Paper 3 Practical Test
May/June 2009
1 hour 30 minutes
Candidates answer on the Question Paper
Additional Materials: As listed in the Confidential Instructions

## READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.
Write in dark blue or black pen.
You may use a pencil for any diagrams, graphs or rough work.
Do not use staples, paper clips, highlighters, glue or correction fluid.
DO NOT WRITE IN ANY BARCODES.
Answer all questions.
You should show the essential steps in any calculations and record experimental results in the spaces provided on the question paper.
Qualitative Analysis Notes are printed on page 8.
At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question.

| For Examiner's Use |  |
| :---: | :---: |
| $\mathbf{1}$ |  |
| 2 |  |
| Total |  |

This document consists of $\mathbf{7}$ printed pages and $\mathbf{1}$ blank page.

1 Vinegar is an acidic aqueous solution.
$\mathbf{P}$ is a solution prepared by taking $150 \mathrm{~cm}^{3}$ of vinegar and diluting the solution by adding distilled water until the total volume is $1.00 \mathrm{dm}^{3}$.

The amount of acid present in solution $\mathbf{P}$ can be determined by titrating a volume of aqueous sodium hydroxide of known concentration with $\mathbf{P}$, using phenolphthalein as the indicator. Phenolphthalein turns from pink to colourless at the end-point.

Solution $\mathbf{Q}$ is $0.100 \mathrm{~mol} / \mathrm{dm}^{3}$ sodium hydroxide.
(a) Put P into the burette.

Pipette a $25.0 \mathrm{~cm}^{3}$ (or $20.0 \mathrm{~cm}^{3}$ ) portion of $\mathbf{Q}$ into a flask and titrate with $\mathbf{P}$, using the phenolphthalein indicator provided.

Record your results in the table, repeating the titration as many times as you consider necessary to achieve consistent results.

## Results

## Burette readings

| titration number | 1 | 2 |  |
| :--- | :--- | :--- | :--- |
| final reading $/ \mathrm{cm}^{3}$ |  |  |  |
| initial reading $/ \mathrm{cm}^{3}$ |  |  |  |
| volume of P used $/ \mathrm{cm}^{3}$ |  |  |  |
| best titration results $(\mathcal{J})$ |  |  |  |

## Summary

Tick $(\checkmark)$ the best titration results.
Using these results, the average volume of $\mathbf{P}$ required was $\qquad$ $\mathrm{cm}^{3}$.

Volume of solution $\mathbf{Q}$ used was $\qquad$ $\mathrm{cm}^{3}$.
(b) $\mathbf{Q}$ is $0.100 \mathrm{~mol} / \mathrm{dm}^{3}$ sodium hydroxide.

Using your results from (a), calculate the number of moles of hydrogen ions, $\mathrm{H}^{+}$, in $1.00 \mathrm{dm}^{3}$ of $\mathbf{P}$.
moles of hydrogen ions in $1.00 \mathrm{dm}^{3}$ of $\mathbf{P}$ $\qquad$
(c) Using your answer from (b), determine the number of moles of hydrogen ions, $\mathrm{H}^{+}$, in $150 \mathrm{~cm}^{3}$ of vinegar.
moles of hydrogen ions in $150 \mathrm{~cm}^{3}$ of vinegar
(d) Assuming the only acid present in the vinegar is ethanoic acid, $\mathrm{CH}_{3} \mathrm{COOH}$, calculate the mass, in grams, of ethanoic acid present in $150 \mathrm{~cm}^{3}$ of the vinegar. [The relative formula mass of ethanoic acid is 60.]
mass of ethanoic acid present in $150 \mathrm{~cm}^{3}$ of vinegar $\qquad$ ..g
(e) Given that $1.00 \mathrm{~cm}^{3}$ of the vinegar has a mass of 1.00 g , calculate the percentage by mass of ethanoic acid in the vinegar.
percentage by mass of ethanoic acid in vinegar

2 Carry out the following experiments on the aqueous solution $\mathbf{R}$ and the solid sodium salt $\mathbf{S}$ and record your observations in the table. You should test and name any gas evolved.

Tests on solution $\mathbf{R}$

| test <br> no. | test | observations |
| :---: | :---: | :---: |
| 1 | (a) To a portion of solution $\mathbf{R}$, add aqueous sodium hydroxide until a change is seen. <br> (b) Add excess aqueous sodium hydroxide to the mixture from (a). |  |
| 2 | (a) To a portion of solution $\mathbf{R}$, add aqueous ammonia until a change is seen. <br> (b) Add excess aqueous ammonia to the mixture from (a). |  |
| 3 | (a) To a portion of solution $\mathbf{R}$, add an equal volume of dilute nitric acid. <br> (b) Add aqueous silver nitrate to the mixture from (a). |  |
| 4 | (a) To a portion of solution $\mathbf{R}$, add an equal volume of dilute nitric acid. <br> (b) Add aqueous barium nitrate solution to the mixture from (a). |  |

## Tests on solid S

| test <br> no. | test |
| :---: | :--- | :--- |
| $\mathbf{5}$ | To a portion of dilute hydrochloric acid <br> add a small amount of solid S. |
| $\mathbf{6}$ | (a)Put 1 cm depth of solid $\mathbf{S}$ in a hard- <br> glass test-tube and heat strongly <br> for about 3 to 4 minutes. You <br> should test the gas evolved. <br> Leave the test-tube and contents to <br> cool. <br> (b)To a portion of dilute hydrochloric <br> acid add some of the solid residue <br> from (a). <br> $\mathbf{7}$ <br> $\mathbf{8}$ <br> To a portion of aqueous copper(II) <br> sulfate solution add a small amount of <br> solid $\mathbf{S}$ and mix well. <br> Put 1 cm depth of solid $\mathbf{S}$ in a hard-glass <br> test-tube and then add to it an equal <br> amount of solid ammonium chloride. <br> Heat the mixture. <br> (a)Dissolve a small amount of solid $\mathbf{S}$ <br> in a portion of solution $\mathbf{R}$. <br> (b)Warm the mixture from (a). |

## Conclusions

Identify the anion in $\mathbf{R}$.
The anion in $\mathbf{R}$ is $\qquad$
$\mathbf{S}$ is a sodium salt. Suggest two other elements present in $\mathbf{S}$.
and

## NOTES FOR USE IN QUALITATIVE ANALYSIS

## Tests for anions

| anion | test | test result |
| :--- | :--- | :--- |
| carbonate $\left(\mathrm{CO}_{3}^{2-}\right)$ | add dilute acid | effervescence, carbon dioxide <br> produced |
| chloride $\left(\mathrm{Cl}^{-}\right)$ <br> [in solution] | acidify with dilute nitric acid, then add <br> aqueous silver nitrate | white ppt. |
| iodine (I-) <br> [in solution] | acidify with dilute nitric acid, then add <br> aqueous lead(II) nitrate | yellow ppt. |
| nitrate $\left(\mathrm{NO}_{3}^{-}\right)$ <br> [in solution] | add aqueous sodium hydroxide, then <br> add aluminium foil; warm carefully | ammonia produced |
| sulfate $\left(\mathrm{SO}_{4}^{2-}\right)$ <br> [in solution] | acidify with dilute nitric acid, then add <br> aqueous barium nitrate | white ppt. |

## Tests for aqueous cations

| cation | effect of aqueous sodium hydroxide | effect of aqueous ammonia |
| :--- | :--- | :--- |
| aluminium $\left(\mathrm{Al}^{3+}\right)$ | white ppt., soluble in excess giving a <br> colourless solution | white ppt., insoluble in excess |
| ammonium $\left(\mathrm{NH}_{4}^{+}\right)$ | ammonia produced on warming | - |
| calcium $\left(\mathrm{Ca}^{2+}\right)$ | white ppt., insoluble in excess | no ppt., or very slight white ppt. |
| copper $\left(\mathrm{Cu}^{2+}\right)$ | light blue ppt., insoluble in excess | light blue ppt., soluble in excess <br> giving a dark blue solution |
| iron(II) $\left(\mathrm{Fe}^{2+}\right)$ | green ppt., insoluble in excess | green ppt., insoluble in excess |
| iron(III) $\left(\mathrm{Fe}^{3+}\right)$ | red-brown ppt., insoluble in excess | red-brown ppt., insoluble in excess |
| zinc $\left(\mathrm{Zn}^{2+}\right)$ | white ppt., soluble in excess giving <br> a colourless solution | white ppt., soluble in excess giving <br> a colourless solution |

## Tests for gases

| gas | test and test result |
| :--- | :--- |
| ammonia $\left(\mathrm{NH}_{3}\right)$ | turns damp red litmus paper blue |
| carbon dioxide $\left(\mathrm{CO}_{2}\right)$ | turns limewater milky |
| chlorine $\left(\mathrm{Cl}_{2}\right)$ | bleaches damp litmus paper |
| hydrogen $\left(\mathrm{H}_{2}\right)$ | 'pops' with a lighted splint |
| oxygen $\left(\mathrm{O}_{2}\right)$ | relights a glowing splint |
| sulfur dioxide $\left(\mathrm{SO}_{2}\right)$ | turns aqueous potassium dichromate(VI) from orange to green |
