold voltage and maximum noise immunity. The offset is obtained by use of current sources and matched resistors.

The DS9622 allows the choice of output states with the input open, without affecting circuit performance by use of S3. A 130 Ω terminating resistor is provided at the input of each line receiver. An enable is also provided for each line receiver. The output is TTL compatible. The output high level can be increased to 12V by tying it to a positive supply through a resistor. The output circuits allow wired-OR operation.

Features

- TTL compatible threshold voltage
- Input terminating resistors
- Choice of output state with inputs open
- TTL compatible output
- High common mode
- Wired-OR capability
- Enable inputs
- Logic compatible supply voltages

DS3662

Quad High Speed Trapezoidal™ Bus Transceiver

General Description

The DS3662 is a quad high speed Schottky bus transceiver intended for use with terminated 120Ω impedance lines. It is specifically designed to reduce noise in unbalanced transmission systems. The open collector drivers generate precise trapezoidal waveforms with rise and fall times of 15 ns (typical), which are relatively independent of capacitive loading conditions on the outputs. This reduces noise coupling to the adjacent lines without any appreciable impact on the maximum data rate obtainable with high speed bus transceivers. In addition, the receivers use a low pass filter in conjunction with a high speed comparator, to further enhance the noise immunity. Tightly controlled threshold levels on the receiver provide equal rejection to both negative and positive going noise pulses on the bus.

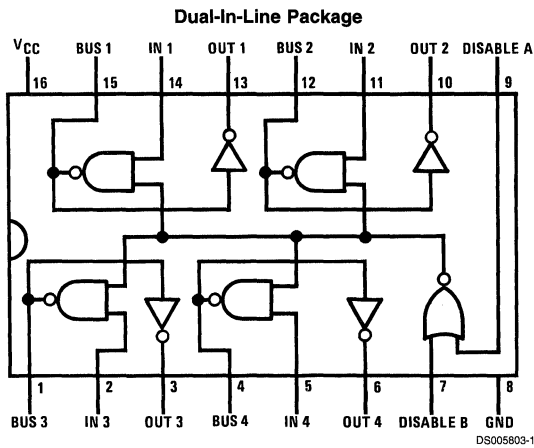

The external termination is intended to be a 180Ω resistor from the bus to 5V logic supply, together with a 390Ω resistor from the bus to ground. The bus can be terminated at one or both ends. A two input NOR gate is provided to disable all drivers in a package simultaneously.

Features

- Pin to pin functional replacement for DS8641
- Guaranteed AC specifications on noise immunity and propagation delay over the specified temperature and supply voltage range
- Temperature insensitive receiver thresholds track bus logic level
- Trapezoidal bus waveforms reduce noise coupling to adjacent lines
- Precision receiver thresholds provide maximum noise immunity and symmetrical response to positive and negative going pulses
- Open collector driver output allows wire-OR connection
- High speed Schottky technology
- 15 μA typical bus termination current with normal V_{CC} or with $V_{CC} = 0V$
- Glitch free power up/down protection on the driver output
- TTL compatible driver and disable inputs, and receiver outputs

DS3862

Octal High Speed Trapezoidal™ Bus Transceiver

General Description

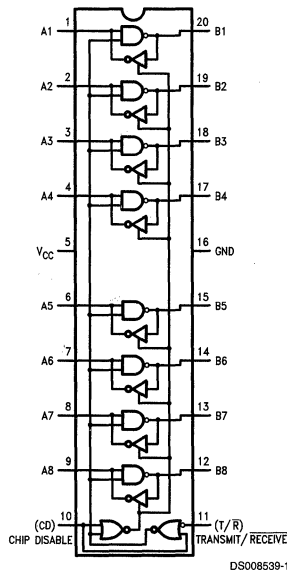

The DS3862 is an octal high speed schottky bus transceiver intended for use with terminated 120Ω impedance lines. It is specifically designed to reduce noise in unbalanced transmission systems. The open collector drivers generate precise trapezoidal waveforms with rise and fall times of 9 ns (typical), which are relatively independent of capacitive loading conditions on the outputs. This reduces noise coupling to the adjacent lines without any appreciable impact on the maximum data rate obtainable with high speed bus transceivers. In addition, the receivers use a low pass filter in conjunction with a high speed comparator, to further enhance the noise immunity. Tightly controlled threshold levels on the receiver provide equal rejection to both negative and positive going noise pulses on the bus.

The external termination is intended to be a 180Ω resistor from the bus to 5V logic supply, together with a 390Ω resistor from the bus to ground. The bus can be terminated at one or both ends.

Features

- Guaranteed A.C. specifications on noise immunity and propagation delay over the specified temperature and supply voltage range
- Temperature insensitive receiver thresholds track bus logic level and respond symmetrically to positive and negative going pulses
- Trapezoidal bus waveforms reduce noise coupling to adjacent lines
- Open collector driver output allows wire-or connection
- Advanced low power schottky technology
- Glitch free power up/down protection on driver and receiver outputs
- TTL compatible driver and control inputs, and receiver outputs
- Control logic is the same as the DS3896

DS75160A/DS75161A

IEEE-488 GPIB Transceivers

General Description

This family of high-speed-Schottky 8-channel bi-directional transceivers is designed to interface TTL/MOS logic to the IEEE Standard 488-1978 General Purpose Interface Bus (GPIB). PNP inputs are used at all driver inputs for minimum loading, and hysteresis is provided at all receiver inputs for added noise margin. The IEEE-488 required bus termination is provided internally with an active turn-off feature which disconnects the termination from the bus when V_{CC} is removed.

The General Purpose Interface Bus is comprised of 16 signal lines — 8 for data and 8 for interface management. The data lines are always implemented with DS75160A, and the management lines are either implemented with DS75161A in a single-controller system.

Features

- 8-channel bi-directional non-inverting transceivers
- Bi-directional control implemented with TRI-STATE® output design
- Meets IEEE Standard 488-1978
- High-speed Schottky design
- Low power consumption
- High impedance PNP inputs (drivers)
- 500 mV (typ) input hysteresis (receivers)
- On-chip bus terminators
- No bus loading when V_{CC} is removed
- Pin selectable open collector mode on DS75160A driver outputs
- Accommodates multi-controller systems

DS8641

Quad Unified Bus Transceiver

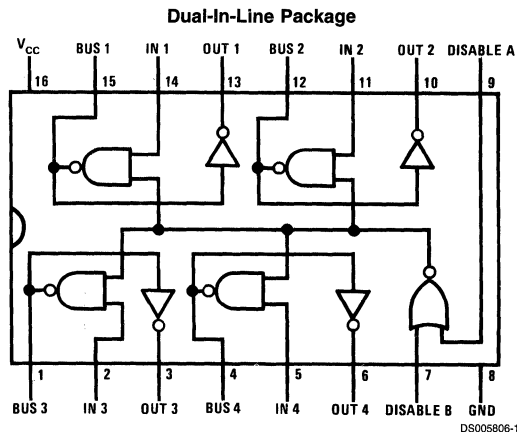

General Description

The DS8641 is a quad high speed drivers/receivers designed for use in bus organized data transmission systems interconnected by terminated 120Ω impedance lines. The external termination is intended to be a 180Ω resistor from the bus to the +5V logic supply together with a 390Ω resistor from the bus to ground. The bus can be terminated at one or both ends. Low bus pin current allows up to 27 driver/receiver pairs to utilize a common bus. The bus loading is unchanged when $V_{CC} = 0V$. The receivers incorporate tight thresholds for better bus noise immunity. One two-input NOR gate is included to disable all drivers in a package simultaneously.

Features

- 4 separate driver/receiver pairs per package
- Guaranteed minimum bus noise immunity of 0.6V, 1.1V typ
- Temperature insensitive receiver thresholds track bus logic levels
- $30\mu A$ typical bus terminal current with normal V_{CC} or with $V_{CC} = 0V$
- Open collector driver output allows wire-OR connection
- High speed
- Series 74 TTL compatible driver and disable inputs and receiver outputs

Typical Application

DS005806-2

DS8838

Quad Unified Bus Transceiver

General Description

The DS8838 is a quad high speed driver/receiver designed for use in bus organized data transmission systems interconnected by terminated 120Ω impedance lines. The external termination is intended to be 180Ω resistor from the bus to the +5V logic supply together with a 390Ω resistor from the bus to ground. The bus can be terminated at one or both ends. Low bus pin current allows up to 27 driver/receiver pairs to utilize a common bus. The bus loading is unchanged when $V_{CC} = 0V$. The receivers incorporate hysteresis to greatly enhance bus noise immunity. One two-input NOR gate is included to disable all drivers in a package simultaneously. Receiver performance is optimized for systems with bus rise and fall times $\leq 1.0 \mu s/V$.

Features

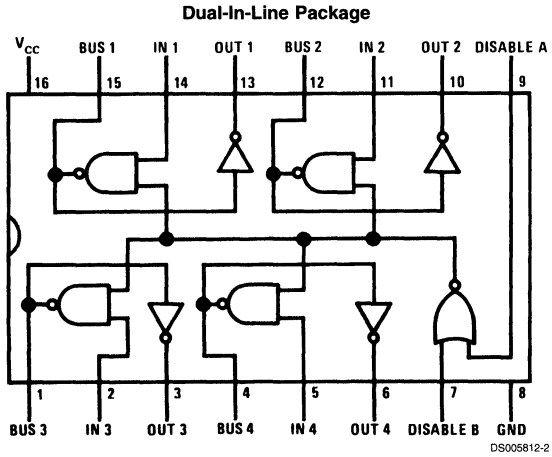

- 4 totally separate driver/receiver pairs per package
- 1V typical receiver input hysteresis
- Receiver hysteresis independent of receiver output load
- Guaranteed minimum bus noise immunity of 1.3V, 2V typ.
- Temperature-insensitive receiver thresholds track bus logic levels
- 20 μA typical bus terminal current with normal V_{CC} or with $V_{CC} = 0V$
- Open collector driver output allows wire-OR connection
- High speed
- Series 74 TTL compatible driver and disable inputs and receiver outputs

Typical Application

DS005812-1

DS1776 PI-Bus Transceiver

General Description

The DS1776 is an octal PI-bus Transceiver. The A to B path is latched. B outputs are open collector with series Schottky diode, ensuring minimum B output loading. B outputs also have ramped rise and fall times (2.5 ns typical), ensuring minimum PI-bus ringing. B inputs have glitch rejection circuitry, 4 ns typical.

Designed using National's Bi-CMOS process for both low operating and disabled power. AC performance is optimized for the PI-Bus inter-operability requirements.

The DS1776 is an octal latched transceiver and is intended to provide the electrical interface to a high performance wired-or bus. This bus has a loaded characteristic impedance range of 20Ω to 50Ω and is terminated on each end with a 30Ω to 40Ω resistor.

The DS1776 is an octal bidirectional transceiver with open collector B and TRI-STATE® A port output drivers. A latch function is provided for the A port signals. The B port output

driver is designed to sink 100 mA from 2V and features a controlled linear ramp to minimize crosstalk and ringing on the bus.

A separate high level control voltage (V_X) is provided to prevent the A side output high level from exceeding future high density processor supply voltage levels. For 5V systems, V_X is tied to V_{CC} .

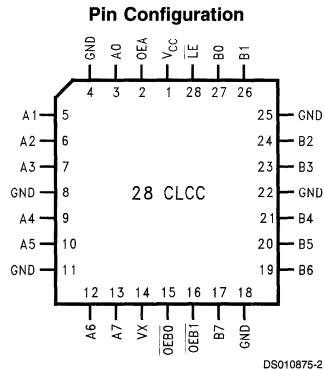

Features

- Mil-Std-883C qualified
- Similar to BTL
- Low power $I_{CCL} = 41$ mA max
- B output controlled ramp rate
- B input noise immunity, typically 4 ns
- Available in 28-pin DIP, Flatpak and CLCC
- Pin and function compatible with Signetics 54F776

Pin Configurations

Order Number DS1776E/883 or DS1776J/883
See NS Package E28A or J28B

Logic Symbol

DS26S10

Quad Bus Transceiver

General Description

The DS26S10 is a quad Bus Transceiver consisting of 4 high speed bus drivers with open-collector outputs capable of sinking 100 mA at 0.8V and 4 high speed bus receivers. Each driver output is connected internally to the high speed bus receiver in addition to being connected to the package pin. The receiver has a Schottky TTL output capable of driving 10 Schottky TTL unit loads.

An active low enable gate controls the 4 drivers so that outputs of different device drivers can be connected together for party-line operation.

The bus output high-drive capability in the low state allows party-line operation with a line impedance as low as 100Ω. The line can be terminated at both ends, and still give considerable noise margin at the receiver. The receiver typical switching point is 2V.

The DS26S10 features advanced Schottky processing to minimize propagation delay. The device package also has 2 ground pins to improve ground current handling and allow close decoupling between V_{CC} and ground at the package. Both GND 1 and GND 2 should be tied to the ground bus external to the device package.

Features

- Input to bus is inverting on DS26S10
- Quad high speed open-collector bus transceivers
- Driver outputs can sink 100 mA at 0.8V maximum
- Advanced Schottky processing
- PNP inputs to reduce input loading

Logic Diagrams

DS1487

Low Power RS-485 1/4 Unit Load Multipoint Transceiver

General Description

The DS1487 is a low-power transceiver for RS-485 and RS-422 communication. The device contains one driver and one receiver. The drivers slew rate allows for operation up to 2.0 Mbps (see Applications Information section). The transceiver presents 1/4 unit loading to the RS-485 bus allowing up to 128 nodes to be connected together without the use of repeaters.

The transceiver draws 200 μ A of supply current when unloaded or fully loaded with the driver disabled and operates from a single +5V supply.

The driver is short-circuit current limited and is protected against excessive power dissipation by thermal shutdown circuitry that places the driver outputs into TRI-STATE® (High Impedance state) under fault conditions. The driver guarantees a minimum of 1.5V differential output voltage with maximum loading across the common mode range (V_{OD3}).

The receiver has a failsafe feature that guarantees a logic-high output if the input is open circuit.

The DS1487 is available in surface mount and DIP packages.

Features

- Meets TIA/EIA RS-485 multipoint standard
- Allows up to 128 transceivers on the bus (1/4 U.L.)
- Guaranteed full load output voltage (V_{OD3})
- Low quiescent current: 200 μ A typ
- -7V to +12V common-mode input voltage range
- TRI-STATE outputs on driver and receiver
- AC performance:
 - Driver transition time: 25 ns typ
 - Driver propagation delay: 40 ns typ
 - Driver skew: 1 ns typ
 - Receiver propagation delay: 200 ns typ
 - Receiver skew: 20 ns typ
- Half-duplex flow through pinout
- Operates from a single 5V supply
- Current-limiting and thermal shutdown for driver overload protection
- Pin and functional compatible with MAX1487

DS16F95, DS36F95

EIA-485/EIA-422A Differential Bus Transceiver

General Description

The DS16F95/DS36F95 Differential Bus Transceiver is a monolithic integrated circuit designed for bidirectional data communication on balanced multipoint bus transmission lines. The transceiver meets both EIA-485 and EIA-422A standards.

The DS16F95/DS36F95 offers improved performance due to the use of L-FAST bipolar technology. The L-FAST technology allows for higher speeds and lower currents by minimizing gate delay times. Thus, the DS16F95 and DS36F95 consume less power, and feature an extended temperature range as well as improved specifications.

The DS16F95/DS36F95 combines a TRI-STATE® differential line driver and a differential input line receiver, both of which operate from a single 5.0V power supply. The driver and receiver have an active Enable that can be externally connected to function as a direction control. The driver differential outputs and the receiver differential inputs are internally connected to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus whenever the driver is disabled or when $V_{CC} = 0V$. These ports feature wide positive and negative common mode voltage ranges, making the device suitable for multipoint applications in noisy environments.

The driver is designed to accommodate loads of up to 60 mA of sink or source current and features positive and negative current limiting in addition to thermal shutdown for protection from line fault conditions.

The DS16F95/DS36F95 can be used in transmission line applications employing the DS96F172 and the DS96F174 quad differential line drivers and the DS96F173 and DS96F175 quad differential line receivers.

Features

- Meets EIA-485 and EIA-422A
- Meets SCSI-1 (5 MHz) specifications
- Designed for multipoint transmission
- Wide positive and negative input/output bus voltage ranges
- Thermal shutdown protection
- Driver positive and negative current-limiting
- High impedance receiver input
- Receiver input hysteresis of 50 mV typical
- Operates from single 5.0V supply
- Reduced power consumption
- Pin compatible with DS3695 and SN75176A
- Military temperature range available
- Qualified for MIL-STD 883C
- Standard Military Drawings (SMD) available
- Available in DIP (J), SOIC (M), LCC (E), and Flatpak (W) packages

DS36276

FAILSAFE Multipoint Transceiver

General Description

The DS36276 FAILSAFE Multipoint Transceiver is designed for use on bi-directional differential busses. It is compatible with existing TIA/EIA-485 transceivers, however, it offers an additional feature not supported by standard transceivers.

The FAILSAFE feature guarantees the receiver output to a known state when the Interface is in the following conditions: Floating Line, Idle Line (no active drivers), and Line Fault conditions (open or short). The receiver output is in a HIGH state for the following conditions: OPEN Inputs, Terminated Inputs (50Ω), and SHORTED Inputs.

FAILSAFE is a highly desirable feature when the transceivers are used with Asynchronous Controllers such as UARTs.

Features

- FAILSAFE receiver, RO = HIGH for:
 - OPEN inputs
 - Terminated inputs
 - SHORTED inputs
- Compatible with popular interface standards:
 - TIA/EIA-485 (RS-485)
 - TIA/EIA-422-A (RS-422-A)
 - CCITT Recommendation V.11
- Bi-Directional Transceiver
 - Designed for multipoint transmission
- Separate driver input, driver enable, receiver enable, and receiver output for maximum flexibility
- Wide bus common mode range
 - (-7V to +12V)
- Pin compatible with: DS75176B, DS96176, DS3695 and SN75176A and B
- Available in SOIC package

DS36277

Dominant Mode Multipoint Transceiver

General Description

The DS36277 Dominant Mode Multipoint Transceiver is designed for use on bi-directional differential busses. It is optimal for use on Interfaces that utilize Society of Automotive Engineers (SAE) J1708 Electrical Standard.

The device is similar to standard TIA/EIA-485 transceivers, but differs in enabling scheme. The Driver's Input is normally externally tied LOW, thus providing only two states: Active (LOW), or Disabled (OFF). When the driver is active, the dominant mode is LOW, conversely, when the driver is disabled, the bus is pulled HIGH by external bias resistors.

The receiver provides a FAILSAFE feature that guarantees a known output state when the Interface is in the following conditions: Floating Line, Idle Line (no active drivers), and Line Fault Conditions (open or short). The receiver output is HIGH for the following conditions: Open Inputs, Terminated Inputs (50Ω), or Shorted Inputs. FAILSAFE is a highly desirable feature when the transceivers are used with Asynchronous Controllers such as UARTs.

Features

- FAILSAFE receiver, RO = HIGH for:
 - OPEN inputs
 - Terminated inputs
 - SHORTED inputs
- Optimal for use in SAE J1708 Interfaces
- Compatible with popular interface standards:
 - TIA/EIA-485 and TIA/EIA-422-A
 - CCITT recommendation V.11
- Bi-directional transceiver
 - Designed for multipoint transmission
- Wide bus common mode range
 - (-7V to +12V)
- Available in plastic DIP and SOIC packages

DS3695/DS3695T/DS3696/DS3697

Multipoint RS485/RS422 Transceivers/Repeaters

General Description

The DS3695, DS3696, and DS3697 are high speed differential TRI-STATE® bus/line transceivers/repeaters designed to meet the requirements of EIA standard RS485 with extended common mode range (+12V to -7V), for multipoint data transmission.

The driver and receiver outputs feature TRI-STATE capability. The driver outputs remain in TRI-STATE over the entire common mode range of +12V to -7V. Bus faults that cause excessive power dissipation within the device trigger a thermal shutdown circuit, which forces the driver outputs into the high impedance state. The DS3696 provides an output pin TS (thermal shutdown) which reports the occurrence of the thermal shutdown of the device. This is an "open collector" pin with an internal 10 kΩ pull-up resistor. This allows the line fault outputs of several devices to be wire OR-ed.

Both AC and DC specifications are guaranteed over the 0°C to 70°C temperature and 4.75V to 5.25V supply voltage range.

Features

- Meets EIA standard RS485 for multipoint bus transmission and is compatible with RS-422
- 15 ns driver propagation delays with 2 ns skew (typical)
- Single +5V supply
- -7V to +12V bus common mode range permits ±7V ground difference between devices on the bus
- Thermal shutdown protection
- High impedance to bus with driver in TRI-STATE or with power off, over the entire common mode range allows the unused devices on the bus to be powered down
- Combined impedance of a driver output and receiver input is less than one RS485 unit load, allowing up to 32 transceivers on the bus
- 70 mV typical receiver hysteresis

DS36950

Quad Differential Bus Transceiver

General Description

The DS36950 is a low power, space-saving quad EIA-485 differential bus transceiver especially suited for high speed, parallel, multipoint, computer I/O bus applications. A compact 20-pin surface mount PLCC package provides high transceiver integration and a very small PC board footprint.

Timing uncertainty across an interface using multiple devices, a typical problem in a parallel interface, is specified—minimum and maximum propagation delay times are guaranteed.

Six devices can implement a complete IPI master or slave interface. Three transceivers in a package are pinned out for

connection to a parallel databus. The fourth transceiver, with the flexibility provided by its individual enables, can serve as a control bus transceiver.

Features

- Pinout for IPI interface
- Compact 20-pin PLCC package
- Meets EIA-485 standard for multipoint bus transmission
- Greater than 60 mA source/sink
- Thermal Shutdown Protection

Pinout and Logic Diagram

Order Number DS36950

DS36954

Quad Differential Bus Transceiver

General Description

The DS36954 is a low power, quad EIA-485 differential bus transceiver especially suited for high speed, parallel, multi-point, I/O bus applications. A compact 20-pin surface mount PLCC or SOIC package provides high transceiver integration and a very small PC board footprint.

Propagation delay skew between devices is specified to aid in parallel interface designs—limits on maximum and minimum delay times are guaranteed.

Five devices can implement a complete SCSI initiator or target interface. Three transceivers in a package are pinned out

for data bus connections. The fourth transceiver, with the flexibility provided by its individual enables, can serve as a control bus transceiver.

Features

- Pinout for SCSI interface
- Compact 20-pin PLCC or SOIC package
- Meets EIA-485 standard for multipoint bus transmission
- Greater than 60 mA source/sink currents
- Thermal shutdown protection
- Glitch-free driver outputs on power up and down

DS3695A/DS3695AT/DS3696A

Multipoint RS485/RS422 Transceivers

General Description

The DS3695A and DS3696A are high speed differential TRI-STATE® bus/line transceivers designed to meet the requirements of EIA standard RS485 with extended common mode range (+12V to -7V), for multipoint data transmission. In addition they are compatible with requirements of RS-422.

The driver and receiver outputs feature TRI-STATE capability. The driver outputs remain in TRI-STATE over the entire common mode range of +12V to -7V. Bus faults that cause excessive power dissipation within the device trigger a thermal shutdown circuit, which forces the driver outputs into the high impedance state. The DS3696A provides an output pin (TS) which reports the thermal shutdown of the device. TS is an "open collector" pin with an internal 10 kΩ pull-up resistor. This allows the TS outputs of several devices to be wire OR-ed.

Both AC and DC specifications are guaranteed over the 0°C to 70°C temperature and 4.75V to 5.25V supply voltage range.

Features

- Meets EIA standard RS485 for multipoint bus transmission and is compatible with RS-422
- 10 ns driver propagation delays (typical)
- Single +5V supply
- -7V to +12V bus common mode range permits ±7V ground difference between devices on the bus
- Thermal shutdown protection
- High impedance to bus with driver in TRI-STATE or with power off, over the entire common mode range allows the unused devices on the bus to be powered down
- Combined impedance of a driver output and receiver input is less than one RS485 unit load, allowing up to 32 transceivers on the bus

DS36C278

Low Power Multipoint EIA-RS-485 Transceiver

General Description

The DS36C278 is a low power differential bus/line transceiver designed to meet the requirements of RS-485 standard for multipoint data transmission. In addition it is compatible with TIA/EIA-422-B.

The CMOS design offers significant power savings over its bipolar and ALS counterparts without sacrificing ruggedness against ESD damage. The device is ideal for use in battery powered or power conscious applications. I_{CC} is specified at 500 μ A maximum.

The driver and receiver outputs feature TRI-STATE® capability. The driver outputs operate over the entire common mode range of $-7V$ to $+12V$. Bus contention or fault situations that cause excessive power dissipation within the device are handled by a thermal shutdown circuit, which forces the driver outputs into the high impedance state.

The receiver incorporates a fail safe circuit which guarantees a high output state when the inputs are left open. (Note 1)

The DS36C278T is fully specified over the industrial temperature range ($-40^{\circ}C$ to $+85^{\circ}C$).

Features

- 100% RS-485 compliant
 - Guaranteed RS-485 device interoperation
- Low power CMOS design: I_{CC} 500 μ A max
- Built-in power up/down glitch-free circuitry
 - Permits live transceiver insertion/displacement
- DIP and SOIC packages available
- Industrial temperature range: $-40^{\circ}C$ to $+85^{\circ}C$
- On-board thermal shutdown circuitry
 - Prevents damage to the device in the event of excessive power dissipation
- Wide common mode range: $-7V$ to $+12V$
- Receiver open input fail-safe (Note 1)
- $\frac{1}{4}$ unit load (DS36C278): ≥ 128 nodes
- $\frac{1}{2}$ unit load (DS36C278T): ≥ 64 nodes
- ESD (human body model): ≥ 2 kV
- Drop in replacement for:
 - LTC485, MAX485, DS75176, DS3695

DS36C279

Low Power EIA-RS-485 Transceiver with Sleep Mode

General Description

The DS36C279 is a low power differential bus/line transceiver designed to meet the requirements of RS-485 Standard for multipoint data transmission. In addition it is compatible with TIA/EIA-422-B.

The sleep mode feature automatically puts the device in a power saving mode when both the driver and receiver are disabled.†† The device is ideal for use in power conscious applications where the device may be disabled for extended periods of time.

The driver and receiver outputs feature TRI-STATE® capability. The driver outputs operate over the entire common mode range of -7V to +12V. Bus contention or fault situations that cause excessive power dissipation within the device are handled by a thermal shutdown circuit, which forces the driver outputs into a high impedance state.

The receiver incorporates a fail safe circuit which guarantees a high output state when the inputs are left open.†

The DS36C279T is fully specified over the industrial temperature range (-40°C to +85°C).

Features

- 100% RS-485 compliant
 - Guaranteed RS-485 device interoperation
- Low power CMOS design: I_{CC} 500 μ A max
- Automatic sensing sleep mode
 - Reduces I_{CC} to 10 μ A maximum
- Built-in power up/down glitch-free circuitry
 - Permits live transceiver intersection/displacement
- SOIC packages
- Industrial temperature range: -40°C to +85°C
- On-board thermal shutdown circuitry
 - Prevents damage to the device in the event of excessive power dissipation
- Wide common mode range: -7V to +12V
- Receive open input fail-safe (Note 1)

DS36C280

Slew Rate Controlled CMOS EIA-RS-485 Transceiver

General Description

The DS36C280 is a low power differential bus/line transceiver designed to meet the requirements of RS-485 Standard for multipoint data transmission. In addition, it is compatible with TIA/EIA-422-B.

The slew rate control feature allows the user to set the driver rise and fall times by using an external resistor. Controlled edge rates can reduce switching EMI.

The CMOS design offers significant power savings over its bipolar and ALS counterparts without sacrificing ruggedness against ESD damage. The device is ideal for use in battery powered or power conscious applications. I_{CC} is specified at 500 μ A maximum.

The driver and receiver outputs feature TRI-STATE® capability. The driver outputs operate over the entire common mode range of $-7V$ to $+12V$. Bus contention or fault situations are handled by a thermal shutdown circuit, which forces the driver outputs into the high impedance state.

The receiver incorporates a fail safe circuit which guarantees a high output state when the inputs are left open (Note 1).

Features

- 100% RS-485 compliant
 - Guaranteed RS-485 device interoperation
- Low power CMOS design: I_{CC} 500 μ A max
- Adjustable slew rate control
 - Minimizes EMI affects
- Built-in power up/down glitch-free circuitry
 - Permits live transceiver insertion/displacement
- SOIC packages
- Industrial temperature range: $-40^{\circ}C$ to $+85^{\circ}C$
- On-board thermal shutdown circuitry
 - Prevents damage to the device in the event of excessive power dissipation
- Wide common mode range: $-7V$ to $+12V$
- Receiver open input fail-safe (Note 1)

DS481

Low Power RS-485/RS-422 Multipoint Transceiver with Sleep Mode

General Description

The DS481 is a low-power transceiver for RS-485 and RS-422 communication. The device contains one driver and one receiver. The drivers slew rate allows for operation up to 2.0 Mbps (see Applications Information section).

The transceiver draws 200 μ A of supply current when unloaded or 0.2 μ A when in the automatic sleep mode. Sleep mode is activated by inactivity on the enables (DE and RE (Note 1)). Holding DE =L and RE (Note 1)=H for greater than 600 ns will enable the sleep mode. The DS481 operates from a single +5V supply.

The driver is short-circuit current limited and is protected against excessive power dissipation by thermal shutdown circuitry that places the driver outputs into TRI-STATE® (High Impedance state) under fault conditions. The driver guarantees a minimum of 1.5V differential output voltage with maximum loading across the common mode range (V_{OD3}).

The receiver has a failsafe feature that guarantees a logic-high output if the input is open circuit.

The DS481 is available in a surface mount package and is characterized for Industrial temperature range operation.

Features

- Meets TIA/EIA RS-485 multipoint standard
- Sleep mode reduces I_{CC} to 0.2 μ A
- Guaranteed full load output voltage (V_{OD3})
- Low quiescent current: 200 μ A typ
- -7V to +12V common-mode input voltage range
- TRI-STATE outputs on driver and receiver
- AC performance:
 - Driver transition time: 25 ns typ
 - Driver propagation delay: 40 ns typ
 - Driver skew: 1 ns typ
 - Receiver propagation delay: 200 ns typ
 - Receiver skew: 20 ns typ
- Half-duplex flow through pinout
- Operates from a single 5V supply
- Allows up to 64 transceivers on the bus
- Current-limiting and thermal shutdown for driver overload protection
- Industrial temperature range operation
- Pin and functional compatible with MAX481C and MAX481E

DS485

Low Power RS-485/RS-422 Multipoint Transceiver

General Description

The DS485 is a low-power transceiver for RS-485 and RS-422 communication. The device contains one driver and one receiver. The drivers slew rate allows for operation up to 2.5 Mbps (see Applications Information section).

The transceiver draws 200 μ A of supply current when unloaded or fully loaded with the driver disabled and operates from a single +5V supply.

The driver is short-circuit current limited and is protected against excessive power dissipation by thermal shutdown circuitry that places the driver outputs into TRI-STATE® (High Impedance state) under fault conditions. The driver guarantees a minimum of 1.5V differential output voltage with maximum loading across the common mode range (V_{OD3}).

The receiver has a failsafe feature that guarantees a logic-high output if the input is open circuit.

The DS485 is available in surface mount and DIP packages and is characterized for Industrial and Commercial temperature range operation.

Features

- Meets TIA/EIA RS-485 multipoint standard
- Guaranteed full load output voltage (V_{OD3})
- Low quiescent current: 200 μ A typ
- -7V to +12V common-mode input voltage range
- TRI-STATE outputs on driver and receiver
- AC performance:
 - Driver transition time: 25 ns typ
 - Driver propagation delay: 40 ns typ
 - Driver skew: 1 ns typ
 - Receiver propagation delay: 200 ns typ
 - Receiver skew: 20 ns typ
- Half-duplex flow through pinout
- Operates from a single 5V supply
- Allows up to 32 transceivers on the bus
- Current-limiting and thermal shutdown for driver overload protection
- Industrial temperature range operation
- Pin and functional compatible with MAX485 and LTC485

DS75176B/DS75176BT Multipoint RS-485/RS-422 Transceivers

General Description

The DS75176B is a high speed differential TRI-STATE® bus/line transceiver designed to meet the requirements of EIA standard RS485 with extended common mode range (+12V to -7V), for multipoint data transmission. In addition, it is compatible with RS-422.

The driver and receiver outputs feature TRI-STATE capability, for the driver outputs over the entire common mode range of +12V to -7V. Bus contention or fault situations that cause excessive power dissipation within the device are handled by a thermal shutdown circuit, which forces the driver outputs into the high impedance state.

DC specifications are guaranteed over the 0 to 70°C temperature and 4.75V to 5.25V supply voltage range.

Features

- Meets EIA standard RS485 for multipoint bus transmission and is compatible with RS-422.
- Small Outline (SO) Package option available for minimum board space.
- 22 ns driver propagation delays.
- Single +5V supply.
- -7V to +12V bus common mode range permits $\pm 7V$ ground difference between devices on the bus.
- Thermal shutdown protection.
- High impedance to bus with driver in TRI-STATE or with power off, over the entire common mode range allows the unused devices on the bus to be powered down.
- Pin out compatible with DS3695/A and SN75176A/B.
- Combined impedance of a driver output and receiver input is less than one RS485 unit load, allowing up to 32 transceivers on the bus.
- 70 mV typical receiver hysteresis.

DS96172/DS96174

RS-485/RS-422 Quad Differential Line Drivers

General Description

The DS96172 and DS96174 are high speed quad differential line drivers designed to meet EIA Standard RS-485. The devices have TRI-STATE® outputs and are optimized for balanced multipoint data bus transmission at rates up to 10 Mbps. The drivers have wide positive and negative common mode range for multipoint applications in noisy environments. Positive and negative current-limiting is provided which protects the drivers from line fault conditions over a +12V to -7.0V common mode range. A thermal shutdown feature is also provided and occurs at junction temperature of approximately 160°C. The DS96172 features an active high and active low Enable, common to all four drivers. The DS96174 features separate active high Enables for each driver pair. Compatible RS-485 receivers, transceivers, and repeaters are also offered to provide optimum bus performance. The respective device types are DS96173, DS96175, DS96176 AND DS96177.

Features

- Meets EIA Standard RS-485 and RS-422A
- Monotonic differential output switching
- Transmission rate to 10 Mbs
- TRI-STATE outputs
- Designed for multipoint bus transmission
- Common mode output voltage range: -7V to +12V
- Operates from single +5V supply
- Thermal shutdown protection
- DS96172/DS96174 are lead and function compatible with the SN75172/75174 or the AM26LS31/MC3487 respectively

DS96173/DS96175

RS-485/RS-422 Quad Differential Line Receivers

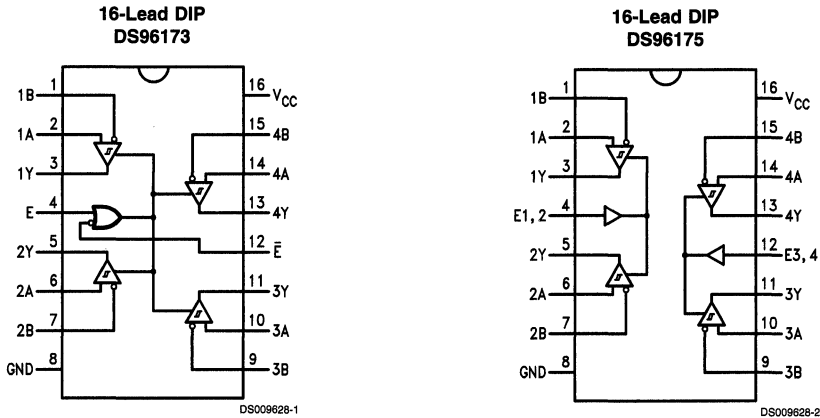

General Description

The DS96173 and DS96175 are high speed quad differential line receivers designed to meet EIA Standard RS-485. The devices have TRI-STATE® outputs and are optimized for balanced multipoint data bus transmission at rates up to 10 Mbps. The receivers feature high input impedance, input hysteresis for increased noise immunity, and input sensitivity of 200 mV over a common mode input voltage range of -7V to +12V. The receivers are therefore suitable for multipoint applications in noisy environments. The DS96173 features an active high and active low Enable, common to all four receivers. The DS96175 features separate active high Enables for each receiver pair. Compatible RS-485 drivers, transceivers, and repeaters are also offered to provide optimum bus performance. The respective device types are DS96172, DS96174, DS96176 and DS96177.

Features

- Meets EIA Standard RS-485, RS-422A, RS-423A
- Designed for multipoint bus applications
- TRI-STATE Outputs
- Common mode input voltage range: -7V to +12V
- Operates from single +5V supply
- Input sensitivity of ± 200 mV over common mode range
- Input hysteresis of 50 mV typical
- High input impedance
- DS96173/DS96175 are lead and function compatible with SN75173/75175 or the AM26LS32/MC3486 respectively

DS96176

RS-485/RS-422 Differential Bus Transceiver

General Description

The DS96176 Differential Bus Transceiver is a monolithic integrated circuit designed for bidirectional data communication on balanced multipoint bus transmission lines. The transceiver meets EIA Standard RS-485 as well as RS-422A.

The DS96176 combines a TRI-STATE® differential line driver and a differential input line receiver, both of which operate from a single 5.0V power supply. The driver and receiver have an active Enable that can be externally connected to function as a direction control. The driver differential outputs and the receiver differential inputs are internally connected to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus whenever the driver is disabled or when $V_{CC} = 0V$. These ports feature wide positive and negative common mode voltage ranges, making the device suitable for multipoint applications in noisy environments.

The driver is designed to handle loads up to 60 mA of sink or source current. The driver features positive and negative current-limiting and thermal shutdown for protection from line fault conditions. Thermal shutdown is designed to occur at junction temperature of approximately 160°C. The receiver features a typical input impedance of 15 kΩ, an input sensitivity of ± 200 mV, and a typical input hysteresis of 50 mV.

The DS96176 can be used in transmission line applications employing the DS96172 and the DS96174 quad differential line drivers and the DS96173 and DS96175 quad differential line receivers.

Features

- Bidirectional transceiver
- Meets EIA Standard RS-422A and RS-485
- Designed for multipoint transmission
- TRI-STATE driver and receiver enables
- Individual driver and receiver enables
- Wide positive and negative input/output bus voltage ranges
- Driver output capability ± 60 mA Maximum
- Thermal shutdown protection
- Driver positive and Negative current-limiting
- High impedance receiver input
- Receiver input sensitivity of ± 200 mV
- Receiver input hysteresis of 50 mV typical
- Operates from single 5.0V supply
- Low power requirements

DS96177

RS-485/RS-422 Differential Bus Repeater

General Description

The DS96177 Differential Bus Repeater is a monolithic integrated device designed for one-way data communication on multipoint bus transmission lines. This device is designed for balanced transmission bus line applications and meets EIA Standard RS-485 and RS-422A. The device is designed to improve the performance of the data communication over long bus lines. The DS96177 has an active high Enable.

The DS96177 features positive and negative current limiting and TRI-STATE® outputs for the receiver and driver. The receiver features high input impedance, input hysteresis for increased noise immunity, and input sensitivity of 200 mV over a common mode input voltage range of -12V to +12V. The driver features thermal shutdown for protection from line fault conditions. Thermal shutdown is designed to occur at a junction temperature of approximately 160°C. The driver is designed to drive current loads up to 60 mA maximum.

The DS96177 is designed for optimum performance when used on transmission buses employing the DS96172 and

DS96174 differential line drivers, DS96173 and DS96175 differential line receivers, or DS96176 differential bus transceivers.

Features

- Meets EIA Standard RS-422A and RS-485
- Designed for multipoint transmission on long bus lines in noisy environments
- TRI-STATE outputs
- Bus voltage range -7.0V to +12V
- Positive and negative current limiting
- Driver output capability ±60 mA max
- Driver thermal shutdown protection
- Receiver input high impedance
- Receiver input sensitivity of ±200 mV
- Receiver input hysteresis of 50 mV typical
- Operates from single 5.0V supply
- Low power requirements

DS96F172M/DS96F174C/DS96F174M

EIA-485/EIA-422 Quad Differential Drivers

General Description

The DS96F172 and the DS96F174 are high speed quad differential line drivers designed to meet EIA-485 Standards. The DS96F172 and the DS96F174 offer improved performance due to the use of L-FAST bipolar technology. The use of LFAST technology allows the DS96F172 and DS96F174 to operate at higher speeds while minimizing power consumption.

The DS96F172 and the DS96F174 have TRI-STATE® outputs and are optimized for balanced multipoint data bus transmission at rates up to 15 Mbps. The drivers have wide positive and negative common mode range for multipoint applications in noisy environments. Positive and negative current-limiting is provided which protects the drivers from line fault conditions over a +12V to -7.0V common mode range. A thermal shutdown feature is also provided. The DS96F172 features an active high and active low Enable, common to all four drivers. The DS96F174 features separate active high Enables for each driver pair.

Features

- Meets EIA-485 and EIA-422 standards
- Monotonic differential output switching
- TRI-STATE outputs
- Designed for multipoint bus transmission
- Common mode output voltage range: -7.0V to +12V
- Operates from single +5.0V supply
- Reduced power consumption
- Thermal shutdown protection
- DS96F172 and DS96F174 are lead and function compatible with the SN75172/174 or the AM26LS31/MC3487
- Military temperature range available
- Qualified for MIL-STD-883C
- Standard military drawings available (SMD)
- Available in DIP (J), LCC (E), and Flatpak (W) packages

DS96F173M/DS96F175C/DS96F175M

EIA-485/EIA-422 Quad Differential Receivers

General Description

The DS96F173 and the DS96F175 are high speed quad differential line receivers designed to meet the EIA-485 standard. The DS96F173 and the DS96F175 offer improved performance due to the use of L-FAST bipolar technology. The use of LFAST technology allows the DS96F173 and DS96F175 to operate at higher speeds while minimizing power consumption.

The DS96F173 and the DS96F175 have TRI-STATE® outputs and are optimized for balanced multipoint data bus transmission at rates up to 15 Mbps. The receivers feature high input impedance, input hysteresis for increased noise immunity, and input sensitivity of 200 mV over a common mode input voltage range of -7V to +12V. The receivers are therefore suitable for multipoint applications in noisy environments. The DS96F173 features an active high and active low Enable, common to all four receivers. The DS96F175 features separate active high Enables for each receiver pair.

Features

DS90LV017

LVDS Single High Speed Differential Driver

General Description

The DS90LV017 is a single LVDS driver device optimized for high data rate and low power applications. The DS90LV017 is a current mode driver allowing power dissipation to remain low even at high frequency. In addition, the short circuit fault current is also minimized. The device is in a 8-lead small Outline Package. The DS90LV017 has a flow-through design for easy PCB layout. The differential driver outputs provides low EMI with its low output swings typically 340 mV.

Features

- Ultra Low Power Dissipation
- Operating Range above 155 Mbps
- Flow-through pinout simplifies PCB layout
- Conforms to TIA/EIA-644 Standard
- 8-Lead SOIC Package Saves Space
- $V_{CM} \pm 1V$ center around 1.2V
- Low Differential Output Swing Typical 340 mV
- Power Off Protection (outputs in high impedance)

DS90LV017A

LVDS Single High Speed Differential Driver

General Description

The DS90LV017A is a single LVDS driver device optimized for high data rate and low power applications. The DS90LV017A is a current mode driver allowing power dissipation to remain low even at high frequency. In addition, the short circuit fault current is also minimized. The device is designed to support data rates in excess of 600Mbps (300MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The device is in a 8-lead small outline package. The DS90LV017A has a flow-through design for easy PCB layout. The differential driver outputs provides low EMI with its typical low output swing of 355 mV. The DS90LV017A can be paired with its companion single line receiver, the DS90LV018A, or with any of National's LVDS receivers, to provide a high-speed point-to-point LVDS interface.

Features

- >600 Mbps (300 MHz) switching rates
- 0.3 ns typical differential skew
- 0.7 ns maximum differential skew
- 1.5 ns maximum propagation delay
- 3.3V power supply design
- ± 355 mV differential signaling
- Low power dissipation (23 mW @ 3.3V static)
- Flow-through design simplifies PCB layout
- Interoperable with existing 5V LVDS devices
- Power Off Protection (outputs in high impedance)
- Conforms to TIA/EIA-644 Standard
- 8-Lead SOIC package saves space
- Industrial temperature operating range (-40°C to +85°C)

Functional Diagram

DS90LV018A

3V LVDS Single CMOS Differential Line Receiver

General Description

The DS90LV018A is a single CMOS differential line receiver designed for applications requiring ultra low power dissipation, low noise and high data rates. The device is designed to support data rates in excess of 400 Mbps (200 MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The DS90LV018A accepts low voltage (350 mV typical) differential input signals and translates them to 3V CMOS output levels. The receiver also supports open, shorted and terminated (100Ω) input fail-safe. The receiver output will be HIGH for all fail-safe conditions. The DS90LV018A has a flow-through design for easy PCB layout.

The DS90LV018A and companion LVDS line driver provide a new alternative to high power PECL/ECL devices for high speed point-to-point interface applications.

Features

- >400 Mbps (200 MHz) switching rates
- 50 ps differential skew (typical)
- 2.5 ns maximum propagation delay
- 3.3V power supply design
- Flow-through pinout
- Power down high impedance on LVDS inputs
- Low Power design (18mW @ 3.3V static)
- Interoperable with existing 5V LVDS networks
- Accepts small swing (350 mV typical) differential signal levels
- Supports open, short and terminated input fail-safe
- Conforms to ANSI/TIA/EIA-644 Standard
- Industrial temperature operating range (-40°C to +85°C)
- Available in SOIC package

DS90LV019

3.3V or 5V LVDS Driver/Receiver

General Description

The DS90LV019 is a Driver/Receiver designed specifically for the high speed low power point-to-point interconnect applications. The device operates from a single 3.3V or 5.0V power supply and includes one differential line driver and one receiver. The DS90LV019 features an independent driver and receiver with TTL/CMOS compatibility (D_{IN} and R_{OUT}). The logic interface provides maximum flexibility as 4 separate lines are provided (D_{IN} , DE , \overline{RE} , and R_{OUT}). The device also features a flow-through pin out which allows easy PCB routing for short stubs between its pins and the connector. The driver has 3.5 mA output loop current.

The driver translates between TTL levels (single-ended) to Low Voltage Differential Signaling levels. This allows for high speed operation, while consuming minimal power with reduced EMI. In addition, the differential signaling provides common-mode noise rejection.

The receiver threshold is ± 100 mV over a ± 1 V common-mode range and translates the low swing differential levels to standard (TTL/CMOS) levels.

Features

- LVDS Signaling
- 3.3V or 5.0V operation
- Low power CMOS design
- Balanced Output Impedance
- Glitch free power up/down (Driver disabled)
- High Signaling Rate Capacity (above 100 Mbps)
- Ultra Low Power Dissipation
- ± 1 V Common-Mode Range
- ± 100 mV Receiver Sensitivity
- Product offered in SOIC and TSSOP packages
- Flow-Through Pin Out
- Industrial Temperature Range Operation

Block Diagram

DS90LV027

LVDS Dual High Speed Differential Driver

General Description

The DS90LV027 is a dual LVDS driver device optimized for high data rate and low power applications. The DS90LV027 is a current mode driver allowing power dissipation to remain low even at high frequency. In addition, the short circuit fault current is also minimized. The device is in a 8-lead small Outline Package. The DS90LV027 has a flow-through design for easy PCB layout. The differential driver outputs provides low EMI with its low output swings typically 340 mV. Perfect for high speed transfer of clock and data. Pair with any of National's LVDS receivers.

Features

- Ultra Low Power Dissipation
- Operating Range above 155 Mbps
- Flow-through pinout simplifies PCB layout
- Conforms to TIA/EIA-644 Standard
- 8-Lead SOIC Package Saves Space
- $V_{CM} \pm 1V$ center around 1.2V
- Low Differential Output Swing Typical 340 mV
- Power Off Protection (outputs in high impedance)

DS90LV027A

LVDS Dual High Speed Differential Driver

General Description

The DS90LV027A is a dual LVDS driver device optimized for high data rate and low power applications. The device is designed to support data rates in excess of 600Mbps (300MHz) utilizing Low Voltage Differential Signaling (LVDS) technology. The DS90LV027A is a current mode driver allowing power dissipation to remain low even at high frequency. In addition, the short circuit fault current is also minimized.

The device is in a 8-lead small outline package. The DS90LV027A has a flow-through design for easy PCB layout. The differential driver outputs provides low EMI with its typical low output swing of 360 mV. It is perfect for high speed transfer of clock and data. The DS90LV027A can be paired with its companion dual line receiver, the DS90LV028A, or with any of National's LVDS receivers, to provide a high-speed point-to-point LVDS interface.

Features

- >600 Mbps (300MHz) switching rates
- 0.3 ns typical differential skew
- 0.7 ns maximum differential skew
- 1.5 ns maximum propagation delay
- 3.3V power supply design
- ± 360 mV differential signaling
- Low power dissipation (46 mW @ 3.3V static)
- Flow-through design simplifies PCB layout
- Interoperable with existing 5V LVDS devices
- Power Off Protection (outputs in high impedance)
- Conforms to TIA/EIA-644 Standard
- 8-Lead SOIC package saves space
- Industrial temperature operating range (-40°C to +85°C)

Functional Diagram

DS90LV028A

3V LVDS Dual CMOS Differential Line Receiver

General Description

The DS90LV028A is a dual CMOS differential line receiver designed for applications requiring ultra low power dissipation, low noise and high data rates. The device is designed to support data rates in excess of 400 Mbps (200 MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The DS90LV028A accepts low voltage (350 mV typical) differential input signals and translates them to 3V CMOS output levels. The receiver also supports open, shorted and terminated (100Ω) input fail-safe. The receiver output will be HIGH for all fail-safe conditions. The DS90LV028A has a flow-through design for easy PCB layout.

The DS90LV028A and companion LVDS line driver provide a new alternative to high power PECL/ECL devices for high speed point-to-point interface applications.

Features

- >400 Mbps (200 MHz) switching rates
- 50 ps differential skew (typical)
- 0.1 ns channel-to-channel skew (typical)
- 2.5 ns maximum propagation delay
- 3.3V power supply design
- Flow-through pinout
- Power down high impedance on LVDS inputs
- Low Power design (18mW @ 3.3V static)
- Interoperable with existing 5V LVDS networks
- Accepts small swing (350 mV typical) differential signal levels
- Supports open, short and terminated input fail-safe
- Conforms to ANSI/TIA/EIA-644 Standard
- Industrial temperature operating range (-40°C to +85°C)
- Available in SOIC package

DS90C031B

LVDS Quad CMOS Differential Line Driver

General Description

The DS90C031B is a quad CMOS differential line driver designed for applications requiring ultra low power dissipation and high data rates. The device is designed to support data rates in excess of 155.5 Mbps (77.7 MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The DS90C031B accepts TTL/CMOS input levels and translates them to low voltage (350 mV) differential output signals. In addition the driver supports a TRI-STATE® function that may be used to disable the output stage, disabling the load current, and thus dropping the device to an ultra low idle power state of 11 mW typical.

In addition, the DS90C031B provides power-off high impedance LVDS outputs. This feature assures minimal loading effect on the LVDS bus lines when V_{CC} is not present.

The DS90C031B and companion line receiver (DS90C032B) provide a new alternative to high power pseudo-ECL devices for high speed point-to-point interface applications.

Features

- >155.5 Mbps (77.7 MHz) switching rates
- High impedance LVDS outputs with power-off
- ± 350 mV differential signaling
- Ultra low power dissipation
- 400 ps maximum differential skew (5V, 25°C)
- 3.5 ns maximum propagation delay
- Industrial operating temperature range
- Pin compatible with DS26C31, MB571 (PECL) and 41LG (PECL)
- Conforms to ANSI/TIA/EIA-644 LVDS standard
- Offered in narrow and wide body SOIC package
- Fail-safe logic for floating inputs

DS90C031

LVDS Quad CMOS Differential Line Driver

General Description

The DS90C031 is a quad CMOS differential line driver designed for applications requiring ultra low power dissipation and high data rates. The device is designed to support data rates in excess of 155.5 Mbps (77.7 MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The DS90C031 accepts TTL/CMOS input levels and translates them to low voltage (350 mV) differential output signals. In addition the driver supports a TRI-STATE® function that may be used to disable the output stage, disabling the load current, and thus dropping the device to an ultra low idle power state of 11 mW typical.

The DS90C031 and companion line receiver (DS90C032) provide a new alternative to high power psuedo-ECL devices for high speed point-to-point interface applications.

Features

- >155.5 Mbps (77.7 MHz) switching rates
- ± 350 mV differential signaling
- Ultra low power dissipation
- 400 ps maximum differential skew (5V, 25°C)
- 3.5 ns maximum propagation delay
- Industrial operating temperature range
- Military operating temperature range option
- Available in surface mount packaging (SOIC) and (LCC)
- Pin compatible with DS26C31, MB571 (PECL) and 41LG (PECL)
- Compatible with IEEE 1596.3 SCI LVDS standard
- Conforms to ANSI/TIA/EIA-644 LVDS standard
- Available to Standard Microcircuit Drawing (SMD) 5962-95833

DS90LV031A

3V LVDS Quad CMOS Differential Line Driver

General Description

The DS90LV031A is a quad CMOS differential line driver designed for applications requiring ultra low power dissipation and high data rates. The device is designed to support data rates in excess of 400 Mbps (200 MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The DS90LV031A accepts low voltage TTL/CMOS input levels and translates them to low voltage (350 mV) differential output signals. In addition the driver supports a TRI-STATE® function that may be used to disable the output stage, disabling the load current, and thus dropping the device to an ultra low idle power state of 13 mW typical.

The EN and EN* inputs allow active Low or active High control of the TRI-STATE outputs. The enables are common to all four drivers. The DS90LV031A and companion line receiver (DS90LV032A) provide a new alternative to high power pseudo-ECL devices for high speed point-to-point interface applications.

Features

- >400 Mbps (200 MHz) switching rates
- 0.1 ns typical differential skew
- 0.4 ns maximum differential skew
- 2.0 ns maximum propagation delay
- 3.3V power supply design
- ± 350 mV differential signaling
- Low power dissipation (13mW at 3.3V static)
- Interoperable with existing 5V LVDS devices
- Compatible with IEEE 1596.3 SCI LVDS standard
- Compatible with TIA/EIA-644 LVDS standard
- Industrial and Military operating temperature range
- Available in SOIC, TSSOP and Cerpack surface mount packaging
- Standard Microcircuit Drawing (SMD) 5962-9865201

DS90LV031B

3V LVDS Quad CMOS Differential Line Driver

General Description

The DS90LV031B is a quad CMOS differential line driver designed for applications requiring ultra low power dissipation and high data rates. The device is designed to support data rates in excess of 400 Mbps (200 MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The DS90LV031B accepts low voltage TTL/CMOS input levels and translates them to low voltage (350 mV) differential output signals. In addition the driver supports a TRI-STATE® function that may be used to disable the output stage, disabling the load current, and thus dropping the device to an ultra low idle power state of 13 mW typical. The DS90LV031B is enhanced over the DS90LV031A in that the inputs are further ruggedized for excessive undershoot.

The EN and EN* inputs allow active Low or active High control of the TRI-STATE outputs. The enables are common to all four drivers. The DS90LV031B and companion line receiver (DS90LV032A) provide a new alternative to high power pseudo-ECL devices for high speed point-to-point interface applications.

Features

- >400 Mbps (200 MHz) switching rates
- 0.1 ns typical differential skew
- 0.4 ns maximum differential skew
- 2.0 ns maximum propagation delay
- Ruggedized inputs that can withstand excessive undershoot
- 3.3V power supply design
- ±350 mV differential signaling
- Low power dissipation (13mW at 3.3V static)
- Interoperable with existing 5V LVDS devices
- Compatible with IEEE 1596.3 SCI LVDS standard
- Compatible with TIA/EIA-644 LVDS standard
- Industrial temperature operating range
- Available in SOIC and TSSOP surface mount packaging

DS90C032B

LVDS Quad CMOS Differential Line Receiver

General Description

The DS90C032B is a quad CMOS differential line receiver designed for applications requiring ultra low power dissipation and high data rates. The device is designed to support data rates in excess of 155.5 Mbps (77.7 MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The DS90C032B accepts low voltage (350 mV) differential input signals and translates them to CMOS (TTL compatible) output levels. The receiver supports a TRI-STATE® function that may be used to multiplex outputs. The receiver also supports OPEN and terminated (100Ω) input Fail-safe. Receiver output will be HIGH for both Fail-safe conditions.

The DS90C032B provides power-off high impedance LVDS inputs. This feature assures minimal loading effect on the LVDS bus lines when V_{CC} is not present.

The DS90C032B and companion line driver (DS90C031B) provide a new alternative to high power pseudo-ECL devices for high speed point-to-point interface applications.

Features

- >155.5 Mbps (77.7 MHz) switching rates
- Accepts small swing (350 mV) differential signal levels
- High Impedance LVDS inputs with power down
- Ultra low power dissipation
- 600 ps maximum differential skew (5V, 25°C)
- 6.0 ns maximum propagation delay
- Industrial operating temperature range
- Available in surface mount packaging (SOIC)
- Pin compatible with DS26C32A, MB570 (PECL) and 41LF (PECL)
- Supports OPEN and terminated input fail-safe
- Conforms to ANSI/TIA/EIA-644 LVDS standard

DS90LV032A

3V LVDS Quad CMOS Differential Line Receiver

General Description

The DS90LV032A is a quad CMOS differential line receiver designed for applications requiring ultra low power dissipation and high data rates. The device is designed to support data rates in excess of 400 Mbps (200 MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The DS90LV032A accepts low voltage (350 mV typical) differential input signals and translates them to 3V CMOS output levels. The receiver supports a TRI-STATE® function that may be used to multiplex outputs. The receiver also supports open, shorted and terminated (100Ω) input Fail-safe. The receiver output will be HIGH for all fail-safe conditions.

The DS90LV032A and companion LVDS line driver (eg. DS90LV031A) provide a new alternative to high power PECL/ECL devices for high speed point-to-point interface applications.

Features

- >400 Mbps (200 MHz) switching rates
- 0.1 ns channel-to-channel skew (typical)
- 0.1 ns differential skew (typical)
- 3.3 ns maximum propagation delay
- 3.3V power supply design
- Power down high impedance on LVDS inputs
- Low Power design (40mW 3.3V static)
- Interoperable with existing 5V LVDS networks
- Accepts small swing (350 mV typical) VID
- Supports open, short and terminated input fail-safe
- Compatible with ANSI/TIA/EIA-644
- Industrial temp. operating range (-40°C to +85°C)
- Available in SOIC and TSSOP Packaging

DS90LV047A

3V LVDS Quad CMOS Differential Line Driver

General Description

The DS90LV047A is a quad CMOS flow-through differential line driver designed for applications requiring ultra low power dissipation and high data rates. The device is designed to support data rates in excess of 400 Mbps (200 MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The DS90LV047A accepts low voltage TTL/CMOS input levels and translates them to low voltage (350 mV) differential output signals. In addition, the driver supports a TRI-STATE® function that may be used to disable the output stage, disabling the load current, and thus dropping the device to an ultra low idle power state of 13 mW typical. The DS90LV047A has a flow-through pinout for easy PCB layout.

The EN and EN* inputs are ANDed together and control the TRI-STATE outputs. The enables are common to all four drivers. The DS90LV047A and companion line receiver (DS90LV048A) provide a new alternative to high power pseudo-ECL devices for high speed point-to-point interface applications.

Features

- >400 Mbps (200 MHz) switching rates
- Flow-through pinout simplifies PCB layout
- 300 ps typical differential skew
- 400 ps maximum differential skew
- 1.7 ns maximum propagation delay
- 3.3V power supply design
- ± 350 mV differential signaling
- Low power dissipation (13mW at 3.3V static)
- Interoperable with existing 5V LVDS receivers
- High impedance on LVDS outputs on power down
- Conforms to TIA/EIA-644 LVDS Standard
- Industrial operating temperature range (-40°C to $+85^{\circ}\text{C}$)
- Available in surface mount (SOIC) and low profile TSSOP package

DS90LV048A

3V LVDS Quad CMOS Differential Line Receiver

General Description

The DS90LV048A is a quad CMOS flow-through differential line receiver designed for applications requiring ultra low power dissipation and high data rates. The device is designed to support data rates in excess of 400 Mbps (200 MHz) utilizing Low Voltage Differential Signaling (LVDS) technology.

The DS90LV048A accepts low voltage (350 mV typical) differential input signals and translates them to 3V CMOS output levels. The receiver supports a TRI-STATE® function that may be used to multiplex outputs. The receiver also supports open, shorted and terminated (100Ω) input fail-safe. The receiver output will be HIGH for all fail-safe conditions. The DS90LV048A has a flow-through pinout for easy PCB layout.

The EN and EN* inputs are ANDed together and control the TRI-STATE outputs. The enables are common to all four receivers. The DS90LV048A and companion LVDS line driver (eg. DS90LV047A) provide a new alternative to high power PECL/ECL devices for high speed point-to-point interface applications.

Features

- >400 Mbps (200 MHz) switching rates
- Flow-through pinout simplifies PCB layout
- 150 ps channel-to-channel skew (typical)
- 100 ps differential skew (typical)
- 2.7 ns maximum propagation delay
- 3.3V power supply design
- High impedance LVDS inputs on power down
- Low Power design (40mW 3.3V static)
- Interoperable with existing 5V LVDS drivers
- Accepts small swing (350 mV typical) differential signal levels
- Supports open, short and terminated input fail-safe
- Conforms to ANSI/TIA/EIA-644 Standard

DS90C401

Dual Low Voltage Differential Signaling (LVDS) Driver

1.0 General Description

The DS90C401 is a dual driver device optimized for high data rate and low power applications. This device along with the DS90C402 provides a pair chip solution for a dual high speed point-to-point interface. The DS90C401 is a current mode driver allowing power dissipation to remain low even at high frequency. In addition, the short circuit fault current is also minimized. The device is in a 8 lead small outline package. The differential driver outputs provides low EMI with its low output swings typically 340 mV.

2.0 Features

- Ultra low power dissipation
- Operates above 155.5 Mbps
- Standard TIA/EIA-644
- 8 Lead SOIC Package saves space
- Low Differential Output Swing typical 340 mV

3.0 Connection Diagram

Dual Low Voltage Differential Signaling (LVDS) Receiver

1.0 General Description

The DS90C402 is a dual receiver device optimized for high data rate and low power applications. This device along with the DS90C401 provides a pair chip solution for a dual high speed point-to-point interface. The device is in a PCB space saving 8 lead small outline package. The receiver offers ± 100 mV threshold sensitivity, in addition to common-mode noise protection.

2.0 Features

- Ultra Low Power Dissipation
- Operates above 155.5 Mbps
- Standard TIA/EIA-644
- 8 Lead SOIC Package saves PCB space
- $V_{CM} \pm 1V$ center around 1.2V
- ± 100 mV Receiver Sensitivity

DS36C200

Dual High Speed Bi-Directional Differential Transceiver

General Description

The DS36C200 is a dual transceiver device optimized for high data rate and low power applications. This device provides a single chip solution for a dual high speed bi-directional interface. Also, both control pins may be routed together for single bit control of datastreams. Both control pins are adjacent to each other for ease of routing them together. The DS36C200 is compatible with IEEE 1394 physical layer and may be used as an economical solution with some considerations. Please reference the application information on 1394 for more information. The device is in a 14-lead small outline package. The differential driver outputs provides low EMI with its low output swings typically 210 mV. The receiver offers ± 100 mV threshold sensitivity, in addition to common-mode noise protection.

Features

- Optimized for DSS to DVHS interface link
- Compatible IEEE 1394 signaling voltage levels
- Operates above 100 Mbps
- Bi-directional transceivers
- 14-lead SOIC package
- Ultra low power dissipation
- ± 100 mV receiver sensitivity
- Low differential output swing typical 210 mV
- High impedance during power off

Functional Diagram

DS90CR211/DS90CR212 21-Bit Channel Link

General Description

The DS90CR211 transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. The DS90CR212 receiver converts the LVDS data streams back into 21 bits of CMOS/TTL data. At a transmit clock frequency of 40 MHz, 21 bits of TTL data are transmitted at a rate of 280 Mbps per LVDS data channel. Using a 40 MHz clock, the data throughput is 840 Mbit/s (105 Mbyte/s).

The multiplexing of the data lines provides a substantial cable reduction. Long distance parallel single-ended buses typically require a ground wire per active signal (and have very limited noise rejection capability). Thus, for a 21-bit wide data bus and one clock, up to 44 conductors are required. With the Channel Link chipset as few as 9 conductors (3 data pairs, 1 clock pair and a minimum of one ground) are

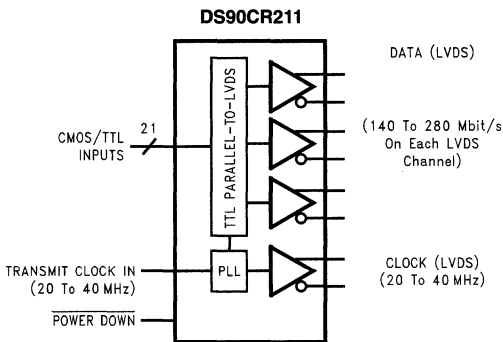

needed. This provides a 80% reduction in required cable width, providing a system cost savings, reduces connector physical size, and reduces shielding requirements due to the cables smaller form factor.

The 21 CMOS/TTL inputs can support a variety of signal combinations. For example, 5 4-bit nibbles plus 1 control, or 2 9-bit (byte + parity) and 3 control.

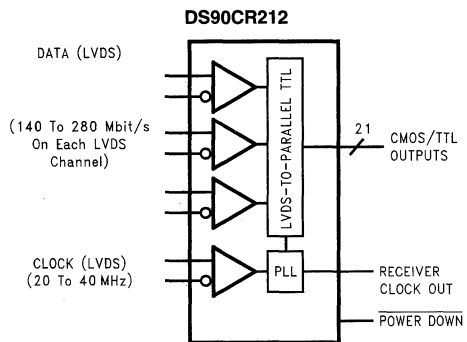

Features

- Narrow bus reduces cable size and cost
- $\pm 1V$ Common mode range (ground shifting)
- 290 mV swing LVDS data transmission
- 840 Mbit/s data throughput
- Low swing differential current mode drivers reduce EMI
- Rising edge data strobe
- Power down mode
- Offered in low profile 48-lead TSSOP package

DS90CR213/DS90CR214

21-Bit Channel Link—66 MHz

General Description

The DS90CR213 transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. The DS90CR214 receiver converts the LVDS data streams back into 21 bits of CMOS/TTL data. At a transmit clock frequency of 66 MHz, 21 bits of TTL data are transmitted at a rate of 462 Mbps per LVDS data channel. Using a 66 MHz clock, the data throughput is 1.386 Gbit/s (173 Mbytes/s).

The multiplexing of the data lines provides a substantial cable reduction. Long distance parallel single-ended buses typically require a ground wire per active signal (and have very limited noise rejection capability). Thus, for a 21-bit wide data and one clock, up to 44 conductors are required. With the Channel Link chipset as few as 9 conductors (3 data pairs, 1 clock pair and a minimum of one ground) are needed. This provides an 80% reduction in required cable

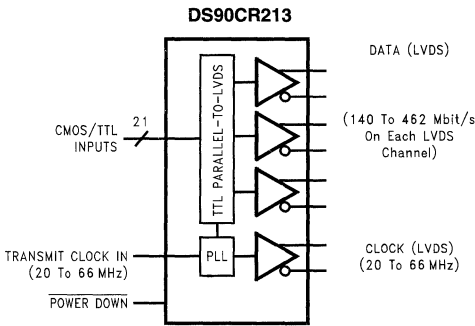

width, which provides a system cost savings, reduces connector physical size and cost, and reduces shielding requirements due to the cable's smaller form factor.

The 21 CMOS/TTL inputs can support a variety of signal combinations. For example, 5 4-bit nibbles (byte + parity) or 2 9-bit (byte + 3 parity) and 1 control.

Features

- 66 MHz Clock Support
- Up to 173 Mbytes/s bandwidth
- Low power CMOS design (<610 mW)
- Power-down mode (<0.5 mW total)
- Up to 1.386 Gbit/s data throughput
- Narrow bus reduces cable size and cost
- 290 mV swing LVDS devices for low EMI
- PLL requires no external components
- Low profile 48-lead TSSOP package
- Rising edge data strobe
- Compatible with TIA/EIA-644 LVDS Standard

+3.3V Rising Edge Data Strobe LVDS 21-Bit Channel Link - 66 MHz

General Description

The DS90CR215 transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. The DS90CR216 receiver converts the LVDS data streams back into 21 bits of CMOS/TTL data. At a transmit clock frequency of 66 MHz, 21 bits of TTL data are transmitted at a rate of 462 Mbps per LVDS data channel. Using a 66 MHz clock, the data throughput is 1.386 Gbit/s (173 Mbytes/s).

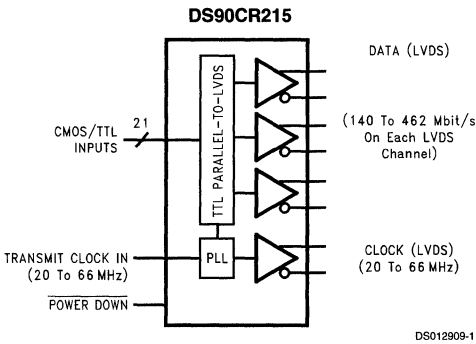

The multiplexing of the data lines provides a substantial cable reduction. Long distance parallel single-ended buses typically require a ground wire per active signal (and have very limited noise rejection capability). Thus, for a 21-bit wide data and one clock, up to 44 conductors are required. With the Channel Link chipset as few as 9 conductors (3 data pairs, 1 clock pair and a minimum of one ground) are needed. This provides a 80% reduction in required cable width, which provides a system cost savings, reduces connector physical size and cost, and reduces shielding requirements due to the cables' smaller form factor.

The 21 CMOS/TTL inputs can support a variety of signal combinations. For example, five 4-bit nibbles plus 1 control, or two 9-bit (byte + parity) and 3 control.

Features

- Single +3.3V supply
- Chipset (Tx + Rx) power consumption <250 mW (typ)
- Power-down mode (<0.5 mW total)
- Up to 173 Megabytes/sec bandwidth
- Up to 1.386 Gbps data throughput
- Narrow bus reduces cable size
- 290 mV swing LVDS devices for low EMI
- +1V common mode range (around +1.2V)
- PLL requires no external components
- Low profile 48-lead TSSOP package
- Rising edge data strobe
- Compatible with TIA/EIA-644 LVDS standard
- ESD Rating > 7 kV
- Operating Temperature: -40°C to +85°C

+3.3V Rising Edge Data Strobe LVDS 21-Bit Channel Link - 75 MHz

General Description

The DS90CR217 transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. The DS90CR218 receiver converts the three LVDS data streams back into 21 bits of CMOS/TTL data. At a transmit clock frequency of 75 MHz, 21 bits of TTL data are transmitted at a rate of 525 Mbps per LVDS data channel. Using a 75 MHz clock, the data throughput is 1.575 Gbit/s (197 Mbytes/sec).

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

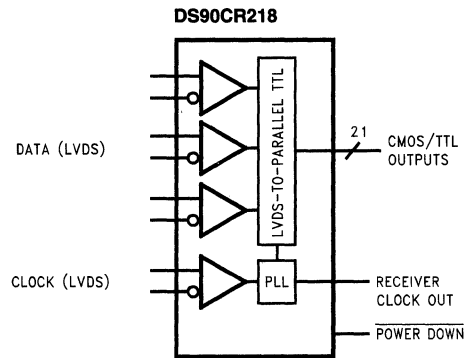

- 20 to 75 MHz shift clock support
- 50% duty cycle on receiver output clock
- Best-in-Class Set & Hold Times on TxINPUTS and RxOUTPUTS
- Low power consumption
- Tx + Rx Power-down mode <400µW (max)
- ±1V common mode range (around +1.2V)
- Narrow bus reduces cable size and cost
- Up to 1.575 Gbps throughput
- Up to 197 Megabytes/sec bandwidth
- 345 mV (typ) swing LVDS devices for low EMI
- PLL requires no external components
- Rising edge data strobe
- Compatible with TIA/EIA-644 LVDS standard
- Low profile 48-lead TSSOP package

+3.3V Rising Edge Data Strobe LVDS 21-Bit Channel Link - 85 MHz

General Description

The DS90CR217 transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. The DS90CR218A receiver converts the three LVDS data streams back into 21 bits of CMOS/TTL data. At a transmit clock frequency of 85 MHz, 21 bits of TTL data are transmitted at a rate of 595 Mbps per LVDS data channel. Using a 85 MHz clock, the data throughput is 1.785 Gbit/s (223 Mbytes/sec).

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

- 20 to 85 MHz shift clock support
- 50% duty cycle on receiver output clock
- Best-in-Class Set & Hold Times on TxINPUTS
- Low power consumption
- $\pm 1V$ common mode range (around +1.2V)
- Narrow bus reduces cable size and cost
- Up to 1.785 Gbps throughput
- Up to 223 Megabytes/sec bandwidth
- 345 mV (typ) swing LVDS devices for low EMI

DS90CR281/DS90CR282 28-Bit Channel Link

General Description

The DS90CR281 transmitter converts 28 bits of CMOS/TTL data into four LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. Every cycle of the transmit clock 28 bits of input data are sampled and transmitted. The DS90CR282 receiver converts the LVDS data streams back into 28 bits of CMOS/TTL data. At a transmit clock frequency of 40 MHz, 28 bits of TTL data are transmitted at a rate of 280 Mbits per LVDS data channel. Using a 40 MHz clock, the data throughput is 1.12 Gbit/s (140 Mbytes/s).

The multiplexing of the data lines provides a substantial cable reduction. Long distance parallel single-ended buses typically require a ground wire per active signal (and have very limited noise rejection capability). Thus, for a 28-bit wide data bus and one clock, up to 58 conductors are required. With the Channel Link chipset as few as 11 conductors (4 data pairs, 1 clock pair and a minimum of one

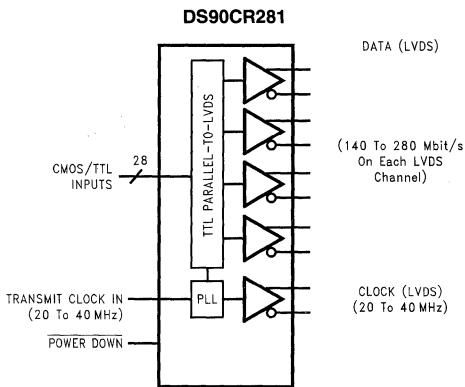

ground) are needed. This provides a 80% reduction in required cable width, which provides a system cost savings, reduces connector physical size and cost, and reduces shielding requirements due to the cables' smaller form factor.

The 28 CMOS/TTL inputs can support a variety of signal combinations. For example, 7 4-bit nibbles or 3 9-bit (byte + parity) and 1 control.

Features

- Narrow bus reduces cable size and cost
- $\pm 1V$ common mode range (ground shifting)
- 290 mV swing LVDS data transmission
- 1.12 Gbit/s data throughput
- Low swing differential current mode drivers reduce EMI
- Rising edge data strobe
- Power down mode
- Offered in low profile 56-lead TSSOP package

+3.3V Rising Edge Data Strobe LVDS Receiver 28-Bit Channel Link—66 MHz, +3.3V Rising Edge Strobe LVDS Receiver 21-Bit Channel Link—66 MHz

General Description

The DS90CR286A receiver converts the four LVDS data streams (Up to 1.848 Gbps throughput or 231 Megabytes/sec bandwidth) back into parallel 28 bits of CMOS/TTL data. Also available is the DS90CR216A that converts the three LVDS data streams (Up to 1.386 Gbps throughput or 173 Megabytes/sec bandwidth) back into parallel 21 bits of CMOS/TTL data. Both Receivers' outputs are Rising edge strobe.

Both devices are offered in TSSOP packages. In addition the DS90CR286A is also offered in a space saving 64 ball, 0.8mm fine pitch ball grid array (FBGA) which provides a 44% reduction in PCB footprint compared to the 56L TSSOP package.

The DS90CR286A / DS90CR216A devices are enhanced over prior generation receivers and provided a wider data valid time on the receiver output.

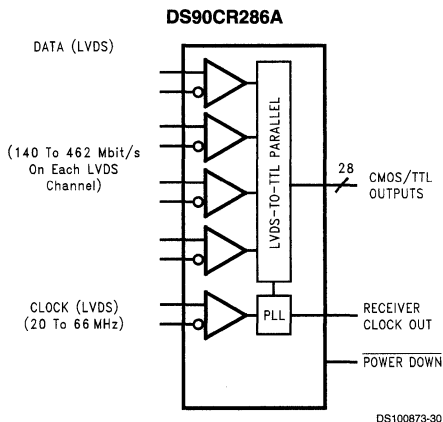

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

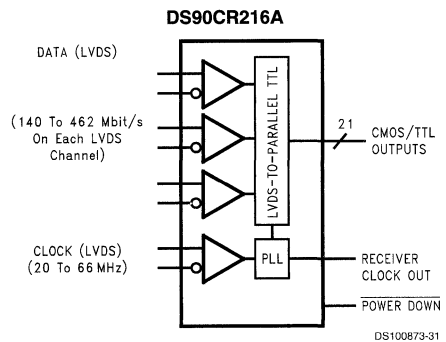

- 20 to 66 MHz shift clock support
- 50% duty cycle on receiver output clock
- Best-in-Class Set & Hold Times on RxOUTPUTS
- Rx power consumption <270 mW (typ) @66MHz Worst Case
- Rx Power-down mode <200µW (max)
- ESD rating >7 kV (HBM), >700V (EIAJ)
- PLL requires no external components
- Compatible with TIA/EIA-644 LVDS standard
- Low profile 56-lead or 48-lead TSSOP package
- DS90CR286A is also offered in a space saving 64 ball FBGA package
- Operating Temperature: -40°C to +85°C

+3.3V Rising Edge Data Strobe LVDS 28-Bit Channel Link-75 MHz

General Description

The DS90CR287 transmitter converts 28 bits of CMOS/TTL data into four LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. Every cycle of the transmit clock 28 bits of input data are sampled and transmitted. The DS90CR288 receiver converts the four LVDS data streams back into 28 bits of CMOS/TTL data. At a transmit clock frequency of 75 MHz, 28 bits of TTL data are transmitted at a rate of 525 Mbps per LVDS data channel. Using a 75 MHz clock, the data throughput is 2.10 Gbit/s (262.5 Mbytes/sec).

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

- 20 to 75 MHz shift clock support
- 50% duty cycle on receiver output clock
- Best-in-Class Set & Hold Times on TxINPUTs and RxOUTPUTs
- Low power consumption
- Tx + Rx Power-down mode <math><400\mu\text{W}</math> (max)
- $\pm 1\text{V}$ common mode range (around +1.2V)
- Narrow bus reduces cable size and cost
- Up to 2.10 Gbps throughput
- Up to 262.5 Megabytes/sec bandwidth
- 345 mV (typ) swing LVDS devices for low EMI
- PLL requires no external components
- Rising edge data strobe

DS90CR287/DS90CR288A

+3.3V Rising Edge Data Strobe LVDS 28-Bit Channel Link-85 MHZ

General Description

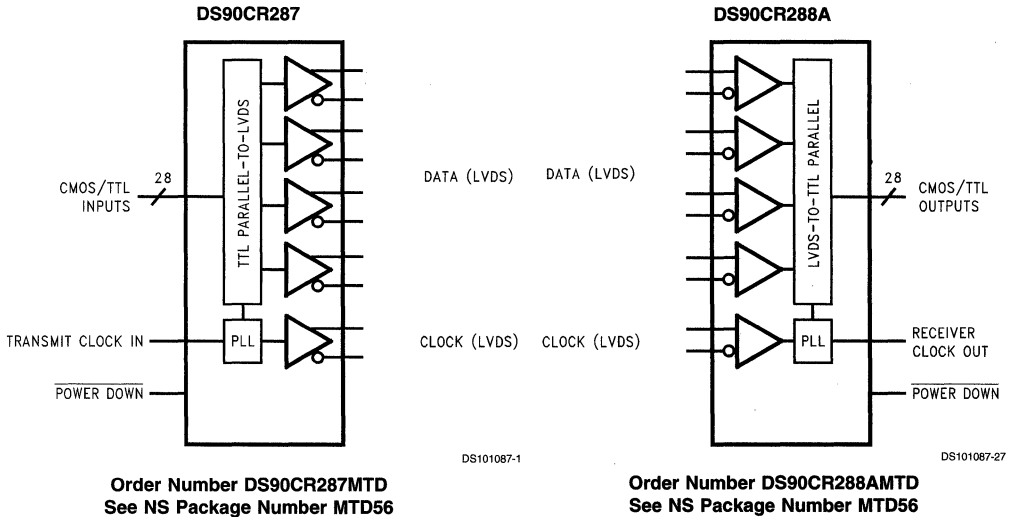

The DS90CR287 transmitter converts 28 bits of CMOS/TTL data into four LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. Every cycle of the transmit clock 28 bits of input data are sampled and transmitted. The DS90CR288A receiver converts the four LVDS data streams back into 28 bits of CMOS/TTL data. At a transmit clock frequency of 85 MHZ, 28 bits of TTL data are transmitted at a rate of 595 Mbps per LVDS data channel. Using a 85 MHZ clock, the data throughput is 2.38 Gbit/s (297.5 Mbytes/sec).

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

Features

- 20 to 85 MHZ shift clock support
- 50% duty cycle on receiver output clock
- Best-in-Class Set & Hold Times on TxINPUTs
- Low power consumption
- $\pm 1V$ common mode range (around +1.2V)
- Narrow bus reduces cable size and cost
- Up to 2.38 Gbps throughput
- Up to 297.5 Megabytes/sec bandwidth
- 345 mV (typ) swing LVDS devices for low EMI
- PLL requires no external components
- Rising edge data strobe
- Compatible with TIA/EIA-644 LVDS standard

DS101087-23

DS90CR483 / DS90CR484

48-Bit LVDS Channel Link Serializer/Deserializer

General Description

The DS90CR483 transmitter converts 48 bits of CMOS/TTL data into eight LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a ninth LVDS link. Every cycle of the transmit clock 48 bits of input data are sampled and transmitted. The DS90CR484 receiver converts the LVDS data streams back into 48 bits of CMOS/TTL data. At a transmit clock frequency of 112MHz, 48 bits of TTL data are transmitted at a rate of 672Mbps per LVDS data channel. Using a 112MHz clock, the data throughput is 5.38Gbit/s (672Mbytes/s).

The multiplexing of data lines provides a substantial cable reduction. Long distance parallel single-ended buses typically require a ground wire per active signal (and have very limited noise rejection capability). Thus, for a 48-bit wide data and one clock, up to 98 conductors are required. With this Channel Link chipset as few as 19 conductors (8 data pairs, 1 clock pair and a minimum of one ground) are needed. This provides an 80% reduction in cable width, which provides a system cost savings, reduces connector physical size and cost, and reduces shielding requirements due to the cables' smaller form factor.

The 48 CMOS/TTL inputs can support a variety of signal combinations. For example, 6 8-bit words or 5 9-bit (byte + parity) and 3 controls.

The DS90CR483/DS90CR484 chipset is improved over prior generations of Channel Link devices and offers higher bandwidth support and longer cable drive with three areas of enhancement. To increase bandwidth, the maximum clock rate is increased to 112 MHz and 8 serialized LVDS outputs are

provided. Cable drive is enhanced with a user selectable pre-emphasis feature that provides additional output current during transitions to counteract cable loading effects. DC balancing on a cycle-to-cycle basis, is also provided to reduce ISI (Inter-Symbol Interference). With pre-emphasis and DC balancing, a low distortion eye-pattern is provided at the receiver end of the cable. A cable deskew capability has been added to deskew long cables of pair-to-pair skew of up to ± 1 LVDS data bit time (up to 80 MHz Clock Rate). These three enhancements allow cables 5+ meters in length to be driven.

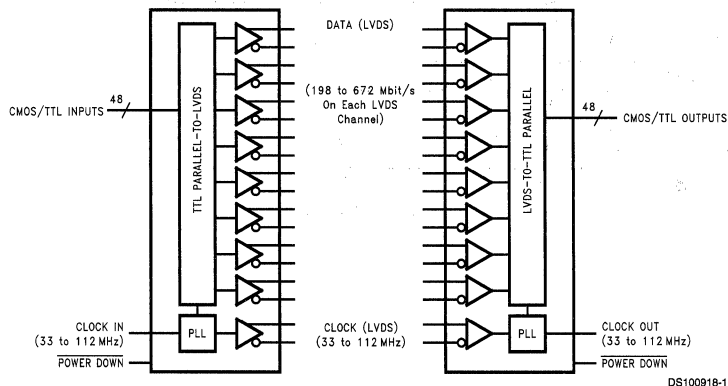

The chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

For more details, please refer to the "Applications Information" section of this datasheet.

Features

- Up to 5.38 Gbits/sec bandwidth
- 33 MHz to 112 MHz input clock support
- LVDS SER/DES reduces cable and connector size
- Pre-emphasis reduces cable loading effects
- DC balance data transmission provided by transmitter reduces ISI distortion
- Cable Deskew of ± 1 LVDS data bit time (up to 80 MHz Clock Rate)
- 5V Tolerant TxIN and control input pins
- Flow through pinout for easy PCB design
- +3.3V supply voltage
- Transmitter rejects cycle-to-cycle jitter
- Conforms to ANSI/TIA/EIA-644-1995 LVDS Standard

Generalized Receiver Block Diagram

DS92LV010A

Bus LVDS 3.3/5.0V Single Transceiver

General Description

The DS92LV010A is one in a series of transceivers designed specifically for the high speed, low power proprietary bus backplane interfaces. The device operates from a single 3.3V or 5.0V power supply and includes one differential line driver and one receiver. To minimize bus loading the driver outputs and receiver inputs are internally connected. The logic interface provides maximum flexibility as 4 separate lines are provided (D_{IN}, DE, $\overline{\text{RE}}$, and R_{OUT}). The device also features flow through which allows easy PCB routing for short stubs between the bus pins and the connector. The driver has 10 mA drive capability, allowing it to drive heavily loaded backplanes, with impedance as low as 27 Ohms.

The driver translates between TTL levels (single-ended) to Low Voltage Differential Signaling levels. This allows for high speed operation, while consuming minimal power with reduced EMI. In addition the differential signaling provides common mode noise rejection of $\pm 1\text{V}$.

The receiver threshold is $\pm 100\text{mV}$ over a $\pm 1\text{V}$ common mode range and translates the low voltage differential levels to standard (CMOS/TTL) levels.

Features

- Bus LVDS Signaling (BLVDS)
- Designed for Double Termination Applications
- Balanced Output Impedance
- Lite Bus Loading 5pF typical
- Glitch free power up/down (Driver disabled)
- 3.3V or 5.0V Operation
- $\pm 1\text{V}$ Common Mode Range
- $\pm 100\text{mV}$ Receiver Sensitivity
- High Signaling Rate Capability (above 100 Mbps)
- Low Power CMOS design
- Product offered in 8 lead SOIC package
- Industrial Temperature Range Operation

DS92LV090A

9 Channel Bus LVDS Transceiver

General Description

The DS92LV090A is one in a series of Bus LVDS transceivers designed specifically for the high speed, low power proprietary backplane or cable interfaces. The device operates from a single 3.3V power supply and includes nine differential line drivers and nine receivers. To minimize bus loading, the driver outputs and receiver inputs are internally connected. The separate I/O of the logic side allows for loop back support. The device also features a flow through pin out which allows easy PCB routing for short stubs between its pins and the connector.

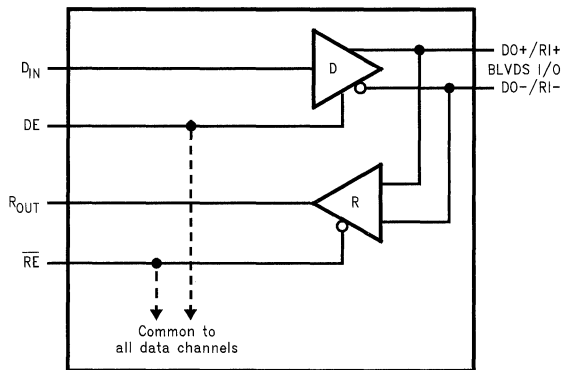

The driver translates 3V TTL levels (single-ended) to differential Bus LVDS (BLVDS) output levels. This allows for high speed operation, while consuming minimal power with reduced EMI. In addition, the differential signaling provides common mode noise rejection of $\pm 1V$.

The receiver threshold is less than ± 100 mV over a $\pm 1V$ common mode range and translates the differential Bus LVDS to standard (TTL/CMOS) levels. (See Applications Information Section for more details.)

Features

- Bus LVDS Signaling
- 3.2 nanosecond propagation delay max
- Chip to Chip skew $\pm 800ps$
- Low power CMOS design
- High Signaling Rate Capability (above 100 Mbps)
- 0.1V to 2.3V Common Mode Range for $V_{ID} = 200mV$
- ± 100 mV Receiver Sensitivity
- Supports open and terminated failsafe on port pins
- 3.3V operation
- Glitch free power up/down (Driver & Receiver disabled)
- Light Bus Loading (5 pF typical) per Bus LVDS load
- Designed for Double Termination Applications
- Balanced Output Impedance
- Product offered in 64 pin TQFP package
- High impedance Bus pins on power off ($V_{CC} = 0V$)
- Driver Channel to Channel skew (same device) 230ps typical
- Receiver Channel to Channel skew (same device) 370ps typical

DS92LV222A

Two Channel Bus LVDS MUXed Repeater

General Description

The DS92LV222A is a repeater designed specifically for the bridging of multiple backplanes in a rack. The DS92LV222A utilizes low voltage differential signaling to deliver high speed while consuming minimal power with reduced EMI. The RSEL pin and DE pins allow maximum flexibility as to which receiver/driver are used. The DS92LV222A repeats signals between backplanes and accepts or drives signals onto the local bus. It also features a flow through pin out which allows easy PCB routing for short stubs between its pins and the connector.

The driver is selectable between 3.5 mA (100Ω load) and 8.5 mA (27Ω load) output loop currents depending upon the level applied to the ISEL pin. This allows for single termination (point-to-point) and also double termination (multipoint) applications while maintain similar differential levels.

The receiver threshold is ±100 mV, while providing ±1V common mode range.

Features

- Bus LVDS Signaling (BLVDS)
- Designed for Double Termination Applications
- Low power CMOS design
- High Signaling Rate Capability (above 100 Mbps)
- Ultra Low Power Dissipation (13.2 mW quiescent)
- Balanced Output Impedance
- Lite Bus Loading 5 pF typical
- Selectable Drive Capability (3.5 mA or 8.5 mA)
- 3.3V operation
- ±1V Common Mode Range
- ±100 mV Receiver Sensitivity
- Available in 16 pin SOIC package.

Block Diagram

DS90CP22

2X2 800 Mbps LVDS Crosspoint Switch

General Description

DS90CP22 is a 2x2 crosspoint switch utilizing LVDS (Low Voltage Differential Signaling) technology for low power, high speed operation. Data paths are fully differential from input to output for low noise generation and low pulse width distortion. The non-blocking design allows connection of any input to any output or outputs. LVDS I/O enable high speed data transmission for point-to-point interconnects. This device can be used as a high speed differential crosspoint, 2:1 mux, 1:2 demux, repeater or 1:2 signal splitter. The mux and demux functions are useful for switching between primary and backup circuits in fault tolerant systems. The 1:2 signal splitter and 2:1 mux functions are useful for distribution of serial bus across several rack-mounted backplanes.

The DS90CP22 accepts LVDS signal levels, LVPECL levels directly or PECL with attenuation networks.

The individual LVDS outputs can be put into TRI-STATE by use of the enable pins.

For more details, please refer to the Application Information section of this datasheet.

Features

- Low jitter 800 Mbps fully differential data path
- 75 ps (typ) of pk-pk jitter with PRBS = $2^{23}-1$ data pattern at 800 Mbps
- Single +3.3 V Supply
- Less than 330 mW (typ) total power dissipation
- Non-blocking "Switch Architecture"
- Balanced output impedance
- Output channel-to-channel skew is 35 ps (typ)
- Configurable as 2:1 mux, 1:2 demux, repeater or 1:2 signal splitter
- LVDS receiver inputs accept LVPECL signals
- Fast switch time of 1.2ns (typ)
- Fast propagation delay of 1.3ns (typ)
- Receiver input threshold < ± 100 mV
- 16 lead SOIC package
- Inter-operates with ANSI/TIA/EIA-644-1995 LVDS standard

DS92LV1021 and DS92LV1210

16-40 MHz 10 Bit Bus LVDS Serializer and Deserializer

General Description

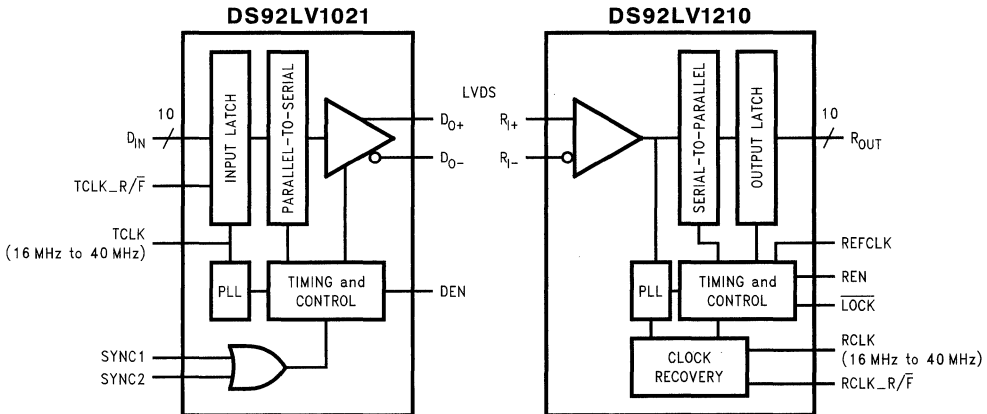

The DS92LV1021 transforms a 10-bit wide parallel CMOS/TTL data bus into a single high speed Bus LVDS serial data stream with embedded clock. The DS92LV1210 receives the Bus LVDS serial data stream and transforms it back into a 10-bit wide parallel data bus and separates clock. The DS92LV1021 may transmit data over heavily loaded backplanes or 10 meters of cable. The reduced cable, PCB trace count and connector size saves cost and makes PCB design layout easier. Clock-to-data and data-to-data skew are eliminated since one output will transmit both clock and all data bits serially. The powerdown pin is used to save power, by reducing supply current when either device is not in use. The Serializer has a synchronization mode that should be activated upon power-up of the device. The Deserializer will establish lock to this signal within 1024 cycles, and will flag Lock status. The embedded clock guarantees a transition on the bus every 12-bit cycle; eliminating transmission errors

due to charged cable conditions. The DS92LV1021 output pins may be TRI-STATE[®] to achieve a high impedance state. The PLL can lock to frequencies between 16 MHz and 40 MHz.

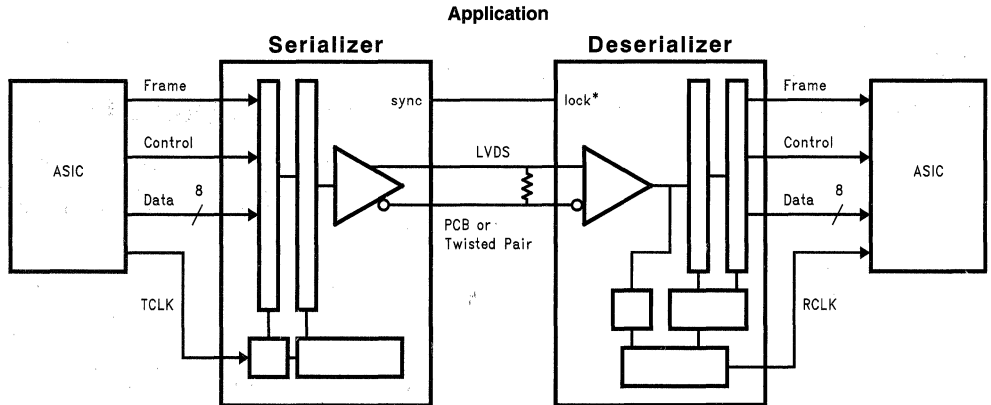

Features

- Guaranteed transition every data transfer cycle
- Single differential pair eliminates multi-channel skew
- Flow-through pinout for easy PCB layout
- 400 Mbps serial Bus LVDS bandwidth (at 40 MHz clock)
- 10-bit parallel interface for 1 byte data plus 2 control bits
- Synchronization mode and LOCK indicator
- Programmable edge trigger on clock
- High impedance on receiver inputs when power is off
- Bus LVDS serial output rated for 27Ω load
- Small 28-lead SSOP package-MSA

Block Diagrams

Block Diagrams (Continued)

Functional Description

The DS92LV1021 and DS92LV1210 is a 10-bit Serializer / Deserializer chipset designed to transmit data over a heavily loaded differential backplanes at clock speeds from 16 to 40MHz. It may also be used to drive data over Unshielded Twisted Pair (UTP) cable.

The chipset has three active states of operation: Initialization, Data Transfer, and Resynchronization; and two passive states: Powerdown and TRI-STATE®.

The following sections describe each operation and passive state.

Initialization

Before data can be transferred both devices must be initialized. Initialization refers to synchronization of the Serializer and the Deserializer PLL's to local clocks that may be the same or separate. Afterward, synchronization of Deserializer to Serializer occurs as the second step of initialization.

Step 1: When V_{CC} is applied to both Serializer and/or Deserializer, the respective outputs are held in TRI-STATE® and internal circuitry is disabled by on-chip power-on circuitry. When V_{CC} reaches $V_{CC\ OK}$ (2.5V) the PLL in each device begins locking to a local clock. For the Serializer, the local clock is the transmit clock, TCLK, provided by the source ASIC or other device. For the Deserializer, the local clock is provided by an on-board oscillator or other source and applied to the REFCLK pin. After $V_{CC\ OK}$ is reached the device's PLL will lock.

The Serializer outputs are held in TRI-STATE while the PLL locks to the TCLK. The Serializer is now ready to send data or SYNC patterns depending on the levels of the SYNC1 and SYNC2 inputs. The SYNC pattern is composed of six ones and six zeros switching at the input clock rate.

The Deserializer \overline{LOCK} output will remain high while its PLL is locking to the local clock- the REFCLK input and then to SYNC patterns on the input.

Step 2: The Deserializer PLL must synchronize to the Serializer to complete the initialization. The transmission of SYNC patterns to the Deserializer enables the Deserializer to lock to the Serializer signal.

Control of the sync pins is left to the user. A feedback loop between the \overline{LOCK} pin is one recommendation. Another op-

tion is that one or both of the Serializer SYNC inputs are asserted for at least 1024 cycles of TCLK to initiate transmission of SYNC patterns. The Serializer will continue to send SYNC patterns after the minimum of 1024 if either of the SYNC inputs remain high.

When the Deserializer detects edge transitions at the Bus LVDS input it will attempt to lock to the embedded clock information. When the Deserializer locks to the Bus LVDS clock, the \overline{LOCK} output will go low. When \overline{LOCK} is low the Deserializer outputs represent incoming Bus LVDS data.

Data Transfer

After initialization, the Serializer inputs DIN0-DIN9 may be used to input data to the Serializer. Data is clocked into the Serializer by the TCLK input. The edge of TCLK used to strobe in data is selectable via the TCLK_R/F pin. TCLK_R/F high selects the rising edge for clocking data and low selects the falling edge. If either of the SYNC inputs is high for $5 \times \text{TCLK}$ cycles the data at DIN 0-DIN9 is ignored regardless of the clock edge.

A start bit and a stop bit, appended internally, frame the data bits in the register. The start bit is always high and the stop bit is always low. The start and stop bits function as the embedded clock bits in the serial stream.

Serialized data and clock bits (10+2 bits) are transmitted from the serial data output (DO) at 12 times the TCLK frequency. For example, if TCLK is 40 MHz, the serial rate is $40 \times 12 = 480$ Mega bits per second. Since only 10 bits are from input data, the serial "payload" rate is 10 times the TCLK frequency. For instance, if TCLK = 40 MHz, the payload data rate is $40 \times 10 = 400$ Mbps. TCLK is provided by the data source and must be in the range 16 MHz to 40 MHz nominal.

The outputs (DO±) can drive a heavily loaded backplane or a point-to-point connection. The outputs transmit data when the enable pin (DEN) is high, \overline{PWRDN} = high and SYNC1 and SYNC2 are low. The DEN pin may be used to TRI-STATE the outputs when driven low.

The \overline{LOCK} pin on the Deserializer is driven low when it is synchronized with the Serializer. The Deserializer locks to the embedded clock and uses it to recover the serialized data. ROUT data is valid when \overline{LOCK} is low. Otherwise ROUT0-ROUT9 is invalid.

Data Transfer (Continued)

RCLK pin is the reference to data on the ROUT0-ROUT9 pins. The polarity of the RCLK edge is controlled by the RCLK_R/F input.

ROUT(0-9), $\overline{\text{LOCK}}$ and RCLK outputs will drive a minimum of three CMOS input gates (15 pF load) with 40 MHz clock.

Resynchronization

The Deserializer $\overline{\text{LOCK}}$ pin driven low indicates that the Deserializer PLL is locked to the embedded clock edge. If the Deserializer loses lock, the $\overline{\text{LOCK}}$ output will go high and the outputs (including RCLK) will be TRI-STATE.

The $\overline{\text{LOCK}}$ pin must be monitored by the system to detect a loss of synchronization and the system must arrange to pulse the Serializer SYNC1 or SYNC2 pin to resynchronize. There are multiple approaches possible. One recommendation is to provide a feedback loop using the $\overline{\text{LOCK}}$ pin itself to control the sync request of the Serializer (SYNC1 or SYNC2). Otherwise, $\overline{\text{LOCK}}$ pin needs to be monitored and when it is a high, the system needs to ensure that one or both of the Serializer SYNC inputs area asserted for at least 1024 cycles of TCLK. A minimum of 1024 sync patterns are needed to resynchronize. Dual SYNC pins are provided for multiple control in a multi-drop application.

Powerdown

The Powerdown state is a low power sleep mode that the Serializer and Deserializer may use to reduce power when

there is no data to be transferred. Powerdown is entered when $\overline{\text{PWRDN}}$ and REN are driven low on the Deserializer, and when the $\overline{\text{PWRDN}}$ is driven low on the Serializer. In Powerdown, the PLL is stopped and the outputs go into TRI-STATE, disabling load current and also reducing supply current to the milliamp range. To exit Powerdown, $\overline{\text{PWRDN}}$ is driven high.

Both the Serializer and Deserializer must reinitialize and resynchronize before data can be transferred. Initialization of the Serializer takes 1024 TCLK cycles. The Deserializer will initialize and assert $\overline{\text{LOCK}}$ high until it is locked to the Bus LVDS clock.

TRI-STATE

For the Serializer, TRI-STATE is entered when the DEN pin is driven low. This will TRI-STATE both driver output pins (DO+ and DO-). When DEN is driven high the serializer will return to the previous state as long as all other control pins remain static (SYNC1, SYNC2, $\overline{\text{PWRDN}}$, TCLK_R/F).

For the Deserializer, TRI-STATE is entered when the REN pin is driven low. This will TRI-STATE the receiver output pins (ROUT0-ROUT9), $\overline{\text{LOCK}}$ and RCLK.

DS92LV1212A

16-40 MHz 10-Bit Bus LVDS Random Lock Deserializer with Embedded Clock Recovery

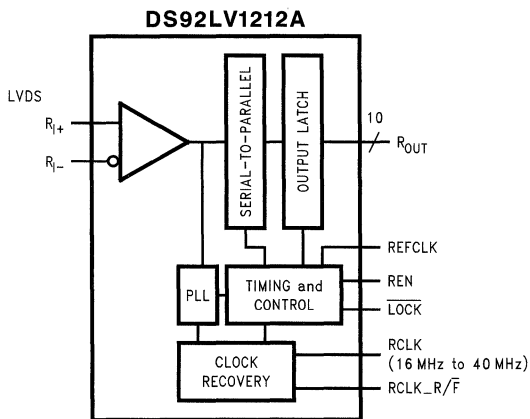

General Description

The DS92LV1212A is an upgrade of the DS92LV1212. It maintains all of the features of the DS92LV1212. The DS92LV1212A is designed to be used with the DS92LV1021 Bus LVDS Serializer. The DS92LV1212A receives a Bus LVDS serial data stream and transforms it into a 10-bit wide parallel data bus and separate clock. The reduced cable, PCB trace count and connector size saves cost and makes PCB layout easier. Clock-to-data and data-to-data skews are eliminated since one input receives both clock and data bits serially. The powerdown pin is used to save power by reducing the supply current when the device is not in use. The Deserializer will establish lock to a synchronization pattern within specified lock times but it can also lock to a data stream without SYNC patterns.

Features

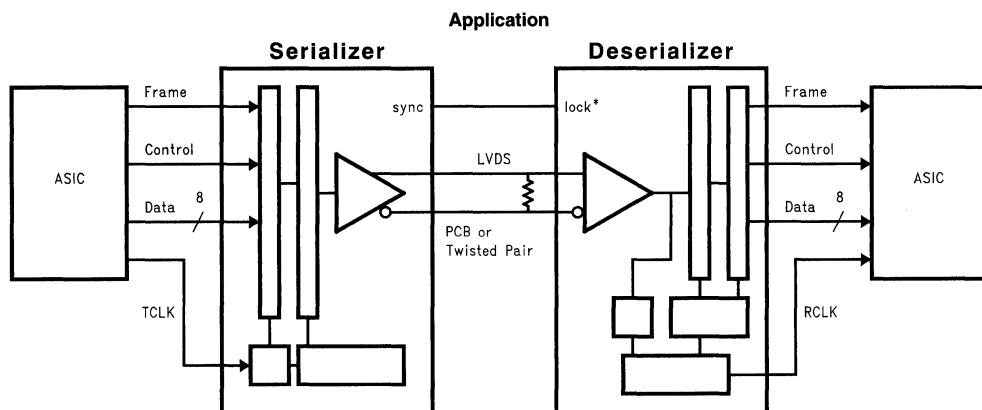

- Clock recovery without SYNC patterns-random lock
- Guaranteed transition every data transfer cycle
- Chipset (Tx + Rx) power consumption < 300mW (typ) @ 40MHz
- Single differential pair eliminates multi-channel skew
- 400 Mbps serial Bus LVDS bandwidth (at 40 MHz clock)
- 10-bit parallel interface for 1 byte data plus 2 control bits or UTOPIA I Interface
- Synchronization mode and LOCK indicator
- Flow-through pinout for easy PCB layout
- High impedance on receiver inputs when power is off
- Programmable edge trigger on clock
- Footprint compatible with DS92LV1210
- Small 28-lead SSOP package-MSA

Block Diagram

DS101387-1

Block Diagram (Continued)

DS101387-2

Functional Description

The DS92LV1212 is a 10-bit Deserializer chip designed to receive data over heavily loaded differential backplanes at clock speeds from 16 MHz to 40 MHz. It may also be used to receive data over Unshielded Twisted Pair (UTP) cable.

The chip has three active states of operation: Initialization, Data Transfer, and Resynchronization; and two passive states: Powerdown and TRI-STATE®.

The following sections describe each operation of the active and passive states.

Initialization

Before data can be transferred, the Deserializer must be initialized. The Deserializer should be powered up with the PWRDN pin held low. After V_{CC} stabilizes, the PWRDN pin can be forced high. The Deserializer is ready to lock to the incoming data stream.

Step 1: When you apply V_{CC} to the Deserializer, the respective outputs are held in TRI-STATE and internal circuitry is disabled by on-chip power-on circuitry. When V_{CC} reaches $V_{CC\text{ OK}}$ (2.5V), the PLL is ready to lock to incoming data or synchronization patterns. You must apply the local clock to the REFCLK pin.

The Deserializer $\overline{\text{LOCK}}$ output will remain high while its PLL locks to incoming data or to SYNC patterns on the inputs.

Step 2: The Deserializer PLL must synchronize to the Serializer to complete the initialization. The Deserializer will lock to non-repetitive data patterns; however, the transmission of SYNC patterns to the Deserializer enables the Deserializer to lock to the Serializer signal within a specified time. See *Figure 7*.

The user's application determines control of the SYNC1 and SYNC2 pins. One recommendation is a direct feedback loop from the $\overline{\text{LOCK}}$ pin. Under all circumstances, the Serializer stops sending SYNC patterns after both SYNC inputs return low.

When the Deserializer detects edge transitions at the Bus LVDS input, it will attempt to lock to the embedded clock information. When the Deserializer locks to the Bus LVDS clock, the $\overline{\text{LOCK}}$ output will go low. When $\overline{\text{LOCK}}$ is low, the Deserializer outputs represent incoming Bus LVDS data.

Data Transfer

After initialization, the Serializer will accept data from inputs DIN0–DIN9. The Serializer uses the TCLK input to latch incoming Data. The TCLK_R/F pin selects which edge the Serializer uses to strobe incoming data. TCLK_R/F high selects the rising edge for clocking data and low selects the falling edge. If either of the SYNC inputs is high for 5*TCLK cycles, the data at DIN0–DIN9 is ignored regardless of clock edge.

After determining which clock edge to use, a start and stop bit, appended internally, frame the data bits in the register. The start bit is always high and the stop bit is always low. The start and stop bits function as the embedded clock bits in the serial stream.

Serialized data and clock bits (10+2 bits) are received at 12 times the TCLK frequency. For example, if TCLK is 40 MHz, the serial rate is $40 \times 12 = 480$ Mega bits per second. Since only 10 bits are from input data, the serial "payload" rate is 10 times the TCLK frequency. For instance, if TCLK = 40 MHz, the payload data rate is $40 \times 10 = 400$ Mbps. TCLK is provided by the data source and must be in the range 16 MHz to 40 MHz nominal.

The $\overline{\text{LOCK}}$ pin on the Deserializer is driven low when it is synchronized with the Serializer. The Deserializer locks to the embedded clock and uses it to recover the serialized data. ROUT data is valid when $\overline{\text{LOCK}}$ is low. Otherwise, ROUT0–ROUT9 is invalid.

The ROUT0–ROUT9 pins use the RCLK pin as the reference to data. The polarity of the RCLK edge is controlled by the RCLK_R/F input. See *Figure 5*.

ROUT(0–9), $\overline{\text{LOCK}}$ and RCLK outputs will drive a minimum of three CMOS input gates (15 pF load) with 40 MHz clock.

Resynchronization

When the Deserializer PLL locks to the embedded clock edge, the Deserializer $\overline{\text{LOCK}}$ pin asserts a low. If the Deserializer loses lock, the $\overline{\text{LOCK}}$ pin output will go high and the outputs (including RCLK) will enter TRI-STATE.

The user's system monitors the $\overline{\text{LOCK}}$ pin to detect a loss of synchronization. Upon detection, the system can arrange to pulse the Serializer SYNC1 or SYNC2 pin to resynchronize. Multiple resynchronization approaches are possible. One recommendation is to provide a feedback loop using the

Resynchronization (Continued)

$\overline{\text{LOCK}}$ pin itself to control the sync request of the Serializer (SYNC1 or SYNC2). Dual SYNC pins are provided for multiple control in a multi-drop application. Sending sync patterns for resynchronization is desirable when lock times within a specific time are critical. However, the Deserializer can lock to random data, which is discussed in the next section.

Random Lock Initialization and Resynchronization

The initialization and resynchronization methods described in their respective sections are the fastest ways to establish the link between the Serializer and Deserializer. However, the DS92LV1212A can attain lock to a data stream without requiring the Serializer to send special SYNC patterns. This allows the DS92LV1212A to operate in "open-loop" applications. Equally important is the Deserializer's ability to support hot insertion into a running backplane. In the open loop or hot insertion case, we assume the data stream is essentially random. Therefore, because lock time varies due to data stream characteristics, we cannot possibly predict exact lock time. The primary constraint on "random" lock time is the initial phase relation between the incoming data and the REFCLK when the Deserializer powers up. As described in the next paragraph, the data contained in the data stream can also affect lock time.

If a specific pattern is repetitive, the Deserializer could enter "false lock" - falsely recognizing the data pattern as the clocking bits. We refer to such a pattern as a repetitive multi-transition, RMT. This occurs when more than one Low-High transition takes place in a clock cycle over multiple cycles. This occurs when any bit, except DIN 9, is held at a low state and the adjacent bit is held high, creating a 0-1 transition. In the worst case, the Deserializer could become locked to the data pattern rather than the clock. Circuitry within the DS92LV1212A can detect that the possibility of "false lock" exists. The circuitry accomplishes this by detecting more than one potential position for clocking bits. Upon detection, the circuitry will prevent the $\overline{\text{LOCK}}$ output from becoming active until the potential "false lock" pattern changes. The false lock detect circuitry expects the data will eventually change, causing the Deserializer to lose lock to the data pattern and then continue searching for clock bits in the serial data stream. Graphical representations of RMT are shown on the following page. Please note that RMT only applies to bits DIN0-DIN8.

Powerdown

When no data transfer occurs, you can use the Powerdown state. The Serializer and Deserializer use the Powerdown state, a low power sleep mode, to reduce power consumption. The Deserializer enters Powerdown when you drive $\overline{\text{PWRDN}}$ and REN low. The Serializer enters Powerdown when you drive $\overline{\text{PWRDN}}$ low. In Powerdown, the PLL stops and the outputs enter TRI-STATE, which disables load current and reduces supply current to the milliampere range. To exit Powerdown, you must drive the $\overline{\text{PWRDN}}$ pin high.

Before valid data exchanges between the Serializer and Deserializer, you must reinitialize and resynchronize the devices to each other. Initialization of the Serializer takes 510 TCLK cycles. The Deserializer will initialize and assert $\overline{\text{LOCK}}$ high until lock to the Bus LVDS clock occurs.

TRI-STATE

The Serializer enters TRI-STATE when the DEN pin is driven low. This puts both driver output pins (DO+ and DO-) into TRI-STATE. When you drive DEN high, the Serializer returns to the previous state, as long as all other control pins remain static (SYNC1, SYNC2, $\overline{\text{PWRDN}}$, TCLK_R/F).

When you drive the REN pin low, the Deserializer enters TRI-STATE. Consequently, the receiver output pins (ROUT0-ROUT9) and RCLK will enter TRI-STATE. The $\overline{\text{LOCK}}$ output remains active, reflecting the state of the PLL.

DS92LV1023 and DS92LV1224 40-66 MHz 10 Bit Bus LVDS Serializer and Deserializer

General Description

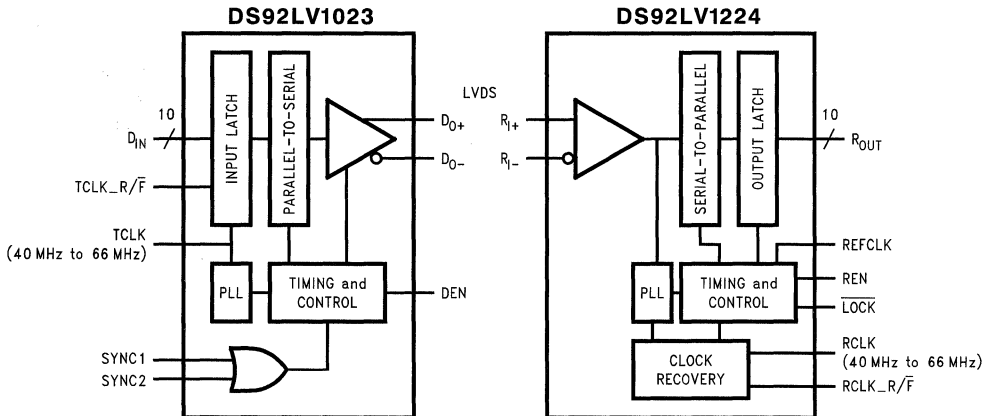

The DS92LV1023 transforms a 10-bit wide parallel LVCMOS/LVTTL data bus into a single high speed Bus LVDS serial data stream with embedded clock. The DS92LV1224 receives the Bus LVDS serial data stream and transforms it back into a 10-bit wide parallel data bus and recovers parallel clock. The DS92LV1023 transmits data over backplanes or cable. The single differential pair data path makes PCB design easier. In addition, the reduced cable, PCB trace count, and connector size tremendously reduce cost. Since one output transmits clock and data bits serially, it eliminates clock-to-data and data-to-data skew. The power-down pin saves power by reducing supply current when not using either device. Upon power up of the Serializer, you can choose to activate synchronization mode or allow the Deserializer to use the synchronization-to-random-data feature. By using the synchronization mode, the Deserializer will establish lock to a signal within specified lock times. In addition, the embedded clock guarantees a transition on the bus every 12-bit cycle. This eliminates transmission errors due to charged cable conditions. Furthermore, you may put

the DS92LV1023 output pins into TRI-STATE® to achieve a high impedance state. The PLL can lock to frequencies between 40 MHz and 66 MHz.

Features

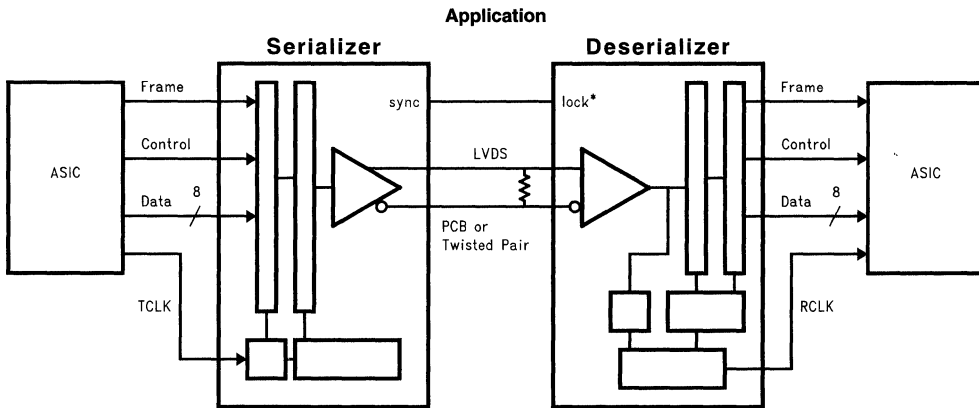

- Clock recovery from PLL lock to random data patterns.
- Guaranteed transition every data transfer cycle
- Chipset (Tx + Rx) power consumption < 500 mW (typ) @ 66 MHz
- Single differential pair eliminates multi-channel skew
- Flow-through pinout for easy PCB layout
- 660 Mbps serial Bus LVDS data rate (at 66 MHz clock)
- 10-bit parallel interface for 1 byte data plus 2 control bits
- Synchronization mode and LOCK indicator
- Programmable edge trigger on clock
- High impedance on receiver inputs when power is off
- Bus LVDS serial output rated for 27Ω load
- Small 28-lead SSOP package

Block Diagrams

DS100933-1

Block Diagrams (Continued)

DS100933-2

Functional Description

The DS92LV1023 and DS92LV1224 are a 10-bit Serializer and Deserializer chipset designed to transmit data over differential backplanes at clock speeds from 40 to 66 MHz. The chipset is also capable of driving data over Unshielded Twisted Pair (UTP) cable.

The chipset has three active states of operation: Initialization, Data Transfer, and Resynchronization; and two passive states: Powerdown and TRI-STATE®.

The following sections describe each operation and passive state.

Initialization

Initialization of both devices must occur before data transmission begins. Initialization refers to synchronization of the Serializer and Deserializer PLL's to local clocks, which may be the same or separate. Afterwards, synchronization of the Deserializer to Serializer occurs.

Step 1: When you apply V_{CC} to both Serializer and/or Deserializer, the respective outputs enter TRI-STATE®, and on-chip power-on circuitry disables internal circuitry. When V_{CC} reaches V_{CCOK} (2.5V) the PLL in each device begins locking to a local clock. For the Serializer, the local clock is the transmit clock (TCLK) provided by the source ASIC or other device. For the Deserializer, you must apply a local clock to the REFCLK pin.

The Serializer outputs remain in TRI-STATE while the PLL locks to the TCLK. After locking to TCLK, the Serializer is now ready to send data or SYNC patterns, depending on the levels of the SYNC1 and SYNC2 inputs or a data stream. The SYNC pattern sent by the Serializer consists of six ones and six zeros switching at the input clock rate.

Note that the Deserializer \overline{LOCK} output will remain high while its PLL locks to the incoming data or to SYNC patterns on the input.

Step 2: The Deserializer PLL must synchronize to the Serializer to complete initialization. The Deserializer will lock to non-repetitive data patterns. However, the transmission of SYNC patterns enables the Deserializer to lock to the Serializer signal within a specified time. See *Figure 9*.

The user's application determines control of the SYNC1 and SYNC2 pins. One recommendation is a direct feedback loop

from the \overline{LOCK} pin. Under all circumstances, the Serializer stops sending SYNC patterns after both SYNC inputs return low.

When the Deserializer detects edge transitions at the Bus LVDS input, it will attempt to lock to the embedded clock information. When the Deserializer locks to the Bus LVDS clock, the \overline{LOCK} output will go low. When \overline{LOCK} is low, the Deserializer outputs represent incoming Bus LVDS data.

Data Transfer

After initialization, the Serializer will accept data from inputs DIN0–DIN9. The Serializer uses the TCLK input to latch incoming Data. The TCLK_R/ \overline{F} pin selects which edge the Serializer uses to strobe incoming data. TCLK_R/ \overline{F} high selects the rising edge for clocking data and low selects the falling edge. If either of the SYNC inputs is high for $5 \cdot TCLK$ cycles, the data at DIN0–DIN9 is ignored regardless of clock edge.

After determining which clock edge to use, a start and stop bit, appended internally, frame the data bits in the register. The start bit is always high and the stop bit is always low. The start and stop bits function as the embedded clock bits in the serial stream.

The Serializer transmits serialized data and clock bits (10+2 bits) from the serial data output (DO±) at 12 times the TCLK frequency. For example, if TCLK is 66 MHz, the serial rate is $66 \times 12 = 792$ Mega-bits-per-second. Since only 10 bits are from input data, the serial "payload" rate is 10 times the TCLK frequency. For instance, if TCLK = 66 MHz, the payload data rate is $66 \times 10 = 660$ Mbps. The data source provides TCLK and must be in the range of 40 MHz to 66 MHz nominal.

The Serializer outputs (DO±) can drive a point-to-point connection or in limited multi-point or multi-drop backplanes. The outputs transmit data when the enable pin (DEN) is high, PWRDN = high, and SYNC1 and SYNC2 are low. When DEN is driven low, the Serializer output pins will enter TRI-STATE.

When the Deserializer synchronizes to the Serializer, the \overline{LOCK} pin is low. The Deserializer locks to the embedded clock and uses it to recover the serialized data. ROUT data is valid when \overline{LOCK} is low. Otherwise ROUT0–ROUT9 is invalid.

Data Transfer (Continued)

The ROUT0-ROUT9 pins use the RCLK pin as the reference to data. The polarity of the RCLK edge is controlled by the RCLK_R/F input. See *Figure 13*.

ROUT(0-9), $\overline{\text{LOCK}}$ and RCLK outputs will drive a maximum of three CMOS input gates (15 pF load) with a 66 MHz clock.

Resynchronization

When the Deserializer PLL locks to the embedded clock edge, the Deserializer $\overline{\text{LOCK}}$ pin asserts a low. If the Deserializer loses lock, the $\overline{\text{LOCK}}$ pin output will go high and the outputs (including RCLK) will enter TRI-STATE.

The user's system monitors the $\overline{\text{LOCK}}$ pin to detect a loss of synchronization. Upon detection, the system can arrange to pulse the Serializer SYNC1 or SYNC2 pin to resynchronize. Multiple resynchronization approaches are possible. One recommendation is to provide a feedback loop using the $\overline{\text{LOCK}}$ pin itself to control the sync request of the Serializer (SYNC1 or SYNC2). Dual SYNC pins are provided for multiple control in a multi-drop application. Sending sync patterns for resynchronization is desirable when lock times within a specific time are critical. However, the Deserializer can lock to random data, which is discussed in the next section.

Random Lock Initialization and Resynchronization

The initialization and resynchronization methods described in their respective sections are the fastest ways to establish the link between the Serializer and Deserializer. However, the DS92LV1224 can attain lock to a data stream without requiring the Serializer to send special SYNC patterns. This allows the DS92LV1224 to operate in "open-loop" applications. Equally important is the Deserializer's ability to support hot insertion into a running backplane. In the open loop or hot insertion case, we assume the data stream is essentially random. Therefore, because lock time varies due to data stream characteristics, we cannot possibly predict exact lock time. However, please see *Table 1* for some general random lock times under specific conditions. The primary constraint on the "random" lock time is the initial phase relation between the incoming data and the REFCLK when the Deserializer powers up. As described in the next paragraph, the data contained in the data stream can also affect lock time.

If a specific pattern is repetitive, the Deserializer could enter "false lock" - falsely recognizing the data pattern as the clocking bits. We refer to such a pattern as a repetitive multi-transition, RMT. This occurs when more than one Low-High transition takes place in a clock cycle over multiple cycles. This occurs when any bit, except DIN 9, is held at a low state and the adjacent bit is held high, creating a 0-1 transition. In the worst case, the Deserializer could become locked to the data pattern rather than the clock. Circuitry within the DS92LV1224 can detect that the possibility of "false lock" exists. The circuitry accomplishes this by detecting more than one potential position for clocking bits. Upon detection, the circuitry will prevent the $\overline{\text{LOCK}}$ output from becoming active until the potential "false lock" pattern changes. The false lock detect circuitry expects the data will eventually change, causing the Deserializer to lose lock to the data pattern and then continue searching for clock bits in the serial data stream. Graphical representations of RMT are shown in *Figure 1*. Please note that RMT only applies to bits DIN0-DIN8.

Powerdown

When no data transfer occurs, you can use the Powerdown state. The Serializer and Deserializer use the Powerdown state, a low power sleep mode, to reduce power consumption. The Deserializer enters Powerdown when you drive PWRDN and REN low. The Serializer enters Powerdown when you drive PWRDN low. In Powerdown, the PLL stops and the outputs enter TRI-STATE, which disables load current and reduces supply current to the milliampere range. To exit Powerdown, you must drive the PWRDN pin high.

Before valid data exchanges between the Serializer and Deserializer, you must reinitialize and resynchronize the devices to each other. Initialization of the Serializer takes 510 TCLK cycles. The Deserializer will initialize and assert $\overline{\text{LOCK}}$ high until lock to the Bus LVDS clock occurs.

TRI-STATE

The Serializer enters TRI-STATE when the DEN pin is driven low. This puts both driver output pins (DO+ and DO-) into TRI-STATE. When you drive DEN high, the Serializer returns to the previous state, as long as all other control pins remain static (SYNC1, SYNC2, PWRDN, TCLK_R/F).

When you drive the REN pin low, the Deserializer enters TRI-STATE. Consequently, the receiver output pins (ROUT0-ROUT9) and RCLK will enter TRI-STATE. The $\overline{\text{LOCK}}$ output remains active, reflecting the state of the PLL.

TABLE 1.

Random Lock Times for the DS92LV1224			
	40 MHz	66 MHz	Units
Maximum	26	18	μS
Mean	4.5	3.0	μS
Minimum	0.77	0.43	μS
Conditions:	PRBS 2 ¹⁵ , $V_{CC} = 3.3\text{V}$		

1) Difference in lock times are due to different starting points in the data pattern with multiple parts.

DS92CK16

3V BLVDS 1 to 6 Clock Buffer/Bus Transceiver

General Description

The DS92CK16 1 to 6 Clock Buffer/Bus Transceiver is a one to six CMOS differential clock distribution device utilizing Bus Low Voltage Differential Signaling (BLVDS) technology. This clock distribution device is designed for applications requiring ultra low power dissipation, low noise, and high data rates. The BLVDS side is a transceiver with a separate channel acting as a return/source clock.

The DS92CK16 accepts BLVDS (300 mV typical) differential input levels, and translates them to 3V CMOS output levels. An output enable pin \overline{OE} , when high, forces all CLK_{OUT} pins high.

The device can be used as a source synchronous driver. The selection of the source driving is controlled by the $CrdCLK_{IN}$ and \overline{DE} pins. This device can be the master clock, driving the inputs of other clock I/O pins in a multipoint environment. Easy master/slave clock selection is achieved along a backplane.

Features

- Master/Slave clock selection in a backplane application
- 125 MHz operation (typical)
- 100 ps duty cycle distortion (typical)
- 50 ps channel to channel skew (typical)
- 3.3V power supply design
- Glitch-free power on at $CLK_{I/O}$ pins
- Low Power design (20 mA @ 3.3V static)
- Accepts small swing (300 mV typical) differential signal levels
- Industrial temperature operating range (-40°C to +85°C)
- Available in 24-pin TSSOP Packaging

TSSOP Package Pin Description

Pin Name	Pin #	Type	Description
CLKI/O+	6	I/O	True (Positive) side of the differential clock input.
CLKI/O-	7	I/O	Complementary (Negative) side of the differential clock input.
\overline{OE}	2	I	\overline{OE} ; this pin is active Low. When High, this pin forces all CLK _{OUT} pins High. When Low, CLK _{OUT} pins logic state is determined by either the CrdCLK _{IN} or the VID at the CLKI/O pins with respect to the logic level at the \overline{DE} pin. This pin has a weak pullup device to V _{CC} . If \overline{OE} is floating, then all CLK _{OUT} pins will be High.
\overline{DE}	11	I	\overline{DE} ; this pin is active LOW. When Low, this pin enables the CardCLK _{IN} signal to the CLKI/O pins and CLK _{OUT} pins. When High, the Driver is TRI-STATE®, the CLKI/O pins are inputs and determine the state of the CLK _{OUT} pins. This pin has a weak pullup device to V _{CC} . If \overline{DE} is floating, then CLKI/O pins are TRI-STATE.
CLK _{OUT}	13, 15, 17, 19, 21, 23	O	6 Buffered clock (CMOS) outputs.
CrdCLK _{IN}	9	I	Input clock from Card (CMOS level or TTL level).
V _{CC}	16, 20, 24	Power	V _{CC} ; Analog V _{CCA} (Internally separate from V _{CC} , connect externally or use separate power supplies). No special power sequencing required. Either V _{CCA} or V _{CC} can be applied first, or simultaneously apply both power supplies.
GND	1, 12, 14, 18, 22	Ground	GND
V _{CCA}	4	Power	Analog V _{CCA} (Internally separate from V _{CC} , connect externally or use separate power supplies). No special power sequencing required. Either V _{CCA} or V _{CC} can be applied first, or simultaneously apply both power supplies.
GND _A	5, 8	Ground	Analog Ground (Internally separate from Ground must be connected externally).

Serial Digital Interface (SDI) Introduction

The Serial Digital Interface product family consists of two groups of products optimized for Digital Video and Telecommunications applications. The line driver, receiver/equalizer, and crosspoint switch devices may also be employed in general applications where there exists a need to transfer high-speed serial information great distances.

The **Serial Digital Video (SDV)** products provide line driving, receiving/equalization, retiming/clock-data separation, and switching functions. Also encoding/decoding functions are provided for Society of Motion Picture and Television Engineers (SMPTE) standards 125M Component video and 244M composite video transmission. The devices are most commonly for use in source, routing and destination equipment. Applications include: Video Cameras, Signal Generators, Digital Video Routers and Switchers, Distribution Amplifiers, Video Tape Recorders, Telecines and similar applications.

The **Synchronous Digital Hierarchy (SDH)** products provide line driving, receiving/equalization, retiming/clock-data separation, and switching functions. This family of parts is targeted at Telecommunications applications in SDH/Sonet, ATM equipment, and other high speed serial data transmission applications. These devices may be utilized in ADMs (Add Drop Mux), DCC (Digital Cross Connect) and repeater applications in the digital telecommunication infrastructure.

These products provide Interface Designers with new alternatives for use in "high speed - long distance" data transmission applications.

CLC005

ITU-T G.703 Cable Driver with Adjustable Outputs

General Description

National's Comlinear CLC005 is a monolithic, high-speed cable driver designed for the ITU-T G.703 serial digital data transmission standard. The CLC005 drives 75Ω transmission lines (Belden 8281 or equivalent) at data rates from DC to over 622 Mbps. Output signal waveforms produced by the CLC005 comply with G.703 specifications. Controlled output rise and fall times (650 ps typical) minimize transition-induced jitter. The output voltage swing, typically 2.0V, set by an accurate, low-drift internal bandgap reference, delivers a 1.0V swing to back-matched and terminated 75Ω cable. Output swing is adjustable from 0.7 V_{p-p} to 2.2 V_{p-p} using external resistors.

The CLC005's class AB output stage consumes less power than other designs, 185 mW with both outputs terminated, and requires no external bias resistors. The differential inputs accept a wide range of digital signals from 200 mV_{p-p} to G.703 levels within the specified common-mode limits. All this make the CLC005 an excellent general purpose high speed driver for digital applications.

The CLC005 is powered from a single +5V or -5.2V supply and comes in an 8-pin SOIC package.

Key Specifications

- 650 ps rise and fall times
- Data rates to 622 Mbps
- 200 mV differential input
- Low residual jitter (25 ps_{pp})

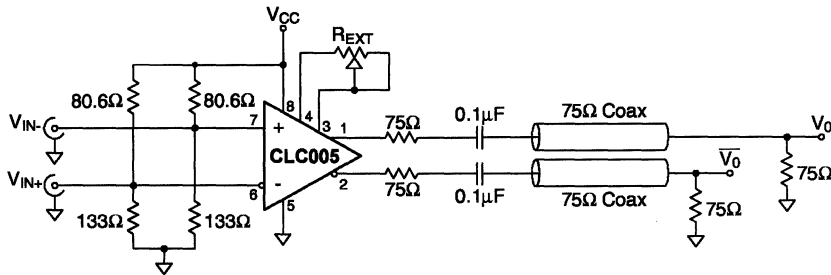

Features

- No external pull-down resistors
- Adjustable output amplitude
- Differential input and output
- Low power dissipation
- Single +5V or -5.2V supply

Applications

- ITU-T G.703, Sonet/SDH, and ATM compatible driver
- Digital routers and distribution amplifiers
- Coaxial cable driver for digital transmission line
- Twisted pair driver
- Buffer applications

Typical Application

DS100144-2

CLC006

Serial Digital Cable Driver with Adjustable Outputs

General Description

National's Comlinear CLC006 is a monolithic, high-speed cable driver designed for the SMPTE 259M serial digital video data transmission standard. The CLC006 drives 75Ω transmission lines (Belden 8281 or equivalent) at data rates up to 400 Mbps. Controlled output rise and fall times (650 ps typical) minimize transition-induced jitter. The output voltage swing, typically 1.65V, set by an accurate, low-drift internal bandgap reference, delivers an 800 mV swing to back-matched and terminated 75Ω cable. Output swing is adjustable from 0.7 V_{p-p} to 2 V_{p-p} using external resistors.

The CLC006's class AB output stage consumes less power than other designs, 185 mW with both outputs terminated, and requires no external bias resistors. The differential inputs accept a wide range of digital signals from 200 mV_{p-p} to ECL levels within the specified common-mode limits. All this make the CLC006 an excellent general purpose high speed driver for digital applications.

The CLC006 is powered from a single +5V or -5.2V supply and comes in an 8-pin SOIC package.

Key Specifications

- 650 ps rise and fall times
- Data rates to 400 Mbps
- 200 mV differential input
- Low residual jitter (25 ps_{pp})

Features

- No external pull-down resistors
- Adjustable output amplitude
- Differential input and output
- Low power dissipation
- Single +5V or -5.2V supply
- Replaces GS9008 in most applications

Applications

- Digital routers and distribution amplifiers
- Coaxial cable driver for digital transmission line
- Twisted pair driver
- Serial digital video interfaces for the commercial and broadcast industry
- SMPTE, Sonet/SDH, and ATM compatible driver
- Buffer applications

CLC007

Serial Digital Cable Driver with Dual Complementary Outputs

General Description

National's Comlinear CLC007 is a monolithic, high-speed cable driver designed for the SMPTE 259M serial digital video data transmission standard. The CLC007 drives 75Ω transmission lines (Belden 8281 or equivalent) at data rates up to 400 Mbps. Controlled output rise and fall times (650 ps typical) minimize transition-induced jitter. The output voltage swing, typically 1.65V, set by an accurate, low-drift internal bandgap reference, delivers an 800 mV swing to back-matched and terminated 75Ω cable.

The CLC007's class AB output stage consumes less power than other designs, 195 mW with all outputs terminated, and requires no external bias resistors. The differential inputs accept a wide range of digital signals from 200 mV_{p-p} to ECL levels within the specified common-mode limits. All this make the CLC007 an excellent general purpose high speed driver for digital applications.

The CLC007 is powered from a single +5V or -5.2V supply and comes in an 8-pin SOIC package.

Applications

- Digital routers and distribution amplifiers
- Coaxial cable driver for digital transmission line
- Twisted pair driver
- Digital distribution amplifiers
- SMPTE, Sonet/SDH, and ATM compatible driver
- Buffer applications

Key Specifications

- 650 ps rise and fall times
- Data rates to 400 Mbps
- 2 sets of complimentary outputs
- 200 mV differential input
- Low residual jitter (25 ps_{pp})

Features

- No external pull-down resistors
- Differential input and output
- Low power dissipation
- Single +5V or -5.2V supply
- Replaces GS9007 in most applications

Typical Application

CLC011

Serial Digital Video Decoder

General Description

National's Comlinear CLC011, Serial Digital Video Decoder, decodes and descrambles SMPTE 259M standard Serial Digital Video datastreams with serial clock into 10-bit parallel words and a corresponding word-rate clock. SMPTE 259M standard parallel data is encoded and scrambled using a 9-bit shift register and is also converted from NRZ to NRZI. The CLC011 restores the original parallel data by reversing the encoding process. The CLC011 also extracts timing information embedded in the SDV data. These reserved code words, known as Timing Reference Signals (TRS), indicate the start and end of each active video line. By decoding the TRS, the CLC011 correctly identifies the word boundaries of the encoded input data. Detection of the TRS reserved codes is indicated by low-true signals at the TRS and End of Active Video (EAV) outputs.

The CLC011's design using current-mode logic (CML) reduces noise injection into the power supply thereby easing board layout and interfacing. The CMOS compatible outputs,

which feature controlled rise and fall times, may be set for either 3.3V or 5V swings with the VDP and VCP inputs.

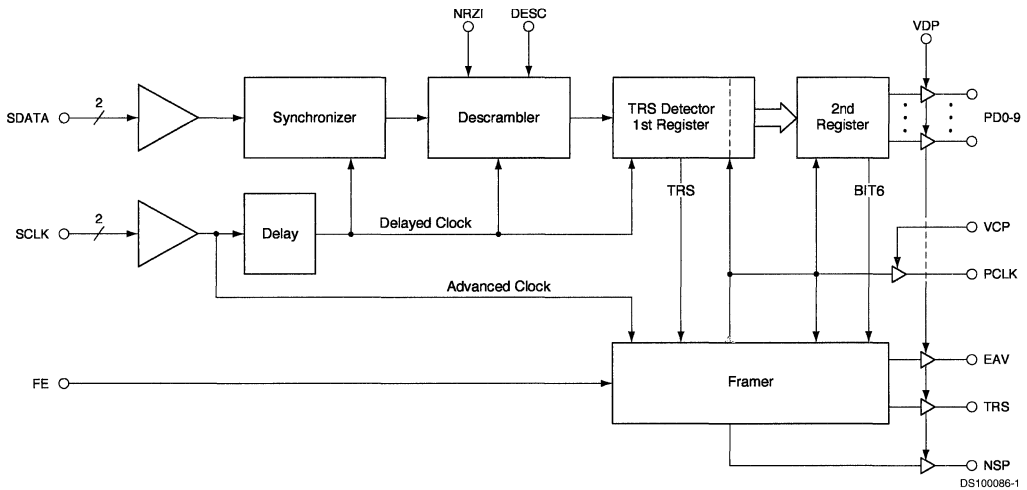

The CLC011 Serial Digital Video Decoder, CLC014 Adaptive Cable Equalizer and the CLC016 Data Retiming PLL combine to provide a complete Serial Digital Video receiver system.

The CLC011 is packaged in a 28-pin PLCC.

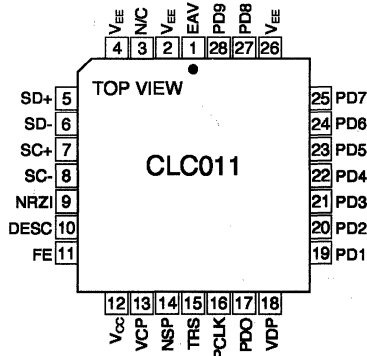

Features

- Data decoding and deserializing
- CLC011B operates to 360Mbps
- Low noise injection to power supplies
- Single +5V or -5.2V supply operation
- Output levels programmable for interface to 5V or 3.3V logic
- Low power
- Low cost

Pin Descriptions

Name	Pin No.	Description
EAV	1	End of active video flag. For component video, a logic low is output for one cycle of the parallel clock every time an EAV timing reference is detected. The pulse is aligned with the fourth word of the timing reference (the XYZ word). For composite video, this line is always asserted high.
V_{EE}	2, 4, 26	Negative supply pins.
NC	3	Unused pin.
SDI+, SDI-	5, 6	Differential serial data inputs.
SCI+, SCI-	7, 8	Differential serial clock inputs.
NRZI	9	A logic high at this pin enables NRZI-to-NRZ conversion.
DESC	10	A logic high at this pin enables descrambling.
FE	11	Frame enable. Enables resynchronization of the parallel word at the next TRS.
V_{CC}	12	Positive supply pin.
VCP	13	Parallel clock high level programming pin. The voltage at this supply pin defines the logic high level for the parallel clock output.
NSP	14	New sync position. Indicates that the most recent TRS is in a new position relative to the previous TRS. Remains high until the parallel rate clock is aligned properly with the TRS.
TRS	15	Timing reference flag. A logic low is output for the duration of the TRS.
PCLK	16	Parallel clock output. The rising edge of this clock is located at the center of the parallel data window.
PD0-9	17, 19-25, 27, 28	Parallel data outputs.
VDP	18	Parallel data high level programming pin. The voltage at this supply pin defines the logic high level for the data outputs.

CLC012

Adaptive Cable Equalizer for ITU-T G.703 Data Recovery

General Description

National's CLC012 adaptive cable equalizer is a low-cost monolithic solution for equalizing data transmitted over cable (or any media with similar dispersive loss characteristics). The CLC012 simplifies the task of high-speed data recovery with a one-chip solution and a minimal number of external components. The equalizer automatically adapts to equalize any cable length from zero meters to lengths that attenuate the signal by 40 dB at 200 MHz. This corresponds to 300 meters of Belden 8281 or 120 meters of Category 5 UTP (unshielded twisted pair).

The CLC012 provides superior jitter performance: 180ps_{pp} for 270 Mbps data that has passed through 200 meters of Belden 8281 cable. This exceptional performance provides wide error margin in digital data links. The equalizer operates on a single supply with a power consumption of only 290 mW. The small 14-pin SOIC package allows for high-density placement of components for multi-channel applications such as routers. The equalizer operates over a wide range of data rates from less than 50 Mbps to rates in excess of 650 Mbps.

The equalizer is flexible in allowing either single-ended or differential input drive. Its high common mode rejection provides excellent immunity to interference from noise sources. On-chip quantized feedback eliminates baseline wander.

Additional features include a Loss of Signal output and an output mute pin which, when tied together, mute the output when no signal is present. A buffered eye monitor output is provided, for viewing the equalized signal prior to the com-

parator. Differential AEC pins allow the user to set the internal adaptive loop time constant with one external capacitor.

Features

- Automatic equalization of coaxial and twisted pair cables
- Loss of Signal detect and output mute
- Output eye monitor
- Single supply operation: +5V or -5.2V
- Single-ended or differential input
- Low cost

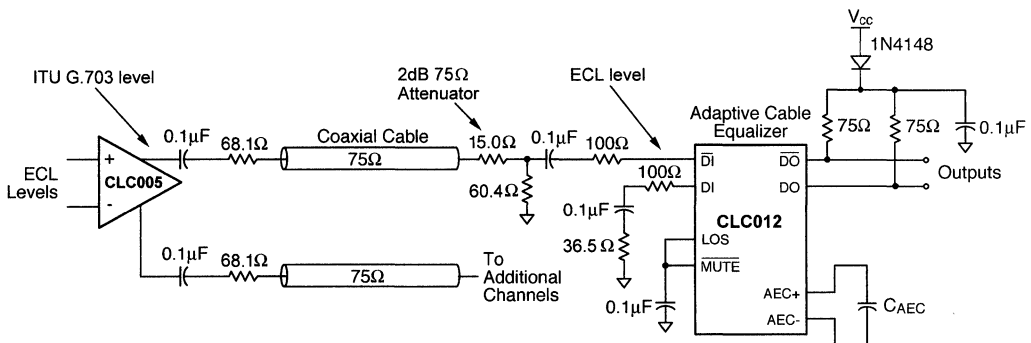

Applications

- ITU-T G.703 serial data recovery
- Serial digital data routing and distribution
- Serial digital data equalization and reception
- Data recovery equalization: ATM, CAD networks, medical, set top terminals, industrial video networks

Key Specifications

- Low jitter: 180ps_{pp} @ 270 Mbps through 200 meters of Belden 8281 coaxial cable
- High data rates: < 50 Mbps to > 650 Mbps
- Excellent input return loss: 19 dB @ 270 MHz
- Low supply current: 68 mA
- Equalizes up to 300+ meters of Belden 8281 or 120 meters of Cat 5 UTP cable

Typical Application

DS100145-4

CLC014

Adaptive Cable Equalizer for High-Speed Data Recovery

General Description

National's CLC014 adaptive cable equalizer is a low-cost monolithic solution for equalizing data transmitted over cable (or any media with similar dispersive loss characteristics). The CLC014 simplifies the task of high-speed data recovery with a one-chip solution and a minimal number of external components. The equalizer automatically adapts to equalize any cable length from zero meters to lengths that attenuate the signal by 40 dB at 200 MHz. This corresponds to 300 meters of Belden 8281 or 120 meters of Category 5 UTP (unshielded twisted pair).

The CLC014 provides superior jitter performance: 180ps_{pp} for 270 Mbps data that has passed through 200 meters of Belden 8281 cable. This exceptional performance provides wide error margin in digital data links. The equalizer operates on a single supply with a power consumption of only 290 mW. The small 14-pin SOIC package allows for high-density placement of components for multi-channel applications such as routers. The equalizer operates over a wide range of data rates from less than 50 Mbps to rates in excess of 650 Mbps.

The equalizer is flexible in allowing either single-ended or differential input drive. Its high common mode rejection provides excellent immunity to interference from noise sources. On-chip quantized feedback eliminates baseline wander.

Additional features include a carrier detect output and an output mute pin which, when tied together, mute the output when no signal is present. A buffered eye monitor output is provided, for viewing the equalized signal prior to the comparator. Differential AEC pins allow the user to set the inter-

nal adaptive loop time constant with one external capacitor. Also, the CLC014 is insensitive to the pathological patterns inherent in the video industry standards.

Features

- Automatic equalization of coaxial and twisted pair cables
- Carrier detection and output mute
- Output eye monitor
- Single supply operation: +5V or -5.2V
- Single-ended or differential input
- Low cost

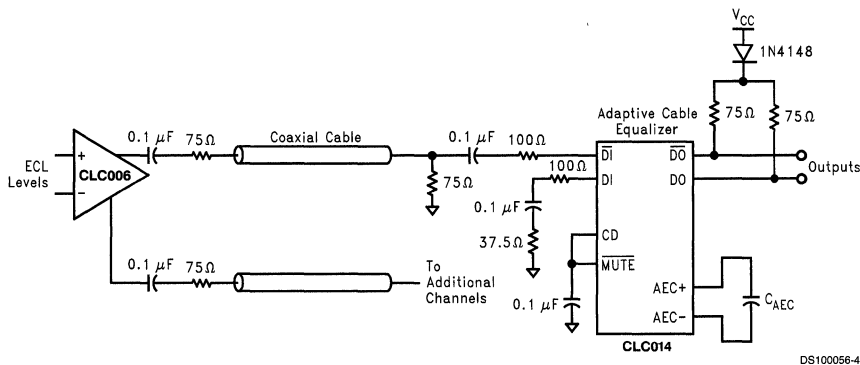

Applications

- SMPTE 259M serial digital interfaces: NTSC/PAL, 4:2:2 component and wide screen; also 540 Mbps (4:4:4:4)
- Serial digital video routing and distribution
- Serial digital data equalization and reception
- Data recovery equalization: ATM, CAD networks, medical, set top terminals, industrial video networks

Key Specifications

- Low jitter: 180ps_{pp} @ 270 Mbps through 200 meters of Belden 8281 coaxial cable
- High data rates: < 50 Mbps to > 650 Mbps
- Excellent input return loss: 19 dB @ 270 MHz
- Low supply current: 58 mA
- Equalizes up to 300+ meters of Belden 8281 or 120 meters of Cat 5 UTP cable

CLC016

Data Retiming PLL with Automatic Rate Selection

General Description

National's Comlinear CLC016 is a low-cost, monolithic, data retiming phase-locked loop (PLL) designed for high-speed serial clock and data recovery. The CLC016 simplifies high-speed data recovery in multi-rate systems by incorporating auto-rate select (ARS) circuitry on chip. This function allows the user to configure the CLC016 to recognize up to four different data rates and automatically adjust to provide accurate, low-jitter clock and data recovery. A single resistor is used to set each data rate anywhere between 40 Mbps and 400 Mbps. No potentiometers, crystals, or other external ICs are required to set the rate.

The CLC016 has output jitter of only 130 ps_{pp} at a 270 Mbps data rate and 0.25% fractional loop bandwidth. Low phase detector output offset and low VCO injection combine to ensure that the CLC016 does not generate bit errors or large phase transients in response to extreme fluctuations in data transition density. The result is improved performance when handling the pathological patterns inherent in the SMPTE 259M video industry standard.

The carrier detect and output mute functions may be used together to automatically latch the outputs when no data is present, preventing random transitions. The external loop filter allows the user to tailor the loop response to the specific application needs. The CLC016 will operate with either +5V or -5.2V power supplies. The serial data inputs and outputs, as well as the recovered clock outputs, allow single- or differential-ECL interfacing. The logic control inputs are TTL-compatible.

Applications

- SMPTE 259M serial digital interfaces: NTSC/PAL, 4:2:2 component, 360 Mbps wide screen
- Serial digital video routing and distribution
- Clock and data recovery for high-speed data transmission
- Re-synchronization of serial data for SONET/SDH, ATM, CAD networks, medical and industrial imaging

Features

- Retimed data output
- Recovered clock output
- Auto and manual rate select modes
- Four user-configurable data rates
- No potentiometers required
- External loop bandwidth control
- Frequency detector for lock acquisition
- Carrier detect output
- Output MUTE function
- Single supply operation: +5V or -5.2V
- Low cost

Key Specifications

- Low jitter: 130 ps_{pp} @ 270 Mbps, 0.25% fractional loop bandwidth (0.675 MHz)
- High data rates: 40 Mbps – 400 Mbps
- Low supply current: 100 mA, including output biasing
- Flexible fractional loop bandwidth: from 0.05% to 0.5%

CLC018

8 x 8 Digital Crosspoint Switch, 1.4 Gbps

General Description

National's Comlinear CLC018 is a fully differential 8x8 digital crosspoint switch capable of operating at data rates exceeding 1.4 Gbps per channel. Its non-blocking architecture utilizes eight independent 8:1 multiplexers to allow each output to be independently connected to any input and any input to be connected to any or all outputs. Additionally, each output can be individually disabled and set to a high-impedance state. This TRI-STATE® feature allows flexible expansion to larger switch array sizes.

Low channel-to-channel crosstalk allows the CLC018 to provide superior all-hostile jitter of 50 ps_{PP}. This excellent signal fidelity along with low power consumption of 850 mW make the CLC018 ideal for digital video switching plus a variety of data communication and telecommunication applications.

The fully differential signal path provides excellent noise immunity, and the I/Os support ECL and PECL logic levels. In addition, the inputs may be driven single-ended or differentially and accept a wide range of common mode levels including the positive supply. Single +5V or -5V supplies or dual +5V supplies are supported. Dual supply mode allows the control signals to be referenced to the positive supply (+5V) while the high-speed I/O remains ECL compatible.

The double row latch architecture utilized in the CLC018 allows switch reprogramming to occur in the background during operation. Activation of the new configuration occurs with a single "configure" pulse. Data integrity and jitter performance on unchanged outputs are maintained during reconfiguration. Two reset modes are provided. Broadcast reset results in all outputs being connected to input port D10. TRI-STATE Reset results in all outputs being disabled.

The CLC018 is fabricated on a high-performance BiCMOS process and is available in a 64-lead plastic quad flat pack (PQFP).

Features

- Fully differential signal path
- Non-Blocking
- Flexible expansion to larger array sizes with very low power
- Single +5/-5V or dual ±5V operation
- TRI-STATE® outputs
- Double row latch architecture
- 64-lead PQFP package

Applications

- Serial digital video routing (SMPTE 259M)
- Telecom/datacom switching
- ATM SONET

Key Specifications

- High speed: >1.4 Gbps
- Low jitter:
 - <50 ps_{PP} for rates <500 Mbps
 - <100 ps_{PP} for rates <1.4 Gbps
- Low power; 850 mW with all outputs active
- Fast output edge speeds: 250 ps

CLC020

SMPTE 259M Digital Video Serializer with Integrated Cable Driver

General Description

The CLC020 SMPTE 259M Digital Video Serializer with Integrated Cable Driver is a monolithic integrated circuit that encodes, serializes and transmits bit-parallel digital data conforming to SMPTE 125M and SMPTE 267M component video and SMPTE 244M composite video standards. The CLC020 can also serialize other 8 or 10-bit parallel data. The CLC020 operates at data rates from below 100 Mbps to over 400 Mbps. The serial data clock frequency is internally generated and requires no external frequency setting components, trimming or filtering*. Functions performed by the CLC020 include: parallel-to-serial data conversion, data encoding using the polynomial (X^9+X^4+1) , data format conversion from NRZ to NRZI, parallel data clock frequency multiplication and encoding with the serial data, and coaxial cable driving. Input for sync (TRS) detection disabling and a PLL lock detect output are provided. The CLC020 has an exclusive built-in self-test (BIST) and video test pattern generator (TPG) with 4 component video test patterns, reference black, PLL and EQ pathologicals and modified colour bars, in 4:3 and 16:9 raster and both NTSC and PAL formats*. Separate power pins for the output driver, VCO and the digital logic improve power supply rejection, output jitter and noise performance.

The CLC020 is the ideal complement to the CLC011B SMPTE 259M Serial Digital Video Decoder, CLC014 Active Cable Equalizer, CLC016 Data Retiming PLL (clock-data separator), CLC018 8X8 Digital Crosspoint Switch and CLC006 or CLC007 Cable Drivers, for a complete parallel-serial-parallel, high-speed data processing and transmission system.

The CLC020 is powered from a single 5V supply. Power dissipation is typically 235 mW including two 75Ω back-matched output loads. The device is packaged in a JEDEC 28-lead PLCC.

Features

- SMPTE 259M serial digital video standard compliant
- No external serial data rate setting or VCO filtering components required*
- Built-in self-test (BIST) and video test pattern generator (TPG) with 16 internal patterns*
- Supports all NTSC and PAL standard component and composite serial video data rates
- HCMOS/TTL-compatible data and control inputs and outputs
- 75Ω ECL-compatible, differential, serial cable-driver outputs
- Fast VCO lock time: <75 μs
- Single +5V TTL or -5V ECL supply operation
- Low power: 235 mW typical
- 28-lead PLCC package
- Commercial temperature range 0°C to +70°C

Applications

- SMPTE 259M parallel-to-serial digital video interfaces for:
 - Video cameras
 - VTRs
 - Telecines
 - Video test pattern generators and digital video test equipment
- Non-SMPTE video applications
- Other high data rate parallel/serial video and data systems

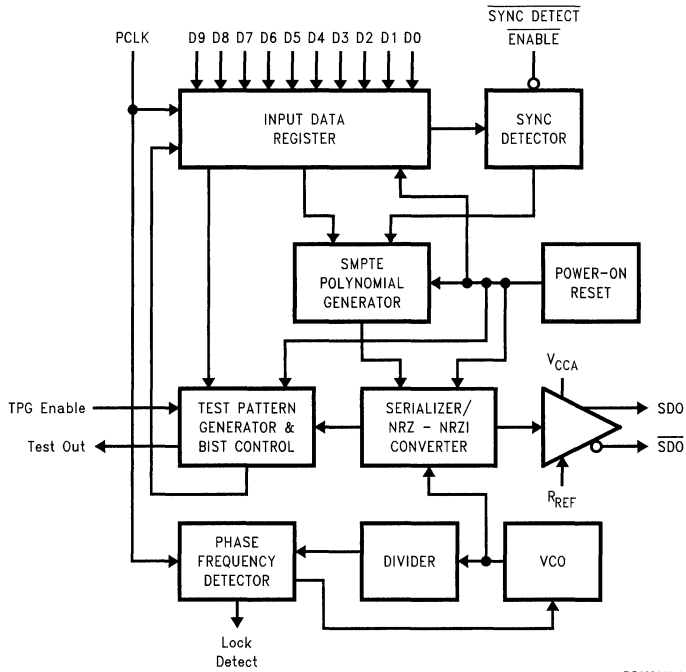

* Patents applications made or pending.

CLC021

SMPTE 259M Digital Video Serializer with EDH Generation/Insertion

General Description

The CLC021 SMPTE 259M Digital Video Serializer with EDH Generation and Insertion is a monolithic integrated circuit that encodes, serializes and transmits bit-parallel digital data conforming to SMPTE 125M and 267M component video and SMPTE 244M composite video standards. The CLC021 can also serialize other 8- or 10-bit parallel data. The CLC021 operates at data rates from below 100 Mbps to over 400 Mbps. The serial data clock frequency is internally generated and requires no external frequency setting, trimming or filtering components*.

Functions performed by the CLC021 include: parallel-to-serial data conversion, ITU-R BT.601-4 input data clipping, data encoding using the SMPTE polynomial (X^9+X^4+1), data format conversion from NRZ to NRZI, parallel data clock frequency multiplication and encoding with the serial data, and differential, serial output data driving. The CLC021 has circuitry for automatic EDH character and flag generation and insertion per SMPTE RP-165. The CLC021 has an exclusive built-in self-test (BIST) and video test pattern generator (TPG) with 16 component video test patterns: reference black, PLL and EQ pathologicals and modified colour bars in 4:3 and 16:9 raster formats for NTSC and PAL formats*.

The CLC021 has inputs for enabling sync detection, non-SMPTE mode operation, enabling the EDH function, NRZ/NRZI mode control and an external reset control. Outputs are provided for H, V and F bits, new TRS sync character position indication, ancillary data header detection, NTSC/PAL raster indication and PLL lock detect. Separate power pins for the output driver, VCO and the serializer improve power supply rejection, output jitter and noise performance.

The CLC021VGZ-5.0V is powered by a single +5V supply. The CLC021VGZ-3.3V is powered by a single +3.3V supply. Power dissipation is typically 235 mW including two 75 Ω back-matched output loads. The device is packaged in a JEDEC metric 44-lead PQFP.

Features

- SMPTE 259M serial digital video standard compliant
 - Supports all NTSC and PAL standard component and composite serial video data rates
 - No external serial data rate setting or VCO filtering components required*
 - Fast VCO lock time: <75 μ s at 270 Mbps
 - Built-in self-test (BIST) and video test pattern generator (TPG) with 16 internal patterns*
 - Automatic EDH character and flag generation and insertion per SMPTE RP 165
 - Non-SMPTE mode operation as parallel-to-serial converter
 - NRZ-to-NRZI conversion control
 - HCMOS/LSTTL-compatible data and control inputs and outputs for CLC021VGZ-5.0, LVCMOS for CLC021VGZ-3.3
 - 75 Ω ECL-compatible, differential, serial cable-driver outputs
 - Single power supply operation: 5V (CLC021VGZ-5.0) or 3.3V (CLC021VGZ-3.3) in TTL or ECL systems
 - Low power: typically 235 mW
 - JEDEC 44-lead metric PQFP package
 - Commercial temperature range 0°C to +70°C
- * Patents applications made or pending.

Applications

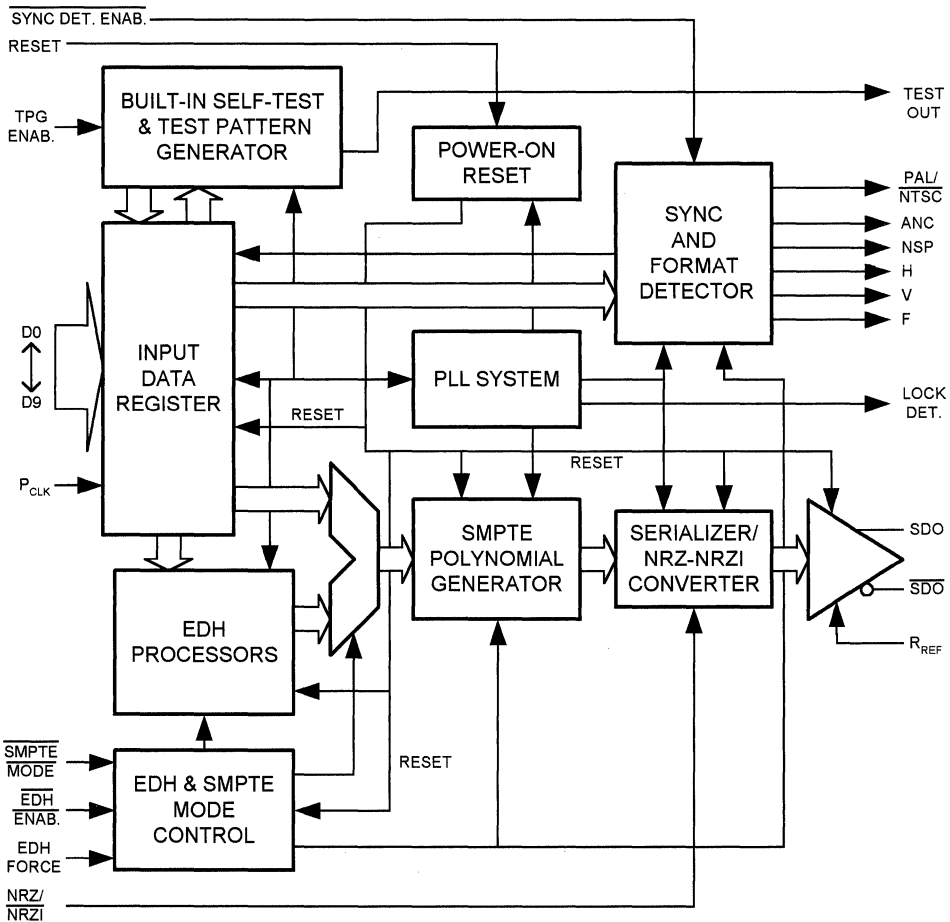

- SMPTE 259M parallel-to-serial digital video interfaces for:
 - Video cameras
 - VTRs
 - Telecines
 - Video test pattern generators and digital video test equipment
 - Video signal generators
- Non-SMPTE video applications
- Other high data rate parallel/serial video and data applications

SDI Nomenclature

Note: The SDI (SDV & SDH) family part numbering nomenclature adheres to the following methodology:

PART NUMBER: CLC###ABCCC where:

Example: CLC006AJE

CLC = National's Comlinear Product

= 3 digit unique part number

A = 1 digit denoting differentiation in:

die revision, or
specification revision, or
screening, or
other feature noted in the datasheet.

B = 1 digit denoting operating temperature range:

C = Commercial (0°C to 70°C)

J = Industrial (-40°C to 85°C)

CCC = 1 to 3 digits denoting package type:

E = SOIC (SOP) Package

Q = PLCC Package

VJQ = PQFP Package

MSA = SSOP Package

Special Part Number Suffix (ABCCC) of "PCASM" denotes assembled Evaluation PCB

CLC532

High-Speed 2:1 Analog Multiplexer

General Description

The CLC532 is a high-speed 2:1 multiplexer with active input and output stages. The CLC532 innovative design employs a closed loop design which dramatically improves accuracy. This monolithic device is constructed using an advanced high-performance bipolar process.

The CLC532 has been specifically designed to provide settling times of 17ns to 0.01%. Fast settling time, coupled with the adjustable bandwidth, and Channel-to-channel isolation is better than 80dB @10MHz. Low distortion (-80dBc) makes the CLC532 an ideal choice for infrared and CCD imaging systems (-80dBc) and spurious signal levels make the CLC532 a very suitable choice for both I/Q processors and receivers.

The CLC532 is offered in two industrial versions, CLC532AJP/AJE, specified from -40°C to +85°C and packaged in 14-pin plastic DIP/14-pin and SOIC packages.

Enhanced Solutions (Military/ Aerospace)

SMD Number: 5962-92035

*Space level versions also available.

*For more information, visit <http://www.national.com/mil>

Features

- 17ns 12-bit settling time to .01%
- Low noise – 32µVrms
- High isolation – 80dB @ 10MHz

- Low distortion – 80dBc @ 5MHz
- Adjustable bandwidth–190MHz(max)

Applications

- Infrared system multiplexing
- CCD sensor signals
- Radar I/Q switching
- High definition video HDTV
- Test and calibration

Typical Application

CLC533

High-Speed 4:1 Analog Multiplexer

General Description

The CLC533 is a high-speed 4:1 multiplexer employing active input and output stages. The CLC533 innovative closed loop design dramatically improves accuracy over conventional analog multiplexer circuits. This monolithic device is constructed using an advanced high-performance bipolar process.

The CLC533 has been specifically designed to provide a 17ns settling time to 0.01%. Fast settling time, coupled with adjustable bandwidth, and channel-to-channel isolation of 80dB @ 10MHz. Low distortion (-80dBc) makes the CLC533 an ideal choice for infrared and CCD imaging systems (-80dBc) and spurious signal levels make the CLC533 a very suitable choice for I/Q processors in radar receivers.

The CLC533 is offered in two industrial versions, CLC533AJPAJE specified from -40°C to +85°C and are packaged in 16-pin plastic DIP and SOIC packages.

Enhanced solutions (Military/Aerospace)

SMD Number: 5962-93203

*Space level versions also available.

*For more information, visit <http://www.national.com/>

Features

- 17ns 12-bit settling time to .01%
- Low noise - 42µVrms
- High Isolation 80dBc @ 10MHz
- 110MHz - 3dB bandwidth ($A_V = +2$)

- Low distortion - 80dBc @ 5MHz
- Adjustable bandwidth -180MHz (max)

Applications

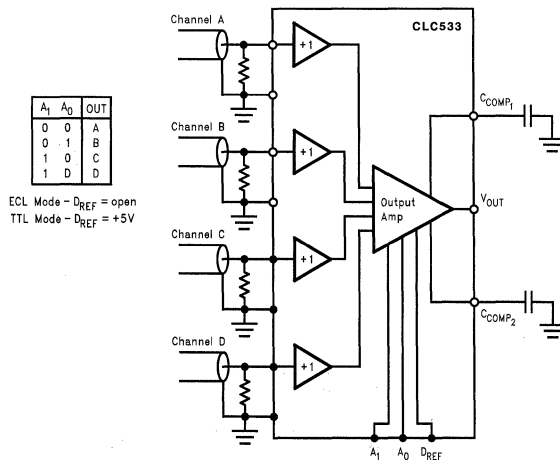

- Infrared system multiplexing
- CCD sensor signals
- Radar I/Q switching
- High definition video HDTV
- Test and calibration

LF198/LF298/LF398, LF198A/LF398A

Monolithic Sample-and-Hold Circuits

General Description

The LF198/LF298/LF398 are monolithic sample-and-hold circuits which utilize BI-FET technology to obtain ultra-high dc accuracy with fast acquisition of signal and low droop rate. Operating as a unity gain follower, dc gain accuracy is 0.002% typical and acquisition time is as low as 6 μ s to 0.01%. A bipolar input stage is used to achieve low offset voltage and wide bandwidth. Input offset adjust is accomplished with a single pin, and does not degrade input offset drift. The wide bandwidth allows the LF198 to be included inside the feedback loop of 1 MHz op amps without having stability problems. Input impedance of $10^{10}\Omega$ allows high source impedances to be used without degrading accuracy.

P-channel junction FET's are combined with bipolar devices in the output amplifier to give droop rates as low as 5 mV/min with a 1 μ F hold capacitor. The JFET's have much lower noise than MOS devices used in previous designs and do not exhibit high temperature instabilities. The overall design guarantees no feed-through from input to output in the hold mode, even for input signals equal to the supply voltages.

Features

- Operates from $\pm 5V$ to $\pm 18V$ supplies
- Less than 10 μ s acquisition time
- TTL, PMOS, CMOS compatible logic input
- 0.5 mV typical hold step at $C_h = 0.01 \mu F$
- Low input offset
- 0.002% gain accuracy
- Low output noise in hold mode
- Input characteristics do not change during hold mode
- High supply rejection ratio in sample or hold
- Wide bandwidth
- Space qualified, JM38510

Logic inputs on the LF198 are fully differential with low input current, allowing direct connection to TTL, PMOS, and CMOS. Differential threshold is 1.4V. The LF198 will operate from $\pm 5V$ to $\pm 18V$ supplies.

An "A" version is available with tightened electrical specifications.

LM231A/LM231/LM331A/LM331

Precision Voltage-to-Frequency Converters

General Description

The LM231/LM331 family of voltage-to-frequency converters are ideally suited for use in simple low-cost circuits for analog-to-digital conversion, precision frequency-to-voltage conversion, long-term integration, linear frequency modulation or demodulation, and many other functions. The output when used as a voltage-to-frequency converter is a pulse train at a frequency precisely proportional to the applied input voltage. Thus, it provides all the inherent advantages of the voltage-to-frequency conversion techniques, and is easy to apply in all standard voltage-to-frequency converter applications. Further, the LM231A/LM331A attain a new high level of accuracy versus temperature which could only be attained with expensive voltage-to-frequency modules. Additionally the LM231/331 are ideally suited for use in digital systems at low power supply voltages and can provide low-cost analog-to-digital conversion in microprocessor-controlled systems. And, the frequency from a battery powered voltage-to-frequency converter can be easily channeled through a simple photoisolator to provide isolation against high common mode levels.

The LM231/LM331 utilize a new temperature-compensated band-gap reference circuit, to provide excellent accuracy

over the full operating temperature range, at power supplies as low as 4.0V. The precision timer circuit has low bias currents without degrading the quick response necessary for 100 kHz voltage-to-frequency conversion. And the output are capable of driving 3 TTL loads, or a high voltage output up to 40V, yet is short-circuit-proof against V_{CC} .

Features

- Guaranteed linearity 0.01% max
- Improved performance in existing voltage-to-frequency conversion applications
- Split or single supply operation
- Operates on single 5V supply
- Pulse output compatible with all logic forms
- Excellent temperature stability, ± 50 ppm/ $^{\circ}$ C max
- Low power dissipation, 15 mW typical at 5V
- Wide dynamic range, 100 dB min at 10 kHz full scale frequency
- Wide range of full scale frequency, 1 Hz to 100 kHz
- Low cost

Typical Applications

DS00680-1

$$f_{OUT} = \frac{V_{IN}}{2.09 \text{ V}} \cdot \frac{R_S}{R_L} \cdot \frac{1}{R_I C_I}$$

*Use stable components with low temperature coefficients. See Typical Applications section.

**0.1 μ F or 1 μ F, See "Principles of Operation."

FIGURE 1. Simple Stand-Alone Voltage-to-Frequency Converter with $\pm 0.03\%$ Typical Linearity ($f = 10$ Hz to 11 kHz)

LM195/LM395 Ultra Reliable Power Transistors

General Description

The LM195/LM395 are fast, monolithic power integrated circuits with complete overload protection. These devices, which act as high gain power transistors, have included on the chip, current limiting, power limiting, and thermal overload protection making them virtually impossible to destroy from any type of overload. In the standard TO-3 transistor power package, the LM195 will deliver load currents in excess of 1.0A and can switch 40V in 500 ns.

The inclusion of thermal limiting, a feature not easily available in discrete designs, provides virtually absolute protection against overload. Excessive power dissipation or inadequate heat sinking causes the thermal limiting circuitry to turn off the device preventing excessive heating.

The LM195 offers a significant increase in reliability as well as simplifying power circuitry. In some applications, where protection is unusually difficult, such as switching regulators, lamp or solenoid drivers where normal power dissipation is low, the LM195 is especially advantageous.

The LM195 is easy to use and only a few precautions need be observed. Excessive collector to emitter voltage can destroy the LM195 as with any power transistor. When the device is used as an emitter follower with low source imped-

ance, it is necessary to insert a 5.0k resistor in series with the base lead to prevent possible emitter follower oscillations. Although the device is usually stable as an emitter follower, the resistor eliminates the possibility of trouble without degrading performance. Finally, since it has good high frequency response, supply bypassing is recommended.

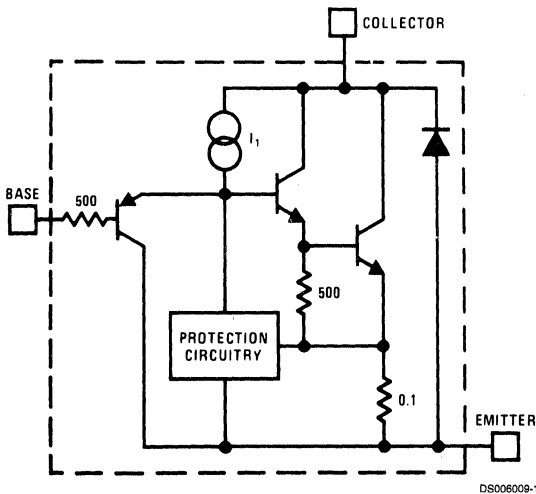

For low-power applications (under 100 mA), refer to the LP395 Ultra Reliable Power Transistor.

The LM195/LM395 are available in the standard TO-3, Kovar TO-5, and TO-220 packages. The LM195 is rated for operation from -55°C to $+150^{\circ}\text{C}$ and the LM395 from 0°C to $+125^{\circ}\text{C}$.

Features

- Internal thermal limiting
- Greater than 1.0A output current
- 3.0 μA typical base current
- 500 ns switching time
- 2.0V saturation
- Base can be driven up to 40V without damage
- Directly interfaces with CMOS or TTL
- 100% electrical burn-in

LM3046

Transistor Array

General Description

The LM3046 consists of five general purpose silicon NPN transistors on a common monolithic substrate. Two of the transistors are internally connected to form a differentially-connected pair. The transistors are well suited to a wide variety of applications in low power system in the DC through VHF range. They may be used as discrete transistors in conventional circuits however, in addition, they provide the very significant inherent integrated circuit advantages of close electrical and thermal matching. The LM3046 is supplied in a 14-lead molded small outline package.

Features

- Two matched pairs of transistors
 V_{BE} matched ± 5 mV
 Input offset current $2 \mu\text{A}$ max at $I_C = 1$ mA
- Five general purpose monolithic transistors
- Operation from DC to 120 MHz
- Wide operating current range
- Low noise figure: 3.2 dB typ at 1 kHz

Applications

- General use in all types of signal processing systems operating anywhere in the frequency range from DC to VHF
- Custom designed differential amplifiers
- Temperature compensated amplifiers

LM555 Timer

General Description

The LM555 is a highly stable device for generating accurate time delays or oscillation. Additional terminals are provided for triggering or resetting if desired. In the time delay mode of operation, the time is precisely controlled by one external resistor and capacitor. For astable operation as an oscillator, the free running frequency and duty cycle are accurately controlled with two external resistors and one capacitor. The circuit may be triggered and reset on falling waveforms, and the output circuit can source or sink up to 200mA or drive TTL circuits.

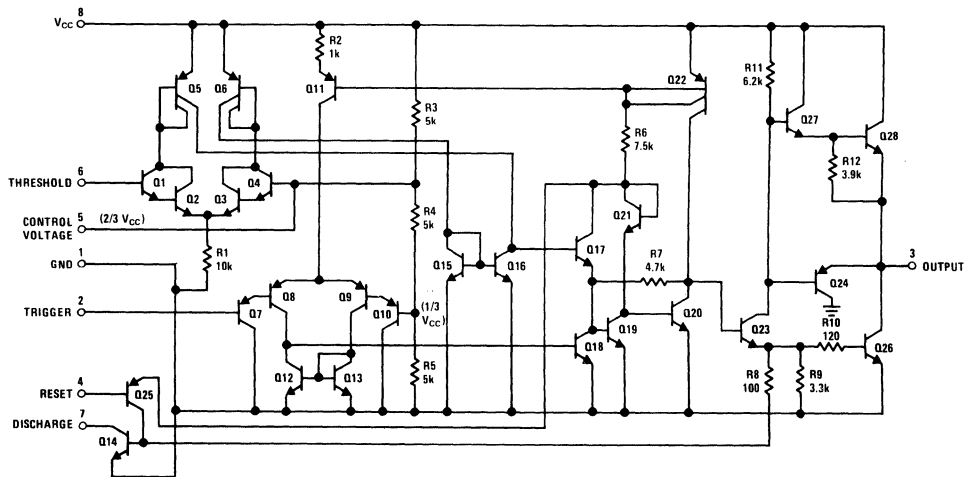

Features

- Direct replacement for SE555/NE555
- Timing from microseconds through hours
- Operates in both astable and monostable modes
- Adjustable duty cycle
- Output can source or sink 200 mA
- Output and supply TTL compatible
- Temperature stability better than 0.005% per °C
- Normally on and normally off output
- Available in 8-pin MSOP package

Applications

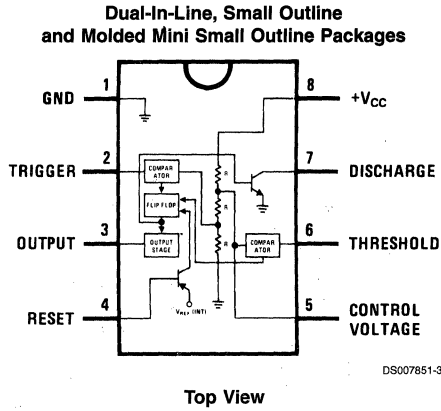

- Precision timing
- Pulse generation
- Sequential timing
- Time delay generation
- Pulse width modulation
- Pulse position modulation
- Linear ramp generator

LMC555

CMOS Timer

General Description

The LMC555 is a CMOS version of the industry standard 555 series general purpose timers. In addition to the standard package (SOIC, MSOP, and MDIP) the LMC555 is also available in a chip sized package (8 Bump micro SMD) using National's micro SMD package technology. The LMC555 offers the same capability of generating accurate time delays and frequencies as the LM555 but with much lower power dissipation and supply current spikes. When operated as a one-shot, the time delay is precisely controlled by a single external resistor and capacitor. In the stable mode the oscillation frequency and duty cycle are accurately set by two external resistors and one capacitor. The use of National Semiconductor's LMC MOS™ process extends both the frequency range and low supply capability.

Features

- Less than 1 mW typical power dissipation at 5V supply
- 3 MHz astable frequency capability
- 1.5V supply operating voltage guaranteed
- Output fully compatible with TTL and CMOS logic at 5V supply
- Tested to -10 mA, +50 mA output current levels
- Reduced supply current spikes during output transitions
- Extremely low reset, trigger, and threshold currents
- Excellent temperature stability
- Pin-for-pin compatible with 555 series of timers
- Available in 8 pin MSOP Package and 8-Bump micro SMD package

LMF100

High Performance Dual Switched Capacitor Filter

General Description

The LMF100 consists of two independent general purpose high performance switched capacitor filters. With an external clock and 2 to 4 resistors, various second-order and first-order filtering functions can be realized by each filter block. Each block has 3 outputs. One output can be configured to perform either an allpass, highpass, or notch function. The other two outputs perform bandpass and lowpass functions. The center frequency of each filter stage is tuned by using an external clock or a combination of a clock and resistor ratio. Up to a 4th-order biquadratic function can be realized with a single LMF100. Higher order filters are implemented by simply cascading additional packages, and all the classical filters (such as Butterworth, Bessel, Elliptic, and Chebyshev) can be realized.

The LMF100 is fabricated on National Semiconductor's high performance analog silicon gate CMOS process,

LMCMOS™. This allows for the production of a very low offset, high frequency filter building block. The LMF100 is pin-compatible with the industry standard MF10, but provides greatly improved performance.

Features

- Wide 4V to 15V power supply range
- Operation up to 100 kHz
- Low offset voltage: typically
(50:1 or 100:1 mode): Vos1 = ±5 mV
Vos2 = ±15 mV
Vos3 = ±15 mV
- Low crosstalk -60 dB
- Clock to center frequency ratio accuracy ±0.2% typical
- f_o × Q range up to 1.8 MHz
- Pin-compatible with MF10

LP395

Ultra Reliable Power Transistor

General Description

The LP395 is a fast monolithic transistor with complete overload protection. This very high gain transistor has included on the chip, current limiting, power limiting, and thermal overload protection, making it difficult to destroy from almost any type of overload. Available in an epoxy TO-92 transistor package this device is guaranteed to deliver 100 mA.

Thermal limiting at the chip level, a feature not available in discrete designs, provides comprehensive protection against overload. Excessive power dissipation or inadequate heat sinking causes the thermal limiting circuitry to turn off the device preventing excessive die temperature.

The LP395 offers a significant increase in reliability while simplifying protection circuitry. It is especially attractive as a small incandescent lamp or solenoid driver because of its low drive requirements and blowout-proof design.

The LP395 is easy to use and only a few precautions need be observed. Excessive collector to emitter voltage can destroy the LP395 as with any transistor. When the device is used as an emitter follower with a low source impedance, it is necessary to insert a 4.7 k Ω resistor in series with the base lead to prevent possible emitter follower oscillations. Also since it has good high frequency response, supply by-passing is recommended.

Areas where the LP395 differs from a standard NPN transistor are in saturation voltage, leakage (quiescent) current and

in base current. Since the internal protection circuitry requires voltage and current to function, the minimum voltage across the device in the on condition (saturated) is typically 1.6 Volts, while in the off condition the quiescent (leakage) current is typically 200 μ A. Base current in this device flows out of the base lead, rather than into the base as is the case with conventional NPN transistors. Also the base can be driven positive up to 36 Volts without damage, but will draw current if driven negative more than 0.6 Volts. Additionally, if the base lead is left open, the LP395 will turn on.

The LP395 is a low-power version of the 1-Amp LM195/LM295/LM395 Ultra Reliable Power Transistor.

The LP395 is rated for operation over a -40°C to $+125^{\circ}\text{C}$ range.

Features

- Internal thermal limiting
- Internal current and power limiting
- Guaranteed 100 mA output current
- 0.5 μ A typical base current
- Directly interfaces with TTL or CMOS
- +36 Volts on base causes no damage
- 2 μ s switching time

MF10

Universal Monolithic Dual Switched Capacitor Filter

General Description

The MF10 consists of 2 independent and extremely easy to use, general purpose CMOS active filter building blocks. Each block, together with an external clock and 3 to 4 resistors, can produce various 2nd order functions. Each building block has 3 output pins. One of the outputs can be configured to perform either an allpass, highpass or a notch function; the remaining 2 output pins perform lowpass and bandpass functions. The center frequency of the lowpass and bandpass 2nd order functions can be either directly dependent on the clock frequency, or they can depend on both clock frequency and external resistor ratios. The center frequency of the notch and allpass functions is directly dependent on the clock frequency, while the highpass center frequency depends on both resistor ratio and clock. Up to 4th order functions can be performed by cascading the two 2nd order building blocks of the MF10; higher than 4th order functions can be obtained by cascading MF10 packages.

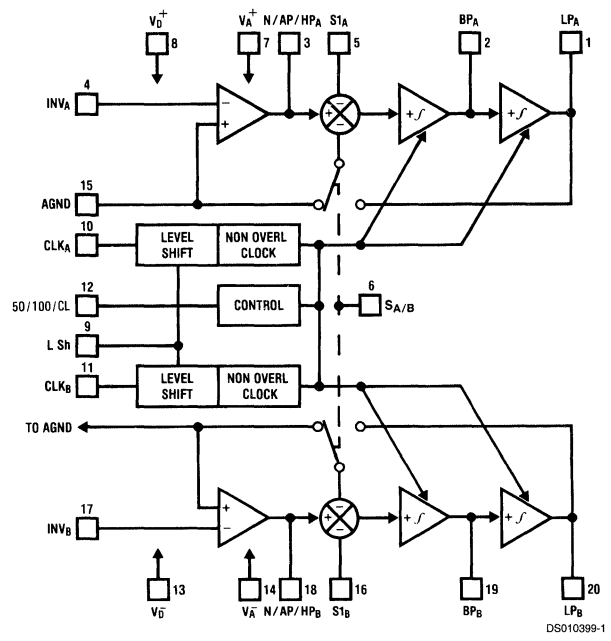

Any of the classical filter configurations (such as Butterworth, Bessel, Cauer and Chebyshev) can be formed.

For pin-compatible device with improved performance refer to LMF100 datasheet.

Features

- Easy to use
- Clock to center frequency ratio accuracy $\pm 0.6\%$
- Filter cutoff frequency stability directly dependent on external clock quality
- Low sensitivity to external component variation
- Separate highpass (or notch or allpass), bandpass, lowpass outputs
- $f_0 \times Q$ range up to 200 kHz
- Operation up to 30 kHz
- 20-pin 0.3" wide Dual-In-Line package
- 20-pin Surface Mount (SO) wide-body package

LM9810/20

10/12-Bit Image Sensor Processor Analog Front End

General Description

The LM9810 and LM9820 are high performance Analog Front Ends (AFEs) for image sensor processing systems. The LM9810/20 performs all the analog and mixed signal functions (correlated double sampling, color specific gain and offset correction, and analog to digital conversion) necessary to digitize the output of a wide variety of CIS and CCD sensors. The LM9810 has a 10-bit 6MHz ADC, and the LM9820 has a 12-bit 6MHz ADC. The LM9810 and LM9820 are pin-for-pin and functionally compatible.

Applications

- Color Flatbed Document Scanners
- Color Sheetfed Scanners
- Multifunction Imaging Products
- Digital Copiers
- General Purpose Linear CCD Imaging

Features

- 6 million pixels/s conversion rate
- Digitally programmed gain and offset for red, green and blue pixels
- Correlated Double Sampling for lowest noise
- TTL/CMOS input/output compatible

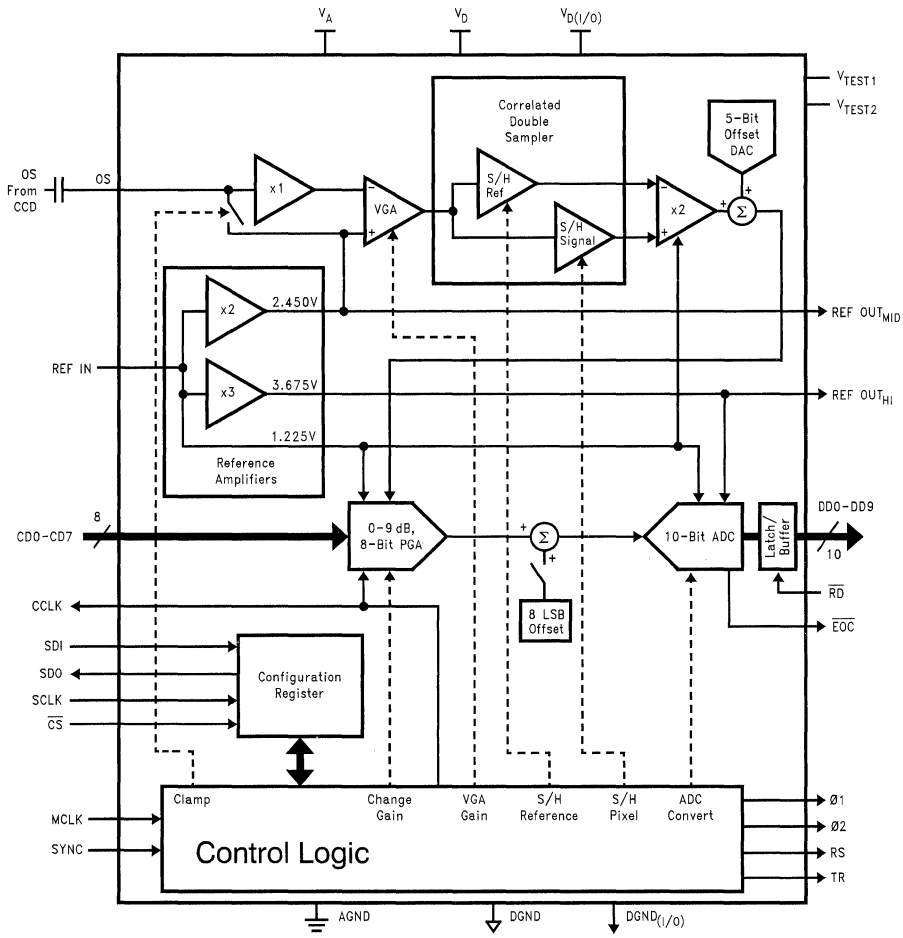

Key Specifications

LM9822

3 Channel 42-Bit Color Scanner Analog Front End

General Description

The LM9822 is a high performance Analog Front End (AFE) for image sensor processing systems. It performs all the analog and mixed signal functions (correlated double sampling, color specific gain and offset correction, and analog to digital conversion) necessary to digitize the output of a wide variety of CIS and CCD sensors. The LM9822 has a 14-bit 6 MHz ADC.

Features

- 6 million pixels/s conversion rate
- Digitally programmed gain and offset for red, green and blue color balancing
- Correlated Double Sampling for lowest noise from CCD sensors
- Compatible with CCD and CIS type image sensors
- Internal Voltage Reference Generation

- TTL/CMOS compatible input/output

Key Specifications

- Output Data Resolution 14 Bits
- Pixel Conversion Rate 6 MHz
- Analog Supply Voltage 5V±5%
- I/O Supply Voltage 3.3V±10% or 5V±5%
- Power Dissipation (typical) 375 mW

Applications

- Color Flatbed Document Scanners
- Color Sheetfed Scanners
- Multifunction Imaging Products
- Digital Copiers
- General Purpose Linear Array Imaging

LM9830

36-Bit Color Document Scanner

General Description

The LM9830 is a complete document scanner system on a single IC. The LM9830 provides all the functions (CCD control, illumination control, analog front end, pixel processing function image data buffer/SRAM controller, microstepping motor controller, and EPP parallel port interface) necessary to create a high performance color scanner. The LM9830 scans images in 36-bit color, and has output data formats for 36 bits, 30 bits, and 24 bits.

The only additional active components required are an external SRAM for data buffering and power transistors for the stepper motor. Parallel port pass-through requires two additional TTL/CMOS logic ICs.

Applications

- Color Document Scanners

Features

- Scans at up to 6M pixels/s (2M RGB pixels/sec.)
- Digital Pixel Processing provides 600, 400, 300, 200, 150, 100, 75, and 50 dpi horizontal resolutions from a 600 dpi sensor
- Provides 50-600 dpi vertical resolutions in 1 dpi increments
- Pixel rate correction for gain (shading) and offset errors
- Output formats include 12-bit linear, 10-bit linear with shading and offset, or 8-bit gamma corrected, all with 12-bit accuracy

- Multiple CCD clocking rates allows matching of CCD clock to scan resolution for maximum scan speed
- Stepper motor control tightly coupled with buffer management to maximize data transfer efficiency
- PWM stepper motor current control allows microstepping for the price of fullstepping
- Supports 64k, 128k, or 256k x 8 external SRAMs
- Parallel Port interface supports EPP, PS2 (bidirectional), or SPP (nibble) modes of operation
- Pixel depths of 1, 2, or 4 bits are packed into bytes for faster scans of line art and low pixel depth images
- Supports 1 and 3 channel CIS and CCD devices
- 3 (R, G, and B) programmable gamma correction tables
- Able to transmit an arbitrary range of pixels to speed up scanning of smaller items (business cards, etc.) by zooming in on a subset of CCD pixels
- Compatible with a wide range of color linear CCDs and Contact Image Sensors (CIS)
- Internal bandgap voltage reference
- 100 pin TQFP package

Key Specifications

LM98501

10-Bit, 27 MSPS Camera Signal Processor

General Description

The LM98501 is a CCD signal processor for electronic cameras. The processor provides a common interface to a number of different image sensors including CCD, CMOS, and CIS. Correlated double sampling reduces kTC noise from the image signal. A fast, temperature stable, 8-bit digitally programmable gain amplifier enables pixel-rate white-balancing. An auxiliary input is provided, allowing for the selection of an external signal, useful for electronic titling and video overlay. The 10-bit A/D converter preserves the image quality with excellent noise performance. The LM98501 also includes the supporting functions of digital black level clamp and power down, ideally suited for portable video applications. This low-power processor is a natural choice for the most demanding imaging systems.

Applications

- Digital still camera
- Digital video camcorder
- Video conferencing
- Security camera
- Plain paper copier
- Flatbed or handheld color scanner
- Video processing for x-ray or infrared
- Barcode scanner

Features

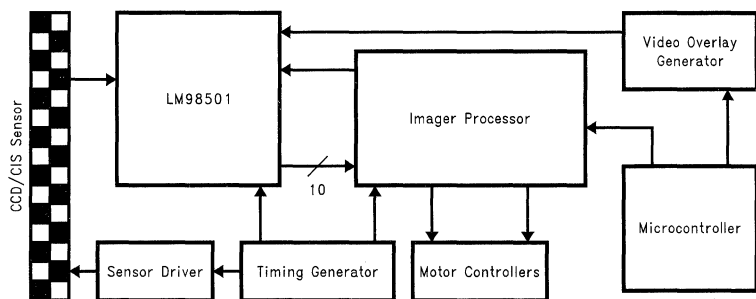

- +3V single power supply
- Low power CMOS design
- 4-wire serial interface
- 2.5V data output voltage swing
- No missing codes
- AUX input with input clamp and programmable gain
- Four color gain and offset registers
- Digital black level clamp
- Small 48-lead LQFP package

Key Specifications

■ Maximum Input Level	1.0V peak-peak
■ CDS Sampling Rate	27 MSPS
■ PGA Gain Steps	256 Steps
■ PGA Gain Range	0.0 dB-32.0 dB
■ ADC Resolution	10-Bit
■ ADC Sampling Rate	27 MSPS
■ *Signal-to-Noise Ratio	60 dB 0 dB Gain, 1.0V Input
■ Power Dissipation	AV+ = DV+ = DV- I/O = 3.0V 195 mW (typical)
■ Operating Temperature	0°C to 70°C

*20 log₁₀ (V_{IN}/RMS Output Noise)

LM3420-4.2, -8.2, -8.4, -12.6, -16.8 Lithium-Ion Battery Charge Controller

General Description

The LM3420 series of controllers are monolithic integrated circuits designed for charging and end-of-charge control for Lithium-Ion rechargeable batteries. The LM3420 is available in five fixed voltage versions for one through four cell charger applications (4.2V, 8.2V/8.4V, 12.6V and 16.8V respectively).

Included in a very small package is an (internally compensated) op amp, a bandgap reference, an NPN output transistor, and voltage setting resistors. The amplifier's inverting input is externally accessible for loop frequency compensation. The output is an open-emitter NPN transistor capable of driving up to 15 mA of output current into external circuitry.

A trimmed precision bandgap reference utilizes temperature drift curvature correction for excellent voltage stability over the operating temperature range. Available with an initial tolerance of 0.5% for the A grade version, and 1% for the standard version, the LM3420 allows for precision end-of-charge control for Lithium-Ion rechargeable batteries.

The LM3420 is available in a sub-miniature 5-lead SOT23-5 surface mount package thus allowing very compact designs.

Features

- Voltage options for charging 1, 2, 3 or 4 cells
- Tiny SOT23-5 package
- Precision (0.5%) end-of-charge control
- Drive capability for external power stage
- Low quiescent current, 85 μ A (typ.)

Applications

- Lithium-Ion battery charging
- Suitable for linear and switching regulator charger designs

LM3620

Lithium-Ion Battery Charger Controller

General Description

The LM3620 series of controllers are monolithic integrated circuits designed to control the charging and end-of-charge control for lithium-ion rechargeable batteries. The LM3620 is available in two versions for one or two cell charger applications. Each version provides the option of selecting the appropriate termination voltage for either coke or graphite anode lithium cells.

The LM3620 can operate from a wide range of DC input sources (4V to 30V). With no charger supply connected, the controller draws a quiescent current of only 10nA to minimize discharging of a connected battery pack.

The LM3620 consists of an operational transconductance amplifier, a bandgap voltage reference, a NPN driver transistor and precision voltage setting resistors. The output of the amplifier is made available to drive an external power transistor if higher drive currents are required.

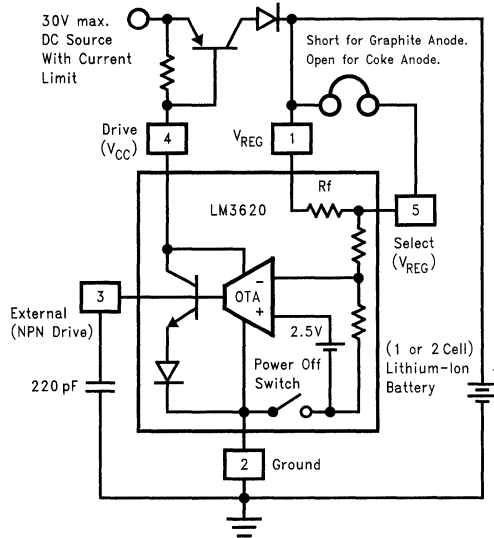

With a trimmed output voltage regulation of $\pm 1.2\%$ initial accuracy, the LM3620 provides a simple, precise solution for end-of-charge control of lithium-ion rechargeable cells.

The LM3620 is packaged in a miniature 5-lead SOT-23 surface mount package for very compact designs.

Features

- Voltage options for charging 1 or 2 cell stacks
- Adjustable output voltage for coke or graphite anodes
- Precision end-of-charge voltage control
- Wide input voltage range (4V to 30V)
- Low off state current (<10nA)
- Drive provided for external power stage
- Tiny SOT-23 package

Typical Application

The small physical size of the SOT23-5 Package does not allow for the full part number marking. Devices will be marked with the designation shown in the column Package Marking.

The devices are shipped in tape-and-reel format. The standard quantity is 250 units on a reel (indicated by the letters "M5" in the part number), or 3000 units on a reel (indicated by the letters "M5X" in the part number).

LM3621

Single Cell Lithium-Ion Battery Charger Controller

General Description

The LM3621 is a full function constant voltage, constant current (CVCC) lithium-ion (Li+) battery charger controller. It provides 1% regulation accuracy over the specified temperature range without requiring the use of external precision resistors. The IC controls five charge modes: conditioning, fast, top-off, monitor and maintenance. In addition, the LM3621 detects and flags defective batteries as well as over current and over voltage fault events. The architecture of the IC is based on high gain constant voltage and constant current control loops.

The LM3621 is designed to control a switching charger, a linear charger or an off-line ac adapter charger.

The LM3621 consists of a logic controller, precision bandgap reference, wide bandwidth transconductance error amplifiers, comparators, and an output buffer. The LM3621 is available in a 16-pin SOIC package and is specified over the range of 0°C to 70°C.

Key Specifications

- Tight output voltage accuracy ($\pm 0.5\%$ at $T_A = 25^\circ\text{C}$)
- Two selectable output voltages (4.2V or 4.1V)

- Less than 1 μA current drain from fully charged battery
- Preconditioning severely discharged cells (0V to 2.55V)

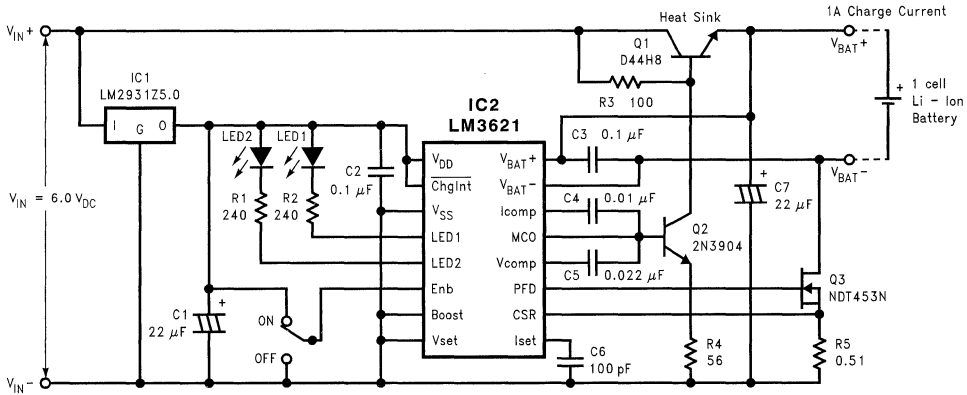

Features

- Automatic end-of-charge control
- Preset or user adjustable charge current regulation
- LED drivers for charging status and fault indication
- Battery self-discharge refresh (maintenance)
- Overvoltage/overcurrent fault detection and protection
- Defective battery pack detection
- Charge current boost control for cellular phone applications
- Charge interruption control input

Applications

- Complete, full function, protected battery charger for coke or graphite anode, single cell Lithium-Ion battery packs
- Linear voltage regulator controlled chargers
- High efficiency switching regulator controlled chargers
- Cost effective wall adapter chargers

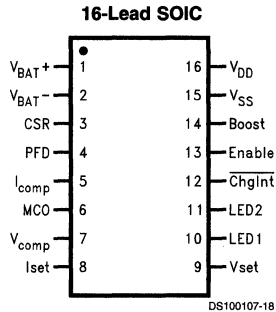

Typical Application

1A, 4.1V CVCC Linear Charger for Graphite Anode Lithium-Ion Battery

LM3622

Lithium-Ion Battery Charger Controller

General Description

The LM3622 is a charge controller for Lithium-Ion batteries. This monolithic integrated circuit accurately controls an external pass transistor for precision Lithium-Ion battery charging. The LM3622 provides a constant voltage or constant current (CVCC) configuration that changes, as necessary, to optimally charge lithium-ion battery cells. Voltage charging versions (4.1V, 4.2V, 8.2V, and 8.4V) are available for one or two cell battery packs and for coke or graphite anode battery chemistry.

The LM3622 accepts input voltages from 4.5V to 24V. Controller accuracy over temperature is $\pm 30\text{mV/cell}$ for A grade and $\pm 50\text{mV/cell}$ for the standard grade. No precision external resistors are required. Furthermore, the LM3622's proprietary output voltage sensing circuit drains less than 200nA from the battery when the input source is disconnected.

The LM3622 circuitry includes functions for regulating the charge voltage with a temperature compensated bandgap reference and regulating the current with an external sense resistor. The internal bandgap insures excellent controller performance over the operating temperature and input supply range.

The LM3622 can sink 15mA minimum at the EXT pin to drive the base of an external PNP pass transistor. It also has

low-voltage battery threshold circuitry that removes this drive when the cell voltage drops below a preset limit. The LV_{SEL} pin programs this threshold voltage to either 2.7V/cell or 2.15V/cell. The low-voltage detection, which is a user enabled feature, provides an output signal that can be used to enable a "wake up charge" source automatically to precondition a deeply discharged pack.

The LM3622 is available in a standard 8-lead SOIC surface mount package.

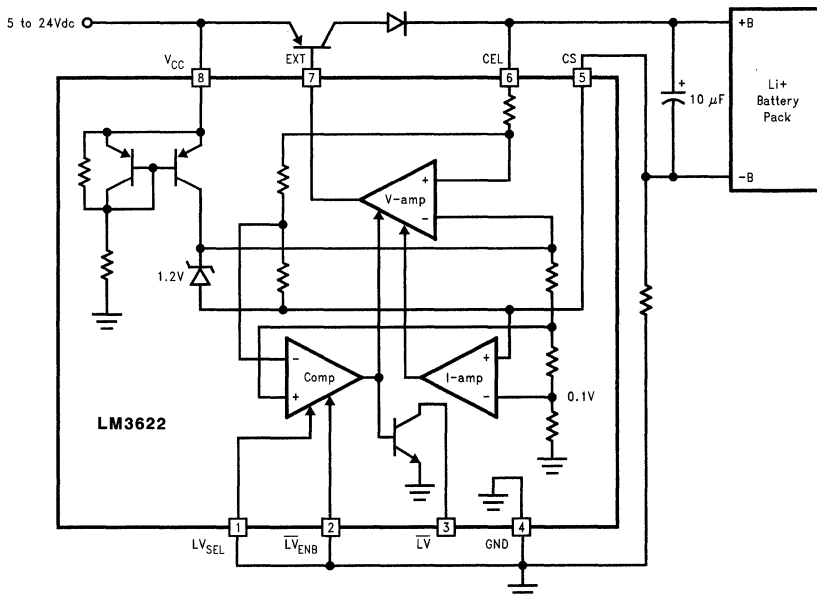

Features

- Versions for charging of 1 cell (4.1V or 4.2V) or 2 cells (8.2V or 8.4V)
- Versions for coke or graphite anode
- Precision ($\pm 30\text{mV/cell}$) end-of-charge control
- Wide input range: 4.5V-24V
- Low battery drain leakage: 200nA
- 15 mA available to drive low cost PNP

Applications

- Cellular phone cradle charger
- PDA/Notebook cradle charger
- Camcorder cradle charger

Typical Application

DS100974-1

Connection Diagram

Refer to the Ordering Information Table in this Datasheet for Specific Part Number
See NS Package M08A

Pin Description

Pin No.	Name	I/O	Description
1	LV _{SEL}	Input	Low-voltage detection threshold Select. The threshold is 2.15V/cell when this pin is pulled low to GND and 2.70V/cell when it is pulled up to V _{CC} . The battery voltage is sensed between CEL and CS pins.
2	LV _{ENB}	Input	Low-voltage detection Enable. The low-voltage detection is enabled when this pin is pulled Low to GND. Pulling this pin HIGH to V _{CC} disables the low-voltage detection.
3	LV	Output	Output of the low-voltage detection. This pin is a NPN open-collector output that goes to low impedance state when LV _{ENB} is pulled LOW and the battery voltage is below the threshold set by LV _{SEL} . LV stays in HIGH impedance state at any battery voltage when LV _{ENB} is pulled HIGH to V _{CC} . LV can be used for turning on a low current source to precondition a deeply depleted battery.
4	GND	Ground	IC common.
5	CS	Input	Input for battery charge current and battery negative-terminal voltage sensing. Battery charging current is sensed through an external resistor, R _{CS} , connected between the battery's negative terminal and GND. The maximum charge current is regulated to a value of 100mV/R _{CS} .
6	CEL	Input	Battery positive-terminal voltage sensing.
7	EXT	Output	Output of the controller for driving a PNP transistor or P-MOSFET. The controller modulates the current sinking into this pin to control the regulation of either the charge current or the battery voltage.
8	V _{CC}	Power Supply	IC power supply

LM3647

Universal Battery Charger for Li-Ion, Ni-MH and Ni-Cd Batteries

1.0 General Description

The LM3647 is a charge controller for Lithium-Ion (Li-Ion), Nickel-Metal Hydride (Ni-MH) and Nickel-Cadmium (Ni-Cd) batteries. The device can use either a pulsed-current charging or a constant-current charging technique. The device can also be configured to discharge before charging. Throughout the charging sequence the LM3647 monitors voltage and/or temperature and time in order to terminate charging.

Charge termination methods are:

- Negative delta voltage ($-\Delta V$)
- Optional: Delta temperature/delta time ($\Delta T/\Delta t$)
- Backup: Maximum temperature
- Backup: Maximum time
- Backup: Maximum voltage

If both voltage and temperature fail to trigger the termination requirements, then the maximum time (configured by external hardware) steps in which terminates the charging.

In Ni-Cd/Ni-MH mode, four different charging stages are used:

- Soft-start charge
- Fast charge
- Topping charge
- Maintenance charge

In Li-Ion mode, four different charging stages are used:

- Qualification
- Fast Charge Phase 1, Constant Current
- Fast Charge Phase 2, Constant Voltage
- Maintenance charge

The charge current of the LM3647 is configured via external resistors, which in turn controls the duty cycle of the PWM switching control output. For cost-sensitive applications, the LM3647 charge controller can be configured to use an external current source and no temperature sensor.

When using an external current source, the current is controlled by the LM3647 which turns the current source on and off. The LM3647 automatically detects the presence of a bat-

tery and starts the charging procedure when the battery is installed. Whenever an error occurs (e.g., short circuit, temperature too high, temperature too low, bad battery, charge time over, etc.) the LM3647 will stay in error mode until the battery is removed or it gets within the allowed charging temperature range. The LM3647 is available in a standard 20-lead SOIC surface mount package.

Features

- Auto-adaptive fast charge
- High-resolution, accurate voltage monitoring prevents Li-Ion undercharge or overcharge
- Fast charge, pre-charge and maintenance currents are provided. Different currents are selectable via external resistors.
- Fast-charge termination by Δ temperature/ Δ time, maximum voltage, maximum temperature, negative Δ voltage and maximum time
- Dynamically detects battery insertion, removal, short circuit and bad battery without additional hardware
- Supports charging of battery packs with 2–8 cells of Ni-Cd/Ni-MH or 1–4 cells of Li-Ion (1 cell of NiCd/NiMH can be supported by added external 2x voltage amplifier)
- Three optional LED indicators and Buzzer output indicate operational modes
- Ni-MH/Ni-Cd charge mode, Li-Ion charge mode or discharge mode can be selected manually
- Supports control of current feedback power supply and constant current power supply

Applications

- Battery charging systems for:
 - Portable consumer electronics
 - Audio/video equipment
 - Communications equipment
 - Point of sale devices
 - Power tools
 - Personal convenience products

LM12CL

80W Operational Amplifier

General Description

The LM12 is a power op amp capable of driving $\pm 25V$ at $\pm 10A$ while operating from $\pm 30V$ supplies. The monolithic IC can deliver 80W of sine wave power into a 4Ω load with 0.01% distortion. Power bandwidth is 60 kHz. Further, a peak dissipation capability of 800W allows it to handle reactive loads such as transducers, actuators or small motors without derating. Important features include:

- input protection
- controlled turn on
- thermal limiting
- overvoltage shutdown
- output-current limiting
- dynamic safe-area protection

The IC delivers $\pm 10A$ output current at any output voltage yet is completely protected against overloads, including shorts to the supplies. The dynamic safe-area protection is provided by instantaneous peak-temperature limiting within the power transistor array.

The turn-on characteristics are controlled by keeping the output open-circuited until the total supply voltage reaches 14V. The output is also opened as the case temperature ex-

ceeds $150^{\circ}C$ or as the supply voltage approaches the BV_{CEO} of the output transistors. The IC withstands overvoltages to 80V.

This monolithic op amp is compensated for unity-gain feedback, with a small-signal bandwidth of 700 kHz. Slew rate is $9V/\mu s$, even as a follower. Distortion and capacitive-load stability rival that of the best designs using complementary output transistors. Further, the IC withstands large differential input voltages and is well behaved should the common-mode range be exceeded.

The LM12 establishes that monolithic ICs can deliver considerable output power without resorting to complex switching schemes. Devices can be paralleled or bridged for even greater output capability. Applications include operational power supplies, high-voltage regulators, high-quality audio amplifiers, tape-head positioners, x-y plotters or other servo-control systems.

The LM12 is supplied in a four-lead, TO-3 package with V^- on the case. A gold-eutectic die-attach to a molybdenum interface is used to avoid thermal fatigue problems. The LM12 is specified for either military or commercial temperature range.

LM628/LM629

Precision Motion Controller

General Description

The LM628/LM629 are dedicated motion-control processors designed for use with a variety of DC and brushless DC servo motors, and other servomechanisms which provide a quadrature incremental position feedback signal. The parts perform the intensive, real-time computational tasks required for high performance digital motion control. The host control software interface is facilitated by a high-level command set. The LM628 has an 8-bit output which can drive either an 8-bit or a 12-bit DAC. The components required to build a servo system are reduced to the DC motor/actuator, an incremental encoder, a DAC, a power amplifier, and the LM628. An LM629-based system is similar, except that it provides an 8-bit PWM output for directly driving H-switches. The parts are fabricated in NMOS and packaged in a 28-pin dual in-line package or a 24-pin surface mount package (LM629 only). Both 6 MHz and 8 MHz maximum frequency versions are available with the suffixes -6 and -8, respectively, used to designate the versions. They incorporate an SDA core processor and cells designed by SDA.

Features

- 32-bit position, velocity, and acceleration registers
- Programmable digital PID filter with 16-bit coefficients
- Programmable derivative sampling interval
- 8- or 12-bit DAC output data (LM628)
- 8-bit sign-magnitude PWM output data (LM629)
- Internal trapezoidal velocity profile generator
- Velocity, target position, and filter parameters may be changed during motion
- Position and velocity modes of operation
- Real-time programmable host interrupts
- 8-bit parallel asynchronous host interface
- Quadrature incremental encoder interface with index pulse input
- Available in a 28-pin dual in-line package or a 24-pin surface mount package (LM629 only)

LMD18200

3A, 55V H-Bridge

General Description

The LMD18200 is a 3A H-Bridge designed for motion control applications. The device is built using a multi-technology process which combines bipolar and CMOS control circuitry with DMOS power devices on the same monolithic structure. Ideal for driving DC and stepper motors; the LMD18200 accommodates peak output currents up to 6A. An innovative circuit which facilitates low-loss sensing of the output current has been implemented.

Features

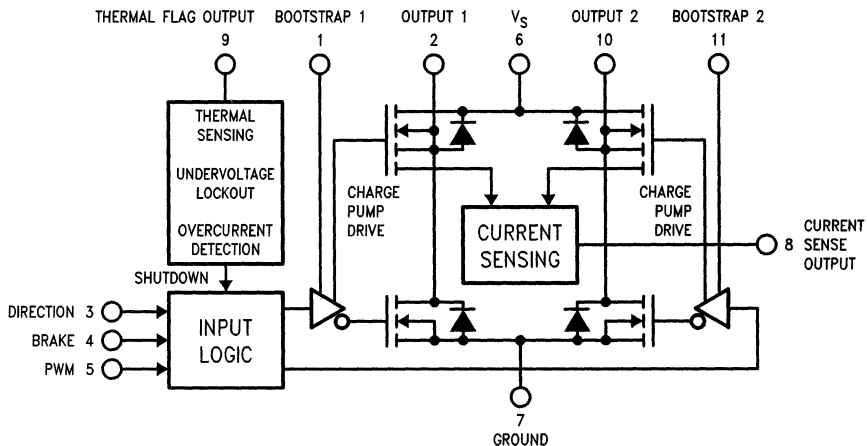

- Delivers up to 3A continuous output
- Operates at supply voltages up to 55V
- Low $R_{DS(ON)}$ typically 0.3Ω per switch
- TTL and CMOS compatible inputs

- No "shoot-through" current
- Thermal warning flag output at 145°C
- Thermal shutdown (outputs off) at 170°C
- Internal clamp diodes
- Shorted load protection
- Internal charge pump with external bootstrap capability

Applications

- DC and stepper motor drives
- Position and velocity servomechanisms
- Factory automation robots
- Numerically controlled machinery
- Computer printers and plotters

LMD18201

3A, 55V H-Bridge

General Description

The LMD18201 is a 3A H-Bridge designed for motion control applications. The device is built using a multi-technology process which combines bipolar and CMOS control circuitry with DMOS power devices on the same monolithic structure. The H-Bridge configuration is ideal for driving DC and stepper motors. The LMD18201 accommodates peak output currents up to 6A. Current sensing can be achieved via a small sense resistor connected in series with the power ground lead. For current sensing without disturbing the path of current to the load, the LMD18200 is recommended.

Features

- Delivers up to 3A continuous output
- Operates at supply voltages up to 55V
- Low $R_{DS(ON)}$ typically 0.33 Ω per switch

- TTL and CMOS compatible inputs
- No "shoot-through" current
- Thermal warning flag output at 145°C
- Thermal shutdown (outputs off) at 170°C
- Internal clamp diodes
- Shorted load protection
- Internal charge pump with external bootstrap capability

Applications

- DC and stepper motor drives
- Position and velocity servomechanisms
- Factory automation robots
- Numerically controlled machinery
- Computer printers and plotters

LMD18245

3A, 55V DMOS Full-Bridge Motor Driver

General Description

The LMD18245 full-bridge power amplifier incorporates all the circuit blocks required to drive and control current in a brushed type DC motor or one phase of a bipolar stepper motor. The multi-technology process used to build the device combines bipolar and CMOS control and protection circuitry with DMOS power switches on the same monolithic structure. The LMD18245 controls the motor current via a fixed off-time chopper technique.

An all DMOS H-bridge power stage delivers continuous output currents up to 3A (6A peak) at supply voltages up to 55V. The DMOS power switches feature low $R_{DS(ON)}$ for high efficiency, and a diode intrinsic to the DMOS body structure eliminates the discrete diodes typically required to clamp bipolar power stages.

An innovative current sensing method eliminates the power loss associated with a sense resistor in series with the motor. A four-bit digital-to-analog converter (DAC) provides a digital path for controlling the motor current, and, by extension, simplifies implementation of full, half and microstep stepper motor drives. For higher resolution applications, an external DAC can be used.

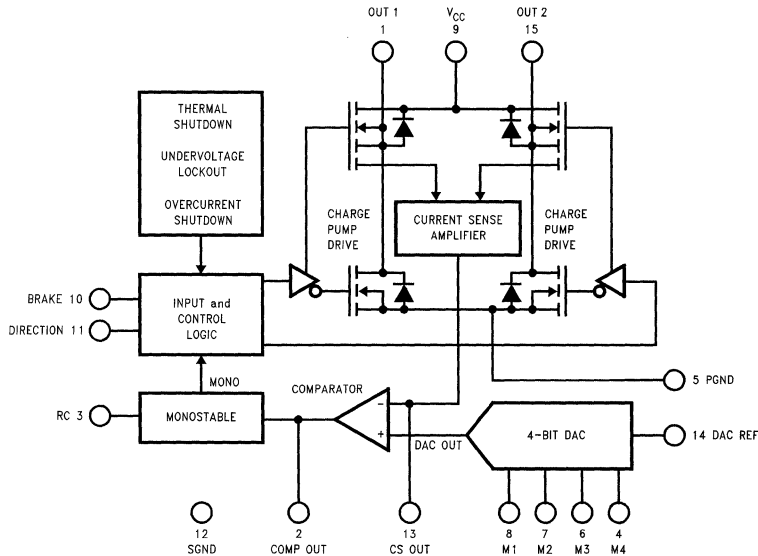

Features

- DMOS power stage rated at 55V and 3A continuous
- Low $R_{DS(ON)}$ of typically 0.3Ω per power switch
- Internal clamp diodes
- Low-loss current sensing method
- Digital or analog control of motor current
- TTL and CMOS compatible inputs
- Thermal shutdown (outputs off) at $T_J = 155^\circ\text{C}$
- Overcurrent protection
- No shoot-through currents
- 15-lead TO-220 molded power package

Applications

- Full, half and microstep stepper motor drives
- Stepper motor and brushed DC motor servo drives
- Automated factory, medical and office equipment

LM3526	Dual	140	115	0.2	2.7	5.5	1

LM3525

Single Port USB Power Switch and Over-Current Protection

General Description

The LM3525 provides Universal Serial Bus standard power switch and over-current protection for all host port applications. The single port device is ideal for Notebook PC and Handheld PC applications that supply power to one port.

A 1 ms delay on fault flag output prevents erroneous over-current reporting caused by inrush currents during the hot-plug events.

The LM3525 accepts an input voltage between 2.7V and 5.5V allowing use as a device-based inrush current limiter for 3.3V USB peripherals, as well as Root and Self-Powered Hubs at 5.5V. The Enable input accepts both 3.3V and 5.0V logic thresholds.

The small size, low R_{ON} , and 1 ms fault flag delay make the LM3525 a good choice for root hubs as well as ganged power control in space-critical self-powered hubs.

Features

- 1 ms Fault Flag Delay During Hot-Plug Events
- Smooth Turn-On Eliminates Inrush Induced Voltage Drop
- UL Recognized Component: REF # 205202
- 1A Nominal Short Circuit Output Current Protects Notebook PC Power Supplies
- Thermal Shutdown Protects Device in Direct Short Condition
- 500mA Minimum Continuous Load Current
- Small SO-8 Package Minimizes Board Space
- 2.7V to 5.5V Input Voltage Range
- Switch Resistance $\leq 120\text{ m}\Omega$ Max. at $V_{IN} = 5\text{V}$
- $1\mu\text{A}$ Max Standby Current
- $100\mu\text{A}$ Max Operating Current
- Undervoltage Lockout (UVLO)

Applications

- Universal Serial Bus (USB) Root Hubs including Desktop and Notebook PC
- USB Monitor Hubs
- Other Self-Powered USB Hub Devices
- High Power USB Devices Requiring Inrush Limiting
- General Purpose High Side Switch Applications

LM3525MX-L	Active Low Enable, 2500 units per reel	

LM3526

Dual Port USB Power Switch and Over-Current Protection

General Description

The LM3526 provides Universal Serial Bus standard power switch and over-current protection for all host port applications. The dual port device is ideal for Notebook and desktop PC's that supply power to more than one port.

A 1 ms delay on the fault flag output prevents erroneous overcurrent reporting caused by in-rush currents during hot-plug events.

The dual stage thermal protection circuit in the LM3526 provides individual protection to each switch and the entire device. In a short-circuit/over-current event, the switch dissipating excessive heat is turned off, allowing the second switch to continue to function uninterrupted.

The LM3526 accepts an input voltage between 2.7V and 5.5V allowing use as a device-based in-rush current limiter for 3.3V USB peripherals, as well as Root and Self-Powered Hubs at 5.5V. The Enable inputs accept both 3.3V and 5.0V logic thresholds.

The small size, low R_{ON} , and 1 ms fault flag delay make the LM3526 a good choice for root hubs as well as per-port power control in embedded and stand-alone hubs.

Features

- 1 ms fault flag delay filters Hot-Plug events
- Smooth turn-on eliminates in-rush induced voltage drop
- UL recognized component: REF# 205202
- 1A nominal short circuit output current protects PC power supplies
- Thermal shutdown protects device in direct short condition
- 500mA minimum continuous load current
- Small SO-8 package minimizes board space
- 2.7V to 5.5V input voltage range
- 140 mΩ Max. switch resistance
- 1 μA Max. standby current
- 200 μA Max. operating current
- Under-voltage lockout (UVLO)

Applications

- Universal Serial Bus (USB) Root Hubs including Desktop and Notebook PC
- USB Monitor Hubs
- Other Self-Powered USB Hub Devices
- High Power USB Devices Requiring In-rush Limiting
- General Purpose High Side Switch Applications

LM20

2.4V, 10µA, SC70, micro SMD Temperature Sensor

General Description

The LM20 is a precision analog output CMOS integrated-circuit temperature sensor that operates over a -55°C to $+130^{\circ}\text{C}$ temperature range. The power supply operating range is $+2.4\text{ V}$ to $+5.5\text{ V}$. The transfer function of LM20 is predominately linear, yet has a slight predictable parabolic curvature. The accuracy of the LM20 when specified to a parabolic transfer function is $\pm 1.5^{\circ}\text{C}$ at an ambient temperature of $+30^{\circ}\text{C}$. The temperature error increases linearly and reaches a maximum of $\pm 2.5^{\circ}\text{C}$ at the temperature range extremes. The temperature range is affected by the power supply voltage. At a power supply voltage of 2.7 V to 5.5 V the temperature range extremes are $+130^{\circ}\text{C}$ and -55°C . Decreasing the power supply voltage to 2.4 V changes the negative extreme to -30°C , while the positive remains at $+130^{\circ}\text{C}$.

The LM20's quiescent current is less than $10\text{ }\mu\text{A}$. Therefore, self-heating is less than 0.02°C in still air. Shutdown capability for the LM20 is intrinsic because its inherent low power consumption allows it to be powered directly from the output of many logic gates or does not necessitate shutdown at all.

Applications

- Cellular Phones
- Computers
- Power Supply Modules
- Battery Management

- FAX Machines
- Printers
- HVAC
- Disk Drives
- Appliances

Features

- Rated for full -55°C to $+130^{\circ}\text{C}$ range
- Available in an SC70 and a micro SMD package
- Predictable curvature error
- Suitable for remote applications

Key Specifications

■ Accuracy at $+30^{\circ}\text{C}$	± 1.5 to $\pm 4^{\circ}\text{C}$ (max)
■ Accuracy at $+130^{\circ}\text{C}$ & -55°C	± 2.5 to $\pm 5^{\circ}\text{C}$ (max)
■ Power Supply Voltage Range	$+2.4\text{ V}$ to $+5.5\text{ V}$
■ Current Drain	$10\text{ }\mu\text{A}$ (max)
■ Nonlinearity	$\pm 0.4\%$ (typ)
■ Output Impedance	$160\text{ }\Omega$ (max)
■ Load Regulation	-2.5 mV (max)
	$0\text{ }\mu\text{A} < I_L < +16\text{ }\mu\text{A}$

Typical Application

$$V_O = (-3.88 \times 10^{-6} \times T^2) + (-1.15 \times 10^{-2} \times T) + 1.8639$$

or

$$T = -1481.96 + \sqrt{2.1962 \times 10^6 + \frac{(1.8639 - V_O)}{3.88 \times 10^{-6}}}$$

where:

T is temperature, and V_O is the measured output voltage of the LM20.

**Full-Range Celsius (Centigrade) Temperature Sensor (-55°C to $+130^{\circ}\text{C}$)
Operating from a Single Li-Ion Battery Cell**

Typical Application (Continued)

Temperature (T)	Typical V_O
+130°C	+303 mV
+100°C	+675 mV
+80°C	+919 mV
+30°C	+1515 mV

Temperature (T)	Typical V_O
+25°C	+1574 mV
0°C	+1863.9 mV
-30°C	+2205 mV
-40°C	+2318 mV
-55°C	+2485 mV

Connection Diagrams

Note:

- GND (pin 2) may be grounded or left floating. For optimum thermal conductivity to the pc board ground plane pin 2 should be grounded.
- NC (pin 1) should be left floating or grounded. Other signal traces should not be connected to this pin.

LM34 Precision Fahrenheit Temperature Sensors

General Description

The LM34 series are precision integrated-circuit temperature sensors, whose output voltage is linearly proportional to the Fahrenheit temperature. The LM34 thus has an advantage over linear temperature sensors calibrated in degrees Kelvin, as the user is not required to subtract a large constant voltage from its output to obtain convenient Fahrenheit scaling. The LM34 does not require any external calibration or trimming to provide typical accuracies of $\pm 1/2^\circ\text{F}$ at room temperature and $\pm 1 1/2^\circ\text{F}$ over a full -50 to $+300^\circ\text{F}$ temperature range. Low cost is assured by trimming and calibration at the wafer level. The LM34's low output impedance, linear output, and precise inherent calibration make interfacing to readout or control circuitry especially easy. It can be used with single power supplies or with plus and minus supplies. As it draws only $75\ \mu\text{A}$ from its supply, it has very low self-heating, less than 0.2°F in still air. The LM34 is rated to operate over a -50° to $+300^\circ\text{F}$ temperature range, while the LM34C is rated for a -40° to $+230^\circ\text{F}$ range (0°F with improved accuracy). The LM34 series is available packaged in

hermetic TO-46 transistor packages, while the LM34C, LM34CA and LM34D are also available in the plastic TO-92 transistor package. The LM34D is also available in an 8-lead surface mount small outline package. The LM34 is a complement to the LM35 (Centigrade) temperature sensor.

Features

- Calibrated directly in degrees Fahrenheit
- Linear $+10.0\ \text{mV}/^\circ\text{F}$ scale factor
- 1.0°F accuracy guaranteed (at $+77^\circ\text{F}$)
- Rated for full -50° to $+300^\circ\text{F}$ range
- Suitable for remote applications
- Low cost due to wafer-level trimming
- Operates from 5 to 30 volts
- Less than $90\ \mu\text{A}$ current drain
- Low self-heating, 0.18°F in still air
- Nonlinearity only $\pm 0.5^\circ\text{F}$ typical
- Low-impedance output, $0.4\ \Omega$ for 1 mA load

LM35

Precision Centigrade Temperature Sensors

General Description

The LM35 series are precision integrated-circuit temperature sensors, whose output voltage is linearly proportional to the Celsius (Centigrade) temperature. The LM35 thus has an advantage over linear temperature sensors calibrated in ° Kelvin, as the user is not required to subtract a large constant voltage from its output to obtain convenient Centigrade scaling. The LM35 does not require any external calibration or trimming to provide typical accuracies of $\pm 1/4^\circ\text{C}$ at room temperature and $\pm 3/4^\circ\text{C}$ over a full -55 to $+150^\circ\text{C}$ temperature range. Low cost is assured by trimming and calibration at the wafer level. The LM35's low output impedance, linear output, and precise inherent calibration make interfacing to readout or control circuitry especially easy. It can be used with single power supplies, or with plus and minus supplies. As it draws only $60\ \mu\text{A}$ from its supply, it has very low self-heating, less than 0.1°C in still air. The LM35 is rated to operate over a -55° to $+150^\circ\text{C}$ temperature range, while the LM35C is rated for a -40° to $+110^\circ\text{C}$ range (-10° with improved accuracy). The LM35 series is available packaged in

hermetic TO-46 transistor packages, while the LM35C, LM35CA, and LM35D are also available in the plastic TO-92 transistor package. The LM35D is also available in an 8-lead surface mount small outline package and a plastic TO-220 package.

Features

- Calibrated directly in ° Celsius (Centigrade)
- Linear + 10.0 mV/°C scale factor
- 0.5°C accuracy guaranteeable (at $+25^\circ\text{C}$)
- Rated for full -55° to $+150^\circ\text{C}$ range
- Suitable for remote applications
- Low cost due to wafer-level trimming
- Operates from 4 to 30 volts
- Less than $60\ \mu\text{A}$ current drain
- Low self-heating, 0.08°C in still air
- Nonlinearity only $\pm 1/4^\circ\text{C}$ typical
- Low impedance output, $0.1\ \Omega$ for 1 mA load

Typical Applications

LM45

SOT-23 Precision Centigrade Temperature Sensors

General Description

The LM45 series are precision integrated-circuit temperature sensors, whose output voltage is linearly proportional to the Celsius (Centigrade) temperature. The LM45 does not require any external calibration or trimming to provide accuracies of $\pm 2^\circ\text{C}$ at room temperature and $\pm 3^\circ\text{C}$ over a full -20 to $+100^\circ\text{C}$ temperature range. Low cost is assured by trimming and calibration at the wafer level. The LM45's low output impedance, linear output, and precise inherent calibration make interfacing to readout or control circuitry especially easy. It can be used with a single power supply, or with plus and minus supplies. As it draws only $120\ \mu\text{A}$ from its supply, it has very low self-heating, less than 0.2°C in still air. The LM45 is rated to operate over a -20° to $+100^\circ\text{C}$ temperature range.

Applications

- Battery Management
- FAX Machines
- Printers

- Portable Medical Instruments
- HVAC
- Power Supply Modules
- Disk Drives
- Computers
- Automotive

Features

- Calibrated directly in $^\circ\text{C}$ (Centigrade)
- Linear $+10.0\ \text{mV}/^\circ\text{C}$ scale factor
- $\pm 3^\circ\text{C}$ accuracy guaranteed
- Rated for full -20° to $+100^\circ\text{C}$ range
- Suitable for remote applications
- Low cost due to wafer-level trimming
- Operates from 4.0V to 10V
- Less than $120\ \mu\text{A}$ current drain
- Low self-heating, 0.20°C in still air
- Nonlinearity only $\pm 0.8^\circ\text{C}$ max over temp
- Low impedance output, $20\ \Omega$ for $1\ \text{mA}$ load

FIGURE 2. Full-Range Centigrade Temperature Sensor (-20°C to $+100^\circ\text{C}$)

LM50

SOT-23 Single-Supply Centigrade Temperature Sensor

General Description

The LM50 is a precision integrated-circuit temperature sensor that can sense a -40°C to $+125^{\circ}\text{C}$ temperature range using a single positive supply. The LM50's output voltage is linearly proportional to Celsius (Centigrade) temperature ($+10\text{ mV}/^{\circ}\text{C}$) and has a DC offset of $+500\text{ mV}$. The offset allows reading negative temperatures without the need for a negative supply. The ideal output voltage of the LM50 ranges from $+100\text{ mV}$ to $+1.75\text{V}$ for a -40°C to $+125^{\circ}\text{C}$ temperature range. The LM50 does not require any external calibration or trimming to provide accuracies of $\pm 3^{\circ}\text{C}$ at room temperature and $\pm 4^{\circ}\text{C}$ over the full -40°C to $+125^{\circ}\text{C}$ temperature range. Trimming and calibration of the LM50 at the wafer level assure low cost and high accuracy. The LM50's linear output, $+500\text{ mV}$ offset, and factory calibration simplify circuitry required in a single supply environment where reading negative temperatures is required. Because the LM50's quiescent current is less than $130\text{ }\mu\text{A}$, self-heating is limited to a very low 0.2°C in still air.

Applications

- Computers
- Disk Drives
- Battery Management
- Automotive
- FAX Machines
- Printers
- Portable Medical Instruments
- HVAC
- Power Supply Modules

Features

- Calibrated directly in degree Celsius (Centigrade)
- Linear $+10.0\text{ mV}/^{\circ}\text{C}$ scale factor
- $\pm 2^{\circ}\text{C}$ accuracy guaranteed at $+25^{\circ}\text{C}$
- Specified for full -40° to $+125^{\circ}\text{C}$ range
- Suitable for remote applications
- Low cost due to wafer-level trimming
- Operates from 4.5V to 10V
- Less than $130\text{ }\mu\text{A}$ current drain
- Low self-heating, less than 0.2°C in still air
- Nonlinearity less than 0.8°C over temp

LM56

Dual Output Low Power Thermostat

General Description

The LM56 is a precision low power thermostat. Two stable temperature trip points (V_{T1} and V_{T2}) are generated by dividing down the LM56 1.250V bandgap voltage reference using 3 external resistors. The LM56 has two digital outputs. OUT1 goes LOW when the temperature exceeds $T1$ and goes HIGH when the temperature goes below $(T1 - T_{HYST})$. Similarly, OUT2 goes LOW when the temperature exceeds $T2$ and goes HIGH when the temperature goes below $(T2 - T_{HYST})$. T_{HYST} is an internally set 5°C typical hysteresis. The LM56 is available in an 8-lead Mini-SO8 surface mount package and an 8-lead small outline package.

Applications

- Microprocessor Thermal Management
- Appliances
- Portable Battery Powered 3.0V or 5V Systems
- Fan Control
- Industrial Process Control
- HVAC Systems
- Remote Temperature Sensing
- Electronic System Protection

Features

- Digital outputs support TTL logic levels
- Internal temperature sensor
- 2 internal comparators with hysteresis
- Internal voltage reference
- Currently available in 8-pin SO plastic package
- Future availability in the 8-pin Mini-SO8 package

Key Specifications

- Power Supply Voltage 2.7V–10V
- Power Supply Current 230 μA (max)
- V_{REF} 1.250V $\pm 1\%$ (max)
- Hysteresis Temperature 5°C
- Internal Temperature Sensor
- Output Voltage (+6.20 mV/ $^\circ\text{C}$ x T) +395 mV
- Temperature Trip Point Accuracy:

	LM56BIM	LM56CIM
+25 $^\circ\text{C}$	$\pm 2^\circ\text{C}$ (max)	$\pm 3^\circ\text{C}$ (max)
+25 $^\circ\text{C}$ to +85 $^\circ\text{C}$	$\pm 2^\circ\text{C}$ (max)	$\pm 3^\circ\text{C}$ (max)
-40 $^\circ\text{C}$ to +125 $^\circ\text{C}$	$\pm 3^\circ\text{C}$ (max)	$\pm 4^\circ\text{C}$ (max)

LM60

2.7V, SOT-23 Temperature Sensor

General Description

The LM60 is a precision integrated-circuit temperature sensor that can sense a -40°C to $+125^{\circ}\text{C}$ temperature range while operating from a single $+2.7\text{V}$ supply. The LM60's output voltage is linearly proportional to Celsius (Centigrade) temperature ($+6.25\text{ mV}/^{\circ}\text{C}$) and has a DC offset of $+424\text{ mV}$. The offset allows reading negative temperatures without the need for a negative supply. The nominal output voltage of the LM60 ranges from $+174\text{ mV}$ to $+1205\text{ mV}$ for a -40°C to $+125^{\circ}\text{C}$ temperature range. The LM60 is calibrated to provide accuracies of $\pm 2.0^{\circ}\text{C}$ at room temperature and $\pm 3^{\circ}\text{C}$ over the full -25°C to $+125^{\circ}\text{C}$ temperature range.

The LM60's linear output, $+424\text{ mV}$ offset, and factory calibration simplify external circuitry required in a single supply environment where reading negative temperatures is required. Because the LM60's quiescent current is less than $110\text{ }\mu\text{A}$, self-heating is limited to a very low 0.1°C in still air. Shutdown capability for the LM60 is intrinsic because its inherent low power consumption allows it to be powered directly from the output of many logic gates.

Features

- Calibrated linear scale factor of $+6.25\text{ mV}/^{\circ}\text{C}$
- Rated for full -40° to $+125^{\circ}\text{C}$ range

- Suitable for remote applications

Applications

- Cellular Phones
- Computers
- Power Supply Modules
- Battery Management
- FAX Machines
- Printers
- HVAC
- Disk Drives
- Appliances

Key Specifications

- Accuracy at 25°C : ± 2.0 and $\pm 3.0^{\circ}\text{C}$ (max)
- Accuracy for -40°C to $+125^{\circ}\text{C}$: $\pm 4.0^{\circ}\text{C}$ (max)
- Accuracy for -25°C to $+125^{\circ}\text{C}$: $\pm 3.0^{\circ}\text{C}$ (max)
- Temperature Slope: $+6.25\text{ mV}/^{\circ}\text{C}$
- Power Supply Voltage Range: $+2.7\text{V}$ to $+10\text{V}$
- Current Drain @ 25°C : $110\text{ }\mu\text{A}$ (max)
- Nonlinearity: $\pm 0.8^{\circ}\text{C}$ (max)
- Output Impedance: 800Ω (max)

LM61

2.7V, SOT-23 or TO-92 Temperature Sensor

General Description

The LM61 is a precision integrated-circuit temperature sensor that can sense a -30°C to $+100^{\circ}\text{C}$ temperature range while operating from a single $+2.7\text{V}$ supply. The LM61's output voltage is linearly proportional to Celsius (Centigrade) temperature ($+10\text{ mV}/^{\circ}\text{C}$) and has a DC offset of $+600\text{ mV}$. The offset allows reading negative temperatures without the need for a negative supply. The nominal output voltage of the LM61 ranges from $+300\text{ mV}$ to $+1600\text{ mV}$ for a -30°C to $+100^{\circ}\text{C}$ temperature range. The LM61 is calibrated to provide accuracies of $\pm 2.0^{\circ}\text{C}$ at room temperature and $\pm 3^{\circ}\text{C}$ over the full -25°C to $+85^{\circ}\text{C}$ temperature range.

The LM61's linear output, $+600\text{ mV}$ offset, and factory calibration simplify external circuitry required in a single supply environment where reading negative temperatures is required. Because the LM61's quiescent current is less than $125\text{ }\mu\text{A}$, self-heating is limited to a very low 0.2°C in still air. Shutdown capability for the LM61 is intrinsic because its inherent low power consumption allows it to be powered directly from the output of many logic gates.

Features

- Calibrated linear scale factor of $+10\text{ mV}/^{\circ}\text{C}$
- Rated for full -30° to $+100^{\circ}\text{C}$ range
- Suitable for remote applications

Applications

- Cellular Phones
- Computers
- Power Supply Modules
- Battery Management
- FAX Machines
- Printers
- HVAC
- Disk Drives
- Appliances

Key Specifications

■ Accuracy at 25°C	± 2.0 or $\pm 3.0^{\circ}\text{C}$ (max)
■ Accuracy for -30°C to $+100^{\circ}\text{C}$	$\pm 4.0^{\circ}\text{C}$ (max)
■ Accuracy for -25°C to $+85^{\circ}\text{C}$	$\pm 3.0^{\circ}\text{C}$ (max)
■ Temperature Slope	$+10\text{ mV}/^{\circ}\text{C}$
■ Power Supply Voltage Range	$+2.7\text{V}$ to $+10\text{V}$

LM62

2.7V, 15.6 mV/°C SOT-23 Temperature Sensor

General Description

The LM62 is a precision integrated-circuit temperature sensor that can sense a 0°C to +90°C temperature range while operating from a single +3.0V supply. The LM62's output voltage is linearly proportional to Celsius (Centigrade) temperature (+15.6 mV/°C) and has a DC offset of +480 mV. The offset allows reading temperatures down to 0°C without the need for a negative supply. The nominal output voltage of the LM62 ranges from +480 mV to +1884 mV for a 0°C to +90°C temperature range. The LM62 is calibrated to provide accuracies of ±2.0°C at room temperature and +2.5°C/–2.0°C over the full 0°C to +90°C temperature range.

The LM62's linear output, +480 mV offset, and factory calibration simplify external circuitry required in a single supply environment where reading temperatures down to 0°C is required. Because the LM62's quiescent current is less than 130 µA, self-heating is limited to a very low 0.2°C in still air. Shutdown capability for the LM62 is intrinsic because its inherent low power consumption allows it to be powered directly from the output of many logic gates.

Features

- Calibrated linear scale factor of +15.6 mV/°C
- Rated for full 0°C to +90°C range with 3.0V supply
- Suitable for remote applications

LM66

Dual Output Internally Preset Thermostat

General Description

The LM66 is a precision low power thermostat. Two stable temperature trip points (V_{T1} and V_{T2}) are generated by dividing down the LM66 1.250V bandgap voltage reference using a resistors divider network. The LM66 has two digital outputs. OUT1 goes LOW when the temperature exceeds T1 and goes HIGH when the the temperature goes below ($T1 - T_{HYST}$). Similarly, OUT2 goes LOW when the temperature exceeds T2 and goes HIGH when the temperature goes below ($T2 - T_{HYST}$). T_{HYST} is an internally set 5°C typical hysteresis.

The LM66 is currently available in an 8-lead small outline package.

Applications

- Microprocessor Thermal Management
- Appliances
- Portable Battery Powered 3.0V or 5V Systems
- Fan Control
- Industrial Process Control
- HVAC Systems
- Remote Temperature Sensing

- Electronic System Protection

Features

- Digital outputs support TTL logic levels
- Internal temperature sensor
- 2 internal comparators with hysteresis
- Internal voltage reference
- Currently available in 8-pin SO plastic package

Key Specifications

- Power Supply Voltage 2.7V to 10V
- Power Supply Current 250 μ A (max)
- V_{REF} 1.250V \pm 1.4% (max)
- Hysteresis Temperature 5°C
- Internal Temperature Sensor
 - Output Voltage (+6.20 mV/°C x T) +400 mV
- Temperature Trip Point Accuracy \pm 3°C (max)
- T1 set point +73°C
- T2 set point +82°C

LM70 SPI/MICROWIRE 10-Bit Plus Sign Digital Temperature Sensor

General Description

The LM70 is a temperature sensor, Delta-Sigma analog-to-digital converter with an SPI and MICROWIRE compatible interface available in LLP and MSOP 8-pin packages. The host can query the LM70 at any time to read temperature. A shutdown mode decreases power consumption to less than 10 μ A. This mode is useful in systems where low average power consumption is critical.

The LM70 has 10-bit plus sign temperature resolution (0.25°C per LSB) while operating over a temperature range of -55°C to +150°C.

The LM70's 2.65V to 5.5V supply voltage range, low supply current and simple SPI interface make it ideal for a wide range of applications. These include thermal management and protection applications in hard disk drives, printers, electronic test equipment, and office electronics.

Applications

- System Thermal Management
- Personal Computers
- Disk Drives
- Office Electronics

- Electronic Test Equipment

Features

- 0.25°C temperature resolution.
- Shutdown mode conserves power between temperature reading
- SPI and MICROWIRE Bus interface
- MSOP-8 and LLP-8 packages save space

LM74

SPI/MICROWIRE™ 12-Bit Plus Sign Temperature Sensor

General Description

The LM74 is a temperature sensor, Delta-Sigma analog-to-digital converter with an SPI and MICROWIRE compatible interface. The host can query the LM74 at any time to read temperature. A shutdown mode decreases power consumption to less than 10 μA . This mode is useful in systems where low average power consumption is critical. The LM74 has 12-bit plus sign temperature resolution (0.0625°C per LSB) while operating over a temperature range of -55°C to +150°C.

The LM74's 3.0V to 5.5V supply voltage range, low supply current and simple SPI interface make it ideal for a wide range of applications. These include thermal management and protection applications in hard disk drives, printers, electronic test equipment, and office electronics. The LM74 is available in the SO-8 package as well as an 5-Bump micro SMD package.

Applications

- System Thermal Management
- Personal Computers
- Disk Drives

- Office Electronics
- Electronic Test Equipment

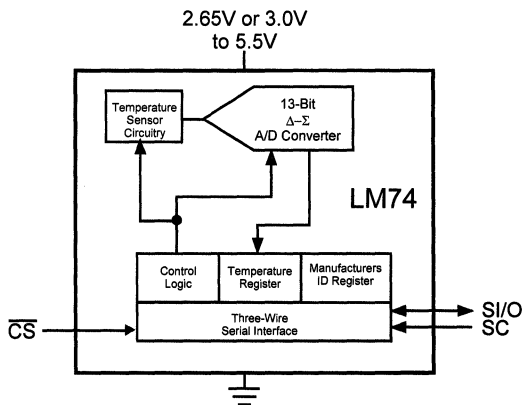

Features

- 0.0625°C temperature resolution.
- Shutdown mode conserves power between temperature reading
- SPI and MICROWIRE Bus interface
- 5-Bump micro SMD package saves space

LM75

Digital Temperature Sensor and Thermal watchdog with Two-Wire Interface

General Description

The LM75 is a temperature sensor, Delta-Sigma analog-to-digital converter, and digital over-temperature detector with I²C® interface. The host can query the LM75 at any time to read temperature. The open-drain Overtemperature Shutdown (O.S.) output becomes active when the temperature exceeds a programmable limit. This pin can operate in either "Comparator" or "Interrupt" mode.

The host can program both the temperature alarm threshold (T_{OS}) and the temperature at which the alarm condition goes away (T_{HYST}). In addition, the host can read back the contents of the LM75's T_{OS} and T_{HYST} registers. Three pins (A0, A1, A2) are available for address selection. The sensor powers up in Comparator mode with default thresholds of 80°C T_{OS} and 75°C T_{HYST}.

The LM75's 3.0V to 5.5V supply voltage range, low supply current and I²C interface make it ideal for a wide range of applications. These include thermal management and protection applications in personal computers, electronic test equipment, and office electronics.

Features

- SOP-8 and Mini SOP-8 (MSOP) packages save space
- I²C Bus interface
- Separate open-drain output pin operates as interrupt or comparator/thermostat output
- Register readback capability
- Power up defaults permit stand-alone operation as thermostat
- Shutdown mode to minimize power consumption
- Up to 8 LM75s can be connected to a single bus

Key Specifications

■ Supply Voltage		3.0V to 5.5V
■ Supply Current	operating	250 μ A (typ) 1 mA (max)
	shutdown	4 μ A (typ)

LM76

±0.5°C, ±1°C, 12-Bit + Sign Digital Temperature Sensor and Thermal Window Comparator with Two-Wire Interface

General Description

The LM76 is a digital temperature sensor and thermal window comparator with an I²C™ Serial Bus interface with an accuracy of ±1°C. This accuracy for the LM76CHM is specified for a -10°C to 45°C temperature range, while for the LM76CNM the temperature range is 70°C to 100°C. The LM76CHM is specified with an accuracy ±0.5°C at 25°C. The window-comparator architecture of the LM76 eases the design of temperature control systems conforming to the ACPI (Advanced Configuration and Power Interface) specification for personal computers. The open-drain Interrupt (INT) output becomes active whenever temperature goes outside a programmable window, while a separate Critical Temperature Alarm (T_CRIT_A) output becomes active when the temperature exceeds a programmable critical limit. The INT output can operate in either a comparator or event mode, while the T_CRIT_A output operates in comparator mode only.

The host can program both the upper and lower limits of the window as well as the critical temperature limit. Programmable hysteresis as well as a fault queue are available to minimize false tripping. Two pins (A0, A1) are available for address selection. The sensor powers up with default thresholds of 2°C T_{HYST}, 10°C T_{LOW}, 64°C T_{HIGH}, and 80°C T_CRIT.

The LM76's 3.3V and 5.0V supply voltage, Serial Bus interface, 12-bit + sign output, and full-scale range of over 127°C make it ideal for a wide range of applications. These include thermal management and protection applications in personal computers, electronic test equipment, office electronics and bio-medical applications.

Features

- Window comparison simplifies design of ACPI compatible temperature monitoring and control.
- Serial Bus interface
- Separate open-drain outputs for Interrupt and Critical Temperature shutdown
- Shutdown mode to minimize power consumption
- Up to 4 LM76s can be connected to a single bus
- 12-bit + sign output; full-scale reading of over 127°C

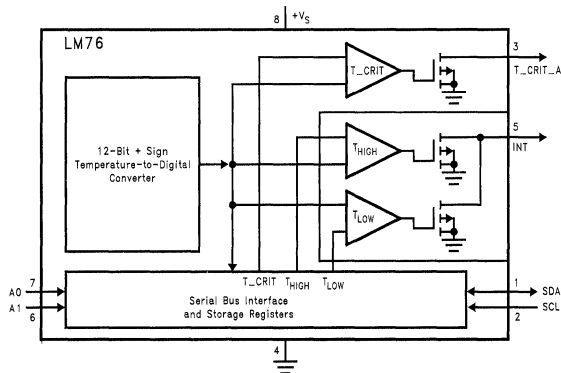

Key Specifications

■ Supply Voltage		3.3V or 5.0V
■ Supply Current	operating	250 µA (typ) 450 µA (max)
	shutdown	8 µA (max)
■ Temperature Accuracy	+25°C	±0.5°C(max)
	-10°C to +45°C	±1.0°C(max)
	70°C to 100°C	±1.0°C(max)
■ Resolution		0.0625°C

Applications

- System Thermal Management
- Personal Computers
- Office Electronics
- HVAC

LM77

9-Bit + Sign Digital Temperature Sensor and Thermal Window Comparator with Two-Wire Interface

General Description

The LM77 is a digital temperature sensor and thermal window comparator with an I²C™ Serial Bus interface. The window-comparator architecture of the LM77 eases the design of temperature control systems conforming to the ACPI (Advanced Configuration and Power Interface) specification for personal computers. The open-drain Interrupt (INT) output becomes active whenever temperature goes outside a programmable window, while a separate Critical Temperature Alarm (T_CRIT_A) output becomes active when the temperature exceeds a programmable critical limit. The INT output can operate in either a comparator or event mode, while the T_CRIT_A output operates in comparator mode only.

The host can program both the upper and lower limits of the window as well as the critical temperature limit. Programmable hysteresis as well as a fault queue are available to minimize false tripping. Two pins (A0, A1) are available for address selection. The sensor powers up with default thresholds of 2°C T_{HYST}, 10°C T_{LOW}, 64°C T_{HIGH}, and 80°C T_CRIT.

The LM77's 3.0V to 5.5V supply voltage range, Serial Bus interface, 9-bit + sign output, and full-scale range of over 128°C make it ideal for a wide range of applications. These include thermal management and protection applications in personal computers, electronic test equipment, office electronics, automotive, and HVAC applications.

Features

- Window comparison simplifies design of ACPI compatible temperature monitoring and control.
- Serial Bus interface
- Separate open-drain outputs for Interrupt and Critical Temperature shutdown
- Shutdown mode to minimize power consumption
- Up to 4 LM77s can be connected to a single bus
- 9-bit + sign output; full-scale reading of over 128°C

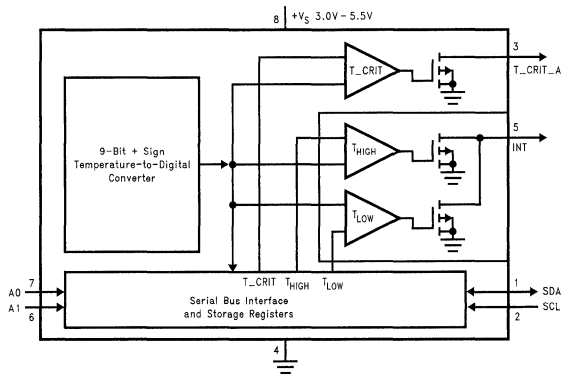

Key Specifications

■ Supply Voltage		3.0V to 5.5V
■ Supply Current	operating	250 µA (typ)
	shutdown	500 µA (max)
		5 µA (typ)
■ Temperature	-10°C to 65°C	±1.5°C(max)
■ Accuracy	-25°C to 100°C	±2°C(max)
	-55°C to 125°C	±3°C(max)

Applications

- System Thermal Management
- Personal Computers
- Office Electronics
- Electronic Test Equipment
- Automotive
- HVAC

LM80

Serial Interface ACPI-Compatible Microprocessor System Hardware Monitor

General Description

The LM80 provides 7 positive voltage inputs, temperature measurement, fan speed measurement, and hardware monitoring on an I²C™ interface. The LM80 performs WATCHDOG comparisons of all measured values and an open-drain interrupt output becomes active when any values exceed programmed limits. A Chassis Intrusion input is provided to monitor and reset an external circuit designed to latch a chassis intrusion event.

The LM80 is especially suited to interface to both linear and digital temperature sensors. The 10 mV LSB and 2.56 volt input range is ideal for accepting inputs from a linear sensor such as the LM50. The BTI is used as an input from either digital or thermostat sensors such as LM75 and LM56.

The LM80's 2.8V to 5.75V supply voltage range, low supply current, and I²C interface make it ideal for a wide range of applications. These include hardware monitoring and protection applications in personal computers, electronic test equipment, and office electronics.

Features

- Temperature sensing
- 7 positive voltage inputs
- 2 programmable fan speed monitoring inputs
- 10 mV LSB and 2.56V input range accepts outputs from linear temperature sensors such as the LM50
- Chassis Intrusion Detector input

- WATCHDOG comparison of all monitored values
- Separate input to show status in Interrupt Status Register of additional external temperature sensors such as the LM56 or LM75
- I²C Serial Bus interface compatibility
- Shutdown mode to minimize power consumption
- Programmable $\overline{\text{RST_OUT}}/\overline{\text{OS}}$ pin: $\overline{\text{RST_OUT}}$ provides a Reset output; $\overline{\text{OS}}$ provides an Interrupt Output activated by an Overtemperature Shutdown event

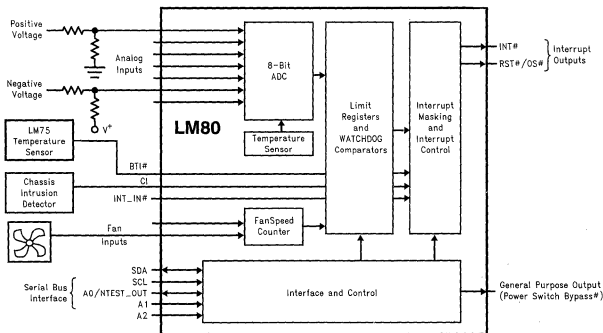

Key Specifications

■ Voltage monitoring Error	±1% (max)
■ Temperature Error	± 3°C (max)
■ Supply Voltage Range	2.8V to 5.75V
■ Supply Current	Operating: 0.2 mA typ Shutdown: 15 µA typ
■ ADC Resolution	8 Bits
■ Temperature Resolution	0.5°C

Applications

- System Thermal and Hardware Monitoring for Servers and PCs
- Office Electronics
- Electronic Test Equipment and Instrumentation

Pin Descriptions

Pin Name(s)	Pin Number	Number of Pins	Type	Description
INT_IN#	1	1	Digital Input	This is an active low input that propagates the $\overline{\text{INT_IN}}$ signal to the INT output of the LM80 via Interrupt Mask Register 1 Bit 7 and INT enable Bit 1 of the Configuration Register.
SDA	2	1	Digital I/O	Serial Bus bidirectional Data. Open-drain output.
SCL	3	1	Digital Input	Serial Bus Clock.

Pin Descriptions (Continued)

Pin Name(s)	Pin Number	Number of Pins	Type	Description
FAN1-FAN2	4-5	2	Digital Inputs	0 to V ⁺ fan tachometer inputs.
BTI	6	1	Digital Input	Board Temperature Interrupt driven by O.S. outputs of additional temperature sensors such as LM75. Provides internal pull-up of 10 k Ω .
CI (Chassis Intrusion)	7	1	Digital I/O	An active high input from an external circuit which latches a Chassis Intrusion event. This line can go high without any clamping action regardless of the powered state of the LM80. The LM80 provides an internal open drain on this line, controlled by Bit 5 of the Configuration Register, to provide a minimum 10 ms reset of this line.
GND	8	1	GROUND	Internally connected to all of the digital circuitry.
V ⁺ (+2.8V to +5.75V)	9	1	POWER	+3.3V or +5V V ⁺ power. Bypass with the parallel combination of 10 μ F (electrolytic or tantalum) and 0.1 μ F (ceramic) bypass capacitors.
INT	10	1	Digital Output	Non-Maskable Interrupt (open source)/Interrupt Request (open drain). The mode is selected with Bit 5 of the Configuration Register and the output is enabled when Bit 1 of the Configuration Register is set to 1. The default state is disabled.
GPO (Power Switch Bypass)	11	1	Digital Output	An active low open drain output intended to drive an external P-channel power MOSFET for software power control.
NTEST_IN/ RESET_IN	12	1	Digital Input	An active-low input that enables NAND Tree board-level connectivity testing. Refer to Section 10.0 on NAND Tree testing. Whenever NAND Tree connectivity is enabled the LM80 is also reset to its power on state.
RST_OUT/ \overline{OS}	13	1	Digital Output	Master Reset, 5 mA driver (open drain), active low output with a 10 ms minimum pulse width. Available when enabled via Bit 4 in Configuration Register and Bit 7 of the Fan Divisor/RST_OUT/ \overline{OS} Register. Bit 6 of the Fan Divisor/RST_OUT/ \overline{OS} Register enables this output as an active low Overtemperature Shutdown (\overline{OS}).
GNDA	14	1	GROUND	Internally connected to all analog circuitry. The ground reference for all analog inputs. This pin needs to be taken to a low noise analog ground plane for optimum performance.
IN6-IN0	15-21	7	Analog Inputs	0V to 2.56V full scale range Analog Inputs.
A0/NTEST_OUT	22	1	Digital I/O	The lowest order bit of the Serial Bus Address. This pin functions as an output when doing a NAND Tree test.
A1-A2	23-24	2	Digital Inputs	The two highest order bits of the Serial Bus Address.
TOTAL PINS		24		

LM81

Serial Interface ACPI-Compatible Microprocessor System Hardware Monitor

General Description

The LM81 is a highly integrated data acquisition system for hardware monitoring of servers, Personal Computers, or virtually any microprocessor-based system. In a PC, the LM81 can be used to monitor power supply voltages, temperatures, and fan speeds. Actual values for these inputs can be read at any time. Programmable WATCHDOG limits in the LM81 activate a fully programmable and maskable interrupt system with two outputs (INT and $\overline{T_CRIT_A}$).

The LM81 has an on-chip digital output temperature sensor with 9-bit or 12-bit resolution, a 6 analog input ADC with 8-bit resolution and an 8-bit DAC. Two fan tachometer outputs can be measured with the LM81's FAN1 and FAN2 inputs. The DAC, with a 0 to 1.25V output voltage range, can be used for fan speed control. Additional inputs are provided for Chassis Intrusion detection circuits, and VID monitor inputs. The LM81 has a Serial Bus interface that is compatible with SMBus™.

Features

- Temperature sensing
- 6 positive voltage inputs with scaling resistors to monitor +5V, +12V, +3.3V, +2.5V, Vccp power supplies directly
- 8-bit DAC output for controlling fan speed
- 2 fan speed monitoring inputs

- Chassis Intrusion detector input
- WATCHDOG comparison of all monitored values
- SMBus 1.0 (LM81C) and 1.1 (LM81B) Serial Bus interface compatibility
- LM81B has improved voltage monitoring accuracy
- VID0-VID4 monitoring inputs

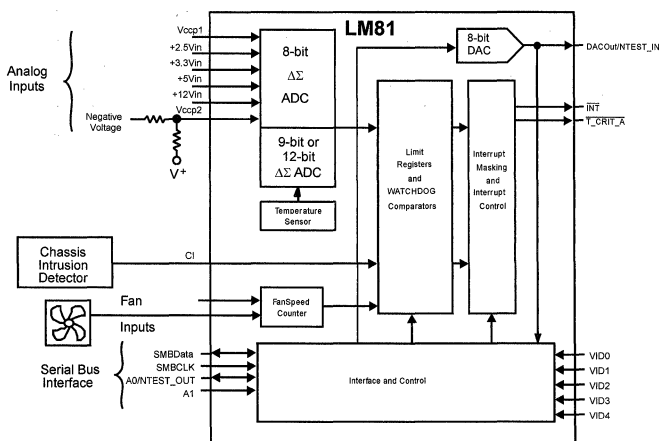

Key Specifications

■ Voltage Monitoring Error	+2% or ±1.2% (max)
■ Temperature Error	± 3°C (max)
■ Supply Voltage Range	2.8V to 3.8V
■ Supply Current	0.4 mA (typ)
■ ADC and DAC Resolution	8 Bits
■ Temperature Resolution	0.5°C

Applications

- System Thermal and Hardware Monitoring for Servers and PCs
- Office Electronics
- Electronic Test Equipment and Instrumentation

Typical Application

Indicates Active Low ("Not")

Pin Description

Pin Name(s)	Pin Number	Number of Pins	Type	Description
A0/NTEST_OUT	1	1	Digital I/O	The lowest order programmable bit of the serial bus address. This pin functions as an output during NAND Tree tests (board-level connectivity testing). Refer to SECTION 11 on NAND Tree testing.
A1	2	1	Digital Input	The highest order programmable bit of the serial bus address.
SMBData	3	1	Digital I/O	Serial Bus bidirectional Data. Open-drain output.
SMBCLK	4	1	Digital Input	Serial Bus Clock.
FAN1-FAN2	5-6	2	Digital Inputs	Schmitt Trigger fan tachometer inputs.
CI	7	1	Digital I/O	An active high input from an external circuit which latches a Chassis Intrusion event. This line can go high without any clamping action regardless of the powered state of the LM81. There is also an internal open-drain output on this line, controlled by Bit 6 of the Configuration Register (40h) or Bit 7 CI Clear Register (46h), to provide a minimum 20 ms reset pulse. See Section 3.3 and Section 9.0.
T_CRIT_A	8	1	Digital Output	Critical Temperature Alarm active low open-drain output. This pin can be grounded when not used.
V+ (+2.8V to +3.8V)	9	1	POWER	+3.3V V+ power. Bypass with the parallel combination of 10 μF (electrolytic or tantalum) and 0.1 μF (ceramic) bypass capacitors.

Pin Description (Continued)

Pin Name(s)	Pin Number	Number of Pins	Type	Description
$\overline{\text{INT}}$	10	1	Digital Output	Interrupt active low open-drain output. This output is enabled when Bit 1 in the Configuration Register is set to 1. The default state is disabled.
DACOut/NTEST_IN	11	1	Analog Output/Digital Input	0V to +1.25V amplitude 8-bit DAC output. When forced high by an external voltage the NAND Tree Test mode is enabled which provides board-level connectivity testing. Refer to Section 11.0 on NAND Tree testing.
$\overline{\text{RESET}}$	12	1	Digital I/O	Master Reset, 5 mA driver (open-drain), active low output with a 20 ms minimum pulse width. Available when enabled via Bit 4 in the Configuration register. It acts as an active low power on $\overline{\text{RESET}}$ input.
GND	13	1	GROUND	Internally connected to all circuitry. The ground reference for all analog inputs and the DAC output. This pin needs to be connected to a low noise analog ground plane for optimum performance of the DAC output.
Vccp2	14	1	Analog Input	Analog input for monitoring -12V or Vccp2. Selectable by choosing the appropriate external resistor divider values such that the input to the LM81 is scaled to +2.5V. See <i>Section 4.0</i> .
+12Vin	15	1	Analog Input	Analog input for monitoring +12V.
+5Vin	16	1	Analog Input	Analog input for monitoring +5V.
+3.3Vin	17	1	Analog Input	Analog input for monitoring +3.3V.
+2.5Vin	18	1	Analog Input	Analog input for monitoring +2.5V.
Vccp1	19	1	Analog Input	Analog input for monitoring Vccp, a processor voltage that is nominally at +2.5V.
VID4-VID0	20-24	5	Digital Inputs	Supply Voltage readouts from the Pentium/PRO power supplies that indicate the operating voltage or the processor (e.g. 1.5V to 2.9V). The values are read in the VID/Fan Divisor Register and the VID4 Register.
TOTAL PINS		24		

LM82

Remote Diode and Local Digital Temperature Sensor with Two-Wire Interface

General Description

The LM82 is a digital temperature sensor with a 2 wire serial interface that senses the voltage and thus the temperature of a remote diode using a Delta-Sigma analog-to-digital converter with a digital over-temperature detector. The LM82 accurately senses its own temperature as well as the temperature of external devices, such as Pentium II® Processors or diode connected 2N3904s. The temperature of any ASIC can be detected using the LM82 as long as a dedicated diode (semiconductor junction) is available on the die. Using the SMBus interface a host can access the LM82's registers at any time. Activation of a $\overline{T_CRIT_A}$ output occurs when any temperature is greater than a programmable comparator limit, T_CRIT . Activation of an \overline{INT} output occurs when any temperature is greater than its corresponding programmable comparator HIGH limit.

The host can program as well as read back the state of the T_CRIT register and the 2 T_HIGH registers. Three state logic inputs allow two pins (ADD0, ADD1) to select up to 9 SMBus address locations for the LM82. The sensor powers up with default thresholds of 127°C for T_CRIT and all T_HIGH s. The LM82 is pin for pin and register compatible with the LM84, Maxim MAX1617 and Analog Devices ADM1021.

Features

- Accurately senses die temperature of remote ICs, or diode junctions

- On-board local temperature sensing
- SMBus and I²C compatible interface, supports SMBus 1.1 TIMEOUT
- Two interrupt outputs: \overline{INT} and $\overline{T_CRIT_A}$
- Register readback capability
- 7 bit plus sign temperature data format, 1 °C resolution
- 2 address select pins allow connection of 9 LM82s on a single bus

Key Specifications

- Supply Voltage 3.0V to 3.6V
- Supply Current 0.8mA (max)
- Local Temp Accuracy (includes quantization error)

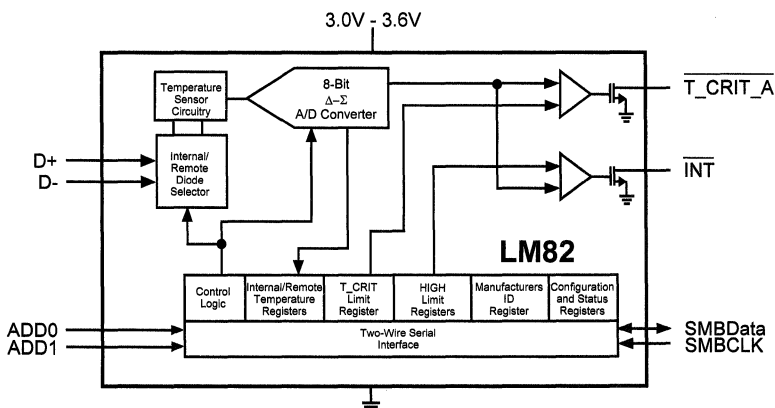

0°C to +85°C	±3.0°C (max)
--------------	--------------
- Remote Diode Temp Accuracy (includes quantization error)

+25°C to +100°C	±3°C (max)
0°C to +125°C	±4°C (max)

Applications

LM83

Triple-Diode Input and Local Digital Temperature Sensor with Two-Wire Interface

General Description

The LM83 is a digital temperature sensor with a 2 wire serial interface that senses the voltage and thus the temperature of three remote diodes using a Delta-Sigma analog-to-digital converter with a digital over-temperature detector. The LM83 accurately senses its own temperature as well as the temperature of three external devices, such as Pentium II® Processors or diode connected 2N3904s. The temperature of any ASIC can be detected using the LM83 as long as a dedicated diode (semiconductor junction) is available on the die. Using the SMBus interface a host can access the LM83's registers at any time. Activation of a $\overline{T_CRIT_A}$ output occurs when any temperature is greater than a programmable comparator limit, T_CRIT . Activation of an \overline{INT} output occurs when any temperature is greater than its corresponding programmable comparator HIGH limit.

The host can program as well as read back the state of the T_CRIT register and the four T_HIGH registers. Three state logic inputs allow two pins ($ADD0$, $ADD1$) to select up to 9 SMBus address locations for the LM83. The sensor powers up with default thresholds of 127°C for T_CRIT and all T_HIGH s. The LM83 is pin for pin and register compatible with the LM84 as well as the Maxim MAX1617 and the Analog Devices ADM1021.

Features

- Accurately senses die temperature of 3 remote ICs, or diode junctions

- On-board local temperature sensing
- SMBus and I²C compatible interface, supports SMBus 1.1 TIMEOUT
- Two interrupt outputs: \overline{INT} and $\overline{T_CRIT_A}$
- Register readback capability

LM84

Diode Input Digital Temperature Sensor with Two-Wire Interface

General Description

The LM84 is a remote diode temperature sensor, Delta-Sigma analog-to-digital converter, and digital over-temperature detector with an SMBus™ interface. The LM84 senses its own temperature as well as the temperature of a target IC with a diode junction, such as a Pentium® II processor or a diode connected 2N3904. A diode junction (semiconductor junction) is required on the target IC's die. A host can query the LM84 at any time to read the temperature of this diode as well as the temperature state of the LM84 itself. A $\overline{T_CRIT_A}$ interrupt output becomes active when the temperature is greater than a programmable comparator limit, T_CRIT .

The host can program as well as read back the state of the T_CRIT register. Three state logic inputs allow two pins ($ADD0$, $ADD1$) to select up to 9 SMBus address locations for the LM84. The sensor powers up with default thresholds of 127°C for T_CRIT .

Features

- Directly senses die temperature of remote ICs
- Senses temperature of remote diodes
- SMBus compatible interface, supports SMBus Timeout

- Register readback capability
- 7 bit plus sign temperature data format
- 2 address select lines enable 9 LM84s to be connected to a single bus

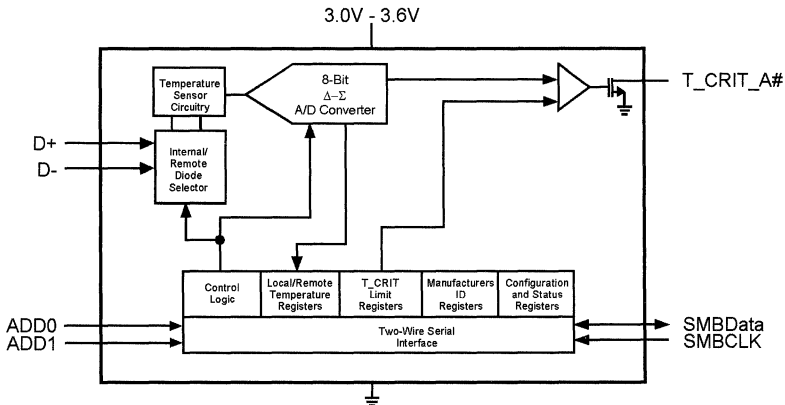

Key Specifications

■ Supply Voltage	3.0V - 3.6V
■ Supply Current	1 mA (max)
■ Local Temperature Accuracy	$\pm 1.0^\circ\text{C}$ (typ)
■ Remote Diode Temperature Accuracy	$\pm 3^\circ\text{C}$ (max)
+60°C to +100°C	$\pm 5^\circ\text{C}$ (max)

Pin Descriptions

Label	Pin #	Function	Typical Connection
NC	1, 5, 9, 13, 16	Manufacturing test pins.	Left floating. PC board traces may be routed through the pads for these pins. Although, the components that drive these traces should share the same supply as the LM84 so that the Absolute Maximum Voltage at any Pin rating is not violated.
V _{CC}	2	Positive Supply Voltage Input	DC Voltage from 3.0V to 3.6V
D+	3	Diode Current Source	To Diode Anode. Connected to remote discrete diode or to the diode on the external IC whose die temperature is being sensed.
D-	4	Diode Return Current Sink	To Diode Cathode. Must be grounded when not used.
ADD0-ADD1	10, 6	User-Set SMBus (I ² C) Address Inputs	Ground (Low, "0"), V _{CC} (High, "1") or open ("TRI-LEVEL")
GND	7, 8	Power Supply Ground	Ground
$\overline{T_CRIT_A}$	11	Critical Temperature Alarm, open-drain output	Pull Up Resistor, Controller Interrupt Line or System Shutdown
SMBData	12	SMBus (I ² C) Serial Bi-Directional Data Line, open-drain output	From and to Controller, Pull Up Resistor
SMBCLK	14	SMBus (I ² C) Clock Input	From Controller
NC	15	No Connection	Left floating. PC board traces may be routed through the pads for this pin.

LM87

Serial Interface System Hardware Monitor with Remote Diode Temperature Sensing

General Description

The LM87 is a highly integrated data acquisition system for hardware monitoring of servers, Personal Computers, or virtually any microprocessor-based system. In a PC, the LM87 can be used to monitor power supply voltages, motherboard and processor temperatures, and fan speeds. Actual values for these inputs can be read at any time. Programmable WATCHDOG limits in the LM87 activate a fully programmable and maskable interrupt system with two outputs (INT# and THERM#).

The LM87 has an on-chip digital output temperature sensor with 8-bit resolution as well as the capability of monitoring 2 external diode temperatures to 8-bit resolution, an 8 channel analog input ADC with 8-bit resolution and an 8-bit DAC. A channel on the ADC measures the supply voltage applied to the LM87, nominally 3.3 V. Two of the ADC inputs can be re-directed to a counter that can measure the speed of up to 2 fans. A slow speed $\Sigma\Delta$ ADC architecture allows stable measurement of signals in an extremely noisy environment. The DAC, with a 0 to 2.5 V output voltage range, can be used for fan speed control. Additional inputs are provided for Chassis Intrusion detection circuits, and VID monitor inputs. The VID monitor inputs can also be used as IRQ inputs if VID monitoring is not required. The LM87 has a Serial Bus interface that is compatible with SMBus™ and I²C™.

Features

- Remote diode temperature sensing (2 channels)
- 8 positive voltage inputs with scaling resistors for monitoring +5 V, +12 V, +3.3 V, +2.5 V, V_{ccp} power supplies directly

- 2 inputs selectable for fan speed or voltage monitoring
- 8-bit DAC output for controlling fan speed
- Chassis Intrusion Detector input
- WATCHDOG comparison of all monitored values
- SMBus or I²C Serial Bus interface compatibility
- VID0-VID4 or IRQ0-IRQ4 monitoring inputs
- On chip temperature sensor

DS100995-1

Pin Description

Pin Name(s)	Pin Number	Number of Pins	Type	Description
ADD/NTEST_OUT	1	1	Digital I/O	This pin normally functions as a three-state input that controls the two LSBs of the Serial Bus Address. When this pin is tied to V_{CC} the two LSBs are 01. When tied to Ground, the two LSBs are 10. If this pin is not connected, the two LSBs are 00. This pin also functions as an output during NAND Tree tests (board-level connectivity testing). To ensure proper NAND tree function, this pin should not be tied directly to V_{CC} or Ground. Instead, a series 5 k Ω resistor should be used to allow the test output function to work. Refer to <i>SECTION 11</i> on NAND Tree testing.
THERM#	2	1	Digital I/O	This pin functions as an open-drain interrupt output for temperature interrupts only, or as an interrupt input for fan control. It has an on-chip 100 k Ω pullup resistor.
SMBData	3	1	Digital I/O	Serial Bus bidirectional Data. Open-drain output.
SMBCLK	4	1	Digital Input	Serial Bus Clock.
FAN1/AIN1- FAN2/AIN2	5-6	2	Analog/Digital Inputs	Programmable as analog inputs (0 to 2.5V) or digital Schmitt Trigger fan tachometer inputs.
CI	7	1	Digital I/O	An active high input from an external circuit which latches a Chassis Intrusion event. This line can go high without any clamping action regardless of the powered state of the LM87. There is also an internal open-drain output on this line, controlled by Bit 7 of the CI Clear Register (46h), to provide a minimum 20 ms reset pulse.

Pin Description (Continued)

Pin Name(s)	Pin Number	Number of Pins	Type	Description
GND	8	1	GROUND	The system ground pin. Internally connected to all circuitry. The ground reference for all analog inputs and the DAC output. This pin needs to be connected to a low noise analog ground plane for optimum performance of the DAC output.
V* (+2.8 V to +3.8 V)	9	1	POWER	+3.3 V V* power. Bypass with the parallel combination of 10 μ F (electrolytic or tantalum) and 0.1 μ F (ceramic) bypass capacitors.
INT# /ALERT#	10	1	Digital Output	Interrupt active low open-drain output. This output is enabled when Bit 1 in the Configuration Register is set to 1. The default state is disabled. It has an on-chip 100 k Ω pullup resistor. Alternately used as an active low output to signal SMBus Alert Response Protocol.
DACOut/NTEST_IN	11	1	Analog Output/Digital Input	0 V to +2.5 V amplitude 8-bit DAC output. When forced high on power up by an external voltage the NAND Tree Test mode is enabled which provides board-level connectivity testing.
RESET#	12	1	Digital I/O	Master Reset, 5 mA driver (open-drain), active low output with a 45 ms minimum pulse width. Available when enabled via Bit 4 in the Configuration register. It also acts as an active low power on RESET input. It has an on-chip 100 k Ω pullup resistor.
D1-	13	1	Analog Input	Analog input for monitoring the cathode of the first external temperature sensing diode.
D1+	14	1	Analog Input	Analog input for monitoring the anode of the first external temperature sensing diode.
+12Vin	15	1	Analog Input	Analog input for monitoring +12 V.
+5Vin	16	1	Analog Input	Analog input for monitoring +5 V.
Vccp2/D2-	17	1	Analog Input	Digitally programmable analog input for monitoring Vccp2 (0 to 3.6 V input range) or the cathode of the second external temperature sensing diode.
+2.5Vin/D2+	18	1	Analog Input	Digitally programmable analog input for monitoring +2.5 V or the anode of the second external temperature sensing diode.
Vccp1	19	1	Analog Input	Analog input (0 to 3.6 V input range) for monitoring Vccp1, the core voltage of processor 1.
VID4/IRQ4- VID0/IRQ0	20-24	5	Digital Inputs	Digitally programmable dual function digital inputs. Can be programmed to monitor the VID pins of the Pentium/PRO and Pentium II processors, that indicate the operating voltage of the processor, or as interrupt inputs. The values are read in the VID/Fan Divisor Register and the VID4 Register. These inputs have on-chip 100 k Ω pullup resistors.

LM92

±0.33°C Accurate, 12-Bit + Sign Temperature Sensor and Thermal Window Comparator with Two-Wire Interface

General Description

The LM92 is a digital temperature sensor and thermal window comparator with an I²C™ Serial Bus interface and an accuracy of ±0.33°C. The window-comparator architecture of the LM92 eases the design of temperature control systems. The open-drain Interrupt (INT) output becomes active whenever temperature goes outside a programmable window, while a separate Critical Temperature Alarm (T_CRIT_A) output becomes active when the temperature exceeds a programmable critical limit. The INT output can operate in either a comparator or event mode, while the T_CRIT_A output operates in comparator mode only.

The host can program both the upper and lower limits of the window as well as the critical temperature limit. Programmable hysteresis as well as a fault queue are available to minimize false tripping. Two pins (A0, A1) are available for address selection. The sensor powers up with default thresholds of 2°C T_{HYST}, 10°C T_{LOW}, 64°C T_{HIGH}, and 80°C T_CRIT.

The LM92's 2.7V to 5.5V supply voltage range, Serial Bus interface, 12-bit + sign output, and full-scale range of over 128°C make it ideal for a wide range of applications. These include thermal management and protection applications in personal computers, electronic test equipment, office electronics, automotive, medical and HVAC applications.

Features

- Window comparison simplifies design of ACPI compatible temperature monitoring and control.
- Serial Bus interface
- Separate open-drain outputs for Interrupt and Critical Temperature shutdown

- Shutdown mode to minimize power consumption
- Up to 4 LM92s can be connected to a single bus
- 12-bit + sign output
- Operation up to 150°C

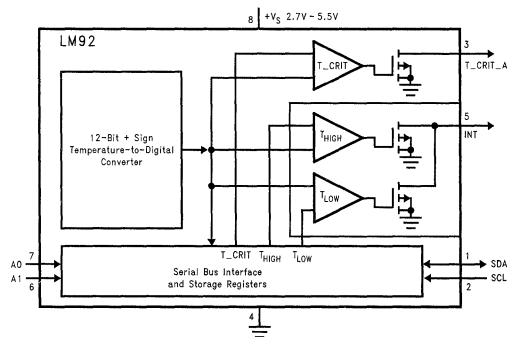

Key Specifications

■ Supply Voltage		2.7V to 5.5V
■ Supply Current	operating	350µA (typ)
		625µA (max)
	shutdown	5µA (typ)
■ Temperature Accuracy	30°C	±0.33°C(max)
	10°C to 50°C	±0.50°C(max)
	-10°C to 85°C	±1.0°C(max)
	125°C	±1.25°C(max)
	-25°C to 150°C	±1.5°C(max)
■ Linearity		±0.5°C(max)
■ Resolution		0.0625°C

Applications

- HVAC
- Medical Electronics
- Electronic Test Equipment
- System Thermal Management
- Personal Computers
- Office Electronics
- Automotive

LM134/LM234/LM334

3-Terminal Adjustable Current Sources

General Description

The LM134/LM234/LM334 are 3-terminal adjustable current sources featuring 10,000:1 range in operating current, excellent current regulation and a wide dynamic voltage range of 1V to 40V. Current is established with one external resistor and no other parts are required. Initial current accuracy is $\pm 3\%$. The LM134/LM234/LM334 are true floating current sources with no separate power supply connections. In addition, reverse applied voltages of up to 20V will draw only a few dozen microamperes of current, allowing the devices to act as both a rectifier and current source in AC applications.

The sense voltage used to establish operating current in the LM134 is 64mV at 25°C and is directly proportional to absolute temperature (°K). The simplest one external resistor connection, then, generates a current with $\approx +0.33\%/^{\circ}\text{C}$ temperature dependence. Zero drift operation can be obtained by adding one extra resistor and a diode.

Applications for the current sources include bias networks, surge protection, low power reference, ramp generation,

LED driver, and temperature sensing. The LM234-3 and LM234-6 are specified as true temperature sensors with guaranteed initial accuracy of $\pm 3^{\circ}\text{C}$ and $\pm 6^{\circ}\text{C}$, respectively. These devices are ideal in remote sense applications because series resistance in long wire runs does not affect accuracy. In addition, only 2 wires are required.

The LM134 is guaranteed over a temperature range of -55°C to $+125^{\circ}\text{C}$, the LM234 from -25°C to $+100^{\circ}\text{C}$ and the LM334 from 0°C to $+70^{\circ}\text{C}$. These devices are available in TO-46 hermetic, TO-92 and SO-8 plastic packages.

Features

- Operates from 1V to 40V
- 0.02%/V current regulation
- Programmable from 1 μA to 10mA
- True 2-terminal operation
- Available as fully specified temperature sensor
- $\pm 3\%$ initial accuracy

LM135/LM235/LM335, LM135A/LM235A/LM335A Precision Temperature Sensors

General Description

The LM135 series are precision, easily-calibrated, integrated circuit temperature sensors. Operating as a 2-terminal zener, the LM135 has a breakdown voltage directly proportional to absolute temperature at +10 mV/°K. With less than 1Ω dynamic impedance the device operates over a current range of 400 μA to 5 mA with virtually no change in performance. When calibrated at 25°C the LM135 has typically less than 1°C error over a 100°C temperature range. Unlike other sensors the LM135 has a linear output.

Applications for the LM135 include almost any type of temperature sensing over a -55°C to +150°C temperature range. The low impedance and linear output make interfacing to readout or control circuitry especially easy.

The LM135 operates over a -55°C to +150°C temperature range while the LM235 operates over a -40°C to +125°C

temperature range. The LM335 operates from -40°C to +100°C. The LM135/LM235/LM335 are available packaged in hermetic TO-46 transistor packages while the LM335 is also available in plastic TO-92 packages.

Features

- Directly calibrated in °Kelvin
- 1°C initial accuracy available
- Operates from 400 μA to 5 mA
- Less than 1Ω dynamic impedance
- Easily calibrated
- Wide operating temperature range
- 200°C overrange
- Low cost

LM1279

110 MHz RGB Video Amplifier System with OSD

General Description

The LM1279 is a full featured and low cost video amplifier with OSD (On Screen Display). 8V operation for low power and increased reliability. Supplied in a 20-pin DIP package, accommodating very compact designs of the video channel requiring OSD. All video functions controlled by 0V to 4V high impedance DC inputs. This provides easy interfacing to 5V DACs used in computer controlled systems and digital alignment systems. Unique OSD switching, no OSD switching signal required. An OSD signal at any OSD input typically switches the LM1279 to the OSD mode within 5 ns. Ideal video amplifier for the low cost OSD monitor with resolutions up to 1280 x 1024. The LM1279 provides superior protection against ESD. Excellent alternative for the MC13282 in new designs.

Features

- Three wideband video amplifiers 110 MHz @ -3dB (4 V_{PP} output)
- OSD signal to any OSD input pin automatically switches all 3 outputs to the OSD mode

- Fast OSD switching time, typically 5 ns
- 3.5 kV ESD protection
- Fixed cutoff level typically set to 1.35V
- 0V to 4V, high impedance DC contrast control with over 40 dB range
- 0V to 4V, high impedance DC drive control (0 dB to -12 dB range)
- Matched (± 0.3 dB or 3.5%) attenuators for contrast control
- Output stage directly drives CRT drivers
- Ideal combination with LM2407 CRT driver

Applications

- High resolution RGB CRT monitors
- Video AGC amplifiers
- Wideband amplifiers with contrast and drive controls
- Interface amplifiers for LCD or CCD systems

Block and Connection Diagram

LM1281

85 MHz RGB Video Amplifier System with On Screen Display (OSD)

General Description

The LM1281 is a full feature video amplifier with OSD inputs, all within a 28-pin package. This part is intended for use in monitors with resolutions up to 1024 x 768. The video section of the LM1281 features three matched video amplifiers with blanking. All of the video amplifier adjustments feature high input impedance 0V to 4V DC controls, providing easy interfacing to bus controlled alignment systems. The OSD section features three TTL inputs and a DC contrast control. The switching between the OSD and video section is controlled by a single TTL input. Although the OSD signals are TTL inputs, these signals are internally processed to match the OSD logic low level to the video black level. When adjusting the drive controls for color balance of the video signal, the color balance of the OSD display will track these color adjustments. The LM1281 also features an internal spot killer circuit to protect the CRT when the monitor is turned off. For applications without OSD insertion please refer to the LM1205 or LM1208 data sheets.

- TTL OSD inputs, 50 MHz bandwidth
- On chip blanking, outputs under 0.1 V when blanked
- High speed Video/OSD switch
- Independent drive control for each channel for color balance
- 0V to 4V, high impedance DC contrast control with over 40 dB range
- 0V to 4V, high impedance DC drive control (0 dB to -12 dB range)
- 0V to 4V, high impedance DC OSD contrast control with over 40 dB range
- Capable of 7 V_{PP} output swing (slight reduction in bandwidth)
- Output stage directly drives most hybrid or discrete CRT drivers

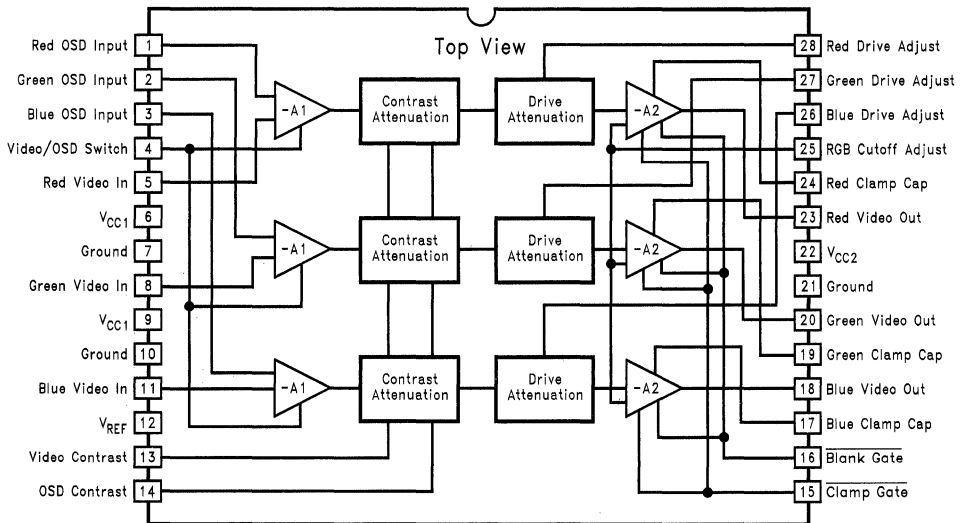

Applications

- High resolution RGB CRT monitors requiring OSD capability

Features

- Three wideband video amplifiers 85 MHz @ -3 dB (4 V_{PP} output)

LM1282

110 MHz RGB Video Amplifier System with On Screen Display (OSD)

General Description

The LM1282 is a full feature video amplifier with OSD inputs, all within a 28-pin package. This part is intended for use in monitors with resolutions up to 1280 x 1024. The video section of the LM1282 features three matched video amplifiers with blanking. All of the video amplifier adjustments feature high input impedance 0V to 4V DC controls, providing easy interfacing to bus controlled alignment systems. The OSD section features three TTL inputs and a DC contrast control. The switching between the OSD and video section is controlled by a single TTL input. Although the OSD signals are TTL inputs, these signals are internally processed to match the OSD logic low level to the video black level. When adjusting the drive controls for color balance of the video signal, the color balance of the OSD display will track these color adjustments. The LM1282 also features an internal spot killer circuit to protect the CRT when the monitor is turned off. For applications without OSD insertion please refer to the LM1205 or LM1208 data sheets.

- TTL OSD inputs, 50 MHz bandwidth
- On chip blanking, outputs under 0.1 V when blanked
- High speed Video/OSD switch
- Independent drive control for each channel for color balance
- 0V to 4V, high impedance DC contrast control with over 40 dB range
- 0V to 4V, high impedance DC drive control (0 dB to -12 dB range)
- 0V to 4V, high impedance DC OSD contrast control with over 40 dB range
- Capable of 7 V_{PP} output swing (slight reduction in bandwidth)
- Output stage directly drives most hybrid or discrete CRT drivers

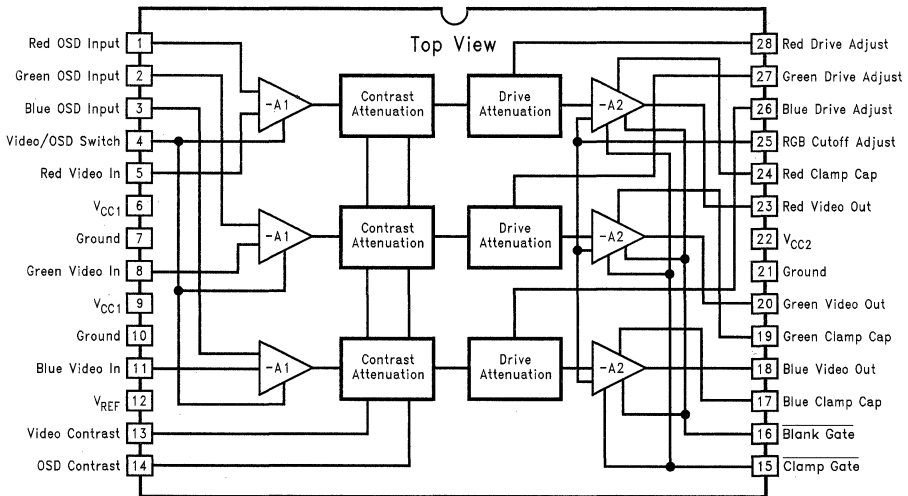

Applications

- High resolution RGB CRT monitors requiring OSD capability

Features

- Three wideband video amplifiers 110 MHz @ -3 dB (4 V_{PP} output)

LM1283

140 MHz RGB Video Amplifier System with On Screen Display (OSD)

General Description

The LM1283 is a full feature video amplifier with OSD inputs, all within a 28-pin package. This part is intended for use in monitors with resolutions up to 1280 x 1024. The video section of the LM1283 features three matched video amplifiers with blanking. All of the video amplifier adjustments feature high input impedance 0V to 4V DC controls, providing easy interfacing to bus controlled alignment systems. The OSD section features three TTL inputs and a DC contrast control. The switching between the OSD and video section is controlled by a single TTL input. Although the OSD signals are TTL inputs, these signals are internally processed to match the OSD logic low level to the video black level. When adjusting the drive controls for color balance of the video signal, the color balance of the OSD display will track these color adjustments. The LM1283 also features an internal spot killer circuit to protect the CRT when the monitor is turned off. For applications without OSD insertion please refer to the LM1205 or LM1208 data sheets.

- TTL OSD inputs, 50 MHz bandwidth
- On chip blanking, outputs under 0.1 V when blanked
- Video/OSD switch speed of 7 ns
- Independent drive control for each channel for color balance
- 0V to 4V, high impedance DC contrast control with over 40 dB range
- 0V to 4V, high impedance DC drive control (0 dB to -12 dB range)
- 0V to 4V, high impedance DC OSD contrast control with over 40 dB range
- Capable of 6.5 V_{PP} output swing (slight reduction in bandwidth)
- Output stage directly drives most hybrid or discrete CRT drivers

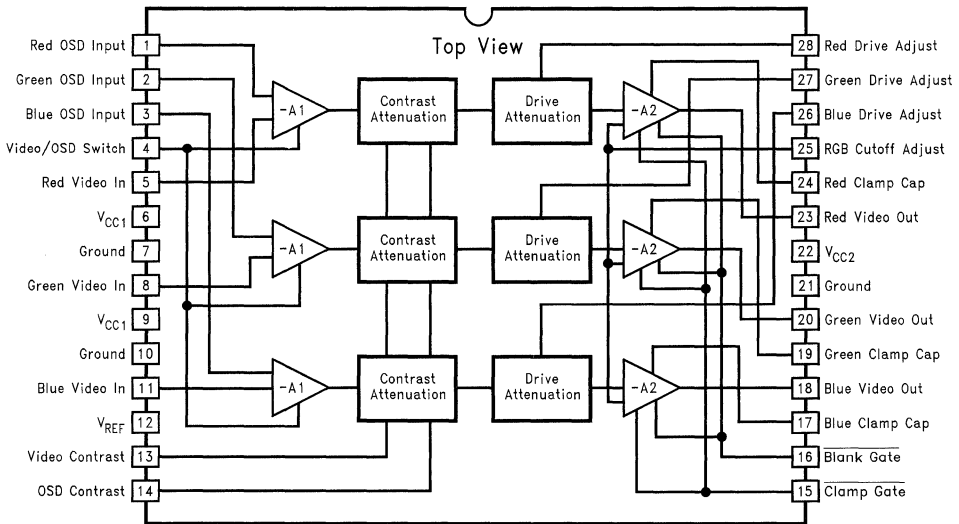

Applications

- High resolution RGB CRT monitors requiring OSD capability

Features

- Three wideband video amplifiers 140 MHz @ -3 dB (4 V_{PP} output)

LM2202

230 MHz Video Amplifier System

General Description

The LM2202 is a very high frequency video amplifier system intended for use in high resolution monochrome or RGB color monitor applications. In addition to the wideband video amplifier the LM2202 contains a gated differential input black level clamp comparator for brightness control, a DC controlled attenuator for contrast control and a DC controlled sub contrast attenuator for drive control. The DC control for the contrast attenuator is pinned out separately to provide a more accurate control system for RGB color monitor applications. All DC controls offer a high input impedance and operate over a 0V to 4V range for easy interface to bus controlled alignment systems. The LM2202 operates from a nominal 12V supply but can be operated with supply voltages down to 8V for applications that require reduced IC package power dissipation characteristics.

Features

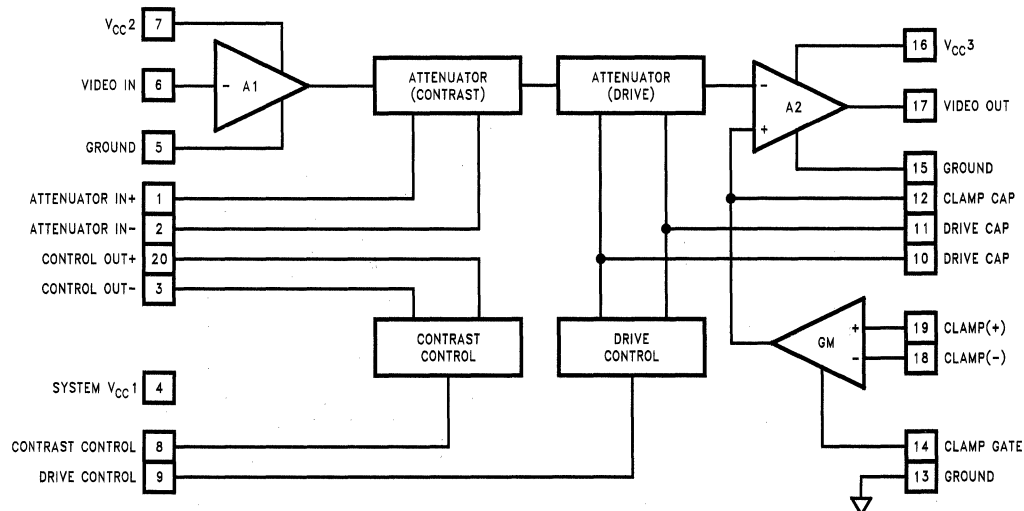

- Wideband video amplifier
($f_{-3dB} = 230 \text{ MHz}$ at $V_O = 4 V_{PP}$)

- $t_r, t_f = 1.5 \text{ ns}$ at $V_O = 4 V_{PP}$
- Externally gated comparator for brightness control
- 0V to 4V high input impedance DC contrast control (>40 dB range)
- 0V to 4V high input impedance DC drive control ($\pm 3 \text{ dB}$ range)
- Easy to parallel three LM2202s for optimum color tracking in RGB systems
- Output stage clamps to 0.65V and provides up to 9V output voltage swing
- Output stage directly drives most hybrid or discrete CRT amplifier stages
- Replacement for the LM1202

Applications

- High resolution CRT monitors
- Video switches
- Video AGC amplifier
- Wideband amplifier with gain and DC offset control

LM1253A

Monolithic Triple 180 MHz I²C CRT Pre-amp With Integrated Analog On Screen Display (OSD) Generator

General Description

The LM1253A pre-amp is an integrated high voltage triple CRT pre-amp and Analog On Screen Display (OSD) generator. The IC is I²C controlled, and allows control of all the parameters necessary to setup and adjust the brightness and contrast in the CRT display. In addition, it provides a programmable period vertical blanking pulse which is used to blank the G1.

The LM1253A pre-amp is designed to work in cooperation with the LM2453 driver, and provides a multiplexed video signal (VideoPlex) interface to enable the DC clamp levels at the cathode to be varied in order to set up the CRT bias and to allow individual adjustment for brightness.

The Analog OSD has a selectable palette allowing a wide selection of colors. The preset level of the OSD can be controlled by I²C to suit different CRT displays. The OSD signal is internally mixed with the video signal, before the gain section, and thus gives excellent white tracking of the OSD with the white color point setting of the video.

The Brightness settings are also mixed into the video signal before the gain matching controls and consequently give excellent white color point tracking with variations in the Brightness control. An active horizontal blanking signal is added to the video at the output, giving excellent smear performance, and preventing video content dependent DC bias offsets as a result of high frequency over shoot.

The OSD horizontal sync and blanking signal is derived from a positive going flyback pulse. The digital section provides easy interfacing of this signal with the deflection circuits.

The vertical blanking signal is taken from the vertical sync signal, and the blanking duration is programmable. This system is highly integrated and requires a minimal number of external components.

Black level clamping of the signal is carried out directly on the AC coupled input signal into the high impedance pre-amplifier input, thus eliminating the need for additional black level clamp capacitors.

The outputs are referenced to a DC level produced by the LM1253A Pre-amp, and so are guaranteed to provide stable DC operating levels within the system without the need for additional external feedback components.

The IC is packaged in an industry standard wide body 28-lead DIL molded plastic package.

Features

- 190 two-color ROM based Character Fonts
- 64 four-color ROM based Character Fonts
- Supports a programmable page size with up to 512 characters and line definition codes
- Support for 2 Display Windows (size of each window is configurable)
- Programmable start position for each Display Window
- Programmable Resolutions: from 512 to 960 pixels per line in 64 pixel increments
- Programmable Character Height, with automatic height control with mode change
- Programmable Row Spacing between each display character row
- Maximum Pixel clock of 92.2 MHz
- I²C compatible interface to controlling micro-controller
- Button boxes
- 180 MHz preamplifier with full video signal parametric control
- VideoPlex™ interface to the LM2453 driver
- OSD mixing with 64 out of 512 color mask programmable selection

Intended Applications

- 1280 x 1024 Displays up to 75 Hz requiring OSD capability

LM2453 Monolithic Triple 6 nS CRT Driver With Integrated Clamp and G1 Blanking

General Description

The AC2DC driver is an integrated high voltage triple CRT driver circuit designed for use in color monitor applications. The input signal interface to the IC is a multiplexed signal containing both clamp and video signal information, relative to a 1.7 V_{DC} reference.

The IC contains three high gain, high input impedance, wide band amplifiers which directly drive the RGB cathodes of a CRT. Each channel has its gain internally set to -52 and can drive CRT capacitive loads as well as resistive loads present in other applications, limited only by the package's power dissipation.

Integrated with the driver is triple clamp circuit for DC recovery of each of the AC coupled outputs. The DC clamp circuit amplifies the clamp signal that is multiplexed on the video signal input. The DC clamp amplifiers are high gain, high input impedance amplifiers, setting a low impedance DC level at the clamp output which can be used to restore the DC level of the cathode drive. Each channel has a gain that is internally set to +73.

Also integrated within the package is a 40 V_{p-p} vertical blanking driver that is designed to provide vertical retrace blanking on G1 of the CRT. This is a current limited, low impedance output capable of driving normal G1 decoupling ca-

pacitances via an external resistor. The output of the G1 driver can also be used to drive a voltage boost capacitor (22 μF). When connected between the G1 drive output and the 120V supply input pin, a 120V boost supply is achieved which can be used to drive the internal DC clamp circuit, thereby eliminating the requirement for a 120V clamp supply.

The IC is packaged in an industry standard 15-lead TO-220 molded plastic power package.

Features

- Low power dissipation
- Well matched with LM1253A video pre-amp
- Three wideband video amplifiers
- Three integrated active clamp circuits
- Convenient TO-220 staggered lead package
- Built in horizontal blanking
- Integrated 120V supply and G1 vertical blank drive circuit

Applications

- 1280 x 1024 Resolution displays up to 75 Hz refresh
- Pixel clock frequencies up to 135 MHz
- Monitors requiring horizontal video blanking

Package Pinout

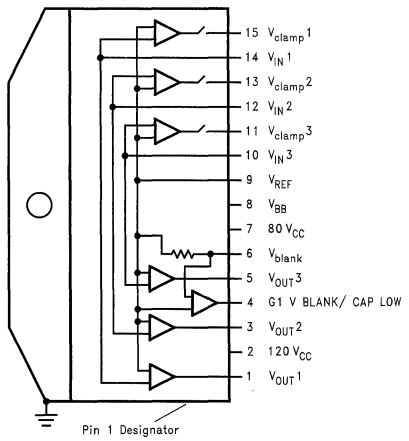

FIGURE 2. LM2453 Package Pinout
Order Number LM2453TA

Special Features

MULTIPLEXED VIDEO SIGNAL INPUT

The LM2453 accepts the multiplexed video signal from the LM1253 which contains the video signal and DC clamp level. This multiplexed signal is shown in *Figure 3*. It was designed to simplify the interface between the pre-amp and CRT

Driver. Slightly over 1V of dynamic range is provided for the video and OSD portions of the waveform. The clamp signal control voltage range is approximately 0.9V. The typical numbers for the black and white levels shown correspond to a nominal swing of 40 V_{P-P} (from 25 to 65) at the video outputs of the LM2453. The clamp pulse lower level is used to set the voltage at the clamp outputs of the LM2453.

FIGURE 3. National LM1253 Multiplexed Video Signal

LM2402

Monolithic Triple 3 ns CRT Driver

General Description

The LM2402 is an integrated high voltage CRT driver circuit designed for use in high resolution color monitor applications. The IC contains three high input impedance, wide band amplifiers which directly drive the RGB cathodes of a CRT. Each channel has its gain internally set to -14 and can drive CRT capacitive loads as well as resistive loads presented by other applications, limited only by the package's power dissipation.

The IC is packaged in an industry standard 11 lead TO-220 molded plastic power package. See thermal considerations on page 5.

Features

- Rise/fall times typically 3.0/2.8 ns with 8 pF load at 40 V_{PP}

- Well matched with LM2202 video preamps
- Output swing capability: 50 V_{PP} for V_{CC} = 80V
- 1V to 5V input range
- Stable with 0-20 pF capacitive loads and inductive peaking networks
- Convenient TO-220 staggered lead package style
- Standard LM240X family pinout which is designed for easy PCB layout

Applications

- CRT driver for color monitors with display resolutions up to 1600 x 1200
- Pixel clock frequency up to 200 MHz

LM2403

Monolithic Triple 4.5 nS CRT Driver

General Description

The LM2403 is an integrated high voltage CRT driver circuit designed for use in high resolution color monitor applications. The IC contains three high input impedance, wide band amplifiers which directly drive the RGB cathodes of a CRT. Each channel has its gain internally set to -14 and can drive CRT capacitive loads as well as resistive loads presented by other applications, limited only by the package's power dissipation.

The IC is packaged in an industry standard 11 lead TO-220 molded plastic power package. See thermal considerations on page 5.

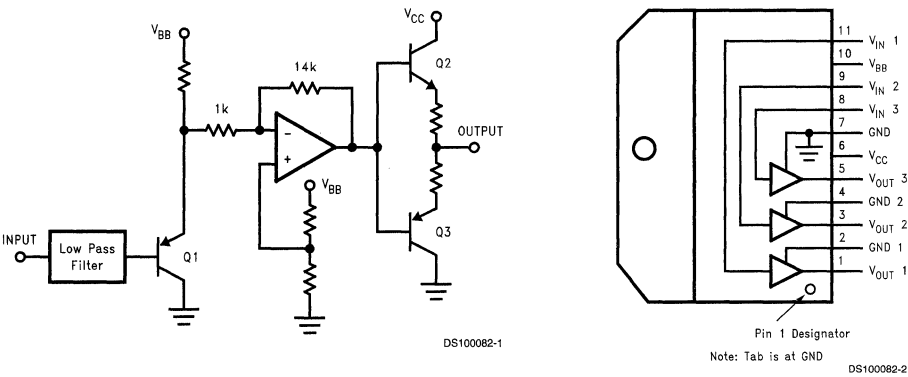

Features

- Rise/fall times typically 4.5 nS with 8 pF load at 40 V_{pp}
- Well matched with LM1283 video preamp
- Output swing capability: 60 V_{pp} for V_{CC} = 80V
- 1V to 5V input range
- Stable with 0 pF–20 pF capacitive loads and inductive peaking networks
- Convenient TO-220 staggered lead package style
- Standard LM240X Family Pinout which is designed for easy PCB layout

Applications

- CRT driver for color monitors with display resolutions up to 1600 x 1200
- Pixel clock frequency up to 160 MHz

LM2405

Monolithic Triple 7 ns CRT Driver

General Description

The LM2405 is an integrated high voltage CRT driver circuit designed for use in color monitor applications. The IC contains three high input impedance, wide band amplifiers which directly drive the RGB cathodes of a CRT. Each channel has its gain internally set at -14 and can drive CRT capacitive loads as well as resistive loads presented by other applications, limited only by the package's power dissipation.

The IC is packaged in an industry standard 11 lead TO-220 molded plastic power package. See thermal considerations on page 5.

Features

- Rise/fall times typically 7 ns with 8 pF load

- Output swing capability:
 - 50 V_{PP} for $V_{CC} = 80$
 - 40 V_{PP} for $V_{CC} = 70$
 - 30 V_{PP} for $V_{CC} = 60$
- Pinout designed for easy PCB layout
- 0V to 6V input range
- Stable with 0 pF–20 pF capacitive loads
- Convenient TO-220 staggered lead package style

Applications

- CRT driver for 1280 x 1024 (Non-interlaced) and XGA display resolution color monitors
- Pixel clock frequency up to 130 MHz
- Monitors using video blanking

LM2407

Monolithic Triple 7.5 nS CRT Driver

General Description

The LM2407 is an integrated high voltage CRT driver circuit designed for use in color monitor applications. The IC contains three high input impedance, wide band amplifiers which directly drive the RGB cathodes of a CRT. Each channel has its gain internally set to -14 and can drive CRT capacitive loads as well as resistive loads present in other applications, limited only by the package's power dissipation. The IC is packaged in an industry standard 11-lead TO-220 molded plastic power package. See thermal considerations on page 6.

Features

- Low power dissipation
- Well matched with LM1279 video preamp
- 0V to 5V input range
- Stable with 0 pF–20 pF capacitive loads and inductive peaking networks
- Convenient TO-220 staggered lead package style
- Standard LM240X Family Pinout which is designed for easy PCB layout

Applications

- 1024 x 768 displays up to 85 Hz refresh
- Pixel clock frequencies up to 100 MHz
- Monitors using video blanking

LM2409

Monolithic Triple 9.5 ns CRT Driver

General Description

The LM2409 is an integrated high voltage CRT driver circuit designed for use in color monitor applications. The IC contains three high input impedance, wide band amplifiers which directly drive the RGB cathodes of a CRT. Each channel has its gain internally set to -14 and can drive CRT capacitive loads as well as resistive loads present in other applications, limited only by the package's power dissipation.

The IC is packaged in an industry standard 11-lead TO-220 molded plastic power package. See Thermal Considerations section.

Features

- Dissipates approximately 50% less power than the LM2406

- Well matched with LM1279 video preamp
- 0V to 5V input range
- Stable with 0 pF–20 pF capacitive loads and inductive peaking networks
- Convenient TO-220 staggered lead package style
- Standard LM240X Family Pinout which is designed for easy PCB layout

Applications

- 1024 x 768 Displays up to 70 Hz Refresh
- Pixel clock frequencies up to 75 MHz
- Monitors using video blanking

LM2415 Monolithic Triple 5.5 ns CRT Driver

General Description

The LM2415 is an integrated high voltage CRT driver circuit designed for use in color monitor applications. The IC contains three high input impedance, wide band amplifiers which directly drive the RGB cathodes of a CRT. Each channel has its gain internally set to -14 and can drive CRT capacitive loads as well as resistive loads present in other applications, limited only by the package's power dissipation.

The IC is packaged in an industry standard 11-lead TO-220 molded plastic power package. See Thermal Considerations section.

Features

- Dissipates approximately 45% less power than the LM2405

- Well matched with LM1279 and LM1282 video preamps
- 0V to 5V input range
- Stable with 0 pF–20 pF capacitive loads and inductive peaking networks
- Convenient TO-220 staggered lead package style
- Standard LM240X Family Pinout which is designed for easy PCB layout

Applications

- 1280 x 1024 Displays up to 75 Hz Refresh
- Pixel clock frequencies up to 135 MHz
- Monitors using video blanking

LM2435

Monolithic Triple 5.5 ns CRT Driver

General Description

The LM2435 is an integrated high voltage CRT driver circuit designed for use in color monitor applications. The IC contains three high input impedance, wide band amplifiers which directly drive the RGB cathodes of a CRT. Each channel has its gain internally set to -14 and can drive CRT capacitive loads as well as resistive loads present in other applications, limited only by the package's power dissipation.

The IC is packaged in an industry standard 9-lead TO-220 molded plastic power package. See Thermal Considerations section.

Features

- Dissipates approximately 45% less power than the LM2405

- Well matched with LM1279 and LM1282/83 video preamps
- 0V to 5V input range
- Stable with 0 pF–20 pF capacitive loads and inductive peaking networks
- Convenient TO-220 staggered lead package style
- Standard LM243X Family Pinout which is designed for easy PCB layout

POWER SUPPLY SUPERVISOR PRODUCTS

Part Number	Function	Input Range or Threshold	Output	Features	Package (Note 1)
LM809	Power-on Reset	2.63, 2.93, 3.08, 4.00, 4.38, 4.63V	Reset Flag	Active Low $\overline{\text{RESET}}$ Output	M3
LM810	Power-on Reset	2.63, 2.93, 3.08, 4.00, 4.38, 4.63V	Reset Flag	Active High RESET Output	M3
LM2601	External Charger Power Source Detector for Portable Computer	5V - 24V	Logic Flags	Adapter Present and Charger Present Logic Outputs to Inform CPU of Proper Bus Power Configuration	TSSOP-14
LMC6953	PCI Local Bus Supervisor	1.5-6, 3.3, 5V	Reset Flag	Power-on reset with adjustable delay.	M8
LP3470	Power-on Reset	2.63, 2.93, 3.08, 4.00, 4.38, 4.63V	Reset Flag	Adjustable delay. Custom voltages available (2.4V-5.0V)	M5

Note 1: Package designation includes number of pins:

M = plastic surface-mount

M3 = 3 Lead SOT-23

M5 = 5 Lead SOT-23

N = plastic dual-in-line

TSSOP-14 = 14-Lead Thin Shrink Small-Outline Package

Note 2: Refer to the Low Dropout Linear Voltage Regulators for product data for the LM3460 voltage controller.

LM809/LM810

3-Pin Microprocessor Reset Circuits

General Description

The LM809/810 microprocessor supervisory circuits can be used to monitor the power supplies in microprocessor and digital systems. They provide a reset to the microprocessor during power-up, power-down and brown-out conditions.

The function of the LM809/810 is to monitor the V_{CC} supply voltage, and assert a reset signal whenever this voltage declines below the factory-programmed reset threshold. The reset signal remains asserted for 240ms after V_{CC} rises above the threshold. The LM809 has an active-low $\overline{\text{RESET}}$ output, while the LM810 has an active-high RESET output.

Six standard reset voltage options are available, suitable for monitoring 5V, 3.3V, and 3V supply voltages.

With a low supply current of only 15 μA , the LM809/810 are ideal for use in portable equipment. The LM809/LM810 are available in the 3-pin SOT23 package.

Features

- Precise monitoring of 3V, 3.3V, and 5V supply voltages
- Superior upgrade to MAX809/810
- Fully specified over temperature
- 140ms min. Power-On Reset pulse width, 240ms typical
 - Active-low $\overline{\text{RESET}}$ Output (LM809)
 - Active-high RESET Output (LM810)
- Guaranteed RESET Output valid for $V_{CC} \geq 1\text{V}$
- Low Supply Current, 15 μA typ.
- Power supply transient immunity

Applications

- Microprocessor Systems
- Computers
- Controllers
- Intelligent Instruments
- Portable/Battery-Powered Equipment
- Automotive

Typical Application Circuit

Pin Description

PIN	NAME	FUNCTION
1	GND	Ground reference
2	RESET (LM809)	Active-low output. RESET remains low while V_{CC} is below the reset threshold, and for 240ms after V_{CC} rises above the reset threshold.
	RESET (LM810)	Active-high output. RESET remains high while V_{CC} is below the reset threshold, and for 240ms after V_{CC} rises above the reset threshold.
3	V_{CC}	Supply Voltage (+5V, +3.3V, or +3.0V)

LM2601

Adapter Interface Circuit

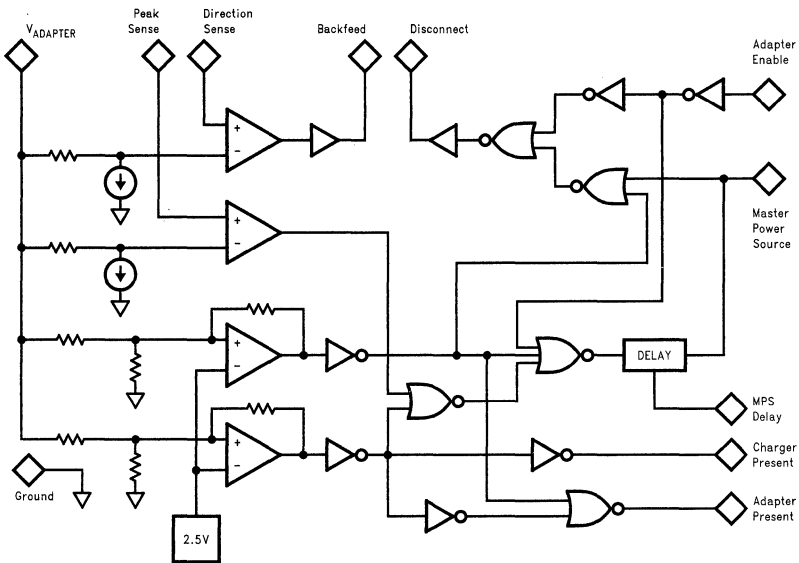

General Description

The Adapter Interface Circuit (AIC) is used to sense the presence of an external power source for a portable computer. It notifies the computer if a source is present and indicates if the source is appropriate for charging battery packs inside the computer. The AIC also senses current thresholds and signals the computer when these thresholds are exceeded.

Features

- Wide input range: 5V - 24V
- Low leakage current: 1 μ A typical
- Available in TSSOP-14 package

Ordering Information

Order Number	Package Number	Package Type	Supplied As*
LM2601MTC	MTC14	TSSOP-14	Rail (94 Units/Rail)
LM2601MTCX	MTC14	TSSOP-14	Tape and Reel (2500 Units/Reel)

* Partial Rails are available, there is no minimum order quantity. Tape and Reel is supplied as full reels only.

Pin Description

Pin No.	Name	Function
1	MPS DELAY	A capacitor between this pin and ground sets the delay of the MPS risetime.
2	MASTER POWER SOURCE	Bi-directional logic pin. If driven high by an external source, indicates external source is driving the power buss. If driven high by the AIC, indicates the adapter is powering the buss.
3	ADAPTER ENABLE	Logic input pin. Grants permission to the adapter to drive both the power buss and the MPS signal.
4	ADAPTER PRESENT	Logic output pin. High when $12 \text{ volts} < V_{\text{ADAPTER}} < 17 \text{ volts}$.
5	CHARGER PRESENT	Logic output pin. High when $V_{\text{ADAPTER}} > 17 \text{ volts}$.
9	GND	IC ground pin.
10	DISCONNECT	Drives the gate of the disconnect FET.
11	BACKFEED	Drives the gate of the backfeed FET.
12	DIRECTION SENSE	Connection for current sense resistor to control BACKFEED.
13	PEAK SENSE	Connection for current sense resistor to control DISCONNECT.
14	V_{ADAPTER}	Power input pin. Output of AC adapter, auto adapter or airline adapter.

LM3411

Precision Secondary Regulator/Driver

General Description

The LM3411 is a low power fixed-voltage (3.3V or 5.0V) precision shunt regulator designed specifically for driving an optoisolator to provide feedback isolation in a switching regulator.

The LM3411 circuitry includes an internally compensated op amp, a bandgap reference, NPN output transistor, and voltage setting resistors.

A trimmed precision bandgap reference with temperature drift curvature correction, provides a guaranteed 1% precision over the operating temperature range (A grade version). The amplifier's inverting input is externally accessible for loop frequency compensation when used as part of a larger servo system. The output is an open-emitter NPN transistor capable of driving up to 15 mA of load current.

Because of its small die size, the LM3411 has been made available in the sub-miniature 5-lead SOT23-5 surface mount package. This package is ideal for use in space critical applications.

Although its main application is to provide a precision output voltage (no trimming required) and maintain very good regulation in isolated DC/DC converters, it can also be used with

other types of voltage regulators or power semiconductors to provide a precision output voltage without precision resistors or trimming.

Features

- Fixed voltages of 3.3V and 5.0V with initial tolerance of $\pm 1\%$ for standard grade and $\pm 0.5\%$ for A grade
- Custom voltages available (3V–17V)
- Wide output current range, 20 μA –15 mA
- Low temperature coefficient
- Available in 5-lead SOT23-5 surface mount package (tape and reel)

Applications

- Secondary controller for isolated DC/DC PWM switching regulators systems
- Use with LDO regulator for high-precision fixed output regulators
- Precision monitoring applications
- Use with many types of regulators to increase precision and improve performance

Five Lead Surface Mount Package Marking and Order Information (SOT23-5)

The small SOT23-5 package allows only 4 alphanumeric characters to identify the product. The table below contains the field information marked on the package.

	Grade	Order Information	Package Marking	Supplied as
3.3V	A (Prime)	LM3411AM5-3.3	D00A	1000 unit increments on tape and reel
3.3V	A (Prime)	LM3411AM5X-3.3	D00A	3000 unit increments on tape and reel
3.3V	B (Standard)	LM3411M5-3.3	D00B	1000 unit increments on tape and reel
3.3V	B (Standard)	LM3411M5X-3.3	D00B	3000 unit increments on tape and reel
5.0V	A (Prime)	LM3411AM5-5.0	D01A	1000 unit increments on tape and reel
5.0V	A (Prime)	LM3411AM5X-5.0	D01A	3000 unit increments on tape and reel
5.0V	B (Standard)	LM3411M5-5.0	D01B	1000 unit increments on tape and reel
5.0V	B (Standard)	LM3411M5X-5.0	D01B	3000 unit increments on tape and reel

FIGURE 1. SOT23-5 Marking and Order Information

The first letter "D" identifies the part as a Driver, the next two numbers indicate the voltage, "00" for 3.3V part and "01" for a 5V part. The fourth letter indicates the grade, "B" for standard grade, "A" for the prime grade.

The SOT23-5 surface mount package is only available on tape in quantities increments of 250 on tape and reel (indicated by the letters "M5" in the part number), or in quantities increments of 3000 on tape and reel (indicated by the letters "M5X" in the part number).

LM3812/LM3813

Precision Current Gauge IC with Ultra Low Loss Sense Element and PWM Output

General Description

The LM3812/LM3813 Current Gauges provide easy to use precision current measurement with virtually zero insertion loss (typically 0.004 Ω). The LM3812 is used for high-side sensing and the LM3813 is used for low-side sensing.

A Delta Sigma analog to digital converter is incorporated to precisely measure the current and to provide a current averaging function. Current is averaged over 50 msec time periods in order to provide immunity to current spikes. The ICs have a pulse-width modulated (PWM) output which indicates the current magnitude and direction. The shutdown pin can be used to inhibit false triggering during start-up, or to enter a low quiescent current mode.

The LM3812 and LM3813 are factory-set in two different current options. The sense range is -1A to $+1\text{A}$ or -7A to $+7\text{A}$. The sampling interval for these parts is 50ms. If faster sampling is desired, please refer to the data sheets for the part numbers LM3814 and LM3815.

Key Specifications

- Ultra low insertion loss (typically 0.004 Ω)
- 2V to 5.25V supply range
- $\pm 2\%$ accuracy at room temperature (includes accuracy of the internal sense element) (LM3812-1.0, LM3813-1.0)
- Low quiescent current in shutdown mode (typically 2.5 μA)
- 50 msec sampling interval

Features

- No external sense element required
- PWM output indicates the current magnitude and direction
- PWM output can be interfaced with microprocessors
- Precision $\Delta\Sigma$ current-sense technique
- Low temperature sensitivity
- Internal filtering rejects false trips
- Internal Power-On-Reset (POR)

Applications

- Battery charge/discharge gauge
- Motion control diagnostics
- Power supply load monitoring and management
- Resettable smart fuse

* Suffix M indicates that the part is available in Surface Mount package. Suffix X indicates that the part is available in 2.5k units on Tape and Reel.

* Current is sampled over a fixed interval. The average current during this interval is indicated by the duty cycle of the PWM output during next interval.

[‡] The Package code M08A is internal to National Semiconductor and indicates an 8-lead surface mount package, SO-8.

Pin Description (High-Side, LM3812)

Pin	Name	Function
1	SENSE+, V _{DD}	High side of internal current sense, also supply voltage.
2	SENSE-	Low side of internal current sense.
3	FLTR+	Filter input — provides anti-aliasing for delta sigma modulator.
4	FLTR-	Filter input.
5	SD	Shutdown pin. Connected to V _{DD} through a pull up resistor for normal operation. When low, the IC goes into a low current mode (typically 3 μA).
6	PWM	PWM output indicates the current magnitude and direction.
7	GND	Ground
8	GND	Ground

Pin Description (Low-Side, LM3813)

Pin	Name	Function
1	SENSE+, GND	High side of internal current sense, also ground.
2	SENSE-	Low side of internal current sense.
3	FLTR+	Filter input – provides anti-aliasing for delta sigma modulator.
4	FLTR-	Filter input.
5	SD	Shutdown pin. Connected to V _{DD} through a pull up resistor for normal operation. When low, the IC goes into a low current mode (typically 3 μA).
6	PWM	PWM output indicates the current magnitude and direction.
7	GND	Ground
8	V _{DD}	V _{DD} (supply)

LM3814/LM3815

Fast Current Gauge IC with Ultra Low Loss Sense Element and PWM Output

General Description

The LM3814/LM3815 Current Gauges provide easy to use precision current measurement with virtually zero insertion loss (typically 0.004Ω). The LM3814 is used for high-side sensing and the LM3815 is used for low-side sensing.

A Delta Sigma analog to digital converter is incorporated to precisely measure the current and to provide a current averaging function. Current is averaged over 6 msec time periods in order to provide immunity to current spikes. The ICs have a pulse-width modulated (PWM) output which indicates the current magnitude and direction. The shutdown pin can be used to inhibit false triggering during start-up, or to enter a low quiescent current mode.

The LM3814 and LM3815 are factory-set in two different current options. The sense range is -1A to +1A or -7A to +7A. The user specifies a particular part number to match the current range for a given application. The sampling interval for these parts is 6ms. If larger sampling interval is desired for better accuracy, please refer to the data sheets for the part numbers LM3812 and LM3813.

Key Specifications

- Ultra low insertion loss (typically 0.004Ω)
- 2V to 5.25V supply range
- ±3.5% accuracy at room temperature (includes accuracy of the internal sense element) (LM3814-1.0, LM3815-1.0)
- Low quiescent current in shutdown mode (typically 2.5 μA)
- 6 msec sampling interval

Features

- No external sense element required
- PWM output indicates the current magnitude and direction
- PWM output can be interfaced with microprocessors
- Precision ΔΣ current-sense technique
- Low temperature sensitivity
- Internal filtering rejects false trips
- Internal Power-On-Reset (POR)

Applications

- Battery charge/discharge gauge
- Motion control diagnostics
- Power supply load monitoring and management
- Resettable smart fuse

LM3822

Precision Current Gauge IC with Internal Zero Ohm Sense Element and PWM Output

General Description

The LM3822 Current Gauge provides easy to use precision current measurement with virtually zero insertion loss (typically 0.003Ω). The LM3822 is used for high-side sensing.

A Delta Sigma analog to digital converter is incorporated to precisely measure the current and to provide a current averaging function. Current is averaged over 50 msec time periods in order to provide immunity to current spikes. The ICs have a pulse-width modulated (PWM) output which indicates the current magnitude and direction. The shutdown pin can be used to inhibit false triggering during start-up, or to enter a low quiescent current mode.

The LM3822 is factory-set in two different current options. The sense range is -1.0A to +1.0A or -2.0A to +2.0A. The sampling interval for this part is 50ms. If faster sampling is desired, please refer to the data sheet for the part number LM3824.

Key Specifications

- Ultra low insertion loss (typically 0.003Ω)
- 2V to 5.5V supply range
- ±2% accuracy at room temperature for the 1A device (includes accuracy of the internal sense element)
- Low quiescent current in shutdown mode (typically 1.8 μA)
- 50 msec sampling interval
- In MSOP-8 Package

Features

- No external sense element required
- PWM output indicates the current magnitude and direction
- PWM output is easily interfaced with microprocessors and controllers
- Precision ΔΣ current-sense technique
- Low temperature sensitivity
- Internal filtering rejects false trips
- Internal Power-On-Reset (POR)
- DC Offset is less than 1 mA for 1A part

Applications

- Battery charge/discharge gauge
- Motion control diagnostics
- Power supply load monitoring and management
- Resettable smart fuse

LMC6953

PCI Local Bus Power Supervisor

General Description

The LMC6953 is a voltage supervisory chip designed to meet PCI (Peripheral Component Interconnect) Specifications Revision 2.1. It monitors 5V and 3.3V power supplies. In cases of power-up, power-down, brown-out, power failure and manual reset interrupt, the LMC6953 provides an active low reset. $\overline{\text{RESET}}$ holds low for 100 ms after both 5V and 3.3V powers recover, or after manual reset signal returns to high state. The external capacitor on pin 8 adjusts the reset delay.

This part is ideal on PCI motherboards or add-in cards to ensure the integrity of the entire system when there is a fault condition. The active low reset sets the microprocessor or local device in a known state.

The LMC6953 has a built-in bandgap reference that accurately determines all the threshold voltages. The internal reset delay circuitry eliminates additional discrete components.

Features

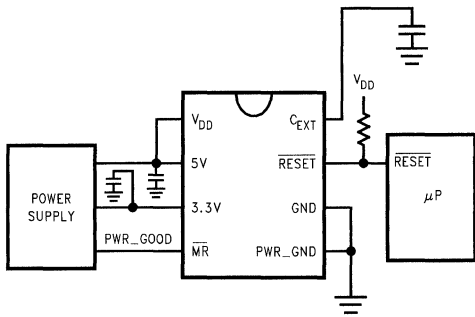

- Compliant to PCI specifications revision 2.1.
- Under and over voltage detectors for 5V and 3.3V
- Power failure detection (5V falling under 3.3V by 300 mV max)
- Manual reset input pin
- Guaranteed $\overline{\text{RESET}}$ assertion at $V_{\text{DD}} = 1.5\text{V}$
- Integrated reset delay circuitry
- Open drain output
- Adjustable reset delay
- Response time for over and under voltage detection: 490 ns Max
- Power failure response time: 90 ns Max
- Requires minimal external components

Applications

- Desktop PCs
- PCI-Based Systems
- Network servers

LP3470

Tiny Power On Reset Circuit

General Description

The LP3470 is a micropower CMOS voltage supervisory circuit designed to monitor power supplies in microprocessor (μP) and other digital systems. It provides maximum adjustability for power-on-reset (POR) and supervisory functions. It is available in the following six standard reset threshold voltage (V_{RTH}) options: 2.63V, 2.93V, 3.08V, 4.00V, 4.38V, and 4.63V. If other voltage options between 2.4V and 5.0V are desired please contact your National Semiconductor representative.

The LP3470 asserts a reset signal whenever the V_{CC} supply voltage falls below a reset threshold. The reset time-out period is adjustable using an external capacitor. Reset remains asserted for an interval (programmed by an external capacitor) after V_{CC} has risen above the threshold voltage.

The device is available in the tiny SOT23-5 package.

Key Specifications

- $\pm 1\%$ Reset Threshold Accuracy Over Temperature
- Standard Reset Threshold Voltages: 2.63V, 2.93V, 3.08V, 4.00V, 4.38V, and 4.63V

- Custom Reset Threshold Voltages: For other voltages between 2.4V and 5.0V contact your National Semiconductor representative
- Very Low Quiescent Current (16 μA typical)
- Guaranteed $\overline{\text{Reset}}$ valid down to $V_{CC}=0.5V$

Features

- Tiny SOT23-5 Package
- Open Drain $\overline{\text{Reset}}$ Output
- Programmable Reset Timeout Period Using an External Capacitor
- Immune to Short V_{CC} Transients

Applications

- Critical μP and μC Power Monitoring
- Intelligent Instruments
- Computers
- Portable/Battery-Powered Equipments

“Reference Grade” Voltage Regulators

Please refer to the Low Dropout Regulators Selection Guide for many voltage regulators having a maximum voltage tolerance (at $T_A = 25^\circ\text{C}$) of between $\pm 0.5\%$ and $\pm 1.5\%$.

LM10

Operational Amplifier and Voltage Reference

General Description

The LM10 series are monolithic linear ICs consisting of a precision reference, an adjustable reference buffer and an independent, high quality op amp.

The unit can operate from a total supply voltage as low as 1.1V or as high as 40V, drawing only 270 μ A. A complementary output stage swings within 15 mV of the supply terminals or will deliver ± 20 mA output current with ± 0.4 V saturation. Reference output can be as low as 200 mV.

The circuit is recommended for portable equipment and is completely specified for operation from a single power cell. In contrast, high output-drive capability, both voltage and current, along with thermal overload protection, suggest it in demanding general-purpose applications.

The device is capable of operating in a floating mode, independent of fixed supplies. It can function as a remote comparator, signal conditioner, SCR controller or transmitter for

analog signals, delivering the processed signal on the same line used to supply power. It is also suited for operation in a wide range of voltage- and current-regulator applications, from low voltages to several hundred volts, providing greater precision than existing ICs.

This series is available in the three standard temperature ranges, with the commercial part having relaxed limits. In addition, a low-voltage specification (suffix "L") is available in the limited temperature ranges at a cost savings.

Features

- input offset voltage: 2.0 mV (max)
- input offset current: 0.7 nA (max)
- input bias current: 20 nA (max)
- reference regulation: 0.1% (max)
- offset voltage drift: 2 μ V/ $^{\circ}$ C
- reference drift: 0.002%/ $^{\circ}$ C

LM129/LM329 Precision Reference

General Description

The LM129 and LM329 family are precision multi-current temperature-compensated 6.9V zener references with dynamic impedances a factor of 10 to 100 less than discrete diodes. Constructed in a single silicon chip, the LM129 uses active circuitry to buffer the internal zener allowing the device to operate over a 0.5 mA to 15 mA range with virtually no change in performance. The LM129 and LM329 are available with selected temperature coefficients of 0.001, 0.002, 0.005 and 0.01%/°C. These references also have excellent long term stability and low noise.

A new subsurface breakdown zener used in the LM129 gives lower noise and better long-term stability than conventional IC zeners. Further the zener and temperature compensating transistor are made by a planar process so they are immune to problems that plague ordinary zeners. For example, there is virtually no voltage shift in zener voltage due to temperature cycling and the device is insensitive to stress on the leads.

The LM129 can be used in place of conventional zeners with improved performance. The low dynamic impedance simplifies biasing and the wide operating current allows the replacement of many zener types.

The LM129 is packaged in a 2-lead TO-46 package and is rated for operation over a -55°C to +125°C temperature range. The LM329 for operation over 0°C to 70°C is available in both a hermetic TO-46 package and a TO-92 epoxy package.

Features

- 0.6 mA to 15 mA operating current
- 0.6Ω dynamic impedance at any current
- Available with temperature coefficients of 0.001%/°C
- 7μV wideband noise
- 5% initial tolerance
- 0.002% long term stability
- Low cost
- Subsurface zener

LM199/LM299/LM399/LM3999

Precision Reference

General Description

The LM199 series are precision, temperature-stabilized monolithic zeners offering temperature coefficients a factor of ten better than high quality reference zeners. Constructed on a single monolithic chip is a temperature stabilizer circuit and an active reference zener. The active circuitry reduces the dynamic impedance of the zener to about 0.5Ω and allows the zener to operate over 0.5 mA to 10 mA current range with essentially no change in voltage or temperature coefficient. Further, a new subsurface zener structure gives low noise and excellent long term stability compared to ordinary monolithic zeners. The package is supplied with a thermal shield to minimize heater power and improve temperature regulation.

The LM199 series references are exceptionally easy to use and free of the problems that are often experienced with ordinary zeners. There is virtually no hysteresis in reference voltage with temperature cycling. Also, the LM199 is free of voltage shifts due to stress on the leads. Finally, since the unit is temperature stabilized, warm up time is fast.

The LM199 can be used in almost any application in place of ordinary zeners with improved performance. Some ideal applications are analog to digital converters, calibration standards, precision voltage or current sources or precision power supplies. Further in many cases the LM199 can replace references in existing equipment with a minimum of wiring changes.

The LM199 series devices are packaged in a standard hermetic TO-46 package inside a thermal shield. The LM199 is rated for operation from -55°C to $+125^{\circ}\text{C}$ while the LM299 is rated for operation from -25°C to $+85^{\circ}\text{C}$ and the LM399 is rated from 0°C to $+70^{\circ}\text{C}$.

The LM3999 is packaged in a standard TO-92 package and is rated from 0°C to $+70^{\circ}\text{C}$.

Features

- Guaranteed 0.0001%/°C temperature coefficient
- Low dynamic impedance — 0.5Ω
- Initial tolerance on breakdown voltage — 2%
- Sharp breakdown at 400 μA
- Wide operating current — 500 μA to 10 mA
- Wide supply range for temperature stabilizer
- Guaranteed low noise
- Low power for stabilization — 300 mW at 25°C
- Long term stability — 20 ppm
- Proven reliability, low-stress packaging in TO-46 integrated-circuit hermetic package, for low hysteresis after thermal cycling. 33 million hours MTBF at $T_A = +25^{\circ}\text{C}$ ($T_J = +86^{\circ}\text{C}$)
- Certified long term stability available
- MIL-STD-883 compliant

LM134/LM234/LM334 3-Terminal Adjustable Current Sources

General Description

The LM134/LM234/LM334 are 3-terminal adjustable current sources featuring 10,000:1 range in operating current, excellent current regulation and a wide dynamic voltage range of 1V to 40V. Current is established with one external resistor and no other parts are required. Initial current accuracy is $\pm 3\%$. The LM134/LM234/LM334 are true floating current sources with no separate power supply connections. In addition, reverse applied voltages of up to 20V will draw only a few dozen microamperes of current, allowing the devices to act as both a rectifier and current source in AC applications.

The sense voltage used to establish operating current in the LM134 is 64mV at 25°C and is directly proportional to absolute temperature (°K). The simplest one external resistor connection, then, generates a current with $\approx +0.33\%/^{\circ}\text{C}$ temperature dependence. Zero drift operation can be obtained by adding one extra resistor and a diode.

Applications for the current sources include bias networks, surge protection, low power reference, ramp generation,

LED driver, and temperature sensing. The LM234-3 and LM234-6 are specified as true temperature sensors with guaranteed initial accuracy of $\pm 3^{\circ}\text{C}$ and $\pm 6^{\circ}\text{C}$, respectively. These devices are ideal in remote sense applications because series resistance in long wire runs does not affect accuracy. In addition, only 2 wires are required.

The LM134 is guaranteed over a temperature range of -55°C to $+125^{\circ}\text{C}$, the LM234 from -25°C to $+100^{\circ}\text{C}$ and the LM334 from 0°C to $+70^{\circ}\text{C}$. These devices are available in TO-46 hermetic, TO-92 and SO-8 plastic packages.

Features

- Operates from 1V to 40V
- 0.02%/V current regulation
- Programmable from 1 μA to 10mA
- True 2-terminal operation
- Available as fully specified temperature sensor
- $\pm 3\%$ initial accuracy

LM136-2.5/LM236-2.5/LM336-2.5V Reference Diode

General Description

The LM136-2.5/LM236-2.5 and LM336-2.5 integrated circuits are precision 2.5V shunt regulator diodes. These monolithic IC voltage references operate as a low-temperature-coefficient 2.5V zener with 0.2Ω dynamic impedance. A third terminal on the LM136-2.5 allows the reference voltage and temperature coefficient to be trimmed easily.

The LM136-2.5 series is useful as a precision 2.5V low-voltage reference for digital voltmeters, power supplies or op amp circuitry. The 2.5V make it convenient to obtain a stable reference from 5V logic supplies. Further, since the LM136-2.5 operates as a shunt regulator, it can be used as either a positive or negative voltage reference.

The LM136-2.5 is rated for operation over -55°C to +125°C while the LM236-2.5 is rated over a -25°C to +85°C temperature range.

The LM336-2.5 is rated for operation over a 0°C to +70°C temperature range. See the connection diagrams for available packages.

Features

- Low temperature coefficient
- Wide operating current of 400 μA to 10 mA
- 0.2Ω dynamic impedance
- ±1% initial tolerance available
- Guaranteed temperature stability
- Easily trimmed for minimum temperature drift
- Fast turn-on
- Three lead transistor package

LM136-5.0/LM236-5.0/LM336-5.0 5.0V Reference Diode

General Description

The LM136-5.0/LM236-5.0/LM336-5.0 integrated circuits are precision 5.0V shunt regulator diodes. These monolithic IC voltage references operate as a low temperature coefficient 5.0V zener with 0.6Ω dynamic impedance. A third terminal on the LM136-5.0 allows the reference voltage and temperature coefficient to be trimmed easily.

The LM136-5.0 series is useful as a precision 5.0V low voltage reference for digital voltmeters, power supplies or op amp circuitry. The 5.0V makes it convenient to obtain a stable reference from low voltage supplies. Further, since the LM136-5.0 operates as a shunt regulator, it can be used as either a positive or negative voltage reference.

The LM136-5.0 is rated for operation over -55°C to +125°C while the LM236-5.0 is rated over a -25°C to +85°C temperature range. The LM336-5.0 is rated for operation over a

0°C to +70°C temperature range. See the connection diagrams for available packages. For applications requiring 2.5V see LM136-2.5.

Features

- Adjustable 4V to 6V
- Low temperature coefficient
- Wide operating current of 600 μA to 10 mA
- 0.6Ω dynamic impedance
- ± 1% initial tolerance available
- Guaranteed temperature stability
- Easily trimmed for minimum temperature drift

LM185/LM285/LM385

Adjustable Micropower Voltage References

General Description

The LM185/LM285/LM385 are micropower 3-terminal adjustable band-gap voltage reference diodes. Operating from 1.24 to 5.3V and over a 10 μ A to 20mA current range, they feature exceptionally low dynamic impedance and good temperature stability. On-chip trimming is used to provide tight voltage tolerance. Since the LM185 band-gap reference uses only transistors and resistors, low noise and good long-term stability result.

Careful design of the LM185 has made the device tolerant of capacitive loading, making it easy to use in almost any reference application. The wide dynamic operating range allows its use with widely varying supplies with excellent regulation.

The extremely low power drain of the LM185 makes it useful for micropower circuitry. This voltage reference can be used to make portable meters, regulators or general purpose analog circuitry with battery life approaching shelf life. Further, the wide operating current allows it to replace older references with a tighter tolerance part.

The LM185 is rated for operation over a -55°C to 125°C temperature range, while the LM285 is rated -40°C to 85°C and the LM385 0°C to 70°C. The LM185 is available in a hermetic TO-46 package and a leadless chip carrier package, while the LM285/LM385 are available in a low-cost TO-92 molded package, as well as S.O.

Features

- Adjustable from 1.24V to 5.30V
- Operating current of 10 μ A to 20mA
- 1% and 2% initial tolerance
- 1 Ω dynamic impedance
- Low temperature coefficient

LM185-1.2/LM285-1.2/LM385-1.2

Micropower Voltage Reference Diode

General Description

The LM185-1.2/LM285-1.2/LM385-1.2 are micropower 2-terminal band-gap voltage regulator diodes. Operating over a 10 μ A to 20 mA current range, they feature exceptionally low dynamic impedance and good temperature stability. On-chip trimming is used to provide tight voltage tolerance. Since the LM185-1.2 band-gap reference uses only transistors and resistors, low noise and good long term stability result.

Careful design of the LM185-1.2 has made the device exceptionally tolerant of capacitive loading, making it easy to use in almost any reference application. The wide dynamic operating range allows its use with widely varying supplies with excellent regulation.

The extremely low power drain of the LM185-1.2 makes it useful for micropower circuitry. This voltage reference can be used to make portable meters, regulators or general purpose analog circuitry with battery life approaching shelf life.

Further, the wide operating current allows it to replace older references with a tighter tolerance part.

The LM185-1.2 is rated for operation over a -55°C to 125°C temperature range while the LM285-1.2 is rated -40°C to 85°C and the LM385-1.2 0°C to 70°C . The LM185-1.2/LM285-1.2 are available in a hermetic TO-46 package and the LM285-1.2/LM385-1.2 are also available in a low-cost TO-92 molded package, as well as SO and SOT-23. The LM185-1.2 is also available in a hermetic leadless chip carrier package.

Features

- ± 4 mV ($\pm 0.3\%$) max. initial tolerance (A grade)
- Operating current of 10 μ A to 20 mA
- 0.6Ω max dynamic impedance (A grade)
- Low temperature coefficient
- Low voltage reference — 1.235V
- 2.5V device and adjustable device also available
- LM185-2.5 series and LM185 series, respectively

LM185-2.5/LM285-2.5/LM385-2.5

Micropower Voltage Reference Diode

General Description

The LM185-2.5/LM285-2.5/LM385-2.5 are micropower 2-terminal band-gap voltage regulator diodes. Operating over a 20 μA to 20 mA current range, they feature exceptionally low dynamic impedance and good temperature stability. On-chip trimming is used to provide tight voltage tolerance. Since the LM-185-2.5 band-gap reference uses only transistors and resistors, low noise and good long term stability result.

Careful design of the LM185-2.5 has made the device exceptionally tolerant of capacitive loading, making it easy to use in almost any reference application. The wide dynamic operating range allows its use with widely varying supplies with excellent regulation.

The extremely low power drain of the LM185-2.5 makes it useful for micropower circuitry. This voltage reference can be used to make portable meters, regulators or general purpose analog circuitry with battery life approaching shelf life. Further, the wide operating current allows it to replace older references with a tighter tolerance part. For applications requiring 1.2V see LM185-1.2.

The LM185-2.5 is rated for operation over a -55°C to 125°C temperature range while the LM285-2.5 is rated -40°C to 85°C and the LM385-2.5 0°C to 70°C . The LM185-2.5/LM285-2.5 are available in a hermetic TO-46 package and the LM285-2.5/LM385-2.5 are also available in a low-cost TO-92 molded package, as well as S.O. and SOT-23. The LM185-2.5 is also available in a hermetic leadless chip carrier package.

Features

- $\pm 20\text{ mV}$ ($\pm 0.8\%$) max. initial tolerance (A grade)
- Operating current of 20 μA to 20 mA
- 0.6Ω dynamic impedance (A grade)
- Low temperature coefficient
- Low voltage reference—2.5V

LM4040

Precision Micropower Shunt Voltage Reference

General Description

Ideal for space critical applications, the LM4040 precision voltage reference is available in the sub-miniature (3 mm x 1.3 mm) SOT-23 surface-mount package. The LM4040's advanced design eliminates the need for an external stabilizing capacitor while ensuring stability with any capacitive load, thus making the LM4040 easy to use. Further reducing design effort is the availability of several fixed reverse breakdown voltages: 2.500V, 4.096V, 5.000V, 8.192V, and 10.000V. The minimum operating current increases from 60 μ A for the LM4040-2.5 to 100 μ A for the LM4040-10.0. All versions have a maximum operating current of 15 mA.

The LM4040 utilizes fuse and zener-zap reverse breakdown voltage trim during wafer sort to ensure that the prime parts have an accuracy of better than $\pm 0.1\%$ (A grade) at 25°C. Bandgap reference temperature drift curvature correction and low dynamic impedance ensure stable reverse breakdown voltage accuracy over a wide range of operating temperatures and currents.

Also available is the LM4041 with two reverse breakdown voltage versions: adjustable and 1.2V. Please see the LM4041 data sheet.

Features

- Small packages: SOT-23, TO-92
- No output capacitor required

- Tolerates capacitive loads
- Fixed reverse breakdown voltages of 2.500V, 4.096V, 5.000V, 8.192V, and 10.000V

Key Specifications (LM4040-2.5)

- Output voltage tolerance (A grade, 25°C) $\pm 0.1\%$ (max)
- Low output noise (10 Hz to 10 kHz) 35 μ V_{rms}(typ)
- Wide operating current range 60 μ A to 15 mA
- Industrial temperature range -40°C to +85°C
- Extended temperature range -40°C to +125°C
- Low temperature coefficient 100 ppm/°C (max)

Applications

- Portable, Battery-Powered Equipment
- Data Acquisition Systems
- Instrumentation
- Process Control
- Energy Management
- Product Testing
- Automotive
- Precision Audio Components

Connection Diagrams

*This pin must be left floating or connected to pin 2.

LM4041

Precision Micropower Shunt Voltage Reference

General Description

Ideal for space critical applications, the LM4041 precision voltage reference is available in the sub-miniature (3 mm x 1.3 mm) SOT-23 surface-mount package. The LM4041's advanced design eliminates the need for an external stabilizing capacitor while ensuring stability with any capacitive load, thus making the LM4041 easy to use. Further reducing design effort is the availability of a fixed (1.225V) and adjustable reverse breakdown voltage. The minimum operating current is 60 μ A for the LM4041-1.2 and the LM4041-ADJ. Both versions have a maximum operating current of 12 mA.

The LM4041 utilizes fuse and zener-zap reverse breakdown or reference voltage trim during wafer sort to ensure that the prime parts have an accuracy of better than $\pm 0.1\%$ (A grade) at 25°C. Bandgap reference temperature drift curvature correction and low dynamic impedance ensure stable reverse breakdown voltage accuracy over a wide range of operating temperatures and currents.

Features

- Small packages: SOT-23, and TO-92
- No output capacitor required
- Tolerates capacitive loads
- Reverse breakdown voltage options of 1.225V and adjustable

LM4050

Precision Micropower Shunt Voltage Reference

General Description

Ideal for space critical applications, the LM4050 precision voltage reference is available in the sub-miniature (3 mm x 1.3 mm) SSOT-23 surface-mount package. The LM4050's design eliminates the need for an external stabilizing capacitor while ensuring stability with any capacitive load, thus making the LM4050 easy to use. Further reducing design effort is the availability of several fixed reverse breakdown voltages: 2.500V, 4.096V, 5.000V, 8.192V, and 10.000V. The minimum operating current increases from 60 μ A for the LM4050-2.5 to 100 μ A for the LM4050-10.0. All versions have a maximum operating current of 15 mA.

The LM4050 utilizes fuse and zener-zap reverse breakdown voltage trim during wafer sort to ensure that the prime parts have an accuracy of better than $\pm 0.1\%$ (A grade) at 25°C. Bandgap reference temperature drift curvature correction and low dynamic impedance ensure stable reverse breakdown voltage accuracy over a wide range of operating temperatures and currents.

All grades and voltage options of the LM4050 operate between -40°C and $+85^{\circ}\text{C}$. Selected parts can operate in the extended temperature range, from -40°C and $+125^{\circ}\text{C}$.

Features

- Small packages: SSOT-23
- No output capacitor required
- Tolerates capacitive loads
- Fixed reverse breakdown voltages of 2.500V, 4.096V, 5.000V, 8.192V, and 10.000V

Key Specifications (LM4050-2.5)

- | | |

LM4051

Precision Micropower Shunt Voltage Reference

General Description

Ideal for space critical applications, the LM4051 precision voltage reference is available in the sub-miniature (3 mm x 1.3 mm) SSOT-23 surface-mount package. The LM4051's advanced design eliminates the need for an external stabilizing capacitor while ensuring stability with any capacitive load, thus making the LM4051 easy to use. Further reducing design effort is the availability of a fixed (1.225V) and adjustable reverse breakdown voltage. The minimum operating current is 60 μ A for the LM4051-1.2 and the LM4051-ADJ. Both versions have a maximum operating current of 12 mA.

The LM4051 comes in three grades (A, B, and C). The best grade devices (A) have an initial accuracy of 0.1%, while the B-grade have 0.2% and the C-grade 0.5%, all with a tempco of 50 ppm/ $^{\circ}$ C guaranteed from -40° C to 125° C.

The LM4051 utilizes fuse and zener-zap trim of reference voltage during wafer sort to ensure that the prime parts have an accuracy of better than $\pm 0.1\%$ (A grade) at 25° C.

Features

- Small packages: SSOT-23
- No output capacitor required
- Tolerates capacitive loads
- Reverse breakdown voltage options of 1.225V and adjustable

Key Specifications (LM4051-1.2)

- | | |
|---|------------------------------------|
| ■ Output voltage tolerance
(A grade, 25° C) | $\pm 0.1\%$ (max) |
| ■ Low output noise

LM4120

Precision Micropower Low Dropout Voltage Reference

General Description

The LM4120 is a precision low power low dropout bandgap voltage reference with up to 5 mA output current source and sink capability.

This series reference operates with input voltages as low as 2V and up to 12V consuming 160 μA (Typ.) supply current. In power down mode, device current drops to less than 2 μA .

The LM4120 comes in two grades (A and Standard) and seven voltage options for greater flexibility. The best grade devices (A) have an initial accuracy of 0.2%, while the standard have an initial accuracy of 0.5%, both with a tempco of 50ppm/ $^{\circ}\text{C}$ guaranteed from -40°C to $+125^{\circ}\text{C}$.

The very low dropout voltage, low supply current and power-down capability of the LM4120 makes this product an ideal choice for battery powered and portable applications.

The device performance is guaranteed over the industrial temperature range (-40°C to $+85^{\circ}\text{C}$), while certain specs are guaranteed over the extended temperature range (-40°C to $+125^{\circ}\text{C}$). Please contact National for full specifications over the extended temperature range. The LM4120 is available in a standard 5-pin SOT-23 package.

Features

- Small SOT23-5 package
- Low dropout voltage: 120 mV Typ @ 1 mA
- High output voltage accuracy: 0.2%
- Source and Sink current output: ± 5 mA
- Supply current: 160 μA Typ.
- Low Temperature Coefficient: 50 ppm/ $^{\circ}\text{C}$
- Enable pin
- Fixed output voltages: 1.8, 2.048, 2.5, 3.0, 3.3, 4.096 and 5.0V
- Industrial temperature Range: -40°C to $+85^{\circ}\text{C}$
- (For extended temperature range, -40°C to 125°C , contact National Semiconductor)

Applications

- Portable, battery powered equipment
- Instrumentation and process control
- Automotive & Industrial
- Test equipment
- Data acquisition systems
- Precision regulators
- Battery chargers
- Base stations
- Communications
- Medical equipment

First Field: R = Reference
Second and third Field: 21 = 1.800V Voltage Option 14 = 2.048V Voltage Option 08 = 2.500V Voltage Option 15 = 3.000V Voltage Option 16 = 3.300V Voltage Option 17 = 4.096V Voltage Option 18 = 5.000V Voltage Option
Fourth Field: A-B = Initial Reference Voltage Tolerance A = $\pm 0.2\%$ B = $\pm 0.5\%$

LM4121

Precision Micropower Low Dropout Voltage Reference

General Description

The LM4121 is a precision bandgap voltage reference available in a fixed 1.25V and adjustable version with up to 5 mA current source and sink capability.

This series reference operates with input voltages as low as 1.8V and up to 12V consuming 160 μ A (Typ.) supply current. In power down mode, device current drops to less than 2 μ A.

The LM4121 comes in two grades A and Standard. The best grade devices (A) have an initial accuracy of 0.2%, while the standard have an initial accuracy of 0.5%, both with a tempo of 50ppm/ $^{\circ}$ C guaranteed from -40° C to $+125^{\circ}$ C.

The very low operating voltage, low supply current and power-down capability of the LM4121 makes this product an ideal choice for battery powered and portable applications.

The device performance is guaranteed over the industrial temperature range (-40° C to $+85^{\circ}$ C), while certain specs are guaranteed over the extended temperature range (-40° C to $+125^{\circ}$ C). Please contact National for full specifications over the extended temperature range. The LM4121 is available in a standard 5-pin SOT-23 package.

Features (LM4121-1.2)

- Small SOT23-5 package
- Low voltage operation
- High output voltage accuracy: 0.2%
- Source and Sink current output: ± 5 mA
- Supply current: 160 μ A Typ.
- Low Temperature Coefficient: 50 ppm/ $^{\circ}$ C
- Enable pin
- Output voltages: 1.25V and Adjustable
- Industrial temperature Range: -40° C to $+85^{\circ}$ C
- (For extended temperature range, -40° C to 125° C, contact National Semiconductor)

Applications

- Portable, battery powered equipment
- Instrumentation and process control
- Automotive & Industrial
- Test equipment
- Data acquisition systems
- Precision regulators
- Battery chargers
- Base stations
- Communications
- Medical equipment

LM4130

Precision Micropower Low Dropout Voltage Reference

General Description

The LM4130 family of precision voltage references performs comparable to the best laser-trimmed bipolar references, but in cost effective CMOS technology. Key to this break through is the use of EEPROM registers for correction of curvature, tempco, and accuracy on a CMOS bandgap architecture that allows package level programming to overcome assembly shift. The shifts in voltage accuracy and tempco during assembly of die into plastic packages limit the accuracy of references trimmed with laser techniques.

Unlike other LDO references, the LM4130 requires no output capacitor. Neither is a buffer amplifier required, even with loads up to 20mA. These advantages and the SOT23 packaging are important for cost-critical and space-critical applications.

Series references provide lower power consumption than shunt references, since they don't have to idle the maximum possible load current under no load conditions. This advantage, the low quiescent current (75 μ A), and the low dropout voltage (275mV) make the LM4130 ideal for battery-powered solutions.

The LM4130 is available in five grades (A, B, C, D and E) for greater flexibility. The best grade devices (A) have an initial accuracy of 0.05% with guaranteed temperature coefficient of 10ppm/ $^{\circ}$ C or less, while the lowest grade parts (E) have an initial accuracy of 0.5% and a tempco of 30ppm/ $^{\circ}$ C.

Features

- Small SOT23-5 package
- High output voltage accuracy 0.05%
- Low Temperature Coefficient 10 ppm/ $^{\circ}$ C
- Stable with capacitive loads to 100 μ F
- Low dropout voltage ≤ 275 mV @ 10 mA
- Supply Current ≤ 75 μ A
- Full accuracy -40° C to 85° C
- Extended operation to 125° C
- Excellent load and line regulation
- Output current 20 mA
- Output impedance $< 1\Omega$
- Voltage options: 2.048V, 2.500V, and 4.096V

Applications Summary

- Portable, battery powered equipment
- Instrumentation and process control
- Automotive & Industrial
- Test equipment
- Data acquisition systems
- Precision regulators
- Battery chargers
- Base stations
- Communications
- Medical equipment
- Servo systems

LM4140

High Precision Low Noise Low Dropout Voltage Reference

General Description

The LM4140 series of precision references are designed to combine high accuracy, low drift and noise with low power dissipation in a small package.

The LM4140 is the industry's first reference with output voltage options lower than the bandgap voltage.

The key to the advance performance of the LM4140 is the use of EEPROM registers and CMOS DACs for temperature coefficient curvature correction and trimming of the output voltage accuracy of the device during the final production testing.

The major advantage of this method is the much higher resolution available with DACs than is available economically with most methods utilized by other bandgap references.

The low input and dropout voltage, low supply current and output drive capability of the LM4140 makes this product an ideal choice for battery powered and portable applications.

The LM4140 is available in three grades (A, B, C) with 0.1% initial accuracy and 3, 6 and 10 ppm/°C temperature coefficients. For even lower Tempco, contact National Semiconductor.

The device performance is specified over the temperature range (0°C to +70°C) and is available in compact 8-pin SO package.

For other output voltage options from 0.5V to 4.5V, contact National Semiconductor.

Features

- High initial accuracy: 0.1%
- Ultra low noise
- Low Temperature Coefficient: 3 ppm/°C (A grade)
- Low voltage operation: 1.8V
- SO-8 package
- Low dropout voltage: 20 mV (typ) @ 1mA
- Supply Current: 230 μ A (typ), \leq 1 μ A disable mode
- Enable pin
- Output voltage options: 1.024V, 1.250V, 2.048V, 2.500V, and 4.096V
- Custom voltages from 0.5V to 4.5V
- Temperature range (0°C to 70°C)

Applications Summary

- Portable, battery powered equipment
- Instrumentation and test equipment
- Automotive
- Industrial process control
- Data acquisition systems
- Medical equipment
- Precision scales
- Servo systems
- Battery charging

Pin Functions

- V_{ref} (Pin 6):** Reference Output. Capable of sourcing up to 8mA.
- Input (Pin 2):** Positive Supply.
- Ground (Pins 1, 4, 7, 8):** Negative Supply or Ground Connection. These pins must be connected to ground.
- Enable (Pin 3):** Pulled to input for normal operation. Forcing this pin to ground will turn-off the output.
- NC (Pin 5):** This pin must be left open.

LM431

Adjustable Precision Zener Shunt Regulator

General Description

The LM431 is a 3-terminal adjustable shunt regulator with guaranteed temperature stability over the entire temperature range of operation. It is now available in a chip sized package (4-Bump micro SMD) using National's micro SMD package technology. The output voltage may be set at any level greater than 2.5V (V_{REF}) up to 36V merely by selecting two external resistors that act as a voltage divided network. Due to the sharp turn-on characteristics this device is an excellent replacement for many zener diode applications.

Features

- Average temperature coefficient 50 ppm/°C
- Temperature compensated for operation over the full temperature range
- Programmable output voltage
- Fast turn-on response
- Low output noise
- LM431 in micro SMD package

LM4431

Micropower Shunt Voltage Reference

General Description

Ideal for space critical applications, the LM4431 voltage reference is available in the sub-miniature (3 mm x 1.3 mm) SOT-23 surface-mount package. The LM4431's advanced design eliminates the need for an external stabilizing capacitor while ensuring stability with any capacitive load, thus making the LM4431 easy to use. The operating current range is 100 μ A to 15 mA.

The LM4431 utilizes fuse and zener-zap reverse breakdown voltage trim during wafer sort to ensure that the parts have an accuracy of better than $\pm 2.0\%$ at 25°C. Bandgap reference temperature drift curvature correction and low dynamic impedance ensure stable reverse breakdown voltage accuracy over a wide range of operating temperatures and currents.

Features

- Small package: SOT-23
- No output capacitor required

- Tolerates capacitive loads
- Fixed reverse breakdown voltage of 2.50V

Key Specifications

- Output voltage tolerance 25°C: $\pm 2.0\%$ (max)
- Low output noise (10 Hz to 10 kHz): 35 μ V_{rms} (typ)
- Wide operating current range: 100 μ A to 15 mA
- Commercial temperature range: 0°C to +70°C
- Low temperature coefficient: 30 ppm/°C (typ)

Applications

- Portable, Battery-Powered Equipment
- Data Acquisition Systems
- Instrumentation
- Process Control
- Energy Management
- Product Testing
- Power Supplies

LM611

Operational Amplifier and Adjustable Reference

General Description

The LM611 consists of a single-supply op-amp and a programmable voltage reference in one space saving 8-pin package. The op-amp out-performs most single-supply op-amps by providing higher speed and bandwidth along with low supply current. This device was specifically designed to lower cost and board space requirements in transducer, test, measurement and data acquisition systems.

Combining a stable voltage reference with a wide output swing op-amp makes the LM611 ideal for single supply transducers, signal conditioning and bridge driving where large common-mode signals are common. The voltage reference consists of a reliable band-gap design that maintains low dynamic output impedance (1Ω typical), excellent initial tolerance (0.6%), and the ability to be programmed from 1.2V to 6.3V via two external resistors. The voltage reference is very stable even when driving large capacitive loads, as are commonly encountered in CMOS data acquisition systems.

As a member of National's Super-Block™ family, the LM611 is a space-saving monolithic alternative to a multi-chip solution, offering a high level of integration without sacrificing performance.

Features

OP AMP

- Low operating current: 300 μ A (op amp)
- Wide supply voltage range: 4V to 36V
- Wide common-mode range: V^- to $(V^+ - 1.8V)$
- Wide differential input voltage: $\pm 36V$
- Available in low cost 8-pin DIP
- Available in plastic package rated for Military Temperature Range Operation

REFERENCE

- Adjustable output voltage: 1.2V to 6.3V
- Tight initial tolerance available: $\pm 0.6\%$
- Wide operating current range: 17 μ A to 20 mA
- Reference floats above ground
- Tolerant of load capacitance

Applications

- Transducer bridge driver
- Process and Mass Flow Control systems
- Power supply voltage monitor
- Buffered voltage references for A/D's

Connection Diagrams

LM613 Dual Operational Amplifiers, Dual Comparators, and Adjustable Reference

General Description

The LM613 consists of dual op-amps, dual comparators, and a programmable voltage reference in a 16-pin package. The op-amps out-performs most single-supply op-amps by providing higher speed and bandwidth along with low supply current. This device was specifically designed to lower cost and board space requirements in transducer, test, measurement, and data acquisition systems.

Combining a stable voltage reference with wide output swing op-amps makes the LM613 ideal for single supply transducers, signal conditioning and bridge driving where large common-mode-signals are common. The voltage reference consists of a reliable band-gap design that maintains low dynamic output impedance (1Ω typical), excellent initial tolerance (0.6%), and the ability to be programmed from 1.2V to 6.3V via two external resistors. The voltage reference is very stable even when driving large capacitive loads, as are commonly encountered in CMOS data acquisition systems.

As a member of National's Super-Block™ family, the LM613 is a space-saving monolithic alternative to a multi-chip solution, offering a high level of integration without sacrificing performance.

LM614

Quad Operational Amplifier and Adjustable Reference

General Description

The LM614 consists of four op-amps and a programmable voltage reference in a 16-pin package. The op-amp out-performs most single-supply op-amps by providing higher speed and bandwidth along with low supply current. This device was specifically designed to lower cost and board space requirements in transducer, test, measurement and data acquisition systems.

Combining a stable voltage reference with four wide output swing op-amps makes the LM614 ideal for single supply transducers, signal conditioning and bridge driving where large common-mode-signals are common. The voltage reference consists of a reliable band-gap design that maintains low dynamic output impedance (1Ω typical), excellent initial tolerance (0.6%), and the ability to be programmed from 1.2V to 6.3V via two external resistors. The voltage reference is very stable even when driving large capacitive loads, as are commonly encountered in CMOS data acquisition systems.

As a member of National's new Super-Block™ family, the LM614 is a space-saving monolithic alternative to a multichip solution, offering a high level of integration without sacrificing performance.

Features

Op Amp

- Low operating current: 300 μ A
- Wide supply voltage range: 4V to 36V
- Wide common-mode range: V^- to $(V^+ - 1.8V)$
- Wide differential input voltage: $\pm 36V$
- Available in plastic package rated for Military Temperature Range Operation

Reference

- Adjustable output voltage: 1.2V to 6.3V
- Tight initial tolerance available: $\pm 0.6\%$
- Wide operating current range: 17 μ A to 20 mA
- Tolerant of load capacitance

Applications

- Transducer bridge driver and signal processing
- Process and mass flow control systems
- Power supply voltage monitor
- Buffered voltage references for A/D's

Low-Voltage (1.24V) Adjustable Precision Shunt Regulators

General Description

The LMV431, LMV431A and LMV431B are precision 1.24V shunt regulators capable of adjustment to 30V. Negative feedback from the cathode to the adjust pin controls the cathode voltage, much like a non-inverting op amp configuration (Refer to Symbol and Functional diagrams). A two resistor voltage divider terminated at the adjust pin controls the gain of a 1.24V band-gap reference. Shorting the cathode to the adjust pin (voltage follower) provides a cathode voltage of a 1.24V.

The LMV431, LMV431A and LMV431B have respective initial tolerances of 1.5%, 1% and 0.5%. The LMV431 and LMV431A are available in commercial and Industrial temperature ranges. The LMV431B is only available in commercial temperature range.

The LMV431, LMV431A and LMV431B functionally lends themselves to several applications that require zener diode type performance at low voltages. Applications include a 3V to 2.7V low drop-out regulator, an error amplifier in a 3V off-line switching regulator and even as a voltage detector. These parts are typically stable with capacitive loads greater than 10nF and less than 50pF.

The LMV431, LMV431A and LMV431B provide performance at a competitive price.

Features

- Low Voltage Operation/Wide Adjust Range (1.24V/30V)
- 0.5% Initial Tolerance (LMV431B)
- Temperature Compensated for Industrial Temperature Range (39 PPM/°C for the LMV431AI)
- Low Operation Current (55µA)
- Low Output Impedance (0.25Ω)
- Fast Turn-On Response
- Low Cost

Applications

- Shunt Regulator
- Series Regulator
- Current Source or Sink
- Voltage Monitor
- Error Amplifier
- 3V Off-Line Switching Regulator
- Low Dropout N-Channel Series Regulator

Voltage Regulators Definition Of Terms

Current-Limit Sense Voltage: The voltage across the current-limit terminals required to cause the regulator to current-limit with a short circuited output. This voltage is used to determine the value of the external current-limit resistor when external booster transistors are used.

Dropout Voltage: The input-output voltage differential at which the circuit ceases to regulate against further reduction in input voltage.

Feedback Sense Voltage: The voltage, referred to ground, on the feedback terminal of the regulator while it is operating in regulation.

Input Voltage Range: The range of dc input voltages over which the regulator will operate within specifications.

Line Regulation: The change in output voltage for a change in the input voltage. The measurement is made under conditions of low dissipation or by using pulse techniques such that the average chip temperature is not significantly affected.

Load Regulation: The change in output voltage for a change in load current at constant chip temperature.

Long term Stability: Output voltage stability under accelerated life-test conditions at 125°C with maximum rated voltages and power dissipation for 1000 hours.

Maximum Power Dissipation: The maximum total device dissipation for which the regulator will operate within specifications.

Output Input Voltage Differential: The voltage difference between the unregulated input voltage and the regulated output voltage for which the regulator will operate within specifications.

Output Noise Voltage: The RMS ac voltage at the output, with constant load and no input ripple, measured over a specified frequency range.

Output Voltage Range: The range of regulated output voltages over which the specifications apply.

Output Voltage Scale Factor: The output voltage obtained for a unit value of resistance between the adjustment terminal and ground.

Quiescent Current: That part of the input current to the regulator that is not delivered to the load.

Ripple Rejection: The line regulation for ac input signals at or above a given frequency with a specified value of bypass capacitor on the reference bypass terminal.

Standby Current Drain: The part of the operating current of the regulator which does not contribute to the load current. (See Quiescent Current)

Temperature Stability: The percentage change in output voltage for a thermal variation from room temperature to either temperature extreme.

Thermal Regulation: Percentage change in output voltage for a given change in power dissipation over a specified time period.

LM105/LM305/LM305A Voltage Regulators

General Description

The LM105 series are positive voltage regulators similar to the LM100, except that an extra gain stage has been added for improved regulation. A redesign of the biasing circuitry removes any minimum load current requirement and at the same time reduces standby current drain, permitting higher voltage operation. They are direct, plug-in replacements for the LM100 in both linear and switching regulator circuits with output voltages greater than 4.5V. Important characteristics of the circuits are:

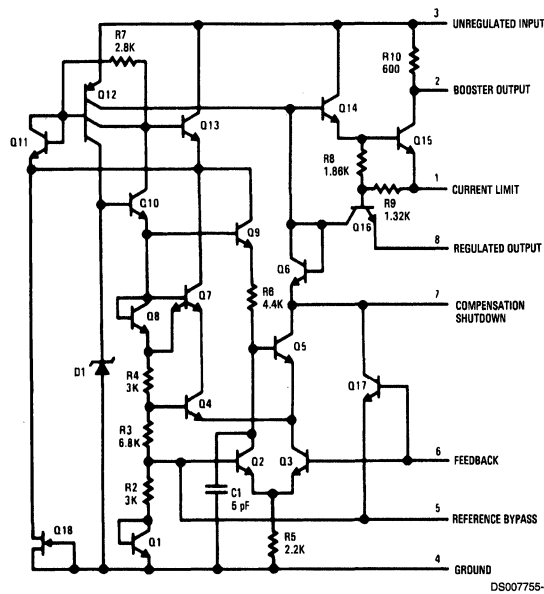

- Output voltage adjustable from 4.5V to 40V
- Output currents in excess of 10A possible by adding external transistors
- Load regulation better than 0.1%, full load with current limiting

- DC line regulation guaranteed at 0.03%/V
- Ripple rejection on 0.01%/V
- 45 mA output current without external pass transistor (LM305A)

Like the LM100, they also feature fast response to both load and line transients, freedom from oscillations with varying resistive and reactive loads and the ability to start reliably on any load within rating. The circuits are built on a single silicon chip and are supplied in a TO-99 metal can.

The LM105 is specified for operation for $-55^{\circ}\text{C} \leq T_A \leq +125^{\circ}\text{C}$, and the LM305/LM305A is specified for $0^{\circ}\text{C} \leq T_A \leq +70^{\circ}\text{C}$.

LM109/LM309 5-Volt Regulator

General Description

The LM109 series are complete 5V regulators fabricated on a single silicon chip. They are designed for local regulation on digital logic cards, eliminating the distribution problems associated with single-point regulation. The devices are available in two standard transistor packages. In the solid-kovar TO-5 header, it can deliver output currents in excess of 200 mA, if adequate heat sinking is provided. With the TO-3 power package, the available output current is greater than 1A.

The regulators are essentially blowout proof. Current limiting is included to limit the peak output current to a safe value. In addition, thermal shutdown is provided to keep the IC from overheating. If internal dissipation becomes too great, the regulator will shut down to prevent excessive heating.

Considerable effort was expended to make these devices easy to use and to minimize the number of external components. It is not necessary to bypass the output, although this

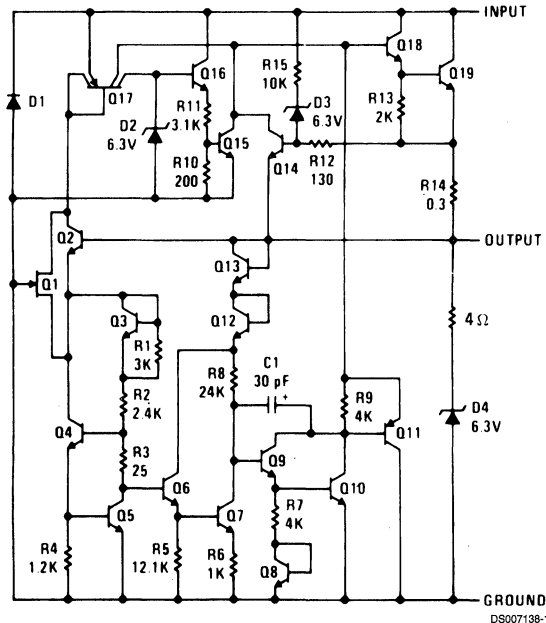

does improve transient response somewhat. Input bypassing is needed, however, if the regulator is located very far from the filter capacitor of the power supply. Stability is also achieved by methods that provide very good rejection of load or line transients as are usually seen with TTL logic.

Although designed primarily as a fixed-voltage regulator, the output of the LM109 series can be set to voltages above 5V, as shown. It is also possible to use the circuits as the control element in precision regulators, taking advantage of the good current-handling capability and the thermal overload protection.

Features

- Specified to be compatible, worst case, with TTL and DTL
- Output current in excess of 1A
- Internal thermal overload protection
- No external components required

Schematic Diagram

LM117/LM317A/LM317

3-Terminal Adjustable Regulator

General Description

The LM117 series of adjustable 3-terminal positive voltage regulators is capable of supplying in excess of 1.5A over a 1.2V to 37V output range. They are exceptionally easy to use and require only two external resistors to set the output voltage. Further, both line and load regulation are better than standard fixed regulators. Also, the LM117 is packaged in standard transistor packages which are easily mounted and handled.

In addition to higher performance than fixed regulators, the LM117 series offers full overload protection available only in IC's. Included on the chip are current limit, thermal overload protection and safe area protection. All overload protection circuitry remains fully functional even if the adjustment terminal is disconnected.

Normally, no capacitors are needed unless the device is situated more than 6 inches from the input filter capacitors in which case an input bypass is needed. An optional output capacitor can be added to improve transient response. The adjustment terminal can be bypassed to achieve very high ripple rejection ratios which are difficult to achieve with standard 3-terminal regulators.

Besides replacing fixed regulators, the LM117 is useful in a wide variety of other applications. Since the regulator is "floating" and sees only the input-to-output differential volt-

age, supplies of several hundred volts can be regulated as long as the maximum input to output differential is not exceeded, i.e., avoid short-circuiting the output.

Also, it makes an especially simple adjustable switching regulator, a programmable output regulator, or by connecting a fixed resistor between the adjustment pin and output, the LM117 can be used as a precision current regulator. Supplies with electronic shutdown can be achieved by clamping the adjustment terminal to ground which programs the output to 1.2V where most loads draw little current.

For applications requiring greater output current, see LM150 series (3A) and LM138 series (5A) data sheets. For the negative complement, see LM137 series data sheet.

Features

- Guaranteed 1% output voltage tolerance (LM317A)
- Guaranteed max. 0.01%/V line regulation (LM317A)
- Guaranteed max. 0.3% load regulation (LM117)
- Guaranteed 1.5A output current
- Adjustable output down to 1.2V
- Current limit constant with temperature
- P+ Product Enhancement tested
- 80 dB ripple rejection
- Output is short-circuit protected

Typical Applications

Full output current not available at high input-output voltages

*Needed if device is more than 6 inches from filter capacitors.

†Optional — improves transient response. Output capacitors in the range of 1 μ F to 1000 μ F of aluminum or tantalum electrolytic are commonly used to provide improved output impedance and rejection of transients.

$$\dagger\dagger V_{OUT} = 1.25V \left(1 + \frac{R2}{R1} \right) + I_{ADJ}(R2)$$

LM117HV/LM317HV

3-Terminal Adjustable Regulator

General Description

The LM117HV/LM317HV are adjustable 3-terminal positive voltage regulators capable of supplying in excess of 1.5A over a 1.2V to 57V output range. They are exceptionally easy to use and require only two external resistors to set the output voltage. Further, both line and load regulation are better than standard fixed regulators. Also, the LM117HV is packaged in standard transistor packages which are easily mounted and handled.

In addition to higher performance than fixed regulators, the LM117HV series offers full overload protection available only in IC's. Included on the chip are current limit, thermal overload protection and safe area protection. All overload protection circuitry remains fully functional even if the adjustment terminal is disconnected.

Normally, no capacitors are needed unless the device is situated more than 6 inches from the input filter capacitors in which case an input bypass is needed. An optional output capacitor can be added to improve transient response. The adjustment terminal can be bypassed to achieve very high ripple rejections ratios which are difficult to achieve with standard 3-terminal regulators.

Besides replacing fixed regulators, the LM117HV is useful in a wide variety of other applications. Since the regulator is "floating" and sees only the input-to-output differential voltage, supplies of several hundred volts can be regulated as long as the maximum input to output differential is not exceeded, i.e. do not short the output to ground.

Also, it makes an especially simple adjustable switching regulator, a programmable output regulator, or by connecting a fixed resistor between the adjustment and output, the LM117HV can be used as a precision current regulator. Supplies with electronic shutdown can be achieved by clamping the adjustment terminal to ground which programs the output to 1.2V where most loads draw little current.

The LM117HVK STEEL and LM317HVK STEEL are packaged in standard TO-3 transistor packages, while the LM117HVH and LM317HVH are packaged in a solid Kovar base TO-39 transistor package. The LM317HVT uses a TO-220 plastic package. The LM117HV is rated for operation from -55°C to +150°C, and the LM317HV from 0°C to +125°C.

Features

- Adjustable output down to 1.2V
- Guaranteed 1.5A output current
- Line regulation typically 0.01%/V
- Load regulation typically 0.1%
- Current limit constant with temperature
- 100% electrical burn-in
- Eliminates the need to stock many voltages
- Standard 3-lead transistor package
- 80 dB ripple rejection
- Output is short-circuit protected
- P⁺ Product Enhancement tested

LM123/LM323A/LM323

3-Amp, 5-Volt Positive Regulator

General Description

The LM123 is a three-terminal positive regulator with a preset 5V output and a load driving capability of 3 amps. New circuit design and processing techniques are used to provide the high output current without sacrificing the regulation characteristics of lower current devices.

The LM323A offers improved precision over the standard LM323. Parameters with tightened specifications include output voltage tolerance, line regulation, and load regulation. The 3 amp regulator is virtually blowout proof. Current limiting, power limiting, and thermal shutdown provide the same high level of reliability obtained with these techniques in the LM109 1 amp regulator.

No external components are required for operation of the LM123. If the device is more than 4 inches from the filter capacitor, however, a 1 μF solid tantalum capacitor should be used on the input. A 0.1 μF or larger capacitor may be used on the output to reduce load transient spikes created by fast switching digital logic, or to swamp out stray load capacitance.

An overall worst case specification for the combined effects of input voltage, load currents, ambient temperature, and power dissipation ensure that the LM123 will perform satisfactorily as a system element.

For applications requiring other voltages, see LM150 series adjustable regulator data sheet.

Operation is guaranteed over the junction temperature range -55°C to $+150^{\circ}\text{C}$ for LM123, -40°C to $+125^{\circ}\text{C}$ for LM323A, and 0°C to $+125^{\circ}\text{C}$ for LM323. A hermetic TO-3 package is used for high reliability and low thermal resistance.

Features

- Guaranteed 1% initial accuracy (A version)
- 3 amp output current
- Internal current and thermal limiting
- 0.01 Ω typical output impedance
- 7.5V minimum input voltage
- 30W power dissipation
- P+ Product Enhancement tested

Typical Applications

*Required if LM123 is more than 4" from filter capacitor.
 †Regulator is stable with no load capacitor into resistive loads.

LM133/LM333

3-Ampere Adjustable Negative Regulators

General Description

The LM133/LM333 are adjustable 3-terminal negative voltage regulators capable of supplying in excess of $-3.0A$ over an output voltage range of $-1.2V$ to $-32V$. These regulators are exceptionally easy to apply, requiring only 2 external resistors to set the output voltage and 1 output capacitor for frequency compensation. The circuit design has been optimized for excellent regulation and low thermal transients. Further, the LM133 series features internal current limiting, thermal shutdown and safe-area compensation, making them substantially immune to failure from overloads.

The LM133/LM333 serve a wide variety of applications including local on-card regulation, programmable-output voltage regulation or precision current regulation. The LM133/LM333 are ideal complements to the LM150/LM350 adjustable positive regulators.

Features

- Output voltage adjustable from $-1.2V$ to $-32V$
- $3.0A$ output current guaranteed, $-55^{\circ}C$ to $+150^{\circ}C$
- Line regulation typically $0.01\%/V$
- Load regulation typically 0.2%
- Excellent rejection of thermal transients
- $50 \text{ ppm}/^{\circ}C$ temperature coefficient
- Temperature-independent current limit
- Internal thermal overload protection
- P⁺ Product Enhancement tested
- Standard 3-lead transistor package
- Output is short circuit protected

LM137/LM337

3-Terminal Adjustable Negative Regulators

General Description

The LM137/LM337 are adjustable 3-terminal negative voltage regulators capable of supplying in excess of -1.5A over an output voltage range of -1.2V to -37V . These regulators are exceptionally easy to apply, requiring only 2 external resistors to set the output voltage and 1 output capacitor for frequency compensation. The circuit design has been optimized for excellent regulation and low thermal transients. Further, the LM137 series features internal current limiting, thermal shutdown and safe-area compensation, making them virtually blowout-proof against overloads.

The LM137/LM337 serve a wide variety of applications including local on-card regulation, programmable-output voltage regulation or precision current regulation. The LM137/LM337 are ideal complements to the LM117/LM317 adjustable positive regulators.

Features

- Output voltage adjustable from -1.2V to -37V
- 1.5A output current guaranteed, -55°C to $+150^\circ\text{C}$
- Line regulation typically $0.01\%/V$
- Load regulation typically 0.3%
- Excellent thermal regulation, $0.002\%/W$

- 77 dB ripple rejection
- Excellent rejection of thermal transients
- $50\text{ ppm}/^\circ\text{C}$ temperature coefficient
- Temperature-independent current limit
- Internal thermal overload protection
- P+ Product Enhancement tested
- Standard 3-lead transistor package
- Output is short circuit protected

LM137 Series Packages and Power Capability

Device	Package	Rated Power Dissipation	Design Load Current
LM137/337	TO-3 (K)	20W	1.5A
	TO-39 (H)	2W	0.5A
LM337	TO-220 (T)	15W	1.5A
LM337	SOT-223 (MP)	2W	1A

Typical Applications

Adjustable Negative Voltage Regulator

DS009067-1

Full output current not available at high input-output voltages

$$-V_{OUT} = -1.25V \left(1 + \frac{R2}{120} \right) + (-I_{ADJ} \times R2)$$

†C1 = $1\ \mu\text{F}$ solid tantalum or $10\ \mu\text{F}$ aluminum electrolytic required for stability

*C2 = $1\ \mu\text{F}$ solid tantalum is required only if regulator is more than $4''$ from power-supply filter capacitor

Output capacitors in the range of $1\ \mu\text{F}$ to $1000\ \mu\text{F}$ of aluminum or tantalum electrolytic are commonly used to provide improved output impedance and rejection of transients

Comparison between SOT-223 and D-Pak (TO-252) Packages

Scale 1:1

LM137HV/LM337HV

3-Terminal Adjustable Negative Regulators (High Voltage)

General Description

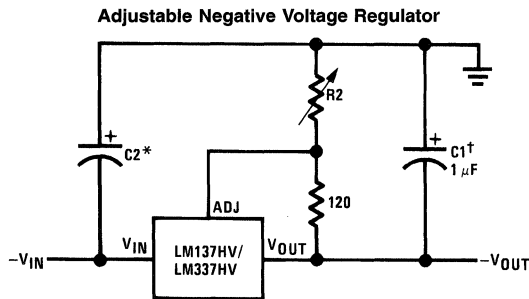

The LM137HV/LM337HV are adjustable 3-terminal negative voltage regulators capable of supplying in excess of $-1.5A$ over an output voltage range of $-1.2V$ to $-47V$. These regulators are exceptionally easy to apply, requiring only 2 external resistors to set the output voltage and 1 output capacitor for frequency compensation. The circuit design has been optimized for excellent regulation and low thermal transients. Further, the LM137HV series features internal current limiting, thermal shutdown and safe-area compensation, making them virtually blowout-proof against overloads.

The LM137HV/LM337HV serve a wide variety of applications including local on-card regulation, programmable-output voltage regulation or precision current regulation. The LM137HV/LM337HV are ideal complements to the LM117HV/LM317HV adjustable positive regulators.

Features

- Output voltage adjustable from $-1.2V$ to $-47V$
- $1.5A$ output current guaranteed, $-55^{\circ}C$ to $+150^{\circ}C$
- Line regulation typically $0.01\%/V$
- Load regulation typically 0.3%
- Excellent thermal regulation, $0.002\%/W$
- 77 dB ripple rejection
- Excellent rejection of thermal transients
- 50 ppm/ $^{\circ}C$ temperature coefficient
- Temperature-independent current limit
- Internal thermal overload protection
- P+ Product Enhancement tested
- Standard 3-lead transistor package
- Output short circuit protected

Typical Applications

$$-V_{OUT} = -1.25V \left(1 + \frac{R_2}{120\Omega} \right) + \left[-I_{Adj} (R_2) \right]$$

DS009066-2S

†C1 = $1 \mu F$ solid tantalum or $10 \mu F$ aluminum electrolytic required for stability. Output capacitors in the range of $1 \mu F$ to $1000 \mu F$ of aluminum or tantalum electrolytic are commonly used to provide improved output impedance and rejection of transients.

*C2 = $1 \mu F$ solid tantalum is required only if regulator is more than 4° from power-supply filter capacitor.

LM138/LM338

5-Amp Adjustable Regulators

General Description

The LM138 series of adjustable 3-terminal positive voltage regulators is capable of supplying in excess of 5A over a 1.2V to 32V output range. They are exceptionally easy to use and require only 2 resistors to set the output voltage. Careful circuit design has resulted in outstanding load and line regulation—comparable to many commercial power supplies. The LM138 family is supplied in a standard 3-lead transistor package.

A unique feature of the LM138 family is time-dependent current limiting. The current limit circuitry allows peak currents of up to 12A to be drawn from the regulator for short periods of time. This allows the LM138 to be used with heavy transient loads and speeds start-up under full-load conditions. Under sustained loading conditions, the current limit decreases to a safe value protecting the regulator. Also included on the chip are thermal overload protection and safe area protection for the power transistor. Overload protection remains functional even if the adjustment pin is accidentally disconnected.

Normally, no capacitors are needed unless the device is situated more than 6 inches from the input filter capacitors in which case an input bypass is needed. An output capacitor can be added to improve transient response, while bypassing the adjustment pin will increase the regulator's ripple rejection.

Besides replacing fixed regulators or discrete designs, the LM138 is useful in a wide variety of other applications. Since the regulator is "floating" and sees only the input-to-output differential voltage, supplies of several hundred volts can be regulated as long as the maximum input to output differential is not exceeded, i.e., do not short-circuit output to ground. The part numbers in the LM138 series which have a K suffix are packaged in a standard Steel TO-3 package, while those with a T suffix are packaged in a TO-220 plastic package. The LM138 is rated for $-55^{\circ}\text{C} \leq T_J \leq +150^{\circ}\text{C}$, and the LM338 is rated for $0^{\circ}\text{C} \leq T_J \leq +125^{\circ}\text{C}$.

Features

- Guaranteed 7A peak output current
- Guaranteed 5A output current
- Adjustable output down to 1.2V
- Guaranteed thermal regulation
- Current limit constant with temperature
- P+ Product Enhancement tested
- Output is short-circuit protected

Applications

- Adjustable power supplies
- Constant current regulators
- Battery chargers

LM340/LM78MXX Series 3-Terminal Positive Regulators

General Description

The LM140/LM340A/LM340/LM7800C monolithic 3-terminal positive voltage regulators employ internal current-limiting, thermal shutdown and safe-area compensation, making them essentially indestructible. If adequate heat sinking is provided, they can deliver over 1.0A output current. They are intended as fixed voltage regulators in a wide range of applications including local (on-card) regulation for elimination of noise and distribution problems associated with single-point regulation. In addition to use as fixed voltage regulators, these devices can be used with external components to obtain adjustable output voltages and currents.

Considerable effort was expended to make the entire series of regulators easy to use and minimize the number of external components. It is not necessary to bypass the output, although this does improve transient response. Input bypassing is needed only if the regulator is located far from the filter capacitor of the power supply.

The 5V, 12V, and 15V regulator options are available in the steel TO-3 power package. The LM340A/LM340/LM7800C series is available in the TO-220 plastic power package, and the LM340-5.0 is available in the SOT-223 package, as well as the LM340-5.0 and LM340-12 in the surface-mount TO-263 package.

Features

- Complete specifications at 1A load
- Output voltage tolerances of $\pm 2\%$ at $T_j = 25^\circ\text{C}$ and $\pm 4\%$ over the temperature range (LM340A)
- Line regulation of 0.01% of V_{OUT}/V of ΔV_{IN} at 1A load (LM340A)
- Load regulation of 0.3% of V_{OUT}/A (LM340A)
- Internal thermal overload protection
- Internal short-circuit current limit
- Output transistor safe area protection
- P+ Product Enhancement tested

Device	Output Voltages	Packages
LM140	5, 12, 15	TO-3 (K)
LM340A/LM340	5, 12, 15	TO-3 (K), TO-220 (T), SOT-223 (MP), TO-263 (S) (5V and 12V only)
LM7800C	5, 8, 12, 15	TO-220 (T)

Typical Applications

Fixed Output Regulator

DS007781-1

*Required if the regulator is located far from the power supply filter.

**Although no output capacitor is needed for stability, it does help transient response. (If needed, use 0.1 μF ceramic disc).

Adjustable Output Regulator

DS007781-2

$$V_{\text{OUT}} = 5V + (5V/R1 + I_Q) R2 \quad 5V/R1 > 3 I_Q$$

$$\text{load regulation } (L_r) = [(R1 + R2)/R1] (L_r \text{ of LM340-5})$$

Current Regulator

DS007781-3

$$I_{\text{OUT}} = \frac{V_{2-3}}{R1} + I_Q$$

$\Delta I_Q = 1.3 \text{ mA}$ over line and load changes.

Scale 1:1

LM150/LM350A/LM350

3-Amp Adjustable Regulators

General Description

The LM150 series of adjustable 3-terminal positive voltage regulators is capable of supplying in excess of 3A over a 1.2V to 33V output range. They are exceptionally easy to use and require only 2 external resistors to set the output voltage. Further, both line and load regulation are comparable to discrete designs. Also, the LM150 is packaged in standard transistor packages which are easily mounted and handled.

In addition to higher performance than fixed regulators, the LM150 series offers full overload protection available only in IC's. Included on the chip are current limit, thermal overload protection and safe area protection. All overload protection circuitry remains fully functional even if the adjustment terminal is accidentally disconnected.

Normally, no capacitors are needed unless the device is situated more than 6 inches from the input filter capacitors in which case an input bypass is needed. An output capacitor can be added to improve transient response, while bypassing the adjustment pin will increase the regulator's ripple rejection.

Besides replacing fixed regulators or discrete designs, the LM150 is useful in a wide variety of other applications. Since the regulator is "floating" and sees only the input-to-output differential voltage, supplies of several hundred volts can be regulated as long as the maximum input to output differential is not exceeded, i.e., avoid short-circuiting the output.

By connecting a fixed resistor between the adjustment pin and output, the LM150 can be used as a precision current

regulator. Supplies with electronic shutdown can be achieved by clamping the adjustment terminal to ground which programs the output to 1.2V where most loads draw little current.

The part numbers in the LM150 series which have a K suffix are packaged in a standard Steel TO-3 package, while those with a T suffix are packaged in a TO-220 plastic package. The LM150 is rated for $-55^{\circ}\text{C} \leq T_J \leq +150^{\circ}\text{C}$, while the LM350A is rated for $-40^{\circ}\text{C} \leq T_J \leq +125^{\circ}\text{C}$, and the LM350 is rated for $0^{\circ}\text{C} \leq T_J \leq +125^{\circ}\text{C}$.

Features

- Adjustable output down to 1.2V
- Guaranteed 3A output current
- Guaranteed thermal regulation
- Output is short circuit protected
- Current limit constant with temperature
- P+ Product Enhancement tested
- 86 dB ripple rejection
- Guaranteed 1% output voltage tolerance (LM350A)
- Guaranteed max. 0.01%/V line regulation (LM350A)
- Guaranteed max. 0.3% load regulation (LM350A)

Applications

- Adjustable power supplies
- Constant current regulators
- Battery chargers

LM317L

3-Terminal Adjustable Regulator

General Description

The LM317L is an adjustable 3-terminal positive voltage regulator capable of supplying 100mA over a 1.2V to 37V output range. It is exceptionally easy to use and requires only two external resistors to set the output voltage. Further, both line and load regulation are better than standard fixed regulators. Also, the LM317L is available packaged in a standard TO-92 transistor package which is easy to use.

In addition to higher performance than fixed regulators, the LM317L offers full overload protection. Included on the chip are current limit, thermal overload protection and safe area protection. All overload protection circuitry remains fully functional even if the adjustment terminal is disconnected.

Normally, no capacitors are needed unless the device is situated more than 6 inches from the input filter capacitors in which case an input bypass is needed. An optional output capacitor can be added to improve transient response. The adjustment terminal can be bypassed to achieve very high ripple rejection ratios which are difficult to achieve with standard 3-terminal regulators.

Besides replacing fixed regulators, the LM317L is useful in a wide variety of other applications. Since the regulator is "floating" and sees only the input-to-output differential voltage, supplies of several hundred volts can be regulated as long as the maximum input-to-output differential is not exceeded.

Also, it makes an especially simple adjustable switching regulator, a programmable output regulator, or by connecting a fixed resistor between the adjustment and output, the LM317L can be used as a precision current regulator. Supplies with electronic shutdown can be achieved by clamping the adjustment terminal to ground which programs the output to 1.2V where most loads draw little current.

The LM317L is available in a standard TO-92 transistor package, the SO-8 package, and 6-Bump micro SMD package. The LM317L is rated for operation over a -25°C to 125°C range.

Features

- Adjustable output down to 1.2V
- Guaranteed 100 mA output current
- Line regulation typically 0.01%/V
- Load regulation typically 0.1%
- Current limit constant with temperature
- Eliminates the need to stock many voltages
- Standard 3-lead transistor package
- 80 dB ripple rejection
- Available in TO-92, SO-8, or 6-Bump micro SMD package
- Output is short circuit protected
- See AN-1112 for micro SMD considerations

LM320L/LM79LXXAC Series 3-Terminal Negative Regulators

General Description

The LM320L/LM79LXXAC dual marked series of 3-terminal negative voltage regulators features fixed output voltages of $-5V$, $-12V$, and $-15V$ with output current capabilities in excess of 100 mA. These devices were designed using the latest computer techniques for optimizing the packaged IC thermal/electrical performance. The LM79LXXAC series, even when combined with a minimum output compensation capacitor of $0.1 \mu F$, exhibits an excellent transient response, a maximum line regulation of $0.07\% V_{OUT}/V$, and a maximum load regulation of $0.01\% V_{OUT}/mA$.

The LM320L/LM79LXXAC series also includes, as self-protection circuitry: safe operating area circuitry for output transistor power dissipation limiting, a temperature independent short circuit current limit for peak output current limiting, and a thermal shutdown circuit to prevent excessive junction temperature. Although designed primarily as fixed voltage regulators, these devices may be combined with simple external circuitry for boosted and/or adjustable volt-

ages and currents. The LM79LXXAC series is available in the 3-lead TO-92 package, and SO-8; 8 lead package. The LM320L series is available in the 3-lead TO-92 package.

For output voltage other than $-5V$, $-12V$ and $-15V$, the LM137L series provides an output voltage range from 1.2V to 47V.

Features

- Preset output voltage error is less than $\pm 5\%$ overload, line and temperature
- Specified at an output current of 100 mA
- Easily compensated with a small $0.1 \mu F$ output capacitor
- Internal short-circuit, thermal and safe operating area protection
- Easily adjustable to higher output voltages
- Maximum line regulation less than $0.07\% V_{OUT}/V$
- Maximum load regulation less than $0.01\% V_{OUT}/mA$

Typical Applications

DS007748-1

*Required if the regulator is located far from the power supply filter. A $1 \mu F$ aluminum electrolytic may be substituted.

**Required for stability. A $1 \mu F$ aluminum electrolytic may be substituted.

DS007748-3

LM325 Dual Voltage Regulator

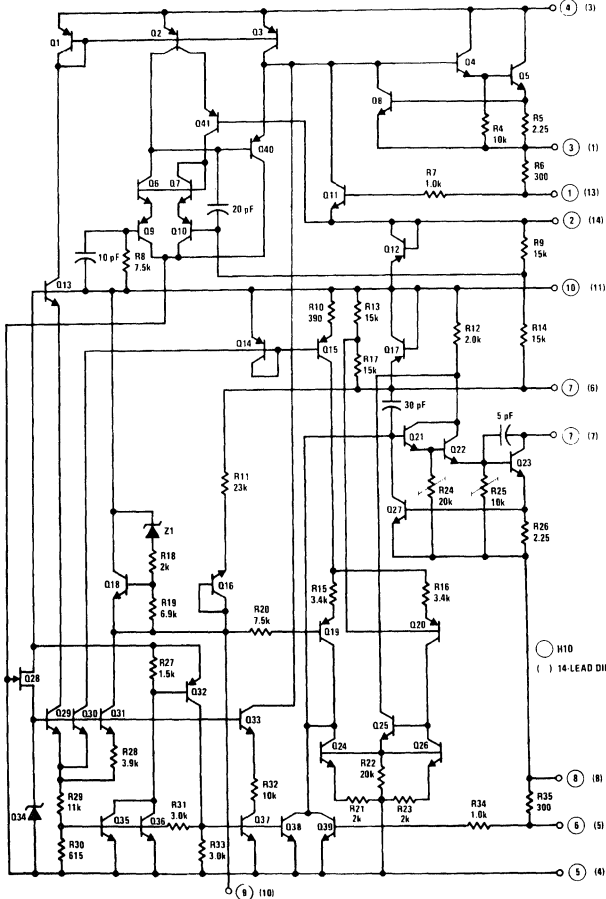

General Description

This dual polarity tracking regulator is designed to provide balanced positive and negative output voltages at current up to 100 mA, and is set for $\pm 15V$ outputs. Input voltages up to $\pm 30V$ can be used and there is provision for adjustable current limiting. The device is available in two package types to accommodate various power requirements and temperature ranges.

Features

- $\pm 15V$ tracking outputs
- Output current to 100 mA
- Output voltage balanced to within 2%
- Line and load regulation of 0.06%
- Internal thermal overload protection
- Standby current drain of 3 mA
- Externally adjustable current limit
- Internal current limit

LM330

3-Terminal Positive Regulator

General Description

The LM330 5V 3-terminal positive voltage regulator features an ability to source 150 mA of output current with an input-output differential of 0.6V or less. Familiar regulator features such as current limit and thermal overload protection are also provided.

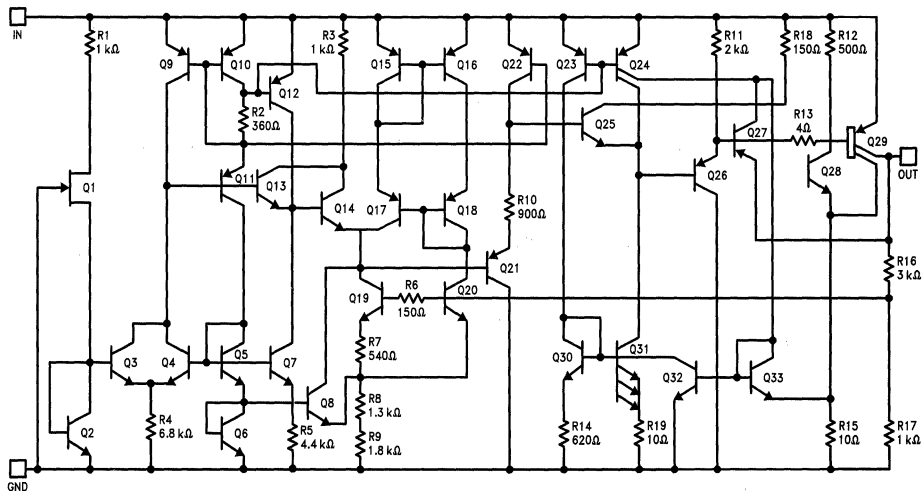

The low dropout voltage makes the LM330 useful for certain battery applications since this feature allows a longer battery discharge before the output falls out of regulation. For example, a battery supplying the regulator input voltage may discharge to 5.6V and still properly regulate the system and load voltage. Supporting this feature, the LM330 protects both itself and regulated systems from negative voltage inputs resulting from reverse installations of batteries.

Other protection features include line transient protection up to 26V, when the output actually shuts down to avoid damaging internal and external circuits. Also, the LM330 regulator cannot be harmed by a temporary mirror-image insertion.

Features

- Input-output differential less than 0.6V
- Output current of 150 mA
- Reverse battery protection
- Line transient protection
- Internal short circuit current limit
- Internal thermal overload protection
- Mirror-image insertion protection
- P+ Product Enhancement tested

LM337L

3-Terminal Adjustable Regulator

General Description

The LM337L is an adjustable 3-terminal negative voltage regulator capable of supplying 100 mA over a 1.2V to 37V output range. It is exceptionally easy to use and requires only two external resistors to set the output voltage. Furthermore, both line and load regulation are better than standard fixed regulators. Also, the LM337L is packaged in a standard TO-92 transistor package which is easy to use.

In addition to higher performance than fixed regulators, the LM337L offers full overload protection. Included on the chip are current limit, thermal overload protection and safe area protection. All overload protection circuitry remains fully functional even if the adjustment terminal is disconnected.

Normally, only a single 1 μ F solid tantalum output capacitor is needed unless the device is situated more than 6 inches from the input filter capacitors, in which case an input bypass is needed. A larger output capacitor can be added to improve transient response. The adjustment terminal can be bypassed to achieve very high ripple rejection ratios which are difficult to achieve with standard 3-terminal regulators.

Besides replacing fixed regulators, the LM337L is useful in a wide variety of other applications. Since the regulator is "floating" and sees only the input-to-output differential voltage, supplies of several hundred volts can be regulated as long as the maximum input-to-output differential is not exceeded.

Also, it makes an especially simple adjustable switching regulator, a programmable output regulator, or by connecting a fixed resistor between the adjustment and output, the LM337L can be used as a precision current regulator. Supplies with electronic shutdown can be achieved by clamping the adjustment terminal to ground which programs the output to 1.2V where most loads draw little current.

The LM337L is available in a standard TO-92 transistor package and a SO-8 surface mount package. The LM337L is rated for operation over a -25°C to $+125^{\circ}\text{C}$ range.

For applications requiring greater output current in excess of 0.5A and 1.5A, see LM137 series data sheets. For the positive complement, see series LM117 and LM317L data sheets.

Features

- Adjustable output down to 1.2V
- Guaranteed 100 mA output current
- Line regulation typically 0.01%/V
- Load regulation typically 0.1%
- Current limit constant with temperature
- Eliminates the need to stock many voltages
- Standard 3-lead transistor package
- 80 dB ripple rejection
- Output is short circuit protected

LM341/LM78MXX Series

3-Terminal Positive Voltage Regulators

General Description

The LM341 and LM78MXX series of three-terminal positive voltage regulators employ built-in current limiting, thermal shutdown, and safe-operating area protection which makes them virtually immune to damage from output overloads.

With adequate heatsinking, they can deliver in excess of 0.5A output current. Typical applications would include local (on-card) regulators which can eliminate the noise and degraded performance associated with single-point regulation.

Features

- Output current in excess of 0.5A
- No external components
- Internal thermal overload protection
- Internal short circuit current-limiting
- Output transistor safe-area compensation
- Available in TO-220, TO-39, and TO-252 D-PAK packages
- Output voltages of 5V, 12V, and 15V

LM723/LM723C

Voltage Regulator

General Description

The LM723/LM723C is a voltage regulator designed primarily for series regulator applications. By itself, it will supply output currents up to 150 mA; but external transistors can be added to provide any desired load current. The circuit features extremely low standby current drain, and provision is made for either linear or foldback current limiting.

The LM723/LM723C is also useful in a wide range of other applications such as a shunt regulator, a current regulator or a temperature controller.

The LM723C is identical to the LM723 except that the LM723C has its performance guaranteed over a 0°C to +70°C temperature range, instead of -55°C to +125°C.

Features

- 150 mA output current without external pass transistor
- Output currents in excess of 10A possible by adding external transistors
- Input voltage 40V max
- Output voltage adjustable from 2V to 37V
- Can be used as either a linear or a switching regulator

LM78XX

Series Voltage Regulators

General Description

The LM78XX series of three terminal regulators is available with several fixed output voltages making them useful in a wide range of applications. One of these is local on card regulation, eliminating the distribution problems associated with single point regulation. The voltages available allow these regulators to be used in logic systems, instrumentation, HiFi, and other solid state electronic equipment. Although designed primarily as fixed voltage regulators these devices can be used with external components to obtain adjustable voltages and currents.

The LM78XX series is available in an aluminum TO-3 package which will allow over 1.0A load current if adequate heat sinking is provided. Current limiting is included to limit the peak output current to a safe value. Safe area protection for the output transistor is provided to limit internal power dissipation. If internal power dissipation becomes too high for the heat sinking provided, the thermal shutdown circuit takes over preventing the IC from overheating.

Considerable effort was expended to make the LM78XX series of regulators easy to use and minimize the number of external components. It is not necessary to bypass the out-

put, although this does improve transient response. Input bypassing is needed only if the regulator is located far from the filter capacitor of the power supply.

For output voltage other than 5V, 12V and 15V the LM117 series provides an output voltage range from 1.2V to 57V.

Features

- Output current in excess of 1A
- Internal thermal overload protection
- No external components required
- Output transistor safe area protection
- Internal short circuit current limit
- Available in the aluminum TO-3 package

LM78LXX Series

3-Terminal Positive Regulators

General Description

The LM78LXX series of three terminal positive regulators is available with several fixed output voltages making them useful in a wide range of applications. When used as a zener diode/resistor combination replacement, the LM78LXX usually results in an effective output impedance improvement of two orders of magnitude, and lower quiescent current. These regulators can provide local on card regulation, eliminating the distribution problems associated with single point regulation. The voltages available allow the LM78LXX to be used in logic systems, instrumentation, HiFi, and other solid state electronic equipment.

The LM78LXX is available in the plastic TO-92 (Z) package, the plastic SO-8 (M) package and a chip sized package (8-Bump micro SMD) using National's micro SMD package technology. With adequate heat sinking the regulator can deliver 100 mA output current. Current limiting is included to limit the peak output current to a safe value. Safe area pro-

tection for the output transistors is provided to limit internal power dissipation. If internal power dissipation becomes too high for the heat sinking provided, the thermal shutdown circuit takes over preventing the IC from overheating.

Features

- LM78L05 in micro SMD package
- Output voltage tolerances of $\pm 5\%$ over the temperature range
- Output current of 100 mA
- Internal thermal overload protection
- Output transistor safe area protection
- Internal short circuit current limit
- Available in plastic TO-92 and plastic SO-8 low profile packages
- No external components
- Output voltages of 5.0V, 6.2V, 8.2V, 9.0V, 12V, 15V

LM79XX Series 3-Terminal Negative Regulators

General Description

The LM79XX series of 3-terminal regulators is available with fixed output voltages of $-5V$, $-12V$, and $-15V$. These devices need only one external component—a compensation capacitor at the output. The LM79XX series is packaged in the TO-220 power package and is capable of supplying 1.5A of output current.

These regulators employ internal current limiting safe area protection and thermal shutdown for protection against virtually all overload conditions.

Low ground pin current of the LM79XX series allows output voltage to be easily boosted above the preset value with a

resistor divider. The low quiescent current drain of these devices with a specified maximum change with line and load ensures good regulation in the voltage boosted mode.

For applications requiring other voltages, see LM137 data sheet.

Features

- Thermal, short circuit and safe area protection
- High ripple rejection
- 1.5A output current
- 4% tolerance on preset output voltage

Connection Diagrams

Typical Applications

*Required if regulator is separated from filter capacitor by more than 3". For value given, capacitor must be solid tantalum. 25 μF aluminum electrolytic may be substituted.

†Required for stability. For value given, capacitor must be solid tantalum. 25 μF aluminum electrolytic may be substituted. Values given may be increased without limit.

For output capacitance in excess of 100 μF , a high current diode from input to output (1N4001, etc.) will protect the regulator from momentary input shorts.

LM79MXX Series 3-Terminal Negative Regulators

General Description

The LM79MXX series of 3-terminal regulators is available with fixed output voltages of $-5V$, $-12V$, and $-15V$. These devices need only one external component—a compensation capacitor at the output. The LM79MXX series is packaged in the TO-220 power package, and is capable of supplying 0.5A of output current.

These regulators employ internal current limiting, safe area protection, and thermal shutdown for protection against virtually all overload conditions.

Low ground pin current of the LM79MXX series allows output voltage to be easily boosted above the preset value with

a resistor divider. The low quiescent current of these devices with a specified maximum change with line and load ensures good regulation in the voltage boosted mode.

For output voltage other than $-5V$, $-12V$, and $-15V$ the LM137 series provides an output voltage range from $-1.2V$ to $-57V$.

Features

- Thermal, short circuit and safe area protection
- High ripple rejection
- 0.5A output current
- 4% tolerance on preset output voltage

Note 1: "F" denotes accuracy for full temperature range; otherwise, accuracy is at 25°C.

Note 2: Dropout voltage is given for full load. "F" denotes value for full temperature range, and "T" denotes typical value; otherwise, values are maximum at 25°C.

Note 3: Quiescent current is given for minimum load. "F" denotes value for full temperature range, and "T" denotes typical value; otherwise, values are maximum at 25°C.

Note 4: 20V version available upon request.

Note 5: Minimum input voltage required to maintain regulation is 2.20V.

Note 6: Denotes products with fixed output voltages that also provide adjustment control of the output voltage.

Note 7: Refer to Voltage Control and Supervisor Products section for product data for the LM3411A/LM3411 regulator controller.

Low-Dropout Voltage Regulators Definition Of Terms

Dropout Voltage: The input-voltage differential at which the circuit ceases to regulate against further reduction in input voltage. Measured when the output voltage has dropped 100 mV from the nominal value obtained at ($V_{OUT} + 5V$) input, dropout voltage is dependent upon load current and junction temperature.

Input Voltage: The DC voltage applied to the input terminals with respect to ground.

Input-Output Differential: The voltage difference between the unregulated input voltage and the regulated output voltage for which the regulator will operate.

Line Regulation: The change in output voltage for a change in the input voltage. The measurement is made under conditions of low dissipation or by using pulse techniques such that the average chip temperature is not significantly affected.

Load Regulation: The change in output voltage for a change in load current at constant chip temperature.

Long Term Stability: Output voltage stability under accelerated life-test conditions after 1000 hours with maximum rated voltage and junction temperature.

Output Noise Voltage: The rms AC voltage at the output, with constant load and no input ripple, measured over a specified frequency range.

Quiescent Current: That part of the positive input current that does not contribute to the positive load current. The regulator ground lead current.

Ripple Rejection: The ratio of the peak-to-peak input ripple voltage to the peak-to-peak output ripple voltage.

Temperature Stability of V_O : The percentage change in output voltage for a thermal variation from room temperature to either temperature extreme.

LM1084

5A Low Dropout Positive Regulators

General Description

The LM1084 is a series of low dropout voltage positive regulators with a maximum dropout of 1.5V at 5A of load current. It has the same pin-out as National Semiconductor's industry standard LM317.

The LM1084 is available in an adjustable version, which can set the output voltage with only two external resistors. It is also available in three fixed voltages: 3.3V, 5.0V and 12.0V. The fixed versions intergrate the adjust resistors.

The LM1084 circuit includes a zener trimmed bandgap reference, current limiting and thermal shutdown.

The LM1084 series is available in TO-220 and TO-263 packages. Refer to the LM1085 for the 3A version, and the LM1086 for the 1.5A version.

Features

- Available in 3.3V, 5.0V, 12V and Adjustable Versions
- Current Limiting and Thermal Protection
- Output Current 5A
- Industrial Temperature Range -40°C to 125°C
- Line Regulation 0.015% (typical)
- Load Regulation 0.1% (typical)

Applications

- Post Regulator for Switching DC/DC Converter
- High Efficiency Linear Regulators
- Battery Charger

LM1085

3A Low Dropout Positive Regulators

General Description

The LM1085 is a series of low dropout positive voltage regulators with a maximum dropout of 1.5V at 3A of load current. It has the same pin-out as National Semiconductor's industry standard LM317.

The LM1085 is available in an adjustable version, which can set the output voltage with only two external resistors. It is also available in three fixed voltages: 3.3V, 5.0V and 12.0V. The fixed versions integrate the adjust resistors.

The LM1085 circuit includes a zener trimmed bandgap reference, current limiting and thermal shutdown.

The LM1085 series is available in TO-220 and TO-263 packages. Refer to the LM1084 for the 5A version, and the LM1086 for the 1.5V version.

Features

- Available in 3.3V, 5.0V, 12V and Adjustable Versions
- Current Limiting and Thermal Protection
- Output Current 3A
- Line Regulation 0.015% (typical)
- Load Regulation 0.1% (typical)

Applications

- High Efficiency Linear Regulators
- Battery Charger
- Post Regulation for Switching Supplies
- Constant Current Regulator
- Microprocessor Supply

LM1086

1.5A Low Dropout Positive Regulators

General Description

The LM1086 is a series of low dropout positive voltage regulators with a maximum dropout of 1.5V at 1.5A of load current. It has the same pin-out as National Semiconductor's industry standard LM317.

The LM1086 is available in an adjustable version, which can set the output voltage with only two external resistors. It is also available in four fixed voltages: 2.5V, 2.85V, 3.3V and 5.0V. The fixed versions integrate the adjust resistors.

The LM1086 circuit includes a zener trimmed bandgap reference, current limiting and thermal shutdown.

The LM1086 series is available in TO-220 and TO-263 packages. Refer to the LM1084 for the 5A version, and the LM1085 for the 3A version.

Features

- Available in 2.5V, 2.85V, 3.3V, 5V and Adjustable Versions
- Current Limiting and Thermal Protection
- Output Current 1.5A
- Line Regulation 0.015% (typical)
- Load Regulation 0.1% (typical)

Applications

- SCSI-2 Active Terminator
- High Efficiency Linear Regulators
- Battery Charger
- Post Regulation for Switching Supplies
- Constant Current Regulator
- Microprocessor Supply

LM1117

800mA Low-Dropout Linear Regulator

General Description

The LM1117 is a series of low dropout voltage regulators with a dropout of 1.2V at 800mA of load current. It has the same pin-out as National Semiconductor's industry standard LM317.

The LM1117 is available in an adjustable version, which can set the output voltage from 1.25V to 13.8V with only two external resistors. In addition, it is also available in five fixed voltages, 1.8V, 2.5V, 2.85V, 3.3V, and 5V.

The LM1117 offers current limiting and thermal shutdown. Its circuit includes a zener trimmed bandgap reference to assure output voltage accuracy to within $\pm 1\%$.

The LM1117 series is available in SOT-223, TO-220, and TO-252 D-PAK packages. A minimum of 10 μ F tantalum capacitor is required at the output to improve the transient response and stability.

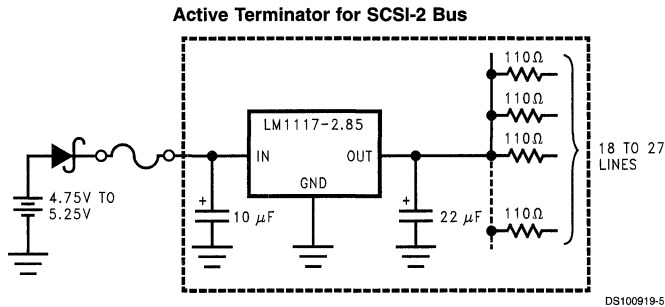

Features

- Available in 1.8V, 2.5V, 2.85V, 3.3V, 5V, and Adjustable Versions
- Space Saving SOT-223 Package
- Current Limiting and Thermal Protection
- Output Current 800mA
- Temperature Range 0°C to 125°C
- Line Regulation 0.2% (Max)
- Load Regulation 0.4% (Max)

Applications

- 2.85V Model for SCSI-2 Active Termination
- Post Regulator for Switching DC/DC Converter
- High Efficiency Linear Regulators
- Battery Charger
- Battery Powered Instrumentation

Typical Application

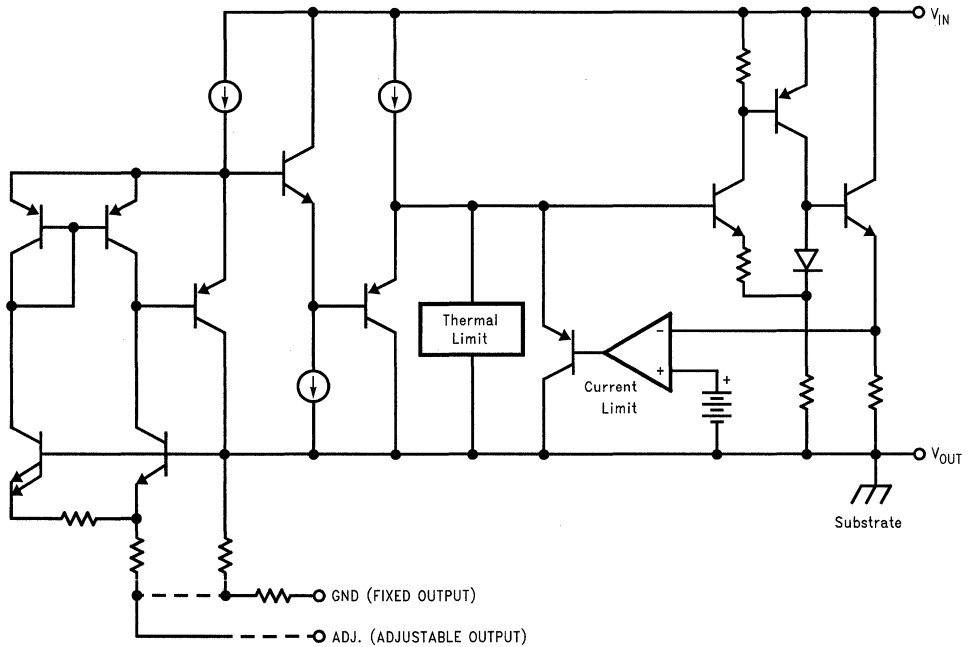

* Required if the regulator is located far from the power supply filter.

LM2930

3-Terminal Positive Regulator

General Description

The LM2930 3-terminal positive regulator features an ability to source 150 mA of output current with an input-output differential of 0.6V or less. Efficient use of low input voltages obtained, for example, from an automotive battery during cold crank conditions, allows 5V circuitry to be properly powered with supply voltages as low as 5.6V. Familiar regulator features such as current limit and thermal overload protection are also provided.

Designed originally for automotive applications, the LM2930 and all regulated circuitry are protected from reverse battery installations or 2 battery jumps. During line transients, such as a load dump (40V) when the input voltage to the regulator can momentarily exceed the specified maximum operating voltage, the regulator will automatically shut down to protect both internal circuits and the load. The LM2930 cannot be harmed by temporary mirror-image insertion.

Fixed outputs of 5V and 8V are available in the plastic TO-220 and TO-263 power packages.

Features

- Input-output differential less than 0.6V
- Output current in excess of 150 mA
- Reverse battery protection
- 40V load dump protection
- Internal short circuit current limit
- Internal thermal overload protection
- Mirror-image insertion protection
- P+ Product Enhancement tested

LM2931

Series Low Dropout Regulators

General Description

The LM2931 positive voltage regulator features a very low quiescent current of 1mA or less when supplying 10mA loads. This unique characteristic and the extremely low input-output differential required for proper regulation (0.2V for output currents of 10mA) make the LM2931 the ideal regulator for standby power systems. Applications include memory standby circuits, CMOS and other low power processor power supplies as well as systems demanding as much as 100mA of output current.

Designed originally for automotive applications, the LM2931 and all regulated circuitry are protected from reverse battery installations or 2 battery jumps. During line transients, such as a load dump (60V) when the input voltage to the regulator can momentarily exceed the specified maximum operating voltage, the regulator will automatically shut down to protect both internal circuits and the load. The LM2931 cannot be harmed by temporary mirror-image insertion. Familiar regulator features such as short circuit and thermal overload protection are also provided.

The LM2931 family includes a fixed 5V output ($\pm 3.8\%$ tolerance for A grade) or an adjustable output with ON/OFF pin.

Both versions are available in a TO-220 power package, TO-263 surface mount package, and an 8-lead surface mount package. The fixed output version is also available in the TO-92 plastic and 6-Bump micro SMD packages.

Features

- Very low quiescent current
- Output current in excess of 100 mA
- Input-output differential less than 0.6V
- Reverse battery protection
- 60V load dump protection
- -50V reverse transient protection
- Short circuit protection
- Internal thermal overload protection
- Mirror-image insertion protection
- Available in TO-220, TO-92, TO-263, SO-8 or 6-Bump micro SMD packages
- Available as adjustable with TTL compatible switch
- See AN-1112 for micro SMD considerations

Typical Applications

LM2931 Fixed Output

DS006254-4

*Required if regulator is located far from power supply filter.

**C2 must be at least 100 μF to maintain stability. May be increased without bound to maintain regulation during transients. Locate as close as possible to the regulator. This capacitor must be rated over the same operating temperature range as the regulator. The equivalent series resistance (ESR) of this capacitor is critical; see curve.

LM2931 Adjustable Output

DS006254-5

$$V_{OUT} = \text{Reference Voltage} \times \frac{R1 + R2}{R1}$$

Note: Using 27k for R1 will automatically compensate for errors in V_{OUT} due to the input bias current of the ADJ pin (approximately 1 μA).

LM2936-3.0

Ultra-Low Quiescent Current 3.0V Regulator

General Description

The LM2936-3.0 ultra-low quiescent current regulator features low dropout voltage and low current in the standby mode. With less than 20 μA quiescent current at a 100 μA load, the LM2936-3.0 is ideally suited for automotive and other battery operated systems. The LM2936-3.0 retains all of the features that are common to low dropout regulators including a low dropout PNP pass device, short circuit protection, reverse battery protection, and thermal shutdown. The LM2936-3.0 has a 40V maximum operating voltage limit, a -40°C to $+125^{\circ}\text{C}$ operating temperature range, and $\pm 3\%$ output voltage tolerance over the entire output current, input voltage, and temperature range. The LM2936-3.0 is available in a TO-92 package, a SO-8 surface mount package, as well as SOT-223 and TO-252 surface mount power packages.

Features

- Ultra low quiescent current ($I_Q \leq 20 \mu\text{A}$ for $I_O \leq 100 \mu\text{A}$)
- Fixed 3.0V, 50 mA output
- Output tolerance $\pm 3\%$ over line, load, and temperature
- Dropout voltage typically 200 mV @ $I_O = 50 \text{ mA}$
- Reverse battery protection
- -50V reverse transient protection
- Internal short circuit current limit
- Internal thermal shutdown protection
- 40V operating voltage limit

Typical Application

DS200016-1

* Required if regulator is located more than 2" from power supply filter capacitor.

** Required for stability. Must be rated for 22 μF minimum over intended operating temperature range. Effective series resistance (ESR) is critical, see curve. Locate capacitor as close as possible to the regulator output and ground pins. Capacitance may be increased without bound.

LM2936-3.3

Ultra-Low Quiescent Current 3.3V Regulator

General Description

The LM2936-3.3 ultra-low quiescent current regulator features low dropout voltage and low current in the standby mode. With less than 20 μA quiescent current at a 100 μA load, the LM2936-3.3 is ideally suited for automotive and other battery operated systems. The LM2936-3.3 retains all of the features that are common to low dropout regulators including a low dropout PNP pass device, short circuit protection, reverse battery protection, and thermal shutdown. The LM2936-3.3 has a 40V maximum operating voltage limit, a -40°C to $+125^{\circ}\text{C}$ operating temperature range, and $\pm 3\%$ output voltage tolerance over the entire output current, input voltage, and temperature range. The LM2936-3.3 is available in a TO-92 package, a SO-8 surface mount package, as well as SOT-223 and TO-252 surface mount power packages.

Features

- Ultra low quiescent current ($I_Q \leq 20 \mu\text{A}$ for $I_O \leq 100 \mu\text{A}$)
- Fixed 3.3V, 50 mA output
- Output tolerance $\pm 3\%$ over line, load, and temperature
- Dropout voltage typically 200 mV @ $I_O = 50 \text{ mA}$
- Reverse battery protection
- -50V reverse transient protection
- Internal short circuit current limit
- Internal thermal shutdown protection
- 40V operating voltage limit

Typical Application

DS101324-1

* Required if regulator is located more than 2" from power supply filter capacitor.

** Required for stability. Must be rated for 22 μF minimum over intended operating temperature range. Effective series resistance (ESR) is critical, see curve. Locate capacitor as close as possible to the regulator output and ground pins. Capacitance may be increased without bound.

LM2936-5.0

Ultra-Low Quiescent Current 5V Regulator

General Description

The LM2936 ultra-low quiescent current regulator features low dropout voltage and low current in the standby mode. With less than 15 μA quiescent current at a 100 μA load, the LM2936 is ideally suited for automotive and other battery operated systems. The LM2936 retains all of the features that are common to low dropout regulators including a low dropout PNP pass device, short circuit protection, reverse battery protection, and thermal shutdown. The LM2936 has a 40V maximum operating voltage limit, a -40°C to $+125^{\circ}\text{C}$ operating temperature range, and $\pm 3\%$ output voltage tolerance over the entire output current, input voltage, and temperature range. The LM2936 is available in a TO-92 package, a SO-8 surface mount package, and a TO-252 surface mount power package.

Features

- Ultra low quiescent current ($I_Q \leq 15 \mu\text{A}$ for $I_O \leq 100 \mu\text{A}$)
- Fixed 5V, 50 mA output
- Output tolerance $\pm 3\%$ over line, load, and temperature
- Dropout voltage typically 200 mV @ $I_O = 50 \text{ mA}$
- Reverse battery protection
- -50V reverse transient protection
- Internal short circuit current limit
- Internal thermal shutdown protection
- 40V operating voltage limit

Typical Application

DS009759-1

* Required if regulator is located more than 2" from power supply filter capacitor.

** Required for stability. Must be rated for 10 μF minimum over intended operating temperature range. Effective series resistance (ESR) is critical, see curve. Locate capacitor as close as possible to the regulator output and ground pins. Capacitance may be increased without bound.

LM2937

500 mA Low Dropout Regulator

General Description

The LM2937 is a positive voltage regulator capable of supplying up to 500 mA of load current. The use of a PNP power transistor provides a low dropout voltage characteristic. With a load current of 500 mA the minimum input to output voltage differential required for the output to remain in regulation is typically 0.5V (1V guaranteed maximum over the full operating temperature range). Special circuitry has been incorporated to minimize the quiescent current to typically only 10 mA with a full 500 mA load current when the input to output voltage differential is greater than 3V.

The LM2937 requires an output bypass capacitor for stability. As with most low dropout regulators, the ESR of this capacitor remains a critical design parameter, but the LM2937 includes special compensation circuitry that relaxes ESR requirements. The LM2937 is stable for all ESR below 3Ω. This allows the use of low ESR chip capacitors.

Ideally suited for automotive applications, the LM2937 will protect itself and any load circuitry from reverse battery con-

nections, two-battery jumps and up to +60V/-50V load dump transients. Familiar regulator features such as short circuit and thermal shutdown protection are also built in.

Features

- Fully specified for operation over -40°C to +125°C
- Output current in excess of 500 mA
- Output trimmed for 5% tolerance under all operating conditions
- Typical dropout voltage of 0.5V at full rated load current
- Wide output capacitor ESR range, up to 3Ω
- Internal short circuit and thermal overload protection
- Reverse battery protection
- 60V input transient protection
- Mirror image insertion protection

LM2937-2.5, LM2937-3.3

400mA and 500mA Voltage Regulators

General Description

The LM2937-2.5 and LM2937-3.3 are positive voltage regulators capable of supplying up to 500 mA of load current. Both regulators are ideal for converting a common 5V logic supply, or higher input supply voltage, to the lower 2.5V and 3.3V supplies to power VLSI ASIC's and microcontrollers. Special circuitry has been incorporated to minimize the quiescent current to typically only 10 mA with a full 500 mA load current when the input to output voltage differential is greater than 5V.

The LM2937 requires an output bypass capacitor for stability. As with most regulators utilizing a PNP pass transistor, the ESR of this capacitor remains a critical design parameter, but the LM2937-2.5 and LM2937-3.3 include special compensation circuitry that relaxes ESR requirements. The LM2937 is stable for all ESR ratings less than 5Ω. This allows the use of low ESR chip capacitors.

The regulators are also suited for automotive applications, with built in protection from reverse battery connections,

two-battery jumps and up to +60V/-50V load dump transients. Familiar regulator features such as short circuit and thermal shutdown protection are also built in.

Features

- Fully specified for operation over -40°C to +125°C
- Output current in excess of 500 mA (400mA for SOT-223 package)
- Output trimmed for 5% tolerance under all operating conditions
- Wide output capacitor ESR range, 0.01Ω up to 5Ω
- Internal short circuit and thermal overload protection
- Reverse battery protection
- 60V input transient protection
- Mirror image insertion protection

LM2940/LM2940C

1A Low Dropout Regulator

General Description

The LM2940/LM2940C positive voltage regulator features the ability to source 1A of output current with a dropout voltage of typically 0.5V and a maximum of 1V over the entire temperature range. Furthermore, a quiescent current reduction circuit has been included which reduces the ground current when the differential between the input voltage and the output voltage exceeds approximately 3V. The quiescent current with 1A of output current and an input-output differential of 5V is therefore only 30 mA. Higher quiescent currents only exist when the regulator is in the dropout mode ($V_{IN} - V_{OUT} \leq 3V$).

Designed also for vehicular applications, the LM2940/LM2940C and all regulated circuitry are protected from reverse battery installations or 2-battery jumps. During line transients, such as load dump when the input voltage can

momentarily exceed the specified maximum operating voltage, the regulator will automatically shut down to protect both the internal circuits and the load. The LM2940/LM2940C cannot be harmed by temporary mirror-image insertion. Familiar regulator features such as short circuit and thermal overload protection are also provided.

Features

- Dropout voltage typically 0.5V @ $I_O = 1A$
- Output current in excess of 1A
- Output voltage trimmed before assembly
- Reverse battery protection
- Internal short circuit current limit
- Mirror image insertion protection
- P+ Product Enhancement tested

Typical Application

DS008822-3

*Required if regulator is located far from power supply filter.

** C_{OUT} must be at least 22 μF to maintain stability. May be increased without bound to maintain regulation during transients. Locate as close as possible to the regulator. This capacitor must be rated over the same operating temperature range as the regulator and the ESR is critical; see curve.

LM2941/LM2941C

1A Low Dropout Adjustable Regulator

General Description

The LM2941 positive voltage regulator features the ability to source 1A of output current with a typical dropout voltage of 0.5V and a maximum of 1V over the entire temperature range. Furthermore, a quiescent current reduction circuit has been included which reduces the ground pin current when the differential between the input voltage and the output voltage exceeds approximately 3V. The quiescent current with 1A of output current and an input-output differential of 5V is therefore only 30 mA. Higher quiescent currents only exist when the regulator is in the dropout mode ($V_{IN} - V_{OUT} \leq 3V$). Designed also for vehicular applications, the LM2941 and all regulated circuitry are protected from reverse battery installations or two-battery jumps. During line transients, such as load dump when the input voltage can momentarily exceed the specified maximum operating voltage, the regulator will

automatically shut down to protect both the internal circuits and the load. Familiar regulator features such as short circuit and thermal overload protection are also provided.

Features

- Output voltage adjustable from 5V to 20V
- Dropout voltage typically 0.5V @ $I_O = 1A$
- Output current in excess of 1A
- Trimmed reference voltage
- Reverse battery protection
- Internal short circuit current limit
- Mirror image insertion protection
- P+ Product Enhancement tested
- TTL, CMOS compatible ON/OFF switch

LM2984 Microprocessor Power Supply System

General Description

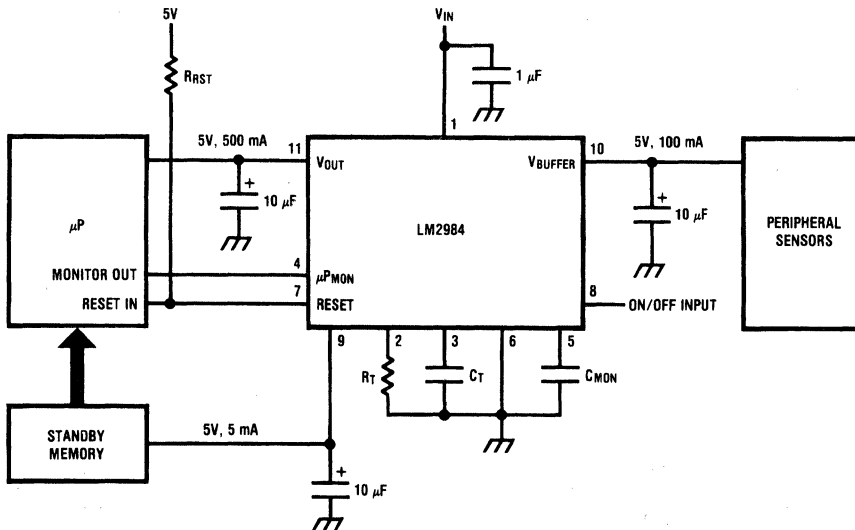

The LM2984 positive voltage regulator features three independent and tracking outputs capable of delivering the power for logic circuits, peripheral sensors and standby memory in a typical microprocessor system. The LM2984 includes circuitry which monitors both its own high-current output and also an external μP . If any error conditions are sensed in either, a reset error flag is set and maintained until the malfunction terminates. Since these functions are included in the same package with the three regulators, a great saving in board space can be realized in the typical microprocessor system. The LM2984 also features very low dropout voltages on each of its three regulator outputs (0.6V at the rated output current). Furthermore, the quiescent current can be reduced to 1 mA in the standby mode.

Designed also for vehicular applications, the LM2984 and all regulated circuitry are protected from reverse battery installations or 2-battery jumps. Familiar regulator features such as short circuit and thermal overload protection are also provided. Fixed outputs of 5V are available in the plastic TO-220 power package.

Features

- Three low dropout tracking regulators
- Output current in excess of 500 mA
- Fully specified for -40°C to $+125^{\circ}\text{C}$ operation
- Low quiescent current standby regulator
- Microprocessor malfunction RESET flag
- Delayed RESET on power-up
- Accurate pretrimmed 5V outputs
- Reverse battery protection
- Overvoltage protection
- Reverse transient protection
- Short circuit protection
- Internal thermal overload protection
- ON/OFF switch for high current outputs
- P* Product Enhancement tested

Typical Application Circuit

DS011252-1

C_{OUT} must be at least $10\ \mu\text{F}$ to maintain stability. May be increased without bound to maintain regulation during transients. Locate as close as possible to the regulator. This capacitor must be rated over the same operating temperature range as the regulator. The equivalent series resistance (ESR) of this capacitor is critical; see curve.

Order Number LM2984T
See NS Package Number TA11B

LM2990

Negative Low Dropout Regulator

General Description

The LM2990 is a three-terminal, low dropout, 1 ampere negative voltage regulator available with fixed output voltages of -5, -5.2, -12, and -15V.

The LM2990 uses new circuit design techniques to provide low dropout and low quiescent current. The dropout voltage at 1A load current is typically 0.6V and a guaranteed worst-case maximum of 1V over the entire operating temperature range. The quiescent current is typically 1 mA with 1A load current and an input-output voltage differential greater than 3V. A unique circuit design of the internal bias supply limits the quiescent current to only 9 mA (typical) when the regulator is in the dropout mode ($V_{OUT} - V_{IN} \leq 3V$). Output voltage accuracy is guaranteed to $\pm 5\%$ over load, and temperature extremes.

The LM2990 is short-circuit proof, and thermal shutdown includes hysteresis to enhance the reliability of the device when overloaded for an extended period of time. The

LM2990 is available in a 3-lead TO-220 package and is rated for operation over the automotive temperature range of -40°C to $+125^{\circ}\text{C}$.

Features

- 5% output accuracy over entire operating range
- Output current in excess of 1A
- Dropout voltage typically 0.6V at 1A load
- Low quiescent current
- Internal short circuit current limit
- Internal thermal shutdown with hysteresis
- Functional complement to the LM2940 series

Applications

- Post switcher regulator
- Local, on-card, regulation
- Battery operated equipment

Typical Application

DS010801-1

*Required if the regulator is located further than 6 inches from the power supply filter capacitors. A 1 μF solid tantalum or a 10 μF aluminum electrolytic capacitor is recommended.

**Required for stability. Must be at least a 10 μF aluminum electrolytic or a 1 μF solid tantalum to maintain stability. May be increased without bound to maintain regulation during transients. Locate the capacitor as close as possible to the regulator. The equivalent series resistance (ESR) is critical, and should be less than 10 Ω over the same operating temperature range as the regulator.

LM2991

Negative Low Dropout Adjustable Regulator

General Description

The LM2991 is a low dropout adjustable negative regulator with a output voltage range between $-3V$ to $-24V$. The LM2991 provides up to 1A of load current and features a On /Off pin for remote shutdown capability.

The LM2991 uses new circuit design techniques to provide a low dropout voltage, low quiescent current and low temperature coefficient precision reference. The dropout voltage at 1A load current is typically 0.6V and a guaranteed worst-case maximum of 1V over the entire operating temperature range. The quiescent current is typically 1 mA with a 1A load current and an input-output voltage differential greater than 3V. A unique circuit design of the internal bias supply limits the quiescent current to only 9 mA (typical) when the regulator is in the dropout mode ($V_{OUT} - V_{IN} \leq 3V$).

The LM2991 is short-circuit proof, and thermal shutdown includes hysteresis to enhance the reliability of the device when inadvertently overloaded for extended periods. The LM2991 is available in 5-lead TO-220 and TO-263 packages and is rated for operation over the automotive temperature range of $-40^{\circ}C$ to $+125^{\circ}C$. Mil-Aero versions are also available.

Features

- Output voltage adjustable from $-3V$ to $-24V$, typically $-2V$ to $-25V$
- Output current in excess of 1A
- Dropout voltage typically 0.6V at 1A load
- Low quiescent current
- Internal short circuit current limit
- Internal thermal shutdown with hysteresis
- TTL, CMOS compatible $\overline{ON/OFF}$ switch
- Functional complement to the LM2941 series

Applications

- Post switcher regulator
- Local, on-card, regulation
- Battery operated equipment

Typical Application

DS011260-1

$$V_{OUT} = V_{REF} (1 + R2/R1)$$

*Required if the regulator is located further than 6 inches from the power supply filter capacitors. A 1 μF solid tantalum or a 10 μF aluminum electrolytic capacitor is recommended.

**Required for stability. Must be at least a 10 μF aluminum electrolytic or a 1 μF solid tantalum to maintain stability. May be increased without bound to maintain regulation during transients. Locate the capacitor as close as possible to the regulator. The equivalent series resistance (ESR) is critical, and should be less than 10 Ω over the same operating temperature range as the regulator.

LM3460-1.2, -1.5

Precision Controller for GTLp and GTL Bus Termination

General Description

The LM3460 is a monolithic integrated circuit designed for precision control of GTLplus and GTL Bus termination. This controller is available in a tiny SOT23-5 package, and includes an internally compensated op amp, a bandgap reference, an NPN output transistor, and voltage setting resistors.

A trimmed precision bandgap voltage reference utilizes temperature drift curvature correction for excellent voltage stability over the operating range. The precision output control enables the termination voltage to maintain tight regulation, despite fast switching requirements on the bus.

The LM3460 controller is designed to be used with a high current (> 7A) NPN pass transistor to provide the high current needed for the bus termination. The wide bandwidth of the feedback loop provides excellent transient response, and greatly reduces the output capacitance required, thus reducing cost and board space requirements.

Features

- Precision output (1%)
- Output voltage can be adjusted
- Extremely fast transient response in GTLp and GTL bus termination
- Tiny SOT23-5 package
- Output voltage capability for GTL or GTLp
- Low temperature coefficient

Applications

- GTL bus termination (1.2V output 7A)
- GTLp bus termination (1.5V output 7A)
- Adjustable high-current linear regulator

Connection Diagram and Package Information

*This resistor is not used on the LM3460-1.2.

LM3480

100 mA, SOT-23, Quasi Low-Dropout Linear Voltage Regulator

General Description

The LM3480 is an integrated linear voltage regulator. It features operation from an input as high as 30V and a guaranteed maximum dropout of 1.2V at the full 100 mA load. Standard packaging for the LM3480 is the 3-lead SuperSOT® package.

The 5, 12, and 15V members of the LM3480 series are intended as tiny alternatives to industry standard LM78LXX series and similar devices. The 1.2V quasi low dropout of LM3480 series devices makes them a nice fit in many applications where the 2 to 2.5V dropout of LM78LXX series devices precludes their (LM78LXX series devices) use.

The LM3480 series features a 3.3V member. The SOT packaging and quasi low dropout features of the LM3480 series converge in this device to provide a very nice, very tiny 3.3V, 100 mA bias supply that regulates directly off the system 5V±5% power supply.

Key Specifications

- 30V maximum input for operation
- 1.2V guaranteed maximum dropout over full load and temperature ranges
- 100 mA guaranteed minimum load current
- ±5% guaranteed output voltage tolerance over full load and temperature ranges
- -40 to +125°C junction temperature range for operation

Features

- 3.3, 5, 12, and 15V versions available
- Packaged in the tiny 3-lead SuperSOT package

Applications

- Tiny alternative to LM78LXX series and similar devices
- Tiny 5V±5% to 3.3V, 100 mA converter
- Post regulator for switching DC/DC converter
- Bias supply for analog circuits

Typical Application Circuit

LM3490

100 mA, SOT-23, Quasi Low-Dropout Linear Voltage Regulator with Logic-Controlled ON/OFF

General Description

The LM3490 is an integrated linear voltage regulator. It features operation from an input as high as 30V and a guaranteed maximum dropout of 1.2V at the full 100 mA load. Standard packaging for the LM3490 is the 5-lead SOT-23 package. A logic-controlled ON/OFF feature makes the LM3490 ideal for powering subsystems ON and OFF as needed.

The 5, 12, and 15V members of the LM3490 series are intended as tiny alternatives to industry standard LM78LXX series and similar devices. The 1.2V quasi low dropout of LM3490 series devices makes them a nice fit in many applications where the 2 to 2.5V dropout of LM78LXX series devices precludes their (LM78LXX series devices) use.

The LM3490 series features a 3.3V member. The SOT packaging and quasi low dropout features of the LM3490 series converge in this device to provide a very nice, very tiny 3.3V, 100 mA bias supply that regulates directly off the system 5V±5% power supply.

Key Specifications

- 30V maximum input for operation

LM3940

1A Low Dropout Regulator for 5V to 3.3V Conversion

General Description

The LM3940 is a 1A low dropout regulator designed to provide 3.3V from a 5V supply.

The LM3940 is ideally suited for systems which contain both 5V and 3.3V logic, with prime power provided from a 5V bus. Because the LM3940 is a true low dropout regulator, it can hold its 3.3V output in regulation with input voltages as low as 4.5V.

The TO-220 package of the LM3940 means that in most applications the full 1A of load current can be delivered without using an additional heatsink.

The surface mount TO-263 package uses minimum board space, and gives excellent power dissipation capability when soldered to a copper plane on the PC board.

Features

- Output voltage specified over temperature
- Excellent load regulation
- Guaranteed 1A output current
- Requires only one external component
- Built-in protection against excess temperature
- Short circuit protected

Applications

- Laptop/Desktop Computers
- Logic Systems

Typical Application

*Required if regulator is located more than 1" from the power supply filter capacitor or if battery power is used.

**See Application Hints.

LMS1585A/LMS1587

5A and 3A Low Dropout Fast Response Regulators

General Description

The LMS1585A and LMS1587 are low dropout positive regulators with output load current of 5A and 3A respectively. Their low dropout voltage (1.2V) and fast transient response make them an excellent solution for low voltage microprocessor applications.

The LMS1585A/87 are available in adjustable versions, which can set the output voltage with only two external resistors. In addition, they are also available in 1.5V and 3.3V fixed voltage version (Note 9).

The LMS1585A/87 circuits include a zener trimmed bandgap reference, current limiting and thermal shutdown.

The LMS1585A/87 series are available in TO-220 and TO-263 packages.

Features

- Fast transient response
- Available in Adjustable, 1.5V, and 3.3V versions
- Current limiting and thermal protection
- Commercial temp. range 0°C to 125°C
- Industrial temp. range -40°C to 125°C
- Line regulation 0.005% (typical)
- Load regulation 0.05% (typical)
- Direct replacement for LT™1585A/87

Applications

- Pentium™ processor supplies
- PowerPC™ supplies
- Other 2.5V to 3.6V microprocessor supplies
- Low voltage logic supplies

Typical Application

* REQUIRED FOR STABILITY

LMS8117

1A Low-Dropout Linear Regulator

General Description

The LMS8117 is a series of low dropout voltage regulators with a dropout of 1.2V at 1A of load current. It has the same pin-out as National Semiconductor's industry standard LM317.

The LMS8117 is available in an adjustable version, which can set the output voltage from 1.25V to 13.8V with only two external resistors. In addition, it is also available in two fixed voltages, 1.8V and 3.3V.

The LMS8117 offers current limiting and thermal shutdown. Its circuit includes a zener trimmed bandgap reference to assure output voltage accuracy to within $\pm 1\%$.

The LMS8117 series is available in SOT-223 and TO-252 D-PAK packages. A minimum of $10\mu\text{F}$ tantalum capacitor is required at the output to improve the transient response and stability.

Features

- Available in 1.8V, 3.3V, and Adjustable Versions
- Space Saving SOT-223 and TO-252 Packages
- Current Limiting and Thermal Protection
- Output Current 1A
- Temperature Range 0°C to 125°C
- Line Regulation 0.2% (Max)
- Load Regulation 0.4% (Max)

Applications

- Post Regulator for Switching DC/DC Converter
- High Efficiency Linear Regulators
- Battery Charger
- Battery Powered Instrumentation

Typical Application

*Required if the regulator is located far from the power supply filter

LP2950/LP2951

Series of Adjustable Micropower Voltage Regulators

General Description

The LP2950 and LP2951 are micropower voltage regulators with very low quiescent current (75 μ A typ.) and very low dropout voltage (typ. 40 mV at light loads and 380 mV at 100 mA). They are ideally suited for use in battery-powered systems. Furthermore, the quiescent current of the LP2950/LP2951 increases only slightly in dropout, prolonging battery life.

The LP2950-5.0 is available in the surface-mount D-Pak package, and in the popular 3-pin TO-92 package for pin-compatibility with older 5V regulators. The 8-lead LP2951 is available in plastic, ceramic dual-in-line, or metal can packages and offers additional system functions.

One such feature is an error flag output which warns of a low output voltage, often due to falling batteries on the input. It may be used for a power-on reset. A second feature is the logic-compatible shutdown input which enables the regulator to be switched on and off. Also, the part may be pin-strapped for a 5V, 3V, or 3.3V output (depending on the version), or programmed from 1.24V to 29V with an external pair of resistors.

Careful design of the LP2950/LP2951 has minimized all contributions to the error budget. This includes a tight initial tolerance (.5% typ.), extremely good load and line regulation

(.05% typ.) and a very low output voltage temperature coefficient, making the part useful as a low-power voltage reference.

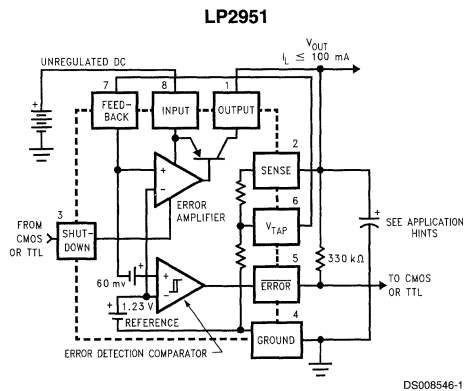

Features

- 5V, 3V, and 3.3V versions available
- High accuracy output voltage
- Guaranteed 100 mA output current
- Extremely low quiescent current
- Low dropout voltage
- Extremely tight load and line regulation
- Very low temperature coefficient
- Use as Regulator or Reference
- Needs minimum capacitance for stability
- Current and Thermal Limiting
- Stable with low-ESR output capacitors

LP2951 versions only

- Error flag warns of output dropout
- Logic-controlled electronic shutdown
- Output programmable from 1.24 to 29V

LP2952/LP2952A/LP2953/LP2953A

Adjustable Micropower Low-Dropout Voltage Regulators

General Description

The LP2952 and LP2953 are micropower voltage regulators with very low quiescent current (130 μ A typical at 1 mA load) and very low dropout voltage (typ. 60 mV at light load and 470 mV at 250 mA load current). They are ideally suited for battery-powered systems. Furthermore, the quiescent current increases only slightly at dropout, which prolongs battery life.

The LP2952 and LP2953 retain all the desirable characteristics of the LP2951, but offer increased output current, additional features, and an improved shutdown function.

The internal crowbar pulls the output down quickly when the shutdown is activated.

The error flag goes low if the output voltage drops out of regulation.

Reverse battery protection is provided.

The internal voltage reference is made available for external use, providing a low-T.C. reference with very good line and load regulation.

The parts are available in DIP and surface mount packages.

Features

- Output voltage adjusts from 1.23V to 29V
- Guaranteed 250 mA output current
- Extremely low quiescent current
- Low dropout voltage
- Extremely tight line and load regulation
- Very low temperature coefficient
- Current and thermal limiting
- Reverse battery protection
- 50 mA (typical) output pulldown crowbar
- 5V and 3.3V versions available

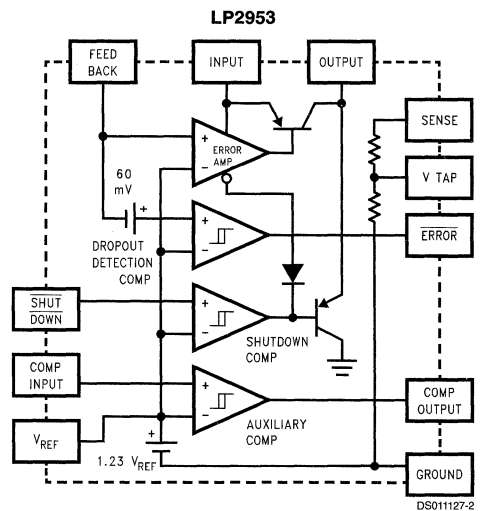

LP2953 Versions Only

- Auxiliary comparator included with CMOS/TTL compatible output levels. Can be used for fault detection, low input line detection, etc.

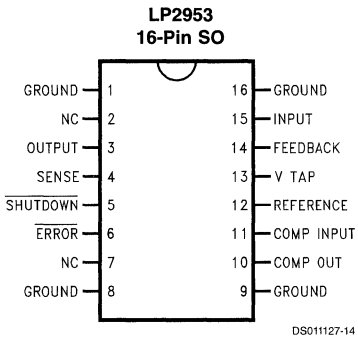

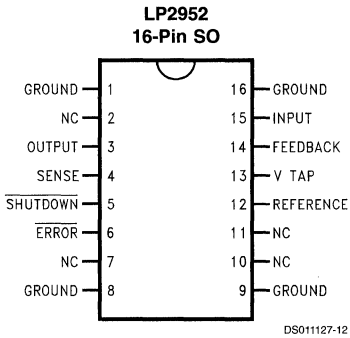

Applications

- High-efficiency linear regulator
- Regulator with under-voltage shutdown
- Low dropout battery-powered regulator
- Snap-ON/Snap-OFF regulator

LP2954/LP2954A

5V and Adjustable Micropower Low-Dropout Voltage Regulators

General Description

The LP2954 is a 5V micropower voltage regulator with very low quiescent current (90 μ A typical at 1 mA load) and very low dropout voltage (typically 60 mV at light loads and 470 mV at 250 mA load current).

The quiescent current increases only slightly at dropout (120 μ A typical), which prolongs battery life.

The LP2954 with a fixed 5V output is available in the three-lead TO-220 and TO-263 packages. The adjustable LP2954 is provided in an 8-lead surface mount, small outline package. The adjustable version also provides a resistor network which can be pin strapped to set the output to 5V.

Reverse battery protection is provided.

The tight line and load regulation (0.04% typical), as well as very low output temperature coefficient make the LP2954 well suited for use as a low-power voltage reference.

Output accuracy is guaranteed at both room temperature and over the entire operating temperature range.

Features

- 5V output within 1.2% over temperature (A grade)
- Adjustable 1.23 to 29V output voltage available (LP2954IM and LP2954AIM)
- Guaranteed 250 mA output current
- Extremely low quiescent current
- Low dropout voltage
- Reverse battery protection
- Extremely tight line and load regulation
- Very low temperature coefficient
- Current and thermal limiting
- Pin compatible with LM2940 and LM340 (5V version only)
- Adjustable version adds error flag to warn of output drop and a logic-controlled shutdown

Applications

- High-efficiency linear regulator
- Low dropout battery-powered regulator

LP2956/LP2956A

Dual Micropower Low-Dropout Voltage Regulators

General Description

The LP2956 is a micropower voltage regulator with very low quiescent current (170 μ A typical at light loads) and very low dropout voltage (typically 60 mV at 1 mA load current and 470 mV at 250 mA load current on the main output).

The LP2956 retains all the desirable characteristics of the LP2951, but offers increased output current (main output), an auxiliary LDO adjustable regulated output (75 mA), and additional features.

The auxiliary output is always on (regardless of main output status), so it can be used to power memory circuits.

Quiescent current increases only slightly at dropout, which prolongs battery life.

The error flag goes low if the main output voltage drops out of regulation.

An open-collector auxiliary comparator is included, whose inverting input is tied to the 1.23V reference.

Reverse battery protection is provided.

The parts are available in DIP and surface mount packages.

Features

- Output voltage adjusts from 1.23V to 29V
- Guaranteed 250 mA current (main output)
- Auxiliary LDO (75 mA) adjustable output
- Auxiliary comparator with open-collector output
- Shutdown pin for main output
- Extremely low quiescent current
- Low dropout voltage
- Extremely tight line and load regulation
- Very low temperature coefficient
- Current and thermal limiting
- Reverse battery protection

Applications

- High-efficiency linear regulator
- Low dropout battery-powered regulator
- μ P system regulator with switchable high-current V_{CC}

LP2957/LP2957A

5V Low-Dropout Regulator for μ P Applications

General Description

The LP2957 is a 5V micropower voltage regulator with electronic shutdown, error flag, very low quiescent current (150 μ A typical at 1 mA load), and very low dropout voltage (470 mV typical at 250 mA load current).

Output can be wired for snap-on/snap-off operation to eliminate transition voltage states where μ P operation may be unpredictable.

Output crowbar (50 mA typical pull-down current) will bring down the output quickly when the regulator snaps off or when the shutdown function is activated.

The part has tight line and load regulation (0.04% typical) and low output temperature coefficient (20 ppm/ $^{\circ}$ C typical).

The accuracy of the 5V output is guaranteed at room temperature and over the full operating temperature range.

The LP2957 is available in the five-lead TO-220 and TO-263 packages.

Features

- 5V output within 1.4% over temperature (A grade)
- Easily programmed for snap-on/snap-off output
- Guaranteed 250 mA output current
- Extremely low quiescent current
- Low Input-Output voltage required for regulation
- Reverse battery protection
- Extremely tight line and load regulation
- Very low temperature coefficient
- Current and thermal limiting
- Error flag signals when output is out of regulation

Applications

- High-efficiency linear regulator
- Battery-powered regulator

LP2960

Adjustable Micropower 0.5A Low-Dropout Regulators

General Description

The LP2960 is a micropower voltage regulator with very low dropout voltage (12 mV typical at 1 mA load and 470 mV typical at 500 mA load) and very low quiescent current (450 μ A typical at 1 mA load).

The LP2960 is ideally suited for battery-powered systems: the quiescent current increases only slightly at dropout, which prolongs battery life.

The LP2960 retains all the desirable characteristics of the LP2953, and offers increased output current.

The error flag goes low any time the output drops more than 5% out of regulation.

Reverse battery protection is provided.

The LP2960 requires only 10 μ F of output capacitance for stability (5V version).

The internal voltage reference is made available for external use, providing a low-T.C. reference with very good regulation characteristics.

The parts are available in 16-pin plastic DIP and 16-pin surface mount packages.

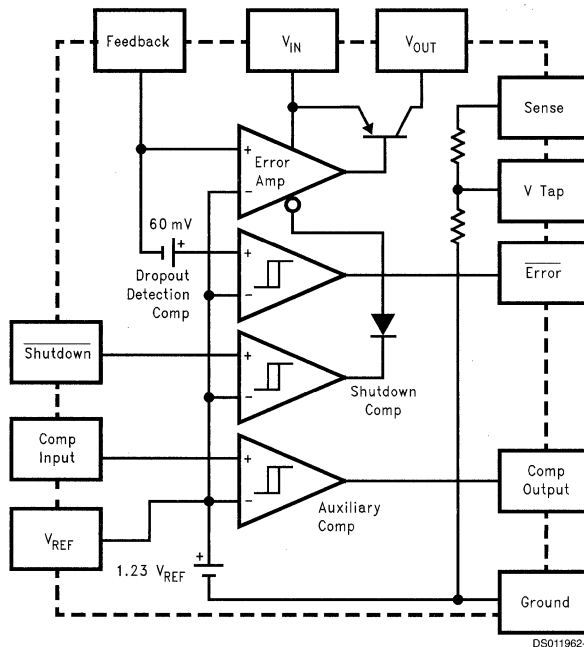

Features

- Output voltage adjusts from 1.23V–29V
- Guaranteed 500 mA output current
- 5V and 3.3V versions available
- 16-pin DIP and 16-pin SO packages
- Low dropout voltage
- Low quiescent current
- Tight line and load regulation
- Low temperature coefficient
- Current limiting and thermal protection
- Logic-level shutdown
- Can be wired for snap-ON and snap-OFF
- Reverse battery protection

Applications

- High-efficiency linear regulator
- Regulator with under-voltage shutdown
- Low dropout battery-powered regulator
- Cellular telephones

Block Diagram

LP2966

Dual 150mA Ultra Low-Dropout Regulator

General Description

The LP2966 dual ultra low-dropout (LDO) regulator operates from a +2.70V to +7.0V input supply. Each output delivers 150mA over full temperature range. The IC operates with extremely low drop-out voltage and quiescent current, which makes it very suitable for battery powered and portable applications. Each LDO in the LP2966 has independent shutdown capability. The LP2966 provides low noise performance with low ground pin current in an extremely small MSOP-8 package (refer to package dimensions and connection diagram for more information on MSOP-8 package). A wide range of preset voltage options are available for each output. In addition to the voltage combinations listed in the ordering information table, many more are available upon request with minimum orders. In all, 256 voltage combinations are possible.

Key Specifications

Dropout Voltage: Varies linearly with load current. Typically 0.9 mV at 1mA load current and 135mV at 150mA load current.

Ground Pin Current: Typically 300 μ A at 1mA load current and 340 μ A at 100mA load current (with one shutdown pin pulled low).

Shutdown Mode: Less than 1 μ A quiescent current when both shutdown pins are pulled low.

Error Flag: Open drain output, goes low when the corresponding output drops 10% below nominal.

Precision Output Voltage: Multiple output voltage options available ranging from 1.8V to 5.0V with a guaranteed accuracy of $\pm 1\%$ at room temperature.

Features

- Ultra low drop-out voltage
- Low ground pin current
- <1 μ A quiescent current in shutdown mode
- Independent shutdown of each LDO regulator
- Output voltage accuracy $\pm 1\%$
- Guaranteed 150mA output current at each output
- Low output noise
- Error Flags indicate status of each output
- Available in MSOP-8 surface mount packages
- Low output capacitor requirements (1 μ F)
- Operates with Low ESR ceramic capacitors in most applications
- Over temperature/over current protection
- -40°C to +125°C junction temperature range

Applications

- Cellular and Wireless Applications
- Palmtop/Laptop Computer
- GPS systems
- Flat panel displays
- Post regulators
- USB applications
- Hand held equipment and multimeters
- Wireless data terminals
- Other battery powered applications

Typical Application Circuit

DS100650-30

*SD1 and SD2 must be actively terminated through a pull up resistor. Tie to VIN if not used.

**ERROR1 and ERROR2 are open drain outputs. These pins must be connected to ground if not used.

Minimum output capacitance is 1 μ F to insure stability over full load current range. More capacitance improves superior dynamic performance and provides additional stability margin.

LP2975

MOSFET LDO Driver/Controller

General Description

A high-current LDO regulator is simple to design with the LP2975 LDO Controller. Using an external P-FET, the LP2975 will deliver an ultra low dropout regulator with extremely low quiescent current.

High open loop gain assures excellent regulation and ripple rejection performance.

The trimmed internal bandgap reference provides precise output voltage over the entire operating temperature range.

Dropout voltage is "user selectable" by sizing the external FET: the minimum input-output voltage required for operation is the maximum load current multiplied by the $R_{DS(ON)}$ of the FET.

Overcurrent protection of the external FET is easily implemented by placing a sense resistor in series with V_{IN} . The 57 mV detection threshold of the current sense circuitry minimizes dropout voltage and power dissipation in the resistor.

The standard product versions available provide output voltages of 12V, 5V, or 3.3V with guaranteed 25°C accuracy of 1.5% ("A" grade) and 2.5% (standard grade).

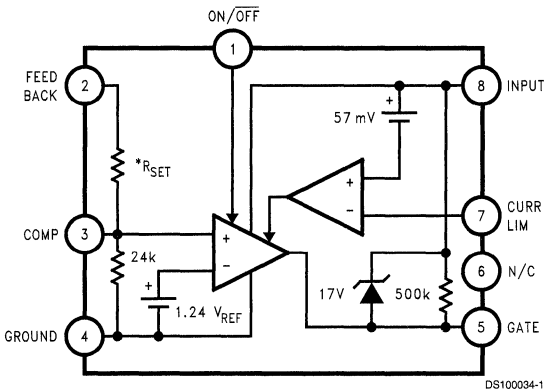

Features

- Simple to use, few external components
- Ultra-small mini SO-8 package
- 1.5% (A grade) precision output voltage
- Low-power shutdown input
- $< 1 \mu A$ in shutdown
- Low operating current (180 μA typical @ $V_{IN} = 5V$)
- Wide supply voltage range (1.8V to 24V)
- Built-in current limit amplifier
- Overtemperature protection
- 12V, 5V, and 3.3V standard output voltages
- Can be programmed using external divider
- $-40^{\circ}C$ to $+125^{\circ}C$ junction temperature range

Applications

- High-current 5V to 3.3V regulator
- Post regulator for switching converter
- Current-limited switch

Block Diagram

* R_{SET} values are: 208k for 12V part, 72.8k for 5V part, and 39.9k for 3.3V part.

LP2978

Micropower SOT, 50 mA Low-Noise Ultra Low-Dropout Regulator

Designed for Use with Very Low ESR Output Capacitors

General Description

The LP2978 is a 50 mA, fixed-output voltage regulator designed to provide ultra low-dropout and low noise in battery powered applications.

Using an optimized VIP™ (Vertically Integrated PNP) process, the LP2978 delivers unequalled performance in all specifications critical to battery-powered designs:

Dropout Voltage: Typically 120 mV @ 50 mA load, and 7 mV @ 1 mA load.

Ground Pin Current: Typically 350 μ A @ 50 mA load, and 75 μ A @ 1 mA load.

Enhanced Stability: The LP2978 is stable with output capacitor ESR as low as 5 m Ω , which allows the use of ceramic capacitors on the output.

Sleep Mode: Less than 1 μ A quiescent current when ON/OFF pin is pulled low.

Smallest Possible Size: SOT-23 package uses absolute minimum board space.

Precision Output: 1% tolerance output voltages available (A grade).

Low Noise: By adding a 10 nF bypass capacitor, output noise can be reduced to 30 μ V (typical).

Features

- Ultra low dropout voltage
- Smallest possible size (SOT-23 Package)
- Requires minimum external components
- Stable with low-ESR output capacitor
- <1 μ A quiescent current when shut down
- Low ground pin current at all loads
- Output voltage accuracy 1% (A Grade)
- High peak current capability
- Wide supply voltage range (16V max)
- Low Z_{OUT} : 0.3 Ω typical (10 Hz to 1 MHz)
- Overtemperature/overcurrent protection
- -40°C to +125°C junction temperature range
- Custom voltages available

Applications

- Cellular Phone
- Palmtop/Laptop Computer
- Personal Digital Assistant (PDA)
- Camcorder, Personal Stereo, Camera

Block Diagram

Basic Application Circuit

DS100935-2

*ON/OFF input must be actively terminated. Tie to V_{IN} if this function is not to be used.

**Minimum capacitance is shown to ensure stability (may be increased without limit). Ceramic capacitor required for output (see Application Hints).

***Reduces output noise (may be omitted if application is not noise critical). Use ceramic or film type with very low leakage current (see Application Hints).

LP2980

Micropower 50 mA Ultra Low-Dropout Regulator In SOT-23 and micro SMD Packages

General Description

The LP2980 is a 50 mA, fixed-output voltage regulator designed specifically to meet the requirements of battery-powered applications.

Using an optimized VIP™ (Vertically Integrated PNP) process, the LP2980 delivers unequalled performance in all specifications critical to battery-powered designs:

Dropout Voltage. Typically 120 mV @ 50 mA load, and 7 mV @ 1 mA load.

Ground Pin Current. Typically 375 μ A @ 50 mA load, and 80 μ A @ 1 mA load.

Sleep Mode. Less than 1 μ A quiescent current when ON/OFF pin is pulled low.

Smallest Possible Size. SOT-23 and micro SMD packages use an absolute minimum board space.

Minimum Part Count. Requires only 1 μ F of external capacitance on the regulator output.

Precision Output. 0.5% tolerance output voltages available (A grade).

5.0V, 3.3V, and 3.0V versions available as standard products.

Features

- Ultra low dropout voltage
- Output voltage accuracy 0.5% (A Grade)
- Guaranteed 50 mA output current
- Smallest possible size (SOT-23, micro SMD package)
- Requires only 1 μ F external capacitance
- < 1 μ A quiescent current when shutdown
- Low ground pin current at all load currents
- High peak current capability (150 mA typical)
- Wide supply voltage range (16V max)
- Fast dynamic response to line and load
- Low Z_{OUT} over wide frequency range
- Overtemperature/overcurrent protection
- -40°C to +125°C junction temperature range

Applications

- Cellular Phone
- Palmtop/Laptop Computer
- Personal Digital Assistant (PDA)
- Camcorder, Personal Stereo, Camera

LP2980-ADJ

Micropower SOT, 50 mA Ultra Low-Dropout Adjustable Voltage Regulator

General Description

The LP2980-ADJ is a 50 mA adjustable voltage regulator designed to provide ultra low dropout in battery powered applications.

Using an optimized VIP™ (vertically Integrated PNP) process, the LP2980-ADJ delivers unequalled performance in all specifications critical to battery-powered designs:

Adjustable Output: output voltage can be set from 1.23V to 15V.

Precision Reference: 0.75% tolerance.

Dropout Voltage: typically 120 mV @ 50 mA load, and 7 mV @ 1 mA load.

Ground Pin Current: typically 320 μ A @ 50 mA load, and 80 μ A @ 1 mA load.

Sleep Mode: less than 1 μ A quiescent current when on/off pin is pulled low.

Smallest Possible Size: SOT-23 package uses minimum board space.

Features

- Ultra low dropout voltage
- Output adjusts from 1.23V to 15V
- Guaranteed 50 mA output current
- Uses tiny SOT-23 package
- Requires few external components
- <1 μ A quiescent current when shutdown
- Low ground pin current at all loads
- High peak current capability (150 mA typical)
- Wide supply voltage range (2.5V–16V)
- Overtemperature/overcurrent protection
- -40°C to +125°C Junction temperature range

Applications

- Cellular Phone
- Palmtop/Laptop Computer
- Camcorder, Personal Stereo, Camera

LP2980LV

Micropower SOT, 50 mA Low-Voltage Low-Dropout Regulator For Applications With Output Voltages < 2V

General Description

The LP2980LV is a 50 mA, fixed-output voltage regulator designed for high performance in applications requiring output voltages below 2V.

Using an optimized VIP™ (Vertically Integrated PNP) process, the LP2980LV delivers unequalled performance in all specifications critical to battery-powered designs:

Low Ground Pin Current. Typically 280 μA @ 50 mA load, and 75 μA @ 1 mA load.

Sleep Mode. Less than 1 μA quiescent current when ON/OFF pin is pulled low.

Smallest Possible Size. SOT-23 package uses absolute minimum board space.

Precision Output. 0.5% tolerance output voltages available (A grade).

Features

- Guaranteed 50 mA output current
- Smallest possible size (SOT-23 Package)
- Requires few external components
- < 1 μA quiescent current when shutdown
- Low ground pin current at all load currents
- Output voltage accuracy 0.5% (A Grade)
- High peak current capability (150 mA typical)
- Wide supply voltage range (16V max)
- Fast dynamic response to line and load
- Low Z_{OUT} 0.1 Ω typical (10 Hz to 1 MHz)
- Overtemperature/overcurrent protection
- -40°C to +125°C junction temperature range

Applications

- Cellular Phone
- Palmtop/Laptop Computer
- Personal Digital Assistant (PDA)
- Camcorder, Personal Stereo, Camera

DS101091-3

LP2981

Micropower 100 mA Ultra Low-Dropout Regulator in SOT-23 and micro SMD Packages

General Description

The LP2981 is a 100 mA, fixed-output voltage regulator designed specifically to meet the requirements of battery-powered applications.

Using an optimized VIP™ (Vertically Integrated PNP) process, the LP2981 delivers unequaled performance in all specifications critical to battery-powered designs:

Dropout Voltage. Typically 200 mV @ 100 mA load, and 7 mV @ 1 mA load.

Ground Pin Current. Typically 600 μ A @ 100 mA load, and 80 μ A @ 1 mA load.

Sleep Mode. Less than 1 μ A quiescent current when ON/OFF pin is pulled low.

Smallest Possible Size. SOT-23 and micro SMD packages use an absolute minimum board space.

Precision Output. 0.75% tolerance output voltages available (A grade).

Eleven voltage options, from 2.5V to 5.0V, are available as standard products.

Features

- Ultra low dropout voltage
- Output voltage accuracy 0.75% (A Grade)
- Guaranteed 100 mA output current
- Smallest possible size (SOT-23, micro SMD package)
- < 1 μ A quiescent current when shutdown
- Low ground pin current at all load currents
- High peak current capability (300 mA typical)
- Wide supply voltage range (16V max)
- Fast dynamic response to line and load
- Low Z_{OUT} over wide frequency range
- Overtemperature/overcurrent protection
- -40° C to $+125^{\circ}$ C junction temperature range

Applications

- Cellular Phone
- Palmtop/Laptop Computer
- Personal Digital Assistant (PDA)
- Camcorder, Personal Stereo, Camera

LP2982

Micropower 50 mA Ultra Low-Dropout Regulator in SOT-23 and micro SMD Packages

General Description

The LP2982 is a 50 mA, fixed-output voltage regulator designed to provide ultra low dropout and lower noise in battery powered applications.

Using an optimized VIP™ (Vertically Integrated PNP) process, the LP2982 delivers unequaled performance in all specifications critical to battery-powered designs:

Dropout Voltage: Typically 120 mV @ 50 mA load, and 7 mV @ 1 mA load.

Ground Pin Current: Typically 375 μ A @ 50 mA load, and 80 μ A @ 1 mA load.

Sleep Mode: Less than 1 μ A quiescent current when on/off pin is pulled low.

Smallest Possible Size: SOT-23 and micro SMD packages use absolute minimum board space.

Precision Output: 1.0% tolerance output voltages available (A grade).

Low Noise: By adding an external bypass capacitor, output noise can be reduced to 30 μ V (typical).

Ten output voltage versions, from 2.5V to 5.0V, are available as standard products.

Features

- Ultra low dropout voltage
- Guaranteed 50 mA output current
- Typical dropout voltage 180 mV @ 80 mA
- Smallest possible size (SOT-23, micro SMD package)
- Requires minimum external components
- < 1 μ A quiescent current when shutdown
- Low ground pin current at all loads
- Output voltage accuracy 1.0% (A Grade)
- High peak current capability (150 mA typical)
- Wide supply voltage range (16V max)
- Low Z_{OUT} 0.3 Ω typical (10 Hz to 1 MHz)
- Overtemperature/overcurrent protection
- -40°C to +125°C junction temperature range
- Custom voltages available

Applications

- Cellular Phone
- Palmtop/Laptop Computer
- Personal Digital Assistant (PDA)
- Camcorder, Personal Stereo, Camera

Note: The actual physical placement of the package marking will vary from part to part. The package marking "X" will designate the date code and will vary considerably. Package marking does not correlate to device type in any way.

Basic Application Circuit

DS012679-2

*ON/OFF input must be actively terminated. Tie to V_{IN} if this function is not to be used.

**Minimum capacitance is shown to insure stability over full load current range. More capacitance provides superior dynamic performance (see Application Hints).

***See Application Hints.

LP2985

Micropower 150 mA Low-Noise Ultra Low-Dropout Regulator in SOT-23 and micro SMD Packages

Designed for Use with Very Low ESR Output Capacitors

General Description

The LP2985 is a 150 mA, fixed-output voltage regulator designed to provide ultra low-dropout and low noise in battery powered applications.

Using an optimized VIP™ (Vertically Integrated PNP) process, the LP2985 delivers unequalled performance in all specifications critical to battery-powered designs:

Dropout Voltage: Typically 300 mV @ 150 mA load, and 7 mV @ 1 mA load.

Ground Pin Current: Typically 850 μ A @ 150 mA load, and 75 μ A @ 1 mA load.

Enhanced Stability: The LP2985 is stable with output capacitor ESR as low as 5 m Ω , which allows the use of ceramic capacitors on the output.

Sleep Mode: Less than 1 μ A quiescent current when ON/OFF pin is pulled low.

Smallest Possible Size: SOT-23 and micro SMD packages use absolute minimum board space.

Precision Output: 1% tolerance output voltages available (A grade).

Low Noise: By adding a 10 nF bypass capacitor, output noise can be reduced to 30 μ V (typical).

Multiple voltage options, from 2.5V to 5.0V, are available as standard products. Consult factory for custom voltages.

Features

- Ultra low dropout voltage
- Guaranteed 150 mA output current
- Smallest possible size (SOT-23, micro SMD package)
- Requires minimum external components
- Stable with low-ESR output capacitor
- <1 μ A quiescent current when shut down
- Low ground pin current at all loads
- Output voltage accuracy 1% (A Grade)
- High peak current capability
- Wide supply voltage range (16V max)
- Low Z_{OUT} : 0.3 Ω typical (10 Hz to 1 MHz)
- Overtemperature/overcurrent protection
- -40°C to +125°C junction temperature range
- Custom voltages available

Applications

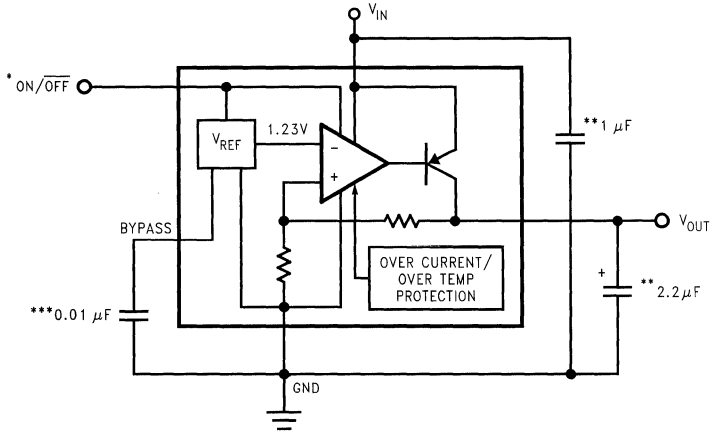

- Cellular Phone
- Palmtop/Laptop Computer
- Personal Digital Assistant (PDA)
- Camcorder, Personal Stereo, Camera

Block Diagram

DS100140-1

Basic Application Circuit

DS100140-2

*ON/OFF input must be actively terminated. Tie to V_{IN} if this function is not to be used.

**Minimum capacitance is shown to ensure stability (may be increased without limit). Ceramic capacitor required for output (see Application Hints).

***Reduces output noise (may be omitted if application is not noise critical). Use ceramic or film type with very low leakage current (see Application Hints).

LP2986

Micropower, 200 mA Ultra Low-Dropout Fixed or Adjustable Voltage Regulator

General Description

The LP2986 is a 200 mA precision LDO voltage regulator which offers the designer a higher performance version of the industry standard LP2951.

Using an optimized VIP™ (Vertically Integrated PNP) process, the LP2986 delivers superior performance:

Dropout Voltage: Typically 180 mV @ 200 mA load, and 1 mV @ 1 mA load.

Ground Pin Current: Typically 1 mA @ 200 mA load, and 200 μ A @ 10 mA load.

Sleep Mode: The LP2986 draws less than 1 μ A quiescent current when shutdown pin is pulled low.

Error Flag: The built-in error flag goes low when the output drops approximately 5% below nominal.

Precision Output: The standard product versions available can be pin-strapped (using the internal resistive divider) to provide output voltages of 5.0V, 3.3V, or 3.0V with guaranteed accuracy of 0.5% ("A" grade) and 1% (standard grade) at room temperature.

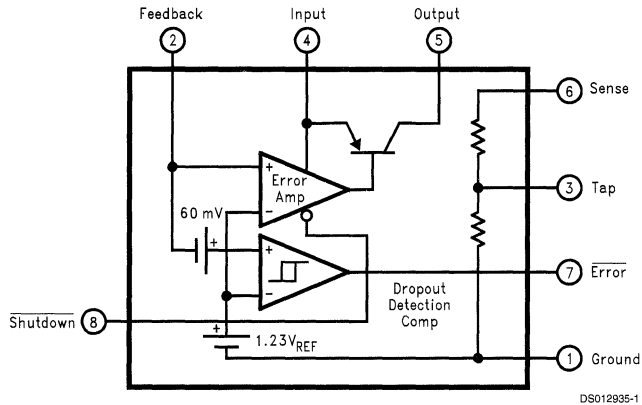

Features

- Ultra low dropout voltage
- Guaranteed 200 mA output current
- SO-8 and mini-SO8 surface mount packages
- <1 μ A quiescent current when shutdown
- Low ground pin current at all loads
- 0.5% output voltage accuracy ("A" grade)
- High peak current capability (400 mA typical)
- Wide supply voltage range (16V max)
- Overtemperature/overcurrent protection
- -40°C to +125°C junction temperature range

Applications

- Cellular Phone
- Palmtop/Laptop Computer
- Camcorder, Personal Stereo, Camera

LP2987/LP2988

Micropower, 200 mA Ultra Low-Dropout Voltage Regulator with Programmable Power-On Reset Delay; Low Noise Version Available (LP2988)

General Description

The LP2987/8 are fixed-output 200 mA precision LDO voltage regulators with power-ON reset delay which can be implemented using a single external capacitor.

The LP2988 is specifically designed for noise-critical applications. A single external capacitor connected to the Bypass pin reduces regulator output noise.

Using an optimized VIP™ (Vertically Integrated PNP) process, these regulators deliver superior performance:

Dropout Voltage: 180 mV @ 200 mA load, and 1 mV @ 1 mA load (typical).

Ground Pin Current: 1 mA @ 200 mA load, and 200 μ A @ 10 mA load (typical).

Sleep Mode: The LP2987/8 draws less than 2 μ A quiescent current when shutdown pin is held low.

Error Flag/Reset: The error flag goes low when the output drops approximately 5% below nominal. This pin also provides a power-ON reset signal if a capacitor is connected to the DELAY pin.

Precision Output: Standard product versions of the LP2987 and LP2988 are available with output voltages of 5.0V, 3.8V, 3.3V, 3.2V, 3.0V, or 2.8V, with guaranteed accuracy of 0.5% ("A" grade) and 1% (standard grade) at room temperature.

Features

- Ultra low dropout voltage
- Power-ON reset delay requires only one component
- Bypass pin for reduced output noise (LP2988)
- Guaranteed continuous output current 200 mA
- Guaranteed peak output current > 250 mA
- SO-8 and mini SO-8 surface mount packages
- <2 μ A quiescent current when shutdown
- Low ground pin current at all loads
- 0.5% output voltage accuracy ("A" grade)
- Wide supply voltage range (16V max)
- Overtemperature/overcurrent protection
- -40°C to +125°C junction temperature range

Applications

- Cellular Phone
- Palmtop/Laptop Computer
- Camcorder, Personal Stereo, Camera

LP2989

Micropower/Low Noise, 500 mA Ultra Low-Dropout Regulator

For Use with Ceramic Output Capacitors

General Description

The LP2989 is a fixed-output 500 mA precision LDO regulator designed for use with ceramic output capacitors.

Output noise can be reduced to 18 μ V (typical) by connecting an external 10 nF capacitor to the bypass pin.

Using an optimized VIP™ (Vertically Integrated PNP) process, the LP2989 delivers superior performance:

Dropout Voltage: Typically 310 mV @ 500 mA load, and 1 mV @ 100 μ A load.

Ground Pin Current: Typically 3 mA @ 500 mA load, and 110 μ A @ 100 μ A load.

Sleep Mode: The LP2989 draws less than 0.8 μ A quiescent current when shutdown pin is pulled low.

Error Flag: The built-in error flag goes low when the output drops approximately 5% below nominal.

Precision Output: Guaranteed output voltage accuracy is 0.75% ("A" grade) and 1.25% (standard grade) at room temperature.

Features

- Ultra low dropout voltage
- Guaranteed 500 mA continuous output current
- Very low output noise with external capacitor
- SO-8 surface mount package
- <0.8 μ A quiescent current when shutdown
- Low ground pin current at all loads
- 0.75% output voltage accuracy ("A" grade)
- High peak current capability (800 mA typical)
- Wide supply voltage range (16V max)
- Overtemperature/overcurrent protection
- -40°C to +125°C junction temperature range

Applications

- Notebook/Desktop PC
- PDA/Palmtop Computer
- Wireless Communication Terminals
- SMPS Post-Regulator

Basic Application Circuit

DS101339-3

*Capacitance values shown are minimum required to assure stability, but may be increased without limit. Larger output capacitor provides improved dynamic response.

**Shutdown must be actively terminated (see App. Hints). Tie to INPUT (Pin4) if not used.

LP2989LV

Micropower 500 mA Low Noise Low Dropout Regulator for Applications with Output Voltages < 2V

Designed for Use with Very Low ESR Output Capacitors

General Description

The LP2989LV is a 500 mA fixed-output voltage regulator designed to provide high performance and low noise in applications requiring output voltages < 2V.

Output noise can be reduced to 18 μ V (typical) by connecting an external 10 nF capacitor to the bypass pin.

Using an optimized VIP™ (Vertically Integrated PNP) process, the LP2989LV delivers superior performance:

Ground Pin Current: Typically 3 mA @ 500 mA load, and 110 μ A @ 100 μ A load.

Sleep Mode: The LP2989LV draws less than 0.8 μ A quiescent current when shutdown pin is pulled low.

Error Flag: The built-in error flag goes low when the output drops approximately 5% below nominal.

Precision Output: Guaranteed output voltage accuracy is 0.75% ("A" grade) and 1.25% (standard grade) at room temperature.

Features

- Ultra low dropout voltage
- Guaranteed 500 mA continuous output current
- Very low output noise with external capacitor
- SO-8 surface mount package
- <0.8 μ A quiescent current when shutdown
- Low ground pin current at all loads
- 0.75% output voltage accuracy ("A" grade)
- High peak current capability (800 mA typical)
- Wide supply voltage range (16V max)
- Overtemperature/overcurrent protection
- -40°C to +125°C junction temperature range

Applications

- Notebook/Desktop PC
- PDA/Palmtop Computer
- Wireless Communication Terminals
- SMPS Post-Regulator

1.8	STD	LP2989IM-1.8	2989IM1.8	Shipped in Anti-Static Rails

For output voltages $\geq 2V$, see LP2989 datasheet.

Basic Application Circuit

DS101357-3

*Capacitance values shown are minimum required to assure stability, but may be increased without limit. Larger output capacitor provides improved dynamic response.

**Shutdown must be actively terminated (see App. Hints). Tie to INPUT (Pin4) if not used.

LP3961/LP3964

800mA Fast Ultra Low Dropout Linear Regulators

General Description

The LP3961/LP3964 series of fast ultra low-dropout linear regulators operate from a +2.5V to +7.0V input supply. Wide range of preset output voltage options are available. These ultra low dropout linear regulators respond very fast to step changes in load which makes them suitable for low voltage microprocessor applications. The LP3961/LP3964 are developed on a CMOS process which allows low quiescent current operation independent of output load current. This CMOS process also allows the LP3961/LP3964 to operate under extremely low dropout conditions.

Dropout Voltage: Ultra low dropout voltage; typically 24mV at 80mA load current and 240mV at 800mA load current.

Ground Pin Current: Typically 4mA at 800mA load current.

Shutdown Mode: Typically 15µA quiescent current when the shutdown pin is pulled low.

Error Flag: Error flag goes low when the output voltage drops 10% below nominal value (for LP3961).

SENSE: Sense pin improves regulation at remote loads. (For LP3964)

Precision Output Voltage: Multiple output voltage options are available ranging from 1.2V to 5.0V and adjustable, with a guaranteed accuracy of $\pm 1.5\%$ at room temperature, and $\pm 3.0\%$ over all conditions (varying line, load, and temperature).

Features

- Ultra low dropout voltage
- Low ground pin current
- Load regulation of 0.02%
- 15µA quiescent current in shutdown mode
- Guaranteed output current of 0.8A DC
- Available in SOT-223, TO-263 and TO-220 packages
- Output voltage accuracy $\pm 1.5\%$
- $\overline{\text{Error}}$ flag indicates output status (LP3961)
- Sense option improves better load regulation (LP3964)
- Extremely low output capacitor requirements
- Overtemperature/overcurrent protection
- -40°C to $+125^{\circ}\text{C}$ junction temperature range

Applications

- Microprocessor power supplies
- GTL, GTL+, BTL, and SSTL bus terminators
- Power supplies for DSPs
- SCSI terminator
- Post regulators
- High efficiency linear regulators
- Battery chargers
- Other battery powered applications

Typical Application Circuits

DS101129-1

Minimum output capacitance is 10 µF to ensure stability over full load current range. More capacitance provides superior dynamic performance and additional stability margin.

*SD and ERROR pins must be pulled high through a 10kΩ pull-up resistor. Connect the ERROR pin to ground if this function is not used. See applications section for more information.

Typical Application Circuits (Continued)

DS101129-2

Minimum output capacitance is 10 μ F to ensure stability over full load current range. More capacitance provides superior dynamic performance and additional stability margin.

*SD and ERROR pins must be pulled high through a 10k Ω pull-up resistor. Connect the ERROR pin to ground if this function is not used. See applications section for more information.

Pin Description for SOT223-5 Package

Pin #	LP3961		LP3964	
	Name	Function	Name	Function
1	\overline{SD}	Shutdown	\overline{SD}	Shutdown
2	V_{IN}	Input Supply	V_{IN}	Input Supply
3	V_{OUT}	Output Voltage	V_{OUT}	Output Voltage
4	\overline{ERROR}	ERROR Flag	SENSE/ADJ	Remote Sense Pin or output Adjust Pin
5	GND	Ground	GND	Ground

Pin Description for TO220-5 and TO263-5 Packages

Pin #	LP3961		LP3964	
	Name	Function	Name	Function
1	\overline{SD}	Shutdown	\overline{SD}	Shutdown
2	V_{IN}	Input Supply	V_{IN}	Input Supply
3	GND	Ground	GND	Ground
4	V_{OUT}	Output Voltage	V_{OUT}	Output Voltage
5	\overline{ERROR}	ERROR Flag	SENSE/ADJ	Remote Sense Pin or output Adjust Pin

Ordering Information

Order Number - LP3961EMP-2.5 for 1k units on tape and reel

Order Number - LP3961EMPX-2.5 for 2k units on tape and reel

DS101129-31

Package Type Designator is "MP" for SOT223 package, "T" for TO220 package, and "S" for TO263 package.

TABLE 1. Package Marking and Ordering Information

Output Voltage	Order Number	Description (Current, Option)	Package Type	Package Marking	Supplied As:
5.0	LP3961EMP-5.0	800mA, Error Flag	SOT223-5	LBSB	1000 units on Tape and Reel

LP3962/LP3965

1.5A Fast Ultra Low Dropout Linear Regulators

General Description

The LP3962/LP3965 series of fast ultra low-dropout linear regulators operate from a +2.5V to +7.0V input supply. Wide range of preset output voltage options are available. These ultra low dropout linear regulators respond very fast to step changes in load which makes them suitable for low voltage microprocessor applications. The LP3962/LP3965 are developed on a CMOS process which allows low quiescent current operation independent of output load current. This CMOS process also allows the LP3962/LP3965 to operate under extremely low dropout conditions.

Dropout Voltage: Ultra low dropout voltage; typically 38mV at 150mA load current and 380mV at 1.5A load current.

Ground Pin Current: Typically 5mA at 1.5A load current.

Shutdown Mode: Typically 15µA quiescent current when the shutdown pin is pulled low.

Error Flag: Error flag goes low when the output voltage drops 10% below nominal value (for LP3962).

SENSE: Sense pin improves regulation at remote loads. (For LP3965)

Precision Output Voltage: Multiple output voltage options are available ranging from 1.2V to 5.0V and adjustable, with a guaranteed accuracy of $\pm 1.5\%$ at room temperature, and $\pm 3.0\%$ over all conditions (varying line, load, and temperature).

Features

- Ultra low dropout voltage
- Low ground pin current
- Load regulation of 0.04%
- 15µA quiescent current in shutdown mode
- Guaranteed output current of 1.5A DC
- Available in SOT-223, TO-263 and TO-220 packages
- Output voltage accuracy $\pm 1.5\%$
- Error flag indicates output status (LP3962)
- Sense option improves better load regulation (LP3965)
- Extremely low output capacitor requirements
- Overtemperature/overcurrent protection
- -40°C to $+125^{\circ}\text{C}$ junction temperature range

Applications

- Microprocessor power supplies
- GTL, GTL+, BTL, and SSTL bus terminators
- Power supplies for DSPs
- SCSI terminator
- Post regulators
- High efficiency linear regulators
- Battery chargers
- Other battery powered applications

Typical Application Circuits

DS101266-1

Minimum output capacitance is 10 µF to ensure stability over full load current range. More capacitance provides superior dynamic performance and additional stability margin.

*SD and ERROR pins must be pulled high through a 10kΩ pull-up resistor. Connect the ERROR pin to ground if this function is not used. See applications section for more information.

Typical Application Circuits (Continued)

$$R2 = R1 \left(\frac{V_{OUT}}{1.215} - 1 \right)$$

DS101266-34

Minimum output capacitance is 10 μF to ensure stability over full load current range. More capacitance provides superior dynamic performance and additional stability margin.

*SD and ERROR pins must be pulled high through a 10kΩ pull-up resistor. Connect the ERROR pin to ground if this function is not used. See applications section for more information.

LP3963/LP3966

3A Fast Ultra Low Dropout Linear Regulators

General Description

The LP3963/LP3966 series of fast ultra low-dropout linear regulators operate from a +2.5V to +7.0V input supply. Wide range of preset output voltage options are available. These ultra low dropout linear regulators respond very fast to step changes in load which makes them suitable for low voltage microprocessor applications. The LP3963/LP3966 are developed on a CMOS process which allows low quiescent current operation independent of output load current. This CMOS process also allows the LP3963/LP3966 to operate under extremely low dropout conditions.

Dropout Voltage: Ultra low dropout voltage; typically 80mV at 300mA load current and 800mV at 3A load current.

Ground Pin Current: Typically 6mA at 3A load current.

Shutdown Mode: Typically 15µA quiescent current when the shutdown pin is pulled low.

Error Flag: Error flag goes low when the output voltage drops 10% below nominal value (for LP3963).

SENSE: Sense pin improves regulation at remote loads. (For LP3966)

Precision Output Voltage: Multiple output voltage options are available ranging from 1.2V to 5.0V and adjustable, with a guaranteed accuracy of $\pm 1.5\%$ at room temperature, and $\pm 3.0\%$ over all conditions (varying line, load, and temperature).

Features

- Ultra low dropout voltage
- Low ground pin current
- Load regulation of 0.06%
- 15µA quiescent current in shutdown mode
- Guaranteed output current of 3A DC
- Available in TO-263 and TO-220 packages
- Output voltage accuracy $\pm 1.5\%$
- Error flag indicates output status (LP3963)
- Sense option improves better load regulation (LP3966)
- Extremely low output capacitor requirements
- Overtemperature/overcurrent protection
- -40°C to $+125^{\circ}\text{C}$ junction temperature range

Applications

- Microprocessor power supplies
- GTL, GTL+, BTL, and SSTL bus terminators
- Power supplies for DSPs
- SCSI terminator
- Post regulators
- High efficiency linear regulators
- Battery chargers
- Other battery powered applications

Typical Application Circuits

DS101267-1

Minimum output capacitance is 10 µF to ensure stability over full load current range. More capacitance provides superior dynamic performance and additional stability margin.

*SD and ERROR pins must be pulled high through a 10kΩ pull-up resistor. Connect the ERROR pin to ground if this function is not used. See applications section for more information.

Typical Application Circuits (Continued)

DS101267-34

Minimum output capacitance is 10 μ F to ensure stability over full load current range. More capacitance provides superior dynamic performance and additional stability margin.

*SD and ERROR pins must be pulled high through a 10k Ω pull-up resistor. Connect the \overline{ERROR} pin to ground if this function is not used. See applications section for more information.

LM2720 5-Bit Programmable, High Frequency Multi-phase PWM Controller	18-80

Switching Regulators Selection Guide

SWITCHING REGULATORS FOR COMPUTING VOLTAGE CONVERSION

Part Number	Number Of Regulated Voltages	Linear Regulator Output (Note 1)	Switching Regulator			Input Voltage		Switching Frequency	Applications
			Output Adj. Range (V), Output Current	Initial Accuracy (Note 2)	5-Bit DAC	Min	Max		
Notebook and Battery Voltage Conversion									
LM2640	3	5V	2.2 to 6V, controller	2%		5.5	30	200	Main V3.3, V5; V _{STANDBY} 5V
LM2641	3	5V	2.2 to 6V, controller	2%		5.5	30	300	Main V3.3, V5; V _{STANDBY} 5V
LM2650	1		1.5 to 16V, 3A	5%		4.5	18	90-300	Main V3.3, V5; V _{GTL} ; V _{AGP}
LM2651	1		1.5 to 3.3V, 1.5A	3.8%		4	14	90-300	Main V3.3, V5; V _{GTL} ; V _{AGP}
LM2653	1		1.5 to 3.3V, 1.5A			4	12	300	CPU V _{IO} ; V _{L2} ; Video Chip Supply
LM2655	1		1.5 to 3.3V, 1.5A	3.5%		4	14	300	CPU V _{IO} ; V _{L2} ; Video Chip Supply
LM2621	1		1.2 to 14V, 1A (Note 3)	3%		0.65	22	400-2000	PC Card Supply, TFT/LCD Bias Supply
Desktop Voltage Conversion									
LM2636	1		1.3 to 3.5V, controller	1.5%	✓	4.5	5.5	50-1000	CPU V _{CORE} ; V _{IO} ; V _{GTL} ; V _{AGP}
LM2637	3	1.5V, 2.5V	1.3 to 3.5V, controller	1.5%	✓	4.75	5.25	50-1000	CPU V _{CORE} ; V _{IO} ; V _{GTL} ; V _{CLK} ; V _{AGP}
LM2638	3	1.5V, 2.5V	1.3 to 3.5V, controller	1.5%	✓	4.75	5.25	50-1000	CPU V _{CORE} ; V _{IO} ; V _{GTL} ; V _{CLK} ; V _{AGP} ; V _{STANDBY} 2.5V, 3.3V
LM2639	1		1.3 to 3.5V, Controller	1.5%	✓	4.75	5.25	40-10,000 (3 or 4 phase)	CPU V _{CORE} ; V _{IO} ; V _{GTL} ; V _{AGP}
LM2720	1		1.3 to 3.5V, Controller	1.5%	✓	4.75	5.25	40-10,000 (3 or 4 phase)	CPU V _{CORE} ; V _{IO} ; V _{GTL} ; V _{AGP}

Note 1: For LM2637 and LM2638, output voltages of linear controllers default to the fixed values shown but are also adjustable.

Note 2: Accuracy of switching controller over temperature.

Note 3: LM2621 is a boost converter with a 2.85A (typ) switch. Maximum load current is up to 1A in most applications, but it is limited at lower input voltages. Consult datasheet for further information.

LM3524D	5V to 40V	1.5V min.	1 to 550	Dual Alternating Open Transistor (0.2A)	M16, N16
LM2640	5.5V to 30V	2.2 to 6V	200	FET drive	MTC28
LM2641	5V to 30V	7V to 15V	300	FET drive	MTC28
LM3478	2.95V to 40V	1.25V	100 to 1000	Low-Side N-Channel FET drive	MSOP-8
LM3488	2.95V to 40V	1.25V	100 to 1000	Low-Side N-Channel FET drive	MSOP-8

INTEGRATED POWER SUPPLY SELECTION GUIDE

Integrated power supplies provide a complete DC-DC Converter, including capacitors and inductor, in a single molded dual-in-line package.

MS101096-1

Part Number	V_{IN}	V_{OUT}	I_{OUT}	Application	Package (Note 6)
LM2825-3.3	4.75V to 40V	3.3V	1A	Buck	N24
LM2825-5.0	7V to 40V	5.0V	1A	Buck	N24
LM2825-12	15V to 40V	12V	0.75A	Buck	N24
LM2825-ADJ	4.5V to 40V	1.23V to 8V	1A	Buck	N24
LM2825H-ADJ	9V to 40V	7V to 15V	0.55A	Buck	N24

Note 4: All switching converters have Current Limiting and Thermal Shutdown features. Adj output voltage can be set typically from 1.23V to (V_{IN} max - 3V).

Note 5: Under Temp. Range the letters indicate temperature range. Ind = Industrial Temperature of -40°C to +125°C. Mil = Military Temperature of -55°C to +150°C.

Note 6: Under Package, the letter identifies the type of package. Numbers following the package letter indicate number of pins.

MM = Miniature Small Outline Molded Package (MSOP)

K = Metal Can (TO-3)

M = Small Outline Molded Package (Surface Mount)

MTC = Molded Thin Shrink Small Outline Package (TSSOP)

N = Molded Dual-In-Line Package

S = TO-263 (Power Surface Mount)

K = TO-220 (Power Through Hole)

J = Aluminum Nitride Ceramic Dual-In-Line Package

Switching Regulators Definition Of Terms

Boost Regulator: A switching regulator topology in which a lower DC voltage is converted to a higher DC voltage. Also known as a *Step-Up Regulator*.

Buck Regulator: A switching regulator topology in which a higher DC voltage is converted to a lower DC voltage. Also known as a *Step-Down Regulator*.

Buck-Boost Regulator: A switching regulator topology in which a positive DC voltage is converted to a negative DC voltage without the use of a transformer. A variation of this topology produces a positive DC output voltage which is between the positive DC output voltage maximum and minimum limits, i.e., providing both buck and boost functions.

Burst Mode: The mode of operation in a switching regulator that results when the load current is reduced to the point where the minimum duty cycle of each pulse provides more energy than the load demands, thus causing the controller to "skip" pulses (or sets of pulses) to maintain the output voltage at its correct value.

Line Regulation: The change in output voltage for a change in the input voltage. The measurement is made under conditions of low dissipation or by using pulse techniques such that the average chip temperature is not significantly affected.

Duty Cycle (D): The ratio of the period time the output switch is ON to the total oscillator period.

$$D = t_{ON}/T$$

Capacitor Ripple Current: The RMS value of the maximum allowable alternating current at which a capacitor can be operated continuously at a specified temperature. This parameter is specified by the capacitor manufacturer, and must be considered when a capacitor is used as a part of a switching regulator input or output filter.

Catch Diode: The diode which provides a return path for the load current when the regulator switch is OFF. For switching regulators, the types of diodes normally used include Schottky-barrier, fast-recovery, and ultra-fast recovery. Also known as a *steering diode* or *free-wheeling diode*.

Collector Saturation Voltage: With the emitter grounded and the switch ON, the collector-to-emitter voltage of an NPN transistor switch at a specified collector current.

Compensation: The circuitry required to provide adequate stability for the regulator control loop.

Continuous Mode Operation: Relates to the inductor current. In the continuous mode, the inductor current is always greater than zero. In discontinuous mode, the inductor current falls to zero before the end of each switching cycle.

Current Limit Sense Voltage: For regulator ICs that have externally-controlled limit, the current limit sense voltage is the voltage that must be applied (between two specified pins) to turn the output transistor OFF and start other current limit functions within the IC.

Current-Mode Control: A method of feedback control used in switching regulators where both the output voltage and the switch current are used to control the switching element.

Diode Recovery Time: The period of time it takes the current through a diode to return to zero after the forward voltage is removed (i.e., the diode is turned OFF).

Discontinuous Mode Operation: See *Continuous Mode Operation*.

Efficiency (η): The proportion of input power actually delivered to the load.

$$\eta = \frac{P_{OUT}}{P_{IN}} = \frac{P_{OUT}}{P_{OUT} + P_{LOSS}}$$

Electromagnetic Interference (EMI): A generic term which is used to refer to any type of unwanted electromagnetic radiation coming from a system such as a switching regulator.

Emitter Saturation Voltage: With the collector pulled up to the DC input voltage and the switch ON, the collector-to-emitter voltage of a NPN transistor switch at a specified emitter current.

Error Amplifier (or Comparator): An amplifier (or comparator) which is used to detect the difference between a feedback voltage (usually proportional to the output voltage) and a DC reference voltage. The resulting error voltage is used in the regulator control circuitry to adjust the switch on-time. This error amplifier may be either a transconductance-type or an operational amplifier.

ESR: A parasitic element of every capacitor, the ESR (equivalent series resistance) is the purely resistive component of a real capacitor's impedance. It is modeled as a resistor in series with the capacitive element, and its value is usually determined by the device construction.

ESL: A parasitic element of every capacitor, which limits its effectiveness at high frequencies. The ESL (equivalent series inductance) is the pure inductance component of a device. Its value is usually determined by the device construction, especially its leads. It is modeled as an inductor in series with the capacitive element.

E-T_{OP}: See *Operating Volt-Microsecond Constant*.

Flyback Regulator: A switching regulator topology in which a DC voltage is converted to another DC voltage by means of a transformer which stores energy delivered by a switch during the switch ON time, and transfers the energy to an output storage capacitor during the switch OFF time.

Inductor Ripple Current (ΔI_{IND}): The peak-to-peak value of the inductor current waveform, typically a sawtooth waveform when the regulator is operating in the continuous mode.

Inductor Saturation: The condition which exists when an inductor cannot hold any more magnetic flux. When an inductor saturates, its inductance appears to decrease and the resistive component dominates. Inductor current is then limited only by the DC resistance of the wire and the available source current.

Inverting Regulator: A switching regulator which converts a positive DC voltage to a negative DC voltage. The buck-boost topology is often used for this function.

Magnetic Flux Interference: Unwanted interference emitted by magnetic components (transformers and inductors) in the form of magnetic flux. Magnetic flux interference can be minimized by the use of magnetic cores (such as toroid or pot core) which contain the flux, or by shielding with materials such as steel or mu-metal. Aluminium and copper are not effective in shielding flux.

Operating Volt-Microsecond Constant: The product (in Volts X microseconds) of the voltage applied to the switching regulator inductor and the period of time the voltage is applied. Abbreviated as $E \cdot T_{OP}$, this constant is a measure of the energy-handling capability of an inductor, and is dependent upon the type of core used, its core area, the number of turns of wire used, and the applied duty cycle.

Oscillator Frequency: The frequency of the internal oscillator used in the control of the switching regulator. Generally the same as the *switching frequency*, for most regulators the oscillator frequency is fixed, either internally or by an external resistor and/or capacitor.

Output Ripple Voltage: The AC component of the switching regulator output voltage. It is usually dominated by the output capacitor ESR multiplied by the applied ripple current, but may have high-frequency spikes caused by effects of output capacitor ESL.

Pulse-Width Modulation (PWM): A method of control used in a switching regulator where the duty cycle of the switching element is used to control the output voltage.

Radio Frequency Interference (RFI): High-frequency electromagnetic radiation resulting from the high switching speeds of switching transistors and rectifiers, often causing problems in nearby circuitry that is sensitive to the large

noise "spikes" that are often associated with it. RFI can be easily shielded by a good electrical conductor such as copper or aluminium.

Snubber: A network used to limit the voltage developed across a component. The network usually consists of a zero diode, or a diode in series with a parallel resistor and capacitor. In a switching regulator, the snubber is most often used to limit the switch voltage of a flyback regulator.

Soft Start: In a switching regulator, a soft start limits the duty cycle of the regulator during start up. This in turn limits the energy the regulator demands from its source while building up the output voltage from its initial condition of 0V.

Standby Quiescent Current: For a regulator with an ON/OFF pin, this is the supply current (or ground pin current) required by the regulator IC when in the standby (OFF) mode.

Switch: In a switching regulator, a transistor or MOSFET used to deliver energy, in pulses, into energy storage devices (such as inductors, transformers, or capacitors) for use by a load.

Switching Frequency: See *Oscillator Frequency*.

Step Response: The transient response of a regulator output after the load current is "stepped" from one value to another. This test is often used for evaluating the loop stability of a regulator.

Transient Response Time: The period of time it takes the output of a regulator to return to a steady-state value after a change in line voltage or load current. See also *Step Response*.

Voltage Mode Control: A method of control used in a switching regulator where the feedback from the output voltage is used to provide control of the switching element.

LM1575/LM2575/LM2575HV Series

SIMPLE SWITCHER® 1A Step-Down Voltage Regulator

General Description

The LM2575 series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving a 1A load with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5V, 12V, 15V, and an adjustable output version.

Requiring a minimum number of external components, these regulators are simple to use and include internal frequency compensation and a fixed-frequency oscillator.

The LM2575 series offers a high-efficiency replacement for popular three-terminal linear regulators. It substantially reduces the size of the heat sink, and in many cases no heat sink is required.

A standard series of inductors optimized for use with the LM2575 are available from several different manufacturers. This feature greatly simplifies the design of switch-mode power supplies.

Other features include a guaranteed $\pm 4\%$ tolerance on output voltage within specified input voltages and output load conditions, and $\pm 10\%$ on the oscillator frequency. External shutdown is included, featuring 50 μA (typical) standby current. The output switch includes cycle-by-cycle current limiting, as well as thermal shutdown for full protection under fault conditions.

Features

- 3.3V, 5V, 12V, 15V, and adjustable output versions
- Adjustable version output voltage range, 1.23V to 37V (57V for HV version) $\pm 4\%$ max over line and load conditions
- Guaranteed 1A output current
- Wide input voltage range, 40V up to 60V for HV version
- Requires only 4 external components
- 52 kHz fixed frequency internal oscillator
- TTL shutdown capability, low power standby mode
- High efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection
- P+ Product Enhancement tested

Applications

- Simple high-efficiency step-down (buck) regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to negative converter (Buck-Boost)

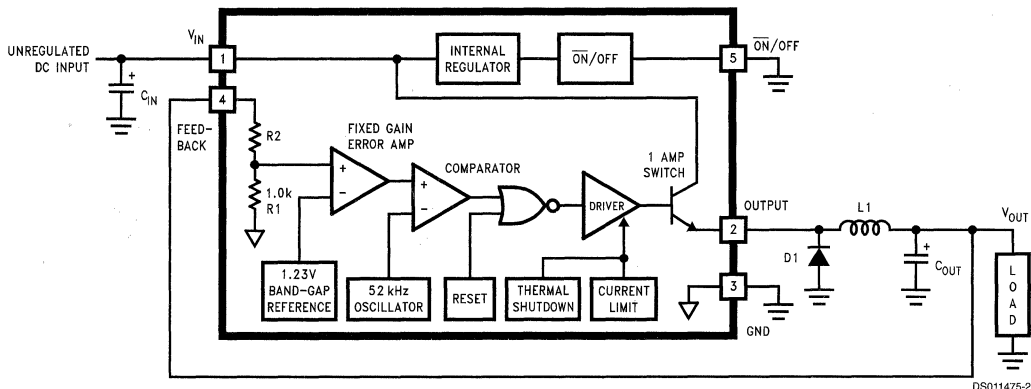

Typical Application (Fixed Output Voltage Versions)

DS011475-1

Note: Pin numbers are for the TO-220 package.

Block Diagram and Typical Application

DS011475-2

3.3V, R2 = 1.7k
 5V, R2 = 3.1k
 12V, R2 = 8.84k
 15V, R2 = 11.3k

LM1577/LM2577

SIMPLE SWITCHER® Step-Up Voltage Regulator

General Description

The LM1577/LM2577 are monolithic integrated circuits that provide all of the power and control functions for step-up (boost), flyback, and forward converter switching regulators. The device is available in three different output voltage versions: 12V, 15V, and adjustable.

Requiring a minimum number of external components, these regulators are cost effective, and simple to use. Listed in this data sheet are a family of standard inductors and flyback transformers designed to work with these switching regulators.

Included on the chip is a 3.0A NPN switch and its associated protection circuitry, consisting of current and thermal limiting, and undervoltage lockout. Other features include a 52 kHz fixed-frequency oscillator that requires no external components, a soft start mode to reduce in-rush current during start-up, and current mode control for improved rejection of input voltage and output load transients.

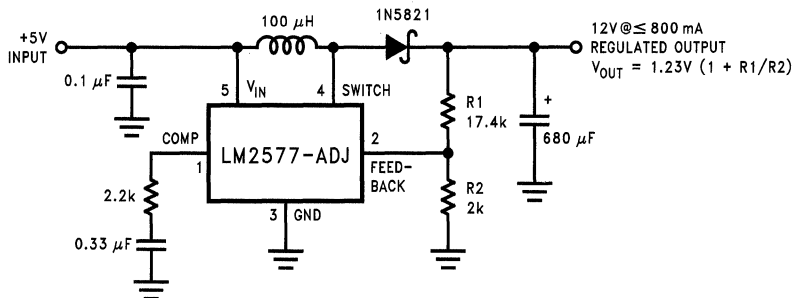

Features

- Requires few external components
- NPN output switches 3.0A, can stand off 65V
- Wide input voltage range: 3.5V to 40V
- Current-mode operation for improved transient response, line regulation, and current limit
- 52 kHz internal oscillator
- Soft-start function reduces in-rush current during start-up
- Output switch protected by current limit, under-voltage lockout, and thermal shutdown

Typical Applications

- Simple boost regulator
- Flyback and forward regulators
- Multiple-output regulator

Typical Application

DS011468-1

Note: Pin numbers shown are for TO-220 (T) package.

LM2524D/LM3524D

Regulating Pulse Width Modulator

General Description

The LM3524D family is an improved version of the industry standard LM3524. It has improved specifications and additional features yet is pin for pin compatible with existing 3524 families. New features reduce the need for additional external circuitry often required in the original version.

The LM3524D has a $\pm 1\%$ precision 5V reference. The current carrying capability of the output drive transistors has been raised to 200 mA while reducing V_{CEsat} and increasing V_{CE} breakdown to 60V. The common mode voltage range of the error-amp has been raised to 5.5V to eliminate the need for a resistive divider from the 5V reference.

In the LM3524D the circuit bias line has been isolated from the shut-down pin. This prevents the oscillator pulse amplitude and frequency from being disturbed by shut-down. Also at high frequencies (≈ 300 kHz) the max. duty cycle per output has been improved to 44% compared to 35% max. duty cycle in other 3524s.

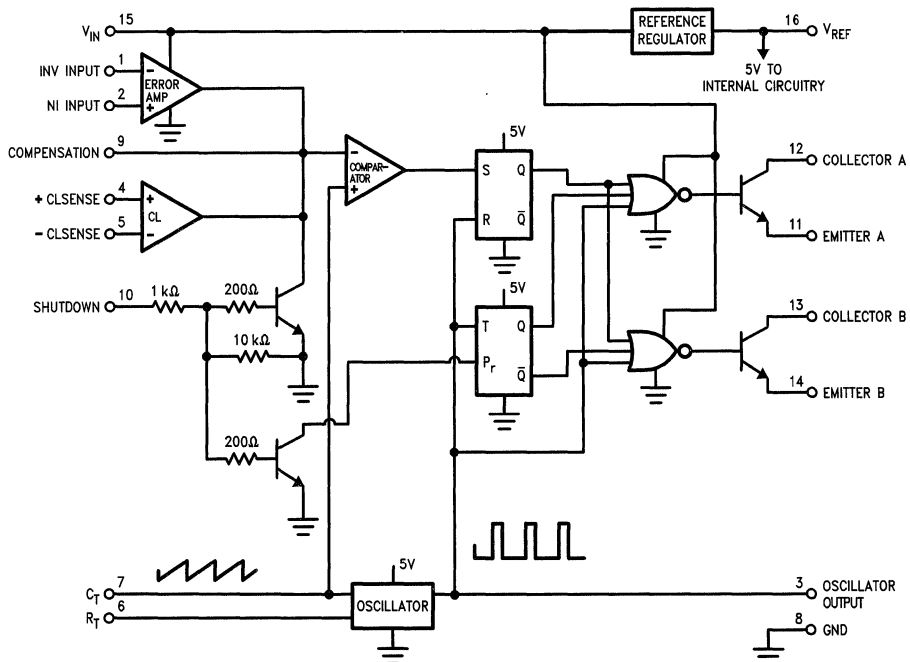

In addition, the LM3524D can now be synchronized externally, through pin 3. Also a latch has been added to insure

one pulse per period even in noisy environments. The LM3524D includes double pulse suppression logic that insures when a shut-down condition is removed the state of the T-flip-flop will change only after the first clock pulse has arrived. This feature prevents the same output from being pulsed twice in a row, thus reducing the possibility of core saturation in push-pull designs.

Features

- Fully interchangeable with standard LM3524 family
- $\pm 1\%$ precision 5V reference with thermal shut-down
- Output current to 200 mA DC
- 60V output capability
- Wide common mode input range for error-amp
- One pulse per period (noise suppression)
- Improved max. duty cycle at high frequencies
- Double pulse suppression
- Synchronize through pin 3

LM2574/LM2574HV

SIMPLE SWITCHER® 0.5A Step-Down Voltage Regulator

General Description

The LM2574 series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving a 0.5A load with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5V, 12V, 15V, and an adjustable output version.

Requiring a minimum number of external components, these regulators are simple to use and include internal frequency compensation and a fixed-frequency oscillator.

The LM2574 series offers a high-efficiency replacement for popular three-terminal linear regulators. Because of its high efficiency, the copper traces on the printed circuit board are normally the only heat sinking needed.

A standard series of inductors optimized for use with the LM2574 are available from several different manufacturers. This feature greatly simplifies the design of switch-mode power supplies.

Other features include a guaranteed $\pm 4\%$ tolerance on output voltage within specified input voltages and output load conditions, and $\pm 10\%$ on the oscillator frequency. External shutdown is included, featuring 50 μA (typical) standby current. The output switch includes cycle-by-cycle current limiting, as well as thermal shutdown for full protection under fault conditions.

Features

- 3.3V, 5V, 12V, 15V, and adjustable output versions
- Adjustable version output voltage range, 1.23V to 37V (57V for HV version) $\pm 4\%$ max over line and load conditions
- Guaranteed 0.5A output current
- Wide input voltage range, 40V, up to 60V for HV version
- Requires only 4 external components
- 52 kHz fixed frequency internal oscillator
- TTL shutdown capability, low power standby mode
- High efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection

Applications

- Simple high-efficiency step-down (buck) regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to negative converter (Buck-Boost)

Typical Application (Fixed Output Voltage Versions)

DS011394-1

Note: Pin numbers are for 8-pin DIP package.

LM2576/LM2576HV Series SIMPLE SWITCHER® 3A Step-Down Voltage Regulator

General Description

The LM2576 series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving 3A load with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5V, 12V, 15V, and an adjustable output version.

Requiring a minimum number of external components, these regulators are simple to use and include internal frequency compensation and a fixed-frequency oscillator.

The LM2576 series offers a high-efficiency replacement for popular three-terminal linear regulators. It substantially reduces the size of the heat sink, and in some cases no heat sink is required.

A standard series of inductors optimized for use with the LM2576 are available from several different manufacturers. This feature greatly simplifies the design of switch-mode power supplies.

Other features include a guaranteed $\pm 4\%$ tolerance on output voltage within specified input voltages and output load conditions, and $\pm 10\%$ on the oscillator frequency. External shutdown is included, featuring 50 μA (typical) standby current. The output switch includes cycle-by-cycle current limiting, as well as thermal shutdown for full protection under fault conditions.

Features

- 3.3V, 5V, 12V, 15V, and adjustable output versions
- Adjustable version output voltage range, 1.23V to 37V (57V for HV version) $\pm 4\%$ max over line and load conditions
- Guaranteed 3A output current
- Wide input voltage range, 40V up to 60V for HV version
- Requires only 4 external components
- 52 kHz fixed frequency internal oscillator
- TTL shutdown capability, low power standby mode
- High efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection
- P+ Product Enhancement tested

Applications

- Simple high-efficiency step-down (buck) regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to negative converter (Buck-Boost)

Typical Application (Fixed Output Voltage Versions)

LM2578A/LM3578A Switching Regulator

General Description

The LM2578A is a switching regulator which can easily be set up for such DC-to-DC voltage conversion circuits as the buck, boost, and inverting configurations. The LM2578A features a unique comparator input stage which not only has separate pins for both the inverting and non-inverting inputs, but also provides an internal 1.0V reference to each input, thereby simplifying circuit design and p.c. board layout. The output can switch up to 750 mA and has output pins for its collector and emitter to promote design flexibility. An external current limit terminal may be referenced to either the ground or the V_{in} terminal, depending upon the application. In addition, the LM2578A has an on board oscillator, which sets the switching frequency with a single external capacitor from <1 Hz to 100 kHz (typical).

The LM2578A is an improved version of the LM2578, offering higher maximum ratings for the total supply voltage and output transistor emitter and collector voltages.

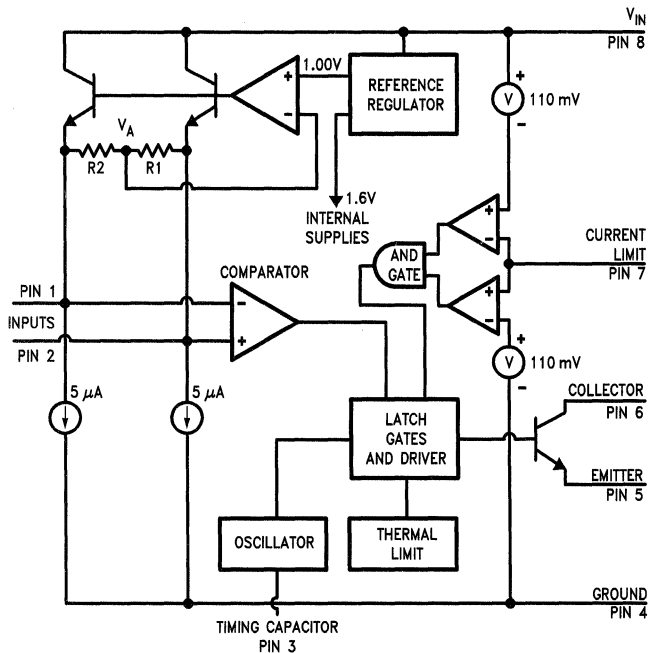

Features

- Inverting and non-inverting feedback inputs
- 1.0V reference at inputs
- Operates from supply voltages of 2V to 40V
- Output current up to 750 mA, saturation less than 0.9V
- Current limit and thermal shut down
- Duty cycle up to 90%

Applications

- Switching regulators in buck, boost, inverting, and single-ended transformer configurations
- Motor speed control
- Lamp flasher

LM2585 SIMPLE SWITCHER® 3A Flyback Regulator

General Description

The LM2585 series of regulators are monolithic integrated circuits specifically designed for flyback, step-up (boost), and forward converter applications. The device is available in 4 different output voltage versions: 3.3V, 5.0V, 12V, and adjustable.

Requiring a minimum number of external components, these regulators are cost effective, and simple to use. Included in the datasheet are typical circuits of boost and flyback regulators. Also listed are selector guides for diodes and capacitors and a family of standard inductors and flyback transformers designed to work with these switching regulators.

The power switch is a 3.0A NPN device that can stand-off 65V. Protecting the power switch are current and thermal limiting circuits, and an undervoltage lockout circuit. This IC contains a 100 kHz fixed-frequency internal oscillator that permits the use of small magnetics. Other features include soft start mode to reduce in-rush current during start up, current mode control for improved rejection of input voltage and output load transients and cycle-by-cycle current limiting. An output voltage tolerance of $\pm 4\%$, within specified input voltages and output load conditions, is guaranteed for the power supply system.

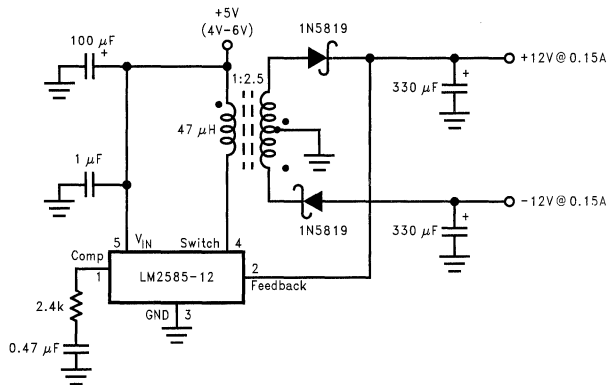

Features

- Requires few external components
- Family of standard inductors and transformers
- NPN output switches 3.0A, can stand off 65V
- Wide input voltage range: 4V to 40V
- Current-mode operation for improved transient response, line regulation, and current limit
- 100 kHz switching frequency
- Internal soft-start function reduces in-rush current during start-up
- Output transistor protected by current limit, under voltage lockout, and thermal shutdown
- System Output Voltage Tolerance of $\pm 4\%$ max over line and load conditions

Typical Applications

- Flyback regulator
- Multiple-output regulator
- Simple boost regulator
- Forward converter

LM2586 SIMPLE SWITCHER® 3A Flyback Regulator with Shutdown

General Description

The LM2586 series of regulators are monolithic integrated circuits specifically designed for flyback, step-up (boost), and forward converter applications. The device is available in 4 different output voltage versions: 3.3V, 5.0V, 12V, and adjustable.

Requiring a minimum number of external components, these regulators are cost effective, and simple to use. Included in the datasheet are typical circuits of boost and flyback regulators. Also listed are selector guides for diodes and capacitors and a family of standard inductors and flyback transformers designed to work with these switching regulators.

The power switch is a 3.0A NPN device that can stand-off 65V. Protecting the power switch are current and thermal limiting circuits, and an undervoltage lockout circuit. This IC contains an adjustable frequency oscillator that can be programmed up to 200 kHz. The oscillator can also be synchronized with other devices, so that multiple devices can operate at the same switching frequency.

Other features include soft start mode to reduce in-rush current during start up, and current mode control for improved rejection of input voltage and output load transients and cycle-by-cycle current limiting. The device also has a shutdown pin, so that it can be turned off externally. An output voltage tolerance of $\pm 4\%$, within specified input voltages and output load conditions, is guaranteed for the power supply system.

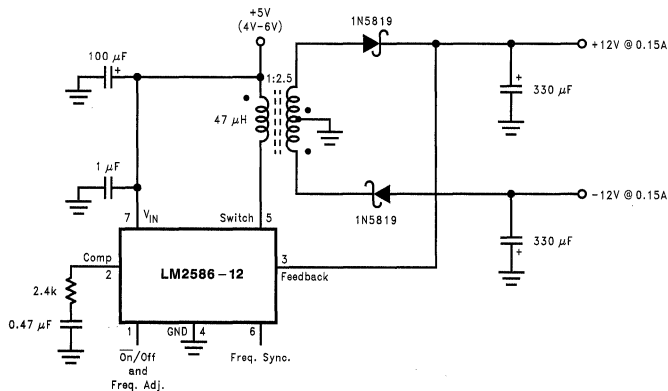

Features

- Requires few external components
- Family of standard inductors and transformers
- NPN output switches 3.0A, can stand off 65V
- Wide input voltage range: 4V to 40V
- Adjustable switching frequency: 100 kHz to 200 kHz
- External shutdown capability
- Draws less than 60 μ A when shut down
- Frequency synchronization
- Current-mode operation for improved transient response, line regulation, and current limit
- Internal soft-start function reduces in-rush current during start-up
- Output transistor protected by current limit, under voltage lockout, and thermal shutdown
- System output voltage tolerance of $\pm 4\%$ max over line and load conditions

LM2594/LM2594HV

SIMPLE SWITCHER® Power Converter 150 kHz 0.5A

Step-Down Voltage Regulator

General Description

The LM2594/LM2594HV series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving a 0.5A load with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5V, 12V, and an adjustable output version, and are packaged in a 8-lead DIP and a 8-lead surface mount package.

Requiring a minimum number of external components, these regulators are simple to use and feature internal frequency compensation†, a fixed-frequency oscillator, and improved line and load regulation specifications.

The LM2594/LM2594HV series operates at a switching frequency of 150 kHz thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Because of its high efficiency, the copper traces on the printed circuit board are normally the only heat sinking needed.

A standard series of inductors (both through hole and surface mount types) are available from several different manufacturers optimized for use with the LM2594/LM2594HV series. This feature greatly simplifies the design of switch-mode power supplies.

Other features include a guaranteed $\pm 4\%$ tolerance on output voltage under all conditions of input voltage and output load conditions, and $\pm 15\%$ on the oscillator frequency. External shutdown is included, featuring typically 85 μA standby current. Self protection features include a two stage frequency reducing current limit for the output switch and an over temperature shutdown for complete protection under fault conditions.

The LM2594HV is for applications requiring an input voltage up to 60V.

Features

- 3.3V, 5V, 12V, and adjustable output versions
- Adjustable version output voltage range, 1.2V to 37V (57V for the HV version) $\pm 4\%$ max over line and load conditions
- Available in 8-pin surface mount and DIP-8 package
- Guaranteed 0.5A output current
- Input voltage range up to 60V
- Requires only 4 external components
- 150 kHz fixed frequency internal oscillator
- TTL Shutdown capability
- Low power standby mode, I_Q typically 85 μA
- High Efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection

Applications

- Simple high-efficiency step-down (buck) regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to Negative convertor

Typical Application (Fixed Output Voltage Versions)

LM2595

SIMPLE SWITCHER® Power Converter 150 kHz

1A Step-Down Voltage Regulator

General Description

The LM2595 series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving a 1A load with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5V, 12V, and an adjustable output version.

Requiring a minimum number of external components, these regulators are simple to use and include internal frequency compensation†, and a fixed-frequency oscillator.

The LM2595 series operates at a switching frequency of 150 kHz thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Available in a standard 5-lead TO-220 package with several different lead bend options, and a 5-lead TO-263 surface mount package. Typically, for output voltages less than 12V, and ambient temperatures less than 50°C, no heat sink is required.

A standard series of inductors are available from several different manufacturers optimized for use with the LM2595 series. This feature greatly simplifies the design of switch-mode power supplies.

Other features include a guaranteed $\pm 4\%$ tolerance on output voltage under specified input voltage and output load conditions, and $\pm 15\%$ on the oscillator frequency. External shutdown is included, featuring typically 85 μ A stand-by current. Self protection features include a two stage frequency reducing current limit for the output switch and an over temperature shutdown for complete protection under fault conditions.

Features

- 3.3V, 5V, 12V, and adjustable output versions
- Adjustable version output voltage range, 1.2V to 37V $\pm 4\%$ max over line and load conditions
- Available in TO-220 and TO-263 (surface mount) packages
- Guaranteed 1A output load current
- Input voltage range up to 40V
- Requires only 4 external components
- Excellent line and load regulation specifications
- 150 kHz fixed frequency internal oscillator
- TTL shutdown capability
- Low power standby mode, I_Q typically 85 μ A
- High efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection

Applications

- Simple high-efficiency step-down (buck) regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to negative converter

Note: † Patent Number 5,382,918.

Typical Application (Fixed Output Voltage Versions)

LM2596

SIMPLE SWITCHER® Power Converter 150 kHz

3A Step-Down Voltage Regulator

General Description

The LM2596 series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving a 3A load with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5V, 12V, and an adjustable output version.

Requiring a minimum number of external components, these regulators are simple to use and include internal frequency compensation†, and a fixed-frequency oscillator.

The LM2596 series operates at a switching frequency of 150 kHz thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Available in a standard 5-lead TO-220 package with several different lead bend options, and a 5-lead TO-263 surface mount package.

A standard series of inductors are available from several different manufacturers optimized for use with the LM2596 series. This feature greatly simplifies the design of switch-mode power supplies.

Other features include a guaranteed $\pm 4\%$ tolerance on output voltage under specified input voltage and output load conditions, and $\pm 15\%$ on the oscillator frequency. External shutdown is included, featuring typically 80 μA standby current. Self protection features include a two stage frequency reducing current limit for the output switch and an over temperature shutdown for complete protection under fault conditions.

Features

- 3.3V, 5V, 12V, and adjustable output versions
- Adjustable version output voltage range, 1.2V to 37V $\pm 4\%$ max over line and load conditions
- Available in TO-220 and TO-263 packages
- Guaranteed 3A output load current
- Input voltage range up to 40V
- Requires only 4 external components
- Excellent line and load regulation specifications
- 150 kHz fixed frequency internal oscillator
- TTL shutdown capability
- Low power standby mode, I_Q typically 80 μA
- High efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection

Applications

- Simple high-efficiency step-down (buck) regulator
- On-card switching regulators
- Positive to negative converter

LM2597/LM2597HV

SIMPLE SWITCHER® Power Converter 150 kHz 0.5A Step-Down Voltage Regulator, with Features

General Description

The LM2597/LM2597HV series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving a 0.5A load with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5V, 12V, and an adjustable output version, and are packaged in an 8-lead DIP and an 8-lead surface mount package.

This series of switching regulators is similar to the LM2594 series, with additional supervisory and performance features added.

Requiring a minimum number of external components, these regulators are simple to use and include internal frequency compensation†, improved line and load specifications, fixed-frequency oscillator, Shutdown /Soft-start, error flag delay and error flag output.

The LM2597/LM2597HV series operates at a switching frequency of 150 kHz thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Because of its high efficiency, the copper traces on the printed circuit board are normally the only heat sinking needed.

A standard series of inductors (both through hole and surface mount types) are available from several different manufacturers optimized for use with the LM2597/LM2597HV series. This feature greatly simplifies the design of switch-mode power supplies.

Other features include a guaranteed $\pm 4\%$ tolerance on output voltage under all conditions of input voltage and output load conditions, and $\pm 15\%$ on the oscillator frequency. External shutdown is included, featuring typically 85 μA standby current. Self protection features include a two stage current limit for the output switch and an over temperature shutdown for complete protection under fault conditions.

The LM2597HV is for use in applications requiring an input voltage up to 60V.

Features

- 3.3V, 5V, 12V, and adjustable output versions
- Adjustable version output voltage range, 1.2V to 37V (57V for HV version) $\pm 4\%$ max over line and load conditions
- Guaranteed 0.5A output current
- Available in 8-pin surface mount and DIP-8 package
- Input voltage range up to 60V
- 150 kHz fixed frequency internal oscillator
- Shutdown /Soft-start
- Out of regulation error flag
- Error output delay
- Bias Supply Pin (V_{BS}) for internal circuitry improves efficiency at high input voltages
- Low power standby mode, I_Q typically 85 μA
- High Efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection

Applications

- Simple high-efficiency step-down (buck) regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to Negative converter

Typical Application (Fixed Output Voltage Versions)

DS012440-1

†Patent Number 5,382,918.

LM2598

SIMPLE SWITCHER® Power Converter 150 kHz 1A Step-Down Voltage Regulator, with Features

General Description

The LM2598 series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving a 1A load with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5V, 12V, and an adjustable output version.

This series of switching regulators is similar to the LM2595 series, with additional supervisory and performance features added.

Requiring a minimum number of external components, these regulators are simple to use and include internal frequency compensation†, improved line and load specifications, fixed-frequency oscillator, Shutdown /Soft-start, error flag delay and error flag output.

The LM2598 series operates at a switching frequency of 150 kHz thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Available in a standard 7-lead TO-220 package with several different lead bend options, and a 7-lead TO-263 surface mount package. Typically, for output voltages less than 12V, and ambient temperatures less than 50°C, no heat sink is required.

A standard series of inductors (both through hole and surface mount types) are available from several different manufacturers optimized for use with the LM2598 series. This feature greatly simplifies the design of switch-mode power supplies.

Other features include a guaranteed $\pm 4\%$ tolerance on output voltage under all conditions of input voltage and output load conditions, and $\pm 15\%$ on the oscillator frequency. Ex-

ternal shutdown is included, featuring typically 85 μA standby current. Self protection features include a two stage current limit for the output switch and an over temperature shutdown for complete protection under fault conditions.

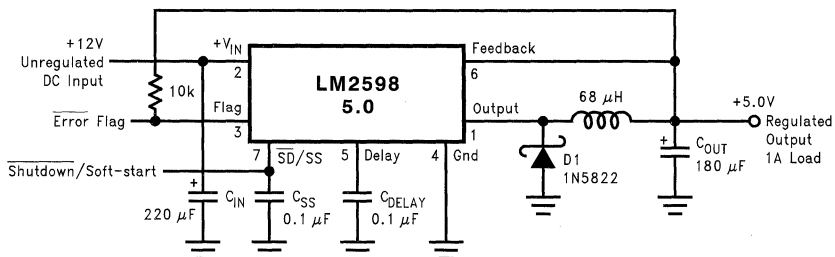

Features

- 3.3V, 5V, 12V, and adjustable output versions
- Adjustable version output voltage range, 1.2V to 37V $\pm 4\%$ max over line and load conditions
- Guaranteed 1A output current
- Available in 7-pin TO-220 and TO-263 (surface mount) package
- Input voltage range up to 40V
- Excellent line and load regulation specifications
- 150 kHz fixed frequency internal oscillator
- Shutdown /Soft-start
- Out of regulation error flag
- Error output delay
- Low power standby mode, I_Q typically 85 μA
- High Efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection

Applications

- Simple high-efficiency step-down (buck) regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to Negative converter

Typical Application (Fixed Output Voltage Versions)

LM2599

SIMPLE SWITCHER® Power Converter 150 kHz 3A Step-Down Voltage Regulator, with Features

General Description

The LM2599 series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving a 3A load with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5V, 12V, and an adjustable output version.

This series of switching regulators is similar to the LM2596 series, with additional supervisory and performance features added.

Requiring a minimum number of external components, these regulators are simple to use and include internal frequency compensation†, improved line and load specifications, fixed-frequency oscillator, Shutdown/Soft-start, error flag delay and error flag output.

The LM2599 series operates at a switching frequency of 150 kHz thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Available in a standard 7-lead TO-220 package with several different lead bend options, and a 7-lead TO-263 Surface mount package.

A standard series of inductors (both through hole and surface mount types) are available from several different manufacturers optimized for use with the LM2599 series. This feature greatly simplifies the design of switch-mode power supplies.

Other features include a guaranteed $\pm 4\%$ tolerance on output voltage under all conditions of input voltage and output load conditions, and $\pm 15\%$ on the oscillator frequency. External shutdown is included, featuring typically 80 μA

standby current. Self protection features include a two stage current limit for the output switch and an over temperature shutdown for complete protection under fault conditions.

Features

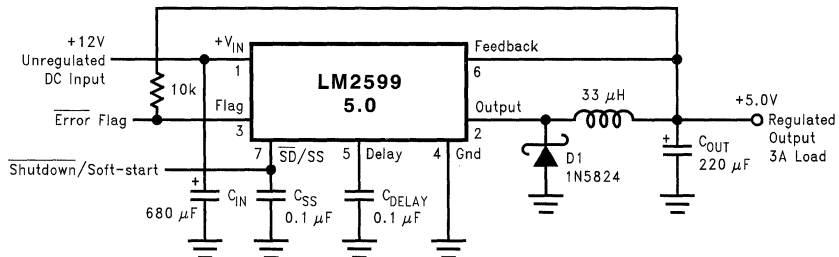

- 3.3V, 5V, 12V, and adjustable output versions
- Adjustable version output voltage range, 1.2V to 37V $\pm 4\%$ max over line and load conditions
- Guaranteed 3A output current
- Available in 7-pin TO-220 and TO-263 (surface mount) Package
- Input voltage range up to 40V
- 150 kHz fixed frequency internal oscillator
- Shutdown/Soft-start
- Out of regulation error flag
- Error output delay
- Low power standby mode, I_Q typically 80 μA
- High Efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection

Applications

- Simple high-efficiency step-down (buck) regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to Negative converter

Note: † Patent Number 5,382,918.

Typical Application (Fixed Output Voltage Versions)

LM2621

Low Input Voltage, Step-Up DC-DC Converter

General Description

The LM2621 is a high efficiency, step-up DC-DC switching regulator for battery-powered and low input voltage systems. It accepts an input voltage between 1.2V and 14V and converts it into a regulated output voltage. The output voltage can be adjusted between 1.24V and 14V. It has an internal 0.17Ω N-Channel MOSFET power switch. Efficiencies up to 90% are achievable using the LM2621.

The high switching frequency (adjustable up to 2MHz) of the LM2621 allows for tiny surface mount inductors and capacitors. Because of the unique constant-duty-cycle gated oscillator topology very high efficiencies are realized over a wide load range. The supply current is reduced to 80μA because of the BiCMOS process technology. In the shutdown mode, the supply current is less than 2.5μA.

The LM2621 is available in a Mini-SO-8 package. This package uses half the board area of a standard 8-pin SO and has a height of just 1.09 mm.

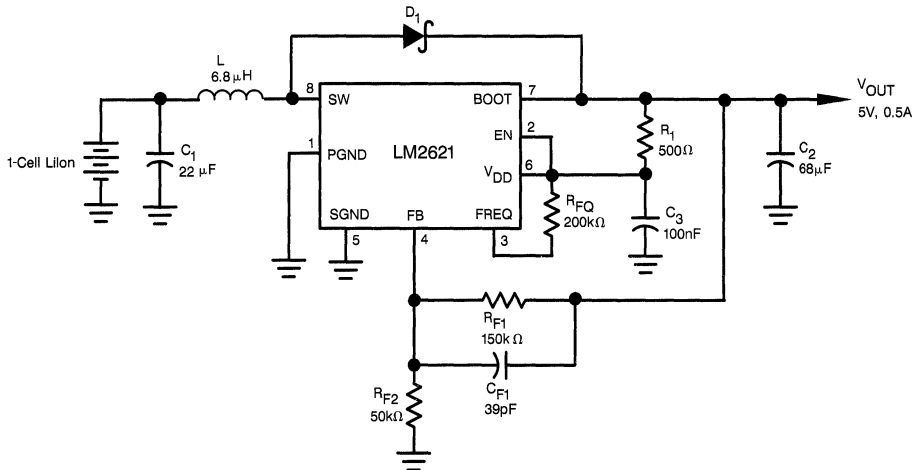

Features

- Small Mini-SO8 Package (Half the Footprint of Standard 8-Pin SO Package)
- 1.09 mm Package Height
- Up to 2 MHz Switching Frequency
- 1.2V to 14V Input Voltage
- 1.24V - 14V Adjustable Output Voltage
- Up to 1A Load Current
- 0.17 Ω Internal MOSFET
- Up to 90% Regulator Efficiency
- 80 μA Typical Operating Current
- <2.5μA Guaranteed Supply Current In Shutdown

Applications

- PDAs, Cellular Phones
- 2-Cell and 3-Cell Battery-Operated Equipment
- PCMCIA Cards, Memory Cards
- Flash Memory Programming
- TFT/LCD Applications
- 3.3V to 5.0V Conversion
- GPS Devices
- Two-Way Pagers
- Palmtop Computers
- Hand-Held Instruments

LM2636

5-Bit Programmable Synchronous Buck Regulator Controller

General Description

The LM2636 is a high speed controller designed specifically for use in synchronous DC/DC buck converters for advanced microprocessors. A 5-bit DAC accepts the VID code directly from the CPU and adjusts the output voltage from 1.3V to 3.5V. It provides the power good, over-voltage protection, and output enable features as required by Intel VRM specifications. Current limiting is achieved by monitoring the voltage drop across the r_{DS_ON} of the high side MOSFET, which eliminates an expensive current sense resistor.

The LM2636 employs a fixed-frequency voltage mode PWM architecture. To provide a faster response to a large and fast load transient, two ultra-fast comparators are built in to monitor the output voltage and override the primary control loop when necessary. The PWM frequency is adjustable from 50 kHz to 1 MHz through an external resistor. The wide range of PWM frequency gives the power supply designer the flexibility to make trade-offs between load transient response performance, MOSFET cost and the overall efficiency. The adaptive non-overlapping MOSFET gate drivers help avoid any potential shoot-through problem while maintaining high efficiency. BiCMOS gate drivers with rail-to-rail swing ensure that no spurious turn-on occur. When only 5V is available, a bootstrap structure can be employed to accommodate an NMOS high side switch. The precision reference trimmed to

2.5% over temperature is available externally for use by other regulators. Dynamic positioning of load voltage, which helps cut the number of output capacitors, can also be implemented easily.

Features

- 1.3V to 3.5V 5-bit programmable output voltage
- Synchronous rectification
- Power Good flag and output enable
- Over-voltage protection
- Initial Output Accuracy: 1.5% over temperature
- Current limit without external sense resistor
- Adaptive non-overlapping MOSFET gate drives
- Adjustable switching frequency: 50 kHz to 1 MHz
- Dynamic output voltage positioning
- 1.256V reference voltage available externally
- Plastic SO-20 package and TSSOP-20 package

Applications

- Motherboard power supply/VRM for Cyrix Gxm, Cyrix Gxi, Cyrix MII, Pentium™ II, Pentium Pro, 6x86 and K6 processors
- 5V to 1.3V–3.5V high current power supplies

Typical Application

Pin Descriptions

LSGATE (Pin 1): Gate drive for the low-side N-channel MOSFET. This signal is interlocked with HSGATE (Pin 20) to avoid a shoot-through problem.

BOOTV (Pin 2): Power supply for high-side N-channel MOSFET gate drive. The voltage should be at least one gate threshold above the converter input voltage to properly operate the high-side N-FET.

PGND (Pin 3): Ground for high current circuitry. It should be connected to system ground.

SGND (Pin 4): Ground for signal level circuitry. It should be connected to system ground.

V_{CC} (Pin 5): Power supply for the controller.

SENSE (Pin 6): Converter output voltage sensing. It provides input for power good, fast dual comparator control loop, and over-voltage protection circuitry. It is recommended that a 0.1 μ F capacitor be connected between this pin and ground to avoid potential noise problems.

IMAX (Pin 7): Current limit threshold setting. It sinks a fixed 180 μ A current. By connecting a resistor between the high side MOSFET drain and this pin, a fixed voltage drop can be built across the resistor. This voltage drop is compared with the V_{DS} of the high-side N-MOSFET to determine if an over-current condition has occurred.

IFB (Pin 8): High-side N-MOSFET source voltage sensing. This pin is one V_{DS} below drain voltage. When this voltage is lower than that of IMAX pin during the time the high-side FET

is on, it means V_{DS} is higher than the preset voltage across the IMAX resistor, which can be interpreted as an over-current condition.

V_{REF} (Pin 9): Bandgap reference voltage. This voltage is mainly for use by other power supplies on the motherboard which need a reference.

EA_OUT (Pin 10): Output of the error amplifier. The voltage level on this pin is compared with an internally generated ramp signal to determine the duty cycle. This pin is necessary for compensating the primary control loop.

FB (Pin 11): Inverting input of the error amplifier. A pin necessary for compensating the control loop.

FREQ_ADJ (Pin 12): Switching frequency adjustment. Switching frequency can be adjusted by changing the grounding resistance on this pin.

PWRGD (Pin 13): Power Good. There are two windows around the DAC output voltage that are associated with PWRGD pin, the $\pm 10\%$ window and the $\pm 8\%$ window. If PWRGD is initially high (open drain state) and output voltage travels out of $\pm 10\%$ window, PWRGD goes to low (low impedance to ground). If PWRGD is initially low and output voltage travels into the $\pm 8\%$ window and has stayed within the window for at least 10 ms, PWRGD goes to high. A PWRGD high means the output voltage is at least within the $\pm 10\%$ window whereas a PWRGD low indicates the output voltage is definitely outside the $\pm 8\%$ window.

VID4:0 (Pins 14, 15, 16, 17, 18): Voltage Identification Code. The five pins accept an open-ground pattern 5-bit binary code from outside the chip (typically from the CPU) for generating the desired output voltage. Each VID pin is internally pulled up to V_{CC} via a 90 μ A current source. *Table 1* shows the code table.

OUTEN (Pin 19): Output Enable. The output voltage is disabled when this pin is pulled low. It is internally pulled up to V_{CC} via a 90 μ A current source.

HSGATE (Pin 20): Gate drive for the high-side N-channel MOSFET. This signal is interlocked with LSGATE (Pin 1) to avoid a shoot-through problem.

LM2637

Motherboard Power Supply Solution with a 5-Bit Programmable Switching Controller and Two Linear Regulator Controllers

General Description

The LM2637 provides a comprehensive embedded power supply solution for motherboards hosting high performance MPUs such as M II™, Pentium™ II, K6-2 and other similar high performance MPUs. The LM2637 incorporates a 5-bit programmable, synchronous buck switching controller and two high-speed linear regulator controllers in a 24-pin SO package.

Switching Section — The switching regulator controller features a 5-bit programmable DAC, over-current and over-voltage protection, under-voltage latch-off, a power good signal, and output enable. The 5-bit DAC has a typical tolerance of 1%. There are two user-selectable over-current protection methods. One provides accurate over-current protection with the use of an external sense resistor. The other saves cost by taking advantage of the r_{DS_ON} of the high-side FET. The over voltage protection provides two levels of protection. The first level keeps the high-side FET off and the low-side FET on. The second provides a gate signal that can be used to fire an external SCR.

Linear Section — The two linear regulator controllers feature wide control bandwidth, N-FET and NPN transistor driving capability, and an adjustable output voltage. The wide control bandwidth makes meeting fast load transient response requirement such as that of the GTL+ bus an easy job. In minimum configuration, the two controllers default to 1.5V and 2.5V respectively.

Both linear controllers have under voltage latch-off.

Features

- Provides 3 regulated voltages
- Power Good flag and output enable
- Under-voltage latch-off
- *Switching Section*
 - Synchronous rectification
 - 5-bit DAC programmable from 3.5V to 1.3V
 - Typical 1% DAC tolerance
 - Switching frequency: 50 kHz to 1 MHz
 - Two levels of over-voltage protection
 - Two methods of over-current protection
 - Adaptive non-overlapping FET gate drives
 - Soft start without external capacitor
- *Linear Section*
 - N-FET and NPN driving capability
 - Ultra fast response speed
 - Output voltages default to 1.5V and 2.5V yet adjustable

Applications

- Embedded power supplies for PC motherboards
- Triple DC/DC power supplies
- Programmable high current DC/DC power supply

LM2638

Motherboard Power Supply Solution with a 5-Bit Programmable Switching Controller and Two Linear Regulator Controllers

General Description

The LM2638 provides a comprehensive embedded power supply solution for motherboards hosting high performance MPUs such as Pentium™ II, M II™, K6™-2 and other similar high performance MPUs. The LM2638 incorporates a 5-bit programmable, synchronous buck switching controller and two high-speed linear regulator controllers in a 24-pin SO package. In a typical application, the switching controller supplies the MPU core, and the linear regulator controllers supply the GTL+ bus and the clock or graphics chip core. A charge pump pin helps provide the necessary voltage to power the linear sections when 12V is shut off during system standby such as STR mode.

Switching Section — The switching regulator controller features an Intel-compatible, 5-bit programmable output voltage, over-current and over-voltage protection, a power good signal, and a logic-controlled output enable. There are two user-selectable over-current protection methods. One provides accurate over-current protection with the use of an external sense resistor. The other saves cost by taking advantage of the r_{DS_ON} of the high-side FET. When there is an over voltage, the controller turns off the high side FET and turns on the low side.

Linear Section — The two linear regulator controllers feature wide control bandwidth, N-FET and NPN transistor driving capability and an adjustable output. The wide control bandwidth makes meeting the GTL+ bus transient response requirement an easy job. In minimum configuration, the two controllers default to 1.5V and 1.25V respectively.

Both linear controllers have under voltage latch-off.

Features

- Provides 3 regulated voltages
- Power Good flag and output enable
- Charge pump pin
- Switching Section*
- Synchronous rectification
- 5-bit DAC programmable down to 1.3V
- Typical $\pm 1\%$ DAC tolerance
- Switching frequency: 50 kHz to 1 MHz
- Over-voltage protection
- Two methods of over-current protection
- Adaptive non-overlapping FET gate drives
- Soft start without external capacitor
- Linear Section*
- N-FET and NPN drive capability
- Ultra fast response speed
- Under voltage latch-off at 0.63V
- Output voltages default to 1.5V and 2.5V yet adjustable

Applications

- Embedded power supplies for motherboards
- Triple DC/DC power supplies
- Programmable high current DC/DC power supply

LM2639

5-Bit Programmable, High Frequency Multi-phase PWM Controller

General Description

The LM2639 provides an attractive solution for power supplies of high power microprocessors (such as Pentium II™, M II™, K6™-2, K6™-3, etc.) exhibiting ultra fast load transients. Compared to a conventional single-phase supply, an LM2639 based multi-phase supply distributes the thermal and electrical loading among components in multiple phases and greatly reduces the corresponding stress in each component. The LM2639 can be programmed to control either a 3-phase converter or a 4-phase converter. Phase shift among the phases is 120° in the case of three phase and 90° with four-phase. Because the power channels are out of phase, there can be significant ripple cancellation for both the input and output current, resulting in reduced input and output capacitor size. Due to the nominal operating frequency of 2 MHz per phase, the size of the output inductors can be greatly reduced which results in a much faster load transient response and a dramatically shrunk output capacitor bank. Microprocessor power supplies with all surface mount components can be easily built.

The internal high speed transconductance amplifier guarantees good dynamic performance. The output drive voltages can be adjusted through a resistor divider to control switching loss in the external FETs.

The internal master clock frequency of up to 8 MHz is set by an external reference resistor. An external clock of 10 MHz can also be used to drive the chip to achieve frequency control and multi-chip operation.

The LM2639 also provides input under-voltage lock-out with hysteresis and input over-current protection.

Features

- Ultra fast load transient response
- Enables all surface-mount-design
- Selectable 2, 3, 4 phase operation
- Clock frequency from 40 kHz to 10 MHz
- Precision load current sharing
- 5-bit programmable from 3.5V to 1.3V
- VID code compatible to VRM 8.X specification
- Output voltage is 2.0V for VID code 11111
- Selectable internal or external clock
- Digital 16-step soft start
- Input under-voltage lock-out, over-current protection

Applications

- Servers and workstations
- High current, ultra-fast transient microprocessors

LM2640

Dual Adjustable Step-Down Switching Power Supply Controller

General Description

The LM2640 is a dual step-down power supply controller intended for application in notebook personal computers and other battery-powered equipment.

Fixed-frequency synchronous drive of logic-level N-channel power MOSFETs is combined with an optional pulse-skipping mode to achieve ultra efficient power conversion over a 1000:1 load current range. The pulse-skipping mode can be disabled in favor of fixed-frequency operation regardless of the load current level.

High DC gain and current-mode feedback control assure excellent line and load regulation and a wide loop bandwidth for fast response to dynamic loads.

An internal oscillator fixes the switching frequency at 200 kHz. Optionally, switching can be synchronized to an external clock running as fast as 400 kHz.

An optional soft-start feature limits current surges from the input power supply at start up and provides a simple means of start-up sequencing.

Logic-level inputs allow the controllers to be turned ON and OFF separately.

Key Specifications

- 96% efficient
- 5.5 to 30V input range
- Dual outputs adjustable from 2.2 to 6V
- 0.5% typical load regulation error
- 0.002%/V typical line regulation error

Features

- 200 kHz fixed-frequency switching
- Switching synchronization with an external signal up to 400 kHz
- Optional pulse-skipping mode
- Adjustable secondary feedback
- Input undervoltage lockout
- Output undervoltage shutdown protection
- Output overvoltage shutdown protection
- Programmable soft-start (each controller)
- 5V, 50 mA linear regulator output
- Precision 2.5V reference output
- 28-pin TSSOP

Applications

- Notebook and subnotebook computers
- Wireless data terminals
- Battery-powered instruments

Pin Description (Refer to Typical Application Circuits)

Pin #	Name	Function
1	CSH2	The sense point for the positive side of the voltage across the current sense resistor (R13) placed in series with output #2.
2	FB2	The regulated output voltage appearing at output #2 is sensed using this pin by connecting it to the center of the output resistive divider (R15 and R16).
3	COMP2	An R-C network made up of R11, C10, and C12 is connected to this pin which provides loop compensation for regulated output #2.
4	SS2	This provides programmable soft-start for the #2 output along with capacitor C15.
5	ON/OFF2	This pin turns off only output #2.
6	\overline{SD}	The part can be put into "sleep" mode using this pin, where both outputs are off and the internal chip functions are shut down.
7	SYNC	The internal oscillator may be synchronized to an external clock via this pin.
8	GND	Connect this pin to circuit Signal Ground.
9	REF	Internal 2.5V reference voltage. This voltage is turned off by the \overline{SD} pin, but remains on if either or both ON/OFF pins are pulled low, which turns off the regulated output(s).
10	2NDFB/FPWM	A 12V supply can be generated using an auxiliary winding on the 5V output inductor. Feedback to control this 12V output is brought in through this pin. If the 12V supply is not required, this pin can also force the chip to operate at fixed frequency at light loads by pulling the pin low (this is the "forced-PWM" mode of operation). This will prevent the converter from operating in pulse-skipping mode.
11	ON/OFF1	This pin turns off only output #1.
12	SS1	This provides programmable soft-start for the #1 output along with capacitor C3.
13	COMP1	An R-C network made up of R6, C5, and C7 is connected to this pin which provides loop compensation for regulated output #1.
14	FB1	The regulated output voltage appearing at output #1 is sensed using this pin by connecting it to the center of the output resistive divider (R1 and R2).
15	CSH1	The sense point for the positive side of the voltage across the current sense resistor (R4) placed in series with output #1.
16	HDRV1	The drive for the gate of the high-side switching FET used for output #1.
17	SW1	This is the switching output drive point of the two power FETs which produce output #1.
18	CBOOT1	The bootstrap capacitor (C8) for output #1 is returned to this point.
19	LDRV1	The drive for the gate of the low-side switching FET (synchronous rectifier) used for output #1.
20	PGND	Connect this pin to circuit Power Ground.
21	CSL1	The sense point for the negative side of the voltage across the current sense resistor (R4) placed in series with output #1.
22	LIN	This pin provides a low-current (50 mA max) 5V output. This output is always on, and can not be turned off by either the \overline{SD} or ON/OFF pins.
23	IN	This is the connection for the main input power.
24	LDRV2	The drive for the gate of the low-side switching FET (synchronous rectifier) used for output #2.
25	CBOOT2	The bootstrap capacitor (C9) for output #2 is returned to this point.
26	SW2	This is the switching output drive point of the two power FETs which produce output #2.
27	HDRV2	The drive for the gate of the high-side switching FET used for output #2.
28	CSL2	The sense point for the negative side of the voltage across the current sense resistor (R13) placed in series with output #2.

Note: Alternate recommended inductor is Sumida CDRH-125-100MC. If this inductor is used, R6 should be changed to 3.3k and R11 should be 5.1k.

LM2650

Synchronous Step-Down DC/DC Converter

General Description

The LM2650 is a step-down DC/DC converter featuring high efficiency over a 3A to milliamperes load range. This feature makes the LM2650 an ideal fit in battery-powered applications that demand long battery life in both run and standby modes.

The LM2650 also features a logic-controlled shutdown mode in which it draws at most 25µA from the input power supply.

The LM2650 employs a fixed-frequency pulse-width modulation (PWM) and synchronous rectification to achieve very high efficiencies. In many applications, efficiencies reach 95%+ for loads around 1A and exceed 90% for moderate to heavy loads from 0.2A to 2A.

A low-power hysteretic or "sleep" mode keeps efficiencies high at light loads. The LM2650 enters and exits sleep mode automatically as the load crosses "sleep in" and "sleep out" thresholds. The LM2650 provides nodes for programming both thresholds via external resistors. A logic input allows the user to override the automatic sleep feature and keep the LM2650 in PWM mode regardless of the load level.

An optional soft-start feature limits current surges from the input power supply at start up and provides a simple means of sequencing multiple power supplies.

Features

- Ultra high efficiencies (95% possible)
- High efficiency over a 3A to milliamperes load range
- Synchronous switching of internal NMOS power FETs
- Wide input voltage range (4.5V to 18V)
- Output voltage adjustable from 1.5V to 16V
- Automatic low-power sleep mode
- Logic-controlled micropower shutdown ($I_{QSD} \leq 25 \mu A$)
- Frequency adjustable up to 300 kHz
- Frequency synchronization with external signal
- Programmable soft-start
- Short-circuit current limiting
- Thermal shutdown
- Available in 24-lead Small-Outline package

Applications

- Notebook and palmtop personal computers
- Portable data terminals
- Modems
- Portable Instruments
- Global positioning devices (GPSs)
- Battery-powered digital devices

Typical Application

DS012848-1

Pin Descriptions (Refer to the Block Diagrams)

Pins	Description
1, 12	SUB: These pins make electrical contact with the substrate of the die. Ground them. For best thermal performance, ground them to the same large, uninterrupted copper plane as the PGND pins.
2	SLEEP LOGIC: Use this logic input to select the conversion mode; low selects PWM, high selects sleep, and high impedance (open) permits the LM2650 to move freely and automatically between the modes, using PWM for moderate to heavy loads and sleep for light loads.
3, 4, 9, 10	PGND: The ground return of the power stage. The power stage consists of the two power switches Q1 and Q2, the gate drivers DH and DL, and the linear voltage regulators VRegH and VRegL. For best electrical and thermal performance, ground these pins to a large, uninterrupted copper plane.
5, 8	SW: The output node of the power stage. It swings from slightly below ground to slightly below the voltage to PV _{IN} . To minimize the effects of switching noise on nearby circuitry, keep all traces originating from SW short and to the point. Route all traces carrying signals well away from the SW traces.
6, 7	PV_{IN}: The positive supply rail of the power stage. Bypass each PV _{IN} pin to PGND with a 0.1 μF capacitor. Use capacitors having low ESL and low ESR, and locate them close to the IC.
11	BOOT: The positive supply rail of the high-side gate driver DH. Connect a 0.1 μF capacitor from this node to SW. Bootstrapping action creates a supply rail about 9V above that at PV _{IN} , and DH uses this rail to override the gate of the NMOS power FET Q1. Overriding ensures low R _{DS(on)} .
13	FB: The feedback input.
14	V_{DD}: An internal regulator steps the input voltage down to a 4V rail used by the signal-level circuitry. V _{DD} is the output node of this regulator. Bypass V _{DD} to GND close to the IC with a 0.2 μF capacitor.
15	COMP: The inverting input of the error amplifier EA.
16	EA OUT: The output node of the error amplifier EA.
17	SS: The soft start node. Connect a capacitor from SS to GND.
18	GND: The ground return of the signal-level circuitry.
19	V_{IN}: The positive supply rail of the internal 4V regulator. Bypass V _{IN} to GND close to the IC with a 0.1 μF capacitor.
20	FREQ ADJ: The LM2650 switches at a nominal 90 kHz. Connect a resistor between FREQ ADJ and GND to adjust the frequency up from the nominal. Use the graph under Typical performance Characteristics to select the resistor.
21	SYNC: The synchronization input. If the switching frequency is to be synchronized with an external clock signal, apply the clock signal here.
22	SD: Use this logic input to control shutdown; pull low for operation, high for shutdown.
23	SLEEP OUT ADJ (SOA): The value of the resistor connected between SIA and ground programs the sleep-in threshold. Higher values program lower thresholds.
24	SLEEP IN ADJ (SIA): The value of the resistor connected between SIA and ground programs the sleep-in threshold. Higher values program lower thresholds.

LM2651

1.5A High Efficiency Synchronous Switching Regulator

General Description

The LM2651 switching regulator provides high efficiency power conversion over a 100:1 load range (1.5A to 15mA). This feature makes the LM2651 an ideal fit in battery-powered applications that demand long battery life in both run and standby modes.

Synchronous rectification is used to achieve up to 97% efficiency. At light loads, the LM2651 enters a low power hysteretic or "sleep" mode to keep the efficiency high. In many applications, the efficiency still exceeds 80% at 15mA load. A shutdown pin is available to disable the LM2651 and reduce the supply current to less than 10 μ A.

The LM2651 contains a patented current sensing circuitry for current mode control. This feature eliminates the external current sensing resistor required by other current-mode DC-DC converters.

The LM2651 has a 300 kHz fixed frequency internal oscillator. The high oscillator frequency allows the use of extremely small, low profile components.

A programmable soft-start feature limits current surges from the input power supply at start up and provides a simple means of sequencing multiple power supplies.

Other protection features include input undervoltage lockout, current limiting, and thermal shutdown.

Features

- Ultra high efficiency up to 97%
- High efficiency over a 1.5A to milliampere load range
- 4V to 14V input voltage range
- 1.8V, 2.5V, 3.3V, or ADJ output voltage
- Internal MOSFET switch with low $R_{DS(on)}$ of 75m Ω
- 300kHz fixed frequency internal oscillator
- 7 μ A shutdown current
- Patented current sensing for current mode control
- Input undervoltage lockout
- Adjustable soft-start
- Current limit and thermal shutdown
- 16-pin TSSOP package

Applications

- Personal digital assistants (PDAs)
- Computer peripherals
- Battery-powered devices
- Handheld scanners
- High efficiency 5V conversion

LM2653 1.5A High Efficiency Synchronous Switching Regulator

General Description

The LM2653 switching regulator provides high efficient power conversion over a 100:1 load range (1.5A to 15 mA). This feature makes the LM2653 an ideal fit in battery-powered applications.

Synchronous rectification is used to achieve up to 97% efficiency. At light loads, the LM2653 enters a low power hysteresic or "sleep" mode to keep the efficiency high. In many applications, the efficiency still exceeds 80% at 15 mA load. A shutdown pin is available to disable the LM2653 and reduce the supply current to 7 μ A.

All the power, control, and drive functions are integrated within the ICs. The ICs contain patented current sensing circuitry for current mode control. This feature eliminates the external current sensing resistor required by other current-mode DC-DC converters.

The ICs have a 300 kHz fixed frequency internal oscillator. The high oscillator frequency allows the use of extremely small, low profile components.

Protection features include thermal shutdown, input undervoltage lockout, adjustable soft-start, cycle by cycle current limit, output overvoltage and undervoltage protections.

- 4V to 14V input voltage range
- 1.5V to 5.0V adjustable output voltage
- 0.1 Ω Switch On Resistance
- 300 kHz fixed frequency internal oscillator
- 7 μ A shutdown current
- Patented current sensing for current mode control
- Input undervoltage lockout
- Output overvoltage shutdown protection
- Output undervoltage shutdown protection
- Adjustable soft-start

LM2655

2.5A High Efficiency Synchronous Switching Regulator

General Description

The LM2655 is a current-mode controlled PWM step-down switching regulator. It has the unique ability to operate in synchronous or asynchronous mode. This gives the designer flexibility to choose between the high efficiency of synchronous operation, or the low solution cost of asynchronous operation. Along with flexibility, the LM2655 offers high power density with the small footprint of a TSSOP-16 package.

High efficiency (>90%) is obtained through the use of an internal low ON-resistance (33mΩ) MOSFET, and an external N-Channel MOSFET. This feature, together with its low quiescent current, makes the LM2655 an ideal fit in portable applications.

Integrated in the LM2655 are all the power, control, and drive functions for asynchronous operation. In addition, a low-side driver output allows easy synchronous operation. The IC uses patented current sensing circuitry that eliminates the external current sensing resistor required by other current-mode DC-DC converters. A programmable soft-start feature limits start up current surges and provides a means of sequencing multiple power supplies.

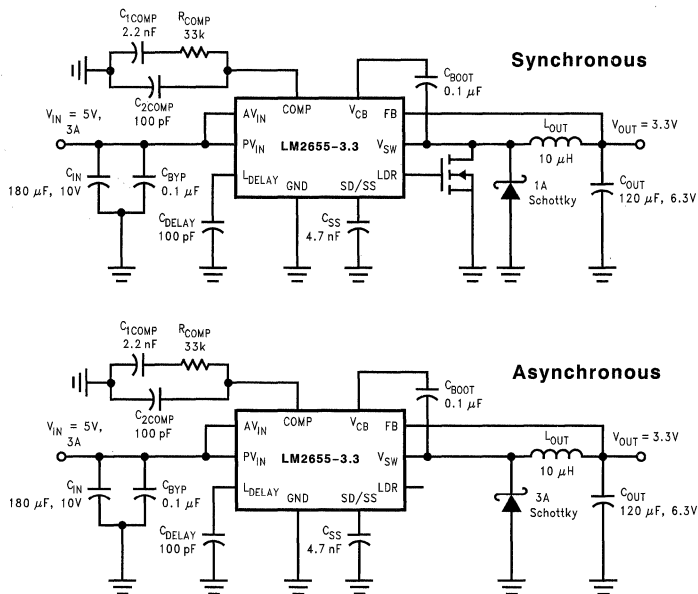

Features

- Ultra-high efficiency up to 96%
- 4V to 14V input voltage range
- Internal high-side MOSFET with low $R_{DS(ON)} = 0.033\Omega$
- 300 kHz fixed frequency internal oscillator
- Low-side drive for synchronous operation
- Guaranteed less than 12 μA shutdown current
- Patented current sensing for current mode control
- Programmable soft-start
- Input undervoltage lockout
- Output overvoltage shutdown protection
- Output undervoltage shutdown protection
- Thermal Shutdown
- 16-pin TSSOP package

LM2670

SIMPLE SWITCHER® High Efficiency 3A Step-Down Voltage Regulator with Sync

General Description

The LM2670 series of regulators are monolithic integrated circuits which provide all of the active functions for a step-down (buck) switching regulator capable of driving up to 3A loads with excellent line and load regulation characteristics. High efficiency (>90%) is obtained through the use of a low ON-resistance DMOS power switch. The series consists of fixed output voltages of 3.3V, 5V and 12V and an adjustable output version.

The SIMPLE SWITCHER concept provides for a complete design using a minimum number of external components. The switching clock frequency can be provided by an internal fixed frequency oscillator (260KHz) or from an externally provided clock in the range of 280KHz to 400KHz which allows the use of physically smaller sized components. A family of standard inductors for use with the LM2670 are available from several manufacturers to greatly simplify the design process. The external Sync clock provides direct and precise control of the output ripple frequency for consistent filtering or frequency spectrum positioning.

The LM2670 series also has built in thermal shutdown, current limiting and an ON/OFF control input that can power down the regulator to a low 50 μ A quiescent current standby condition. The output voltage is guaranteed to a \pm 2% tolerance.

Features

- Efficiency up to 94%
- Simple and easy to design with (using off-the-shelf external components)
- 150 m Ω DMOS output switch
- 3.3V, 5V and 12V fixed output and adjustable (1.2V to 37V) versions
- 50 μ A standby current when switched OFF
- \pm 2% maximum output tolerance over full line and load conditions
- Wide input voltage range: 8V to 40V
- External Sync clock capability (280KHz to 400KHz)
- 260 KHz fixed frequency internal oscillator
- -40 to +125°C operating junction temperature range

Applications

- Simple to design, high efficiency (>90%) step-down switching regulators
- Efficient system pre-regulator for linear voltage regulators
- Battery chargers
- Communications and radio equipment regulator with synchronized clock frequency

Typical Application

DS100942-3

SIMPLE SWITCHER® Power Converter High Efficiency 500mA Step-Down Voltage Regulator with Features

General Description

The LM2671 series of regulators are monolithic integrated circuits built with a LMDMOS process. These regulators provide all the active functions for a step-down (buck) switching regulator, capable of driving a 500mA load current with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5.0V, 12V, and an adjustable output version.

Requiring a minimum number of external components, these regulators are simple to use and include patented internal frequency compensation (Patent Nos. 5,382,918 and 5,514,947), fixed frequency oscillator, external shutdown, soft-start, and frequency synchronization.

The LM2671 series operates at a switching frequency of 260 kHz, thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Because of its very high efficiency (>90%), the copper traces on the printed circuit board are the only heat sinking needed.

A family of standard inductors for use with the LM2671 are available from several different manufacturers. This feature greatly simplifies the design of switch-mode power supplies using these advanced ICs. Also included in the datasheet are selector guides for diodes and capacitors designed to work in switch-mode power supplies.

Other features include a guaranteed $\pm 1.5\%$ tolerance on output voltage within specified input voltages and output load conditions, and $\pm 10\%$ on the oscillator frequency. External shutdown is included, featuring typically 50 μA stand-by current. The output switch includes current limiting, as well as thermal shutdown for full protection under fault conditions.

To simplify the LM2671 buck regulator design procedure, there exists computer design software, **LM267X Made Simple** (version 6.0).

Features

- Efficiency up to 96%
- Available in SO-8 and 8-pin DIP packages
- Computer Design Software **LM267X Made Simple** (version 6.0)
- Simple and easy to design with
- Requires only 5 external components
- Uses readily available standard inductors
- 3.3V, 5.0V, 12V, and adjustable output versions
- Adjustable version output voltage range: 1.21V to 37V
- $\pm 1.5\%$ max output voltage tolerance over line and load conditions
- Guaranteed 500mA output load current
- 0.25 Ω DMOS Output Switch
- Wide input voltage range: 8V to 40V
- 260 kHz fixed frequency internal oscillator
- TTL shutdown capability, low power standby mode
- Soft-start and frequency synchronization
- Thermal shutdown and current limit protection

Typical Applications

- Simple High Efficiency (>90%) Step-Down (Buck) Regulator
- Efficient Pre-Regulator for Linear Regulators

Typical Application (Fixed Output Voltage Versions)

DS100042-1

LM2672 SIMPLE SWITCHER® Power Converter High Efficiency 1A Step-Down Voltage Regulator with Features

General Description

The LM2672 series of regulators are monolithic integrated circuits built with a LDMOS process. These regulators provide all the active functions for a step-down (buck) switching regulator, capable of driving a 1A load current with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5.0V, 12V, and an adjustable output version.

Requiring a minimum number of external components, these regulators are simple to use and include patented internal frequency compensation (Patent Nos. 5,382,918 and 5,514,947), fixed frequency oscillator, external shutdown, soft-start, and frequency synchronization.

The LM2672 series operates at a switching frequency of 260 kHz, thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Because of its very high efficiency (>90%), the copper traces on the printed circuit board are the only heat sinking needed.

A family of standard inductors for use with the LM2672 are available from several different manufacturers. This feature greatly simplifies the design of switch-mode power supplies using these advanced ICs. Also included in the datasheet are selector guides for diodes and capacitors designed to work in switch-mode power supplies.

Other features include a guaranteed $\pm 1.5\%$ tolerance on output voltage within specified input voltages and output load conditions, and $\pm 10\%$ on the oscillator frequency. External shutdown is included, featuring typically 50 μA stand-by current. The output switch includes current limiting, as well as thermal shutdown for full protection under fault conditions.

To simplify the LM2672 buck regulator design procedure, there exists computer design software, **LM267X Made Simple** version 6.0.

Features

- Efficiency up to 96%

- Efficient Pre-Regulator for Linear Regulators

Typical Application (Fixed Output Voltage Versions)

DS012934-1

LM2673 SIMPLE SWITCHER® 3A Step-Down Voltage Regulator with Adjustable Current Limit

General Description

The LM2673 series of regulators are monolithic integrated circuits which provide all of the active functions for a step-down (buck) switching regulator capable of driving up to 3A loads with excellent line and load regulation characteristics. High efficiency (>90%) is obtained through the use of a low ON-resistance DMOS power switch. The series consists of fixed output voltages of 3.3V, 5V and 12V and an adjustable output version.

The SIMPLE SWITCHER concept provides for a complete design using a minimum number of external components. A high fixed frequency oscillator (260KHz) allows the use of physically smaller sized components. A family of standard inductors for use with the LM2673 are available from several manufacturers to greatly simplify the design process.

Other features include the ability to reduce the input surge current at power-ON by adding a softstart timing capacitor to gradually turn on the regulator. The LM2673 series also has built in thermal shutdown and resistor programmable current limit of the power MOSFET switch to protect the device and load circuitry under fault conditions. The output voltage is guaranteed to a ±2% tolerance. The clock frequency is controlled to within a ±11% tolerance.

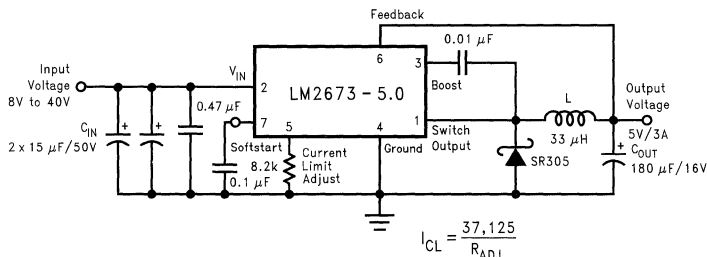

Features

- Efficiency up to 94%
- Simple and easy to design with (using off-the-shelf external components)
- Resistor programmable peak current limit over a range of 2A to 5A.
- 150 mΩ DMOS output switch
- 3.3V, 5V and 12V fixed output and adjustable (1.2V to 37V) versions
- ±2% maximum output tolerance over full line and load conditions
- Wide input voltage range: 8V to 40V
- 260 KHz fixed frequency internal oscillator
- Softstart capability
- -40 to +125°C operating junction temperature range

Applications

- Simple to design, high efficiency (>90%) step-down switching regulators
- Efficient system pre-regulator for linear voltage regulators
- Battery chargers

Typical Application

LM2676

SIMPLE SWITCHER® High Efficiency 3A Step-Down Voltage Regulator

General Description

The LM2676 series of regulators are monolithic integrated circuits which provide all of the active functions for a step-down (buck) switching regulator capable of driving up to 3A loads with excellent line and load regulation characteristics. High efficiency (>90%) is obtained through the use of a low ON-resistance DMOS power switch. The series consists of fixed output voltages of 3.3V, 5V and 12V and an adjustable output version.

The SIMPLE SWITCHER concept provides for a complete design using a minimum number of external components. A high fixed frequency oscillator (260KHz) allows the use of physically smaller sized components. A family of standard inductors for use with the LM2676 are available from several manufacturers to greatly simplify the design process.

The LM2676 series also has built in thermal shutdown, current limiting and an ON/OFF control input that can power down the regulator to a low 50µA quiescent current standby condition. The output voltage is guaranteed to a ±2% tolerance. The clock frequency is controlled to within a ±11% tolerance.

Features

- Efficiency up to 94%
- Simple and easy to design with (using off-the-shelf external components)
- 150 mΩ DMOS output switch
- 3.3V, 5V and 12V fixed output and adjustable (1.2V to 37V) versions
- 50µA standby current when switched OFF
- ±2% maximum output tolerance over full line and load conditions
- Wide input voltage range: 8V to 40V
- 260 KHz fixed frequency internal oscillator
- -40 to +125°C operating junction temperature range

LM2677

SIMPLE SWITCHER® High Efficiency 5A Step-Down Voltage Regulator with Sync

General Description

The LM2677 series of regulators are monolithic integrated circuits which provide all of the active functions for a step-down (buck) switching regulator capable of driving up to 5A loads with excellent line and load regulation characteristics. High efficiency (>90%) is obtained through the use of a low ON-resistance DMOS power switch. The series consists of fixed output voltages of 3.3V, 5V and 12V and an adjustable output version.

The SIMPLE SWITCHER concept provides for a complete design using a minimum number of external components. The switching clock frequency can be provided by an internal fixed frequency oscillator (260KHz) or from an externally provided clock in the range of 280KHz to 400KHz which allows the use of physically smaller sized components. A family of standard inductors for use with the LM2677 are available from several manufacturers to greatly simplify the design process. The external Sync clock provides direct and precise control of the output ripple frequency for consistent filtering or frequency spectrum positioning.

The LM2677 series also has built in thermal shutdown, current limiting and an ON/OFF control input that can power down the regulator to a low 50 μ A quiescent current standby condition. The output voltage is guaranteed to a \pm 2% tolerance.

Features

- Efficiency up to 92%
- Simple and easy to design with (using off-the-shelf external components)
- 100 m Ω DMOS output switch
- 3.3V, 5V and 12V fixed output and adjustable (1.2V to 37V) versions
- 50 μ A standby current when switched OFF
- \pm 2% maximum output tolerance over full line and load conditions
- Wide input voltage range: 8V to 40V
- External Sync clock capability (280KHz to 400KHz)
- 260 KHz fixed frequency internal oscillator
- -40 to +125°C operating junction temperature range

Applications

- Simple to design, high efficiency (>90%) step-down switching regulators
- Efficient system pre-regulator for linear voltage regulators
- Battery chargers
- Communications and radio equipment regulator with synchronized clock frequency

LM2825

Integrated Power Supply 1A DC-DC Converter

General Description

The LM2825 is a complete 1A DC-DC Buck converter packaged in a 24-lead molded Dual-In-Line integrated circuit package.

Contained within the package are all the active and passive components for a high efficiency step-down (buck) switching regulator. Available in fixed output voltages of 3.3V, 5V and 12V, as well as two adjustable versions, these devices can provide up to 1A of load current with fully guaranteed electrical specifications.

Self-contained, this converter is also fully protected from output fault conditions, such as excessive load current, short circuits, or excessive temperatures.

Highlights

- No external components required (fixed output voltage versions)
- Integrated circuit reliability
- MTBF over 20 million hours
- Radiated EMI meets Class B stipulated by CISPR 22
- High power density, 35 W/in³
- 24-pin DIP package profile (1.25 x 0.54 x 0.26 inches)

Features

- Minimum design time required
- 3.3V, 5V and 12V fixed output versions
- Two adjustable versions allow 1.23V to 15V outputs
- Wide input voltage range, up to 40V
- Low-power standby mode, I_Q typically 65 μ A
- High efficiency, typically 80%
- \pm 4% output voltage tolerance
- Excellent line and load regulation
- TTL shutdown capability/programmable Soft-start
- Thermal shutdown and current limit protection
- -40°C to +85°C ambient temperature range

Applications

- Simple high-efficiency step-down (buck) regulator
- On-card switching regulators
- Efficient pre-regulator for linear regulators
- Distributed power systems
- DC/DC module replacement

LM3478

High Efficiency Low-Side N-Channel Controller for Switching Regulator

General Description

The LM3478 is a versatile Low-Side N-FET switching regulator controller. It is suitable for use in topologies requiring low side FET, such as boost, flyback, SEPIC, etc. Moreover, the LM3478 can be operated at extremely high switching frequency in order to reduce the overall solution size. The switching frequency of LM3478 can be adjusted to any value between 100kHz and 1MHz by using a single external resistor. Current mode control provides superior bandwidth and transient response, besides cycle-by-cycle current limiting. Output current can be programmed with a single external resistor.

The LM3478 has built in features such as thermal shutdown, short-circuit protection, over voltage protection, etc. Power saving shutdown mode reduces the total supply current to 5 μ A and allows power supply sequencing. Internal soft-start limits the inrush current at start-up.

Key Specifications

- Wide supply voltage range of 2.95V to 40V
- 100kHz to 1MHz Adjustable clock frequency

- $\pm 2.5\%$ (over temperature) internal reference
- 10 μ A shutdown current

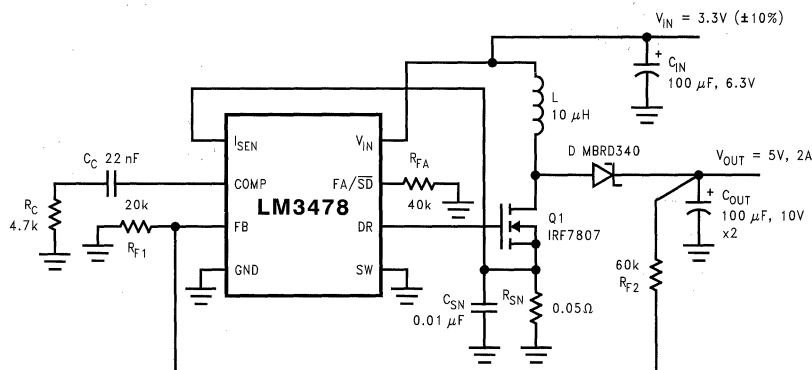

Features

- 8-lead Mini-SO8 (MSOP-8) package
- Internal push-pull driver with 1A peak current capability
- Current limit and thermal shutdown
- Frequency compensation optimized with a capacitor and a resistor
- Internal softstart
- Current Mode Operation
- Undervoltage Lockout with hysteresis

Applications

- Distributed Power Systems
- Battery Chargers
- Offline Power Supplies
- Telecom Power Supplies
- Automotive Power Systems

Typical Application Circuit

Typical High Efficiency Step-Up (Boost) Converter

DS101355-1

Connection Diagram

8 Lead Mini SO8 Package (MSOP-8 Package)

Package Marking and Ordering Information

Order Number	Package Type	Package Marking	Supplied As:
LM3478MM	MSOP-8	S14B	1000 units on Tape and Reel
LM3478MMX	MSOP-8	S14B	3500 units on Tape and Reel

Pin Description

Pin Name	Pin Number	Description
I_{SEN}	1	Current sense input pin. Voltage generated across an external sense resistor is fed into this pin.
COMP	2	Compensation pin. A resistor, capacitor combination connected to this pin provides compensation for the control loop.
FB	3	Feedback pin. The output voltage should be adjusted using a resistor divider to provide 1.25V at this pin.
AGND	4	Analog ground pin.
PGND	5	Power ground pin.
DR	6	Drive pin of the IC. The gate of the external MOSFET should be connected to this pin.
FAD/SD	7	Frequency adjust and Shutdown pin. A resistor connected to this pin sets the oscillator frequency. A high level on this pin for $\geq 30\mu s$ will turn the device off. The device will then draw less than 10 μA from the supply.

LM3488

High Efficiency Low-Side N-Channel Controller for Switching Regulators

General Description

The LM3488 is a versatile Low-Side N-FET high performance controller for switching regulators. It is suitable for use in topologies requiring low side FET, such as boost, fly-back, SEPIC, etc. Moreover, the LM3488 can be operated at extremely high switching frequency in order to reduce the overall solution size. The switching frequency of LM3488 can be adjusted to any value between 100kHz and 1MHz by using a single external resistor or by synchronizing it to an external clock. Current mode control provides superior bandwidth and transient response, besides cycle-by-cycle current limiting. Output current can be programmed with a single external resistor.

The LM3488 has built in features such as thermal shutdown, short-circuit protection, over voltage protection, etc. Power saving shutdown mode reduces the total supply current to 5 μ A and allows power supply sequencing. Internal soft-start limits the inrush current at start-up.

Key Specifications

- Wide supply voltage range of 2.95V to 40V
- 100kHz to 1MHz Adjustable and Synchronizable clock frequency

- $\pm 1.5\%$ (over temperature) internal reference
- 5 μ A shutdown current

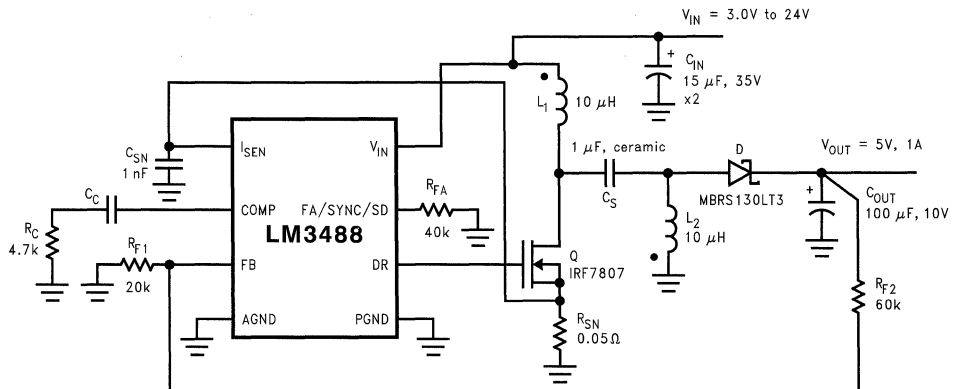

Features

- 8-lead Mini-SO8 (MSOP-8) package
- Internal push-pull driver with 1A peak current capability
- Current limit and thermal shutdown
- Frequency compensation optimized with a capacitor and a resistor
- Internal softstart
- Current Mode Operation
- Undervoltage Lockout with hysteresis

Applications

- Distributed Power Systems
- Notebook, PDA, Digital Camera, and other Portable Applications
- Offline Power Supplies
- Set-Top Boxes

Typical Application Circuit

Typical SEPIC Converter

PGND	5	Power ground pin.
DR	6	Drive pin of the IC. The gate of the external MOSFET should be connected to this pin.
FA/SYNC/SD	7	Frequency adjust, synchronization, and Shutdown pin. A resistor connected to this pin sets the oscillator frequency. An external clock signal at this pin will synchronize the controller to the frequency of the clock. A high level on this pin for $\geq 30\mu s$ will turn the device off. The device will then draw less than $10\mu A$ from the supply.

LM2720

5-Bit Programmable, High Frequency Multi-phase PWM Controller

General Description

The LM2720 provides an attractive solution for power supplies of high power microprocessors exhibiting ultra fast load transients. Compared to a conventional single-phase supply, an LM2720 based multi-phase supply distributes the thermal and electrical loading among components in multiple phases and greatly reduces the corresponding stress in each component. The LM2720 can be programmed to control either a 3-phase converter or a 4-phase converter. Phase shift among the phases is 120° in the case of three phase and 90° with four-phase. Because the power channels are out of phase, there can be significant ripple cancellation for both the input and output current, resulting in reduced input and output capacitor size. Due to the nominal operating frequency of 2 MHz per phase, the size of the output inductors can be greatly reduced which results in a much faster load transient response and a dramatically shrunk output capacitor bank. Microprocessor power supplies with all surface mount components can be easily built.

The internal high speed transconductance amplifier guarantees good dynamic performance.

The internal master clock frequency of up to 8 MHz is set by an external reference resistor. An external clock of 10 MHz can also be used to drive the chip to achieve frequency control and multi-chip operation.

The LM2720 also provides input under-voltage lock-out with hysteresis, input over-current protection and output voltage power good detection.

Features

- Ultra fast load transient response
- Enables all surface-mount-design
- Selectable 2, 3, 4 phase operation
- Clock frequency from 40 kHz to 10 MHz
- Precision load current sharing
- 5-bit programmable from 3.5V to 1.3V
- VID code compatible to VRM 8.X specification
- Output voltage is 2.0V for VID code 11111
- Selectable internal or external clock
- Digital 16-step soft start
- Input under-voltage lock-out, over-current protection
- Open-drain power good signal output

Applications

- Servers and workstations
- High current, ultra-fast transient microprocessors

LM3352	Regulated Output, 2.5V, 3.0V, or 3.3V	n/a	200	2.5 to 5.5	1000	TSSOP-16
INVERTER						
LM2660	$-V_{IN}$	6.5	100	1.5 to 5.5	10/80	MSOP-8/SO-8
LM2661	$-V_{IN}$	6.5	100	1.5 to 5.5	80	MSOP-8/SO-8
LM2662	$-V_{IN}$	3.5	200	1.5 to 5.5	20/150	MSOP-8/SO-8
LM2663	$-V_{IN}$	3.5	200	1.5 to 5.5	150	SO-8
LM2664	$-V_{IN}$	12	40	1.8 to 5.5	160	SOT23-6
LM2682	$-V_{IN}$	90	10	2.0 to 5.5	6	MSOP-8/SO-8
LM2685	$-V_{IN}$	20	50	2.85 to 6.5	130	TSSOP-14
LM2686	$-V_{IN}$	5.0	50	2.85 to 6.5	130	TSSOP-14
LM2687	$-V_{IN}$	30	10	2.7 to 5.5	100	MSOP-8
LM828	$-V_{IN}$	20	25	1.8 to 5.5	12	SOT23-5
LMC7660	$-V_{IN}$	55	20	1.5 to 10	10	SO-8 / N-8
MAX660	$-V_{IN}$	6.5	100	1.5 to 5.5	10/80	MSOP-8/SO-8

Note 1: For voltage splitting function, the applied input voltage can be up to twice the specified Input Range.

Note 2: Package designation includes the number of pins.

LM2660/LM2661

Switched Capacitor Voltage Converter

General Description

The LM2660/LM2661 CMOS charge-pump voltage converter inverts a positive voltage in the range of 1.5V to 5.5V to the corresponding negative voltage. The LM2660/LM2661 uses two low cost capacitors to provide 100 mA of output current without the cost, size, and EMI related to inductor based converters. With an operating current of only 120 μ A and operating efficiency greater than 90% at most loads, the LM2660/LM2661 provides ideal performance for battery powered systems. The LM2660/LM2661 may also be used as a positive voltage doubler.

The oscillator frequency can be lowered by adding an external capacitor to the OSC pin. Also, the OSC pin may be used to drive the LM2660/LM2661 with an external clock. For LM2660, a frequency control (FC) pin selects the oscillator frequency of 10 kHz or 80 kHz. For LM2661, an external shutdown (SD) pin replaces the FC pin. The SD pin can be used to disable the device and reduce the quiescent current to 0.5 μ A. The oscillator frequency for the LM2661 is 80 kHz.

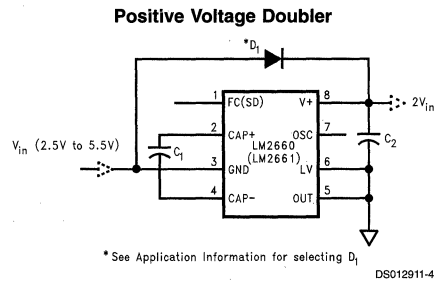

Features

- Inverts or doubles input supply voltage
- Narrow SO-8 and Mini SO-8 Package
- 6.5 Ω typical output resistance
- 88% typical conversion efficiency at 100 mA
- (LM2660) selectable oscillator frequency: 10 kHz/80 kHz
- (LM2661) low current shutdown mode

Applications

- Laptop computers
- Cellular phones
- Medical instruments
- Operational amplifier power supplies
- Interface power supplies
- Handheld instruments

Basic Application Circuits

LM2662/LM2663

Switched Capacitor Voltage Converter

General Description

The LM2662/LM2663 CMOS charge-pump voltage converter inverts a positive voltage in the range of 1.5V to 5.5V to the corresponding negative voltage. The LM2662/LM2663 uses two low cost capacitors to provide 200 mA of output current without the cost, size, and EMI related to inductor based converters. With an operating current of only 300 μ A and operating efficiency greater than 90% at most loads, the LM2662/LM2663 provides ideal performance for battery powered systems. The LM2662/LM2663 may also be used as a positive voltage doubler.

The oscillator frequency can be lowered by adding an external capacitor to the OSC pin. Also, the OSC pin may be used to drive the LM2662/LM2663 with an external clock. For LM2662, a frequency control (FC) pin selects the oscillator frequency of 20 kHz or 150 kHz. For LM2663, an external shutdown (SD) pin replaces the FC pin. The SD pin can be used to disable the device and reduce the quiescent current to 10 μ A. The oscillator frequency for LM2663 is 150 kHz.

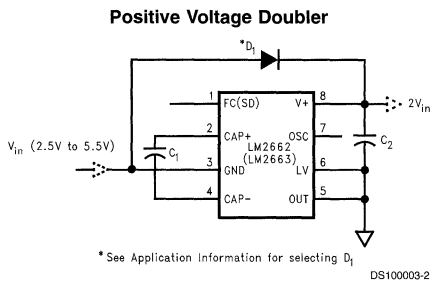

Features

- Inverts or doubles input supply voltage
- Narrow SO-8 Package
- 3.5 Ω typical output resistance
- 86% typical conversion efficiency at 200 mA
- (LM2662) selectable oscillator frequency: 20 kHz/150 kHz
- (LM2663) low current shutdown mode

Applications

- Laptop computers
- Cellular phones
- Medical instruments
- Operational amplifier power supplies
- Interface power supplies
- Handheld instruments

Basic Application Circuits

LM2664 Switched Capacitor Voltage Converter

General Description

The LM2664 CMOS charge-pump voltage converter inverts a positive voltage in the range of +1.8V to +5.5V to the corresponding negative voltage of -1.8V to -5.5V. The LM2664 uses two low cost capacitors to provide up to 40 mA of output current.

The LM2664 operates at 160 kHz oscillator frequency to reduce output resistance and voltage ripple. With an operating current of only 220 μ A (operating efficiency greater than 91% with most loads) and 1 μ A typical shutdown current, the LM2664 provides ideal performance for battery powered systems. The device is in SOT-23-6 package.

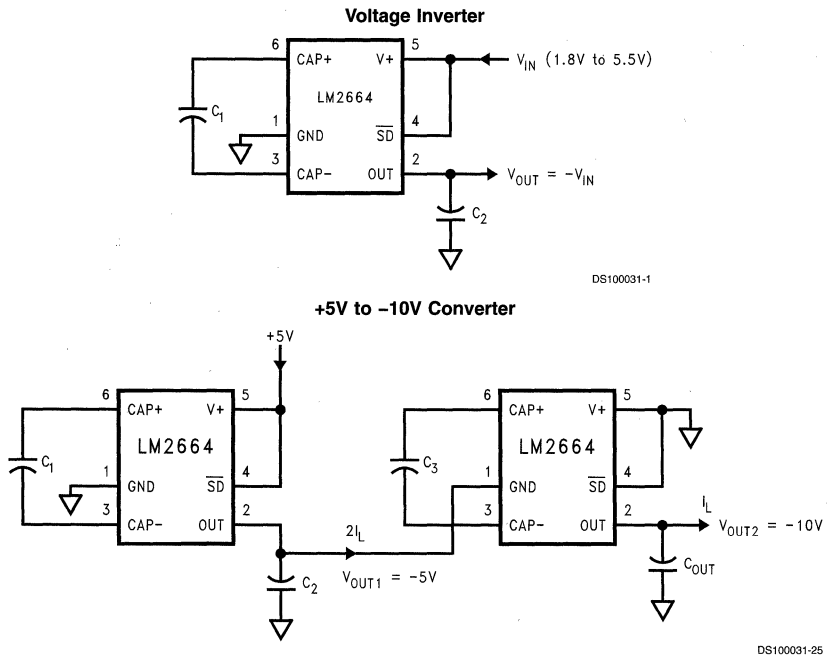

Features

- Inverts Input Supply Voltage
- SOT23-6 Package
- 12 Ω Typical Output Impedance
- 91% Typical Conversion Efficiency at 40 mA
- 1 μ A Typical Shutdown Current

Applications

- Cellular Phones
- Pagers
- PDAs
- Operational Amplifier Power Suppliers
- Interface Power Suppliers
- Handheld Instruments

Basic Application Circuits

LM2665

Switched Capacitor Voltage Converter

General Description

The LM2665 CMOS charge-pump voltage converter operates as a voltage doubler for an input voltage in the range of +2.5V to +5.5V. Two low cost capacitors and a diode (needed during start-up) are used in this circuit to provide up to 40 mA of output current. The LM2665 can also work as a voltage divider to split a voltage in the range of +1.8V to +11V in half.

The LM2665 operates at 160 kHz oscillator frequency to reduce output resistance and voltage ripple. With an operating current of only 650 μ A (operating efficiency greater than 90% with most loads) and 1 μ A typical shutdown current, the LM2665 provides ideal performance for battery powered systems. The device is in SOT-23-6 package.

Features

- Doubles or Splits Input Supply Voltage
- SOT23-6 Package
- 12 Ω Typical Output Impedance
- 90% Typical Conversion Efficiency at 40 mA
- 1 μ A Typical Shutdown Current

Applications

- Cellular Phones
- Pagers
- PDAs
- Operational Amplifier Power Suppliers
- Interface Power Suppliers
- Handheld Instruments

LM2681

Switched Capacitor Voltage Converter

General Description

The LM2681 CMOS charge-pump voltage converter operates as a voltage doubler for an input voltage in the range of +2.5V to +5.5V. Two low cost capacitors and a diode (needed during start-up) is used in this circuit to provide up to 20 mA of output current. The LM2681 can also work as a voltage divider to split a voltage in the range of +1.8V to +11V in half.

The LM2681 operates at 160 kHz oscillator frequency to reduce output resistance and voltage ripple. With an operating current of only 550 μ A (operating efficiency greater than 90% with most loads) the LM2681 provides ideal performance for battery powered systems. The device is in SOT-23-6 package.

Features

- Doubles or Splits Input Supply Voltage
- SOT23-6 Package
- 15 Ω Typical Output Impedance
- 90% Typical Conversion Efficiency at 20 mA

Applications

- Cellular Phones
- Pagers
- PDAs
- Operational Amplifier Power Suppliers
- Interface Power Suppliers
- Handheld Instruments

LM2682

Switched Capacitor Voltage Doubling Inverter

General Description

The LM2682 is a CMOS charge-pump voltage inverter capable of converting positive voltage in the range of +2.0V to +5.5V to the corresponding doubled negative voltage of -4.0V to -11.0V respectively. The LM2682 uses three low cost capacitors to provide 10 mA of output current without the cost, size, and EMI related to inductor based circuits. With an operating current of only 150 μ A and an operating efficiency greater than 90% with most loads, the LM2682 provides ideal performance for battery powered systems. The LM2682 offers a switching frequency of 6 kHz.

Features

- Inverts then doubles input supply voltage
- Small MSOP-8 package (mini SO-8) and SO-8 package
- 90 Ω typical output impedance
- 94% typical power efficiency at 10 mA

Applications

- LCD contrast biasing
- GaAs power amplifier biasing
- Interface power supplies
- Handheld instrumentation
- Laptop computers and PDAs

LM2685

Dual Output Regulated Switched Capacitor Voltage Converter

General Description

The LM2685 CMOS charge-pump voltage converter operates as an input voltage doubler, +5V regulator and inverter for an input voltage in the range of +2.85V to +6.5V. Five low cost capacitors are used in this circuit to provide up to 50mA of output current at +5V ($\pm 5\%$), and 15mA at -5V. The LM2685 operates at a 130 kHz switching frequency to reduce output resistance and voltage ripple. With an operating current of only 800 μ A (operating efficiency greater than 80% with most loads) and 6 μ A typical shutdown current, the LM2685 is ideal for use in battery powered systems. The device is in a small 14-pin TSSOP package.

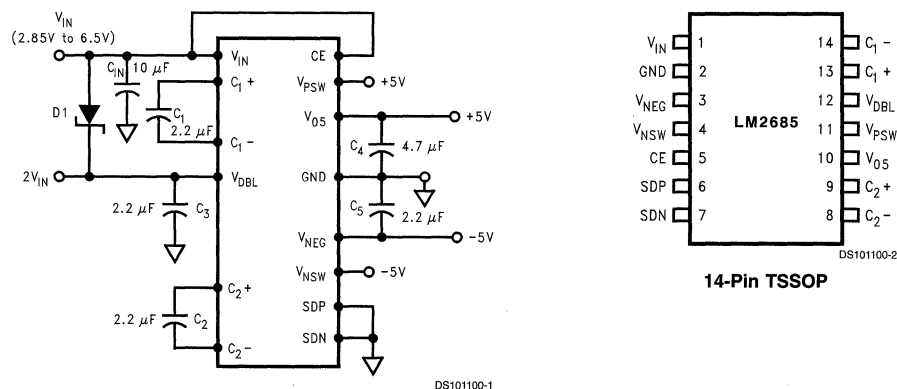

Features

- +5V regulated output
- Inverts $V_{OS}(+5V)$ to $V_{NEG}(-5V)$
- Doubles input supply voltage
- TSSOP-14 package
- 80% typical conversion efficiency at 25mA
- Input voltage range of 2.85V to 6.5V
- Independent shutdown control pins

Applications

- Cellular phones
- Pagers
- PDAs
- Handheld instrumentation
- 3.3V to 5V voltage conversion applications

Typical Application and Connection Diagram

Pin Description

Pin No.	Name	Function
1	V_{IN}	Power supply input voltage.
2	GND	Power supply ground.
3	V_{NEG}	Negative output voltage created by inverting V_{05} .
4	V_{NSW}	V_{NEG} output connected through a series switch, NSW.
5	CE	Chip enable input. This pin is high for normal operation and low for shutdown. (See Shutdown and Load Disconnect section in the Detailed Device Description division).
6	SDP	Positive side shutdown input. This pin is low for normal operation and high for positive side shutdown and V_{PSW} load disconnect. (See Shutdown and Load Disconnect section in the Detailed Device Description division).
7	SDN	Negative side shutdown input. This pin is low for normal operation and high for negative side shutdown and V_{NSW} load disconnect. (See Shutdown and Load Disconnect section in the Detailed Device Description division).
8	C_2^-	The negative terminal of inverting charge-pump capacitor, C2.
9	C_2^+	The positive terminal of inverting charge-pump capacitor, C2.
10	V_{05}	Regulated +5V output.
11	V_{PSW}	V_{05} output connected through a series switch, PSW.
12	V_{DBL}	Voltage Doubler Output. ($2.85V \leq V_{IN} \leq 5.4V$. See Voltage Doubler section).
13	C_1^+	The positive terminal of doubling charge-pump capacitor, C1.
14	C_1^-	The negative terminal of doubling charge-pump capacitor, C1.

LM2686

Regulated Switched Capacitor Voltage Converter

General Description

The LM2686 CMOS charge-pump voltage converter operates as an input voltage doubler and a +5V regulator for an input voltage in the range of +2.85V to +6.5V. Three low cost capacitors are used in this circuit to provide up to 50mA of output current at +5.0V ($\pm 5\%$). The LM2686 operates at a 130 kHz switching frequency to reduce output resistance and voltage ripple. With an operating current of only 450 μ A (operating efficiency greater than 80% with most loads) and 6.0 μ A typical shutdown current, the LM2686 is ideal for use in battery powered systems. The device is in a small 14-pin TSSOP package.

Features

- +5V regulated output
- Doubles input supply voltage
- TSSOP 14 package
- 80% typical conversion efficiency at 25mA
- Input voltage range of 2.85V to 6.5V
- Independent shutdown control pins

Applications

- Cellular phones
- Pagers
- PDAs
- Handheld Instrumentation
- 3.3V to 5V Voltage Conversion Applications

10	V_{05}	Regulated +5V output.
11	V_{PSW}	V_{05} output connected through a series switch, PSW.
12	V_{DBL}	Output of doubled input voltage.
13	C_1^+	The positive terminal of doubling charge-pump capacitor, C1.
14	C_1^-	The negative terminal of doubling charge-pump capacitor, C1.

* All V_{IN} pins, pin 1 and pin 7 must be tied together for proper operation.

** All ground pins, pin 2, pin 3 and pin 4 must be tied together for proper operation.

LM2687

Low Noise Regulated Switched Capacitor Voltage Inverter

General Description

The LM2687 CMOS Negative Regulated Switched Capacitor Voltage Inverter delivers a very low noise adjustable output for an input voltage in the range of +2.7V to +5.5V. Four low cost capacitors are used in this circuit to provide up to 10mA of output current. The regulated output for the LM2687 is adjustable between -1.5V and -5.2V. The LM2687 operates at 100 kHz (typical) switching frequency to reduce output resistance and voltage ripple. With an operating current of only 500 μ A (charge pump power efficiency greater than 90% with most loads) and 0.05 μ A typical shutdown current, the LM2687 provides ideal performance for cellular phone power amplifier bias and other low current, low noise negative voltage needs. The device comes in a small 8-pin MSOP package.

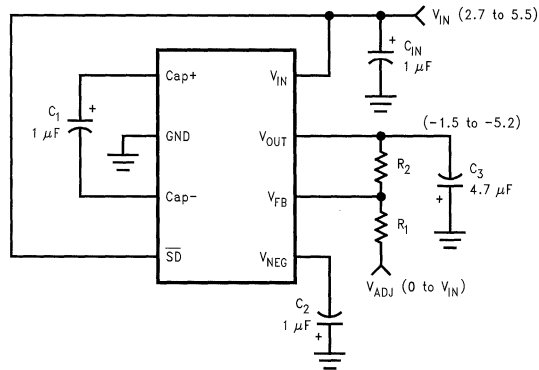

Features

- Inverts and regulates the input supply voltage
- Small MSOP-8 package
- 91% typical charge pump power efficiency at 10mA
- Low output ripple (1mV typical)
- Shutdown lowers Quiescent current to 0.05 μ A (typical)

Applications

- Wireless Communication Systems
- Cellular Phone Power Amplifier Biasing
- Interface Power Supplies
- Handheld Instrumentation
- Laptop Computers and PDA's

Typical Application Circuit

Pin Description

Pin No.	Name	Function
1	Cap+	Positive terminal for C_1 .
2	GND	Ground.
3	Cap-	Negative terminal for C_1 .
4	\overline{SD}	Active low, logic-level shutdown input.
5	V_{NEG}	Negative unregulated output voltage.
6	V_{FB}	Feedback input. Connect V_{FB} to an external resistor divider between V_{OUT} and a positive adjust voltage V_{ADJ} ($0 \leq V_{ADJ} \leq V_{IN}$). DO NOT leave unconnected.
7	V_{OUT}	Regulated negative output voltage.
8	V_{IN}	Positive power supply input.

LM2765

Switched Capacitor Voltage Converter

General Description

The LM2765 CMOS charge-pump voltage converter operates as a voltage doubler for an input voltage in the range of +1.8V to +5.5V. Two low cost capacitors and a diode are used in this circuit to provide up to 20 mA of output current.

The LM2765 operates at 50 kHz switching frequency to reduce output resistance and voltage ripple. With an operating current of only 130 μ A (operating efficiency greater than 90% with most loads) and 0.1 μ A typical shutdown current, the LM2765 provides ideal performance for battery powered systems. The device is manufactured in a SOT-23-6 package.

Features

- Doubles Input Supply Voltage
- SOT23-6 Package
- 20 Ω Typical Output Impedance
- 90% Typical Conversion Efficiency at 20 mA
- 0.1 μ A Typical Shutdown Current

Applications

- Cellular Phones
- Pagers
- PDAs
- Operational Amplifier Power Supplies
- Interface Power Supplies
- Handheld Instruments

3	CAP-	Connect this pin to the negative terminal of the charge-pump capacitor.
4	SD	Shutdown control pin, tie this pin to ground in normal operation.
5	V _{OUT}	Positive voltage output.
6	CAP+	Connect this pin to the positive terminal of the charge-pump capacitor.

LM2766

Switched Capacitor Voltage Converter

General Description

The LM2766 CMOS charge-pump voltage converter operates as a voltage doubler for an input voltage in the range of +1.8V to +5.5V. Two low cost capacitors and a diode are used in this circuit to provide up to 20 mA of output current.

The LM2766 operates at 200 kHz switching frequency to reduce output resistance and voltage ripple. With an operating current of only 350 μ A (operating efficiency greater than 90% with most loads) and 0.1 μ A typical shutdown current, the LM2766 provides ideal performance for battery powered systems. The device is manufactured in a SOT-23-6 package.

Features

- Doubles Input Supply Voltage
- SOT23-6 Package
- 20 Ω Typical Output Impedance
- 90% Typical Conversion Efficiency at 20 mA
- 0.1 μ A Typical Shutdown Current

Applications

- Cellular Phones
- Pagers
- PDAs
- Operational Amplifier Power Supplies
- Interface Power Supplies
- Handheld Instruments

LM2767

Switched Capacitor Voltage Converter

General Description

The LM2767 CMOS charge-pump voltage converter operates as a voltage doubler for an input voltage in the range of +1.8V to +5.5V. Two low cost capacitors and a diode are used in this circuit to provide at least 15 mA of output current.

The LM2767 operates at 11 kHz switching frequency to avoid audio voice-band interference. With an operating current of only 40 μ A (operating efficiency greater than 90% with most loads), the LM2767 provides ideal performance for battery powered systems. The device is manufactured in a SOT23-5 package.

Features

- Doubles Input Supply Voltage
- SOT23-5 Package
- 20 Ω Typical Output Impedance
- 96% Typical Conversion Efficiency at 15mA

Applications

- Cellular Phones
- Pagers
- PDAs, Organizers
- Operational Amplifier Power Suppliers
- Interface Power Suppliers
- Handheld Instruments

Basic Application Circuit

Pin Description

Pin	Name	Function
1	V_{OUT}	Positive voltage output.
2	GND	Power supply ground input.
3	CAP-	Connect this pin to the negative terminal of the charge-pump capacitor.
4	$V+$	Power supply positive voltage input.
5	CAP+	Connect this pin to the positive terminal of the charge-pump capacitor.

LM3350

Switched Capacitor Voltage Converter

General Description

The LM3350 is a CMOS charge-pump voltage converter which efficiently provides a 3.3V to 5V step-up, or 5V to 3.3V step-down. The LM3350 uses four small, low cost capacitors to provide the voltage conversion. It eliminates the cost, size and radiated EMI related to inductor based circuits, or the power loss of a linear regulator. Operating power conversion efficiency greater than 90% provides ideal performance for battery powered portable systems.

The architecture provides a fixed voltage conversion ratio of 3/2 or 2/3. Thus it can be used for other DC-DC conversions as well.

Key Specifications

- 800 kHz switch frequency allows use of very small, inexpensive capacitors.

- 4.2Ω typical step-up output impedance
- 1.8Ω typical step-down output impedance
- 90% typical power conversion efficiency at 50 mA
- 250 nA typical shutdown current

Features

- Conversion of 3.3V to 5V, or 5V to 3.3V
- Small Mini SO-8 package
- No inductor required

Applications

- Any mixed 5V and 3.3V system
- Laptop computers and PDAs
- Handheld instrumentation
- PCMCIA cards

LM3351

Switched Capacitor Voltage Converter

General Description

The LM3351 is a CMOS charge-pump voltage converter which efficiently provides a 3.3V to 5V step-up, or 5V to 3.3V step-down. The LM3351 is pin for pin compatible with the LM3350 but consumes 66% less quiescent current. The LM3351 uses four small, low cost capacitors to provide the voltage conversion. It eliminates the cost, size and radiated EMI related to inductor based circuits, or the power loss of a linear regulator. Operating power conversion efficiency greater than 90% provides ideal performance for battery powered portable systems.

The architecture provides a fixed voltage conversion ratio of 3/2 or 2/3. Thus it can be used for other DC-DC conversions as well.

Key Specifications

- 200 kHz switch frequency allows use of very small, inexpensive capacitors.

- 4.2Ω typical step-up output impedance
- 1.8Ω typical step-down output impedance
- 95% typical power conversion efficiency at 50 mA
- 250 nA typical shutdown current
- Low quiescent current extends battery life

Features

- Conversion of 3.3V to 5V, or 5V to 3.3V
- Small Mini SO-8 package
- No inductor required

Applications

- Any mixed 5V and 3.3V system
- Laptop computers and PDAs
- Handheld instrumentation
- PCMCIA cards

LM3352

Regulated 200 mA Buck-Boost Switched Capacitor DC/DC Converter

General Description

The LM3352 is a CMOS switched capacitor DC/DC converter that produces a regulated output voltage by automatically stepping up (boost) or stepping down (buck) the input voltage. It accepts an input voltage between 2.5V and 5.5V. The LM3352 is available in three standard output voltage versions: 2.5V, 3.0V and 3.3V. If other output voltage options between 1.8V and 4.0V are desired, please contact your National Semiconductor representative.

The LM3352's proprietary buck-boost architecture enables up to 200 mA of load current at an average efficiency greater than 80%. Typical operating current is only 400 μ A and the typical shutdown current is only 2.5 μ A.

The LM3352 is available in a 16-pin TSSOP package. This package has a maximum height of only 1.1 mm.

The high efficiency of the LM3352, low operating and shutdown currents, small package size, and the small size of the overall solution make this device ideal for battery powered, portable, and hand-held applications.

Features

- Regulated V_{OUT} with $\pm 3\%$ accuracy
- Standard output voltage options: 2.5V, 3.0V and 3.3V

- Custom output voltages available from 1.8V to 4.0V in 100 mV increments
- 2.5V to 5.5V input voltage
- Up to 200 mA output current
- >80% average efficiency
- Uses few, low-cost external components
- Very small solution size
- 400 μ A typical operating current
- 2.5 μ A typical shutdown current
- 1 MHz switching frequency (typical)
- Architecture and control methods provide high load current and good efficiency
- TSSOP-16 package
- Over-temperature protection

Applications

- 1-cell Lilon battery-operated equipment including PDAs, hand-held PCs, cellular phones
- Flat panel displays
- Hand-held instruments
- NiCd, NiMH, or alkaline battery powered systems
- 3.3V to 2.5V and 5.0V to 3.3V conversion

LM828 Switched Capacitor Voltage Converter

General Description

The LM828 CMOS charge-pump voltage converter inverts a positive voltage in the range of +1.8V to +5.5V to the corresponding negative voltage of -1.8V to -5.5V. The LM828 uses two low cost capacitors to provide up to 25 mA of output current.

The LM828 operates at 12 kHz switching frequency to reduce output resistance and voltage ripple. With an operating current of only 40 μ A (operating efficiency greater than 96% with most loads), the LM828 provides ideal performance for battery powered systems. The device is in a tiny SOT-23-5 package.

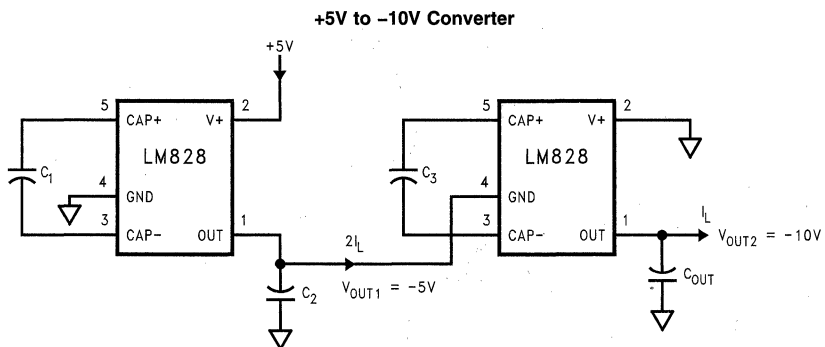

Features

- Inverts Input Supply Voltage
- SOT-23-5 Package
- 20 Ω Typical Output Impedance
- 97% Typical Conversion Efficiency at 5 mA

Applications

- Cellular Phones
- Pagers
- PDAs
- Operational Amplifier Power Supplies
- Interface Power Supplies
- Handheld Instruments

Basic Application Circuits

LMC7660

Switched Capacitor Voltage Converter

General Description

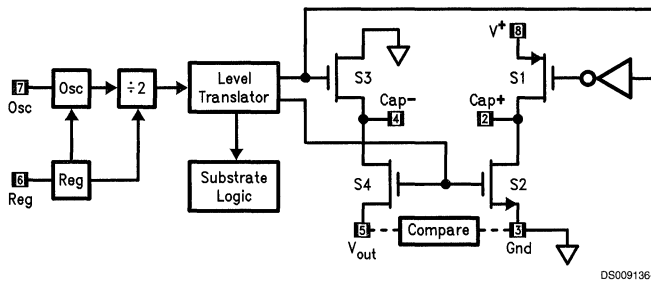

The LMC7660 is a CMOS voltage converter capable of converting a positive voltage in the range of +1.5V to +10V to the corresponding negative voltage of -1.5V to -10V. The LMC7660 is a pin-for-pin replacement for the industry-standard 7660. The converter features: operation over full temperature and voltage range without need for an external diode, low quiescent current, and high power efficiency.

The LMC7660 uses its built-in oscillator to switch 4 power MOS switches and charge two inexpensive electrolytic capacitors.

Features

- Operation over full temperature and voltage range without an external diode
- Low supply current, 200 μ A max
- Pin-for-pin replacement for the 7660
- Wide operating range 1.5V to 10V
- 97% Voltage Conversion Efficiency
- 95% Power Conversion Efficiency
- Easy to use, only 2 external components
- Extended temperature range
- Narrow SO-8 Package

MAX660

Switched Capacitor Voltage Converter

General Description

The MAX660 CMOS charge-pump voltage converter inverts a positive voltage in the range of 1.5V to 5.5V to the corresponding negative voltage. The MAX660 uses two low cost capacitors to provide 100 mA of output current without the cost, size, and EMI related to inductor based converters. With an operating current of only 120 μ A and operating efficiency greater than 90% at most loads, the MAX660 provides ideal performance for battery powered systems. The MAX660 may also be used as a positive voltage doubler.

The oscillator frequency can be lowered by adding an external capacitor to the OSC pin. Also, the OSC pin may be used to drive the MAX660 with an external clock. A frequency control (FC) pin selects the oscillator frequency of 10 kHz or 80 kHz.

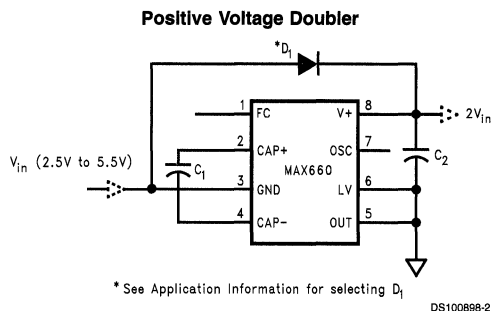

Features

- Inverts or doubles input supply voltage
- Narrow SO-8 Package
- 6.5 Ω typical output resistance
- 88% typical conversion efficiency at 100 mA
- Selectable oscillator frequency: 10 kHz/80 kHz

Applications

- Laptop computers
- Cellular phones
- Medical instruments
- Operational amplifier power supplies
- Interface power supplies
- Handheld instruments

LMX1600/LMX1601/LMX1602 PLLatinum™ Low Cost Dual Frequency Synthesizer

LMX1600	2.0 GHz/500 MHz
LMX1601	1.1 GHz/500 MHz
LMX1602	1.1 GHz/1.1 GHz

General Description

The LMX1600/01/02 is part of a family of monolithic integrated dual frequency synthesizers designed to be used in a local oscillator subsystem for a radio transceiver. It is fabricated using National's 0.5u ABIC V silicon BiCMOS process.

The LMX1600/01/02 contains two dual modulus prescalers, four programmable counters, two phase detectors and two selectable gain charge pumps necessary to provide the control voltage for two external loop filters and VCO loops. Digital filtered lock detects for both PLLs are included. Data is transferred into the LMX1600/01/02 via a MICROWIRE™ serial interface (Data, Clock, LE).

V_{CC} supply voltage can range from 2.7V to 3.6V. The LMX1600/01/02 features very low current consumption - typically 4.0 mA at 3V for LMX1601, 5.0 mA at 3V for LMX1600 or LMX1602. Powerdown for the PLL is hardware controlled.

The LMX1600/01/02 is available in a 16 pin TSSOP surface mount plastic package.

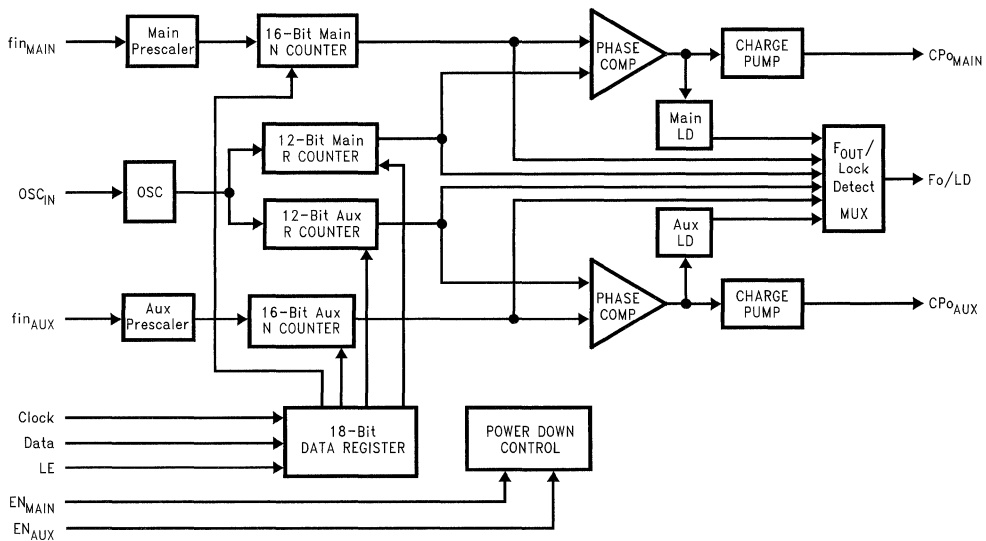

Features

- V_{CC} = 2.7V to 3.6V operation
- Low current consumption:
 - 4 mA @ 3V (typ) for LMX1601
 - 5 mA @ 3V (typ) for LMX1600 or LMX1602
- PLL Powerdown mode: I_{CC} = 1 μA typical
- Dual modulus prescaler:
 - 2 GHz/500 MHz option: (Main) 32/33 (Aux) 8/9
 - 1.1 GHz/500 MHz option: (Main) 16/17 (Aux) 8/9
 - 1.1 GHz/1.1 GHz option: (Main) 16/17 (Aux) 16/17
- Digital Filtered Lock Detects

Applications

- Cordless / Cellular / PCS phones
- Other digital mobile phones

Pin Descriptions

Pin No. for 16-pin CSP Package	Pin No. for 16-pin TSSOP Package	Pin Name	I/O	Description
16	1	FoLD	O	Multiplexed output of the Main/Aux programmable or reference dividers and Main/Aux lock detect. CMOS output. (See Programming Description 2.5)
1	2	OSC _{IN}	I	PLL reference input which drives both the Main and Aux R counter inputs. Has about 1.2V input threshold and can be driven from an external CMOS or TTL logic gate. Typically connected to a TCXO output. Can be used with an external resonator (See Programming Description 2.5.4).
2	3	OSC _{OUT}	O	Oscillator output. Used with an external resonator.
3	4	GND	—	Aux PLL ground.
4	5	fin _{AUX}	I	Aux prescaler input. Small signal input from the VCO.
5	6	V _{CC} _{AUX}	—	Aux PLL power supply voltage input. Must be equal to V _{CC} _{MAIN} . May range from 2.7V to 3.6V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.
6	7	CPo _{AUX}	O	Aux PLL Charge Pump output. Connected to a loop filter for driving the control input of an external VCO.
7	8	EN _{AUX}	I	Powers down the Aux PLL when LOW (N and R counters, prescaler, and tristates charge pump output). Bringing EN _{AUX} HIGH powers up the Aux PLL.
8	9	EN _{MAIN}	I	Powers down the Main PLL when LOW (N and R counters, prescaler, and tristates charge pump output). Bringing EN _{MAIN} HIGH powers up the Main PLL.
9	10	CPo _{MAIN}	O	Main PLL Charge Pump output. Connected to a loop filter for driving the control input of an external VCO.
10	11	V _{CC} _{MAIN}	—	Main PLL power supply voltage input. Must be equal to V _{CC} _{AUX} . May range from 2.7V to 3.6V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.
11	12	fin _{MAIN}	I	Main prescaler input. Small signal input from the VCO.
12	13	GND	—	Main PLL ground.

Pin Descriptions (Continued)

Pin No. for 16-pin CSP Package	Pin No. for 16-pin TSSOP Package	Pin Name	I/O	Description
13	14	LE	I	Load enable high impedance CMOS input. Data stored in the shift registers is loaded into one of the 4 internal latches when LE goes HIGH (control bit dependent).
14	15	Data	I	High impedance CMOS input. Binary serial data input. Data entered MSB first. The last two bits are the control bits.
15	16	Clock	I	High impedance CMOS Clock input. Data for the various counters is clocked in on the rising edge, into the 18-bit shift register.

LMX2306/LMX2316/LMX2326 PLLatinum™ Low Power Frequency Synthesizer for RF Personal Communications

LMX2306 550 MHz
LMX2316 1.2 GHz
LMX2326 2.8 GHz

General Description

The LMX2306/16/26 are monolithic, integrated frequency synthesizers with prescalers that are designed to be used to generate a very stable low noise signal for controlling the local oscillator of an RF transceiver. They are fabricated using National's ABiC V silicon BiCMOS 0.5μ process.

The LMX2306 contains a 8/9 dual modulus prescaler while the LMX2316 and the LMX2326 have a 32/33 dual modulus prescaler. The LMX2306/16/26 employ a digital phase locked loop technique. When combined with a high quality reference oscillator and loop filter, the LMX2306/16/26 provide the feedback tuning voltage for a voltage controlled oscillator to generate a low phase noise local oscillator signal. Serial data is transferred into the LMX2306/16/26 via a three wire interface (Data, Enable, Clock). Supply voltage can range from 2.3V to 5.5V. The LMX2306/16/26 feature ultra low current consumption; LMX2306 - 1.7 mA at 3V, LMX2316 - 2.5 mA at 3V, and LMX2326 - 4.7 mA at 3V.

The LMX2306/16/26 synthesizers are available in a 16-pin TSSOP surface mount plastic package.

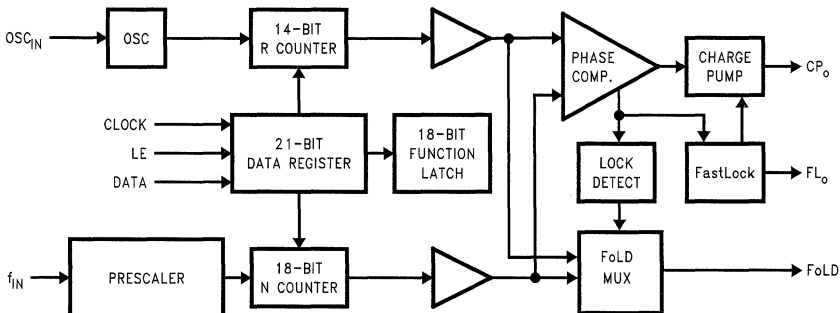

Features

- 2.3V to 5.5V operation
- Ultra low current consumption
- 2.5V V_{CC} JEDEC standard compatible
- Programmable or logical power down mode:
 - I_{CC} = 1 μA typical at 3V
- Dual modulus prescaler:
 - LMX2306 8/9
 - LMX2316/26 32/33
- Selectable charge pump TRI-STATE® mode
- Selectable FastLock™ mode with timeout counter
- MICROWIRE™ interface
- Digital Lock Detect

Applications

- Portable wireless communications (PCS/PCN, cordless)
- Wireless Local Area Networks (WLANs)
- Cable TV tuners (CATV)
- Pagers
- Other wireless communication systems

Pin Descriptions

16-Pin TSSOP	16-Pin CSP	Pin Name	I/O	Description
1	15	FL _o	O	FastLock Output. For connection of parallel resistor to the loop filter. (See Section 1.3.4 FASTLOCK MODES description.)
2	16	CP _o	O	Charge Pump Output. For connection to a loop filter for driving the input of an external VCO.
3	1	GND		Charge Pump Ground.
4	2	GND		Analog Ground.
5	3	f _{IN} ⁻	I	RF Prescaler Complementary Input. A bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane. The complementary input can be left unbypassed, with some degradation in RF sensitivity.
6	4	f _{IN}	I	RF Prescaler Input. Small signal input from the VCO.
7	5	V _{CC1}		Analog Power Supply Voltage Input. Input may range from 2.3V to 5.5V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane. V _{CC1} must equal V _{CC2} .
8	6	OSC _{IN}	I	Oscillator Input. This input is a CMOS input with a threshold of approximately V _{CC} /2 and an equivalent 100k input resistance. The oscillator input is driven from a reference oscillator.
9	7	GND		Digital Ground.
10	8	CE	I	Chip Enable. A LOW on CE powers down the device and will TRI-STATE the charge pump output. Taking CE HIGH will power up the device depending on the status of the power down bit F2. (See Section 1.3.1 POWERDOWN OPERATION and Section 1.7.1 DEVICE PROGRAMMING AFTER FIRST APPLYING V _{CC} .)
11	9	Clock	I	High Impedance CMOS Clock Input. Data for the various counters is clocked in on the rising edge into the 21-bit shift register.
12	10	Data	I	Binary Serial Data Input. Data entered MSB first. The last two bits are the control bits. High impedance CMOS input.
13	11	LE	I	Load Enable CMOS Input. When LE goes HIGH, data stored in the shift registers is loaded into one of the 3 appropriate latches (control bit dependent).
14	12	Fo/LD	O	Multiplexed Output of the RF Programmable or Reference Dividers and Lock Detect. CMOS output. (See Table 4.)
15	13	V _{CC2}		Digital Power Supply Voltage Input. Input may range from 2.3V to 5.5V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane. V _{CC1} must equal V _{CC2} .
16	14	V _P		Power Supply for Charge Pump. Must be ≥ V _{CC} .

LMX2324

PLLatinum™ 2.0 GHz Frequency Synthesizer for RF Personal Communications

General Description

The LMX2324 is a high performance frequency synthesizer with integrated 32/33 dual modulus prescaler designed for RF operation up to 2.0 GHz. Using a proprietary digital phase locked loop technique, the LMX2324's linear phase detector characteristics can generate very stable, low noise control signals for UHF and VHF voltage controlled oscillators.

Serial data is transferred into the LMX2324 via a three-line MICROWIRE™ interface (Data, LE, Clock). Supply voltage range is from 2.7V to 5.5V. The LMX2324 features very low current consumption, typically 3.5 mA at 3V. The charge pump provides 4 mA output current.

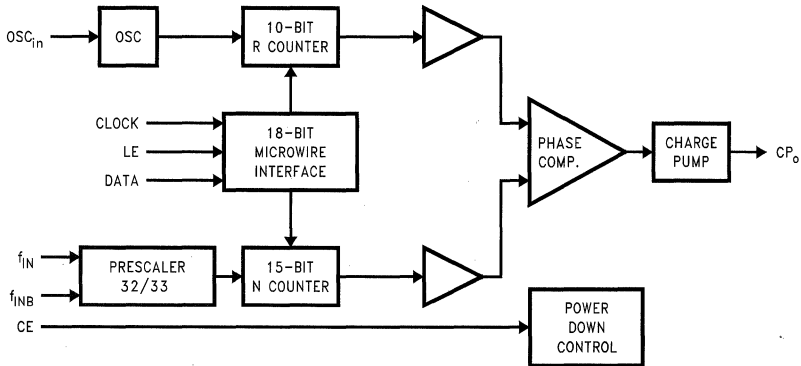

The LMX2324 is manufactured using National's ABiC V BiCMOS process and is packaged in a 16-pin TSSOP and a 16-pin Chip Scale Package (CSP).

Features

- RF operation up to 2.0 GHz
- 2.7V to 5.5V operation
- Low current consumption: $I_{CC} = 3.5 \text{ mA}$ (typ) at $V_{CC} = 3.0\text{V}$
- Dual modulus prescaler: 32/33
- Internal balanced, low leakage charge pump

Applications

- Cellular telephone systems (GSM, NADC, CDMA, PDC)
- Personal wireless communications (DCS-1800, DECT, CT-1+)
- Wireless local area networks (WLANs)
- Other wireless communication systems

Pin Descriptions

Pin No.		Pin Name	I/O	Description
TSSOP16	CSP16			
2	1	V_P	—	Power supply for charge pump. Must be $\geq V_{CC}$
3	2	CP_o	O	Internal charge pump output. For connection to a loop filter for driving the voltage control input of an external oscillator.
4	3	GND	—	Ground.
5	4	f_{INB}	I	RF prescaler complimentary input. In single-ended mode, a bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane. The LMX2324 can be driven differentially when the bypass capacitor is omitted.
6	5	f_{IN}	I	RF prescaler input. Small signal input from the voltage controlled oscillator.
7	6	NC		No Connect
8	7	NC		No Connect
9	8	OSC_{in}	I	Oscillator input. A CMOS inverting gate input. The input has a $V_{CC}/2$ input threshold and can be driven from an external CMOS or TTL logic gate.
10	9	NC		No Connect
12	10	Clock	I	High impedance CMOS Clock input. Data is clocked in on the rising edge, into the various counters and registers.
13	11	Data	I	Binary serial data input. Data entered MSB first. LSB is control bit. High impedance CMOS input.
14	12	LE	I	Load Enable input. When Load Enable transitions HIGH, data is loaded into either the N or R register (control bit dependent). See timing diagram.
15	13	NC		No Connect
11	14	NC		No Connect
16	15	CE	I	CHIP Enable. A LOW on CE powers down the device asynchronously and will TRI-STATE® the charge pump output.
1	16	V_{CC}	I	Power supply voltage input. Input may range from 2.7V to 5.5V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.

LMX2331A 2.0 GHz/510 MHz
LMX2332A 1.2 GHz/510 MHz

The LMX233xA are available in a TSSOP 20-pin surface mount plastic package.

General Description

The LMX233xA family of monolithic, integrated dual frequency synthesizers, including prescalers, is to be used as a local oscillator for RF and first IF of a dual conversion transceiver. It is fabricated using National's ABIC IV silicon BiCMOS process.

The LMX233xA contains dual modulus prescalers. A 64/65 or a 128/129 prescaler (32/33 or 64/65 in the 2.5 GHz LMX2330A) can be selected for the RF synthesizer and a 8/9 or a 16/17 prescaler can be selected for the IF synthesizer. LMX233XA, which employs a digital phase locked loop technique, combined with a high quality reference oscillator and loop filters, provides the tuning voltages for voltage controlled oscillators to generate very stable low noise RF and IF local oscillator signals. Serial data is transferred into the LMX233xA via a three wire interface (Data, Enable, Clock). Supply voltage can range from 2.7V to 5.5V. The LMX233xA family features very low current consumption; LMX2330A—13 mA at 3V, LMX2331A—12 mA at 3V, LMX2332A—8 mA at 3V.

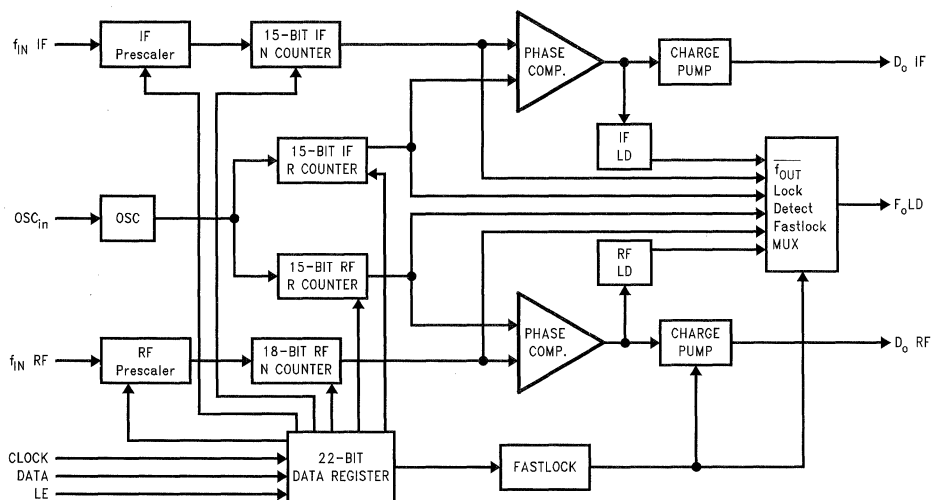

Features

- 2.7V to 5.5V operation
- Low current consumption
- Selectable powerdown mode: $I_{CC} = 1 \mu A$ typical at 3V
- Dual modulus prescaler:
 - LMX2330A (RF) 32/33 or 64/65
 - LMX2331A/32A (RF) 64/65 or 128/129
 - LMX2330A/31A/32A (IF) 8/9 or 16/17
- Selectable charge pump TRI-STATE® mode
- Selectable FastLock™ mode
- Small outline, plastic, surface mount TSSOP 0.173" wide package

Applications

- Portable Wireless Communications (PCS/PCN, cordless)
- Cordless and cellular telephone systems
- Wireless Local Area Networks (WLANs)
- Cable TV tuners (CATV)
- Other wireless communication systems

Pin Description

Pin No.	Pin Name	I/O	Description
1	V _{CC1}	—	Power supply voltage input for RF analog and RF digital circuits. Input may range from 2.7V to 5.5V. V _{CC1} must equal V _{CC2} . Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.
2	V _{P1}	—	Power Supply for RF charge pump. Must be $\geq V_{CC}$.
3	D _O RF	O	Internal charge pump output. For connection to a loop filter for driving the input of an external VCO.
4	GND	—	Ground for RF digital circuitry.
5	f _{IN} RF	I	RF prescaler input. Small signal input from the VCO.
6	f _{IN} RF	I	RF prescaler complementary input. A bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane. Capacitor is optional with some loss of sensitivity.
7	GND	—	Ground for RF analog circuitry.
8	OSC _{in}	I	Oscillator input. The input has a V _{CC} /2 input threshold and can be driven from an external CMOS or TTL logic gate.
9	GND	—	Ground for IF digital, MICROWIRE™, F _O LD, and oscillator circuits.
10	F _O LD	O	Multiplexed output of the RF/IF programmable or reference dividers, RF/IF lock detect signals and Fastlock mode. CMOS output (<i>see Programmable Modes</i>).
11	Clock	I	High impedance CMOS Clock input. Data for the various counters is clocked in on the rising edge, into the 22-bit shift register.
12	Data	I	Binary serial data input. Data entered MSB first. The last two bits are the control bits. High impedance CMOS input.
13	LE	I	Load enable high impedance CMOS input. When LE goes HIGH, data stored in the shift registers is loaded into one of the 4 appropriate latches (control bit dependent).
14	GND	—	Ground for IF analog circuitry.
15	f _{IN} IF	I	IF prescaler complementary input. A bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane. Capacitor is optional with some loss of sensitivity.
16	f _{IN} IF	I	IF prescaler input. Small signal input from the VCO.
17	GND	—	Ground for IF digital, MICROWIRE, F _O LD, and oscillator circuits.
18	D _O IF	O	IF charge pump output. For connection to a loop filter for driving the input of an external VCO.
19	V _{P2}	—	Power Supply for IF charge pump. Must be $\geq V_{CC}$.

Pin Description (Continued)

Pin No.	Pin Name	I/O	Description
20	V _{CC2}	—	Power supply voltage input for IF analog, IF digital, MICROWIRE, F _o LD, and oscillator circuits. Input may range from 2.7V to 5.5V. V _{CC2} must equal V _{CC1} . Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.

Block Diagram

DS012331-27

Notes:

The RF prescaler for the LMX2331A/32A is either 64/65 or 128/129, while the prescaler for the LMX2330A is 32/33 or 64/65.

V_{CC1} supplies power to the RF prescaler, N-counter, R-counter and phase detector. V_{CC2} supplies power to the IF prescaler, N-counter, phase detector, R-counter along with the OSC_{in} buffer, MICROWIRE, and F_oLD. V_{CC1} and V_{CC2} are clamped to each other by diodes and must be run at the same voltage level.

V_{p1} and V_{p2} can be run separately as long as V_p ≥ V_{CC}.

LMX2330L/LMX2331L/LMX2332L

PLLatinum™ Low Power Dual Frequency Synthesizer for RF Personal Communications

LMX2330L 2.5 GHz/510 MHz

LMX2331L 2.0 GHz/510 MHz

LMX2332L 1.2 GHz/510 MHz

General Description

The LMX233XL family of monolithic, integrated dual frequency synthesizers, including prescalers, is to be used as a local oscillator for RF and first IF of a dual conversion transceiver. It is fabricated using National's 0.5μ ABIC V silicon BiCMOS process.

The LMX233XL contains dual modulus prescalers. A 64/65 or a 128/129 prescaler (32/33 or 64/65 in the 2.5 GHz LMX2330L) can be selected for the RF synthesizer and a 8/9 or a 16/17 prescaler can be selected for the IF synthesizer. LMX233XL, which employs a digital phase locked loop technique, combined with a high quality reference oscillator, provides the tuning voltages for voltage controlled oscillators to generate very stable, low noise signals for RF and IF local oscillators. Serial data is transferred into the LMX233XL via a three wire interface (Data, Enable, Clock). Supply voltage can range from 2.7V to 5.5V. The LMX233XL family features very low current consumption;

LMX2330L—5.0 mA at 3V, LMX2331L—4.0 mA at 3V, LMX2332L—3.0 mA at 3V.

The LMX233XL are available in a TSSOP 20-pin and CSP 24-pin surface mount plastic package.

Features

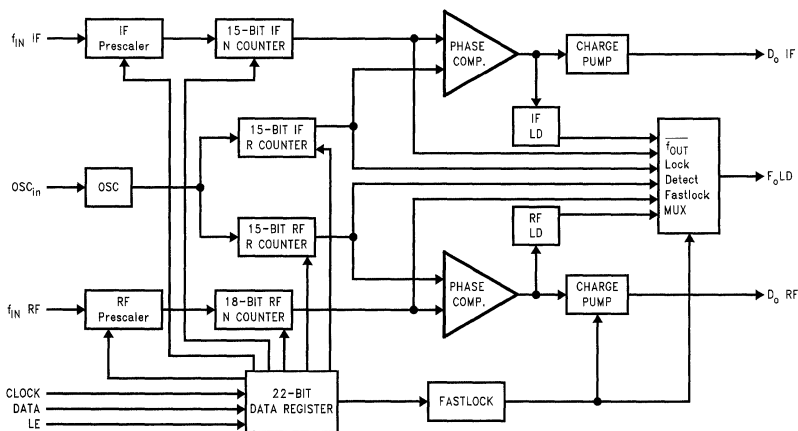

- Ultra low current consumption
- 2.7V to 5.5V operation
- Selectable synchronous or asynchronous powerdown mode:
 - $I_{CC} = 1 \mu A$ typical at 3V
- Dual modulus prescaler:

LMX2330L	(RF) 32/33 or 64/65
LMX2331L/32L	(RF) 64/65 or 128/129
LMX2330L/31L/32L	(IF) 8/9 or 16/17
- Selectable charge pump TRI-STATE® mode
- Selectable charge pump current levels
- Selectable Fastlock™ mode
- Upgrade and compatible to LMX233XA family

Applications

- Portable Wireless Communications (PCS/PCN, cordless)
- Cordless and cellular telephone systems
- Wireless Local Area Networks (WLANS)
- Cable TV tuners (CATV)
- Other wireless communication systems

LMX2350/LMX2352

PLLatinum™ Fractional N RF / Integer N IF Dual Low Power Frequency Synthesizer

LMX2350 2.5 GHz/550 MHz

LMX2352 1.2 GHz/550 MHz

General Description

The LMX2350/2352 is part of a family of monolithic integrated fractional N/ Integer N frequency synthesizers designed to be used in a local oscillator subsystem for a radio transceiver. It is fabricated using National's 0.5 μ ABiC V silicon BiCMOS process. The LMX2350/2352 contains dual modulus prescalers along with modulo 15 or 16 fractional compensation circuitry in the RF divider. A 16/17 or 32/33 prescale ratio can be selected for the LMX2350, and the LMX2352 provides 8/9 or 16/17 prescale ratios. The IF circuitry for both the LMX2350 and LMX2352 contains an 8/9 prescaler, and is fully programmable. Using a fractional N phase locked loop technique, the LMX2350/52 can generate very stable low noise control signals for UHF and VHF voltage controlled oscillators (VCO's).

For the RF PLL, a highly flexible 16 level programmable charge pump supplies output current magnitudes from 100 μ A to 1.6mA. Two uncommitted CMOS outputs can be used to provide external control signals, or configured to FastLock™ mode. Serial data is transferred into the LMX2350/2352 via a three wire interface (Data, LE, Clock). Supply voltage can range from 2.7 V to 5.5 V. The LMX2350/

2352 family features very low current consumption; typically LMX2350 (2.5 GHz) 6.75 mA, LMX2352 (1.2 GHz) 5.00 mA at 3.0V. The LMX2350/2352 are available in a 24-pin TSSOP surface mount plastic package.

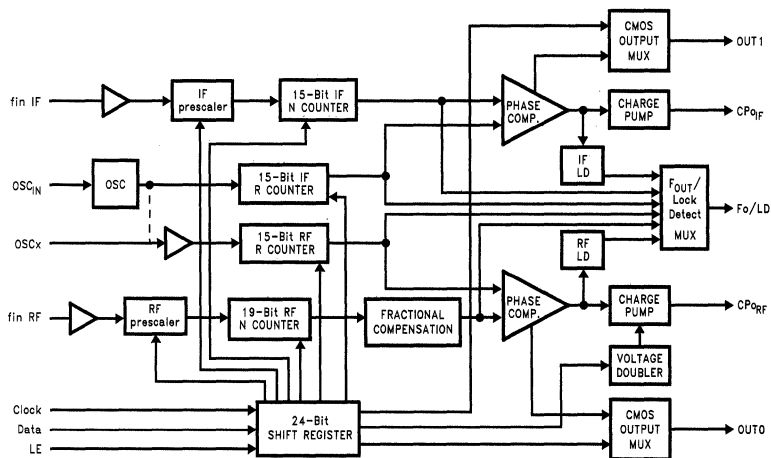

Features

- 2.7 V to 5.5 V operation
- Low current consumption
LMX2350: $I_{CC} = 6.75\text{mA}$ typ at 3V
LMX2352: $I_{CC} = 5.00\text{mA}$ typ at 3V
- Programmable or logical power down mode
 $I_{CC} = 5\ \mu\text{A}$ typ at 3V
- Modulo 15 or 16 fractional RF N divider supports ratios of 1, 2, 3, 4, 5, 8, 15, or 16
- Programmable charge pump current levels
RF 100 μ A to 1.6mA in 100 μ A steps
IF 100 μ A or 800 μ A
- Digital filtered lock detect

Applications

- Portable wireless communications (PCS/PCN, cordless)
- Dual mode cellular telephone systems
- Zero blind slot TDMA systems
- Spread spectrum communication systems (CDMA)
- Cable TV Tuners (CATV)

Pin Descriptions

Pin No.	Pin Name	I/O	Description
1	OUT0	O	Programmable CMOS output. Level of the output is controlled by IF_N [17] bit.
2	VCC _{RF}	-	RF PLL power supply voltage input. Must be equal to Vcc _{IF} . May range from 2.7 V to 5.5 V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.
3	V _{PRF}	-	Power supply for RF charge pump. Must be $\geq V_{CCRF}$ and V _{ccIF} .
4	CP _{ORF}	O	RF charge pump output. Connected to a loop filter for driving the control input of an external VCO.
5	GND	-	Ground for RF PLL digital circuitry.
6	fin RF	I	RF prescaler input. Small signal input from the VCO.
7	$\overline{\text{fin RF}}$	I	RF prescaler complimentary input. A bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane.
8	GND	-	Ground for RF PLL analog circuitry.
9	OSCx	I/O	Dual mode oscillator output or RF R counter input. Has a Vcc/2 input threshold when configured as an input and can be driven from an external CMOS or TTL logic gate. Can also be configured as an output to work in conjunction with OSCin to form a crystal oscillator. (See functional description 1.1 and programming description 3.1.)
10	OSCin	I	Oscillator input which can be configured to drive both the IF and RF R counter inputs or only the IF R counter depending on the state of the OSC programming bit. (See functional description 1.1 and programming description 3.1.)
11	FoLD	O	Multiplexed output of N or R divider and RF/IF lock detect. Active High/Low CMOS output except in analog lock detect mode. (See programming description 3.1.5.)
12	RF_EN	I	RF PLL Enable. Powers down RF N and R counters, prescaler, and will TRI-STATE® the charge pump output when LOW. Bringing RF_EN high powers up RF PLL depending on the state of RF_CTL_WORD. (See functional description 1.9.)
13	IF_EN	I	IF PLL Enable. Powers down IF N and R counters, prescaler, and will TRI-STATE the charge pump output when LOW. Bringing IF_EN high powers up IF PLL depending on the state of IF_CTL_WORD. (See functional description 1.9.)
14	CLOCK	I	High impedance CMOS Clock input. Data for the various counters is clocked into the 24 - bit shift register on the rising edge.
15	DATA	I	Binary serial data input. Data entered MSB first. The last two bits are the control bits. High impedance CMOS input.
16	LE	I	Load enable high impedance CMOS input. Data stored in the shift registers is loaded into one of the 4 internal latches when LE goes HIGH. (See functional description 1.7.)

Connection Diagram (Continued)

Pin No.	Pin Name	I/O	Description
17	GND	-	Ground for IF analog circuitry.
18	$\overline{\text{fin}}_{\text{IF}}$	I	IF prescaler complimentary input. A bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane.
19	fin_{IF}	I	IF prescaler input. Small signal input from the VCO.
20	GND	-	Ground for IF digital circuitry.
21	CP_{OIF}	O	IF charge pump output. For connection to a loop filter for driving the input of an external VCO.
22	$\text{V}_{\text{P}_{\text{IF}}}$	-	Power supply for IF charge pump. Must be $\geq \text{V}_{\text{ccRF}}$ and V_{ccIF} .
23	$\text{V}_{\text{cc}_{\text{IF}}}$	-	IF power supply voltage input. Must be equal to V_{ccRF} . Input may range from 2.7 V to 5.5 V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.
24	OUT1	O	Programmable CMOS output. Level of the output is controlled by IF_N [18] bit.

LMX2353 PLLatinum™ Fractional N Single 2.5 GHz Frequency Synthesizer

General Description

The LMX2353 is a monolithic integrated fractional N frequency synthesizer, designed to be used in a local oscillator subsystem for a radio transceiver. It is fabricated using National's 0.5µ ABIC V silicon BiCMOS process. The LMX2353 contains dual modulus prescalers along with modulo 15 or 16 fractional compensation circuitry in the N divider. A 16/17 or 32/33 prescale ratio can be selected for the LMX2353. Using a fractional N phase locked loop technique, the LMX2353 can generate very stable low noise control signals for UHF and VHF voltage controlled oscillators (VCO's).

The LMX2353 has a highly flexible 16 level programmable charge pump supplies output current magnitudes from 100 µA to 1.6 mA. Serial data is transferred into the LMX2353 via a three wire interface (Data, LE, Clock). Supply voltage can range from 2.7V to 5.5V. The LMX2353 features very low current consumption; typically 4.5 mA at 3.0V. The LMX2353 is available in a 16-pin TSSOP or a 16-pad CSP surface mount plastic package.

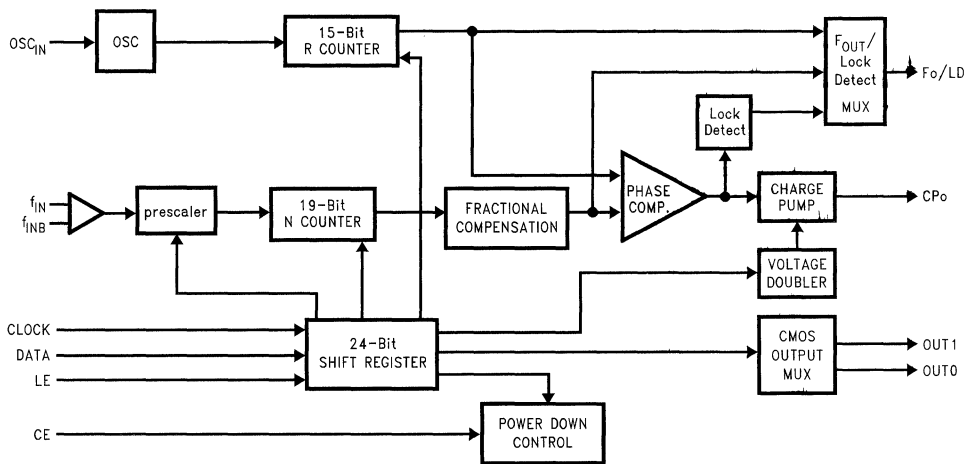

Features

- 2.7V – 5.5V operation
- Low Current Consumption
I_{CC} = 4.5 mA typ @ V_{CC} = 3.0V
- Programmable or Logical Power Down Mode
I_{CC} = 5 µA typ @ V_{CC} = 3.0V
- Modulo 15 or 16 fractional N divider
Supports ratios of 1, 2, 3, 4, 5, 8, 15, or 16
- Programmable charge pump current levels
100 µA to 1.6 mA in 100 µA steps
- Digital Filtered Lock Detect

Applications

- Portable wireless communications (PCS/PCN, cordless)
- Zero blind slot TDMA systems
- Cellular and Cordless telephone systems
- Spread spectrum communication systems (CDMA)

12	13	GND	—	Ground.
13	14	V _{CC}	—	PLL power supply voltage input. May range from 2.7V to 5.5V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.
14	15	OUT1	—	Programmable CMOS output. Level of the output is controlled by F2[18] bit.
15	16	OUT0	—	Programmable CMOS output. Level of the output is controlled by F2[17] bit.

LMX2370/LMX2371/LMX2372

PLLatinum™ Dual Frequency Synthesizer for RF Personal Communications

LMX2370 2.5 GHz/1.2 GHz
LMX2371 2.0 GHz/1.2 GHz
LMX2372 1.2 GHz/1.2 GHz

The LMX237x are available in a 24-pad chip scale (CSP) or a 20-pin TSSOP surface mount plastic package.

General Description

The LMX237x family of monolithic, integrated dual frequency synthesizers, including prescalers, is designed to be used as a first and second local oscillator for dual mode or dual conversion transceivers. It is fabricated using National's 0.5u ABICV silicon BiCMOS process. The LMX237x contains two dual modulus prescalers. A 32/33 or a 16/17 prescaler can be selected for the 2.5 GHz and 2.0 GHz RF synthesizers with the 16/17 prescaler rated for input frequencies below 1.2 GHz. A 16/17 or an 8/9 prescaler can be selected for the 1.2 GHz RF synthesizers with the 8/9 prescaler rated for input frequencies below 550 MHz. Using a digital phase locked loop technique, the LMX237x can generate very stable, low noise control signals for UHF and VHF voltage controlled oscillators (VCOs). Serial data is transferred into the LMX237x via a 1.8 V three wire interface (Data, Enable, Clock) compatible with low voltage baseband processors. Supply voltage can range from 2.7V to 5.5V. The LMX237x family features very low current consumption typically: LMX2370 - 6.0 mA at 3V, LMX2371 - 5.0 mA at 3V, LMX2372 - 4.0 mA at 3V.

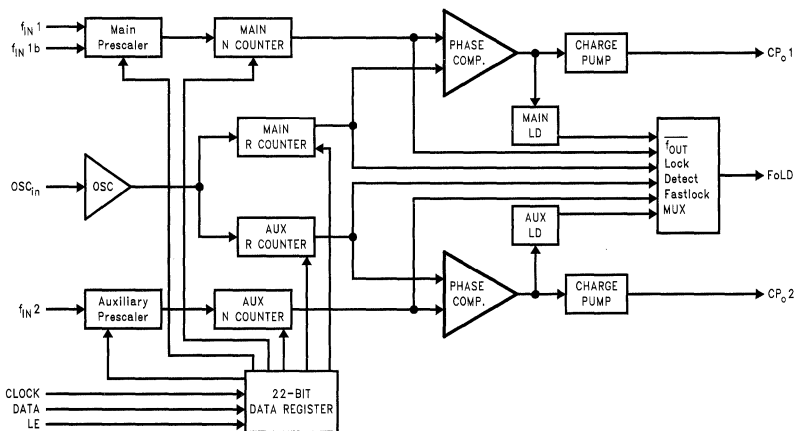

Features

- 2.7V–5.5V operation
- Ultra low current consumption
- Low phase detector noise floor
- Low voltage MICROWIRE™ interface (1.8V up to V_{CC})
- Low prescaler values
 - 32/33 at $f_{IN} \leq 2.5$ GHz
 - 16/17 at $f_{IN} \leq 1.2$ GHz
 - 8/9 at $f_{IN} \leq 550$ MHz
- Selectable charge pump current levels
- Selectable FastLock™ mode
- Enhanced ESD protection
- Available in small 24-pad chip scale package (3.5 x 4.5 x 1.0 mm)

Applications

- Portable wireless communications (PCS/PCN, cordless)
- Dual mode cellular telephone systems
- Spread spectrum communication systems (CDMA)
- Cable TV tuners (CATV)

Pin Descriptions

Pin No.		Pin Name	I/O	Description	
24-Pin CSP	20-Pin TSSOP				
24	1	V _{CC1}	—	Power supply voltage input for RF analog and RF digital circuits. Input may range from 2.7V to 5.5V. V _{CC1} must equal V _{CC2} . Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.	
2	2	V _{p1}	—	Power supply for Main charge pump. Must be ≥ V _{CC} .	
3	3	CP _{o1}	O	Internal Main charge pump output. For connection to a loop filter for driving the input of an external VCO.	
4	4	GND	—	Ground for Main digital circuitry.	
5	5	f _{IN1}	I	Main prescaler input. Small signal input from the VCO.	
6	6	f _{IN1b}	I	Main prescaler complementary input. For single ended operation, a bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane.	
7	7	GND	—	Ground for Main analog circuitry.	

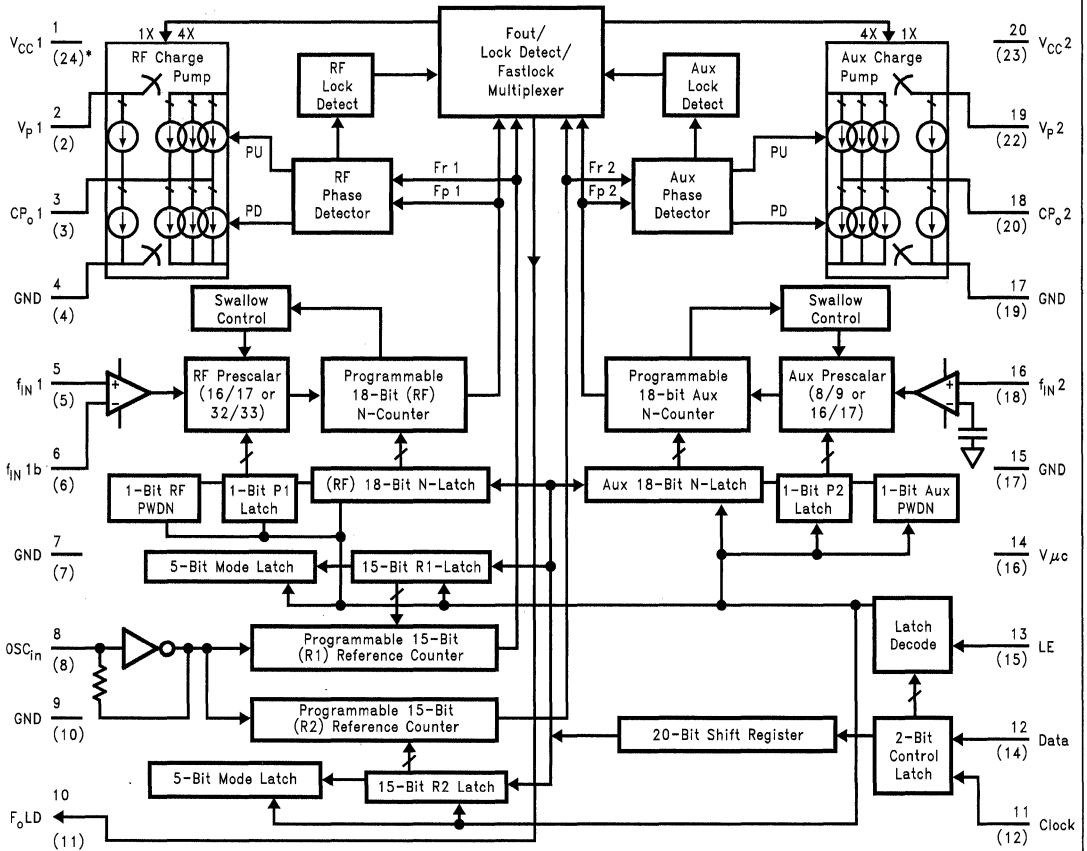

Pin Descriptions (Continued)

Pin No.		Pin Name	I/O	Description	
24-Pin CSP	20-Pin TSSOP				
8	8	OSC _{in}	I	Oscillator input. The input has a $V_{CC}/2$ input threshold and can be driven from an external CMOS or TTL logic gate.	
10	9	GND	—	Ground for Aux digital, MICROWIRE, FoLD, and oscillator circuits.	
11	10	FoLD	O	Multiplexed output of the Main/Aux programmable or reference dividers, Main/Auxiliary lock detect signals and Fastlock mode. CMOS output (see <i>Programmable Modes in the Datasheet</i>).	
12	11	Clock	I	High impedance CMOS Clock input. Data for the various counters is clocked in on the rising edge, into the 22-bit shift register.	
14	12	Data	I	Binary serial data input. Data entered MSB first. The last two bits are the control bits. High impedance CMOS input.	
15	13	LE	I	Load enable. High impedance CMOS input. When LE goes HIGH, data stored in the shift registers is loaded into one of the 4 appropriate latches (control bit dependent).	
16	14	V _{μc}	—	Power supply for MICROWIRE circuitry. Must be $\leq V_{CC}$. Typically connected to same supply level as μ processor or baseband controller to enable programming at low voltages.	
17	15	GND	—	Ground for Aux analog circuitry.	
18	16	f _{IN2}	I	Auxiliary prescaler input. Small signal input from the VCO.	
19	17	GND	—	Ground for Aux digital, MICROWIRE, FoLD, and oscillator.	
20	18	CP _{o2}	O	Aux internal charge pump output. For connection to a loop filter for driving the input of an external VCO.	
22	19	V _{p2}	—	Power supply for Aux charge pump. Must be $\geq V_{CC}$.

LMX3161

Single Chip Radio Transceiver

General Description

The LMX3161 Single Chip Radio Transceiver is a monolithic, integrated radio transceiver optimized for use in a Digital Enhanced Cordless Telecommunications (DECT) system. It is fabricated using National's ABIC V BiCMOS process ($f_T = 18$ GHz).

The LMX3161 contains phase locked loop (PLL), transmit and receive functions. The 1.1 GHz PLL block is shared between transmit and receive section. The transmitter includes a frequency doubler, and a high frequency buffer. The receiver consists of a 2.0 GHz low noise mixer, an intermediate frequency (IF) amplifier, a high gain limiting amplifier, a frequency discriminator, a received signal strength indicator (RSSI), and an analog DC compensation loop. The PLL, doubler, and buffers can be used to implement open loop modulation along with an external VCO and loop filter. The circuit features on-chip voltage regulation to allow supply voltages ranging from 3.0V to 5.5V. Two additional voltage regulators provide a stable supply source to external discrete stages in the Tx and Rx chains.

The IF amplifier, high gain limiting amplifier, and discriminator are optimized for 110 MHz operation, with a total IF gain of 85 dB. The single conversion receiver architecture pro-

vides a low cost, high performance solution for communications systems. The RSSI output may be used for channel quality monitoring.

The Single Chip Radio Transceiver is available in a 48-pin 7mm X 7mm X 1.4mm PQFP surface mount plastic package.

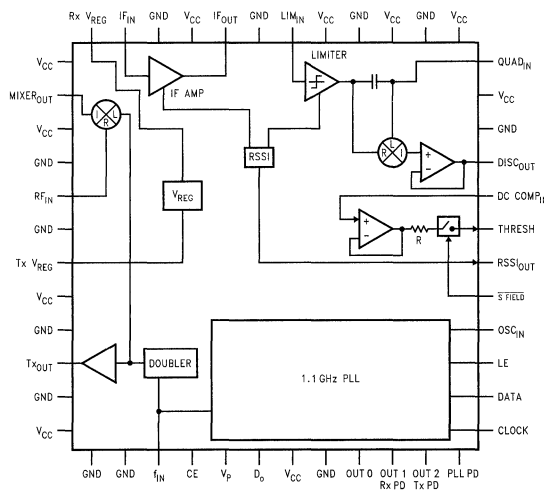

Features

- Single chip solution for DECT RF transceiver
- RF sensitivity to -93 dBm; RSSI sensitivity to -100 dBm
- Two regulated voltage outputs for discrete amplifiers
- High gain (85 dB) intermediate frequency strip
- Allows unregulated 3.0V–5.5V supply voltage
- Power down mode for increased current savings
- System noise figure 6.5 dB (typ)

Applications

- Digital Enhanced Cordless Telecommunications (DECT)
- Personal wireless communications (PCS/PCN)
- Wireless local area networks (WLANs)
- Other wireless communications systems

LMX3161 Pin Diagram (Continued)

Pin No.	Pin Name	I/O	Description
1	V _{CC}	—	Power supply for CMOS section of PLL and ESD bussing.
2	MIXER _{OUT}	O	IF output from the mixer.
3	V _{CC}	—	Power supply for mixer section.
4	GND	—	Ground.
5	RF _{IN}	I	RF input to the mixer.
6	GND	—	Ground.
7	Tx V _{REG}	—	Regulated power supply for external PA gain stage.
8	V _{CC}	—	Power supply for analog sections of PLL and doubler.
9	GND	—	Ground.
10	Tx _{OUT}	O	Frequency doubler output.
11	GND	—	Ground.
12	V _{CC}	—	Power supply for analog sections of PLL and doubler.
13	GND	—	Ground.
14	GND	—	Ground.
15	f _{IN}	I	RF Input to PLL and frequency doubler.
16	CE	I	Chip Enable. Pulling LOW powers down entire chip. Taking CE HIGH powers up the appropriate functional blocks depending on the state of bits F6, F7, F11, and F12 programmed in F-latch. It is necessary to initialize the internal registers once, after the power up reset. The registers' contents are kept even in power-down condition.
17	V _P	—	Power supply for charge pump.
18	D _o	O	Charge pump output. For connection to a loop filter for driving the input of an external VCO.
19	V _{CC}	—	Power supply for CMOS section of PLL and ESD bussing.
20	GND	—	Ground.
21	OUT 0	O	Programmable CMOS output. Refer to Function Register Programming Description section for details.
22	Rx PD/OUT 1	I/O	Receiver power down control input or programmable CMOS output. Refer to Function Register Programming Description section for details.
23	Tx PD/OUT 2	I/O	Transmitter power down control input or programmable CMOS output. Refer to Function Register Programming Description section for details.
24	PLL PD	I	PLL power down control input. LOW for PLL normal operations, and HIGH for PLL power saving.
25	CLOCK	I	MICROWIRE™ clock input. High impedance CMOS input with Schmitt Trigger.
26	DATA	I	MICROWIRE data input. High impedance CMOS input with Schmitt Trigger.
27	LE	I	MICROWIRE load enable input. High impedance CMOS input with Schmitt Trigger.
28	OSC _{IN}	I	Oscillator input. High impedance CMOS input with feedback.
29	S FIELD	I	DC compensation circuit enable. While LOW, the DC compensation circuit is enabled and the threshold is updated through the DC compensation loop. While HIGH, the switch is opened, and the comparator threshold is held by the external capacitor.
30	RSSI _{OUT}	O	Received signal strength indicator (RSSI) output.
31	THRESH	O	Threshold level to external comparator.
32	DC COMP _{IN}	I	Input to DC compensation circuit.
33	DISC _{OUT}	O	Demodulated output of discriminator.
34	GND	—	Ground.
35	V _{CC}	—	Power supply for the discriminator circuit.
36	QUAD _{IN}	I	Quadrature input for tank circuit.
37	V _{CC}	—	Power supply for limiter output stage.
38	GND	—	Ground.
39	V _{CC}	—	Power supply for limiter gain stages.
40	GND	—	Ground.
41	V _{CC}	—	Power supply for IF amplifier gain stages.

LMX3161 Pin Diagram (Continued)

Pin No.	Pin Name	I/O	Description
42	LIM _{IN}	I	IF input to the limiter.
43	GND	—	Ground.
44	IF _{OUT}	O	IF output from IF amplifier.
45	V _{CC}	—	Power supply for IF amplifier output.
46	GND	—	Ground.
47	IF _{IN}	I	IF input to IF amplifier.
48	Rx V _{REG}	—	Regulated power supply for external LNA stages.

LMX3162

Single Chip Radio Transceiver

General Description

The LMX3162 Single Chip Radio Transceiver is a monolithic, integrated radio transceiver optimized for use in ISM 2.45 GHz wireless systems. It is fabricated using National's ABiC V BICMOS process ($f_T = 18$ GHz).

The LMX3162 contains phase locked loop (PLL), transmit and receive functions. The 1.3 GHz PLL is shared between transmit and receive sections. The transmitter includes a frequency doubler, and a high frequency buffer. The receiver consists of a 2.5 GHz low noise mixer, an intermediate frequency (IF) amplifier, a high gain limiting amplifier, a frequency discriminator, a received signal strength indicator (RSSI), and an analog DC compensation loop. The PLL, doubler, and buffers can be used to implement open loop modulation along with an external VCO and loop filter. The circuit features on-chip voltage regulation to allow supply voltages ranging from 3.0V to 5.5V. Two additional voltage regulators provide a stable supply source to external discrete stages in the Tx and Rx chains.

The IF amplifier, high gain limiting amplifier, and discriminator are optimized for 110 MHz operation, with a total IF gain of 85 dB. The single conversion receiver architecture provides a low cost, high performance solution for communications systems. The RSSI output may be used for channel quality monitoring.

The Single Chip Radio Transceiver is available in a 48-pin 7mm X 7mm X 1.4mm PQFP surface mount plastic package.

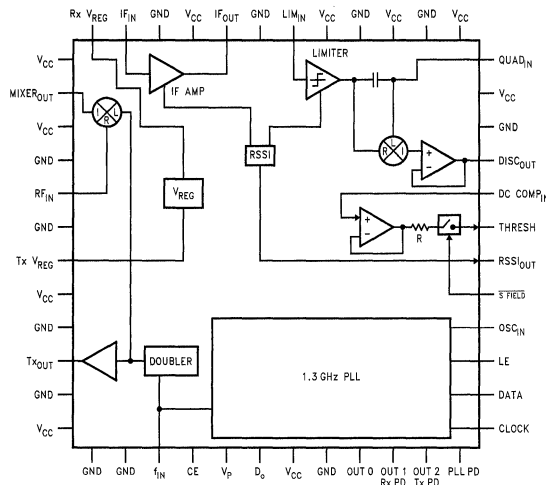

Features

- Single chip solution for ISM 2.45 GHz RF transceiver

LMX5080

PLLatinum™ 2.7 GHz Low Power Dual Modulus Prescaler for RF Personal Communications

General Description

The LMX5080 integrated dual modulus prescaler, is designed to be used in a synthesized local oscillator for 2.5 GHz wireless transceivers. It is fabricated using National's 0.5µ ABiCV silicon BiCMOS process. The LMX5080 contains three dual modulus prescalers. Either a 128/130, 256/158 or a 512/514 prescaler can be selected for up to 2.7 Gz RF input frequencies. The prescaler inputs can be driven either differentially, or single ended with the use of a coupling capacitor on one of the inputs to ground. The LMX5080 CMOS output is optimized to generate very stable, low switching noise output signals. The LMX5080 prescaler can be used in conjunction with a low frequency Phase Lock Loop to form a frequency synthesizer suitable for UHF transceivers. Supply voltage can range from 2.7V to 5.5V. The LMX5080 features low current consumption; typically 7.0 mA at 5V V_{CC} .

The LMX5080 is available in a 8-pin Small Outline (SOP) surface mount plastic package.

Features

- 2.7V to 5.5V operation
- Low current consumption: 7 mA (typ) @ 5V
- -40°C to +85°C low noise CMOS output
- Selectable dual modulus prescaler
 - 128/130
 - 256/258
 - 512/514
- 8-pin small package outline (SOP)

Applications

- 2.5 GHz wireless communications systems (ISM)
- Direct Broadcast Satellite systems (DBS)
- Cable TV tuners (CATV)

Pin Descriptions

Pin No.	Pin Name	I/O	Description
1	IN	I	RF small signal prescaler input. Small signal input from the voltage controlled oscillator
2	V _{CC}	—	Power Supply voltage input may range from 2.7V to 5.5V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.
3	SW1	I	Divide Ratio Control. CMOS logic input. Pin functionality is described in the Modulus Control Truth Table.
4	OUT	O	Prescaler Output. CMOS level output for connection to low frequency PLL input.
5	GND	—	Ground for analog and digital signals.
6	MC	I	Modulus Control Input. High impedance CMOS logic input. Pin functionality is described in the Modulus Control Truth Table.
7	SW2	I	Divide Ratio Control. High impedance CMOS logic input. Pin functionality is described in the Modulus Control Truth Table.
8	IN-bar	I	RF small signal prescaler complementary input. In single-ended mode, a bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane. The IN and IN-bar can be driven differentially when the bypass capacitor is omitted.

LMX2323

PLLatinum™ 2.0 GHz Frequency Synthesizer for RF Personal Communications

General Description

The LMX2323 is a high performance frequency synthesizer with integrated 32/33 dual modulus prescaler designed for RF operation up to 2.0 GHz. Using a proprietary digital phase locked loop technique, the LMX2323's linear phase detector characteristics can generate very stable, low noise control signals for UHF and VHF voltage controlled oscillators.

Serial data is transferred into the LMX2323 via a three-line MICROWIRE™ interface (Data, LE, Clock). Supply voltage range is from 2.7V to 5.5V. The LMX2323 features very low current consumption, typically 3.5mA at 3V. The charge pump provides 4 mA output current.

The LMX2323 is manufactured using National's ABiC V BiCMOS process and is packaged in a 16-pin TSSOP.

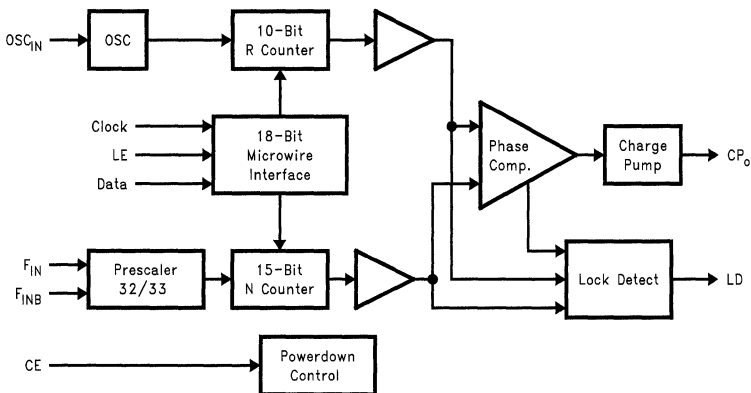

Features

- RF operation up to 2.0 GHz
- 2.7V to 5.5V operation
- Low current consumption: $I_{CC} = 3.5\text{mA}$ (typ) at $V_{CC}=3.0\text{V}$
- Digital Lock Detect
- Dual modulus prescaler: 32/33
- Internal balanced, low leakage charge pump

Applications

- Cellular telephone systems (GSM, NADC, CDMA, PDC, PHS)
- Personal wireless communications (DCS-1800, DECT, CT-1+)
- Wireless local area networks (WLANs)
- DCS/PCS infrastructure equipment
- Other wireless communication systems

Pin Descriptions

Pin No.	Pin Name	I/O	Description
1	OSC _{IN}	I	Oscillator input. A CMOS inverting gate input. The input has a $V_{CC}/2$ input threshold and can be driven from an external CMOS or TTL logic gate.
3	V _P	—	Power supply for charge pump. Must be $\geq V_{CC}$.
4	V _{CC}	—	Power supply voltage input. Input may range from 2.7V to 5.5V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.
5	CP _O	O	Internal charge pump output. For connection to a loop filter for driving the voltage control input of an external oscillator.
6	GND	—	Ground.
7	f _{INB}	I	RF prescaler complimentary input. In single-ended mode, a bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane. The LMX2323 can be driven differentially when a bypass capacitor is omitted.
8	f _{IN}	I	RF prescaler input. Small signal input from the voltage controlled oscillator.
9	Clock	I	High impedance CMOS Clock input. Data is clocked in on the rising edge, into the various counters and registers.
10	Data	I	Binary serial data input. Data entered MSB first. LSB is control bit. High impedance CMOS input.
11	LE	I	Load Enable input. When Load Enable transitions HIGH, data is loaded into either the N or R register (control bit dependent). See timing diagram.
12	CE	I	PLL Enable. A LOW on CE powers down the device asynchronously and TRI-STATE [®] s the charge pump output.
14	LD	O	Lock detect output. This pin can be programmed to provide R counter output, N counter output, digital lock detect (CMOS logic) or analog lock detect (open drain).
2, 13, 15, 16	NC		No Connect.

LMX2354

Dual Low Power Frequency Synthesizer

LMX2354 2.5 GHz/550 MHz

General Description

The LMX2354 is part of a family of monolithic integrated fractional N/Integer N frequency synthesizers designed to be used in a local oscillator subsystem for a radio transceiver. It is fabricated using National's 0.5 μ ABiC V silicon BiCMOS process. The LMX2354 contains quadruple modulus prescalers along with modulo 15 or 16 fractional compensation circuitry in the RF divider. The LMX2354 provides a continuous divide ratio of 80 to 32767 in 16/17 / 20/21 (1.2 GHz–2.5 GHz) fractional mode and 40 to 16383 in 8/9 / 12/13 (550 MHz–1.2 GHz) fractional mode. The IF circuitry for the LMX2354 contains an 8/9 prescaler, and is fully programmable. Using a fractional N phase locked loop technique, the LMX2354 can generate very stable low noise control signals for UHF and VHF voltage controlled oscillators (VCO's).

For the RF PLL, a highly flexible 16 level programmable charge pump supplies output current magnitudes from 100 μ A to 1.6 mA. Two uncommitted CMOS outputs can be used to provide external control signals, or configured to Fast-Lock™ mode. Serial data is transferred into the LMX2354 via a three wire interface (Data, LE, Clock). Supply voltage can range from 2.7V to 5.5V. The LMX2354 family features very low current consumption; typically LMX2354 (2.5 GHz) — 7.0 mA. The LMX2354 are available in a 24-pin TSSOP surface mount plastic package and 24-pin CSP.

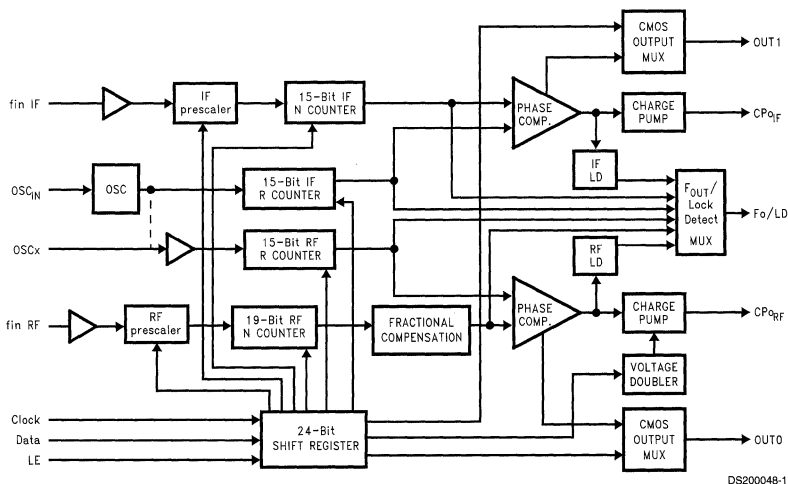

Features

- Pin compatible/functional equivalent to the LMX2354
- Enhanced Low Noise Fractional Engine
- 2.7V to 5.5V operation
- Low current consumption
LMX2354: $I_{CC} = 7$ mA typical at 3V
- Programmable or logical power down mode:
 $I_{CC} = 5$ μ A typical at 3V
- Modulo 15 or 16 fractional RF N divider supports ratios of 1, 2, 3, 4, 5, 8, 15, or 16
- Programmable charge pump current levels
RF 100 μ A to 1.6 mA in 100 μ A steps
IF 100 μ A or 800 μ A
- Digital filtered lock detect
- Available in 24-pin TSSOP and 24-pin CSP

Applications

- Portable wireless communications (PCS/PCN, cordless)
- Dual mode cellular telephone systems
- Zero blind slot TDMA systems
- Spread spectrum communication systems (CDMA)
- Cable TV Tuners (CATV)

Pin Descriptions

Pin No.	Pin No.	Pin Name	I/O	Description
1	24	OUT0	O	Programmable CMOS output. Level of the output is controlled by IF_N [17] bit.
2	1	V _{CCRF}	—	RF PLL power supply voltage input. Must be equal to V _{CCIF} . May range from 2.7V to 5.5V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.
3	2	V _{PRF}	—	Power supply for RF charge pump. Must be ≥V _{CCRF} and V _{CCIF} .
4	3	CP _{ORF}	O	RF charge pump output. Connected to a loop filter for driving the control input of an external VCO.
5	4	GND	—	Ground for RF PLL digital circuitry.
6	5	fin RF	I	RF prescaler input. Small signal input from the VCO.
7	6	fin RF	I	RF prescaler complimentary input. A bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane.
8	7	GND	—	Ground for RF PLL analog circuitry.
9	8	OSC _{RF}	I	Dual mode oscillator output or RF R counter input. Has a V _{CC} /2 input threshold when configured as an input and can be driven from an external CMOS or TTL logic gate.
10	9	OSC _{IF}	I	Oscillator input which can be configured to drive both the IF and RF R counter inputs or only the IF R counter depending on the state of the OSC programming bit. (See functional description 1.1 and programming description 3.1.)
11	10	Fo/LD	O	Multiplexed output of N or R divider and RF/IF lock detect. CMOS output. (See programming description 3.1.5.)

Pin Descriptions (Continued)

Pin No.	Pin No.	Pin Name	I/O	Description
12	11	RF_EN	I	RF PLL Enable. Powers down RF N and R counters, prescaler, and TRI-STATE® charge pump output when LOW. Bringing RF_EN high powers up RF PLL depending on the state of RF_CTL_WORD. (See functional description 1.9.)
13	12	IF_EN	I	IF PLL Enable. Powers down IF N and R counters, prescaler, and TRI-STATE charge pump output when LOW. Bringing IF_EN high powers up IF PLL depending on the state of IF_CTL_WORD. (See functional description 1.9.)
14	13	CLOCK	I	High impedance CMOS Clock input. Data for the various counters is clocked into the 24-bit shift register on the rising edge.
15	14	DATA	I	Binary serial data input. Data entered MSB first. The last two bits are the control bits. High impedance CMOS input.
16	15	LE	I	Load Enable high impedance CMOS input. Data stored in the shift registers is loaded into one of the 4 internal latches when LE goes HIGH. (See functional description 1.7.)
17	16	GND	—	Ground for IF analog circuitry.
18	17	fin IF	I	IF prescaler complimentary input. A bypass capacitor should be placed as close as possible to this pin and be connected directly to the ground plane.
19	18	fin IF	I	IF prescaler input. Small signal input from the VCO.
20	19	GND	—	Ground for IF digital circuitry.
21	20	CPoIF	O	IF charge pump output. For connection to a loop filter for driving the input of an external VCO.
22	21	VpIF	—	Power supply for IF charge pump. Must be $\geq V_{CCRF}$ and V_{CCIF} .
23	22	VCCIF	—	IF power supply voltage input. Must be equal to V_{CCRF} . Input may range from 2.7V to 5.5V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane.
24	23	OUT1	O	Programmable CMOS output. Level of the output is controlled by IF_N [18] bit.

LMX3305

Triple Phase Locked Loop for RF Personal Communications

General Description

The LMX3305 contains three Phase Locked Loops (PLL) on a single chip. It has a RF PLL, an IF Rx PLL and an IF Tx PLL for CDMA applications. The RF fractional-N PLL uses a 16/17/20/21 quadruple modulus prescaler for PCS application and a 8/9/12/13 quadruple modulus prescaler for cellular application. Both quadruple modulus prescalers offer modulo 1 through 16 fractional compensation circuitry. The RF fractional-N PLL can be programmed to operate from 800 MHz to 1400MHz in cellular band and 1200MHz to 2300 MHz in PCS band. The IF Rx PLL and the IF Tx PLL are integer-N frequency synthesizers that operate from 45 MHz to 600 MHz with 8/9 dual modulus prescalers. Serial data is transferred into the LMX3305 via a microwire interface (Clock, Data, & LE).

The RF PLL provides a fastlock feature allowing the loop bandwidth to be increased by 3X during initial lock-on.

The supply voltage of the LMX3305 ranges from 2.7V to 3.6V. It typically consumes 9 mA of supply current and is packaged in a 24-pin CSP package.

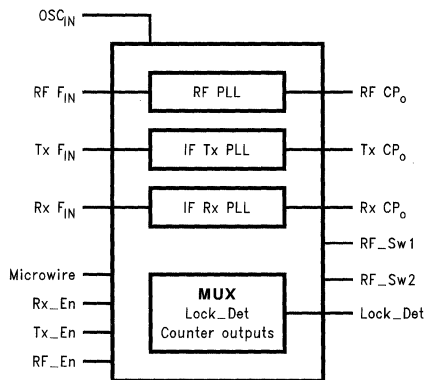

Features

- Three PLLs integrated on a single chip
- RF PLL fractional-N counter
- 16/17/20/21 RF quadruple modulus prescaler for PCS application
- 8/9/12/13 RF quadruple modulus prescaler for cellular application
- 2.7V to 3.6V operation
- Low current consumption: $I_{CC} = 9 \text{ mA}$ (typ) at 3.0V
- Programmable or logical power down mode: $I_{CC} = 10 \mu\text{A}$ (typ) at 3.0V
- RF PLL Fastlock feature with timeout counter
- Digital lock detect
- Microwire Interface with data preset
- 24-pin CSP package

Applications

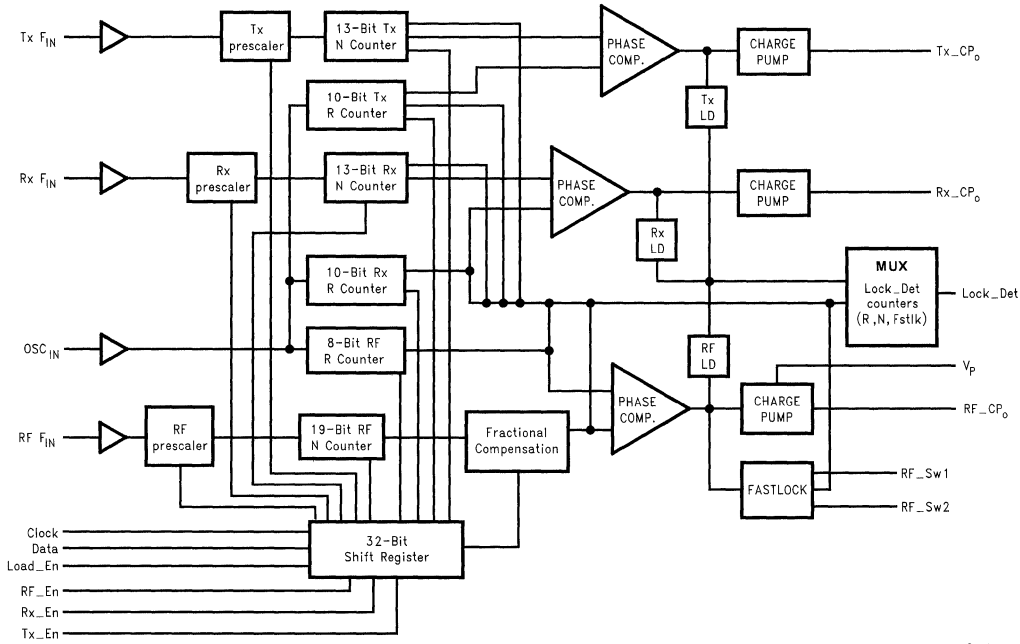

- CDMA Cellular telephone systems

Pin Descriptions

Pin No.	Pin Name	I/O	Description
1	RF_CP _o	O	Charge pump output for RF PLL. For connection to a loop filter for driving the input of an external VCO.
2	RF_GND	PWR	RF PLL ground.
3	RF_F _{IN}	I	RF prescaler input. Small signal input from the RF Cellular or PCS VCO.
4	RF_V _{CC}	PWR	RF PLL power supply voltage. Input may range from 2.7V to 3.6V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane. Tx V _{CC} = Rx V _{CC} = RF V _{CC} .
5	Lock_Det	O	Multiplexed output of the RF, Rx, and Tx PLL's analog or digital lock detects. The outputs from the R, N and Fastlock counters can also be selected for test purposes. Refer to Section 2.3.4 for more detail.
6	N/C		No Connect.
7	RF_En	I	RF PLL enable pin. A LOW on RF En powers down the RF PLL and TRI-STATE [®] s the RF PLL charge pump.
8	Rx_En	I	Rx PLL enable pin. A LOW on Rx En powers down the Rx PLL and TRI-STATEs the Rx PLL charge pump.
9	Tx_En	I	Tx PLL enable pin. A LOW on Tx En powers down the Tx PLL and TRI-STATEs the Tx PLL charge pump.
10	Clock	I	High impedance CMOS clock input. Data for the various counters is clocked on the rising edge into the CMOS input.
11	Data	I	Binary serial data input. Data entered MSB first.
12	LE	I	High impedance CMOS input. When LE goes LOW, data is transferred into the shift registers. When LE goes HIGH, data is transferred from the internal registers into the appropriate latches.
13	Tx_F _{IN}	I	Tx prescaler input. Small signal input from the Tx VCO.
14	Tx_CP _o	O	Charge pump output for Tx PLL. For connection to a loop filter for driving the input of an external VCO.
15	Tx_GND		Tx PLL ground.
16	Tx_V _{CC}	PWR	Tx PLL power supply voltage input. Input may range from 2.7V to 3.6V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane. Tx V _{CC} = Rx V _{CC} = RF V _{CC} .
17	OSC _{IN}	I	PLL reference input which has a V _{CC} /2 input threshold and can be driven from an external CMOS or TLL logic gate. The R counter is clocked on the falling edge of the OSC _{IN} signal.
18	Rx_V _{CC}	PWR	Rx PLL power supply voltage. Input ranges from 2.7V to 3.6V. Bypass capacitors should be placed as close as possible to this pin and be connected directly to the ground plane. Tx V _{CC} = Rx V _{CC} = RF V _{CC} .
19	Rx_GND	PWR	Rx PLL ground.
20	Rx_CP _o	O	Charge pump output for Rx PLL. For connection to a loop filter for driving the input of an external VCO.
21	Rx_F _{IN}	I	Rx prescaler input. Small signal input from the Rx VCO.
22	RF_Sw1	O	An open drain NMOS output which can be use for bandswitching or Fastlocking the RF PLL. (During Fastlock mode a second loop filter damping resistor can be switched in parallel with the first to ground.) Refer to Section 2.5.3 for more detail.
23	RF_Sw2	O	An open drain NMOS output which can be use for bandswitching or Fastlocking the RF PLL. (During Fastlock mode a second loop filter damping resistor can be switched in parallel with the first to ground.) Refer to Section 2.5.3 for more detail.
24	V _p	O	RF PLL charge pump power supply. An internal voltage doubler can be enabled in 3V applications to allow the RF charge pump to operate over a wider tuning range.

LMX5001

Dedicated Bluetooth Link Controller

General Description

The LMX5001 Dedicated Bluetooth™ Link Controller has been designed to interface with the LMX3162, Single Chip Radio Transceiver to provide a rapid design path to a complete Bluetooth physical layer.

The LMX5001 also offers a low power and cost competitive solution to the Bluetooth Link Controller function.

The LMX5001 can be attached to a Link Management Controller, or Host processor performing the Link Management function to implement a complete Bluetooth interface.

Bluetooth is a world-wide recognized wireless communication standard, which operates in the ISM band (2.4 GHz), offering a low cost and convenient wireless replacement for data/voice cable links between fixed and mobile electronic devices.

Utilizing a GFSK modulation scheme, with frequency hopping, Bluetooth is able to offer a low power, low cost, robust and spectrally efficient spread spectrum packet data system.

Features

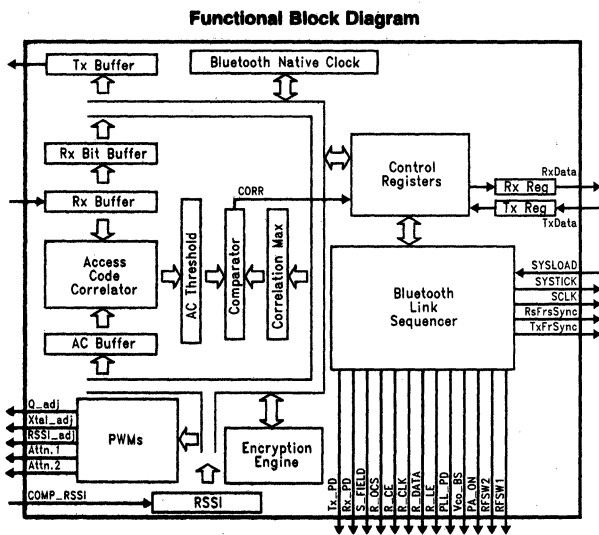

- Bluetooth Specification 1.0B compliant
- Bluetooth physical layer, available today
- Supports Class 1, 2 and 3 Bluetooth (20 dBm, 4 dBm and 0 dBm links)
- 1/8 bit sampling resolution
- Power management for Tx, Rx and PLL

- Piconet and Scatternet communication capable
- Good Bluetooth radio range coverage (when coupled with the LMX3162)
- Support for RSSI channel quality monitoring
- Bluetooth Encryption Engine

Applications

- PCMCIA Cards
- Mobile Phones
- Laptop PCs
- Palmtop PCs
- Desktop PCs
- Computer Peripherals
- Wireless Modems
- PDAs
- Palmtops
- P.O.T.S
- Digital Cameras
- Fax
- Printers
- Bar-code Readers
- Notepads
- Cordless Headsets
- In-vehicle Communications

Block Diagram

Connection Diagram

DS101340-7

Pin Descriptions

Pin No.	Pin Name	I/O	Description
1	BT_TxData	O	Transmit data
2	VCO_BS	O	VCO band switch control signal.
3	S_FIELD2	O	LMX3162 DC compensation circuit enable. This signal is enabled (low) throughout the correlation phase.
4	S_FIELD1	O	LMX3162 DC compensation circuit enable. At the beginning of the correlation phase this signal is enabled (low) for 15 μ s. For the remainder of the correlation phase this signal is PWM by 1/8 (cycle time = 1 μ s).
5	R_OSC	O	LMX3162 4 MHz oscillator input to the PLL synthesizer. This signal is only enabled when the LMX3162 is active.
6	R_DATA	O	MICROWIRE™ data to LMX3162.
7	R_LE	O	MICROWIRE load enable to LMX3162.
8	R_CLK	O	MICROWIRE clock to LMX3162.
9	PLL_PD	O	LMX3162 PLL power down. This signal is used to open the PLL loop or powering down the PLL. The PLL loop is opened when transmitting to make it possible to FSK modulate the VCO. When receiving it is optional to open the PLL loop (configured by the PLLOpenRX bit in threshold_msb).
10	Tx_PD	O	LMX3162 Transmitter power down. For power conservation, the Transmitter is only powered during Transmit Frames.
11	Rx_PD	O	LMX3162 Receiver power down. For power conservation, the Receiver is only powered during Receive Frames.
12	R_CE	O	LMX3162 chip enable. When the LMX5001 is in Idle Mode the LMX3162 is powered down.
13	V _{CC}	Power	+3.3V
14	GND	Power	0V
15	RFSW1	O	Antenna switch control.
16	RFSW2	O	Antenna switch control. This signal is RFSW1 inverted,
17	PA_ON	O	Switches the external PA on/off for 20 dBm/0 dBm transmission, respectively.

Pin Descriptions (Continued)

Pin No.	Pin Name	I/O	Description
18	GPIO0 (XTAL Config)	I/O	XTAL configuration during reset (Note 1).
19	GPIO1 (XTAL Config)	I/O	XTAL configuration during reset (Note 1).
20	LPXTALI	I	128 kHz XTAL connection for low power mode. This is used in low power mode. If the low power mode is not used it is not necessary with at XTAL here. External 128 kHz clock can also be feed in here.
21	LPXTALO	O	128 kHz XTAL connection.
22	GPIO2	I/O	General Purpose I/O
23	GPIO3	I/O	General Purpose I/O
24	GPIO4	I/O	General Purpose I/O
25	TxData	I	LCI Data Transmit
26	RxData	O	LCI Data Receive
27	RxFrSync	O	LCI Receive Frame Sync.
28	TrFrSync	O	LCI Transmit Frame Sync.
29	SCLK	O	LCI Serial Clock.
30	PWDN	O	Power Down to Link Management Controller
31	PWDNACK	I	Power Down Acknowledge from Link Management Controller
32	Xtal_adj	O	PWM signal to make adjustments to the XTAL.
33	XTALI	I	16 MHz XTAL connection. (External clock input).
34	XTALO	O	16 MHz XTAL connection.
35	SYSTICK	O	Systick generated from the internal LMX5001 Master/Slave Counter.
36	SYSLOAD	I	When low holds the LMX5001 in Idle Mode. A rising edge causes a system load. After a rising edge the LMX5001 will start to load control data from and store status information to the LMC via the LCI.
37	V _{CC}	Power	
38	GND	Power	
39	Reset	I	Reset. After Reset is released the LMX5001 will be in Idle Mode, awaiting a SYSLOAD.
40	Test0	I	Should be tied low. This signal is used in production test.
41	Test1	I	Should be tied low. This signal is used in production test.
42	CLKOUT	O	Xtal clock output to Link Management Controller. This signal can be disabled using the Sysload Command (for power saving).
43	GPIO5	I/O	General Purpose I/O
44	Q_adj	O	PWM signal to make it possible to adjust the quadrature tank circuit to the LMX3162.
45	RSSI_adj	O	PWM signal for use in creating an RSSI AD converter.
46	COMP_RSSI	I	Output from the external comparator in the RSSI AD converter.
47	S_Field3	O	DC Compensation circuit enable. At the beginning of the correlation phase, this signal is enabled (low) for 15 μ s.
48	BT_RxData	I	Receive data.

Note 1: During Reset GPIO0 and GPIO1 are sampled to setup the Xtal division ratio. The assumed external Xtal frequency is derived using the following relationship:

GPIO1	GPIO0	Xtal Division Ratio
Low	Low	Divide by 2 (i.e., 16 MHz XTAL or clock input).
Low	High	Divide by 3 (i.e., 24 MHz XTAL or clock input).
High	Low	Divide by 4 (i.e., 32 MHz XTAL or clock input).
High	High	Not used.

After Reset is completed, GPIO0 and GPIO1 can be used as normal general purpose I/Os.

Military-Aerospace Product Services

National Semiconductor is one of the largest suppliers of IC products for high reliability applications. We've provided analog and mixed-signal engineering for the military, aerospace and space markets for more than 30 years and our future commitment is equally firm.

Our expertise in system design and integration is creating innovative solutions for space, radar, communications, and other applications. For fast, effective product design, development, and delivery, National provides knowledge in systems integration and design, as well as organizational and partnership strategies—whether the product you need comes off-the-shelf or is customized for your environment and application.

National continually evaluates and develops new products for high reliability applications including expanding our space and RHA portfolio, introducing low-voltage analog, interface, and logic components and qualifying PLLs for the wireless market.

Processing Capabilities

Process Flow	Description
SPACE-LEVEL SYSTEMS	
QMLV	QML (DSCC Qualified Manufacturers List) product processed to MIL-PRF-38535 for space-level applications.
QMLV“R”	QML (DSCC Qualified Manufacturers List) product processed to MIL-PRF-38535 with guaranteed RHA radiation assurance testing.
JAN Class S	QPL (DSCC Qualified Products List) products processed to MIL-PRF-38535 Appendix B for space-level applications.
JAN Class S “R”	QPL (DSCC Qualified Products List) products processed to MIL-PRF-38535 Appendix B Level S with guaranteed RHA radiation assurance.
NAVAL/AIR/GROUND SYSTEMS	
QMLQ	QML (DSCC Qualified Manufacturers List) product processed to MIL-PRF-38535 for ground applications.
JAN Class B	QPL (DSCC Qualified Product List) products processed to MIL-PRF-38535 Appendix A Level B.
JAN Class B “R” QMLQ“R”	QPL (DSCC Qualified Product List) products processed to MIL-PRF-38535 Appendix A Level B, using space qualified die. Guaranteed RHA radiation assurance testing.
SMD	Standard Microcircuit Drawing tactical-level products processed to QML Level Q with electrical specifications controlled by DSCC. (National's SMD products that include an M or Q in the SMD part number are controlled by and fully compliant with MIL-PRF-38535 QML Q.)
/883	Products processed to MIL-STD-883 Level B for military with electrical specifications controlled by manufacturer.
COMMERCIAL GRADE SYSTEMS	
DC, HC	Hermetic commercially processed product.
OTHER SERVICES	
Radiation Testing	National Semiconductor has a large radiation-tested product offering, High Reliability devices, which are not currently offered as radiation-tolerant product, may be procured with Total Dose Testing performed as an add-on option. Reports of radiation test, performed by National, are available on many device types upon request.

Note 1: Linear products have been irradiated to High Dose rates as required by MIL-STD-883D, Method 1019.4. "Worst-case" conditions for Linear products are derived through Low Dose Rate testing.

Note 2: Using pre-radiation limits provides small additional margin for Linear products that are used in space environments tested at high dose rate.

Note 3: Parts qualified to RHA Level R are guaranteed to meet their post rad specifications after 100 krad(Si) total dose. Rad levels for all other products are typical and are not guaranteed.

Device Marking Conventions

National Semiconductor marks devices sold in order to provide device identification and manufacturing traceability information. The method of presenting the information marked on the device is dependent on the size of the device package and the area available for marking, as well as the nature and specifications of the device.

The information presented here describes the majority of the device markings a customer will observe. Specific package marking for a given device is given in the datasheet for that device. A package may have up to four lines of marking. The following information is usually contained in each line.

First line: Manufacturing information

- Company logo
- Wafer and/or assembly plant codes (optional) (see *Table 1* and *Table 2*)
- Date code (see *Table 3*, *Table 4*, and *Table 5*)
- Die run (wafer lot) code

Second Line: Device part number

- Device family (see *Table 6*)
- Device type
- Options
- Package code (see *Table 7*)

Third or fourth line: Optional, depending on device, package size, and customer

- Continuation of device identification (if too long for the second line)
- "Stampoff" number as required by specific customer request and specification
- Notice(s) related to copyright or trademarks

Very small packages, such as SOT-23, SOT-223, SC70, and SC90, are too small to contain all the information discussed above. Device identification marking is assigned differently, consisting of a four-character code:

- Device type (see *Table 9*)
- Device identification code
- Grade

These small packages also have a date code mark on the underside of the package. This is a one-character alpha code that represents a particular 6-week period during a 3-year span.

The specific marking for a given device can be found in the device datasheet. Other date code information, which would be typically found in the "first line" marking, is identified on the container labels.

Figure 1, *Figure 2*, and *Figure 3* show the typical arrangement of marking on large, medium, and very small packages. Codes that are most often used in the device marking are listed in the following tables. For chip scale packaged devices and all other recent updates, please refer to www.national.com/packaging.

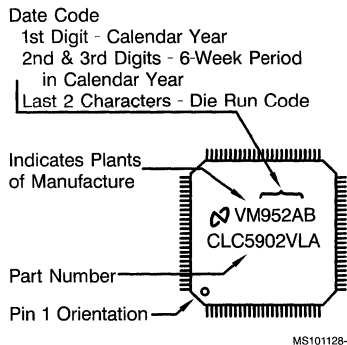

FIGURE 1. Marking Convention for Larger Packages

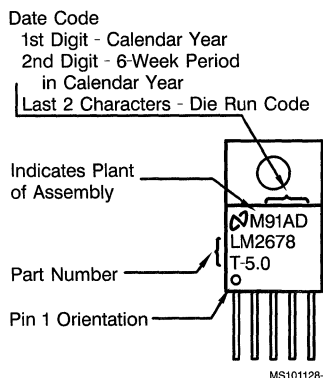

FIGURE 2. Marking Convention for Smaller Packages

FIGURE 3. Marking Convention for Very Small Packages

Wafer Fab and Assembly Plant Codes

Table 1 lists single-letter codes for National Semiconductor's wafer fabrication plants. Letters that are not in this list indicate wafer fabrication at one of National Semiconductor's approved sub-contractors.

TABLE 1. Wafer Fab Plant Code

Code	Fab Location
E	Arlington, TX
H	Greenock, UK
J	Greenock, UK
R	Santa Clara, CA
V	South Portland, ME
X	Arlington, TX
0	Multiple Fab Origin
1	USA (Sub-con)
2	Taiwan (Sub-con)
3	USA (Sub-con)
8	Singapore (Sub-con)
M	USA (Sub-con)
N	Israel (Sub-con)
P	China (Sub-con)
W	Japan (Sub-con)
Z	USA (Sub-con)

Table 2 lists single-letter codes for National Semiconductor's device assembly plants. Letters that are not in this list indicate device assembly at another of National Semiconductor's approved sub-contractors.

TABLE 2. Assembly Plant Code

Code	Assembly Location
F	Santa Clara, CA
M	Malacca, Malaysia
S	Singapore
B	Thailand (Sub-con)
D	Philippines (Sub-con)
E	Korea (Sub-con)
G	Canada (Sub-con)
H	Philippines (Sub-con)
I	Indonesia (Sub-con)
J	Japan (Sub-con)
K	Hong Kong (Sub-con)
N	Malaysia (Sub-con)
P	Malaysia (Sub-con)
T	Taiwan (Sub-con)
V	Malaysia (Sub-con)
X	USA (Sub-con)
Y	Malaysia (Sub-con)

Date of Manufacture Codes

Marks indicating the date of manufacture occur in four, three, two, or one digit versions. The date code represents a six-week period in which the device was assembled. The one-digit code is an alpha code for the very small packages, such as SOT, SC70, and SC90, and ranges from A to Z plus the character @, representing a 6-week period during a 3-year span. For the four, three, and two digit codes, the allocation of digits between year and week information in each scheme is summarized in Table 3:

TABLE 3. Year Code

Version	Year Digits	Week Range Digits
Four-digit (YYWW)	2	2
Three-digit (YWW)	1	2
Two-digit (YW)	1	1

Year: The year code is the last one or two digits of the calendar year of manufacture. For example, a device manufactured in 1999 would have a one-digit code of "9" or a two-digit code of "99".

Week: The week code is based on the starting calendar week of the six-week period during which the device was assembled. Table 4 summarizes the six-week date code schedule for one- and two-digit codes.

TABLE 4. Six-Week Period Code

Six-Week Period		Two-Digit Code	One-Digit Code
From Week	To Week	Code	Code
52	05	52	9
06	11	06	1
12	17	12	2
18	23	18	3
24	29	24	4
30	35	30	5
36	41	36	6
42	47	42	7
48	51	48	8

Some example date codes are shown in Table 5:

TABLE 5. Date Code Examples

Date of Manufacture	4-Digit Code	3-Digit Code	2-Digit Code
Calendar week 48, 1999	9948	948	98
Calendar week 6, 2000	0006	006	01
Calendar week 14, 2000	0012	012	02
Calendar week 32, 2001	0130	130	15

Die Run (Wafer Lot) Codes

The die run code is a two letter alpha code, ranging from AB through ZZ for each device, that is automatically assigned to each lot by an internal manufacturing system. When the date code is combined with the die run code, a unique identifier is created. In case of any problems with a device, this identification facilitates backward traceability to manufacturing processes where containment and corrective actions can be defined. These actions, in turn, minimize, and eventually eliminate, any negative impact on customers.

Device Family and Package Codes

TABLE 6. Device Family

ADC, ADCV	Data Conversion
CLC	Comlinear Products
COP	Control Oriented Processor
DAC	Data Conversion
DS, DSV	Interface Products
FPD	Flat Panel Devices
LF	Linear (Bi-FET™)
LM	Linear (Monolithic)
LMC	Linear CMOS
LMD	Linear DMOS
LMF, MF	Linear Monolithic Filter
LMS	Linear Second Source
LMV	Linear Low Voltage
LMX	Wireless
LP	Linear Low Power
LPC	Linear CMOS (Low Power)
LPV	Linear Low Power, Low Voltage
SC	Digital Cordless Telephony
SCAN	JTAG Products
TP	Telecom Products

TABLE 7. Package Type

BP	Micro Surface-Mount Device (MicroSMD)
D, DH	Ceramic Sidebrazed Dual-In-Line Package
DT, TD	Molded D-Pak (TO-252)
EL	Ceramic Quad Flatpack with J-Bend Lead Form
H, HA	3-Lead Metal Can (TO-46, TO-39)
J, JA	Ceramic Dual-In-Line Package (CerDIP)
K, KA	TO-3 Metal Can (Steel)
LD, LQ, LQA	Leadless Leadframe Package (LLP)
M, MA	Molded Small Outline Package (SO, SOT)
M3, M5, M6, MF	Molded Small Outline Package (SOT-23)
M7, MG	SC70

MEA, MQ, MS, MSA	Molded Shrink Small Outline Package (SSOP)
MM	Miniature Molded Small Outline Package (MSOP, Mini SO)
MP	Molded Small Outline Package (SOT-223)
MTA, MTC, MTD, MT, MTE	Molded Thin Shrink Small Outline Package (TSSOP)
MW, WM	Wide Body Molded Small Outline Package (SO, SOT)
N, NA	Molded Dual-In-Line Package (DIP)
S, TS	Molded Power Surface Mount Package (TO-263)
SL, SLB	Chip Scale Packaging (CSP)
T, TA	Molded TO-220 Power Package
TF	Molded TO-220 Power Package With Isolated Tab
U, UE	Ceramic Pin Grid Array (PGA)
V, VA	28 & 44-Lead Molded Plastic Leaded Chip Carrier (PLCC)
VBG, VC, VCC, VCE, VD, VE, VEF, VF, VH, VHJ, VI, VJ, VJG, VJQ, VK, VLJ, VM, VN, VNG, VO, VP, VQL, VUL, VUW	Molded Plastic Quad Flat Package (PQFP)
VEH, VF, VH, VJD, VS, VT, VU	Molded Plastic Thin Quad Flat Package (TQFP)
W, WA	Ceramic Flatpack
W, WQ	Ceramic Quad Flatpak
WG	Ceramic Small Outline Package and Quad Flatpak with Gullwing Lead Form
Z, ZA	Molded 3-Lead Transistor Package (TO-92)

TABLE 8. Package Type—CLC Products

E	Molded Small Outline Package (SO, SOT)
Q	Molded Plastic Leaded Chip Carrier (PLCC)

Small Surface-Mount Package Marking

For packages such as SOT23 (3-, 5-, and 6-lead), SOT223, and MSOP, there is insufficient space to mark the entire part number, so a four-character code is used instead. The first character represents the device type (see *Table 9*). The second two characters are a code relating to the device part number and options. The fourth character relates to device performance grade. This four-character "top mark" is usually fully specified in the device datasheet, for all options and grades of the product.

TABLE 9. Device Type Code

A	Amplifier
B	Buffer
C	Comparator
D	Driver
H	Comlinear
L	Low-Dropout Linear Regulator
R	Voltage Reference
S	Switched-Capacitor Voltage Converter
T	Temperature Sensor
Z	Audio

National Semiconductor's Die Products

As system designers search for ways to derive higher performance with reduced power consumption, size and weight—from their circuit designs, they are turning to suppliers of bare die and known good die for cost-effective solutions. Based on module size, design complexity, substrate, and tolerance for rework, the manufacturer must make a trade-off between the average yield for the die selected for module use and the cost of additional die upscreening.

With more than five years of experience in supplying Known Good Die—and the manufacturing expertise of more than thirty years in the semiconductor business National Semiconductor is uniquely equipped to support your KGD needs, evaluation, and selection. The Die Products Business Unit, or DPBU, will work with established customers under non-disclosure agreements to help them balance the trade-off between die cost and expected yields for the wide variety of die products that National Semiconductor offers.

While there is no single answer for all applications, there is a common goal among die customers that we understand. Whether your module supports cellular telephones ... or anti-lock brakes ... or deep-space satellites ... all die customers must procure die that meet their unique yield requirements at a price that allows their end product to be competitive.

Wide Product Availability of Die

To address the needs of Multi Chip, Chip on Board and Flip Chip Module manufacturers, National offers a complete product portfolio in die form.

- Analog
- Interface
- Logic
- Memory
- Microcontrollers
- SCAN boundary test (IEEE 1149.1)
- Networking
- Wireless

Since National has been manufacturing semiconductors for over thirty years, we know the capabilities and limitations of our products. Many of these technologies require little additional screening to meet 99.9% yields. Others require AC/DC probe as well as burn-in to meet similar yields. The DPBU can work with customers to understand the system specifications and long-term reliability requirements. Our product engineers can tailor an electrical test program around your needs ... or take into consideration the historic wafer yield as well as final package yields and offer the most cost-effective, reliable die in the industry.

Shipping Methods

Die provided through National Semiconductor's Die Products Business Unit are shipped to the customer in several methods, based on the customer's request. Whole wafers are shipped in plastic vials enclosed in anti-static bags. For die shipments, customers have a choice of Waffle Packs,

GEL-PAKS®, sawn wafers shipped on adhesive tape, or tape and reel. Information on typical die packaging and labeling is available on request.

Documentation Support

It is great to know that you can get the product you need in die form. However, die by itself is difficult to use, so National Semiconductor makes available all of the documentation you need to assemble our KGD into your multichip module or chip-on-board assembly. Our KGD datasheets, which are available on request, include information such as:

- Electrical specifications
- X, Y Coordinates for the bond pad locations
- A bonding diagram
- Die dimensions
- Bond pad dimensions, including passivation opening size
- Bond pad metal composition and thickness
- Die backside composition
- Die passivation
- Pinout list, including any pads which need to be jumpered or skipped
- Electrical potential of die backside
- LAT attributes data, if specified

Package Illustrations

Package photos are actual size. Please see web site at <http://www.national.com/packaging/> for specifications. Many National products are available in wafer, die, and known good die form. Please go to www.national.com/kgd for more information on known good die.
