# WebSphere Application Server for iSeries
First Project Mentoring Service

The goal of the WebSphere® Application Server for iSeries, First Project Mentoring Service is to provide the customer access to a skilled IBM developer that can help with WebSphere application design and implementation challenges that a development team may face as they are building skills in the new technologies supported by WebSphere.

Objectives

- Provide the customer with access to a skilled IBM developer to assist a WebSphere for iSeries application development project
- Help identify areas of application design concerns with respect to security, performance, and scalability
- Recommend design consequences and alternatives when necessary
- Provide on-demand technical assistance on topics such as IBM application development tools, Java™ language usage, and iSeries deployment considerations

Highlights

- Leverage a skilled IBM developer
- Provide for inspection and Q&A support
- Help your project meet its objectives

IBM Responsibilities

- Actively participate in design and implementation inspections
- Assist development team with questions and decisions that impact their deliverables.
- Leverage vast technical expertise within the iSeries programming laboratory

Customer Responsibilities

- Define and manage project scope, risks, schedules, and staffing
- Conduct an initial project overview teleconference with IBM to outline project scope and deliverables
- Engage IBM mentor when project deliverables require assistance
- Make necessary material available to IBM per their responsibilities
- Implement any IBM recommendations

When is the right time for this service?

Customers should consider this service as they transition their skills to WebSphere application development for iSeries to help ensure the success of their project as their development team continues to build skills.
