

# Getting answers without asking questions

Annelies Verhaeghe  
18 November 2010

**Some observations...**

# 1. The power of client data

## 2. Branded communities

**Dell IdeaStorm**  
How can teachers and students use technology in schools to improve learning?

Jump into the world of the cloud

The Dell Community has contributed

Look at Me, I'm Green

**Yunomi**  
Rien que pour vous

Style Saveurs Inspiration Astuces Beauté

**Femme du jour**  
Véronique Hoffman  
J'adore passer une journée entre filles!

**Dernières réactions**  
Boostez votre humeur en...  
Bye bye féfé...  
Cuisiner avec un four à micro...  
Quelle importance accordez...

**Vos contributions**  
mica: Quelle importance accordez vous à l'orthographe?  
Anne-S0875: La littérature de poulettes...  
marianearnoué: Boostez votre humeur en chantant

## **3. Online qualitative research**

## 4. User-generated-content

interviewing bias

QUESTIONS,

consumer insights

contextual information

Long time periods

A photograph of a beach with waves crashing on the shore. The word "Welcome" is written in the sand in the foreground. A white rounded rectangle with red text is overlaid on the image.

**Welcome to the world of unstructured data**

Welcome

## Text analytics

= process of extracting knowledge and information from text

## Two principles

**Top down  
analysis**

**Bottom-up  
analysis**

1

# Extraction

= What do we want to use in our analysis and what do we want to ignore?

## STEP 1: extraction

IBM SPSS Software wants to make software COOL again: well-known, popular and unique

Software detects terms based on several dictionaries

**Count based**

wants  
to  
make  
marketing  
research  
COOL  
again  
Well-known  
popular  
unique

**Linguistische analysis**

**Part of speech analysis**

software  
COOL  
Well-known  
popular  
unique

**! Also add your own terms**

2

## Categorization

Categories are higher-level concepts that represent higher level ideas and information in the text

# Augmented research model for observational research

# STEP 1: Descriptive taxonomy detection

To what extent do I find pre-defined topics back?

# Case 1 :

## Online brandscape

### Ice cream

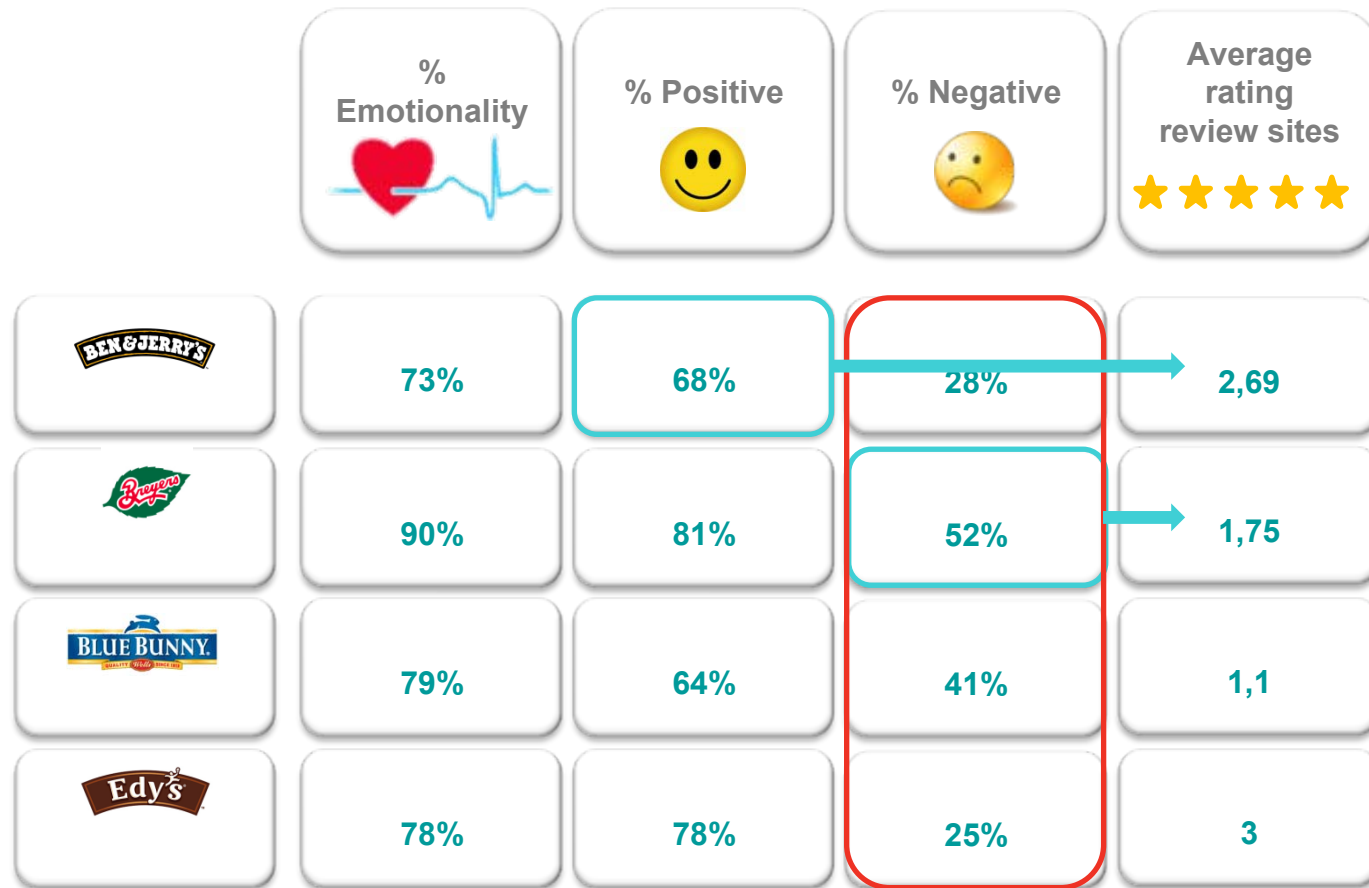

**24%**

# Share brands in total amount of conversations

# Sentiment analysis

# Sentiment analysis

- **Strengths**

- Breyers has a strong **tradition**. Their *vanilla* & *chocolate* flavours are **legends** and they always had a strong fan base. People have a lot of trust in the brand.

- **Weaknesses**

- Recently, consumers report a **decrease in quality**
  - **Taste**
  - **Texture**
  - **Natural claim**
  - **Profit above quality**

# STEP 2: Associative pattern recognition

**What terms co-occur? What are the major themes that pop up in the conversations?**

# Case 2: And they lived happily ever after

Longevity

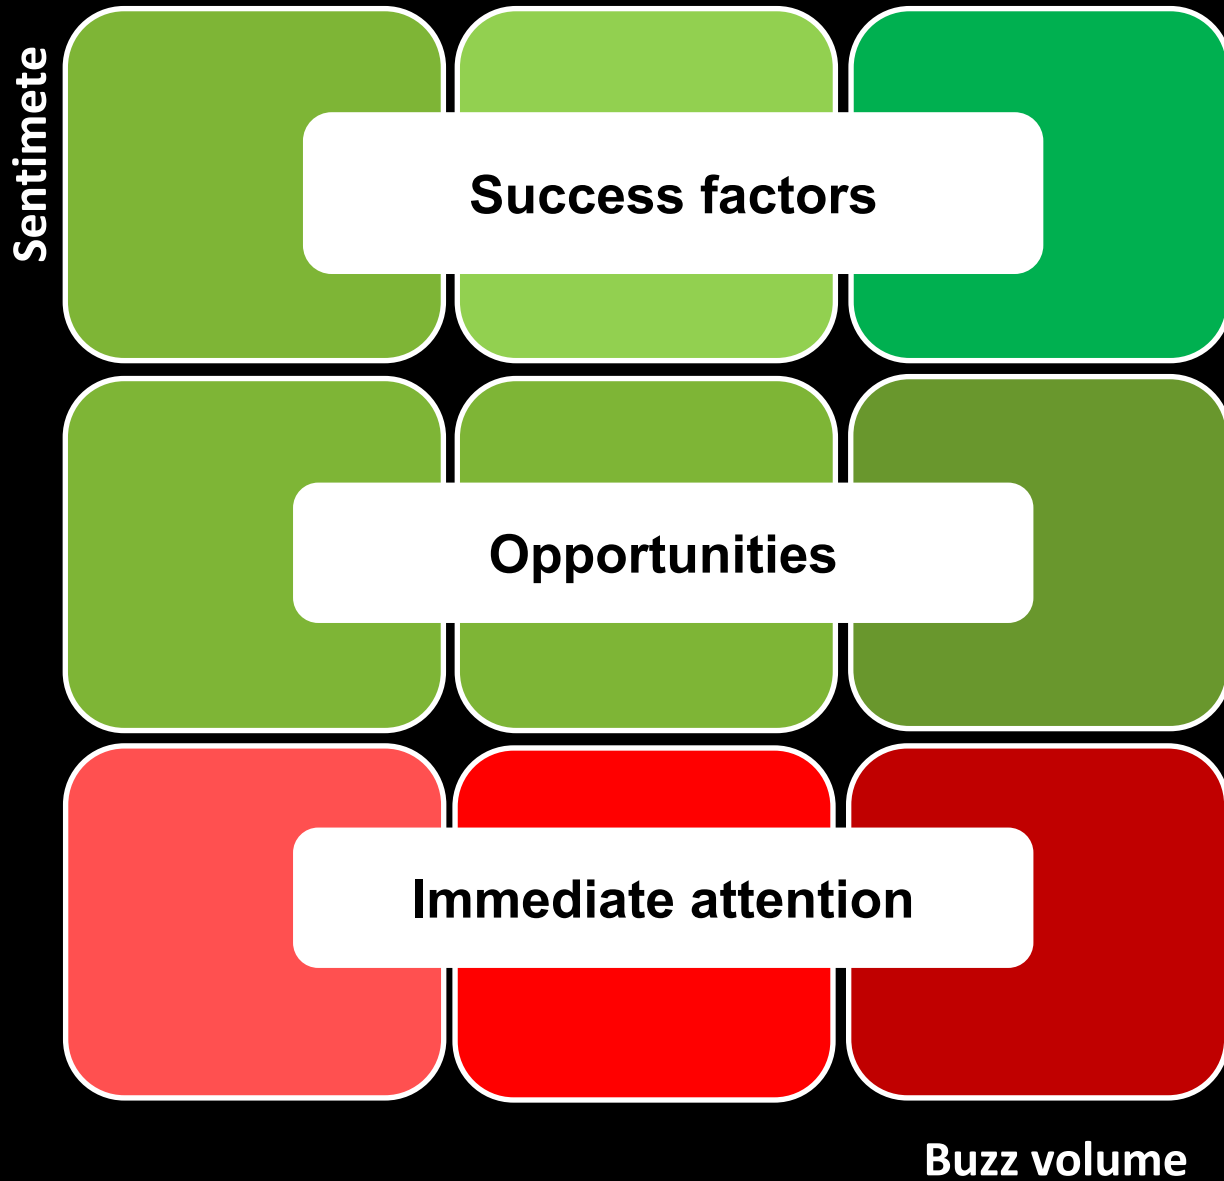

Quality of Life

Health problems

Daily life impact

81861

# Telephone call?

- Need for good friends
- Natural communication device
- Loosing their identity

**Eating = enjoying life**

Health problems

Appetite decreases

Chewing

Altered taste

Swallowing

# Supermarket for elderly

# STEP 3: Qualitative analysis

Qualitative analysis of original verbatims

# Case 3: The longest day

## Beyond user generated content

azian f: make you feel beautiful?

akim Z: great!

akim Z: you guys are doing a great job

akim Z: :o)

ana P: but i also think that what anyone  
not important...not the brand
