This document consists of 16 printed pages.

- (a) The binomial naming system used to identify all living things gives the Indian elephant 1 For a scientific name of Elephas maximus. Examiner's Use Which part of this name refers to the genus and which part refers to the species? genus species [1] (b) The list gives the names of eight members of the cat family. The common or English name is followed by the binomial name. **Bobcat** – Lynx rufus **Cheetah** – Acinonyx jubatus Jaguar – Panthera onca **European lynx** – *Lynx lynx* **Leopard** – Panthera pardus Lion – Panthera leo **Iberian lynx** – Lynx pardinus **Tiger** – Panthera tigris (i) State the common or English names of two members of the same genus. 1. _____ [2] 2. (ii) Name the genus that has only one species. [1] [Total: 4]
- **2** (a) Table 2.1 shows the percentage of haemoglobin that is inactivated by carbon monoxide present in the blood of taxi drivers in a city.

Table	21
rable	Z .I

city taxi drivers		percentage of haemoglobin inactivated by carbon monoxide	
day time	smokers	5.7	
drivers	non-smokers	2.3	
night	smokers	4.4	
time drivers	non-smokers	1.0	

For Examiner's Use

One source is from vehicle exhaust fumes.

(i) The carbon monoxide in the blood of these taxi drivers comes from two sources.

	Name the other source of carbon monoxide that may be inhaled by drivers.
	[1]
(ii)	Using data from Table 2.1, suggest which of these two sources contributes most to the inactivation of the haemoglobin.
	Explain your choice.
	source
	explanation
	[3]
(iii)	Calculate the difference in the percentage of haemoglobin inactivated by carbon monoxide in day and night time taxi drivers and suggest a reason for the difference.
	difference
	reason
	[2]
(b) (i)	Name two other harmful components of cigarette smoke, apart from carbon monoxide.
	For each, describe an effect it can have on the body of a person who smokes.
	1. component
	effect
	2. component
	effect
	[4]
(ii)	Suggest a possible effect that might happen to the fetus of a pregnant woman who smokes.
	[1]

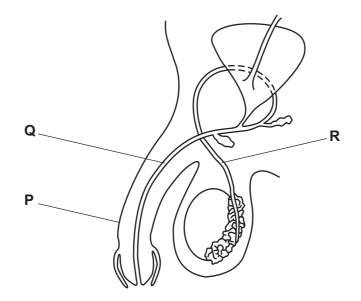

[Total: 11]

3 After an accident at a nuclear power plant in 1986, particles containing radioactive For strontium were carried like dust in the atmosphere. Examiner's Use These landed on grassland in many European countries. When sheep fed on the grass they absorbed the strontium and used it in a similar way to calcium. (a) Explain where in the sheep you might expect the radioactive strontium to become concentrated. [2] (b) Suggest the possible effects of the radiation, given off by the strontium, on cells in the body of the sheep. [3] [Total: 5]

4	Choose words from the list to complete each of the spaces in the paragraph.	For Examiner's
	Each word may be used once only and some words are not used at all.	Use
	allele diploid dominant gene haploid	
	heterozygous homozygous meiosis mitosis recessive	
	In humans there is a condition known as cystic fibrosis.	
	This is controlled by a single which has two forms. One form causes	
	cystic fibrosis while the other does not.	
	Gametes are formed by When two humans reproduce, their gametes	
	fuse at fertilisation to form azygote.	
	Neither of the two humans has cystic fibrosis but one of their three children does have the	
	condition. This means that cystic fibrosis is controlled by a allele and	
	that each of the parents is [5]

For Examiner's Use

(d) The human immunodeficiency virus (HIV) is a sexually transmitted virus.

Apart from intercourse, describe two other routes by which HIV can be transmitted from human to human.

1.	
2.	
	[4]
	[Total: 11]

- (a) Cape buffalo graze on grass. While the buffalo are grazing, two or three oxpecker birds 6 are often seen standing on the backs of each buffalo. These birds eat ticks that are Examiner's parasites on the buffalo's skin.
 - (i) Draw a pyramid of numbers to represent these feeding relationships.

Label the pyramid with the names of the organisms.

[3]

For

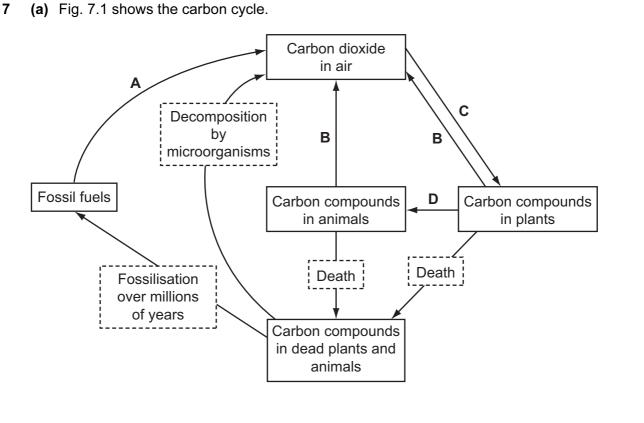

Use

(ii) Draw a pyramid of biomass to represent the same feeding relationships.

Label the trophic levels on this pyramid.

[2]

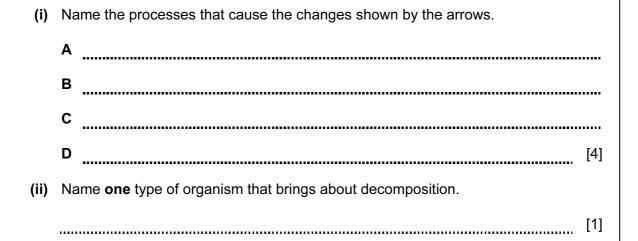

(b)	Explain how the nutrition of consumers differs from that of producers.	For Examiner's Use
	[3]	
	[Total: 8]	

10

For Examiner's Use

Fig. 7.1

(b) Over the last few decades, the carbon dioxide concentration in the atmosphere has been rising.

11

Suggest how this has happened.

[3] [Total: 8]

For

Examiner's Use

Fig. 8.1 shows the bones and muscles of a human leg. 8 For Examiner's Use С В pelvis -- X seat D Α heel / ground Fig. 8.1 (a) Muscles in the leg work antagonistically. (i) State which muscle is antagonistic to muscle A. [1] (ii) Explain what is meant by antagonistic. [2]

(b)	In I	Fig. 8.1, the person is sitting with the foot clear of the ground.	For
	lf a	sharp tap is given at X then the lower leg swings forwards.	Examiner's Use
	Thi	s is a reflex action.	
	(i)	Describe the general features of any reflex action.	
		[2]	
	(ii)	If the spinal cord is cut through near the chest, this reflex action still takes place.	
		Suggest where in the central nervous system this reflex response is coordinated.	
		[1]	
(c)	In a	in emergency, a person might have to run suddenly and very quickly.	
	(i)	Name the hormone that the body releases in such an emergency.	
		[1]	
	(ii)	Describe three changes that occur in the body when this hormone is released in such an emergency.	
		1	
		2.	
		3	
		[3]	
		[Total: 10]	

(a) Fig. 9.1 shows a root hair cell. cell wall nucleus Z. Fig. 9.1 (i) Name the following parts of the cell. Υ Ζ [2] (ii) The function of this cell is to absorb water and mineral ions from the soil. Describe **one** feature shown in the diagram, that is an adaptation for this function. [1] (iii) State two features of this plant cell that would not be present in a typical animal cell, such as a liver cell. 1. _____ 2. _____ [2] (b) (i) State what is meant by the term osmosis.

9

[3]

For Examiner's Use

Explain how this process applies to the uptake of water by this cell. (ii) Examiner's [2] [Total: 10]

For

Use

10	(a)	Transport in plants occurs through the vascular bundles.	 E
		Describe the role of phloem and xylem tissue in transport in a plant stem.	
		phloem	
		xylem	
		[4]	
	(b)	Transport in mammals is through the system of arteries and veins.	
		Describe and explain the differences between the structure of arteries and veins.	
		[4]	
		[Total: 8]
