## CANDIDATE NAME

CENTRE NUMBER

| $\substack{\text { CANDIDATE } \\ \text { NUMBER }}$ |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |

BIOLOGY
5090/06
Paper 6 Alternative to Practical May/June 2007

1 hour
Candidates answer on the Question Paper.
No Additional Materials are required

## READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all work you hand in.
Write in dark blue or black pen.
Do not use staples, paper clips, highlighters, glue or correction fluid.
DO NOT WRITE ON ANY BARCODES.
Answer all questions.
At the end of the examination, fasten all your work securely together.
You may use a pencil for any diagrams, graphs or rough working.
The number of marks is given in brackets [ ] at the end of each question or part question.

| For Examiner's Use |  |
| :---: | :---: |
| $\mathbf{1}$ |  |
| 2 |  |
| Total |  |

This document consists of 9 printed pages and $\mathbf{3}$ blank pages.

## BLANK PAGE

1 The human body maintains a constant temperature, regardless of the external temperature even though heat may be transferred to and from the environment.
Fig. 1.1 shows the apparatus a student used to investigate heat transfer.

For

Fig. 1.1

- As soon as the apparatus had been set up, the student immediately measured and recorded the temperature of the water in the bottle and then again every two minutes for the next ten minutes.
- The student then replaced the water in the bottle and beaker and fitted some plastic tubing into the bottle as shown in Fig. 1.2.

Fig. 1.2

- A steady stream of water at room temperature was poured through the funnel and tubing.
- As soon as the apparatus had been set up, the student immediately measured and recorded the temperature of the water in the bottle and then again every two minutes for the next ten minutes.
(a) These are the records the student made.

First experiment
Starting temperature 20 degrees Celsius.
After two minutes 29
Four minutes 34
Six minutes 37
Eight minutes 39
Ten minutes 40
Second experiment
Starting temperature 20 degrees Celsius.
After two minutes 24
Four minutes 28
Six minutes ??
Eight minutes 32
Ten minutes 34
(i) Draw a table of the student's results.
(ii) Plot the results of both experiments on the same axes on the grid below.

(iii) The student's result after six minutes is missing from the second experiment. Estimate the missing reading from the graph.
$\qquad$
(iv) State and explain the difference in the temperatures in the bottle after 10 minutes. difference explanation $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(b) The plastic bottle in the experiment represents the human body.
(i) State why the water in the bottle should have been at $37^{\circ} \mathrm{C}$.
$\qquad$
$\qquad$
(ii) Suggest why the bottle should have been gently moved around in the beaker between readings.
$\qquad$
$\qquad$
(iii) Describe how you would read the thermometer to ensure that your readings were accurate.
$\qquad$
$\qquad$
(c) The water in the beaker in Fig. 1.2 represents a hot environment. The bottle and tubing represent a human body. If the water being poured into the funnel represents cold drinking water,
(i) Suggest what the water leaving the tube at $X$ could represent,
$\qquad$
(ii) Suggest how this helps to cool the body.
$\qquad$
(d) Design an investigation, using the apparatus shown in Fig. 1.3 to show how sweating helps to maintain a constant body temperature.
Give full practical details.

tap

beaker of warm water

thermometer

cloth

string

$\qquad$

2 A student was provided with four leaves labelled A, B, C and D which were initially all of the same size and from the same plant.
Leaf $\mathbf{A}$ had been freshly picked and had received no treatment.
Leaf $\mathbf{B}$ had been picked three days before.
Leaf $\mathbf{C}$ had been picked three days before and its upper surface coated immediately with petroleum jelly.
Leaf $\mathbf{D}$ had been picked three days before and its lower surface coated immediately with petroleum jelly.

Leaves $\mathbf{B}, \mathbf{C}$ and $\mathbf{D}$ had been left by a window in the laboratory since being picked.

Fig. 2.1
(a) (i) Make a large, labelled drawing of leaf $\mathbf{A}$.
(ii) Measure and record the width of the picture of leaf $\mathbf{A}$ at its widest point. width of leaf $\qquad$
Draw a straight line across the widest point of your drawing of leaf $\mathbf{A}$. Measure and record the length of your line.
length of line
(iii) Calculate the magnification of your drawing. Show your working.
magnification
(b) Examine leaves B, C and $\mathbf{D}$ in Fig. 2.1 and describe their appearance.
(i) leaf B $\qquad$
$\qquad$
leaf $\mathbf{C}$ $\qquad$
$\qquad$
leaf $\mathbf{D}$ $\qquad$
$\qquad$
(ii) Suggest a reason for the difference in appearance between:

Leaf B and C
$\qquad$
Leaf C and D $\qquad$
$\qquad$
(c) The student was also provided with a leaf stalk from a different plant that had been left to stand in a liquid stain for several hours.
Fig. 2.2 shows the leaf stalk cut across its width.

Fig. 2.2
(i) Make a large labelled diagram of the cut surface.
(ii) Suggest where in Leaf A you might find a similar tissue to that which is stained in (c)(i).
$\qquad$
(iii) Draw a simple diagram of a transverse section of a root and indicate where the same tissue that is stained in the leaf stalk would be found.
