Our Vision - a Dynamic, Flexible Finance Function

Logica's Roadmap to Drive Strategic Success

Phase One – Group Reporting Platform

Existing corporate management and statutory reporting platform out of date

- not flexible enough
- insufficient multidimensional approach
- significant volume of manual input
- long process time

Reporting platform in use no longer cost-effective

With the objective of “one single version of the truth”

Create a **single integrated reporting platform** from local to corporate level

- Automated
- Flexible and multidimensional
- Main hub for all business communities

Standardised data and reporting on corporate and operations level

- Definitions
- Timing

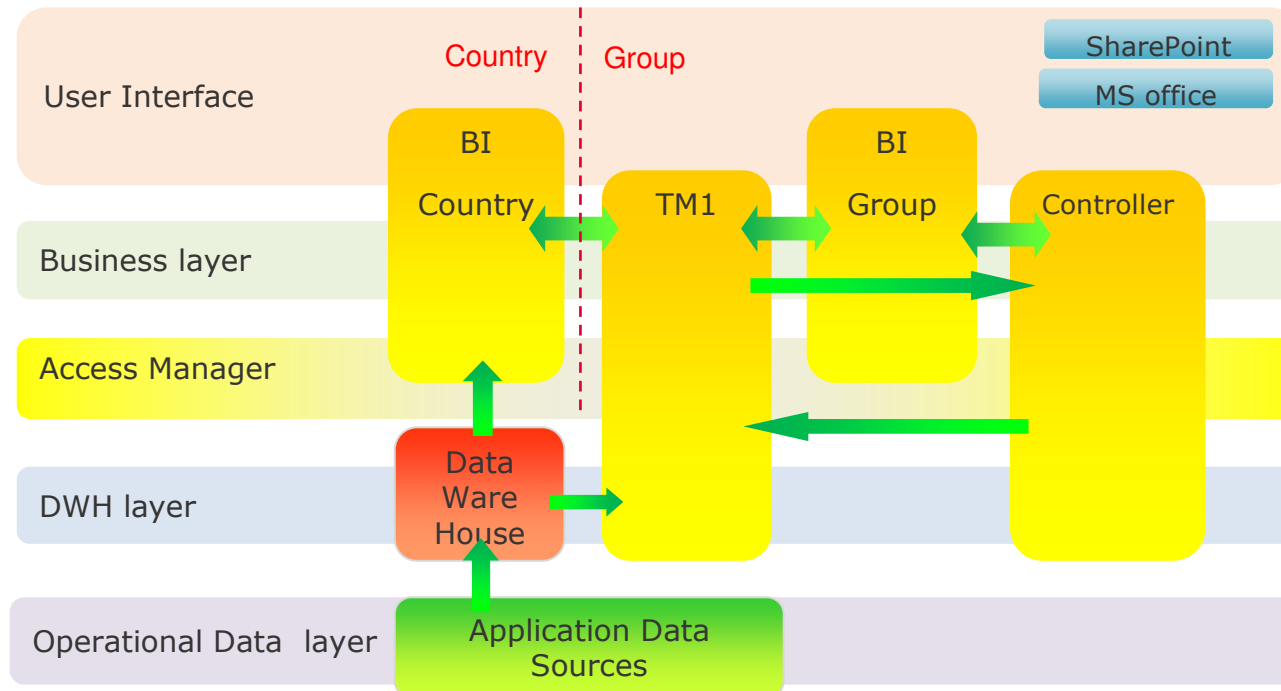

Improved **data quality**

Cost-effective solution

Main delivery components

One integrated reporting platform composed of:

- Corporate management reporting platform (TM1 + BI Group)
- Corporate statutory reporting platform (Controller + TM1+ BI Group)
- Local management reporting platform (BI Country+ DWH)

Key deliverables

A single reporting platform for:

- Monthly consolidation and reporting of actual and forecast data
- Consolidation and reporting of budget data
- Deliver multi-dimensional views on **financial and business information**
- Statutory reporting of interim and year end results
- Integration of management and statutory streams

Automated and manual data entry by the global finance community

User security in accordance with external auditor guidelines

Programme junctions and choices

Initial tool choice changed on recommendation of Cognos: BI changed to TM1

- Implicitly launching customer for the integration of components TM1, BI and Controller
- Mix of internal and IBM Cognos consultant
- Prototype acceptance milestone

Automated load of data from decentralised financial systems

- Complete standardisation of ledgers
- Some countries use a different application and administrative system: *country has to deliver in required format*

Programme junctions and choices

Priority setting changed over time:

- Planning of deliverables adapted to stakeholders requirements

Support and development organisation:

- Keep the (business) knowledge and experience: *maintain group and train in new tool*

Multinational project:

- Project staff in UK, NL, India
- UAT: *bring together financial people and support team from all countries in India and UK*

Technical infrastructure:

- Network latency: *Citrix solution for outskirts of network*

Project results

The objectives survived the process through adaptability of the solution

Realised objectives

- one single reporting platform from local to corporate level
- standardised reporting on corporate and operations level
 - *First reporting tier in place*
 - *Second tier under development*
- IT cost reductions

Logica now has centralised data source in TM1 that achieves "one single version of the truth" not only as a Finance repository but one that is being extended beyond Finance into HR, Sales & Marketing, Consulting and more...

The result: Group Management Reporting

Status: On Multi

The result: Local Management Reporting

Project results : impact on the organisation

Faster availability of information (each month 4 days earlier)

More trust from the business on the availability, quality and timely delivery of financial and business data

Easier interface to produce (ad-hoc) reports

Less manual inputs and processing – “saved” finance FTEs reinvested in business support

Unexpected results of the project

A trigger to accelerate standardisation of the financial configurations in operations:

- Management reporting
- Statutory reporting

Major enabler of a common financial language across the Group

Project victim of own success:

- Low profile
- On budget and on time
- Managing business expectations

Next steps

Users' perspective

More communities

More intimacy

Increase automated interfaces

Information perspective

Continued standardization

More communities

Higher data quality

Infrastructure perspective

More automated interfaces

Continued Integration of platforms

Continued rollout of LMR platforms

Adding new tools (planning)

Conclusions

CPM has been instrumental in supporting a successful execution of the company's strategy

It has had a huge positive influence in the company's finance culture

The roll out of the CPM tools has been successful because:

- We had a good, flexible and knowledgeable project team
- We were pragmatic in architecture and solutions - agile in development
- We had a good sponsor and was the right moment for the organisation
- We delivered on time and on budget a cost-effective solution

Thank you

Logica is a business and technology service company, providing business consulting, outsourcing, systems integration, and professional services. Its value for clients lies in successfully integrating people, business and technology and delivering in a cost-effective manner. It is committed to long term collaboration, applying insight to create innovative answers to clients' business needs. Logica's 39,000 people work with around 10,000 clients around the world, including many of Europe's largest businesses. Logica is listed on both the London Stock Exchange and Euronext (Amsterdam) (LSE: LOG; Euronext: LOG). More information is available at www.logica.com
