

Cxense ASA – Agilely delivers online services to customers worldwide with a SoftLayer hybrid cloud hosting solution

98% faster deployment

with infrastructure provisioning reduced from three months to less than a day

Expands global presence

with SoftLayer® cloud infrastructure hosted worldwide

Improves agility

with powerful bare metal servers available to deploy on demand

Solution component Services

- SoftLayer®

Business challenge: To deliver its portfolio of online personalization services, Cxense ASA relied on a traditional hosting infrastructure with co-located resources. However, as the company expanded, it required a hosting platform with presence worldwide, including Japan.

Solution: After evaluating competing solutions, including the Amazon Web Services platform, Cxense selected SoftLayer cloud hosting infrastructure. The business provisioned bare metal servers in SoftLayer data centers in Washington D.C. and Tokyo, Japan to create a hybrid hosting environment for its services, and it anticipates extending its infrastructure to SoftLayer data centers in Europe.

“The most important thing is that there are no limitations on our infrastructure. With SoftLayer, when we need more hardware, we get it quickly and cost-effectively.”

—Finn Gangstad, director of technology, Cxense ASA
