Getting to the heart of Service Oriented Architecture (SOA)

SOA on your terms and our expertise

ON DEMAND BUSINESS™

© 2005 IBM Corporation

Questions You Need to Consider

- **What is Service Orientation and SOA and why is it important for your business?**
- **Is it real? Are customers really using it today?**
- **What are the core elements brought together under SOA?**
- **How can IBM help you get started?**

What is?

... a service?

A **repeatable business task** – e.g., check customer credit; open new account

... service orientation?

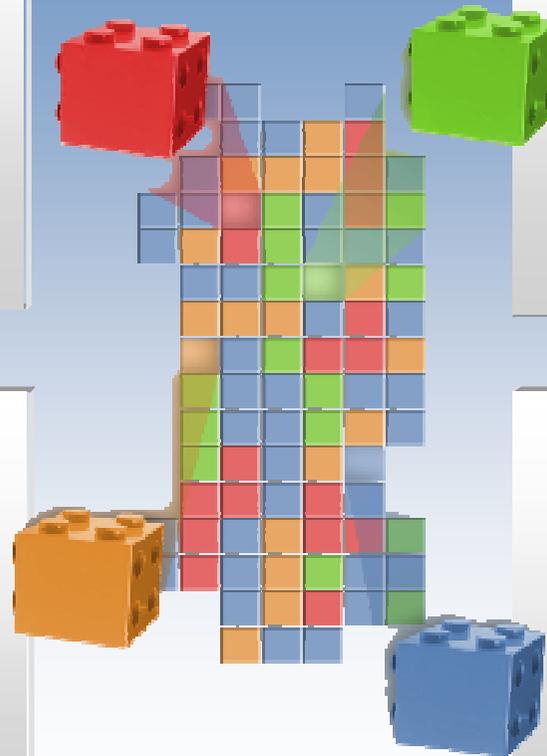

A way of integrating your **business as linked services** and the outcomes that they bring

... service oriented architecture (SOA)?

An IT **architectural style** that supports service orientation

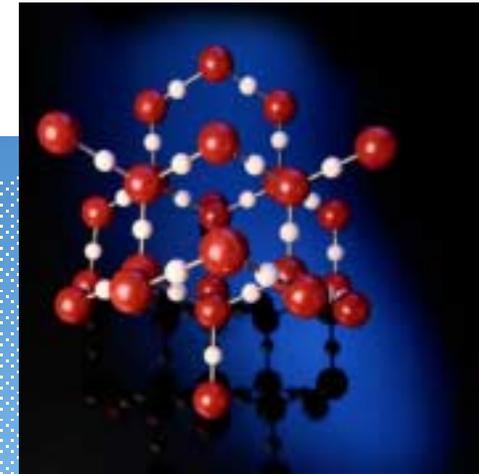

... a composite application?

A set of **related & integrated** services that support a business process built on an SOA

SOA is the DNA of onDemand

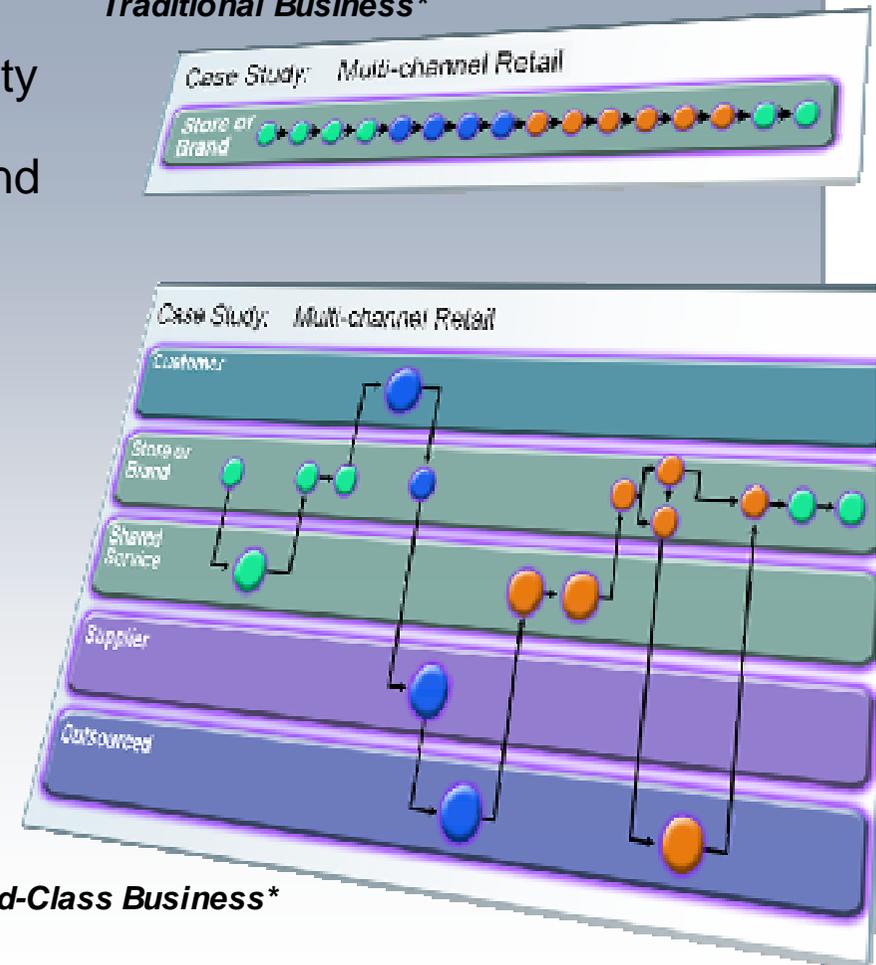

An on demand business is an enterprise whose business processes — **integrated end-to-end** across the company and with key partners, suppliers and customers — can **respond with speed** to any customer demand, market opportunity or external threat.

Why SOA for business flexibility and reuse?

- **Economics:** globalization demands flexibility
- **Business processes:** changing quickly and sometimes outsourced
- **Growth:** at the top of the CEO agenda
- **Reusable assets:** can cut costs
- **Information:** greater availability
- **Crucial for flexibility and becoming an On Demand Business**

Next Process scenario (slide 7-14) should be carefully selected based on customer/audience industry and background

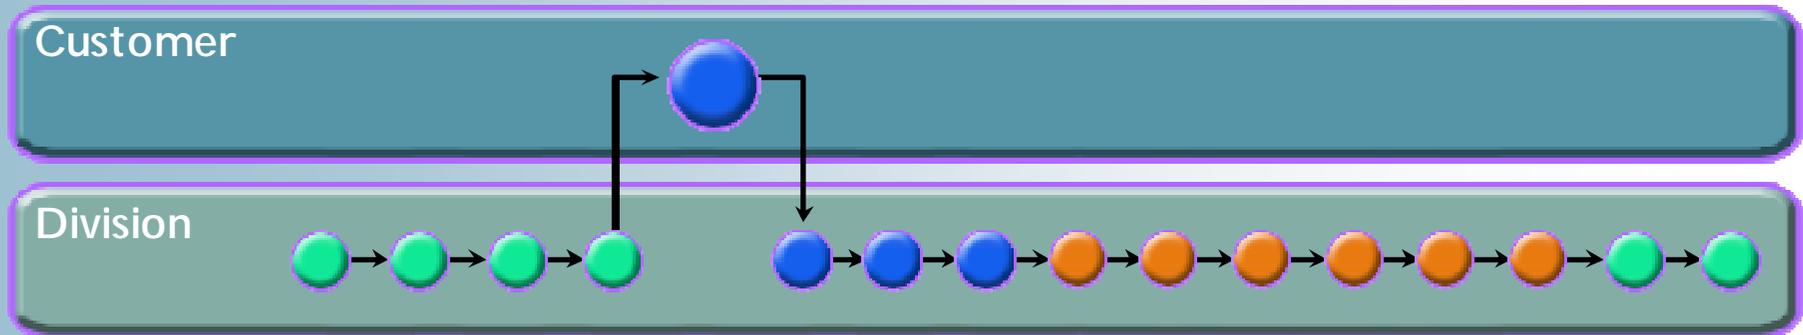

Business Flexibility in Action

Case Study: Procure to Pay Process

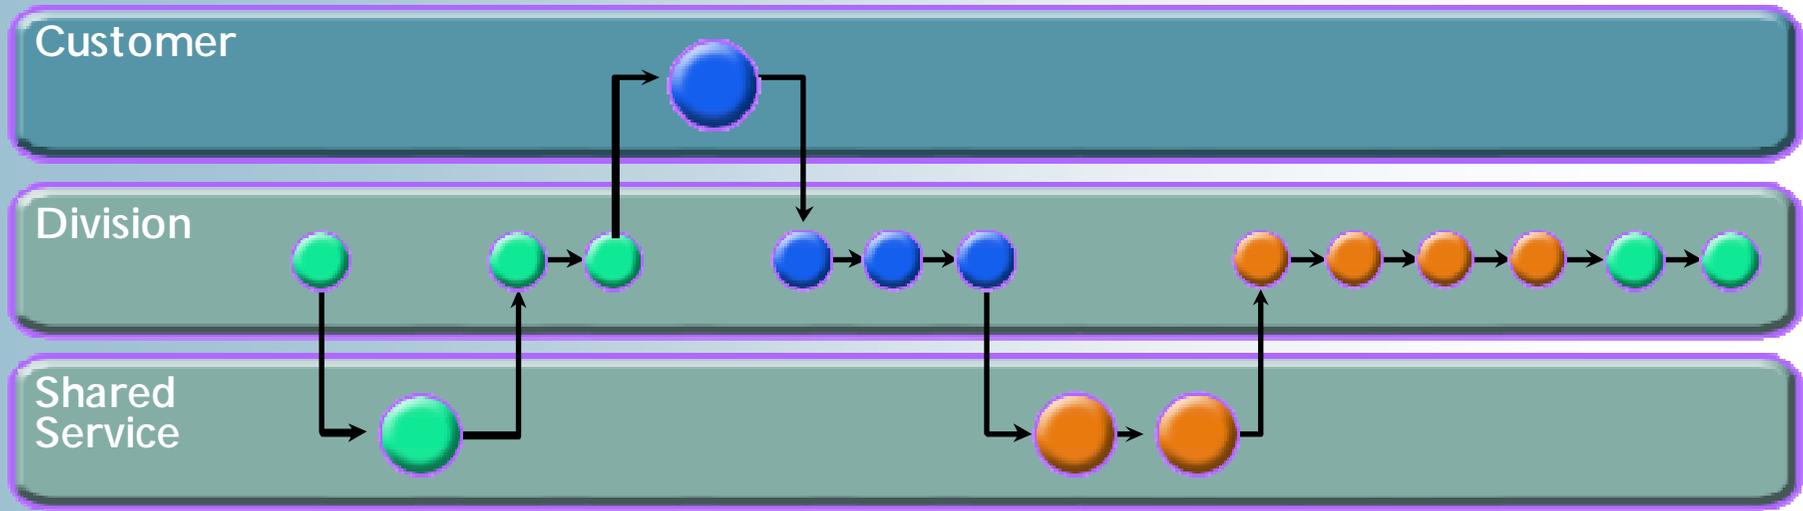

Business Flexibility in Action

Case Study: Procure to Pay Process
Change: Customer Order Entry

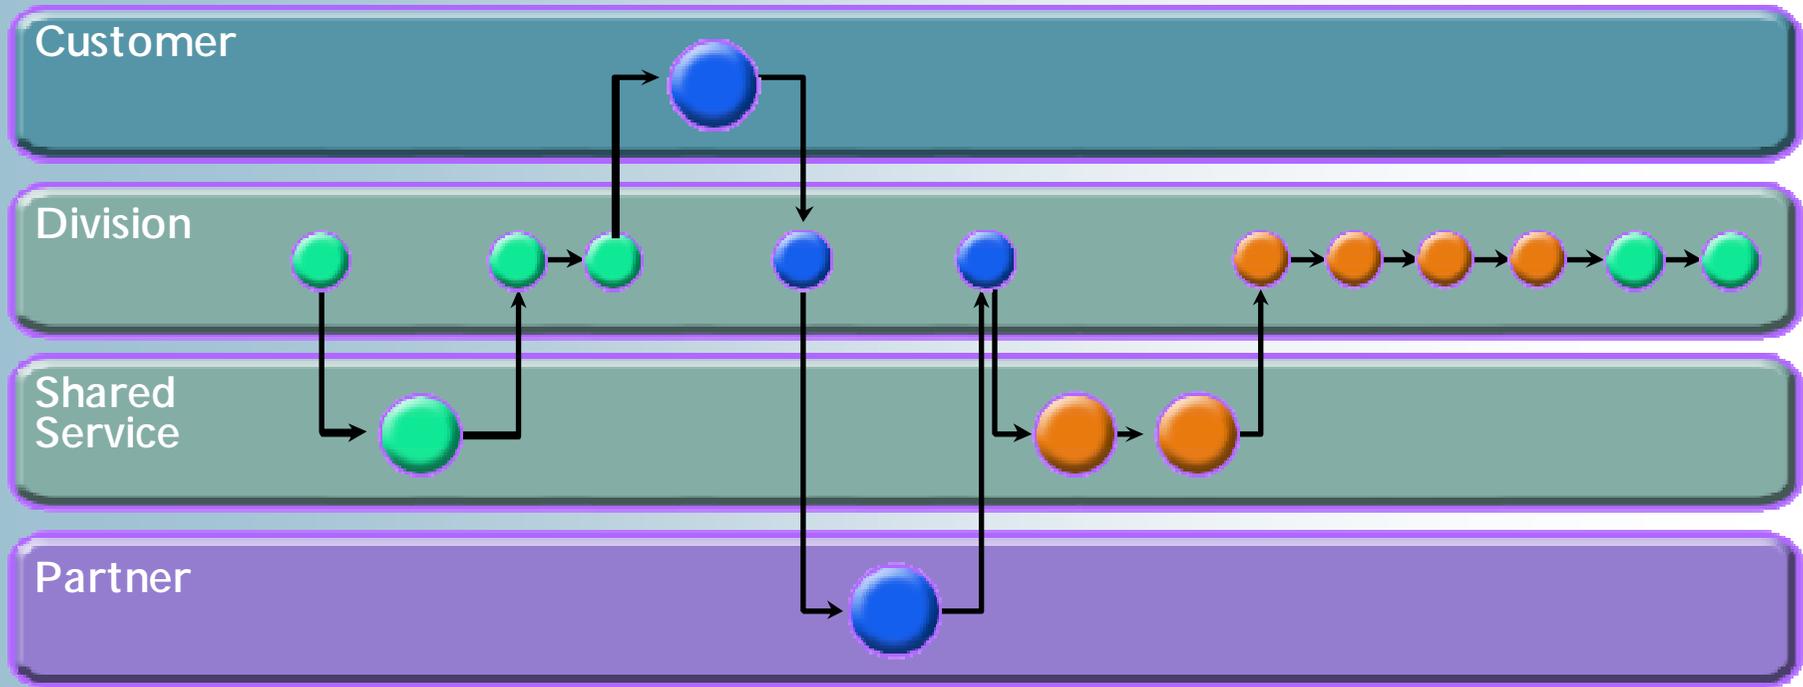

Business Flexibility in Action

Case Study: Procure to Pay Process
Change: Shared Service – Marketing, Billing, Receivables

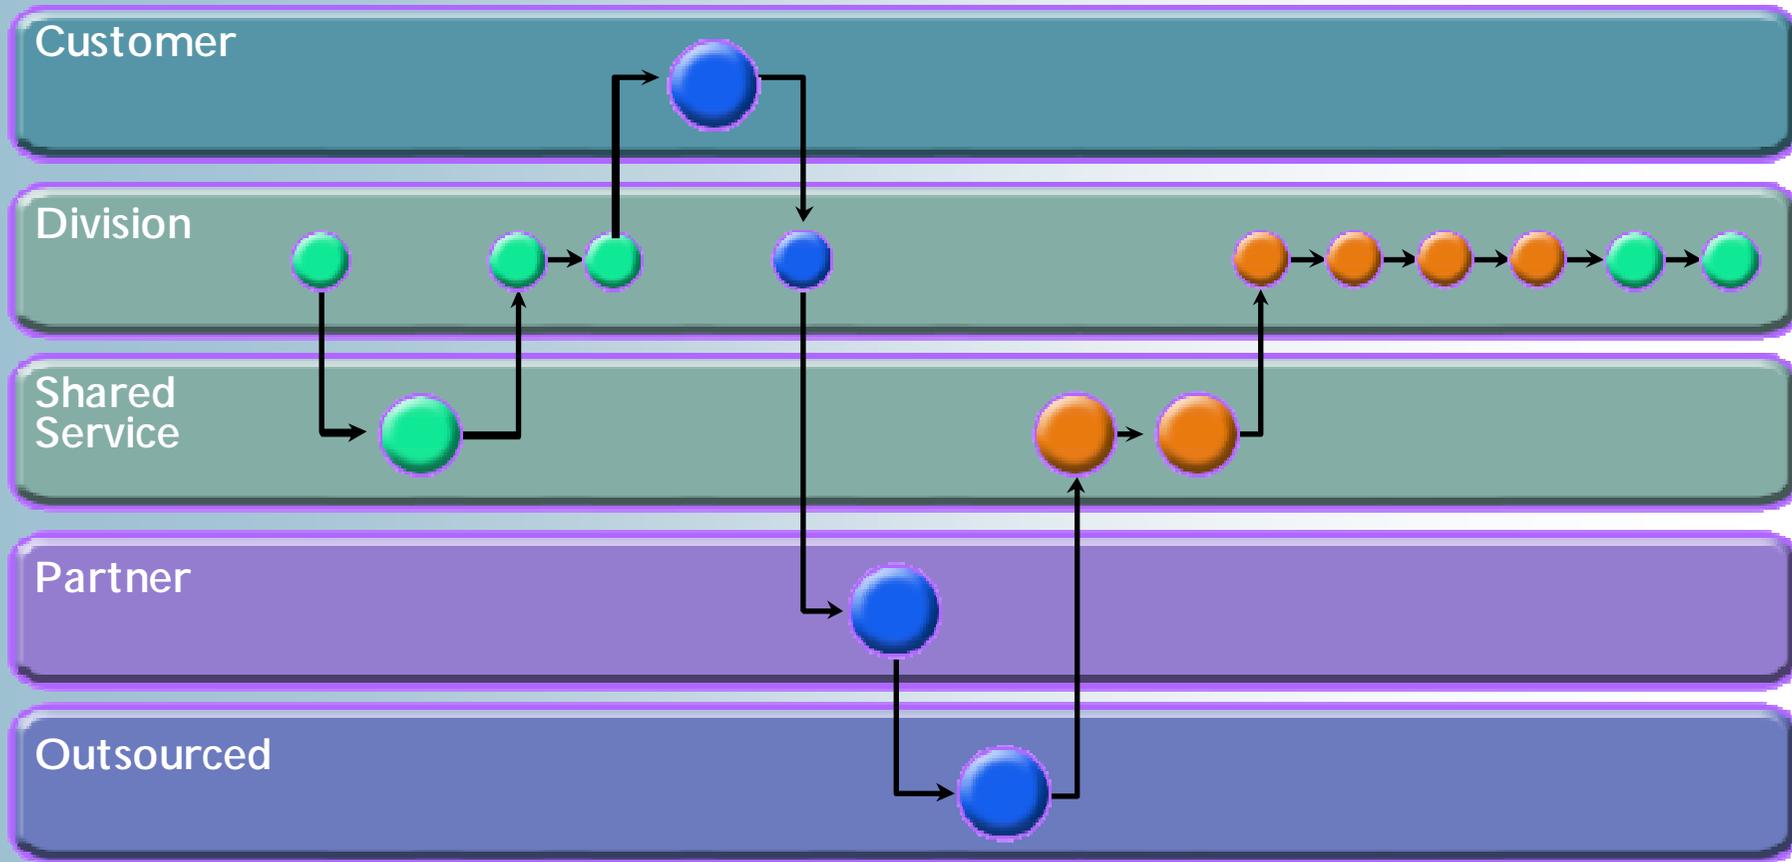

Business Flexibility in Action

Case Study: Procure to Pay Process
Change: Supplier Handles Inventory (VMI)

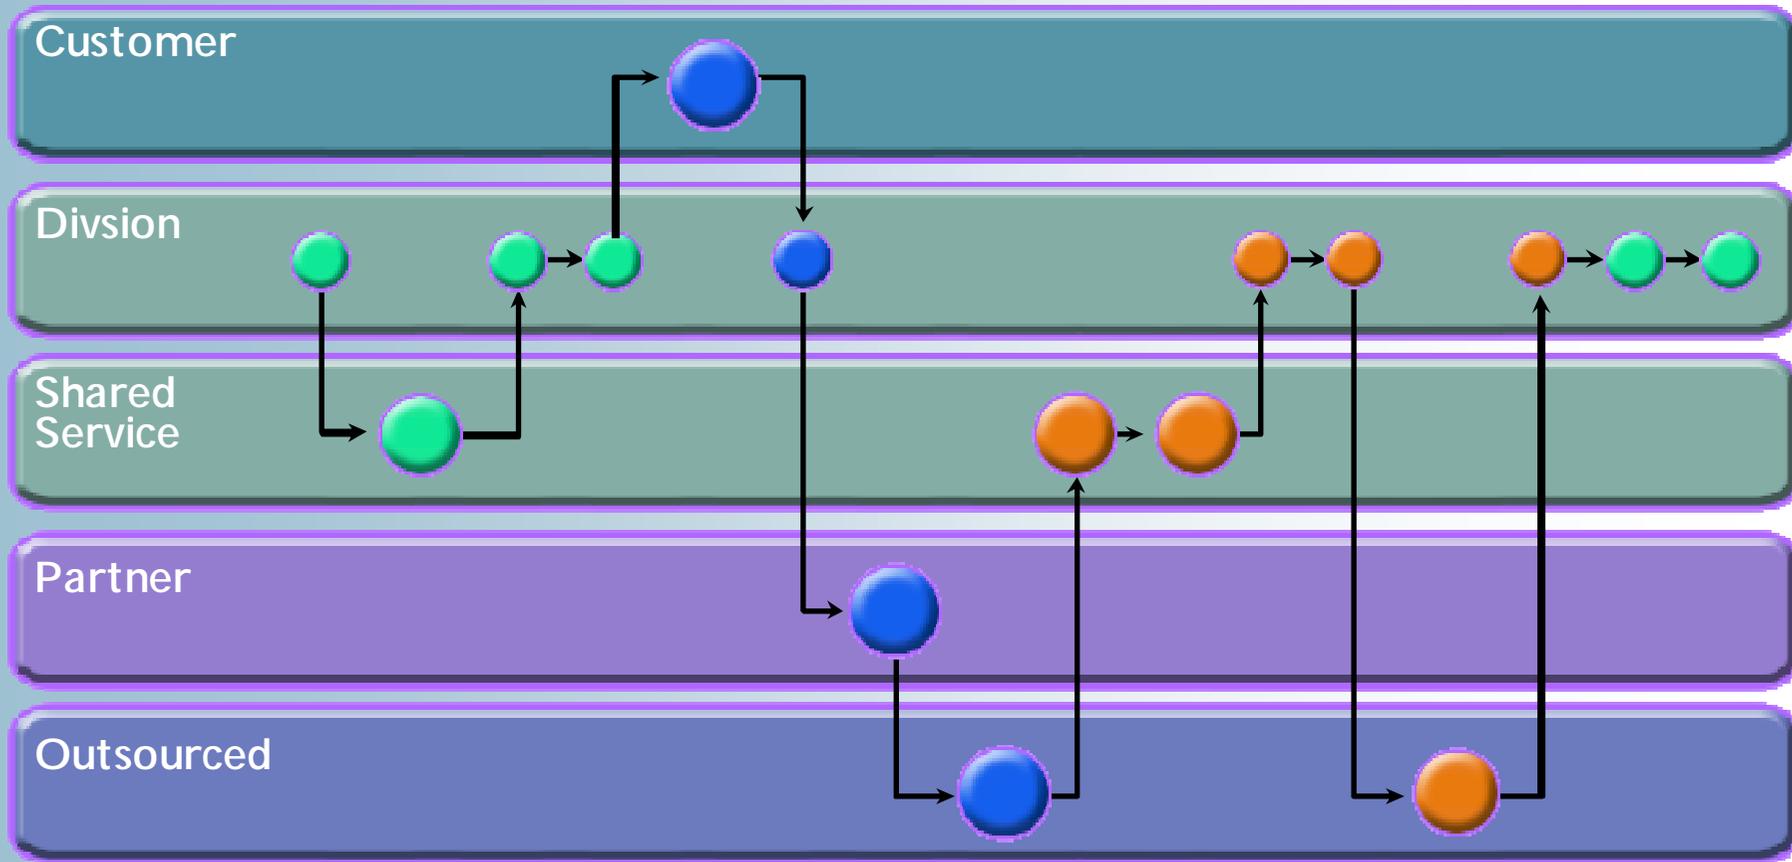

Business Flexibility in Action

Case Study: Procure to Pay Process
 Change: Shipping by FedEx, DHL or UPS

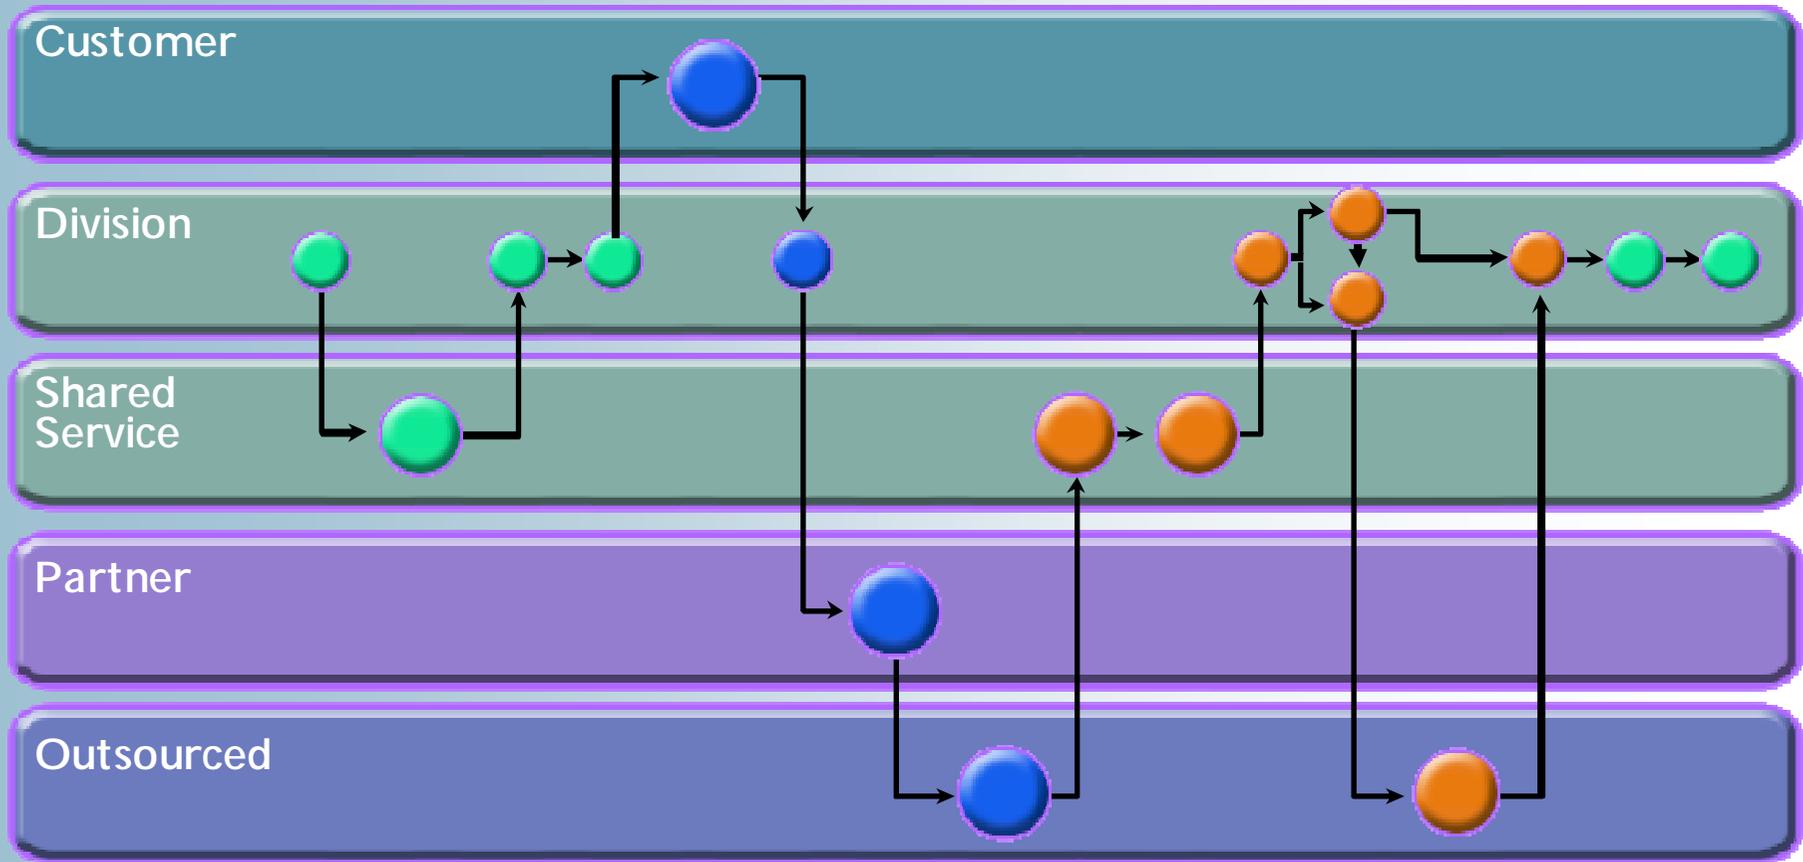

Business Flexibility in Action

Case Study: Procure to Pay Process
Change: Collections Outsourced

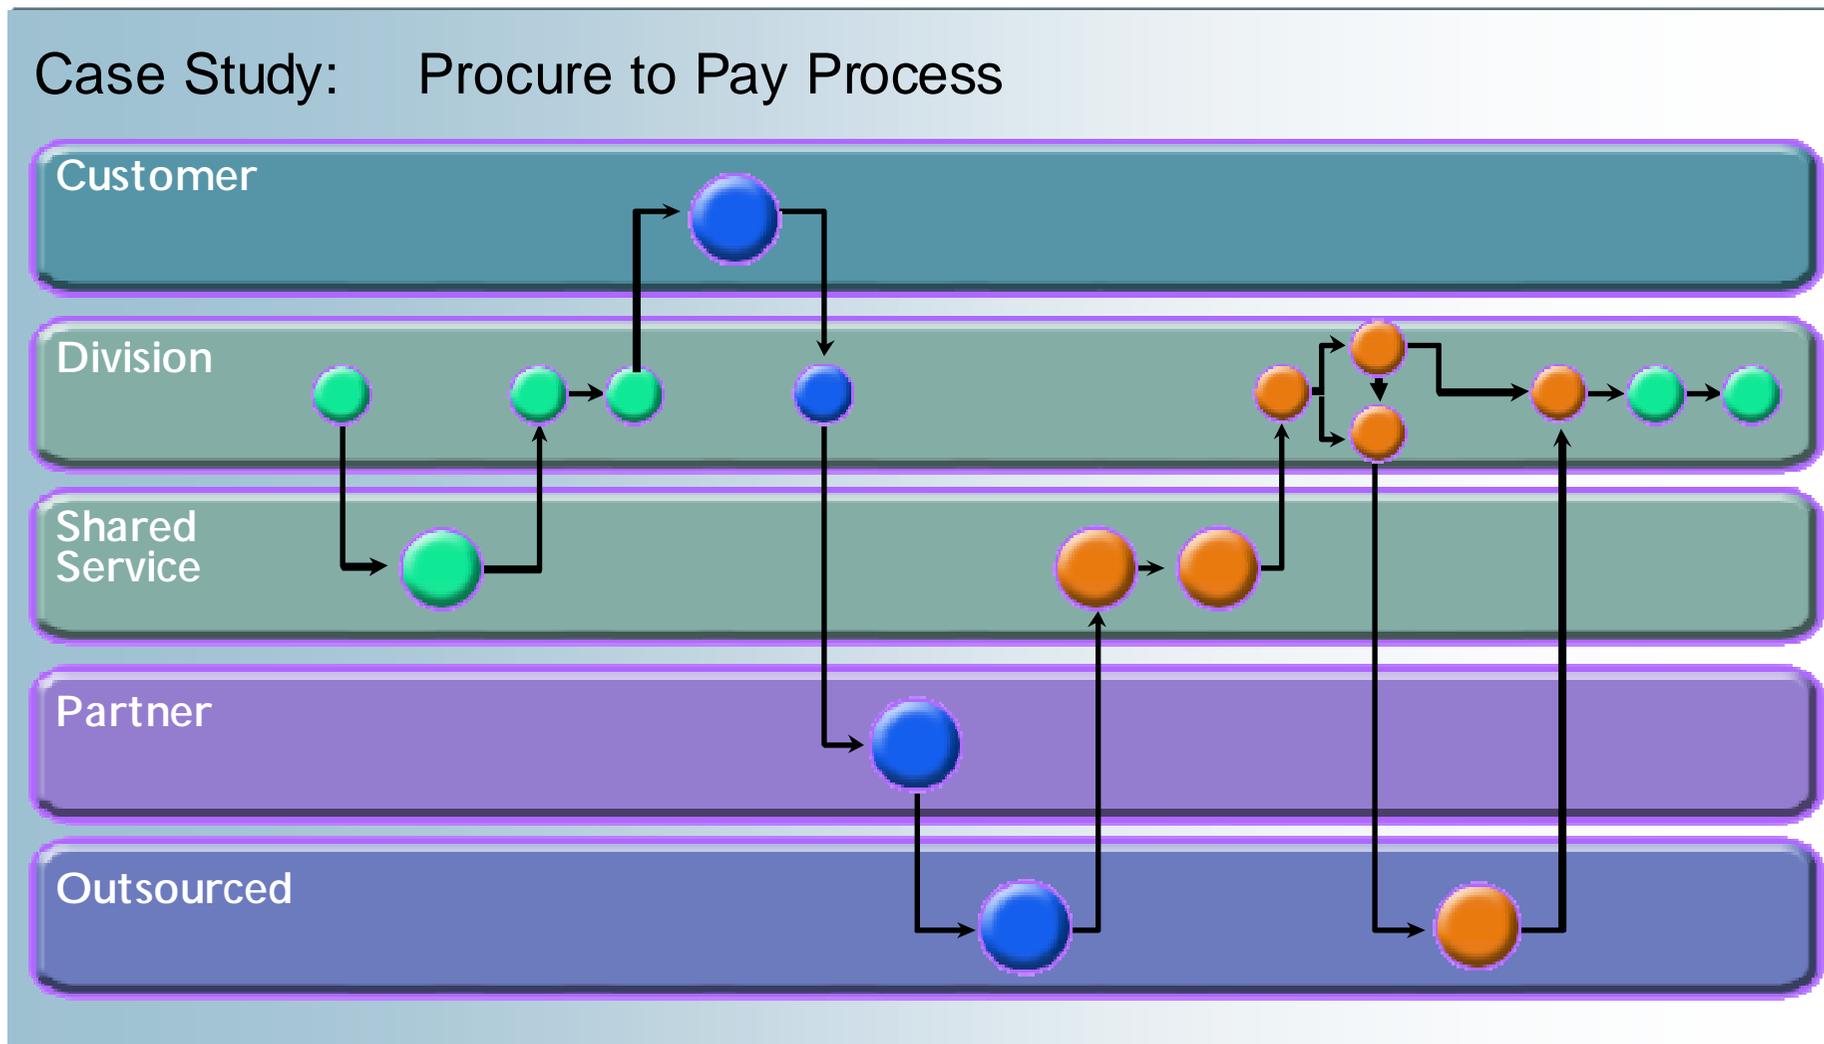

Business Flexibility in Action

Case Study: Procure to Pay Process
Change: Process Optimization

Aligning Technology with Business Objectives: Paving the Way for Business Flexibility

Case Study: Procure to Pay Process

Why is this Scenario So Desirable?

Why Business need SOA?

Business Optimization Enabled Through Innovation and Technology

- A much more pragmatic approach to re-engineering efforts
 - Incremental deployments
 - Clearly tied to tangible business benefits
 - Compelling Regulation/Public Policy Shifts

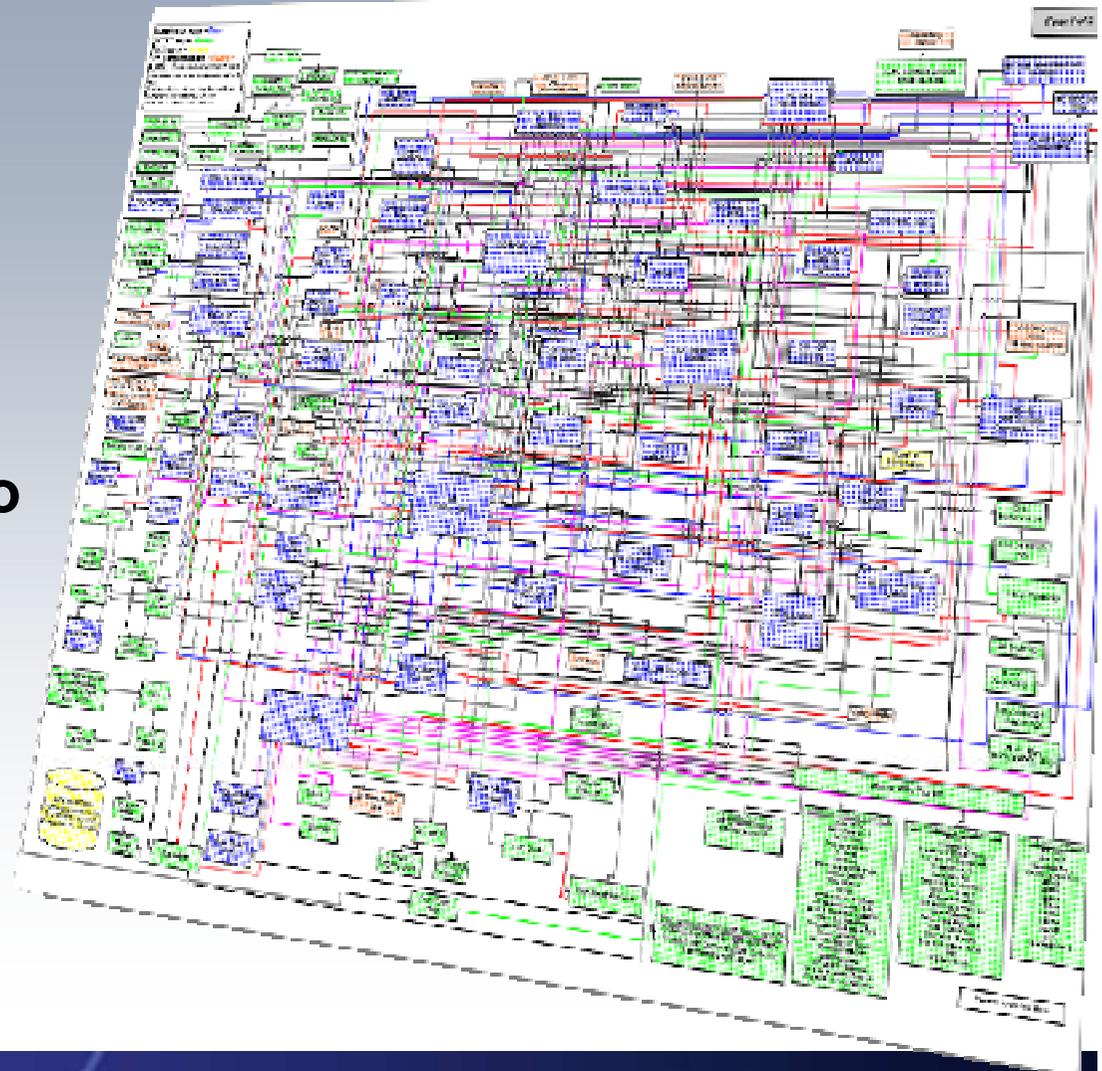

- Move function to the organization that can best meet your business needs – within the organization, to a business partner or completely outsourced

- Allows for ongoing business tuning and monitoring without widespread disruption – optimization in chunks

Technology adoption keeps increasing and the need for **speed, flexibility, Adaptability** to change is becoming that much more important.

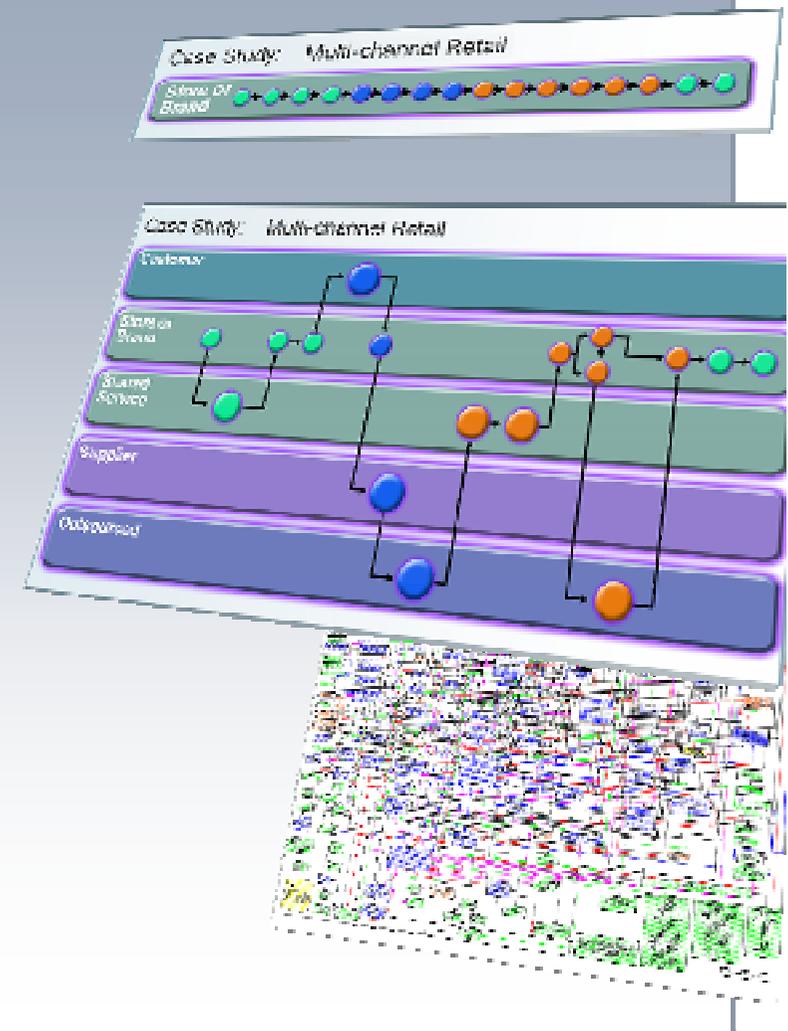

What are the barriers to business flexibility and reuse?

- Lack of business process standards
- Architectural policy limited
- Point application buys to support redundant LOB needs
- Infrastructure built with no roadmap

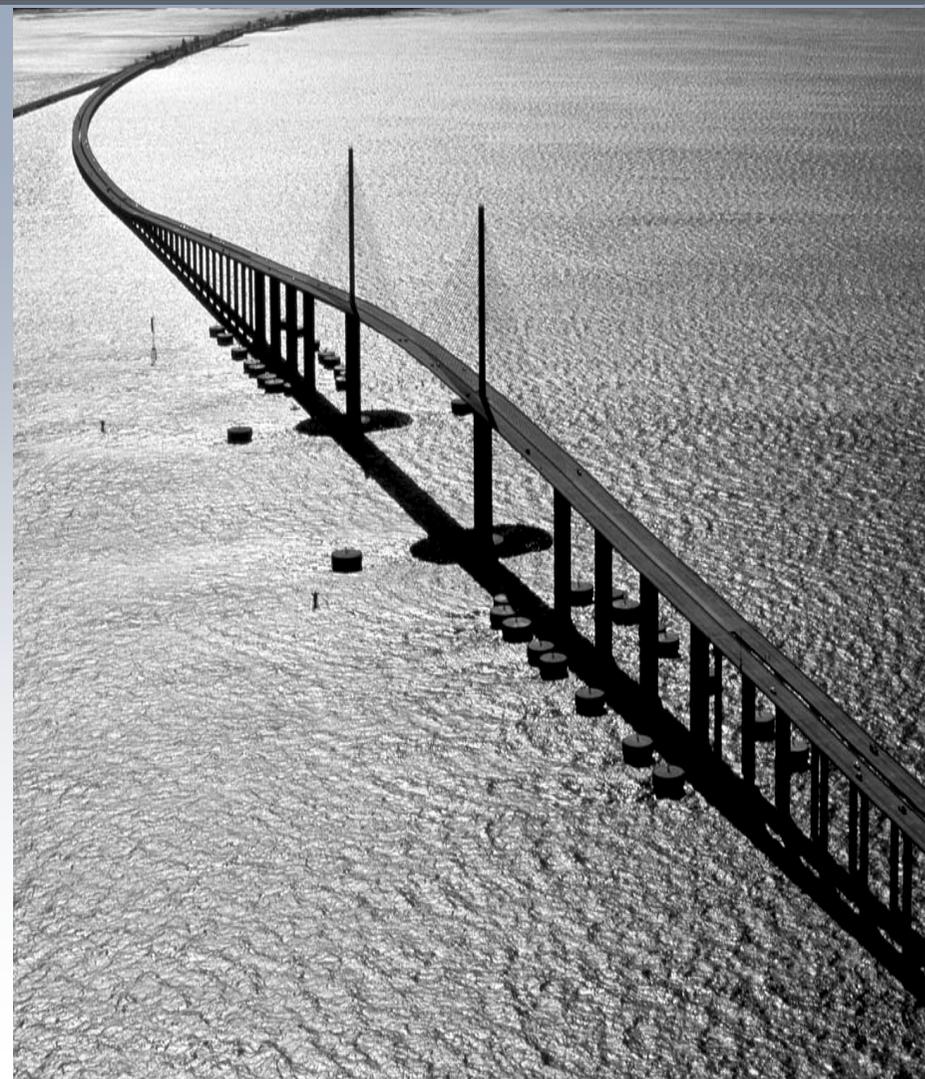

But... Technology applied the right way can pave the way for business innovation

- Standards for interoperability
- Infrastructure that supports self-defined, loosely coupled interfaces emerging
- Tools incorporate existing assets through automation, virtualization, and integration

What is needed to succeed in this environment

- **Flexibility**
to create competitive advantage.
- **Efficiency**
to handle increasing frequency of change.
- **Responsiveness**
to outperform competition and meet increasingly demanding customer expectations.

Facilitating the ability to ...

Flexibility

... **Grow faster**

- Bekins increased revenue by \$75M through integration with business partners to serve a new market
- PineBank increased customer traffic by 300% and revenues by \$8M

Efficiency

... **Spend less**

- Kookmin Bank should save \$250 million from reduction of duplicate processes
- Volkswagen realized a 20% productivity gain

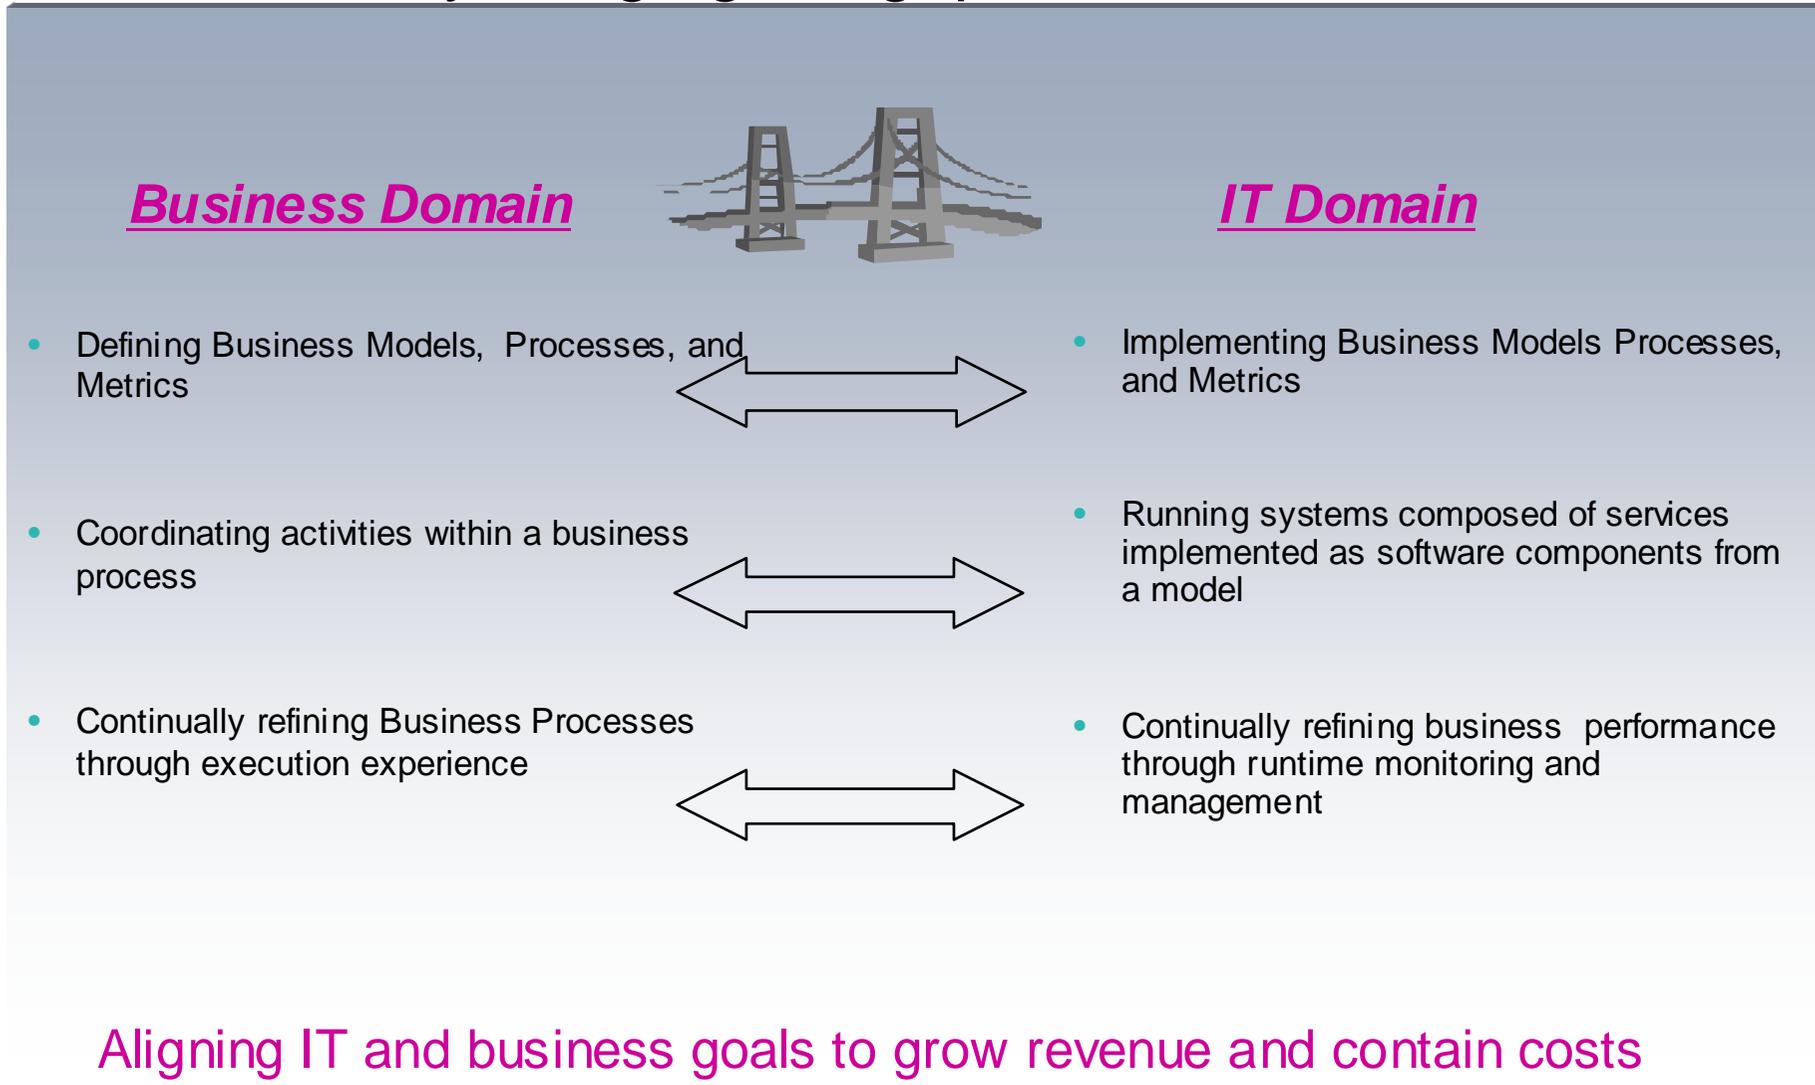

Responsiveness

... **Increase customer satisfaction**

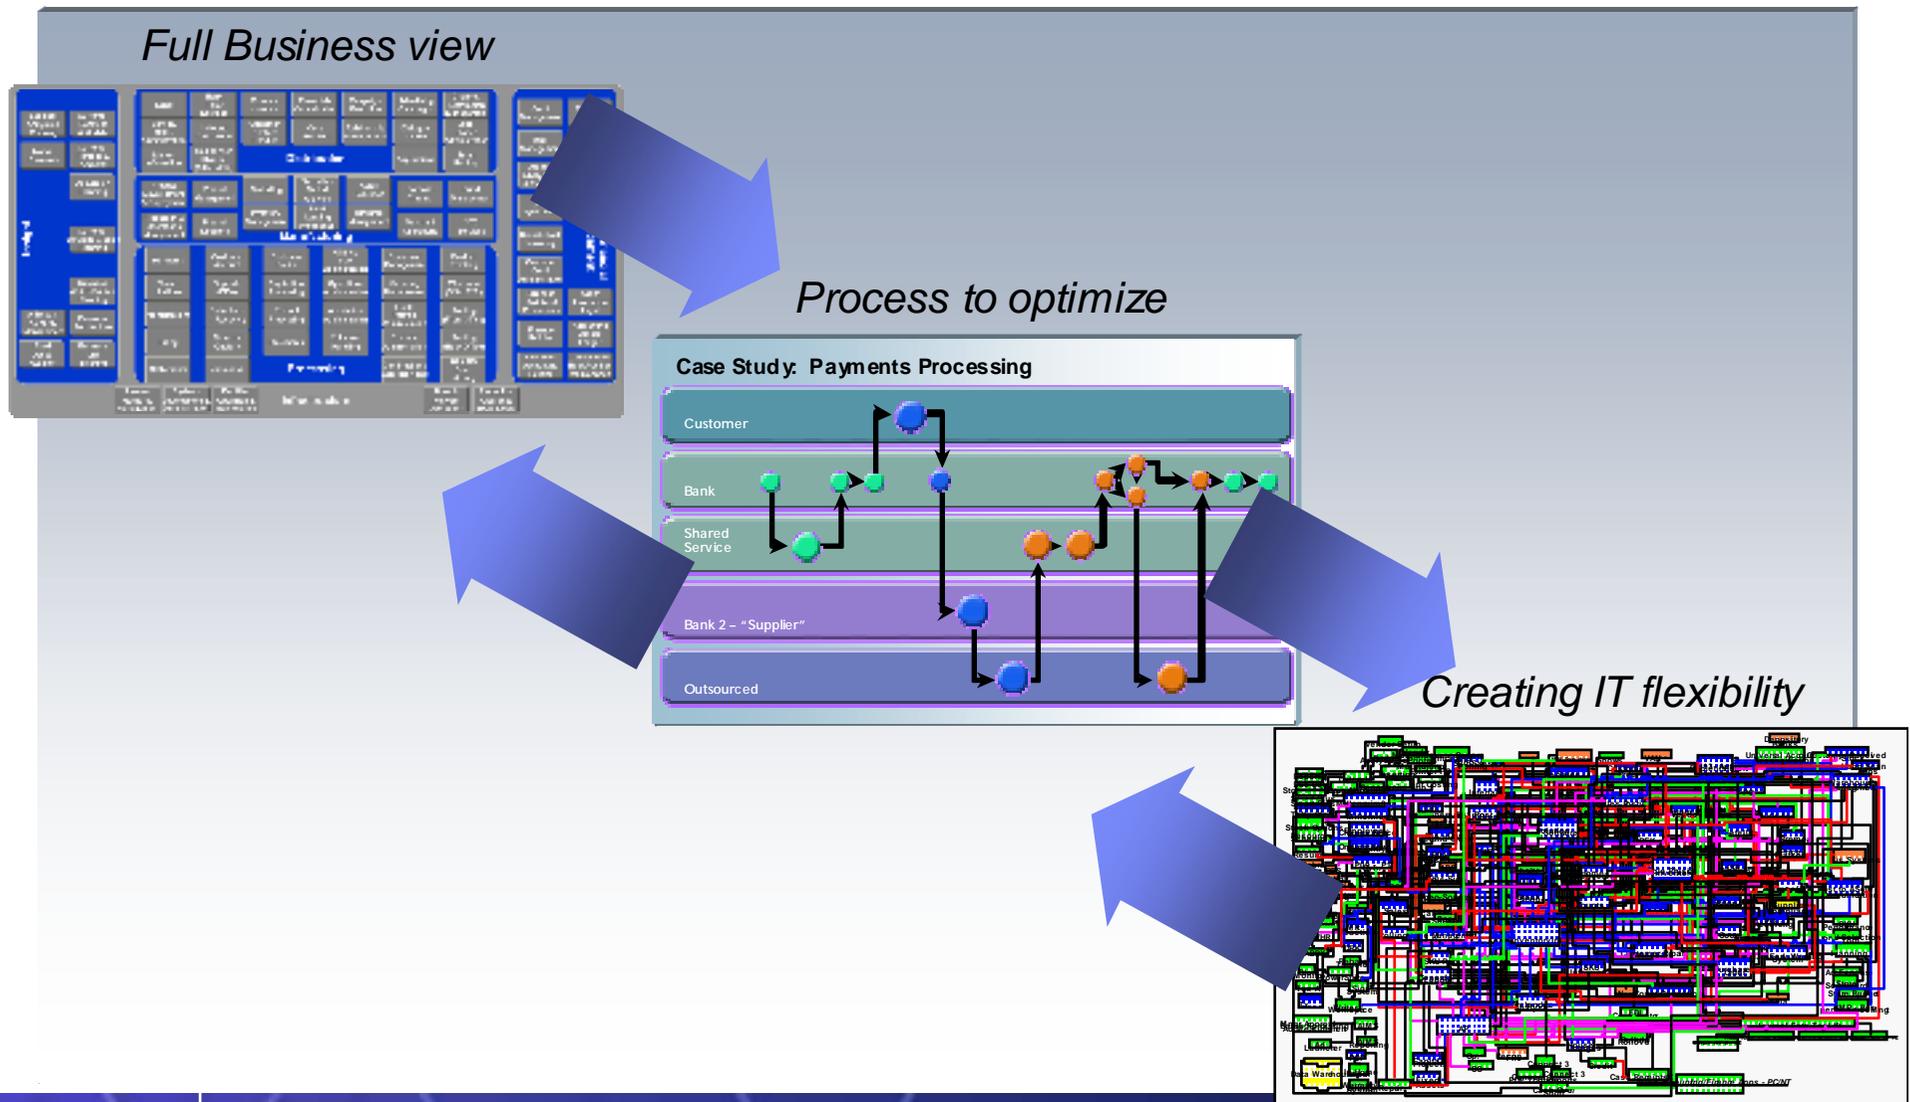

- Dassault Aviation reduced concept-to-runway development time by 30%
- British Petroleum decreased user-provisioning time from 5 days to 10 minutes

How is this achieved? ... by bridging the gap between Business and IT

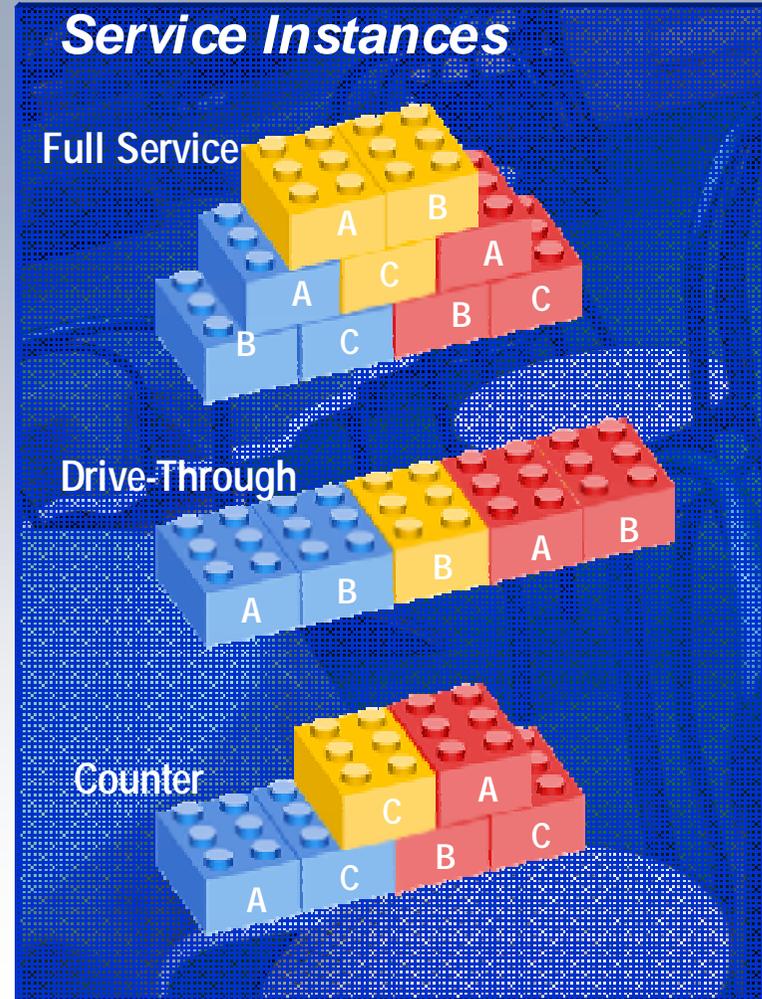

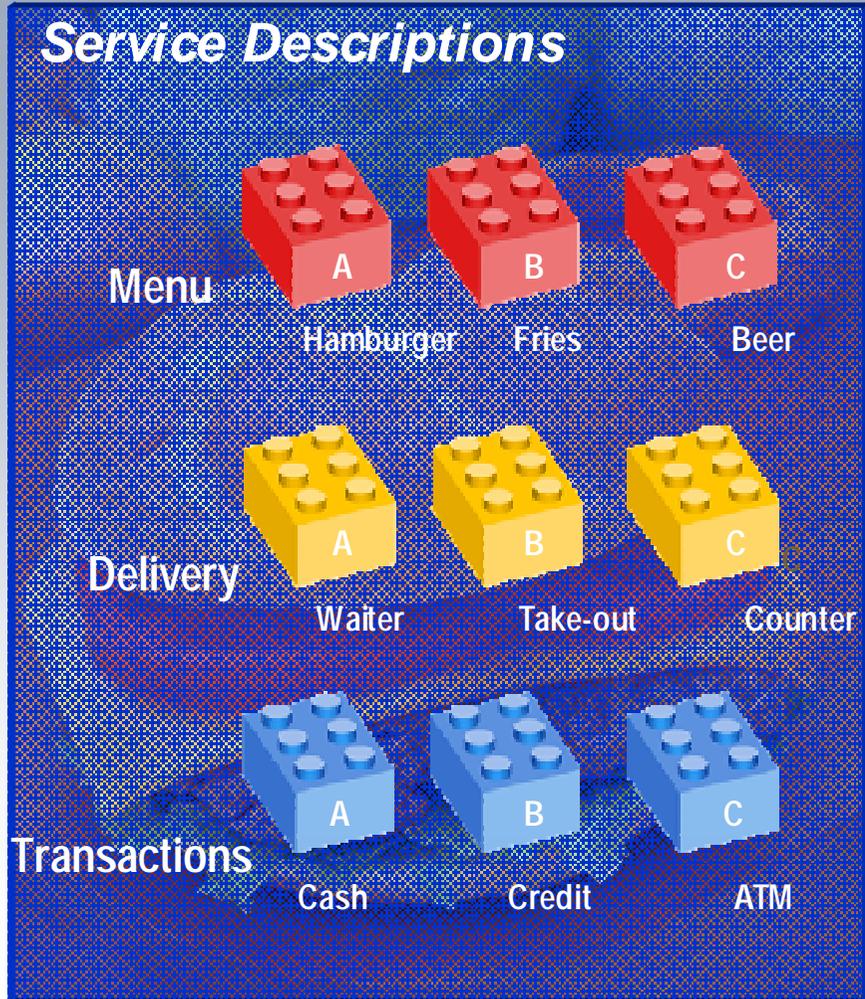

Aligning IT and business goals to grow revenue and contain costs

Flexible business requires flexible IT

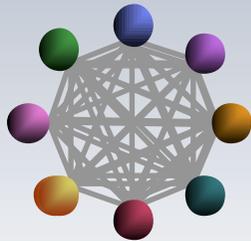

Composite Business Architecture

SOA builds flexibility on your current investments

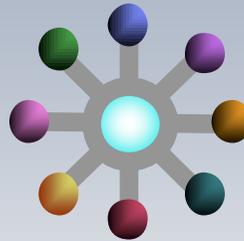

The next stage of integration

Messaging Backbone

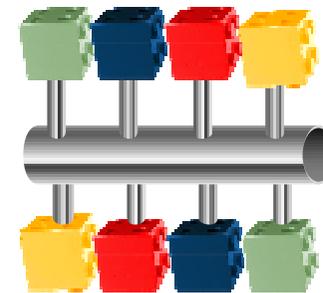

- Point-to-Point connection between applications
- Simple, basic connectivity

Enterprise Application Integration (EAI)

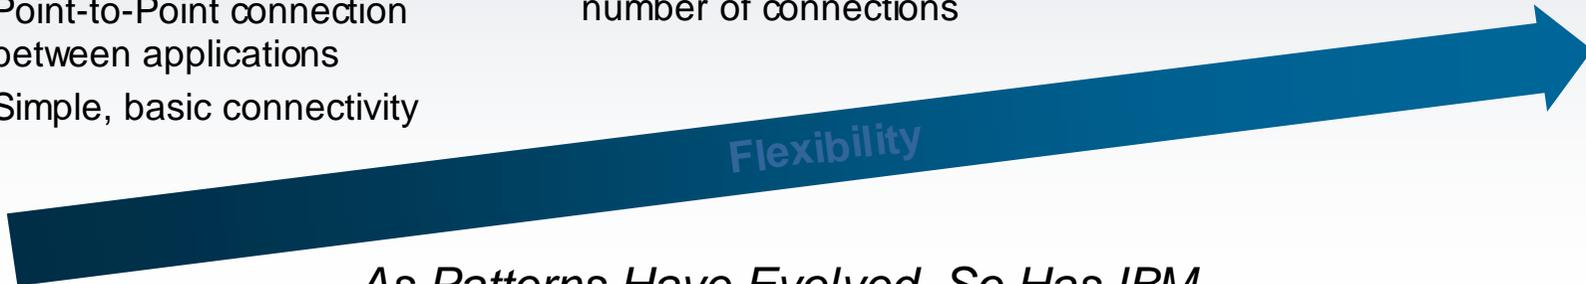

- EAI connects applications via a centralized hub
- Easier to manage larger number of connections

Service Orientated Integration

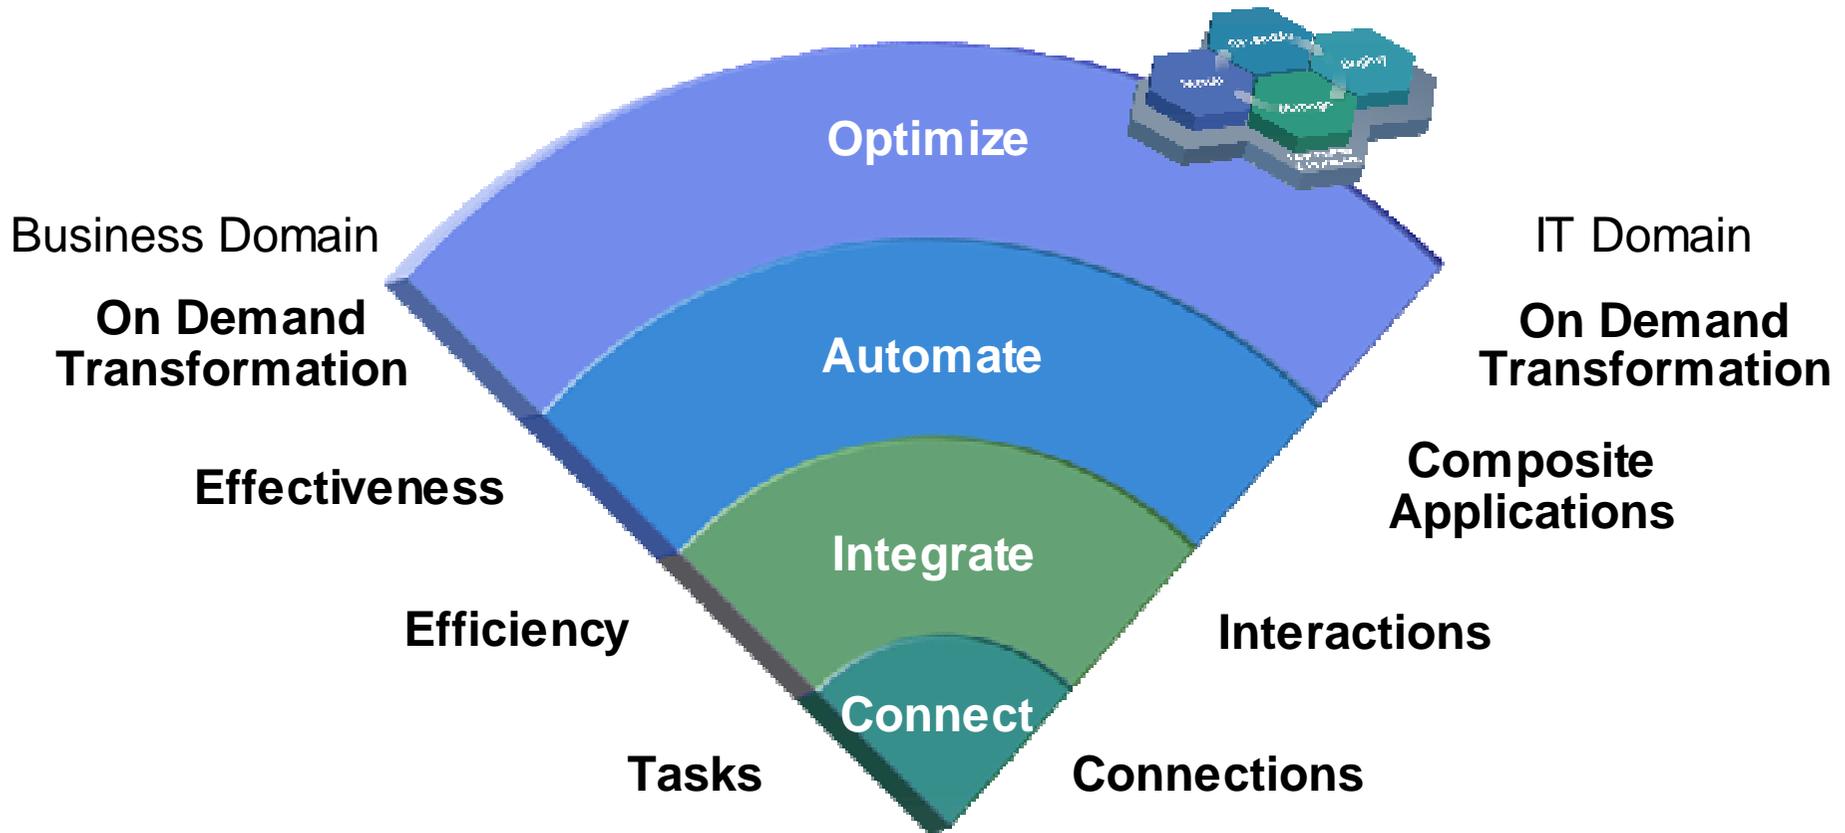

- Integration of services through an Enterprise Service Bus
- Flexible connections with well defined, standards-based interfaces

As Patterns Have Evolved, So Has IBM

Getting To SOA

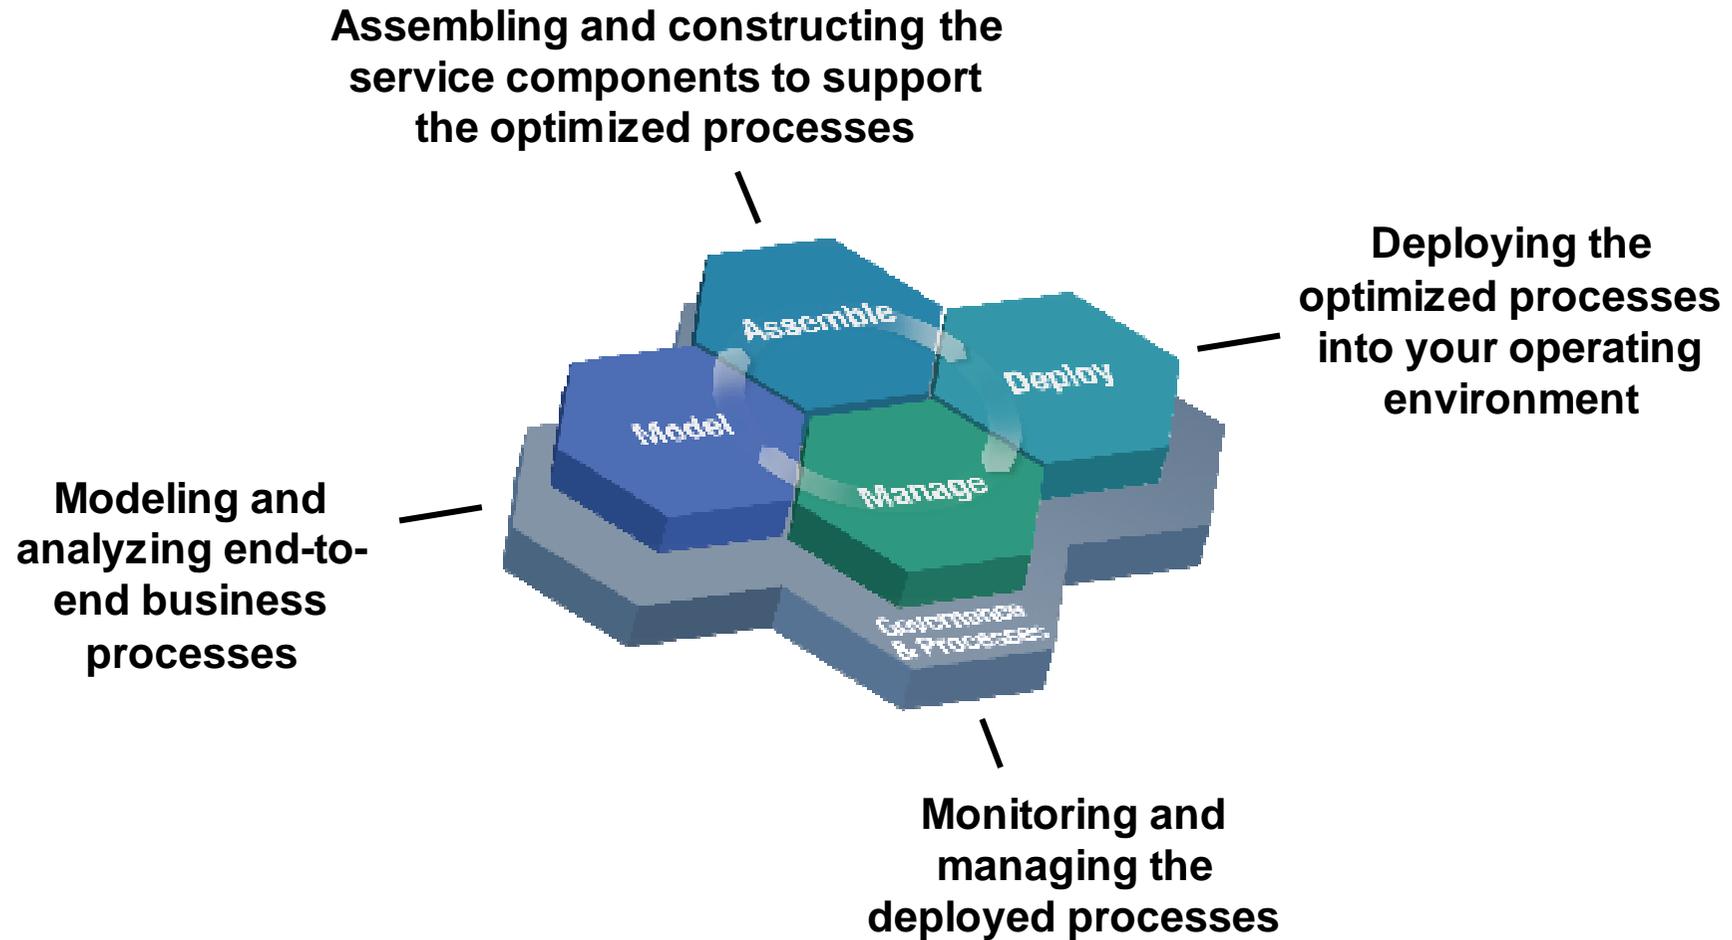

Why SOA now?

- **To keep pace with global competition:**
 - “We are taking apart each task and sending it ... to whomever can do it best, ... and then we are reassembling all the pieces”
from Thomas Friedman’s ‘The World is Flat’
- **The standards and technology are finally in place, with broad industry support**
- **Availability of best practices for effective governance**
- **The necessary software to get started is available today**

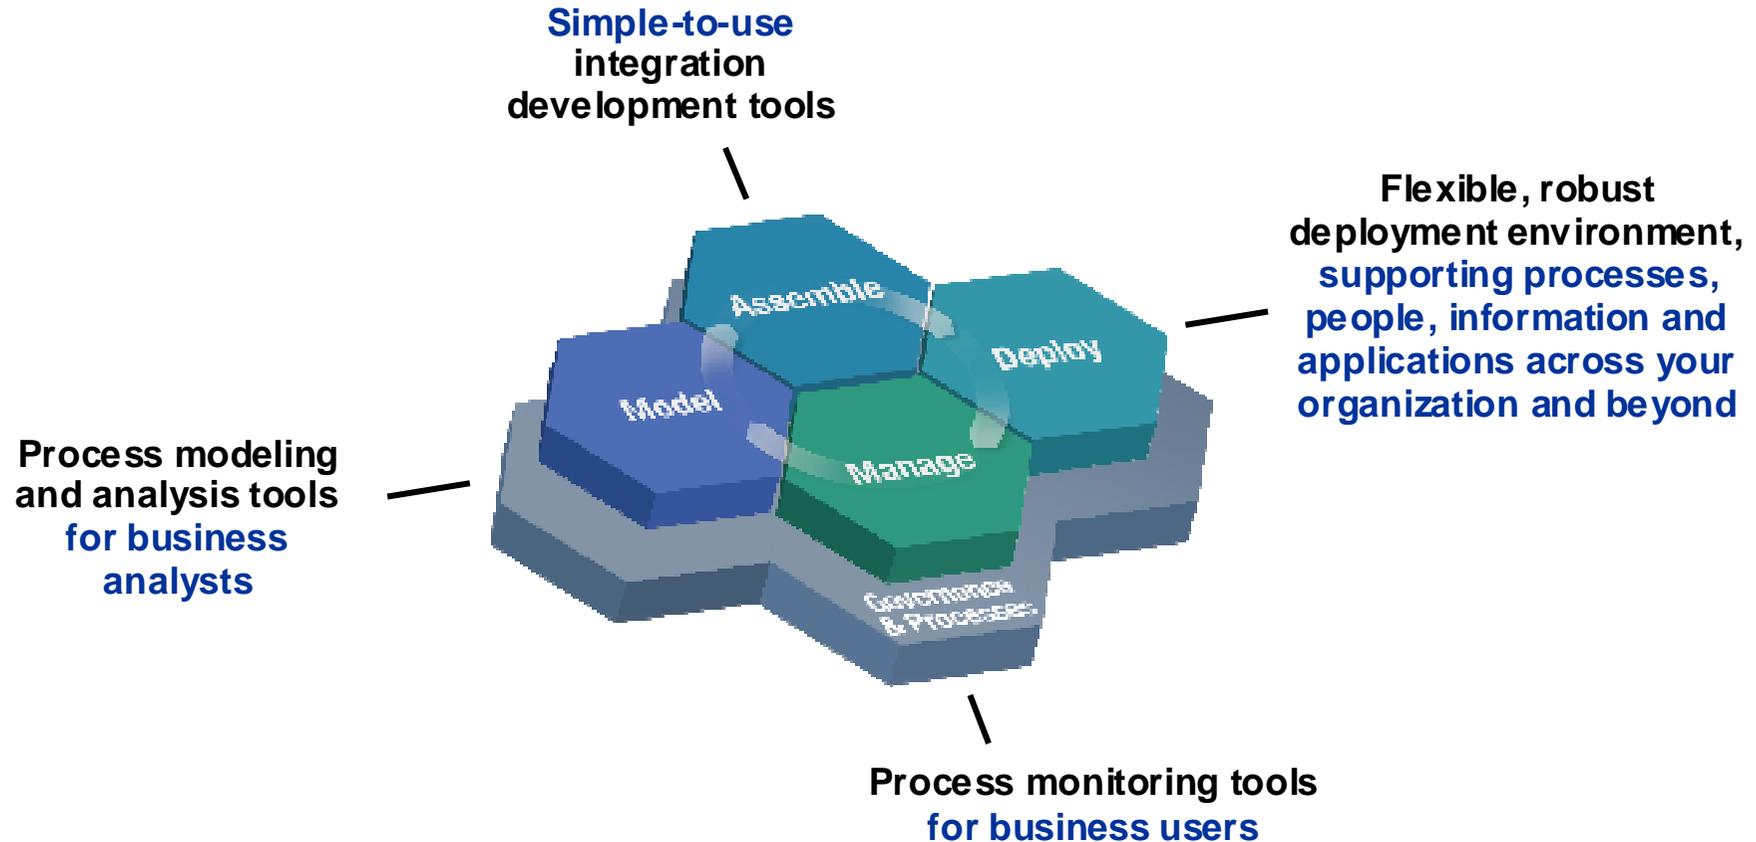

SOA Foundation strategy starts with business processes management

IBM WebSphere Software and SOA

Helping you address today's challenges and improve your flexibility for tomorrow

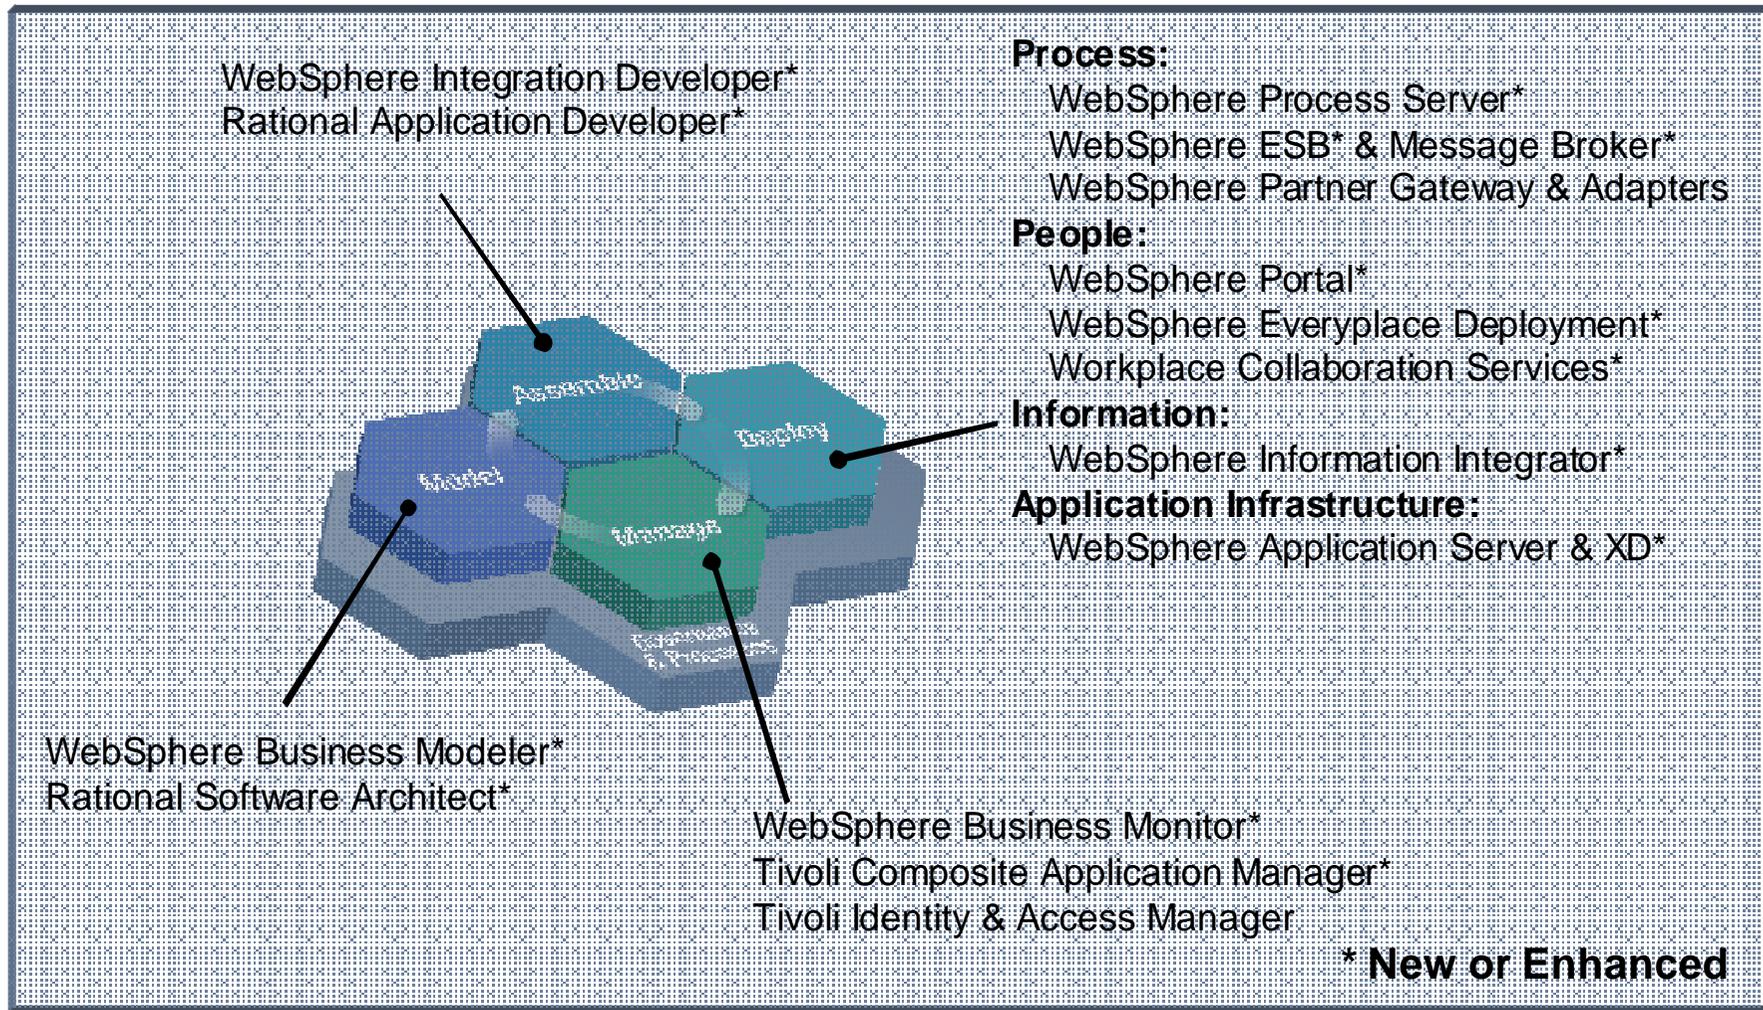

End-to-end business process capabilities

Breadth of SOA deployment capabilities

WebSphere software

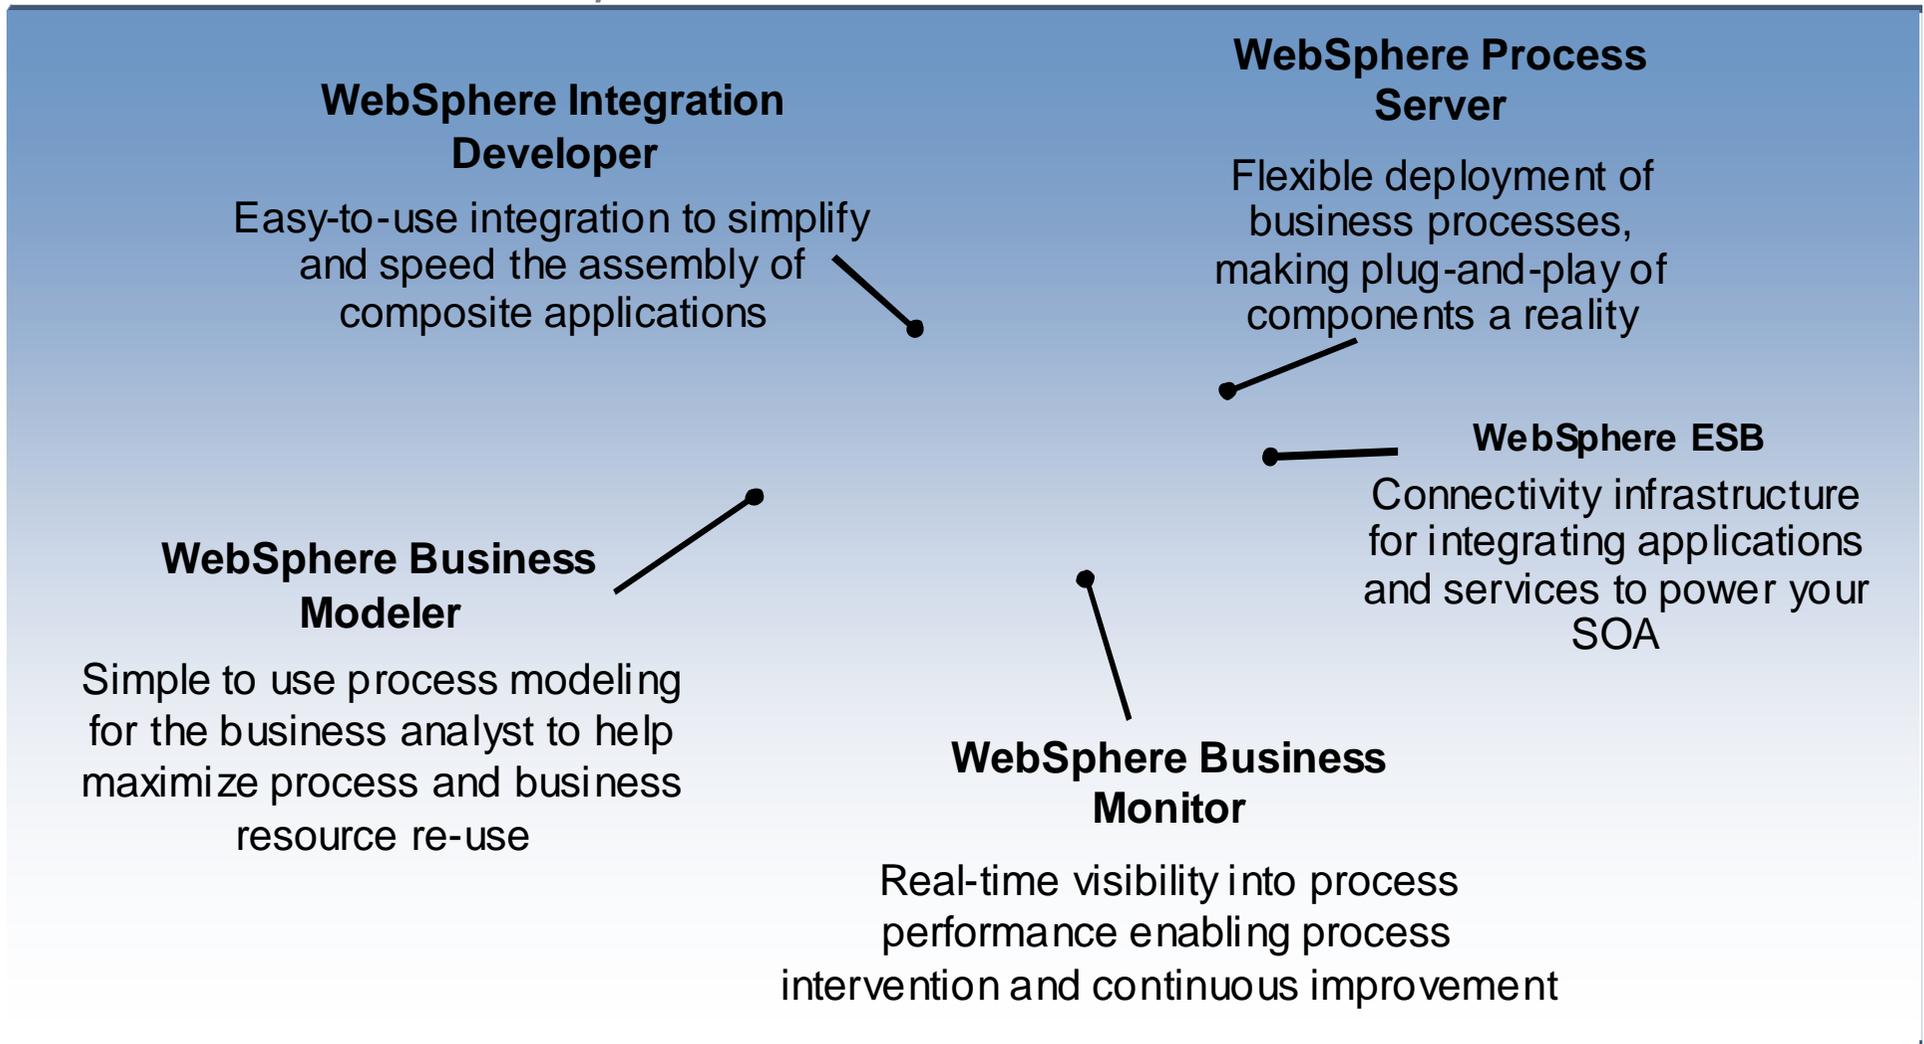

SOA Foundation

Part of a broader portfolio to meet your every need

End-to-end process capabilities for your SOA

New! From IBM WebSphere software

What differentiates SOA from claims like this in the past?

Standards

- Broadly adopted Web services ensure well-defined interfaces.
- Before, proprietary standards limited interoperability

Organizational Commitment

- Business and IT are united behind SOA (63% of projects today are driven by LOB)*
- Before, communication channels & 'vocabulary' not in place

Degree of Focus

- SOA services focus on business-level activities & interactions
- Before, focus was on narrow, technical sub-tasks

Connections

- SOA services are linked dynamically and flexibly
- Before, service interactions were hard-coded and dependent on the application

Level of Reuse

- SOA services can be extensively re-used to leverage existing IT assets
- Before, any reuse was within silo'ed applications

Real results from IBM WebSphere software

Extending SOA to the user interface at Volkswagen

Drivers wanted:

The Challenge

Improve the productivity of procurement department

The Solution

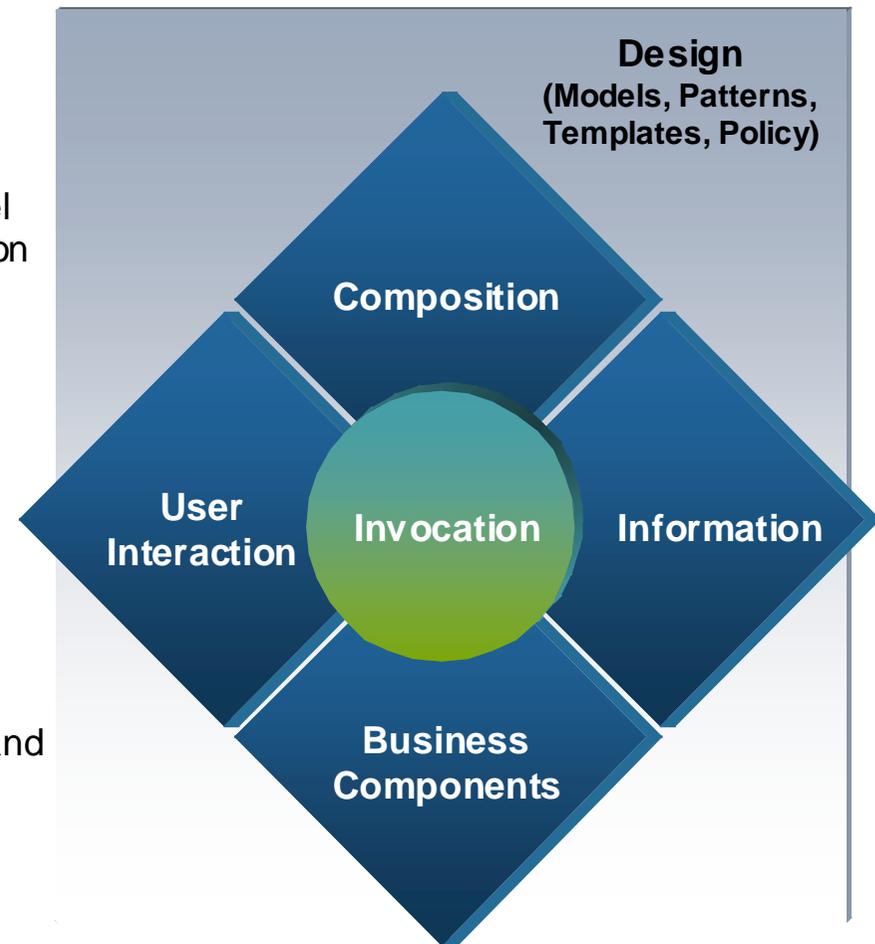

- On Demand Workplace including enterprise wide portal for employees and suppliers
- Sensing, analytic and workflow capabilities
- Streamlined the way employees access and act on information

Real Results

- 20% increase in staff productivity
- Significant decrease in supplier and inventory costs
- Expect 100% payback within a year
- Reuse of portal platform for every kind of portal (B2X)

Supported by a common SOA Programming Model

- **Focus on business design modeling, simplification, and role-based collaboration**
- **Composition of Business-level Applications**
 - ▶ Wired assembly of services to form business-level applications, workflows, and business orchestration
- **User Interaction**
 - ▶ Dynamic support for people integration into the business design
- **Business Components**
 - ▶ Composable and reusable services
- **Information**
 - ▶ Built-in access to service state, disconnected service-data exchange, information composition and transformation
- **Invocation**
 - ▶ Loosely-coupled call-style and event-driven interconnection of services

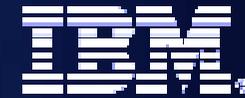

With adherence to the standards that enable flexibility
