

SOA Healthcheck: *Infrastructure*

Smart
SOA

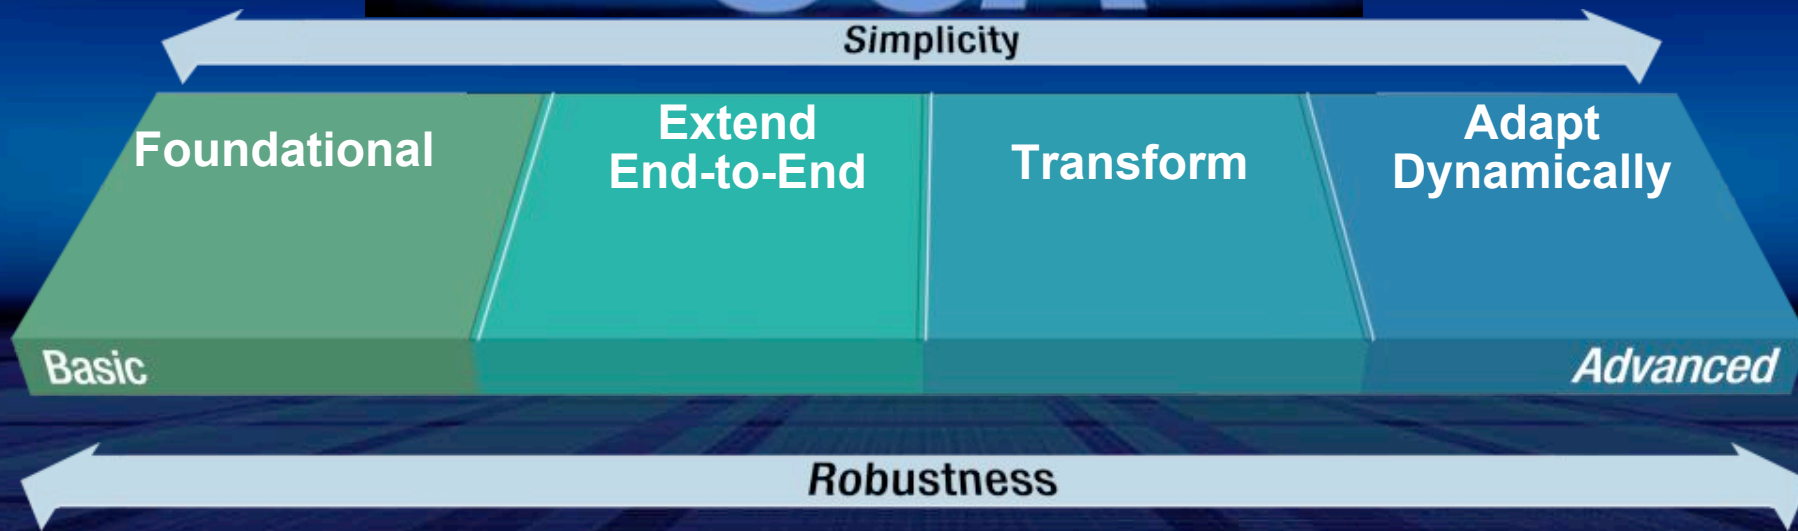

Alexander Szyпка
IBM Global IT Strategy & Architecture Service Product Line
SOA Infrastructure Consulting Services
Global Offering Manager

Objective

- Highlight key IBM SOA Infrastructure Healthcheck services help:
 - Identify opportunities and strategies to reduce infrastructure complexity and optimize operational costs
 - Improve service reliability by identifying the root cause of problems and defining remedial actions
 - Determine optimal infrastructure architecture to meet the performance, capacity, scalability, and virtualization demands of dynamic services

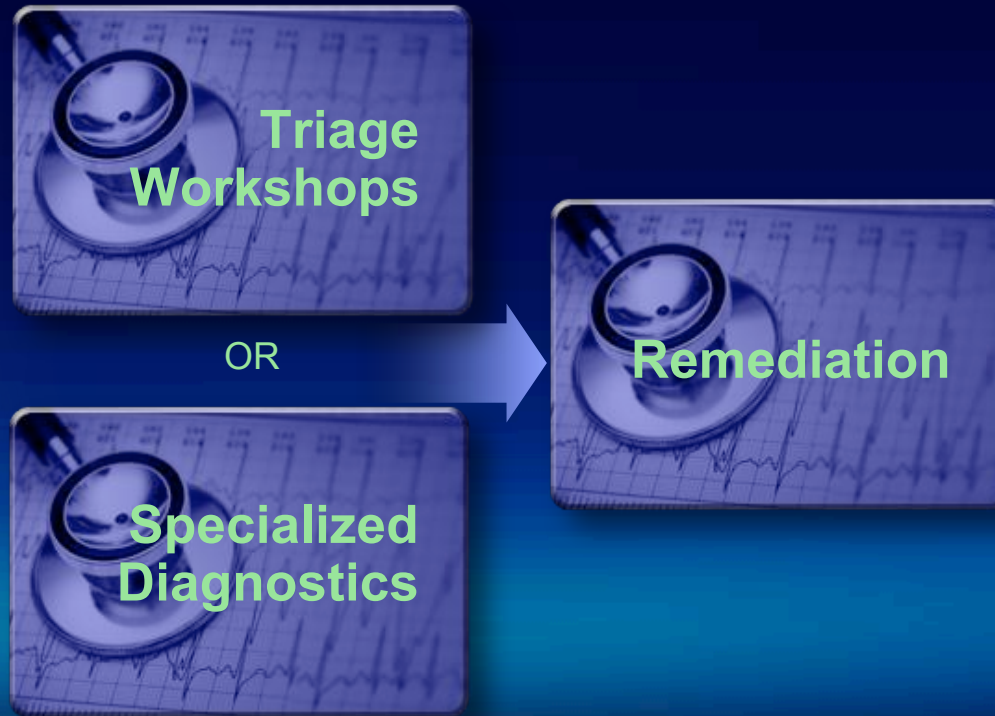

SmartSOA™ requires IT Fitness and Checkups

SOA Health is Important for all SOA Maturity Model phases in a Smart SOA project

IBM SOA Healthchecks

Capabilities within the IBM SOA Diagnostic Services portfolio

Today's focus

Is your IT fit enough to handle your SOA needs?

A close-up photograph of a silver stethoscope, symbolizing a medical check-up or health assessment.

Check your SOA infrastructure health ...

- Is everything working as well on the inside as it appears to be on the outside?
- Is your SOA infrastructure ready to scale for enterprise-wide demands?
- Are you experiencing chronic, nagging issues?
- Are you uncertain about your preparedness to start an SOA project?

A photograph of a red and white ambulance with its emergency lights flashing, parked on a street at night.

... and avoid SOA rescue missions

Infrastructure Healthcheck Workshop for SOA

Each engagement includes 4 phases:

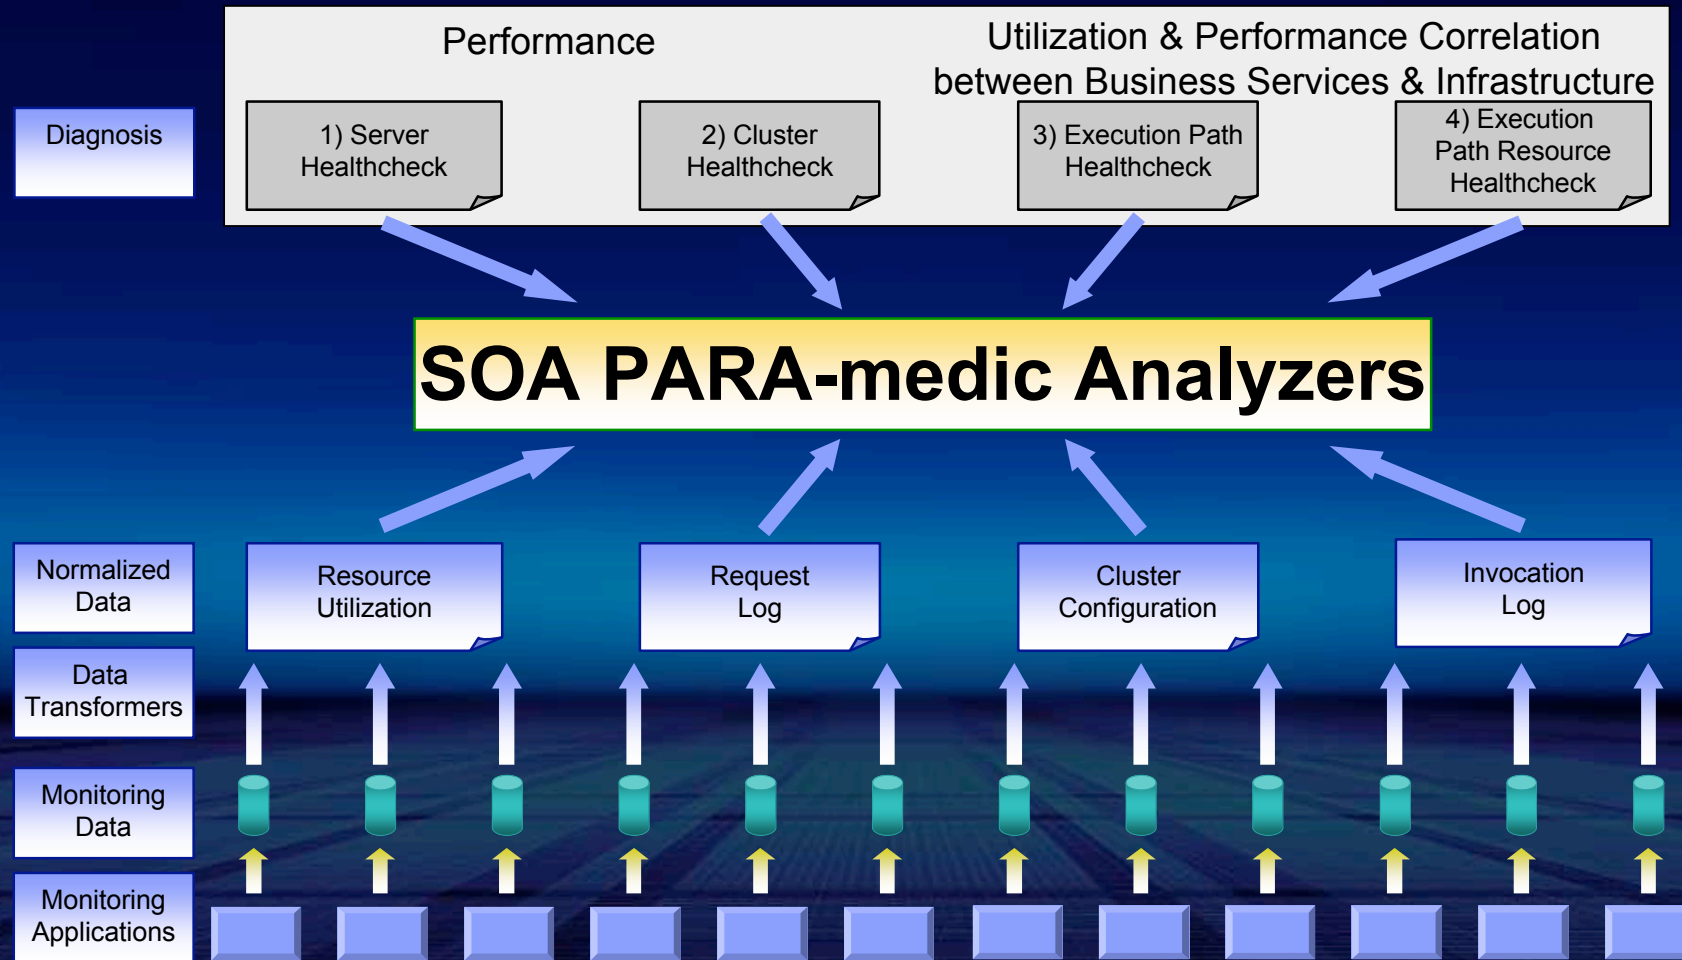

Starting point:

Existing SOA environment:

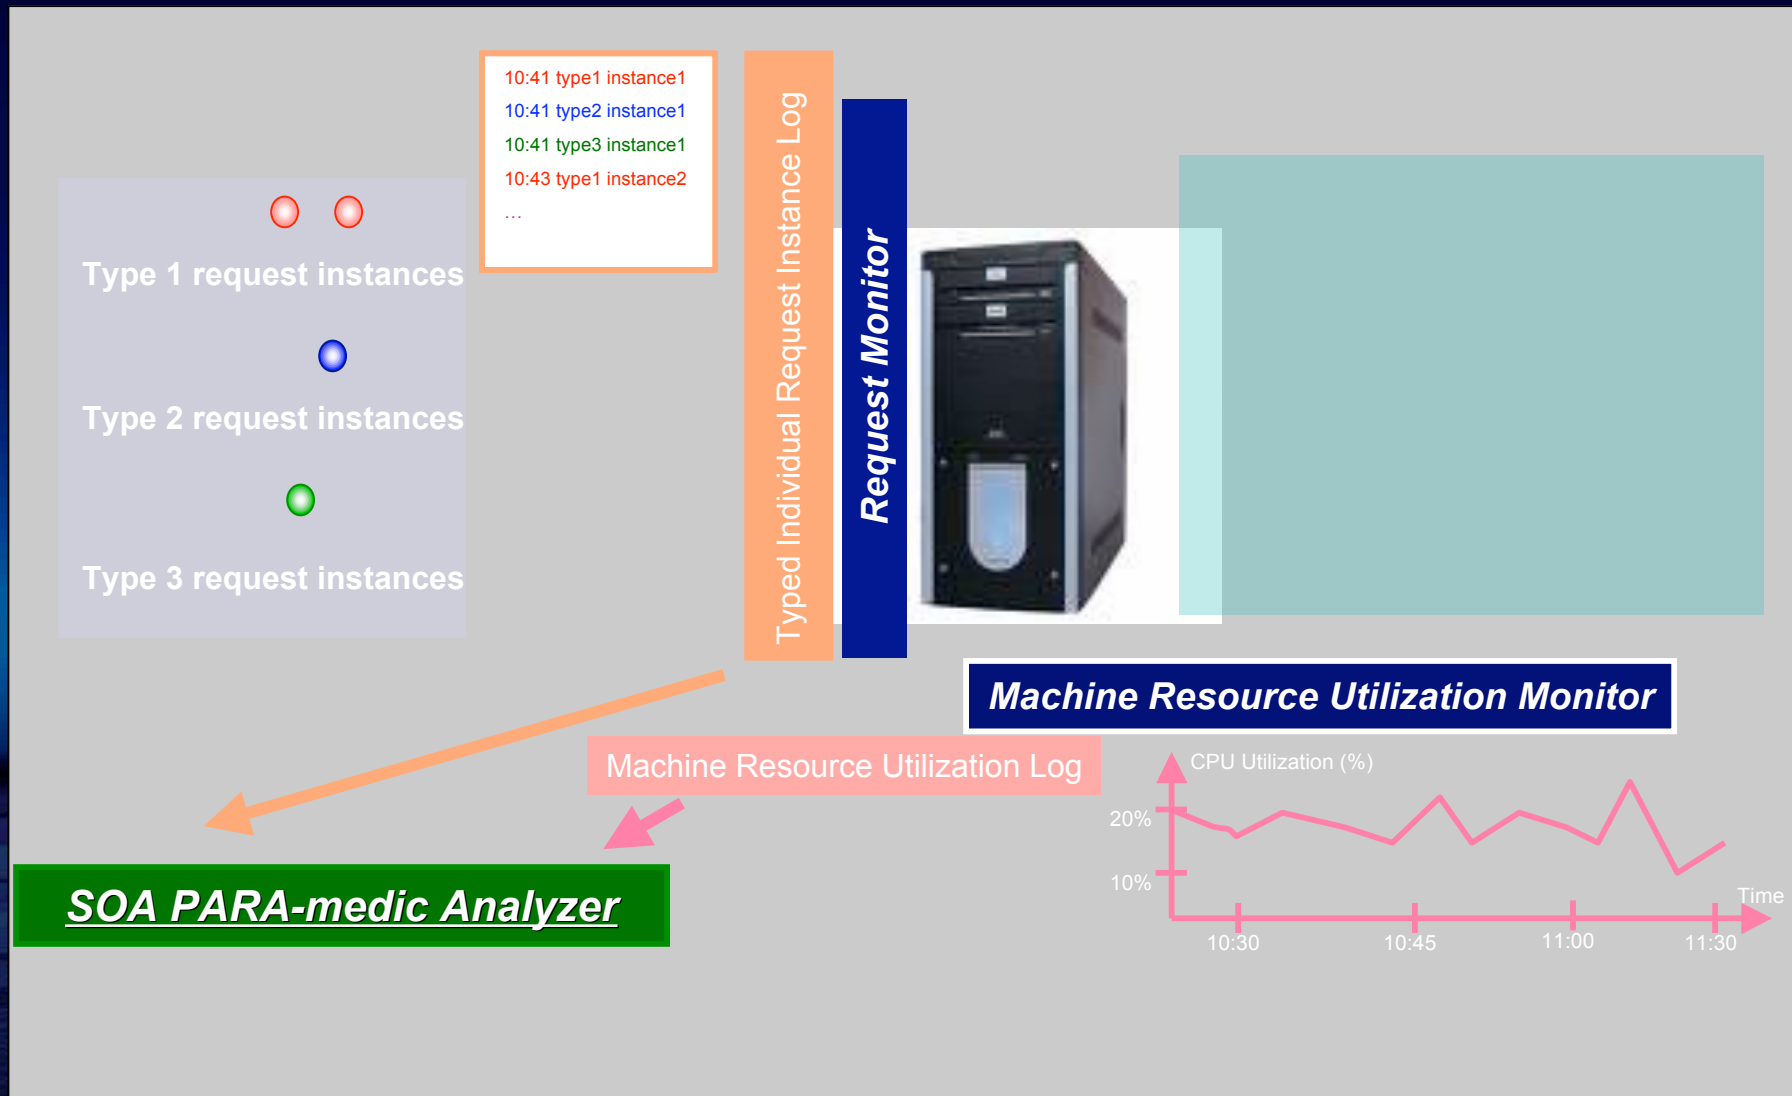

- Offers a three-four week engagement
- Analyze IT infrastructure monitoring data
- Delivers an infrastructure Healthcheck for workshop SOA report

Exclusive, non intrusive, technology-vendor-product agnostic tool from IBM Research (patent-pending assets)

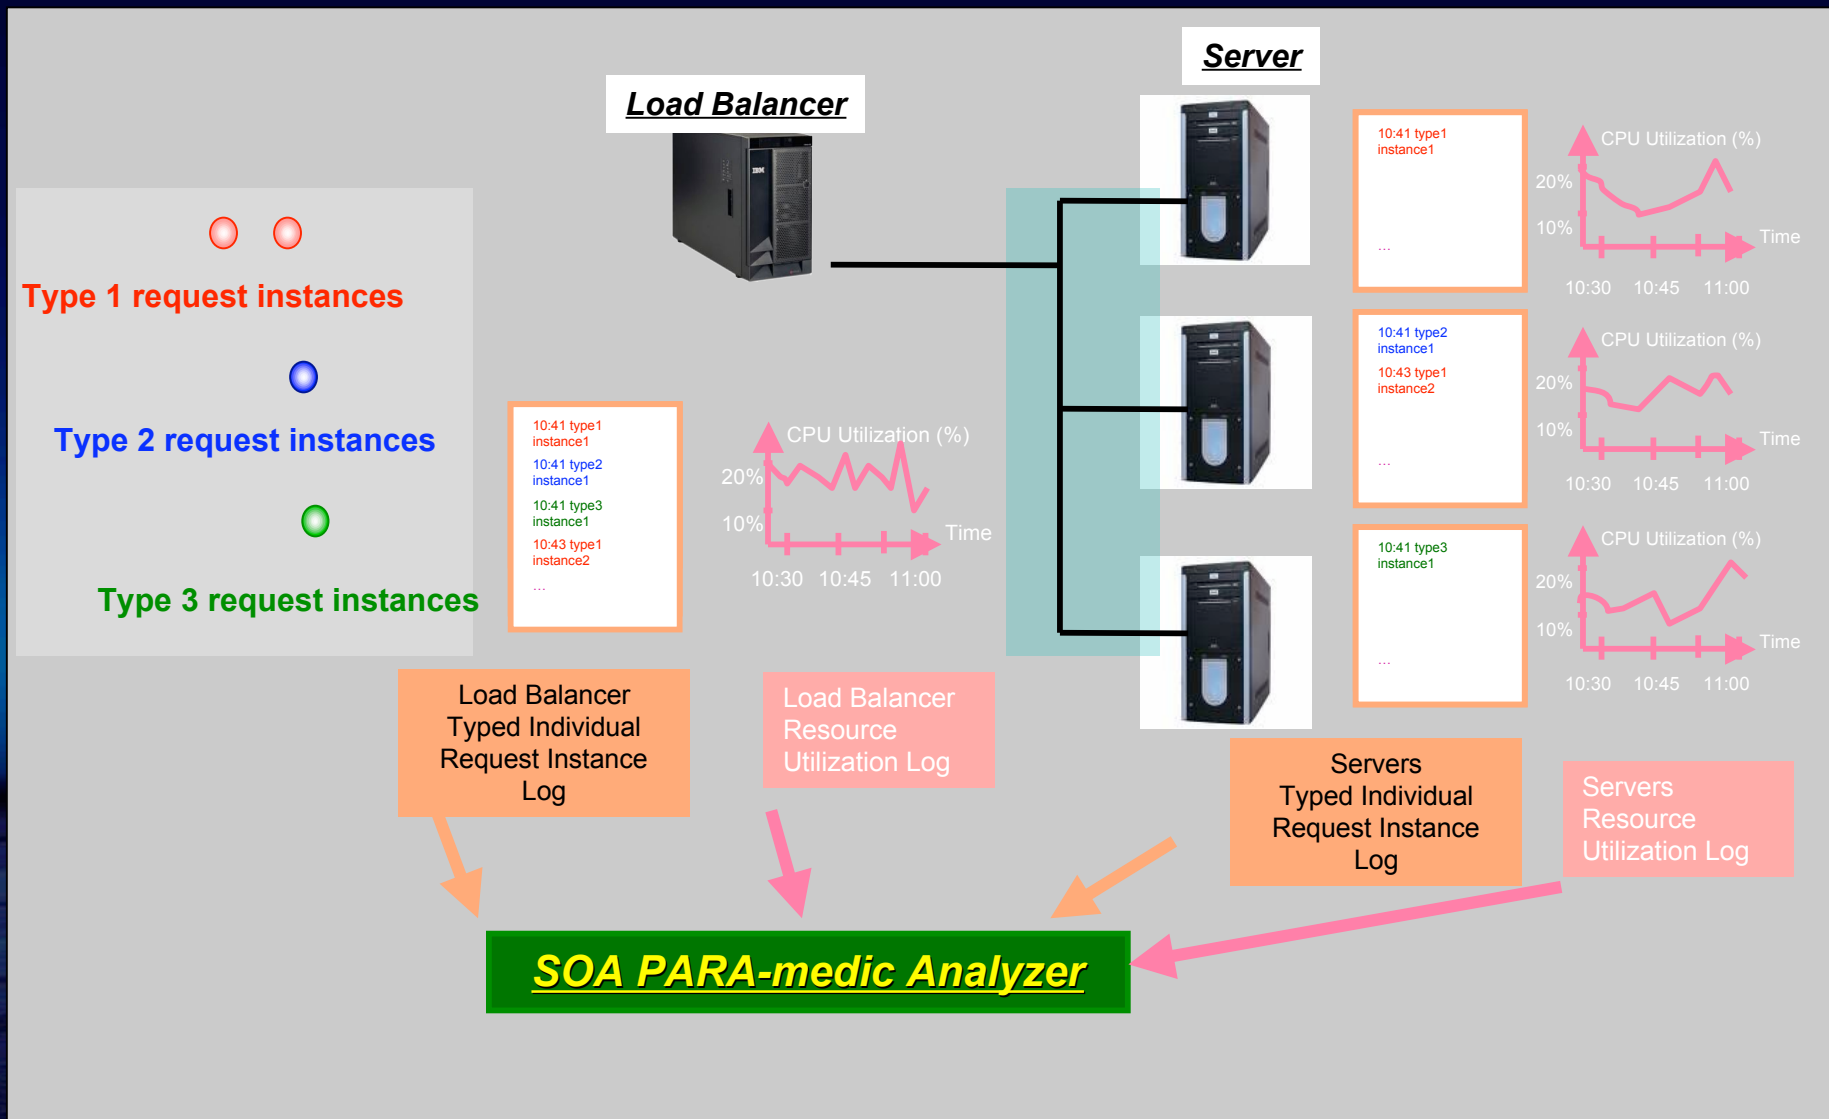

Scenario 1: Server Healthcheck

Performance Analysis of Selected Servers

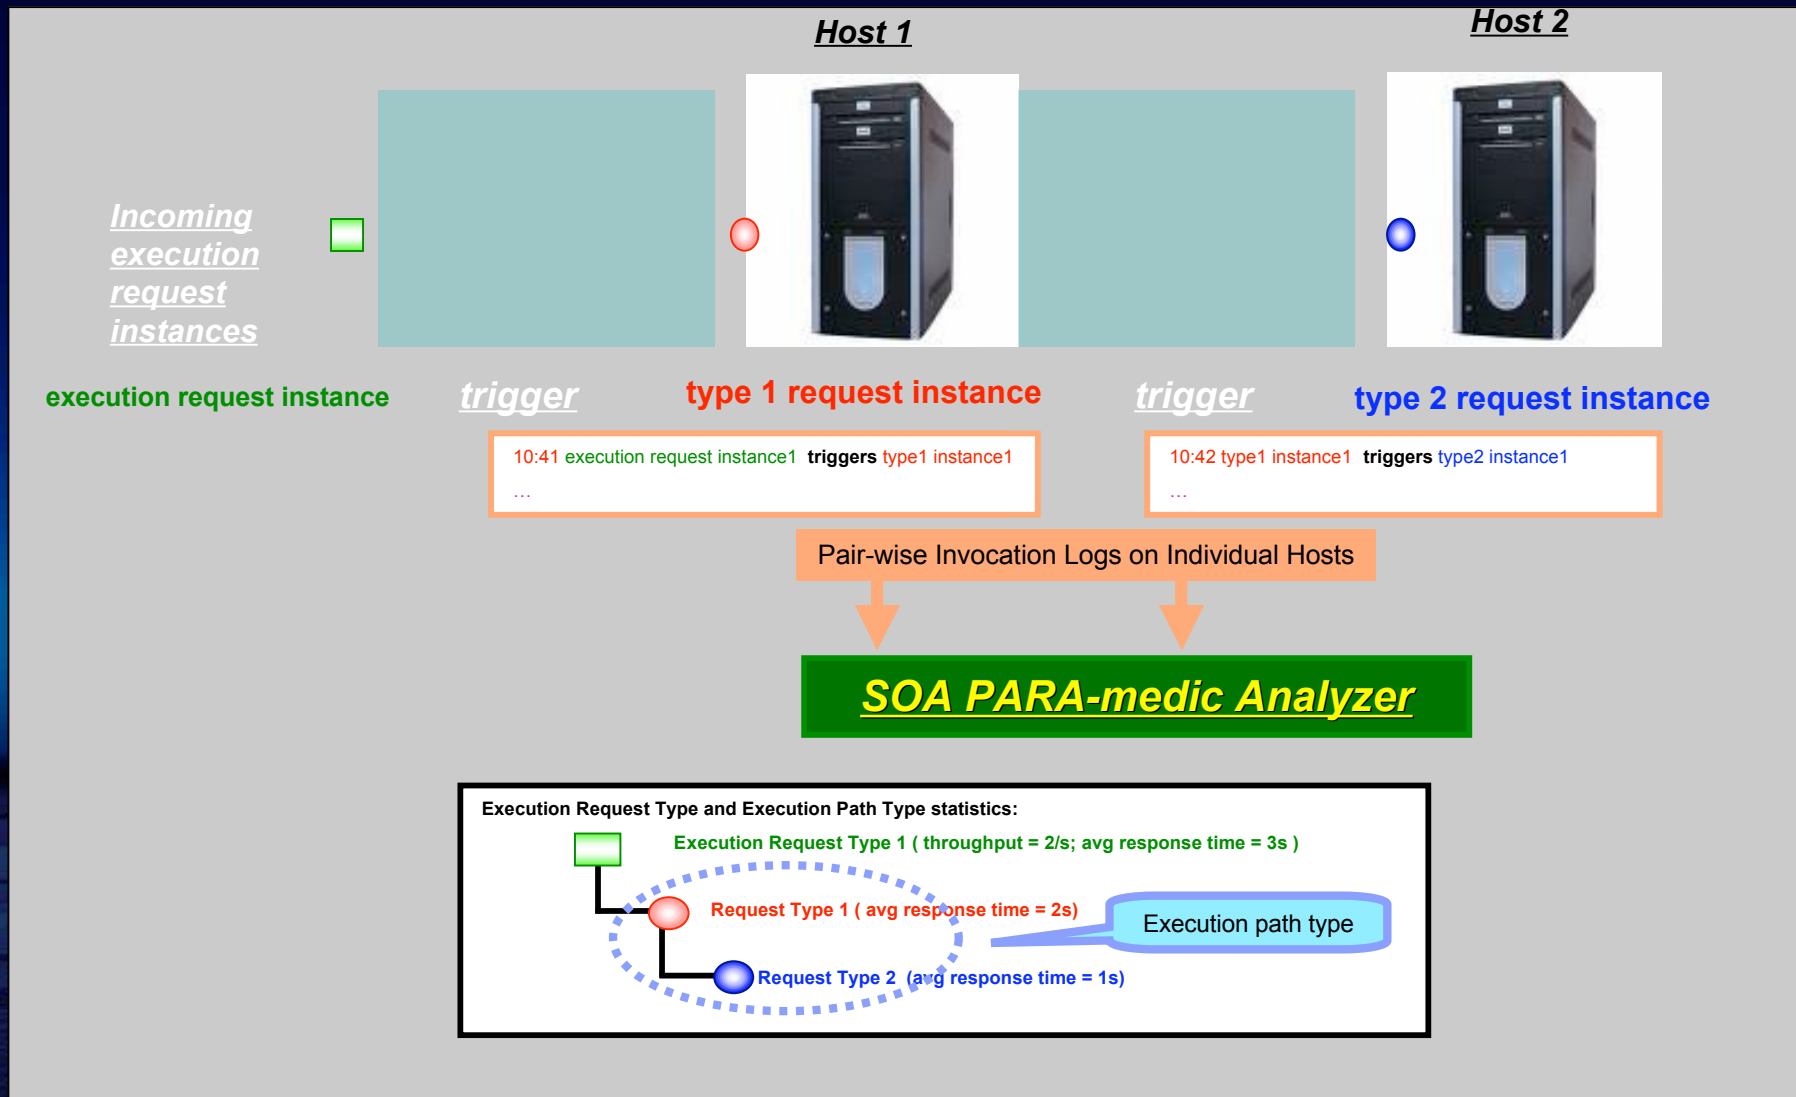

Scenario 2: Cluster Healthcheck

Performance Analysis of Selected Server Clusters

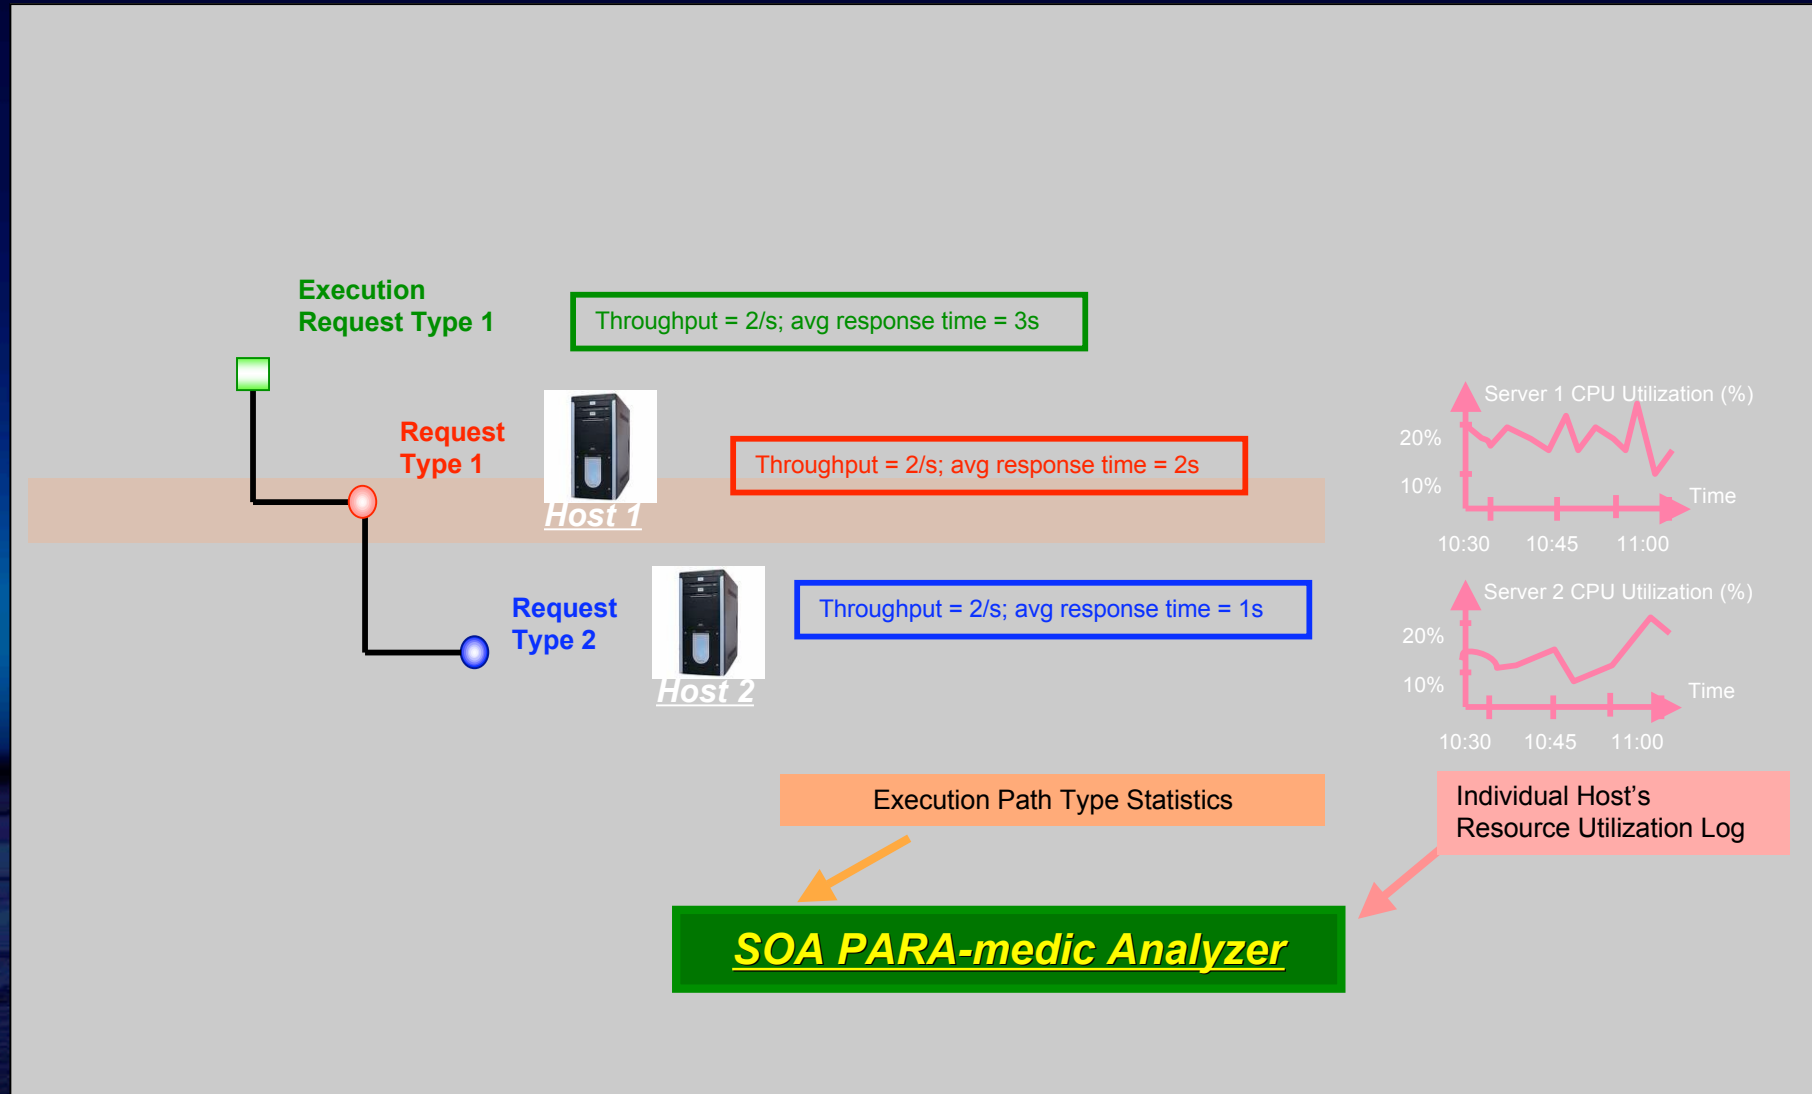

Scenario 3: Execution Path Healthcheck

Cross-Host, Cross-Application Relationship Analysis

Scenario 4: Execution Path Resource Healthcheck

Cross-Host, Cross-Application Performance Analysis

Identify the cause of your SOA performance problems

Gain the clarity you need to realize numerous benefits

By choosing the infrastructure Healthcheck workshop for SOA, you can learn how to identify the root cause of problems and define remedial actions which can help you to:

- ▶ Improve SOA performance
- ▶ Enhance infrastructure utilization and workload management
- ▶ Support SOA availability objectives
- ▶ Improve infrastructure architecture and design
- ▶ Identify opportunities and strategies to reduce infrastructure complexity and optimize operational costs

Is your infrastructure architecture responsive enough to meet your IT and business requirements for SOA?

A close-up photograph of a silver stethoscope, symbolizing a medical check-up or diagnosis.

Adopt an SOA infrastructure architecture planning ...

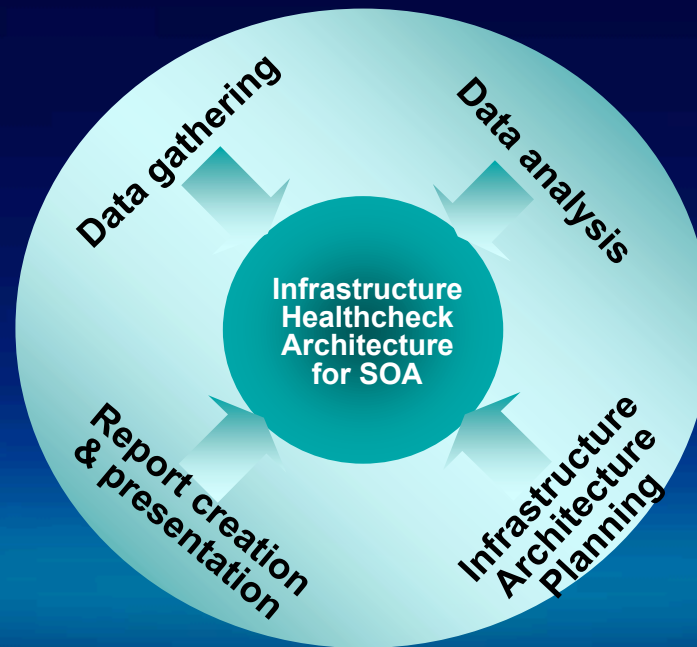

- Are you over engineering your infrastructure to meet your SOA delivery objectives?
- Is your SOA infrastructure ready to scale for enterprise-wide demands?
- Are you validating your SOA infrastructure performance before cut-over?
- Are you uncertain about an accurate budget for SOA infrastructure upgrades?

A photograph of a red and white ambulance with its emergency lights flashing, parked on a street at night.

... and avoid SOA rescue missions

Infrastructure Architecture Healthcheck for SOA

Each engagement includes 4 phases:

But with two starting points:

New SOA environment:

- Offers a three-week engagement fixed price/fixed scope
- Assesses two “What If Scenarios”
- Delivers an infrastructure architecture Healthcheck for SOA report

Extending SOA:

- Offers a five-week engagement fixed price/fixed scope
- Analyzes infrastructure monitoring data
- Assesses two “What If Scenarios”
- Delivers an infrastructure architecture Healthcheck for SOA report

Typical pain points

- **“We have a web application with certain performance objectives”**
 - Throughput of at least n users/s.
 - Average response time $\leq t$ seconds
 - CPU utilization $\leq p\%$
- **“What do we need to achieve these objectives?”**
 - What brand and model of machines?
 - How many machines?
 - Which software?

- Customers over-provisioning or under-provisioning
- Complex problem due to multi-tier heterogeneous topologies
- In best case, guessing # of servers to be deployed
- Dynamically changing workloads, priorities, and SLAs
- Trying to find balance between cost and capacity

Achieve SOA infrastructure architecture objectives

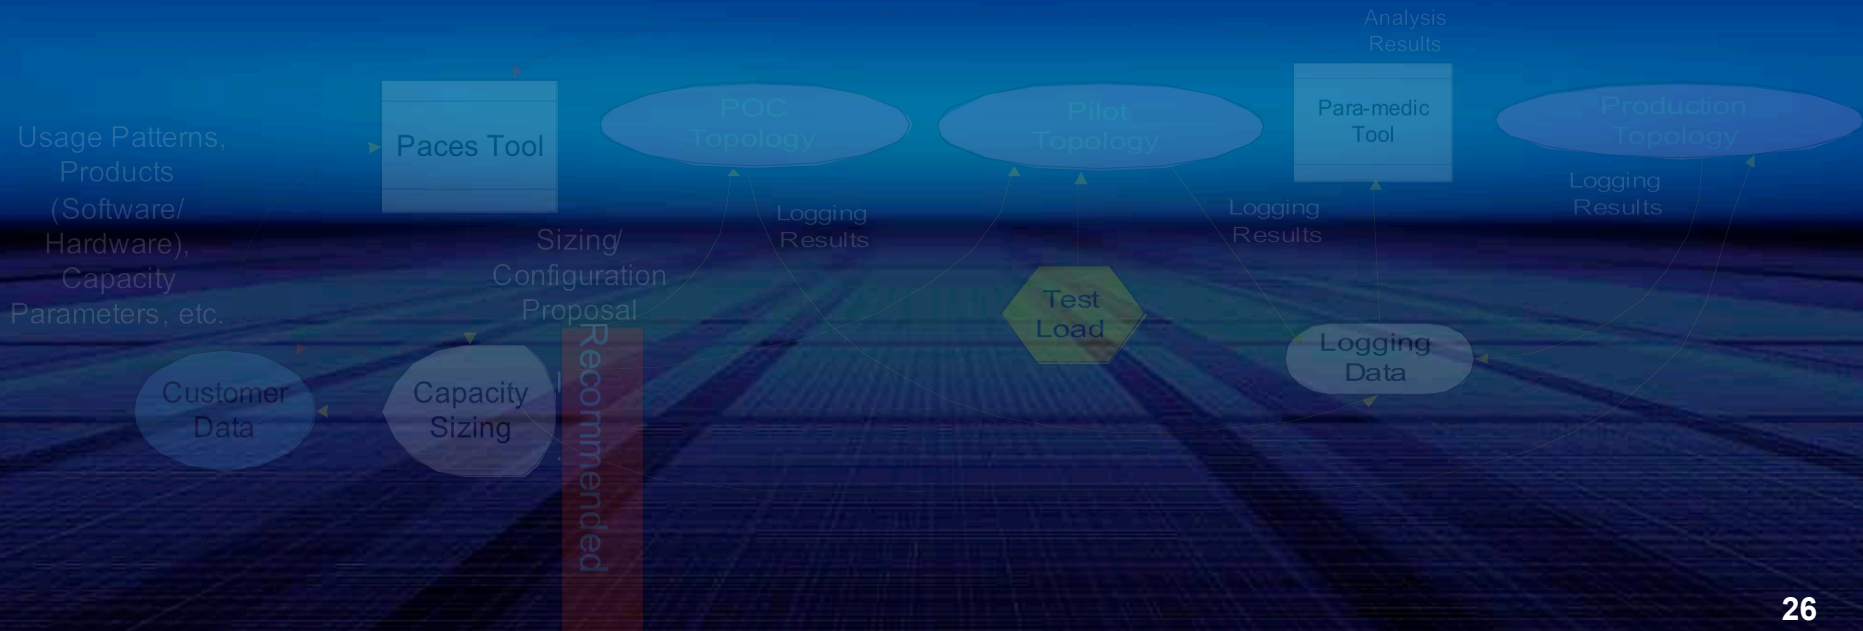

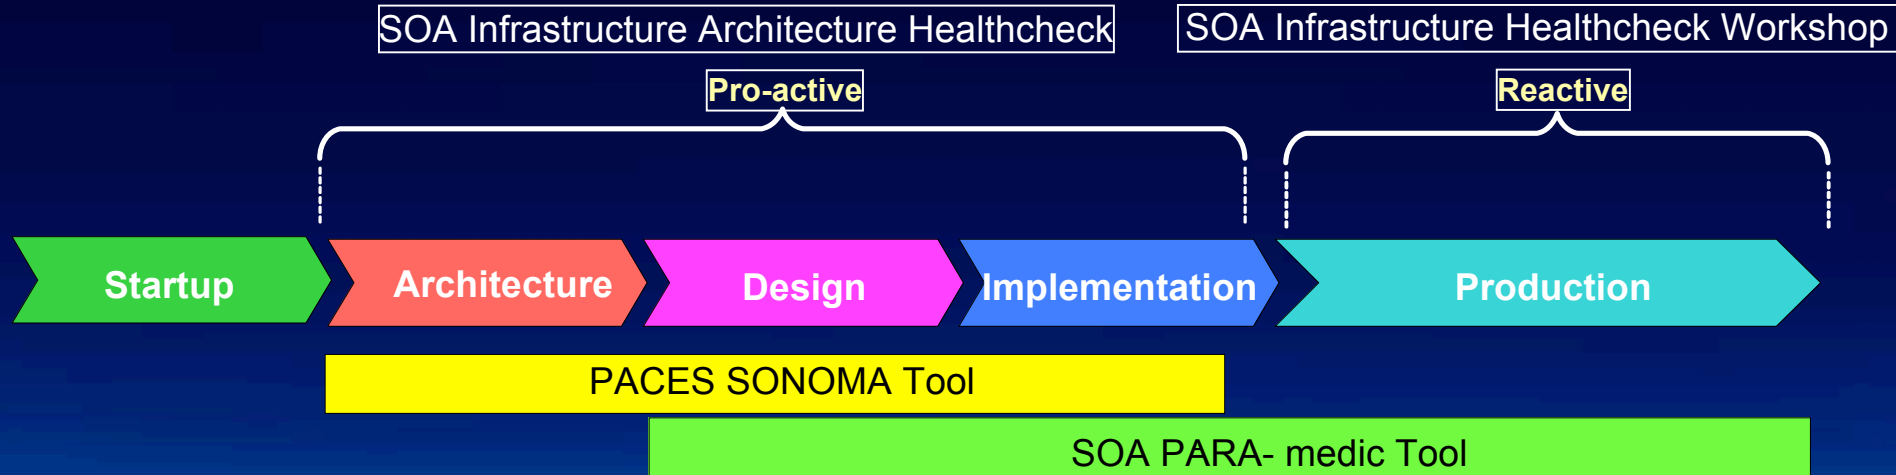

Optimize your infrastructure

By choosing the infrastructure architecture Healthcheck for SOA, you can learn how to define preventive actions which can help you to:

- ▶ Improve SOA infrastructure fitness
- ▶ Enable an infrastructure architecture planning
- ▶ Ease SOA adoption via PoC, PoT or Pilot
- ▶ Quick achieve higher SOA infrastructure maturity/agility levels
- ▶ Get optimum configurations for selected infrastructure architecture scenarios
- ▶ Define performance policies as part of an SOA Governance framework
- ▶ Predict overall performance before cut-over
- ▶ Reduce operational costs

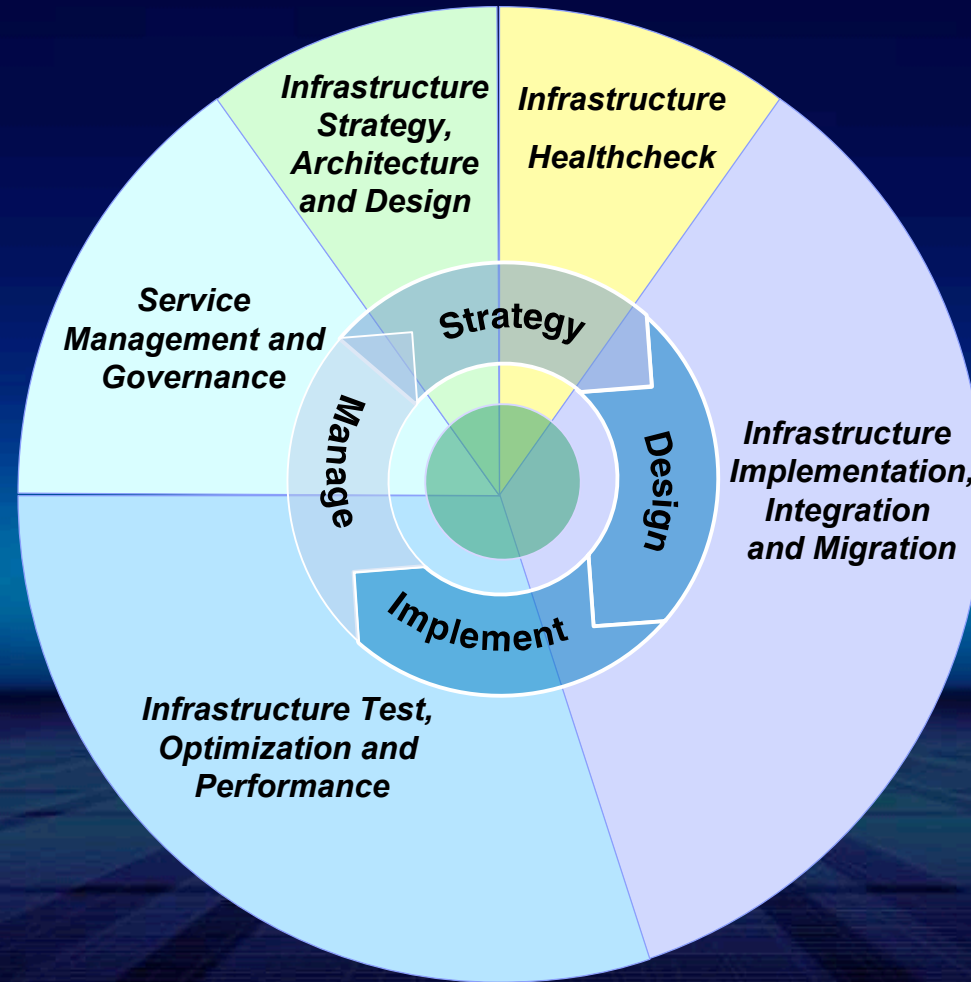

SOA Infrastructure Healthcheck @ work

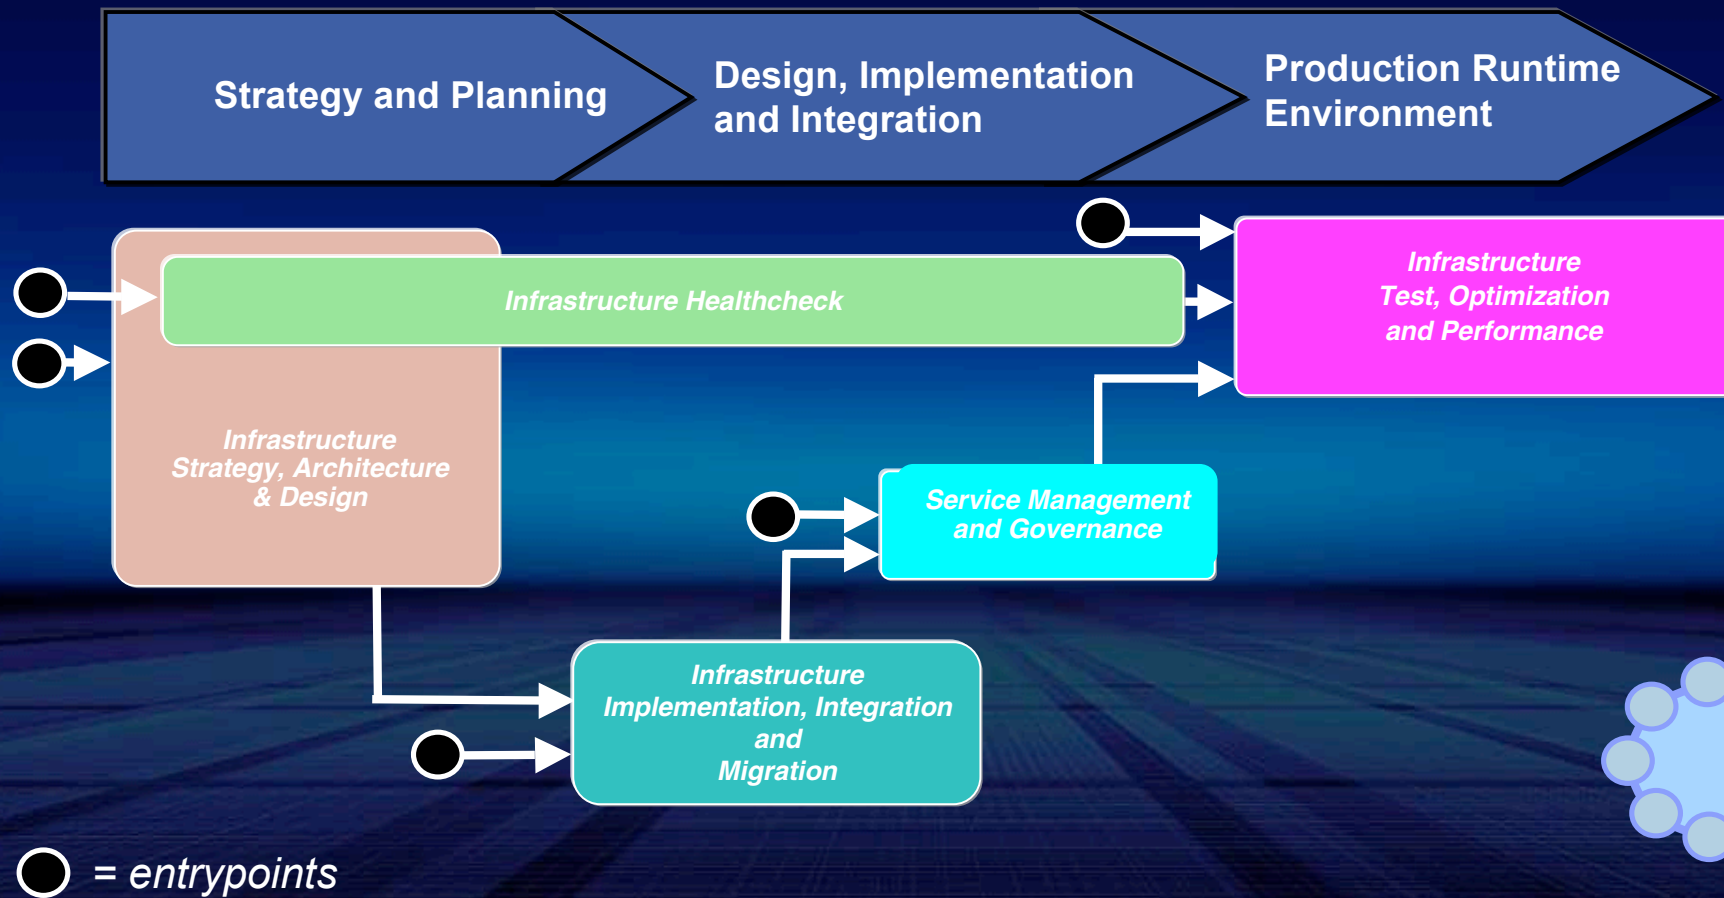

IBM Infrastructure Services supporting SOA

Meeting customers requirements, throughout the SOA lifecycle

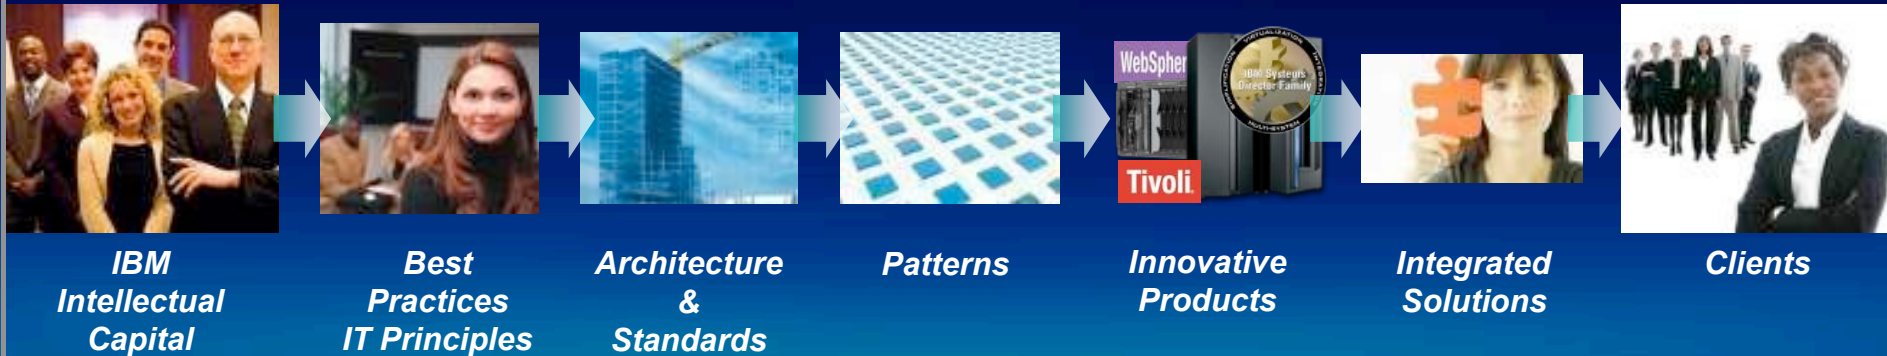

GTS SOA Professional Services offer end-to-end support of your SOA based IT Infrastructure

End-to-End Lifecycle

Building SOA Fitness With IBM – *Why IBM Services?*

Vast internal and external engagement experience

Implementing the “A” in SOA

- Improve SOA infrastructure fitness
- Optimize architectural decisions
 - Improve performance
 - Reduce operational costs

The workshops, sessions and materials have been prepared by IBM or the session speakers and reflect their own views. They are provided for informational purposes only, and are neither intended to, nor shall have the effect of being, legal or other guidance or advice to any participant. While efforts were made to verify the completeness and accuracy of the information contained in this presentation, it is provided AS IS without warranty of any kind, express or implied. IBM shall not be responsible for any damages arising out of the use of, or otherwise related to, this presentation or any other materials. Nothing contained in this presentation is intended to, nor shall have the effect of, creating any warranties or representations from IBM or its suppliers or licensors, or altering the terms and conditions of the applicable license agreement governing the use of IBM software.

References in this presentation to IBM products, programs, or services do not imply that they will be available in all countries in which IBM operates. Product release dates and/or capabilities referenced in this presentation may change at any time at IBM's sole discretion based on market opportunities or other factors, and are not intended to be a commitment to future product or feature availability in any way. Nothing contained in these materials is intended to, nor shall have the effect of, stating or implying that any activities undertaken by you will result in any specific sales, revenue growth or other results.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon many factors, including considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve results similar to those stated here.

All customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics may vary by customer.
