UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

	BIOLOGY	
	Paper 6 Alternative to practical	0610/06
		October/November 2005
	Candidates answer on the Question Pape There are no Additional Materials	er. 1 hour
Candidate Name		
Centre Number		Candidate Number

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen in the spaces provided on the Question Paper.

You may use a pencil for any diagrams, graphs or rough working.

DO NOT WRITE IN THE BARCODE.

DO NOT WRITE IN THE GREY AREAS BETWEEN THE PAGES.

Do not use staples, paper clips, highlighters, glue or correction fluid.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part questions.

This document consists of 8 printed pages and 4 blank pages.

1 Fifteen pieces of raw Irish potato, *Solanum tuberosum*, were cut carefully to a length of 60mm.

Three pieces were placed in each of five different concentrations of glucose solution and left for 2 hours. The pieces were removed and their lengths measured.

Table 1.1 shows the appearance of these pieces at the end of the two hours.

concentration of glucose solution / mol dm ⁻³	potato pieces after being left in glucose solutions	length of potato/mm	change in length/mm
0.2		165 267 366 mean66	
0.4		165 261 363 mean63.	
0.6		156 261 360	
		mean <u>59</u>	
0.8		1 2 3	
1.0		mean 1 2 3 mean	······

Examiner's Use

[1]

[2]

For

(ii) Calculate the mean [average] length of the potato pieces. The first three rows have been completed for you.
[1]

Table 1.1. Write in the figures on the dotted lines. Nine measurements have been

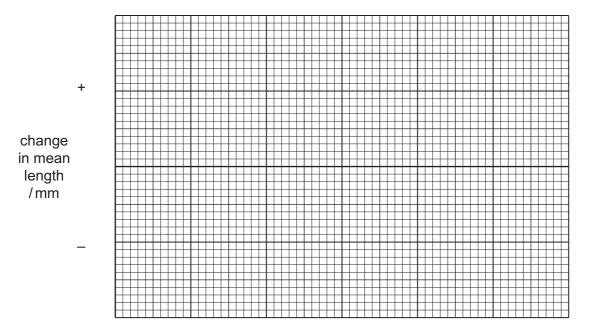

- (iii) Calculate the change in mean length in **all** five concentrations of glucose solutions.
- (iv) Explain why three pieces of potato were used in each solution and not just one piece.

[1]

(b) (i) Plot the change in mean length of potato against concentration of glucose solution on the grid below.

Draw a line of best fit through the points.

completed for you.

concentration of glucose solution/mol dm⁻³

[4]

(a) (i) Measure the length of each piece carefully and record these measurements in

(ii) Describe and explain the changes in mean length of the potato pieces in the different glucose solutions.

For Examiner's Use

[4]
Using the information from the graph, estimate the glucose concentration which results in no change in mean length.
[1]
Suggest why, at this glucose concentration, there is no change in length.

QUESTION 2 IS ON PAGE 6

2 Fig. 2.1 shows a fresh seed of broad bean, *Vicia faba*, which has been cut in half.

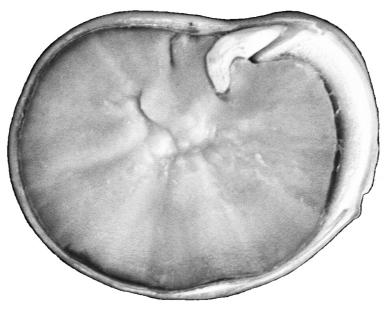

Fig. 2.1

(a) (i) Make a large, labelled drawing of the cut surface of the seed.

For Examiner's Use

(ii)	sure the length of the seed in Fig. 2.1 and in your drawing.			
	Indicate on Fig. 2.1 where the measurement was taken.			
	length of seed in Fig. 2.1			
	length of seed in your drawing			
	Calculate the magnification of your drawing.			
	Show your working.			
	magnification [3]			
<i>(</i> L-)	The base discussion is an example of a large state of a second sta			
(b)	The broad bean is an example of a legume. Legumes are a good source of protein.			
	Describe how you would compare the protein content of two different beans.			
	[4]			
	total [13]			

3 If all conditions required for growth are present, some yeast cells in a flask can divide every hour.

For Examiner's Use

Fig. 3.1 shows the number of yeast cells in a flask measured over a period of 12 hours.

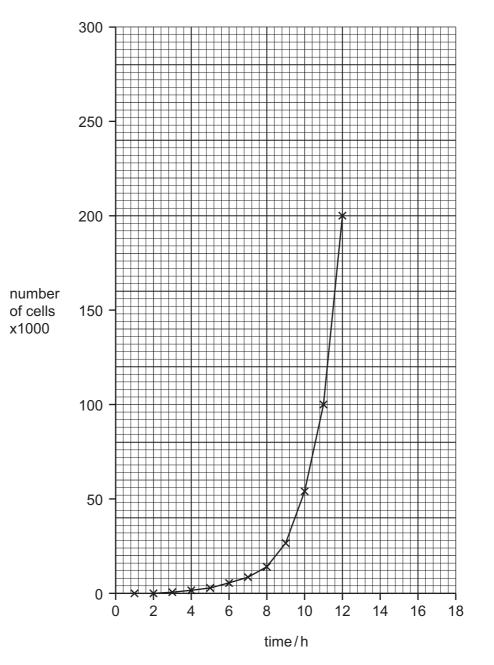

Fig. 3.1

(a) Suggest how you would observe the yeast cells and how you would estimate their total population in the flask.

For Examiner's Use

		[4]
(b)		Fig. 3.1, indicate clearly and name, the two phases shown in this population curve. rk when the change occurs between the two phases with a Q . [3]
(c)	(i)	State two factors needed to maintain the maximum growth of the yeast population.
	1.	
	2.	[2]
	(ii)	Suggest what would happen to the numbers of yeast in Fig. 3.1 if one of these conditions becomes limiting after 12 hours.
		[1]
	(iii)	Draw a sketch to show the effect of your suggestion given in (c)(ii), by continuing the curve on Fig. 3.1 .
