                                ;*-----------
                                ;*THIS TEST IS DESIGNED TO TEST THE WRITE MICROCONTROLLER CHARACTER GENERATION
                                ;*LOGIC.  A KNOWN DATA PATTERN IS FED INTO THE BYTE ASSEMBLY LOGIC FROM
                                ;*THE DIAGNOSTIC DATA REGISTERS - 'DDR' - TO PROVIDE AN 8 BIT WIDE
                                ;*REPLACEMENT FOR MASSBUS DATA IN IMAGE MODE.
                                ;*
                                ;*THE BYTE ASSEMBLY LOGIC WILL 'BREAK UP' THE INPUT DATA (8 BITS)
                                ;*INTO THE DESIRED BYTE FORMAT TO BE WRITTEN ON TAPE.
                                ;*
                                ;*THIS TEST WILL CHECK THE OUTPUT OF THE WRITE MICRO TO BE CORRECT
                                ;*IN REGARD TO THE ECC CHARACTERS GENERATED AND THE PROPER LOCATION
                                ;*OF THESE CHARACTERS IN THE DATA STREAM.
