TABLE OF CONTENTS

1.0 GENERAL INFORMATION

1.1 PROGRAM ABSTRACT

THIS DIAGNOSTIC PROGRAM WILL BE USED PRIMARILY BY FIELD SERVICE PERSONNEL TO EXERCISE THE LQPSE-F LETTER QUALITY PRINTER WITH A SERIAL INTERFACE TO A PDP-11 CPU.

THIS PROGRAM WILL GENERATE SEVERAL PAGES OF PRINT ON THE LQPSE-F PRINTER, LABELLING (WHEN ABLE) EACH TEST PRINT PATTERN WITH THE TEST TITLE. THIS WILL AID THE USER IN THE DIAGNOSIS OF PRINTER FAILURES.

THE DIAGNOSTIC PROGRAM WILL HELP IDENTIFY FUNCTIONAL PROBLEMS WITH THE PRINTER CONNECTED TO A PDP-11 BY ANY OF FIVE SERIAL INTERFACE DEVICES.

THIS DIAGNOSTIC HAS BEEN WRITTEN FOR USE WITH THE DIAGNOSTIC RUNTIME SERVICES SOFTWARE (SUPERVISOR). THESE SERVICES PROVIDE THE INTERFACE TO THE OPERATOR AND TO THE SOFTWARE ENVIRONMENT. THIS PROGRAM CAN BE USED WITH XXDP+, ACT, APT, SLIDE AND PAPER TAPE. FOR A COMPLETE DESCRIPTION OF THE RUNTIME SERVICES, REFER TO THE XXDP+ USER'S MANUAL. THERE IS A BRIEF DESCRIPTION OF THE RUNTIME SERVICES IN SECTION 2 OF THIS DOCUMENT.

1.2 SYSTEM REQUIREMENTS

THE MINIMUM HARDWARE CONFIGURATION FOR RUNNING THIS DIAGNOSTIC IS GIVEN HERE:

1) A PDP-11 CPU WITH AT LEAST 16K WORDS OF MEMORY.
2) A CONSOLE TERMINAL.
3) LQPSE-F PRINTER.
4) ONE OF THE FOLLOWING INTERFACES:
   A) DZ11,
   B) DL11-W,
   C) DLV11-J,
   D) DLV11-F,
   E) MXV11.

1.3 RELATED DOCUMENTS AND STANDARDS

1) XXDP+ USERS MANUAL - CHQUS.
2) PDP-11 DIAGNOSTIC SUPERVISOR PROGRAMMERS GUIDE: HOW TO WRITE TO THE SUPERVISOR.
3) DIAGNOSTIC ENGINEERING STANDARDS AND CONVENTIONS, PROGRAMMING PRACTICES.

1.4 DIAGNOSTIC HIERARCHY PREREQUISITES

THE MINIMUM HARDWARE CONFIGURATION DETAILED IN SECTION 1.2 WITH THE EXCEPTION OF THE PRINTER IS ASSUMED TO BE FULLY

OPERATIONAL BEFORE THIS DIAGNOSTIC IS RUN.

1.5 ASSUMPTIONS

2.0 OPERATING INSTRUCTIONS

THIS SECTION CONTAINS A BRIEF DESCRIPTION OF THE RUNTIME SERVICES.
FOR DETAILED INFORMATION, REFER TO THE XXDP+ USER'S MANUAL (CHQUS).

2.1 COMMANDS

THERE ARE ELEVEN LEGAL COMMANDS FOR THE DIAGNOSTIC RUNTIME SERVICES
(SUPERVISOR). THIS SECTION LISTS THE COMMANDS AND GIVES A VERY
BRIEF DESCRIPTION OF THEM. THE XXDP+ USER'S MANUAL HAS MORE DETAILS.

COMMAND	EFFECT
START	START THE DIAGNOSTIC FROM AN INITIAL STATE
RESTART	START THE DIAGNOSTIC WITHOUT INITIALIZING
CONTINUE	CONTINUE AT TEST THAT WAS INTERRUPTED (AFTER ^C)
PROCEED	CONTINUE FROM AN ERROR HALT
EXIT	RETURN TO XXDP+ MONITOR (XXDP+ OPERATION ONLY!)
ADD	ACTIVATE A UNIT FOR TESTING (ALL UNITS ARE CONSIDERED TO BE ACTIVE AT START TIME
DROP	DEACTIVATE A UNIT
PRINT	PRINT STATISTICAL INFORMATION (IF IMPLEMENTED BY THE DIAGNOSTIC - SECTION 4.0)
DISPLAY	TYPE A LIST OF ALL DEVICE INFORMATION
FLAGS	TYPE THE STATE OF ALL FLAGS (SEE SECTION 2.3)
ZFLAGS	CLEAR ALL FLAGS (SEE SECTION 2.3)

A COMMAND CAN BE RECOGNIZED BY THE FIRST THREE CHARACTERS. SO
YOU MAY, FOR EXAMPLE, TYPE "STA" INSTEAD OF "START".

2.2 SWITCHES

THERE ARE SEVERAL SWITCHES WHICH ARE USED TO MODIFY SUPERVISOR OPERATION.
THESE SWITCHES ARE APPENDED TO THE LEGAL COMMANDS. ALL OF THE LEGAL
SWITCHES ARE TABULATED BELOW WITH A BRIEF DESCRIPTION OF EACH.
IN THE DESCRIPTIONS BELOW, A DECIMAL NUMBER IS DESIGNATED BY "DDDDD".

SWITCH	EFFECT
/TESTS:LIST	EXECUTE ONLY THOSE TESTS SPECIFIED IN THE LIST. LIST IS A STRING OF TEST NUMBERS, FOR EXAMPLE - /TESTS:1:5:7-10. THIS LIST WILL CAUSE TESTS 1,5,7,8,9,10 TO BE RUN. ALL OTHER TESTS WILL NOT BE RUN.
/PASS:DDDDD	EXECUTE DDDDD PASSES (DDDDD = 1 TO 64000)
/FLAGS:FLGS	SET SPECIFIED FLAGS. FLAGS ARE DESCRIBED IN SECTION 2.3.
/EOP:DDDDD	REPORT END OF PASS MESSAGE AFTER EVERY DDDDD PASSES ONLY. (DDDDD = 1 TO 64000)
/UNITS:LIST	TEST/ADD/DROP ONLY THOSE UNITS SPECIFIED IN THE LIST. LIST EXAMPLE - /UNITS:0:5:10-12

```
                                        USE UNITS 0,5,10,11,12 (UNIT NUMBERS = 0-63)

                EXAMPLE OF SWITCH USAGE:

                        START/TESTS:1-5/PASS:1000/EOP:100

                THE EFFECT OF THIS COMMAND WILL BE: 1) TESTS 1 THROUGH 5 WILL BE
                EXECUTED, 2) ALL UNITS WILL TESTED 1000 TIMES AND 3) THE END OF
                PASS MESSAGES WILL BE PRINTED AFTER EACH 100 PASSES ONLY.  A
                SWITCH CAN BE RECOGNIZED BY THE FIRST THREE CHARACTERS.  YOU MAY,
                FOR EXAMPLE, TYPE "/TES:1-5" INSTEAD OF "/TESTS:1-5".

                BELOW IS A TABLE THAT SPECIFIES WHICH SWITCHES CAN BE USED BY EACH
                COMMAND.

                        TESTS   PASS    FLAGS   EOP     UNITS
                        ------------------------------------
                START     X       X       X       X       X
                RESTART   X       X       X       X       X
                CONTINUE          X       X       X
                PROCEED                   X
                DROP                                      X
                ADD                                       X
                PRINT
                DISPLAY                                   X
                FLAGS
                ZFLAGS
                EXIT

                2.3     FLAGS

                FLAGS ARE USED TO SET UP CERTAIN OPERATIONAL PARAMETERS SUCH AS
                LOOPING ON ERROR.  ALL FLAGS ARE CLEARED AT STARTUP AND REMAIN
                CLEARED UNTIL EXPLICITLY SET USING THE FLAGS SWITCH.  FLAGS
                ARE ALSO CLEARED AFTER A START COMMAND UNLESS SET USING THE
                FLAG SWITCH.  THE ZFLAGS COMMAND MAY ALSO BE USED TO CLEAR
                ALL FLAGS.  WITH THE EXCEPTION OF THE START AND ZFLAGS COMMANDS,
                NO COMMANDS AFFECT THE STATE OF THE FLAGS;  THEY REMAIN SET OR
                CLEARED AS SPECIFIED BY THE LAST FLAG SWITCH.

                        FLAG            EFFECT
                        ----            ----------------------------------
                        HOE             HALT ON ERROR - CONTROL IS RETURNED TO
                                        RUNTIME SERVICES COMMAND MODE
                        LOE             LOOP ON ERROR   (NOT SUPPORTED IN THIS
                                        DIAGNOSTIC)
                        IER*            INHIBIT ALL ERROR REPORTS
                        IBR*            INHIBIT ALL ERROR REPORTS EXCEPT
                                        FIRST LEVEL  (FIRST LEVEL CONTAINS
                                        ERROR TYPE, NUMBER, PC, TEST AND UNIT)
                        IXR*            INHIBIT EXTENDED ERROR REPORTS (THOSE
                                        CALLED BY PRINTX MACRO'S)
                        PRI             DIRECT MESSAGES TO LINE PRINTER
                        PNT             PRINT TEST NUMBER AS TEST EXECUTES
                        BOE             "BELL" ON ERROR
                        UAM             UNATTENDED MODE (NO MANUAL INTERVENTION)
```

```
                        ISR             INHIBIT STATISTICAL REPORTS (DOES NOT
                                        APPLY TO DIAGNOSTICS WHICH DO NOT SUPPORT
                                        STATISTICAL REPORTING)
                        IDR             INHIBIT PROGRAM DROPPING OF UNITS
                        ADR             EXECUTE AUTODROP CODE
                        LOT             LOOP ON TEST
                        EVL             EXECUTE EVALUATION (ON DIAGNOSTICS WHICH
                                        HAVE EVALUATION SUPPORT)

                                *ERROR MESSAGES ARE DESCRIBED IN SECTION 3.1

SEE THE XXDP+ USER'S MANUAL FOR MORE DETAILS ON FLAGS.  YOU MAY
SPECIFY MORE THAN ONE FLAG WITH THE FLAG SWITCH.  FOR EXAMPLE,
TO CAUSE THE PROGRAM TO LOOP ON ERROR, INHIBIT ERROR REPORTS
AND TYPE A "BELL" ON ERROR, YOU MAY USE THE FOLLOWING STRING:

        /FLAGS:IER:BOE

2.4  HARDWARE QUESTIONS

WHEN A DIAGNOSTIC IS STARTED, THE RUNTIME SERVICES WILL PROMPT
THE USER FOR HARDWARE INFORMATION BY TYPING "CHANGE HW (L) ?"
YOU MUST ANSWER "Y" AFTER A START COMMAND UNLESS THE HARDWARE
INFORMATION HAS BEEN "PRELOADED" USING THE SETUP UTILITY (SEE
CHAPTER 6 OF THE XXDP+ USER'S MANUAL).  WHEN YOU ANSWER THIS
QUESTION WITH A "Y", THE RUNTIME SERVICES WILL ASK FOR THE NUMBER
OF UNITS (IN DECIMAL).  YOU WILL THEN BE ASKED THE FOLLOWING
QUESTIONS FOR EACH UNIT.

Q1:     "CHOOSE PAGE WIDTH FOR THE PRINTER
         CHOOSE ONE:    1)80 CHARACTERS PER PRINTER LINE
                        2)132 CHARACTERS PER PRINTER LINE
         (1,2) >>

Q2:     "IF ALL DEFAULT VALUES FOR INTERFACE DESIRED,ENTER ^Z.
         IF DEFAULT DESIRED FOR A SINGLE INTERFACE CHARACTERISTIC
         DEPRESS <RETURN>.

        "ENTER CONTROL STATUS REGISTER (CSR) ADDRESS.>>

Q3:     "PRINTER CONNECTED TO A SINGLE LINE INTERFACE?

Q3-A:   "ENTER INTERFACE CHANNEL NUMBER FOR THE PRINTER.
                (ASKED ONLY IF Q3 WAS ANSWERED BY A "N")

2.5  SOFTWARE QUESTIONS

AFTER YOU HAVE ANSWERED THE HARDWARE QUESTIONS OR AFTER A RESTART
```

OR CONTINUE COMMAND, THE RUNTIME SERVICES WILL ASK FOR SOFTWARE
PARAMETERS. THESE PARAMETERS WILL GOVERN SOME DIAGNOSTIC SPECIFIC
OPERATION MODES. YOU WILL BE PROMPTED BY "CHANGE SW (L) ?"
IF YOU WISH TO CHANGE ANY PARAMETERS, ANSWER BY TYPING
"Y". THE SOFTWARE QUESTIONS AND THE DEFAULT VALUES ARE DESCRIBED
IN THE NEXT PARAGRAPH(S).

NONE

2.6 EXTENDED P-TABLE DIALOGUE

WHEN YOU ANSWER THE HARDWARE QUESTIONS, YOU ARE BUILDING ENTRIES
IN A TABLE THAT DESCRIBES THE DEVICES UNDER TEST. THE SIMPLEST
WAY TO BUILD THIS TABLE IS TO ANSWER ALL QUESTIONS FOR EACH
UNIT TO BE TESTED. IF YOU HAVE A MULTIPLEXED DEVICE SUCH AS
A MASS STORAGE CONTROLLER WITH SEVERAL DRIVES OR A COMMUNICATION
DEVICE WITH SEVERAL LINES, THIS BECOMES TEDIOUS SINCE MOST OF
THE ANSWERS ARE REPETITIOUS.

TO ILLUSTRATE A MORE EFFICIENT METHOD, SUPPOSE YOU ARE TESTING
A FICTIONAL DEVICE, THE XY11. SUPPOSE THIS DEVICE CONSISTS OF
A CONTROL MODULE WITH EIGHT UNITS (SUB-DEVICES) ATTACHED TO IT.
THESE UNITS ARE DESCRIBED BY THE OCTAL NUMBERS 0 THROUGH 7. THERE
IS ONE HARDWARE PARAMETER THAT CAN VARY AMONG UNITS CALLED THE
Q-FACTOR. THIS Q-FACTOR MAY BE 0 OR 1. BELOW IS A SIMPLE WAY
TO BUILD A TABLE FOR ONE XY11 WITH EIGHT UNITS.

```
        # UNITS (D) ?  8<CR>

UNIT 1
CSR ADDRESS (O) ?  160000<CR>
SUB-DEVICE # (O) ?  0<CR>
Q-FACTOR (O) 0 ?  1<CR>

UNIT 2
CSR ADDRESS (O) ?  160000<CR>
SUB-DEVICE # (O) ?  1<CR>
Q-FACTOR (O) 1 ?  0<CR>

UNIT 3
CSR ADDRESS (O) ?  160000<CR>
SUB-DEVICE # (O) ?  2<CR>
Q-FACTOR (O) 0 ?  <CR>

UNIT 4
CSR ADDRESS (O) ?  160000<CR>
SUB-DEVICE # (O) ?  3<CR>
Q-FACTOR (O) 0 ?  <CR>

UNIT 5
CSR ADDRESS (O) ?  160000<CR>
SUB-DEVICE # (O) ?  4<CR>
Q-FACTOR (O) 0 ?  <CR>

UNIT 6
CSR ADDRESS (O) ?  160000<CR>
SUB-DEVICE # (O) ?  5<CR>
```

```
                                Q-FACTOR (O) 0 ?  <CR>

                                UNIT 7
                                CSR ADDRESS (O) ?  160000<CR>
                                SUB-DEVICE # (O) ?  6<CR>
                                Q-FACTOR (O) 0 ?  1<CR>

                                UNIT 8
                                CSR ADDRESS (O)  160000<CR>
                                SUB-DEVICE # (O) ?  7<CR>
                                Q-FACTOR (O) 1 ?  <CR>

NOTICE THAT THE DEFAULT VALUE FOR THE Q-FACTOR CHANGES WHEN A
NON-DEFAULT RESPONSE IS GIVEN.  BE CAREFUL WHEN SPECIFYING
MULTIPLE UNITS!

AS YOU CAN SEE FROM THE ABOVE EXAMPLE, THE HARDWARE PARAMETERS
DO NOT VARY SIGNIFICANTLY FROM UNIT TO UNIT.  THE PROCEDURE SHOWN IS
NOT VERY EFFICIENT.

THE RUNTIME SERVICES CAN TAKE MULTIPLE UNIT SPECIFICATIONS HOWEVER.
LET'S BUILD THE SAME TABLE USING THE MULTIPLE SPECIFICATION
FEATURE.

                # UNITS (D) ?  8<CR>

                UNIT 1
                CSR ADDRESS (O) ?  160000<CR>
                SUB-DEVICE # (O) ?  0,1<CR>
                Q-FACTOR (O) 0 ?  1,0<CR>

                UNIT 3
                CSR ADDRESS (O) ?  160000<CR>
                SUB-DEVICE # (O) ?  2-5<CR>
                Q-FACTOR (O) 0 ?  0<CR>

                UNIT 7
                CSR ADDRESS (O) ?  160000<CR>
                SUB-DEVICE # (O) ?  6,7<CR>
                Q-FACTOR (O) 0 ?  1<CR>

AS YOU CAN SEE IN THE ABOVE DIALOGUE, THE RUNTIME SERVICES WILL
BUILD AS MANY ENTRIES AS IT CAN WITH THE INFORMATION GIVEN IN ANY
ONE PASS THROUGH THE QUESTIONS.  IN THE FIRST PASS, TWO ENTRIES
ARE BUILT SINCE TWO SUB-DEVICES AND Q-FACTORS WERE SPECIFIED.  THE
SERVICES ASSUME THAT THE CSR ADDRESS IS 160000 FOR BOTH SINCE IT
WAS SPECIFIED ONLY ONCE.  IN THE SECOND PASS, FOUR ENTRIES WERE
BUILT.  THIS IS BECAUSE FOUR SUB-DEVICES WERE SPECIFIED.  THE
"-" CONSTRUCT TELLS THE RUNTIME SERVICES TO INCREMENT THE DATA
FROM THE FIRST NUMBER TO THE SECOND.  IN THIS CASE, SUB-DEVICES
2, 3, 4 AND 5 WERE SPECIFIED.  (IF THE SUB-DEVICE WERE SPECIFIED
BY ADDRESSES, THE INCREMENT WOULD BE BY 2 SINCE ADDRESSES MUST
BE ON AN EVEN BOUNDARY.)  THE CSR ADDRESSES AND Q-FACTORS FOR
THE FOUR ENTRIES ARE ASSUMED TO BE 160000 AND 0 RESPECTIVELY
SINCE THEY WERE ONLY SPECIFIED ONCE.  THE LAST TWO UNITS ARE
SPECIFIED IN THE THIRD PASS.
```

```
                        THE WHOLE PROCESS COULD HAVE BEEN ACCOMPLISHED IN ONE PASS AS
                        SHOWN BELOW.

                                # UNITS (D) ?  8<CR>

                                UNIT 1
                                CSR ADDRESS (O) ?  160000<CR>
                                SUB-DEVICE # (O) ?  0-7<CR>
                                Q-FACTOR (O) 0 ?  0,1,0,,,,1,1<CR>

                        AS YOU CAN SEE FROM THIS EXAMPLE, NULL REPLIES (COMMAS ENCLOSING
                        A NULL FIELD) TELL THE RUNTIME SERVICES TO REPEAT THE LAST REPLY.

                        2.7 QUICK START-UP PROCEDURE  (XXDP+)

                        TO START-UP THIS PROGRAM:

                                1. BOOT XXDP+

                                2. GIVE THE DATE AND ANSWER THE LSI AND 50HZ (IF THERE
                                   IS A CLOCK) QUESTIONS

                                3. TYPE "R NAME", WHERE NAME IS THE NAME OF THE BIN OR BIC
                                   FILE FOR THIS PROGRAM

                                4. TYPE "START"

                                5. ANSWER THE "CHANGE HW" QUESTION WITH "Y"

                                6. ANSWER ALL THE HARDWARE QUESTIONS

                                7. ANSWER THE "CHANGE SW" QUESTION WITH "N" (NOT ASKED)

                        WHEN YOU FOLLOW THIS PROCEDURE YOU WILL BE USING ONLY THE
                        DEFAULTS FOR FLAGS AND SOFTWARE PARAMETERS.  THESE DEFAULTS
                        ARE DESCRIBED IN SECTIONS 2.3 AND 2.5.

                        3.0 ERROR INFORMATION

                        3.1 TYPES OF ERROR MESSAGES

                        THERE ARE THREE LEVELS OF ERROR MESSAGES THAT MAY BE ISSUED BY
                        A DIAGNOSTIC: GENERAL, BASIC AND EXTENDED.  GENERAL ERROR MESSAGES
                        ARE ALWAYS PRINTED UNLESS THE "IER" FLAG IS SET (SECTION 2.3).
                        THE GENERAL ERROR MESSAGE IS OF THE FORM:

                                NAME  TYPE  NUMBER  ON UNIT NUMBER  TST NUMBER PC:XXXXXX
                                ERROR MESSAGE

                        ,WHERE; NAME = DIAGNOSTIC NAME
                                TYPE = ERROR TYPE (SYS FATAL, DEV FATAL, HARD OR SOFT)
                                NUMBER = ERROR NUMBER
                                UNIT NUMBER = 0 - N (N IS LAST UNIT IN PTABLE)
                                TST NUMBER = TEST AND SUBTEST WHERE ERROR OCCURRED
                                PC:XXXXXX = ADDRESS OF ERROR MESSAGE CALL

                        BASIC ERROR MESSAGES ARE MESSAGES THAT CONTAIN SOME ADDITIONAL
```

INFORMATION ABOUT THE ERROR. THESE ARE ALWAYS PRINTED UNLESS
THE "IER" OR "IBR" FLAGS ARE SET (SECTION 2.3). THESE MESSAGES
ARE PRINTED AFTER THE ASSOCIATED GENERAL MESSAGE.

EXTENDED ERROR MESSAGES CONTAIN SUPPLEMENTARY ERROR INFORMATION
SUCH AS REGISTER CONTENTS OR GOOD/BAD DATA. THESE ARE ALWAYS
PRINTED UNLESS THE "IER", "IBR" OR "IXR" FLAGS ARE SET (SECTION 2.3).
THESE MESSAGES ARE PRINTED AFTER THE ASSOCIATED GENERAL ERROR
MESSAGE AND ANY ASSOCIATED BASIC ERROR MESSAGES.

3.2 SPECIFIC ERROR MESSAGES

"I/O FAILURE DETECTED AT PRINTER."
        PROBLEM WITH THE SELF TEST SEQUENCE. CHECK PRINTER ROM.

"PRINTER BUFFER FULL."
        A "CAN" CHARACTER HAS BEEN RECEIVED, AND THE PRINTER
        HAS DETECTED THAT ITS BUFFER LIMIT HAS BEEN REACHED.

"PROM/RAM FAILURE DETECTED BY PRINTER."
        VALID ONLY AFTER THE SELF TEST. CHECK THE PRINTER MEMORY.

"PRINTER ERROR: N OUT OF RANGE IN ESCAPE SEQUENCE."
        AN UNDEFINED OR OUT OF RANGE ARGUMENT HAS BEEN SENT TO
        THE PRINTER WITHIN AN ESCAPE SEQUENCE.(PRINTER COMMAND)

"PAUSE SWITCH PRESSED."
        THE PRINTER FRONT PANEL PAUSE SWITCH HAS BEEN PRESSED.

"RIBBON OUT ON PRINTER."
        THE PRINTER RIBBON MUST BE IN PLACE.

"UNDEFINED CHARACTER OR ESCAPE SEQUENCE RECEIVED."
        AN ILLEGAL SEQUENCE OR CHARACTER HAS BEEN RECEIVED.
        CHECK THE ADDRESS OF THE LAST TRANSMISSION WHICH
        IS GIVEN BY THE DIAGNOSTIC.

"SHEET FEEDER ERROR."
        THE SHEET FEEDER HAS FAILED TO OPERATE PROPERLY. THIS
        ERROR CONDITION MAY BE CLEARED BY SENDING AN "ESC 6" TO
        THE PRINTER.

"SOFTWARE ERROR"
        THIS MESSAGE SHOULD NOT PRINT UNLESS THE SOFTWARE HAS
        BEEN CORRUPTED.

"UNEXPECTED CHARACTER RECEIVED FROM PRINTER."
        AN XON, XOFF, ANSWER-BACK RESPONSE OR STATUS RESPONSE
        WAS EXPECTED, OR NO TRANSMISSION WAS EXPECTED FROM THE
        PRINTER. SOMETHING WAS NONE THE LESS RECEIVED.

"EXPECTED CHARACTER NOT RECEIVED FROM THE PRINTER."
        AN XON, XOFF, CAN, EOT, OR ESC WAS EXPECTED BUT NOT
        RECEIVED.

```
                        "INCORRECT CSR ADDRESS GIVEN.  TRY AGAIN."
                                THE USER HAS ENTERRED AN INCORRECT CSR ADDRESS OR THE
                                DEFAULT ADDRESSES DID NOT WORK WHEN TRYED.  THE USER
                                MUST NOW EXPLICITLY ENTER THE CORRECT CSR ADDRESS.

                        "INCORRECT CSR ADDRESS OR CHANNEL GIVEN. TRY AGAIN."
                                EITHER THE ADDRESS OR THE CHANNEL IS INCORRECT.

                        "FAILED TO TRANSMIT TO PRINTER."
                                THE TRANSMIT READY CONDITION COULD NOT BE OBTAINED.
                                CHECK THAT THE INTERFACE CABLE IS PROPERLY ATTACHED.

                        "WAITING FOR A CHARACTER FROM THE PRINTER."
                                THIS IS NOT AN ERROR MESSAGE.  IF THE CHARACTER IS NOT
                                RECEIVED EVENTUALLY, AN ERROR WILL OCCUR.  THIS IS AN
                                INDICATOR TO THE USER THAT THE PROGRAM IS IN A WAITING
                                STATE AND NOT SIMPLY "LOST".  WHEN THIS MESSAGE IS SEEN,
                                WAIT FOR NO MORE THAN FIVE MINUTES BEFORE TAKING ACTION.

                        "FAILED TO FIND PRINTER AT DEFAULT ADDRESSES.  RESTART PROGRAM."
                                        THIS INDICATES THAT THE DEFAULT SEQUENCE WHICH
                                        THE PROGRAM WAS INSTRUCTED TO EXERCISE FAILED
                                        TO FIND A PRINTER AT THE ASSUMED DEFAULT
                                        ADDRESSES.  THE USER MUST NOW RESTART THE
                                        PROGRAM, EXPLICILTY SPECIFYING THE CSR ADDRESS
                                        AND THE DZ11 CHANNEL (IF APPLICABLE) AND THE
                                        INTERFACE TYPE.

                        4.0 PERFORMANCE AND PROGRESS REPORTS

                        AT THE END OF EACH PASS, THE PASS COUNT IS GIVEN ALONG WITH THE
                        TOTAL NUMBER OF ERRORS REPORTED SINCE THE DIAGNOSTIC WAS STARTED.
                        THE "EOP" SWITCH CAN BE USED TO CONTROL HOW OFTEN THE END
                        OF PASS MESSAGE IS PRINTED.  SECTION 2.2 DESCRIBES SWITCHES.

                        NONE

                        5.0 DEVICE INFORMATION TABLES

                        P-TABLE ENTRIES:

                        CSRADD  -       CSR ADDRESS.  IF FOUND TO BE ZERO, THIS INDICATES
                                        THAT THE DEFAULT CSR ADDRESSES ARE TO BE TRIED AS
                                        THE CSR ADDRESS.  THE CSR ADDRESS IS THE ADDRESS OF
                                        THE RECEIVER CONTROL STATUS REGISTER IN THE SINGLE
                                        LINE INTERFACES AND THE RECEIVER AND TRANSMITTER
                                        CSR FOR THE DZ11 INTERFACE.

                        IOOPTN  -       I/O OPTION.  A LOGICAL VALUE.  IF EQUAL TO "Y" THEN
                                        A DZ11 INTERFACE IS ASSUMED.  IF EQUAL TO "N" THEN
                                        A SINGLE LINE INTERFACE IS ASSUMED.

                        PTRCHN  -       PRINTER CHANNEL.  THIS NUMBER (0-7) IS THE CHANNEL
                                        NUMBER ON A DZ11 INTERFACE WHICH IS CONNECTED TO THE
```

PRINTER.

LINCHS - PRINTER LINE SIZE CHOICE.
THIS NUMBER (1-2) CORRESPONDS TO
THE NUMBER OF CHARACTERS PER HORIZONTAL LINE DESIRED
ON THE PRINTER. THIS SHOULD BE CHOSEN BY THE USER
BASED ON THE WIDTH OF THE FORMS USED ON THE PRINTER.

6.0 TEST SUMMARIES

EACH TEST WILL PRINT THE CURRENT TEST TITLE ON THE PRINTER AS PART OF
THE TEST SEQUENCE. THIS WILL AID THE USER IN THE DIAGNOSIS PROCESS
BY INFORMING THE USER OF THE PURPOSE OF THE CURRENT TEST. THIS IS
THOUGHT TO BE PARTICULARY USEFUL WHEN THE USER IS RUNNING TESTS OUT OF
THE NUMERIC TEST SEQUENCE BECAUSE THE USUAL OVERALL TEST PRINT PATTERN
WILL BE DIFFERENT.

IN ALL TESTS, BEFORE AND AFTER EACH TRANSMISSION TO THE PRINTER, THE
RECEIVER BUFFER IS CHECKED. IF THE BUFFER CONTAINS A CHARACTER THEN
THE PROGRAM CHECKS TO SEE IF IT IS AN EOT, OR A CAN CHARACTER. IF THE
CHARACTER IS ONE OF THESE TWO THEN AN ERROR CONDITION EXISTS AND AN
ERROR HANDLING ROUTINE IS CALLED.

TEST 1 - SELF TEST

A SELF TEST IS INITIATED BY SENDING THE SEQUENCE "ESC N C"
TO THE PRINTER. IT IS ASSUMED THAT NO CAN OR EOT SIGNALS
WILL BE GENERATED IN THE PROCESS. A TIME DELAY WILL BE
GENERATED TO WAIT FOR THE SELF TEST COMPLETION. THE PRINTER
STATUS IS THEN EXAMINED. THE ARGUMENT N MAY BE ANY VALUE
WITH NO EFFECT TO THE TEST.

SELF TEST COMPLETION WILL BE CONFIRMED BY THE SOFTWARE BY
THE RECEPTION FROM THE PRINTER OF AN "XON" CHARACTER AND AN
ACCEPTABLE PRINTER STATUS WORD.

TEST 2 - UNDERLINE / NO UNDERLINE MODE TEST

A LINE OF CHARACTERS WILL BE PRINTED, ALTERNATING UNDERLINED
AND THEN NON-UNDERLINED CHARACTERS. THE MODE IS GENERATED BY
THE "ESC N G" SEQUENCE WHERE N=0 MEANS THAT UNDERLINE IS
INHIBITTED AND WHERE N=1 MEANS THAT UNDERLINE IS EMPLOYED.

```
571                             TEST 3 -        HAMMER HIT COUNT TEST
572
573                                             FOUR LINES OF TEXT WILL BE PRINTED, EACH LINE OF TEXT BEING
574                                             PRINTED WITH A DIFFERENT HIT COUNT.  THE RESULTING PRINT
575                                             PATTERN WILL BE FOUR LINES, ONE BLANK LINE (HIT COUNT 0),
576                                             AND THREE LINES OF INCREASING DARKNESS (INCREASING HIT COUNT).
577                                             THE "ESC N D" SEQUENCE IS USED WITH N EQUAL TO 0, 1, 2, AND
578                                             N<0.  THE N<0 SEQUENCE WILL RESULT IN A HIT COUNT OF ZERO,
579                                             N=0 IS A HIT COUNT OF ONE, N=1 IS A HIT COUNT OF TWO AND N=2
580                                             IS A HIT COUNT OF THREE.
581
582                             TEST 4 -        CARRIAGE POSITIONING TEST
583
584                                             IN THIS TEST, TWO CHARACTERS ARE PRINTED SEPARATED BY A
585                                             SPACE OF ADJUSTABLE WIDTH.  BOTH FORWARD AND REVERSE
586                                             CARRIAGE MOTIONS ARE EXERCISED.  THE RANGE OF THE SPACE
587                                             SIZE IS DICTATED BY THE CURRENT PAGE WIDTH.  THE SPACE
588                                             SIZE IS ADJUSTED BY SENDING THE "ESC N ;" SEQUENCE TO THE
589                                             PRINTER.  THE VALUE N IS PROPORTIONAL TO THE SPACE SIZE
590                                             AND MAY BE POSITIVE (RIGHT MOVEMENT) OR NEGATIVE (LEFT
591                                             MOVEMENT).
592
593                             TEST 5 -        PAPER POSITIONING TEST (VERTICAL)
594
595                                             THE VERTICAL SPACING IS ADJUSTED IN THIS TEST BY SENDING
596                                             THE SEQUENCE "ESC N 9" WHERE N IS PROPORTIONAL TO THE VERTICAL
597                                             SPACE SIZE.  IN THIS TEST A LINE OF CHARACTERS WILL BE PRINTED
598                                             AND A CARRIAGE RETURN - LINE FEED TRANSMITTED.  THE VERTICAL
599                                             SPACE SIZE WILL THEN BE ADJUSTED AND THE SEQUENCE WILL BE
600                                             REPEATED.  THIS SEQUENCE WILL BE PERFORMED OVER A REASONABLE
601                                             RANGE OF VERTICAL SPACE SIZES.
602
603                             TEST 6 -        PRINT ONE LINE OF EACH CHARACTER
604
605                                             ONE LINE OF EACH PRINTABLE CHARACTER WILL BE PRINTED TO
606                                             CONFIRM THAT ALL POSITIONS ON THE PRINT WHEEL WILL ACTUALLY
607                                             PRINT.
608
609                             TEST 7 -        PRINT A SWIRL PATTERN
610
611                                             THE COMPLETE CHARACTER SET IS PRINTED ONE LINE AT A TIME
612                                             IN A "SWIRL PATTERN"..
613
614                             TEST 8 -        WORST CASE RAPID MOTION TEST
615
616                                             THIS TEST WILL PUT THE PRINT WHEEL THROUGH A MECHANICALLY STRESSFUL
617                                             SITUATION BY REPEATEDLY PRINTING THE SEQUENCE "ACA:ACA:AC.."
618
619                             TEST 9 -        PRINT RANDOM CHARACTERS
620
621                                             THIS TEST WILL PRINT A RANDOM SEQUENCE OF CHARACTERS ON THE
622                                             PRINTER.
623
624                             TEST 10 -       PRINT OPERATOR SELECTED CHARACTERS
625
626                                             THIS TEST WILL PRINT CHARACTER SEQUENCES DEFINED BY THE
627                                             USER.  THE TEST IS ENDED BY ENTERRING Q<RETURN>.
```

```
628
629                         TEST 11 -       LIFT / DROP RIBBON BY OPERATOR CONTROL
630                                         (OPTIONAL - SPECIAL TEST)
631
632                                         THIS TEST WILL HAVE TWO MODES SELECTABLE ON THE TEST MENU:
633                                         AUTOMATIC MODE AND MANUAL MODE.  IN THE AUTOMATIC MODE THE
634                                         RIBBON WILL RAISE AND DROP AT A RATE OF ABOUT ONCE PER SECOND.
635                                         THIS SEQUENCE WILL CONTINUE UNTIL THE OPERATOR STOPS IT BY
636                                         ACTION TAKEN AT THE OPERATORS CONSOLE.  IN MANUAL MODE THE
637                                         OPERATOR WILL RAISE AND DROP THE RIBBON AT WILL BY PRESSING
638                                         CONSOLE KEYS AS SPECIFIED ON THE CONSOLE SCREEN.
639
640                         TEST 12 -       BIDIRECTIONAL FORMS TRACTOR (OPTIONAL - SPECIAL TEST)
641
642                                         A VARIABLE SIZE MATRIX OF CHARACTERS WILL BE PRINTED IN A
643                                         RANDOM ORDER, FORCING RANDOM MOVEMENT OF THE CARRIAGE IN ALL
644                                         FOUR DIRECTIONS.
645
646                         TEST 13 -       CUT SHEET FEEDER EXERCISER (OPTIONAL - SPECIAL TEST)
647
648                                         IN THIS TEST THE PAGE SIZE IS SET TO ELEVEN INCHES, A SHEET
649                                         IS FED FROM THE FRONT TRAY, A LINE IS PRINTED AT THE TOP OF
650                                         THE PAGE AND A LINE IS PRINTED AT THE BOTTOM OF THE PAGE.
651                                         THE PROCESS IS THEN REPEATED WITH THE REAR TRAY FEEDING WHICH
652                                         SHOULD AUTOMATICALLY EJECT THE PAGE IN THE PRINTER FROM THE
653                                         FRONT TRAY.

;----------------------------------------------------------------------------
;FUNCTIONAL DESCRIPTION:
;
;       GLOBAL PROCEDURE XMIT:
;
;       THIS PROCEDURE WILL TRANSMIT CHARACTER SEQUENCES TO THE PRINTER.
;       THE SEQUENCE WILL BE TRANSMITTED IN ONE OF TWO MODES: WITH
;       BIDIRECTIONAL PRINTING ENABLED AND WITH BIDIRECTIONAL PRINTING
;       DISABLED.  THERE ARE THREE ARGUMENTS SENT TO THIS ROUTINE IN
;       REGISTERS R1, R2, AND R3.  R1 IS EXPECTED TO CONTAIN THE ADDRESS
;       OF THE FIRST BYTE (ASCII) TO BE SENT TO THE PRINTER CONTROLLER.
;       R2 IS EXPECTED TO CONTAIN THE NUMBER OF BYTES TO BE TRANSMITTED
;       TO THE PRINTER FROM THE CONTIGUOUS ARRAY WHOSE ADDRESS IA IN R1.
;       R3, IF SET TO -1, ENABLES BIDIRECTIONAL PRINTING SOFTWARE TO
;       CONTROL THE TRANSMISSION PROCESS.  IF R3 IS EQUAL TO ZERO, THEN
;       NO BIDIRECTIONAL PRINTING IS PERMITTED AND ALL CARRIAGE CONTROL
;       CHARACTERS MUST BE EXPLICITLY SENT BY THE CALLING ROUTINE.
;
;
;
;---------------------------------------------------------------------------
;INPUTS
;
;       R1      -       ADDRESS OF STRING TO PRINT
;       R2      -       NUMBER OF BYTES IN STRING TO BE PRINTED.
;       R3      -       IF SET, BIDIRECTIONAL PRINTING IS TO BE ENABLED.
;
;OUTPUTS
;
;       THE STRING IS PRINTED ON THE PRINTER.
;       GREASE  -       IF SET TO -1, AN ERROR HAS OCCURRED.  SET FOR FAST EXIT
;
;SUBROUTINES USED
;
;       SENCHR  -       THIS ROUTINE WILL SEND THE CHARACTER TO THE PRINTER
;                       BUFFER (IF THERE IS ROOM IN THE BUFFER AND NO
;                       CHARACTERS ARE CURRENTLY BEING RECEIVED.
;SIDE EFFECTS
;
;       THE CONTENTS OF R1 AND R2 ARE NOT PRESERVED.  R3, R4, AND R5 ARE
;       PRESERVED.  IF A TRANSMISSION ERROR OCCURS, THIS ROUTINE WILL CAUSE A
;       GREASED EXIT TO OCCUR FROM THE CURRENT TEST.
;
;CALLING SEQUENCE
;
;       PUT THE STRING ADDRESS INTO R1, THE NUMBER OF CHARACTERS TO BE PRINTED
;       INTO R2 AND SET R3 TO ENABLE OR DISABLE THE BIDIRECTIONAL PRINTING.
;       SET R3 TO 0 FOR NO BIDIRECTIONAL PRINTING.  SET R3 TO -1 FOR
;       BIDIRECTIONAL PRINTING ENABLE.  THE CALL IS THEN...
;                       JSR     PC,XMIT
