# An early preview...

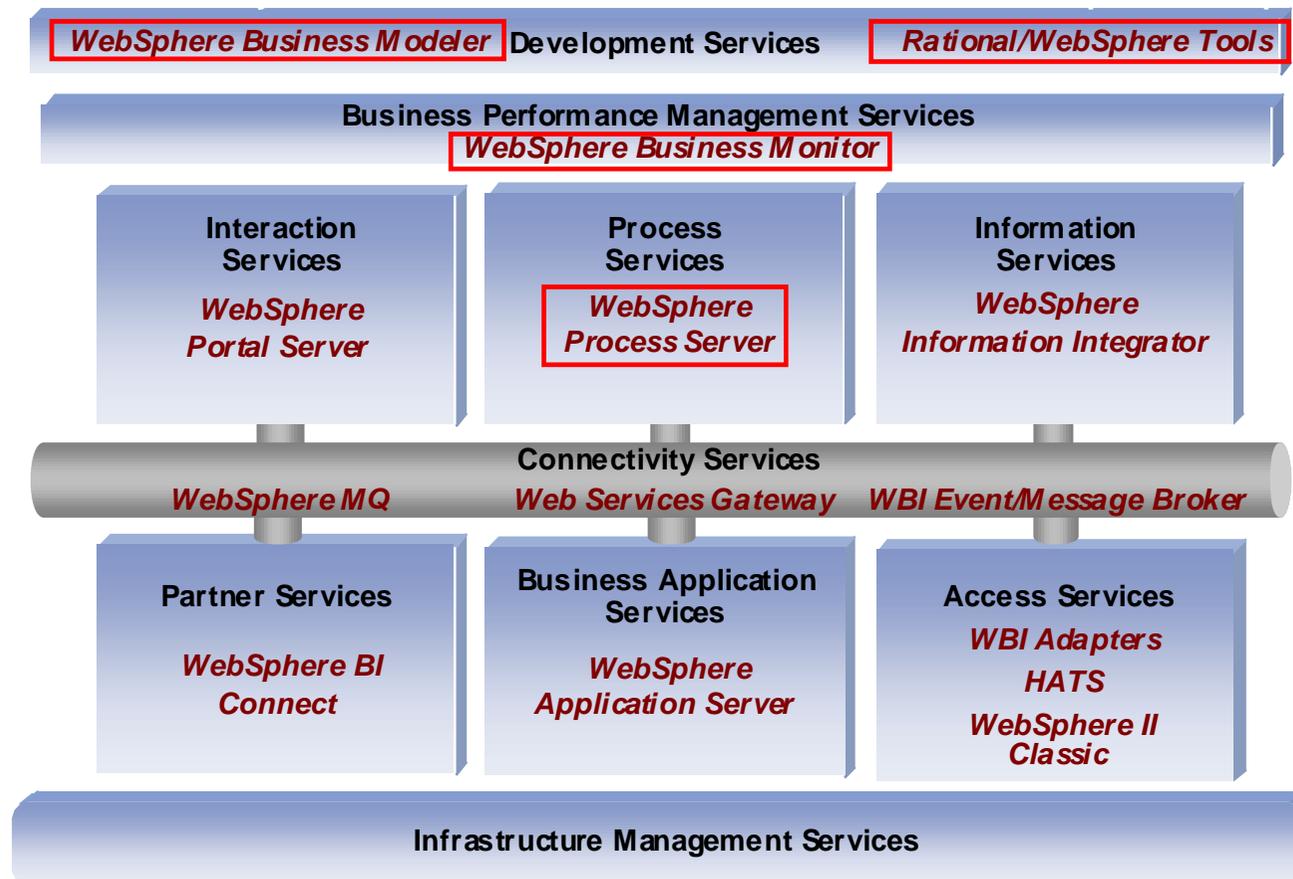

The image shows a splash screen for WebSphere Integration Developer. At the top right is the IBM logo. The main title is "WebSphere Integration Developer" in a purple box, with "Version 6.0 Beta" in a white box below it. A red arrow points to the "Version 6.0 Beta" text. Below the title is a colorful collage of images including a globe, a hand holding a pen, a server rack, and various abstract patterns. At the bottom left, it says "Powered by Eclipse Technology". At the bottom right is the Java logo with the text "Java COMPATIBLE".

WebSphere Integration Developer  
Version 6.0 Beta

# IBM WebSphere Integration Reference Architecture

# IBM Addresses Software Industry Trends

## Integration technologies

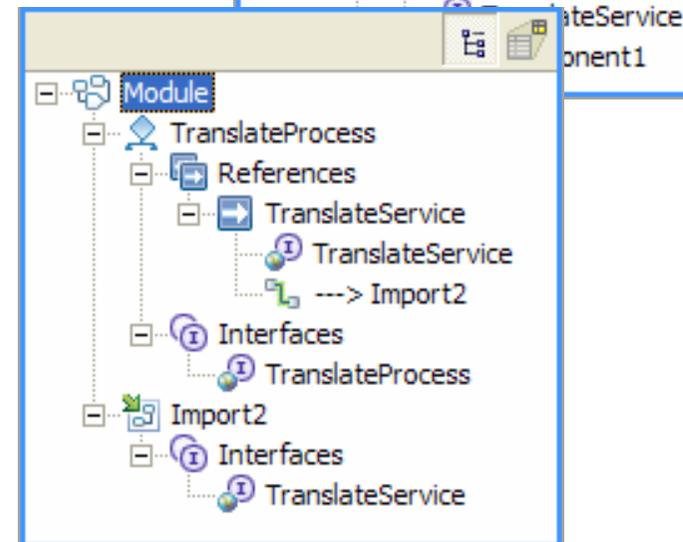

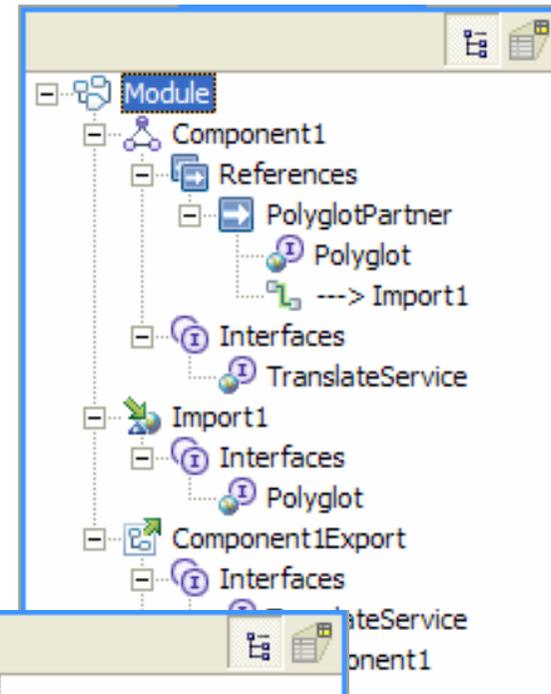

## Application Server technologies

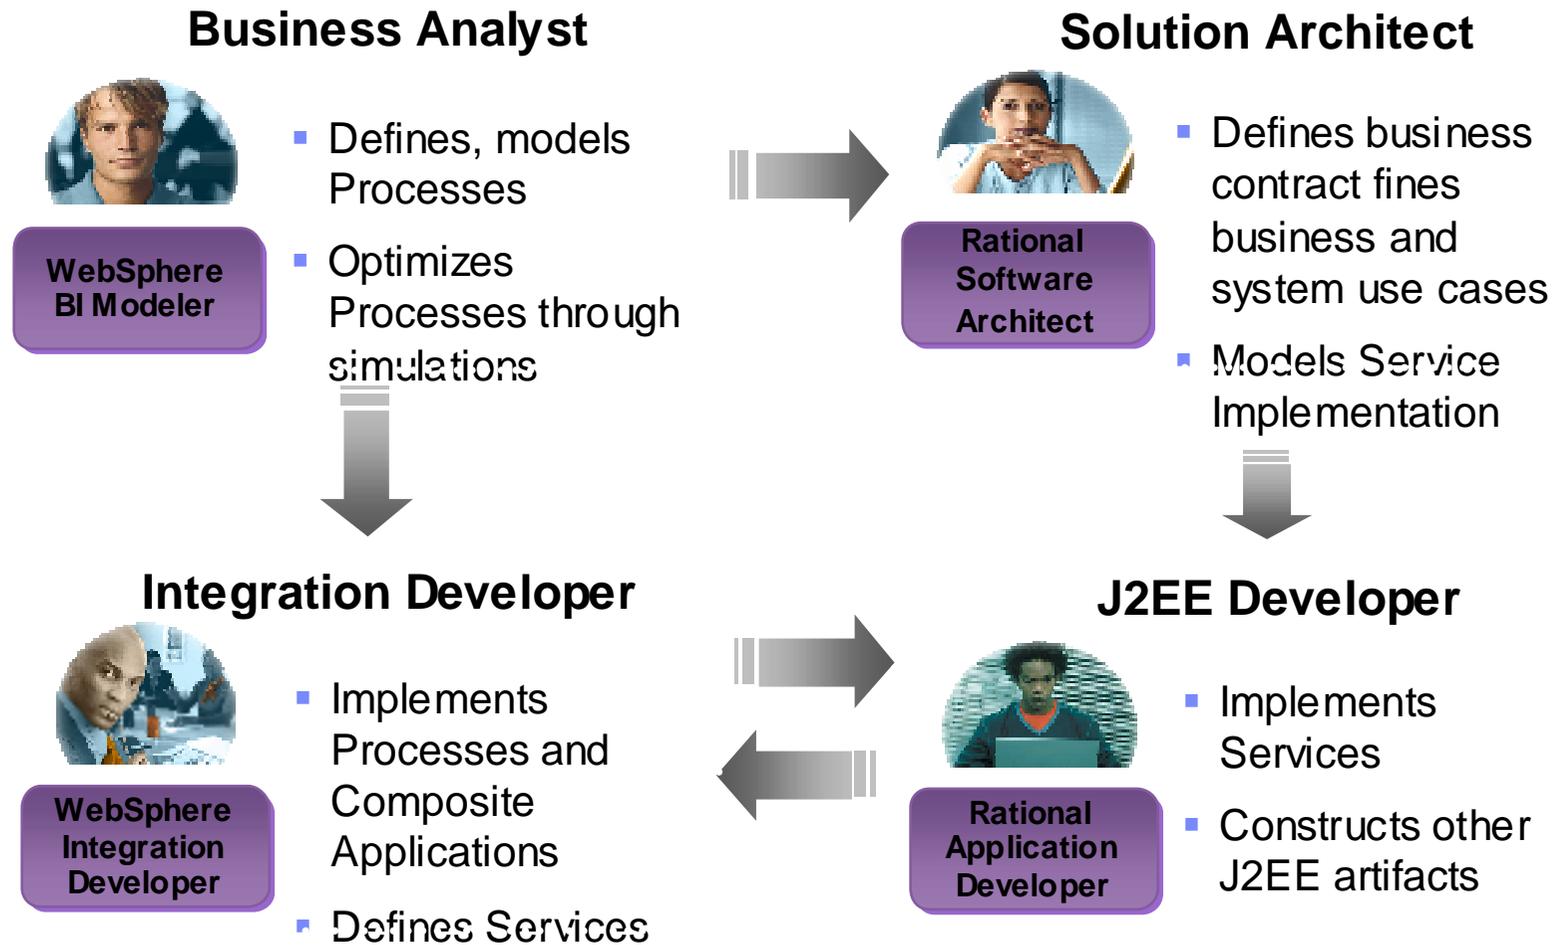

- The middleware market is evolving
  - ▶ **Integration servers** adopt open standards
  - ▶ **Application servers** adopt t integration functionality
- IBM is uniquely positioned to assist customers during this market evolution
- IBM is the only middleware provider that can leverage both:
  - ▶ Market leading application server – **WebSphere Application Server**
  - ▶ Integration server products and technologies: **WebSphere MQ Workflow, WebSphere InterChange Server**

## Key Product Messages

- **Reduced complexity**
  - ▶ Provide a layer of abstraction over the J2EE programming model
- **Solution building blocks based on integration-level concepts and patterns**
  - ▶ Process Choreography, Mediation, Relationships, Business Rules, etc...
- **Not J2EE Artifacts**
  - ▶ EJBs, RARs, EARs, WARs, etc..
- **Application assembly**
  - ▶ Enable solution assembly from components

# Business Driven Development – Roles and Tools

# Roadmap: Transitioning from Integration Edition

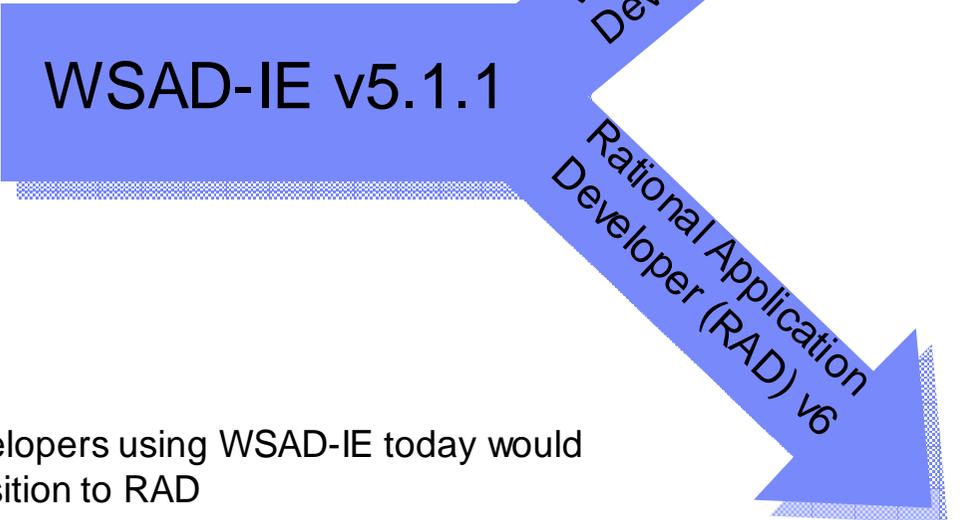

**J2EE and Integration Developer**

- Build Integration applications
- Use CICS / IMS / HOD J2C 1.0, WBI Adapters, OEM Adapters
- Deploy to WBI-SF, WAS

**Integration Developer**

- Compose Business Integration solutions
- Use CICS / IMS J2C 1.5, WBI Adapters, IBM JCA 1.5 Adapters
- Deploy to WebSphere Process Server

**Java/J2EE developer**

- Build J2EE applications
- Use CICS / IMS J2C 1.0, 1.5 (RAD 6.0.0.1 – released in April)
- Deploy J2EE apps to WAS, WebSphere Process Server

1. J2EE developers using WSAD-IE today would likely transition to RAD
2. Integration developers using WSAD-IE today would likely transition to WID

## Integration in an SOA World

- SOA Integration requires
  - ▶ Common Data Model
    - All Data is represented consistently
  - ▶ Common Invocation Model
    - All components are represented consistently
    - All components are invoked identically
    - Encapsulation and re-use through Modules
  - ▶ Service Choreography
    - Components can be choreographed independently of their implementation

# The Common Data Model: Business Objects

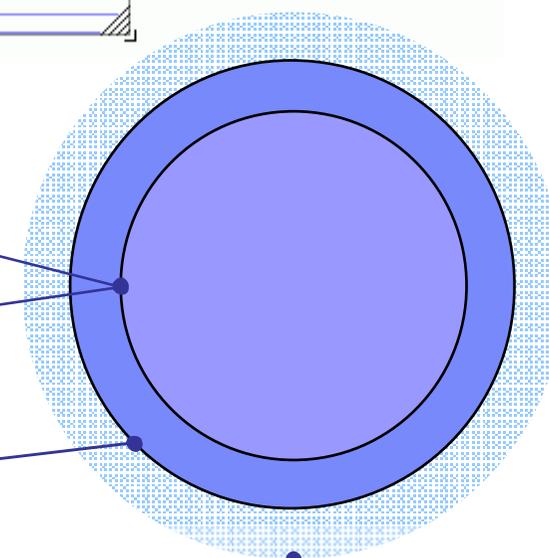

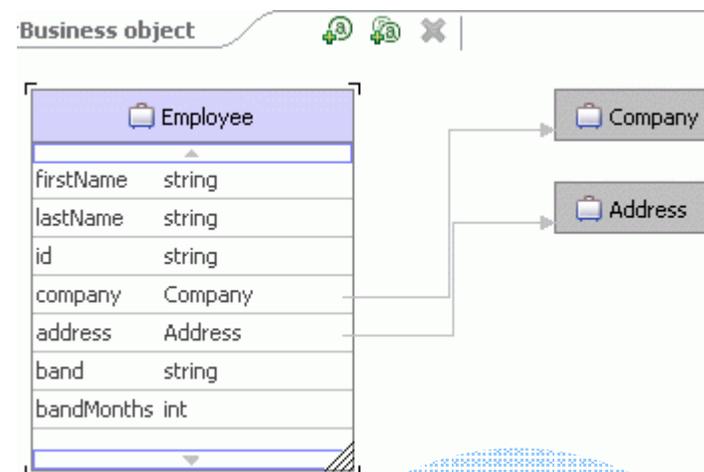

- Enhanced Service Data Object
  - ▶ Provides some function not available in base SDO DO (close to SDO 1.1/2.0)
  - ▶ Provides functional equivalence to existing ICS Business Objects
  - ▶ Enables import of 'standard' XSD
- Business Object Framework consists of:

Business Object definition

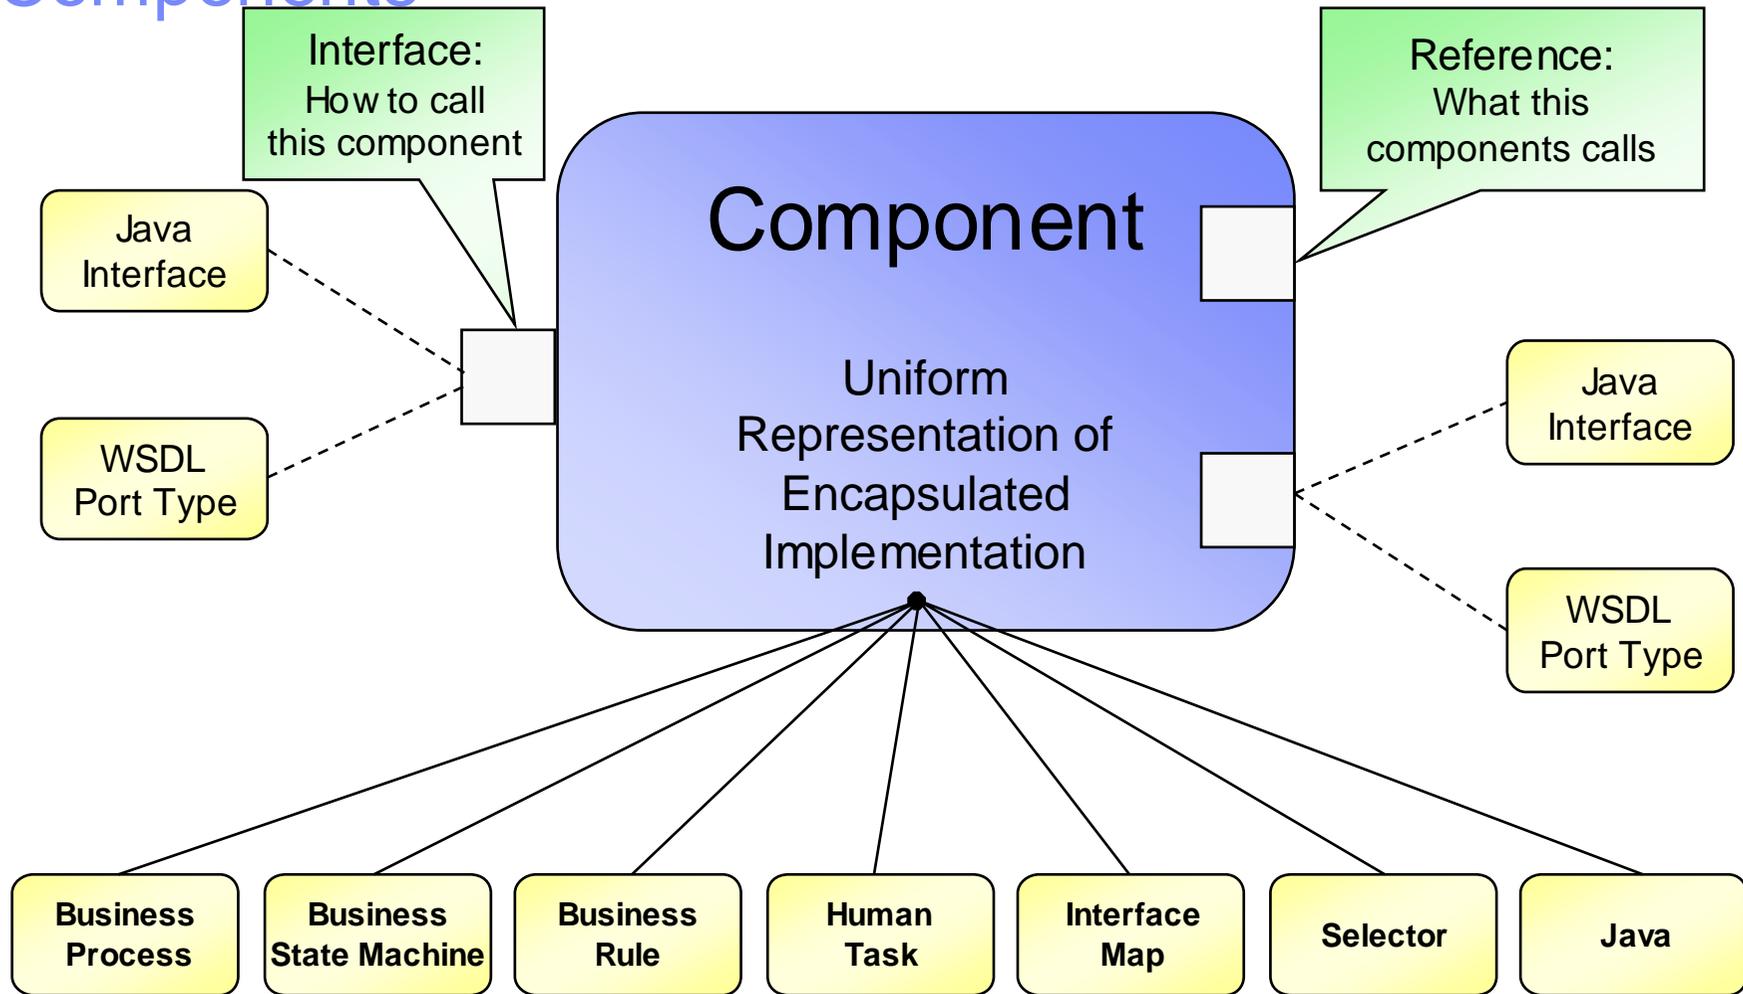

Business Object Metadata definition

Business Graph definition

Business Object Services

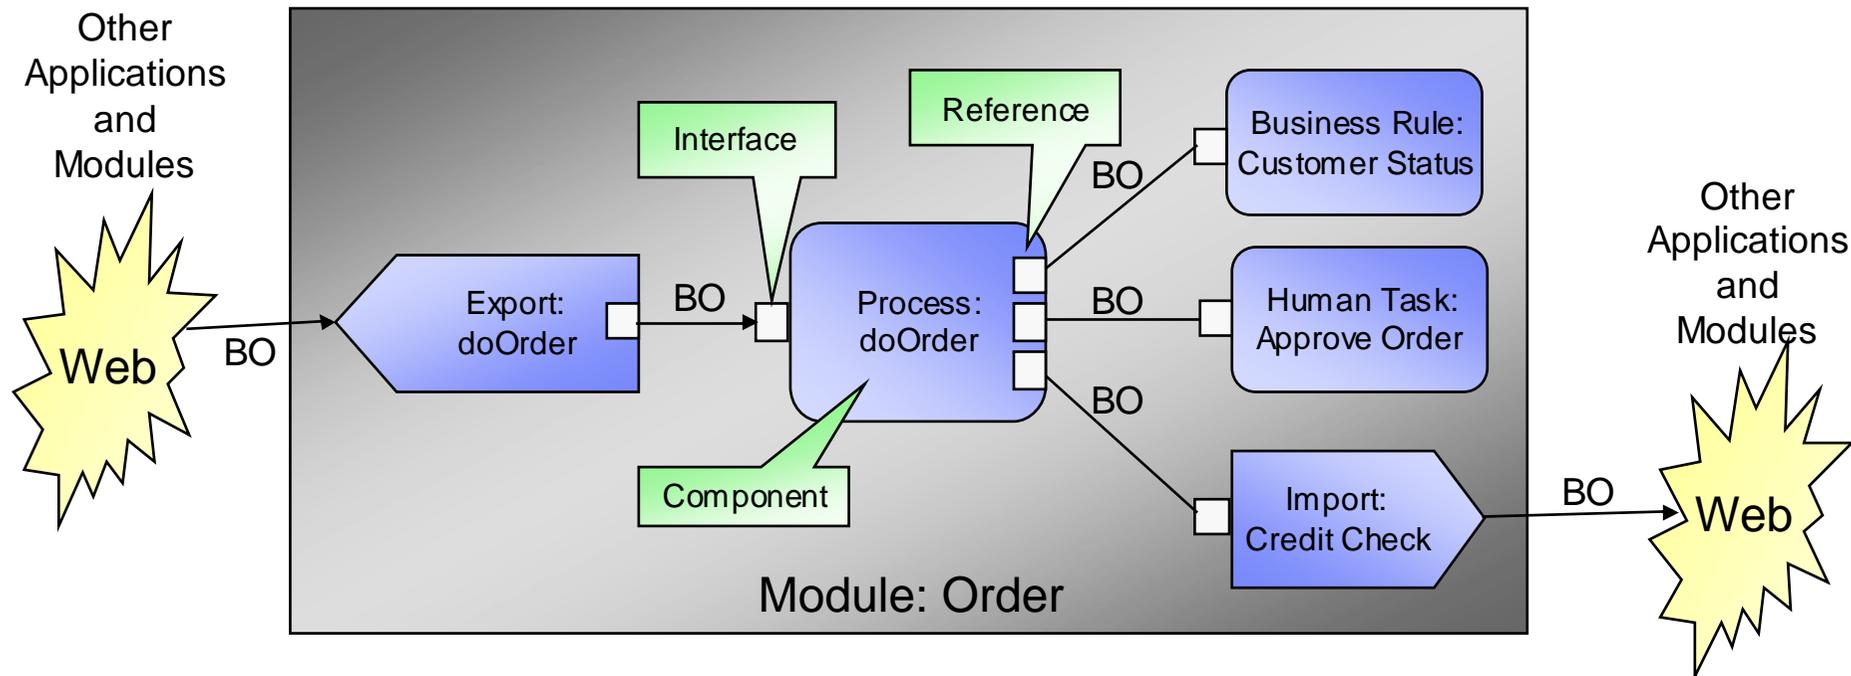

# The Common Invocation Model: Service Components

## The Common Invocation Model: Imports / Exports

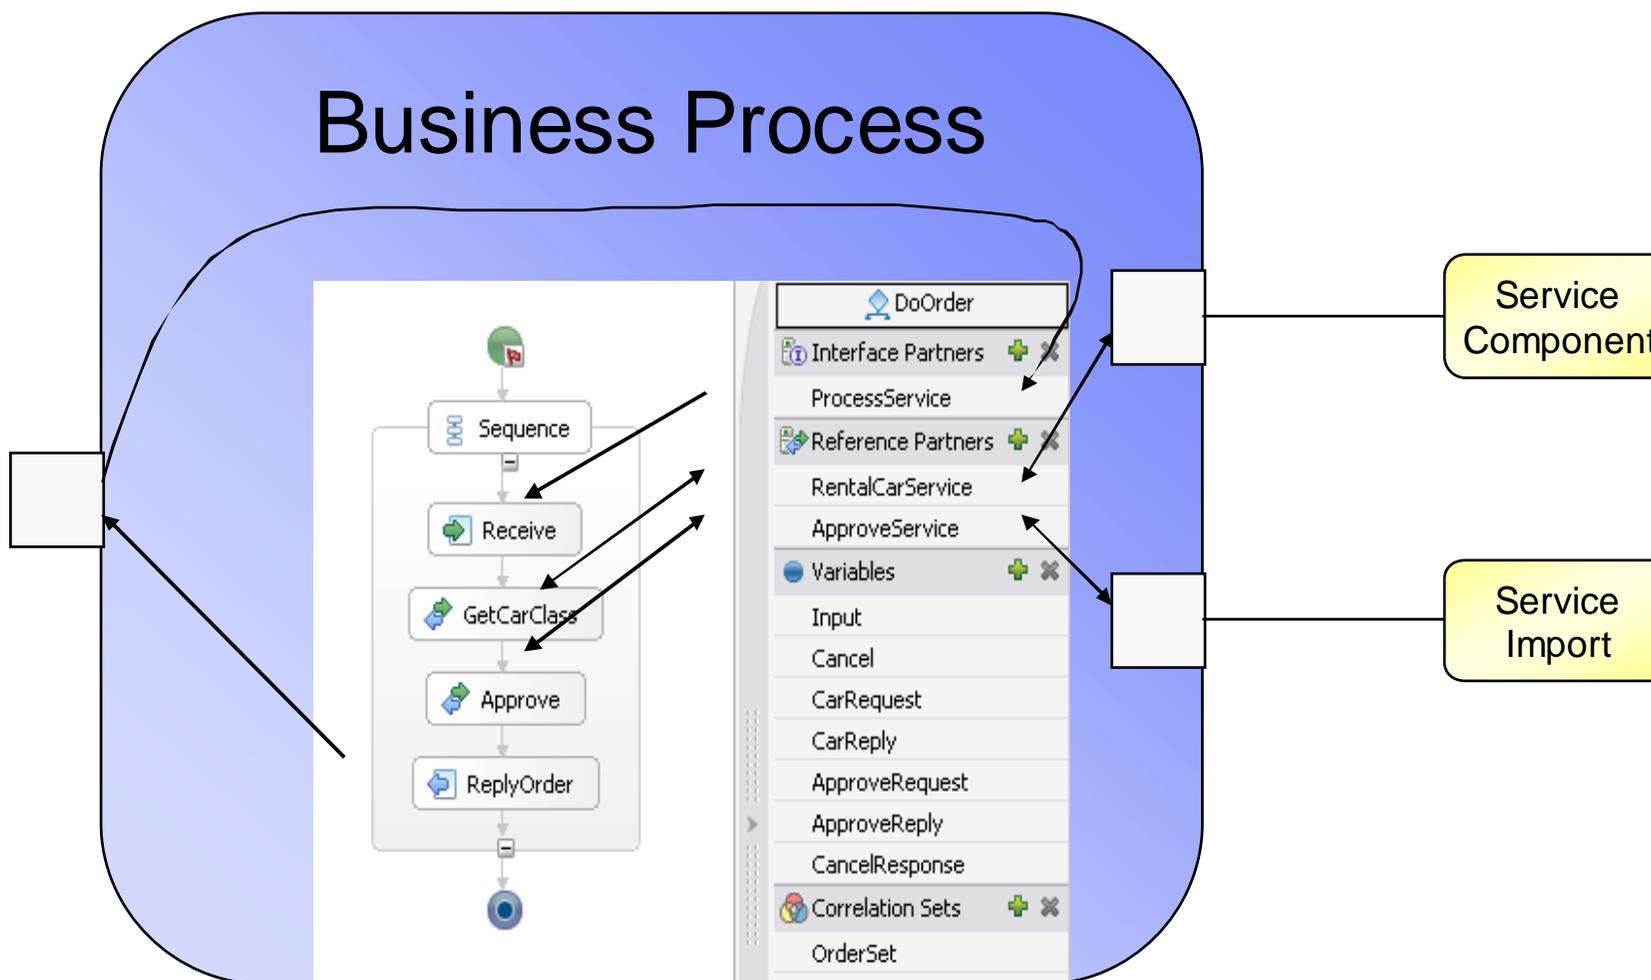

- Adapters
  - ▶ J2C 1.5
  - ▶ WBI Adapters (genetic “clone” of JMS)
- Web Services
  - ▶ SOAP over HTTP, SOAP over JMS
- JMS (WebSphere Messaging Resources)
  - ▶ Integrate existing WebSphere MQ Solutions through MQ Client Link
  - ▶ Use WebSphere Message Broker V6 to directly access destinations
- EJB
- Standalone Reference File
  - ▶ Enable an API Client to call a Module

## SCA and Business Objects – Conceptual View

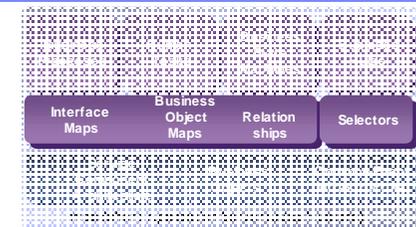

- SCA is the component model
- Components may be wired together
- Business Objects are the data flowing on wires between Components

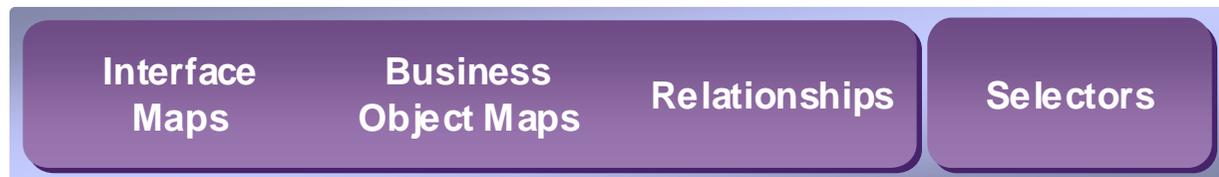

# The Service Choreography Model: WS-BPEL

# Supporting Services

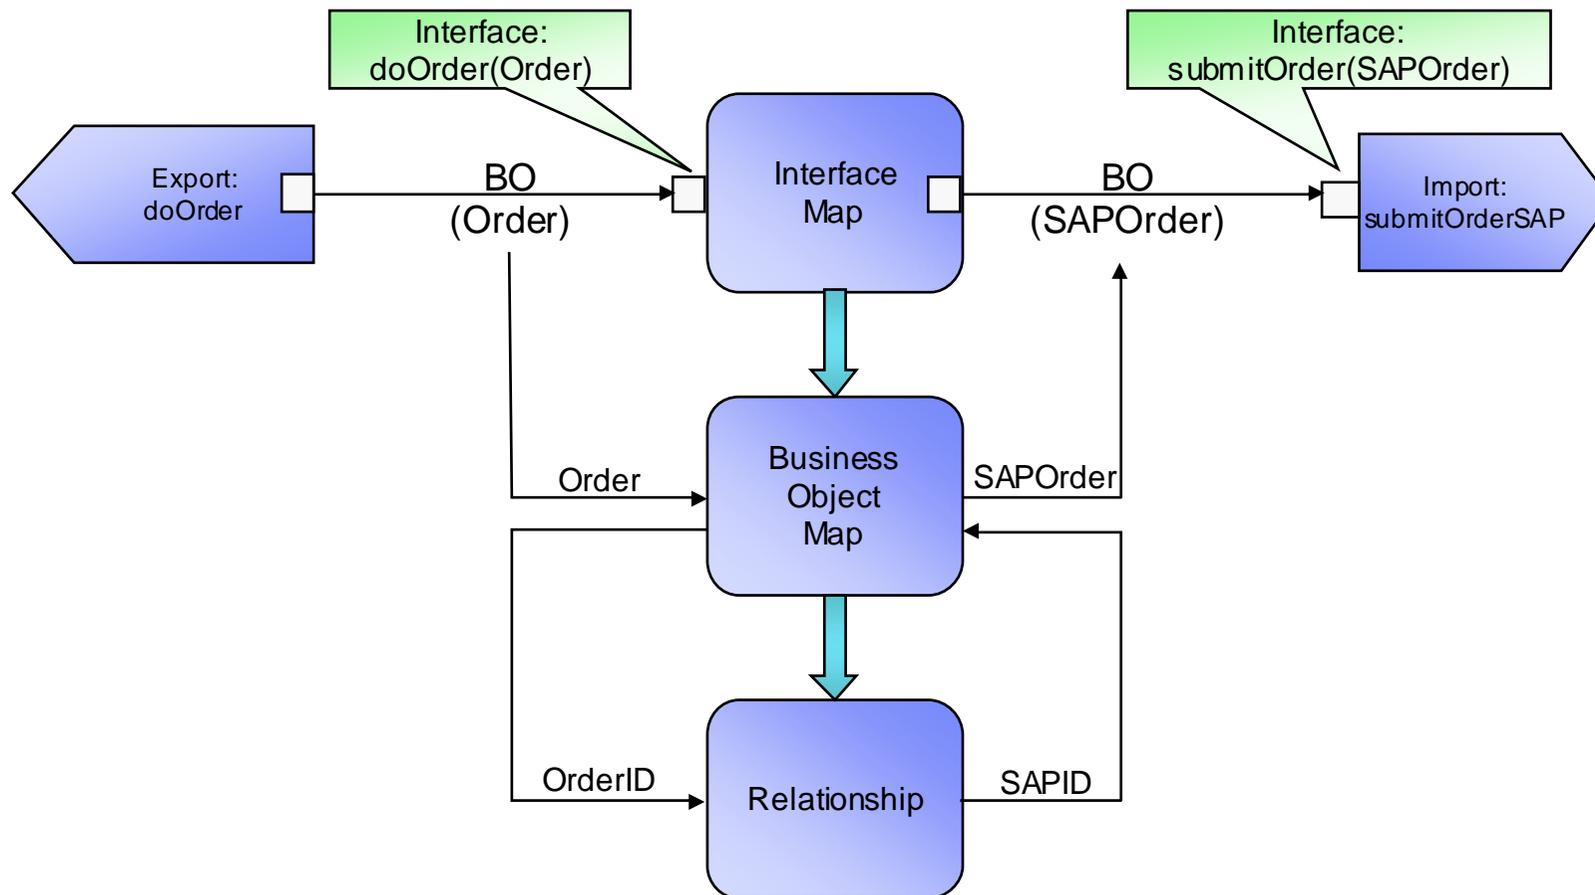

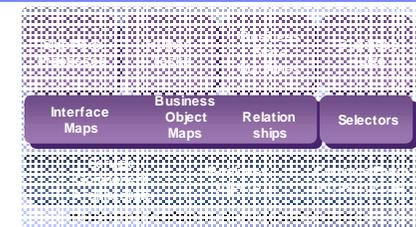

- Simplify common integration tasks
  - ▶ Simple mapping of fields from one representation to another
  - ▶ Mapping of interface signatures
  - ▶ Primary key relationship management between systems
- Selectors
  - ▶ Dynamic component invocation

**Supporting Services**  
simplify the common  
integration tasks

# Transformation Components

# Selector

- Client
  - ▶ makes a call to the Selector Component
- Selector Component
  - ▶ chooses which target destination to invoke using a declared selection implementation
- Destination(s)
  - ▶ for each operation on the Selector Component are associated with the Selector Component
- Web-based Administration

▼Active destinations

Default destinations: ValidateRule

Start Date	End Date	Destination
7/1/05 12:00:00 AM	7/31/05 12:00:00 AM	ImportValidateExternal
8/1/05 12:00:00 AM	8/31/06 12:00:00 AM	ValidateManual

Parameter method: Current time

Business Processes Human Tasks Business State Machines Business Rules

## Service Components

- Powerful business modeling and integration components
  - ▶ Integrated into the runtime
  - ▶ Powerful tooling support
- All SCA Components
  - ▶ Consume and generate Business Objects

Business Processes

Human Tasks

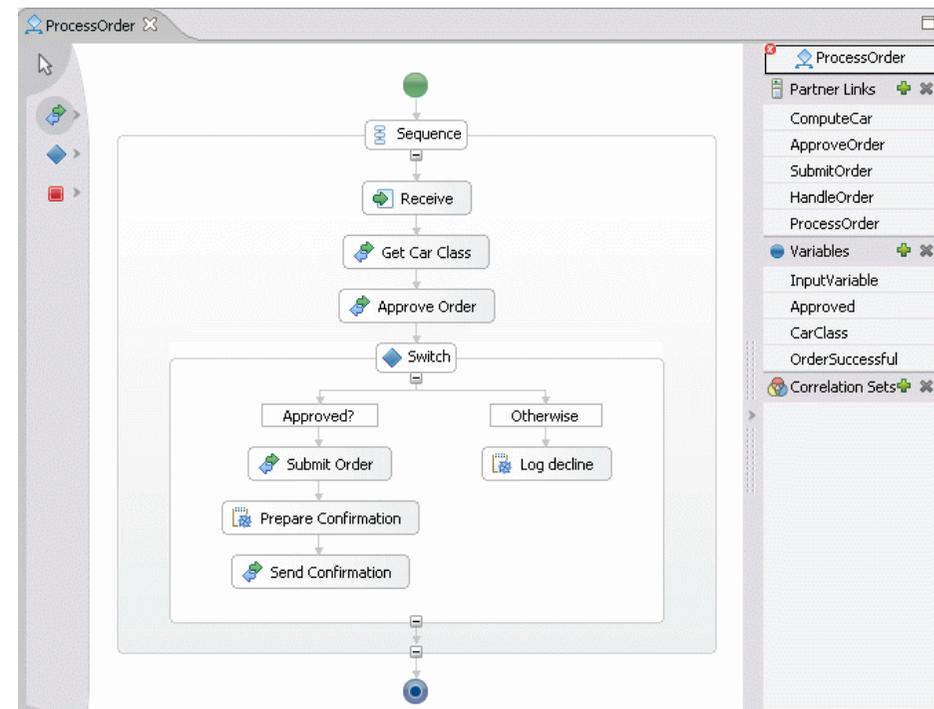

Business State Machines

Business Rules

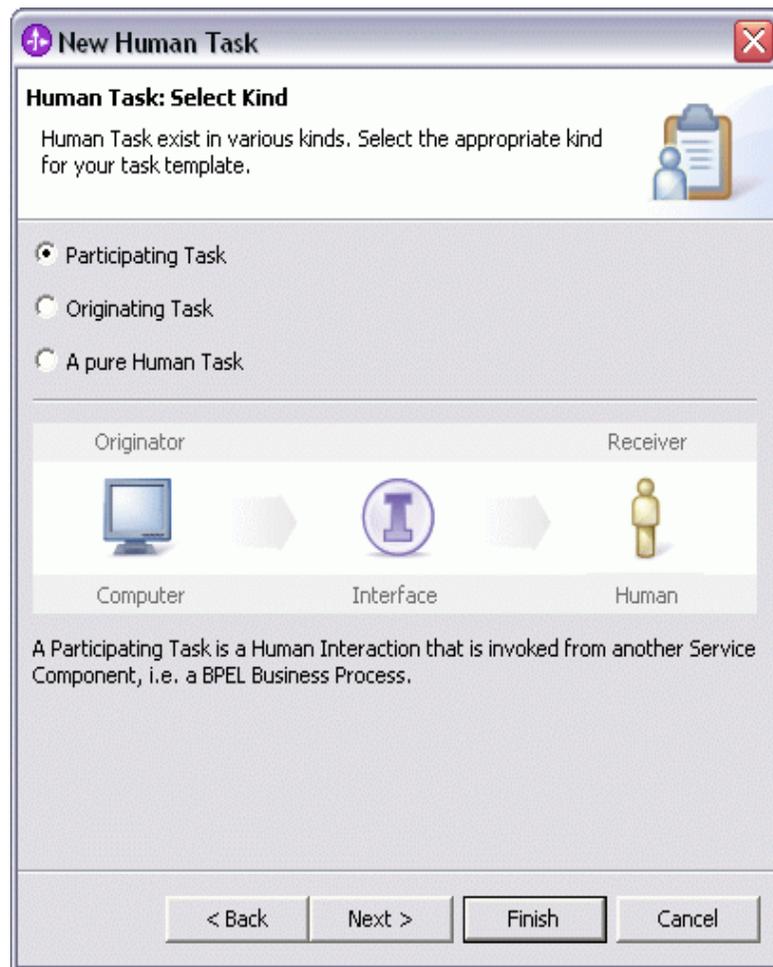

**Service Components**  
are the added-value  
components

# Business Process

- WS-BPEL compliant business process engine
  - ▶ WS-BPEL 1.1 + 2.0 Draft
  - ▶ Optionally, generated from WebSphere Business Modeler
- Generic Business Process
  - ▶ Operations / Parameters
  - ▶ Service Implementation Details hidden
- Transactions / Compensation
- Full XPath 1.0 Support
- Visual Debugger

# Human Task Manager

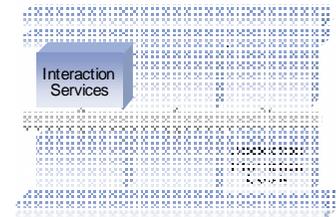

- Invoke humans as services
  - ▶ Human participate in an otherwise automated business process
- Human interface to services
  - ▶ Allows humans originate a service such as a business process or Web Service using a common User Interface
- Ad-hoc usage of To-Do list
  - ▶ Implement a pure-human task (such as a managed query) to a colleague or customer
  - ▶ Forward a workitem to another human

# Human Task Features

- Powerful Staff Resolution
  - ▶ Integrate with existing enterprise people repository (e.g. LDAP)
- Different Assignment Rules for Editors, Readers, Administrators and Potential Owners
- Included Clients
  - ▶ Web Client
  - ▶ Portal Client
- Multi-level Escalation Mechanisms
  - ▶ e-Mail
  - ▶ Staff Assignment -> Notification Work Item
  - ▶ Priority Aging

The screenshot displays the configuration interface for a human task named "ApproveOrder". The interface is organized into several sections:

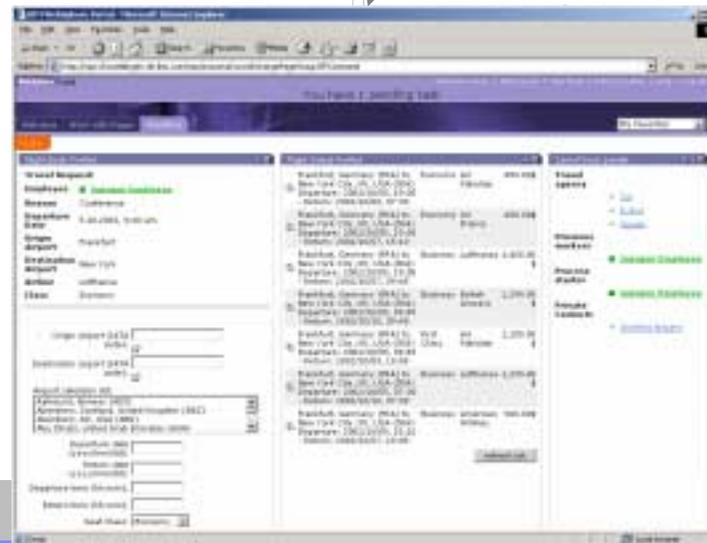

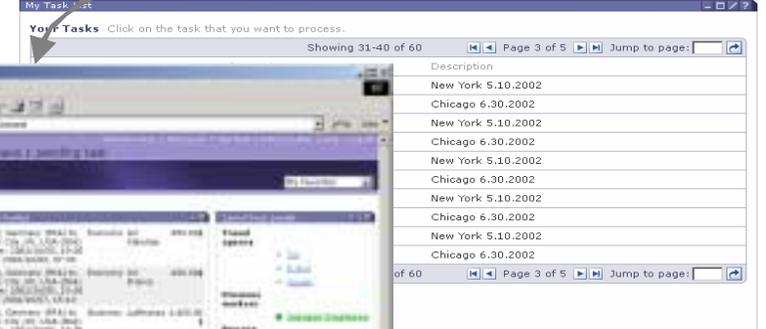

- Human task:** Shows the task name "ApproveOrder" and a button to edit it.
- Receiver settings:** Contains a "Staff settings" section with fields for "Potential Owner", "Editor", and "Reader".
- Client settings:** Contains a "Client settings" section with a "Web Client" field.
- Escalation settings:** Shows a flow diagram starting from a "Ready" state. From "Ready", there are two paths:
  - One path leads to "Send e-Mail" and "Increase Priority every 2 hours".
  - Another path leads to a "Claimed" state, which then leads to "Notify Manager after 2 hours".

# WebSphere Process Portal

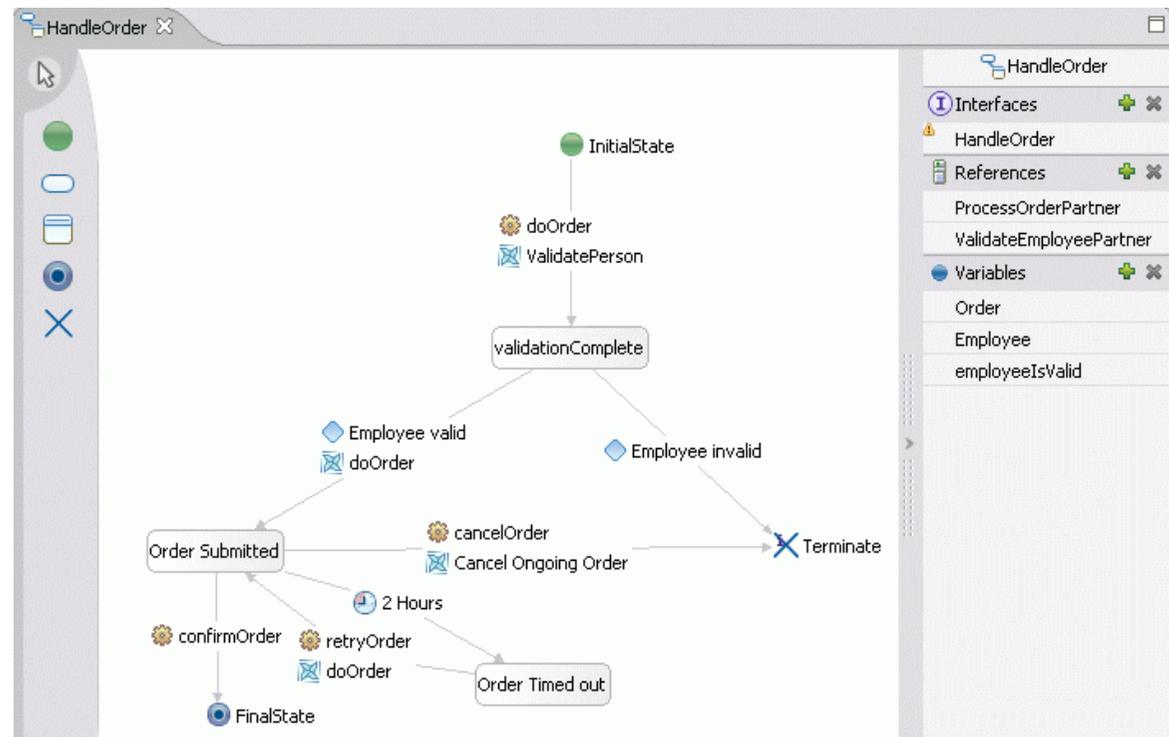

## *Simplicity from a user's perspective*

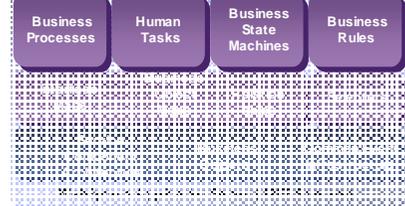

- The Portal becomes the user interface for all user facing tasks.
- To each user, the portal presents exactly the tasks at hand, and is also the integration point for all information and applications required to process those tasks.
- WebSphere Portal displays alerts for users when tasks are pending. When a user clicks on the alert, the portal displays the user's task list, which lets the user launch **Task Page**

# Business State Machines

- Another way to model a process
  - ▶ Manage transitions
- State Machine Implementation
  - ▶ Based on UML 2.0 State Machine
  - ▶ Event driven business processes
  - ▶ Creates WS-BPEL under the covers
- Simple/Complex States
  - ▶ Entry/Exit
- Transitions
  - ▶ Guards
  - ▶ Actions (invokes)
  - ▶ Timeout

# Business Rules

- Externalize Business Logic from an application (business process)
  - ▶ Easy change of logic that may change
  - ▶ Dynamically Update Rules in Runtime on the fly through Web Interface
  
- Most-requested Business Rule functionality
  - ▶ Decision Tables
  - ▶ Rule Sets (If/Then Rules)
  - ▶ Rule Templates
  
- Ease of Use
  - ▶ Rule Group: all artifacts needed for business rule developer are contained within one component

## Business Rules – Presentation Information

- Enables rules to be displayed in the web based tooling with a more natural language view
  - ▶ if invoice.purchase()  $\geq$  100.00 then discount = .05
  - ▶ When the customer purchase is \$ 100 or more then give the customer a discount of 5 percent.
- Defined by the application developer
- Can be translated

# Web Based Tooling – Decision Table

The screenshot shows the WBI Business Rule Editor web interface. The main content area displays the configuration for 'Table224 - Decision Table'. The interface includes a left-hand navigation pane with a tree view of rule books and rule sets. The main area shows the 'General Info' and 'Decision Table' sections.

**Table224 - Decision Table**

Back Edit

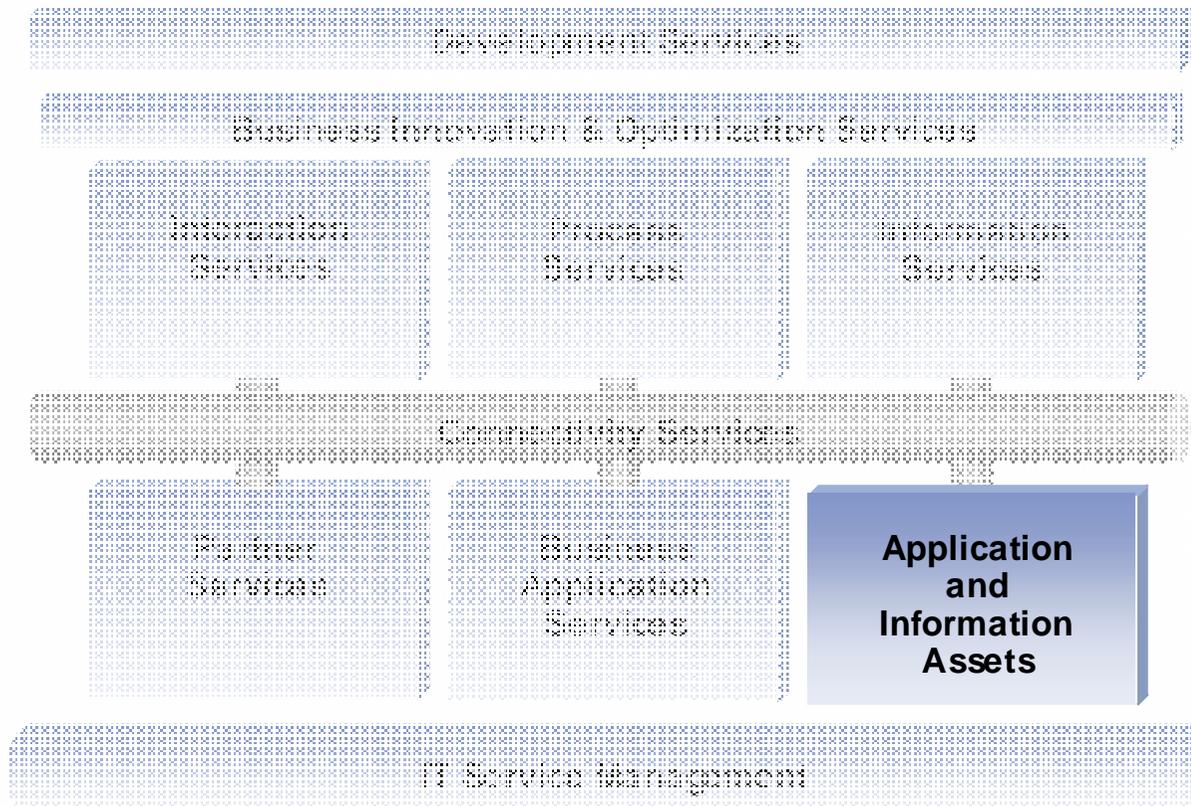

**General Info**

Last Published	2005/3/1 18:48 (Local Time)	Status	Local Change
Description	comment for table224 which uses new WPT format		

**Decision Table**

income value	member type	output rate
[1000,2000)	is gold member	Todays Prime + 1.5
	is silver member	Todays Prime + 1.0
	is bronze member	Todays Prime + 0.5
[2000,5000)	is gold member	Todays Prime + 2.0
	is silver member	Todays Prime + 1.5
	is bronze member	Todays Prime + 1.0

# The IBM WebSphere Integration Reference Architecture: Application and Information Assets: Application Integration

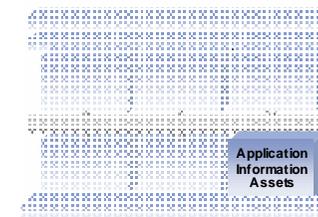

**Access** to existing applications, technologies and data

Service based **Adapters** to connect with heritage and off-the-shelf applications

**Repurpose** existing systems with minimal impact to those systems

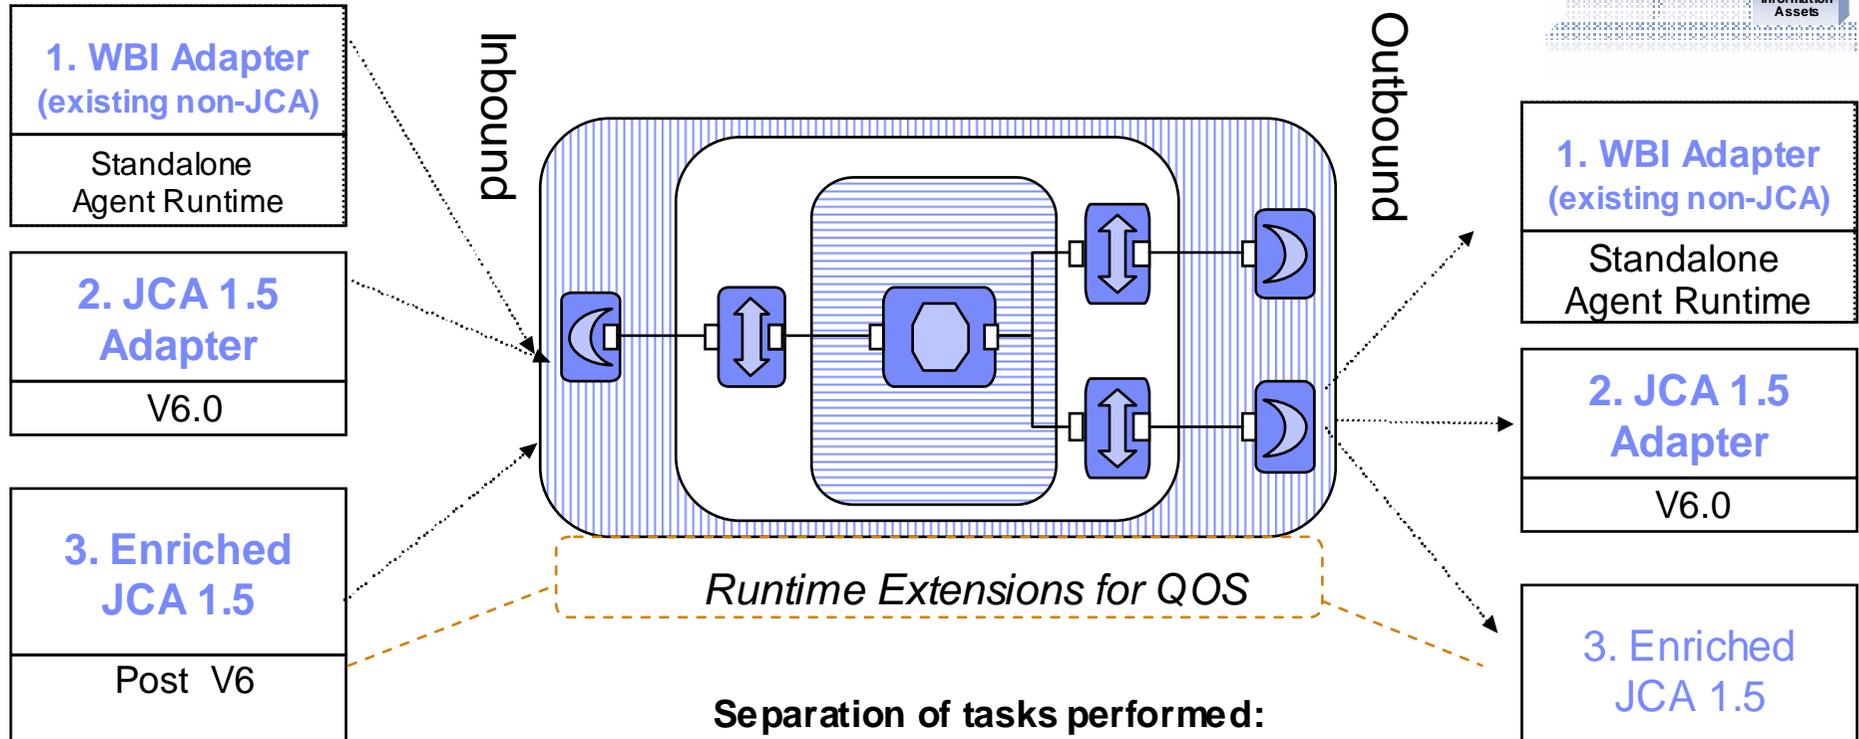

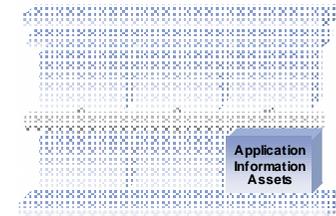

# WebSphere Process Server V6 Adapters

- JCA 1.0/1.5 Resource Adapters
  - ▶ Current IBM JCA Adapters: IMS, CICS, ...
  - ▶ New IBM JCA 1.5 Resource Adapters
  - ▶ Third party “vanilla” JCA compliant Resource Adapters
- JMS Interface:
  - ▶ Generic interface.
  - ▶ Current WBI Adapters (non-JCA)
  - ▶ Over 70 adapters from IBM
- Web Services
- Service Component Architecture (SCA) hides implementation

# WebSphere Process Server – Adapters

**Separation of tasks performed:**

- The 'connector'** – communications, QOS initiation, propagation, termination, etc.,
- Adaptor BI Component** EIS inbound format to AsBO, AsBO to EIS specific outbound format
- Mediator Component** convert AsBO to GBO, GBO to ASBO, Selection, etc..

## Two Types of WebSphere Adapters

### J2C Based Adapters

- ▶ API:
  - SCA Bindings
    - J2EE 1.4, JCA 1.5
- ▶ Transport:
  - n/a
- ▶ Heritage:
  - WSAD-IE 1.5 JCA 1.0 ported to JCA 1.5, and
  - WBI Adapters v2.x ported to JCA 1.5

### JMS Based Adapters

- ▶ API:
  - SCA Bindings
    - J2EE 1.4, JMS
- ▶ Transport:
  - A JMS provider (i.e. WebSphere MQ or WAS 6.0 WebSphere Platform Messaging)
  - IIOP and native WebSphere MQ API
    - No SCA support
- ▶ Heritage:
  - Improved WBI Adapters v2.x

# JMS Based Adapters

## Application Adapters

- Ariba Buyer
- Clarify CRM
- eMatrix
- i2
- i2 Active Data Warehouse
- IndusConnect Framework
- Maximo MEA
- MetaSolv Applications
- mySAP.com
- NightFire Applications
- Oracle Applications
- PeopleSoft
- Portal Infranet
- QAD MFG/PRO
- Retek
- Siebel eBusiness Applications
- Spirent Applications
- Telcordia Applications
- WebSphere Commerce

## Technology Adapters

- Adapter for e-mail
- FIX Protocol
- JMS
- JText
- JDBC
- MQ
- MQ Integrator
- MQ Workflow
- SWIFT
- XML
- Data Handler for XML
- Data Handler for EDI
- Web Services

## Mainframe Adapters

- ADABAS
- CICS
- DB2 Databases
- IMS Transaction Manager
- IMS Database Manager
- VSAM
- Natural
- IDMS Database

## JCA Based Adapters

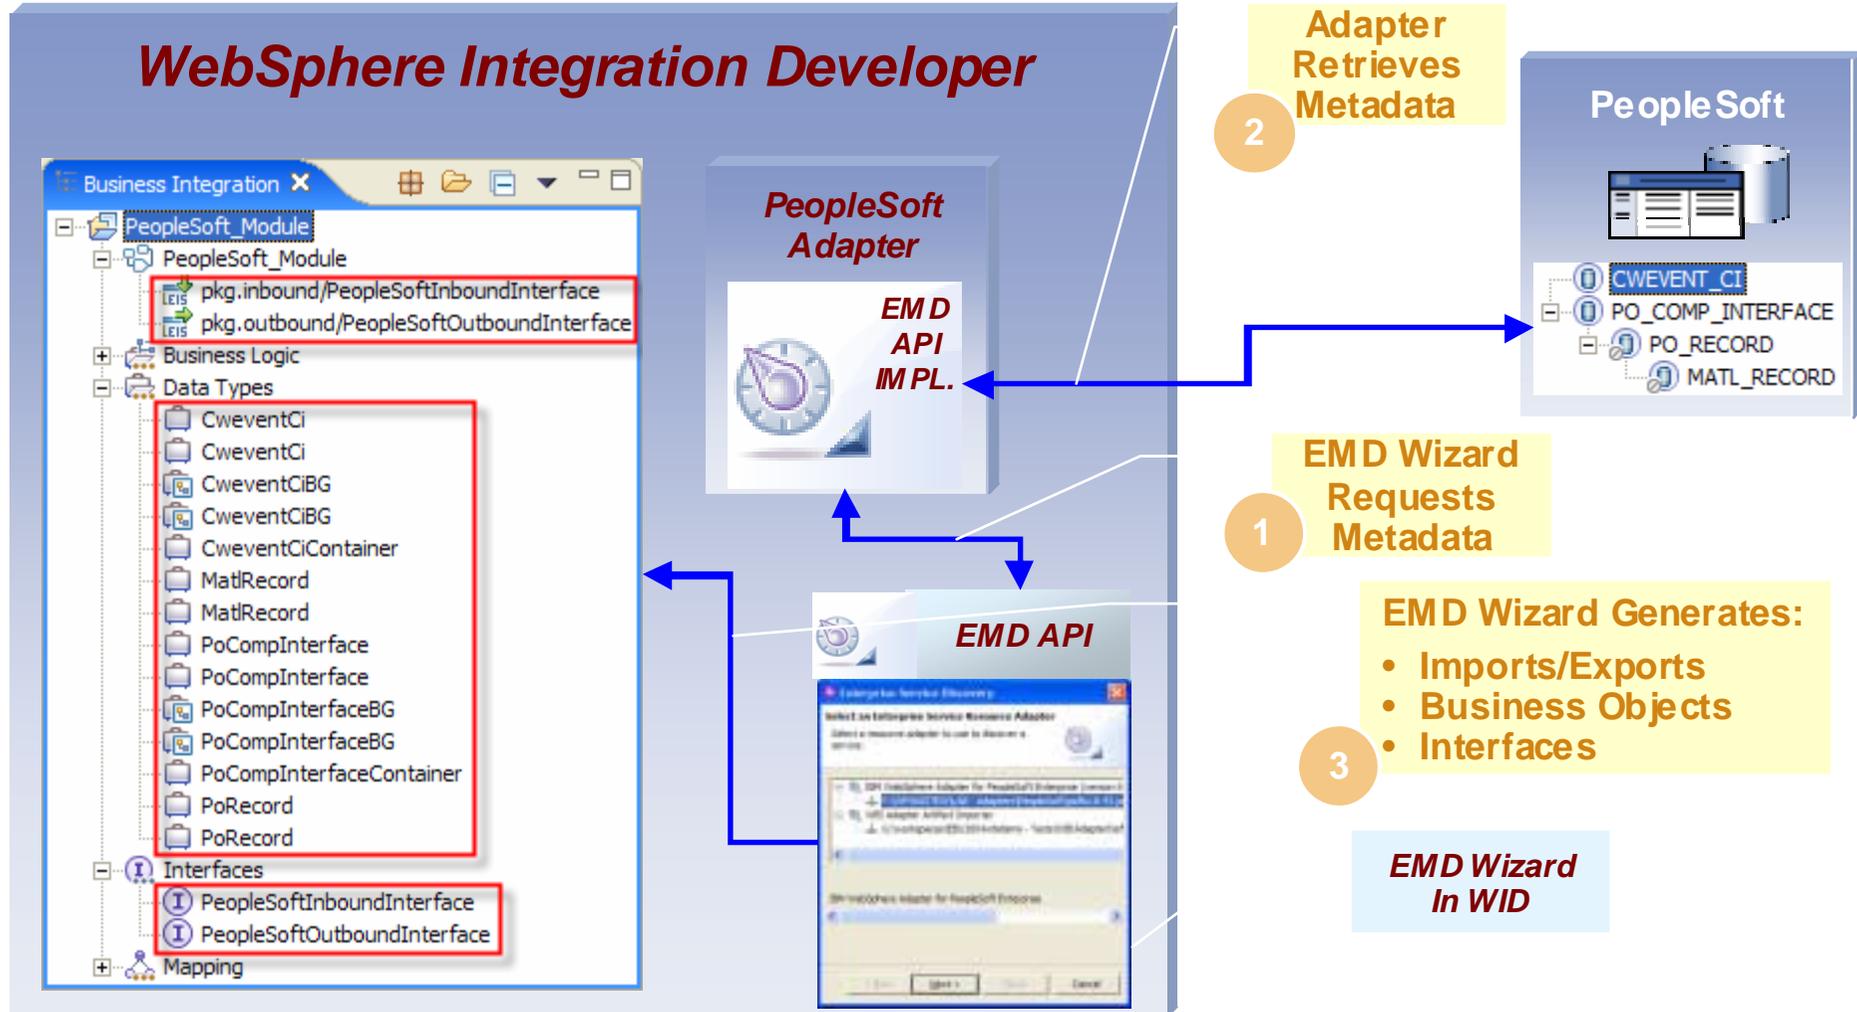

### New IBM WebSphere Adapters ported from WBI Adapters v2.x

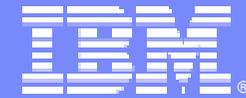

- Flat Files v6.0
- JDBC v6.0
- PeopleSoft Enterprise v6.0
- Siebel Business Applications v6.0
- SAP Applications v6.0

### WBI-SF 5.1 Adapters ported to JCA 1.5

- CICS ECI 1.0
- CICS ECI 1.5
- IMS 1.0
- IMS 1.5

## WPC 6.0 Programming Model

- **SCA** - Service Component Architecture

- ▶ Based on J2EE
- ▶ Service Components
- ▶ Service Data Objects
- ▶ Programming model for building business processes in a service oriented way

- Value

- ▶ Lowers the barriers for a developer to enter the world of SOA and become productive
- ▶ J2EE and Web Service skills not required to create sophisticated business applications
- ▶ Makes the experienced J2EE developers more productive.

## Users their Roles and Tools – RAD and WID

### Integration Developer

WebSphere  
Integration  
Developer V6.0

- Focus on SOA implementations and business process automation
- Had some basic programming experience (loops, conditions, string manipulation)
- Expects tools to simplify and abstract advanced IT implementation details

### J2EE Developer

Rational  
Application  
Developer V6.0

- Creates J2EE artifacts used by Integration Developer to assemble solutions
- Has J2EE and Web Services skills
- Expects tools to automate the low level details of J2EE programming model
