READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may need to use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

A copy of the periodic table is printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

5 A student used the apparatus shown below to investigate the rate of reaction of calcium carbonate with dilute hydrochloric acid.

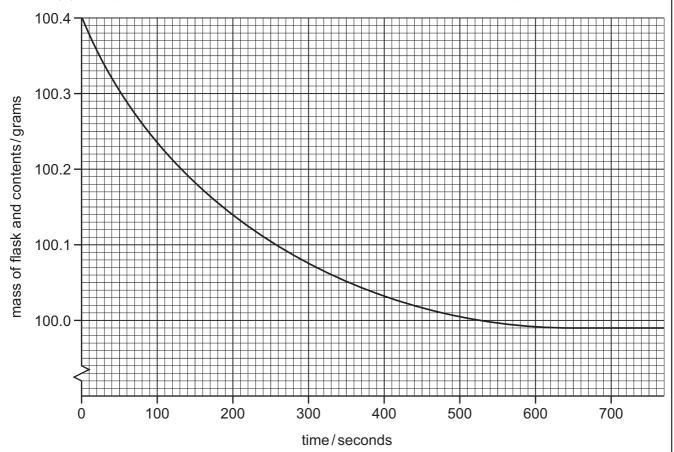

For Examiner's Use

(a)	Use the information in the equation to suggest why the mass of the flask and contents
	decreases with time.

	[1]

(b) The graph shows how the mass of the flask and its contents changes with time.

	(i)	At what time was the reaction just complete?	For

	(ii)	On the graph, mark with an ${\bf X}$ the point where the speed (rate) of reaction was fastest.	as 1]
	(iii)	The student repeated the experiment but altered the concentration of the hydrochloric acid so that it was half the original value. In both experiments calcius carbonate was in excess and all other conditions were kept the same.	
		On the graph on page 10, draw a curve to show how the mass of the flask ar contents changes with time when hydrochloric acid of half the concentration was used.	
(c)	Hov	w does the speed (rate) of this reaction change when	
	(i)	the temperature is increased,	[1]
	(ii)	smaller pieces of calcium carbonate are used?	[1]
(d)	Cor	mplete the following sentence using words from the list.	
	C	ombustion expansion large rapid slow small
