

## Do you have confidence in your information and the reports out of it?

According to a recent Accenture survey:

- 47% of users don't have confidence in their information
- 59% say they missed information they should have used
- 42% of managers use wrong information at least once a week
- 25% user adoption within organizations
- 95% of the typical workforce does not understand the strategy

## Do you find yourself anywhere in these survey results?

If the answer is yes attend the BI part of the seminar.

## In the webinar you'll hear more about how to:

- Create a process and framework to gather and work on trusted information
- Learn about best practices in driving the information process
- Use a set of tools that can enable you make the best decisions based on trusted information

## Agenda

- Best processes for gathering and analysing information
