a.			rence determine general principles of the First Responder Awareness least 80% accuracy. (2-1)
	(1)		duction - At the awareness level responders must meet all rements of,
		(2	-1.1)
	(2)		ition - First responders at the awareness level are expected to: call for trained nnel,
		(2-1.2	
	(3)	provid	The goal of the competencies at the awareness level shall be to de first responders with the knowledge and skill to perform the wing tasks safely. (2-1.3)
		(a)	Detect the presence of hazardous materials. (2-1.3(a)1.)
		(b)	Survey a hazardous materials incident, from a safe location, to identify the name, UN/NA identification number, or type placard applied for any hazardous materials involved. (2-1.3(a)2.)
		(c)	Collect hazard information from the current edition of the Emergency Response Guidebook. (2-1.3(a)3.)

Awareness Page 1

(d)

(2-1.3(b))

Initiate protective actions consistent with the local emergency

response plan, the organization's standard operation procedures, and the current edition of the Emergency Response Guidebook.

STUDENT STUDY GUIDE ANALYZING THE INCIDENT

PRESENTATION:

(1)

100000002. Competencies - Analyzing the Incident

- a. Given various facility and/or transportation scenarios, with and without hazardous materials present, identify those scenarios where hazardous materials are present with at least 80% accuracy. (2-2.1)
 - Identify the definition of hazardous materials (or Dangerous Goods, in Canada). (2-2.1.1) As defined by the U.S. D.O.T:_____ (a) Hazardous Materials: (b) Hazardous Substances: (c) (d) Extremely Hazardous Substances:

(e)	Toxic Chemicals:
(f)	Hazardous Wastes:
(g)	Hazardous Chemicals:
(h)	Dangerous Goods:
DOT	Hazard Classes and divisions with examples (2-2.1.2)
•	D.O.T. has classified hazardous materials according to their primary danger and assigned standardized symbols to identify the <i>classes</i> .
•	Materials are grouped by their major hazardous characteristic and many materials will have other hazards as well. Example: A material may be poisonous, corrosive and flammable but will only be grouped with whichever is considered the worst.
(a)	Class 1 (Explosives)
	• Major Hazard: Awareness Page 3

(2)0

Divi	sions
<u>a</u>	 1.1 Explosives that have ahazar Ais one that affects almost the entire load instantaneously. Black powder, dynamite, T-N-T, blasting caps, nitroglycerine
<u>b</u>	1.2 Explosives that have abut not a mass explosion hazard.
	 Aerial flares, detonation cord, and power device cartridges
<u>c</u>	1.3 Explosives that have a and either a or hazard, or both, but not a mass explosion hazard
	 Liquid-fueled rocket motors, propellant explosives
<u>d</u>	1.4 Explosive devices that present a No device in the division may contain more than(0.9 oz) or a detonating material. The explosive effects are largely confined to the package and no projection of fragments of appreciable size or range are expected. An external fire must not cause virtually instantaneous explosion of almost the entire contents of the package.
	Practice ammunition, signal cartridges
<u>e</u>	1.5 Very insensitive explosives. This division is comprised of substances that have ahazar but are so insensitive that there is very little

			-	bility of initiation or of transition from ng to detonation under normal conditions of ort.
			•	Prilled ammonium nitrate fertilizer, (blasting agents).
		f	a of arti detona neglig	. This division is comprised cles that contain only extremely insensitive ating substances and that demonstrate a gible probability of accidental initiation or gation.
	<u>30</u>	Placar	d:	
(b)0	Class	2 (Con	npressec	d gas)
	•	Major	Hazard	ls:
	•	Sub-h	azards:	Flammable, Oxidizer, Poisonous
	<u>1</u>	Divisi	ons	
		<u>a</u>	at 20° pressu	means any material that is a gas C (68° F) or less and 101.3 kPa (14.7 psi) of are, a material that has a boiling point of 20° C or less at 101.3 kPa (14.7 psi) and that:
			<u>1</u>	Is ignitable at 101.3 kPa (14.7 psi) when in a mixture of 13% or less by volume with air; or
			<u>2</u>	Has a flammable range at 101.3 kPa (14.7 psi) with air of at least 12% regardless of the lower limit

Inhibited butadienes, methyl

		chloride, propane, .methane and hydrogen
<u>b0</u>	means packag	nmable, nonpoisonous compressed gas any material (or mixture) that exerts in the ing an absolute pressure of 280 kPa (41 psia) C (68° F).
	gas ha	genic liquid means a refrigerated, liquefied ing a boiling point colder than -90° C _F) at 101.3 kPa (14.7 psi) absolute.
	•	Anhydrous ammonia, cryogenic argon, carbon dioxide, compressed nitrogen, neon, and helium.
c	2.3 () means gases that
_	vaporisin sma (68° F) or 1 at	te easily, that are very dangerous to life, even l amounts. A material that is a gas at 20° C or less and a pressure of 101.3 kPa (14.7 psi n), a material that has a boiling point of 20° F) or less at 101.3 kPa (14.7 psi), and that:
	<u>1</u>	Is known to be so toxic to humans as to pose a hazard to health during transportation; or
	<u>2</u>	In the absence of adequate data on human toxicity, it is presumed to be toxic to humans because, when tested on laboratory animals, it has an LC50 value of not more than 5,000 ppm.
Awa	reness l	 Anhydrous hydrogen fluoride, arsine, chlorine, methyl bromide, cyanide gas, hydrocyanic acid, and diphosgene.

Hazard Zones of poisonous gases

			<u>a</u>	Hazard Zone A - LC50 less than or equal to 200 ppm.
			<u>b</u>	Hazard Zone B - LC50 greater than 200 ppm and less than or equal to 1000 ppm.
			<u>c</u>	Hazard Zone C - LC50 greater than 1000 ppm and less than or equal to 3000 ppm.
			<u>d</u>	Hazard Zone D - LC50 greater than 3000 ppm and less than or equal to 5000 ppm.

Hazard Zones of Flammable Liquids

<u>c0</u>

(d)00	Class 4	4 ()
	<u>1</u>	Major	Hazard	:
	<u>2</u>	Divisio	ons	
		<u>a</u>) means any of the ing three types of materials:
			<u>1</u>	Wetted explosives:
			<u>2</u>	Self-reactive materials:
			<u>3</u>	Readily combustible solids:
				 Magnesium (pellets, turnings, or ribbons), nitrocellulose, safety matches, and sulfur.
		<u>b0</u>	4.2 (<u></u>	any of the following materials:
			<u>1</u>	Self-heating material:

		 Aluminum alkyls, charcoal briquettes, magnesium alkyls, and phosphorus.
	<u>c0</u>	 4.3 () means a material that, by contact with water, is liable to become spontaneously flammable or to give off flammable or toxic gas at a rate greater than 1 L/kg of the material, per hour. Calcium carbide, magnesium powder, potassium metal alloys, and sodium hydride.
<u>30</u>	Placaro	ls
	<u>a</u>	Division 4.1:
	<u>b</u>	Division 4.2:
	<u>c</u>	Division 4.3:
		_
) Hazards 5.1:
2	Major	Hazards 5.2:
<u>3</u>	genera	ons 5.1 (Oxidizer) means a material that may, lly by yielding oxygen, cause or enhance the stion of other materials.
		• Ammonium nitrate, bromine trifluoride, calcium hypochlorite, chlorate, and permanganate.

<u>1</u>		sion 5.2 (Organic Peroxide) mater ssigned to one of seven types:
	<u>a</u>	Type A - organic peroxide that detonate or deflagrate rapidly a packaged for transport. Transportation of type A organ peroxides is forbidden.
	<u>b</u>	Type B - organic peroxide that neither detonates nor deflagrate rapidly, but that can undergo a thermal explosion.
	<u>c</u>	Type C - organic peroxide that neither detonates nor deflagrate rapidly and cannot undergo the explosion.
	<u>d</u>	Type D - organic peroxide that detonates only partially or deflagrates slowly, with medium no effect when heated under

confinement.

under confinement.

<u>e</u>

Type E - organic peroxide that

neither detonates nor deflagrates and shows low, or no, effect when heated

not detonate, does not deflagrate, shows only a low, or no, effect if heated when confined, and has low or no explosive power.

- g Type G organic peroxide that will not detonate, does not deflagrate, shows no effect if heated when confined, and has no explosive power, is thermally stable, and is desensitized.
 - Dibenzoyl peroxide, methyl ethyl ketone peroxide, and peroxyacetic acid.

	Placard:	
(i)0	Class 9	
	1	Definition:
		Any material that has an anesthetic, noxious, or other similar property that could cause extreme annoyance or discomfort to a flight crew member so as to prevent the correct performance of assigned duties.
		<u>b</u> Any material that is not included in any other hazard class, but is subject to the DOT requirements (a hazardous substance or a hazardous waste).
		 Adipic Acid, hazardous substances such as; PCBs and Molten Sulfur. Hazardous Waste
	<u>20</u>	Placard:
(j)0	Other I	Regulated Material (ORM-D)
	1	Definition:
		• Consumer commodities, small arms ammunition, and furniture polish.
	2	No placard
		Awareness Page 15

(k)0	Forbidden:						

(3)0 System Limitations

- It is extremely important that the *DOT Emergency Response Guide* be carried on every emergency response vehicle. Nonetheless, there are several limitations to the system.
- (a) Dangerous Placard This placard can be used for Class C explosives, mixed loads, or irritating materials (ORM A). There is no way for the responder to know, even generally, the primary hazard of the load.
- (b) 1,000-Pound (500 kg) Limitation There is not much difference in the danger of 1,005 pounds (502 kg) of a hazardous substance and 990 pounds (494 kg).
- (c) Visibility Placards will be of little use if they are damaged or if the vehicle comes to rest hiding the placard. Obstructions, fog, darkness, and other factors can make the placard useless.
- (d) Unclassified Materials and Exemptions Many materials like cryogenics are not considered hazardous. Experience has also proven that substances once thought to be perfectly safe are not. In addition, DOT yearly grants hundreds of exemptions from the standard safe transportation rules for a number of reasons, including economics.
- (e) Multiple Hazards Only the hazard considered the most dangerous is used to classify materials. Chlorine requires two labels, nonflammable gas and poison, when under 110 gallons. (In Canada all quantities are marked as corrosive gas.) It is also highly corrosive and water reactive and can form self-igniting, explosive atmospheres with many substances.

(f)	Degree of Hazard - This system does not indicate the relative level of the hazard like the NFPA 704 system.
(g)	Human Error and Placarding - The shipper may neglect to change placards for each shipment or may incorrectly placard a load.

- (h) Enforcement It is virtually impossible for DOT to enforce all of the regulations all of the time.
- (4)0 Primary hazards associated with each of the DOT hazard classes and divisions. (2-2.1.3) (HM-181, TABLE 2.1; 1991)
- (5) Differences between hazardous materials incidents and other emergencies. (2-2.1.4)
 - (a) They present such a large potential for doing great harm. The affects are far reaching and severe.
 - (b) Responders must be specifically trained and equipped to deal with them properly.
 - (c) Hazardous Materials often have far reaching and long term effects to the environment (cleanup), humans (cancer) and property (contamination).

(6)0	List some typical occupancies and locations in the community where hazardous materials are manufactured, transported, stored, used, or disposed of. (2-2.1.5)
	(a)
	(b)
	(c)
	(d)

(e)

(f)

(g)

(h)

(7)0Personnel developing the pre-incident plans should seek assistance from in identifying hazardous materials locations and recording them on the plan in a way that will be useful to the firstarriving companies (8) Hazardous materials that are manufactured, stored, processed, or used at a particular site are <u>NOT</u> subject to regulations affecting <u>transported</u> materials. (9) Hazardous occupancies and problem locations should be identified and evaluated during pre-incident planning (10)Typical container shapes that may indicate hazardous materials. (2-2.1.6) **Individual Containers** (a) 1 **Boxes** Rigid packaging <u>a</u> b Fiberboard, metal, wood, plastic 20 Compressed gas cylinders Small aerosol containers of metal, glass, or plastic <u>a</u> <u>b</u> Uninsulated steel, aluminum or fiberglass No uniform taper on head 1 2 Varying thread design <u>c0</u> Insulated (cryogenic) containers 1 Outer jacket insulates inner metal cylinder

	•		ge is a common term for the area above the main deck ship from which the ship is controlled				
	<u>4</u>	Air					
	<u>5</u>	Eme	rgency				
(h)0	Exam (2-2.2	-	f clues that use the senses of sight, sound and odor:				
	1	Odoi Aw	rs areness Page 31				

- <u>a</u> Gas leaks
- <u>b</u> Fire or Vapor Cloud
- <u>c</u> Peculiar smells

<u>20</u> Sight

- <u>a</u> Distinctive colored vapor cloud (ie; Chlorine or Ammonia)
- Visible corrosive actions, chemical reactions, pooling liquids, pressure releases, condensation lines on pressure tanks, injured victims, or casualties.
- <u>c</u> Extraordinary fire conditions
- <u>d</u> Peeling or discoloration of a container's finish
- e Spattering or boiling of unheated liquids
- <u>f</u> Smoking or self-igniting materials
- g Unexpected deterioration of equipment
- <u>h</u> Unexplained changes in ordinary materials

30 Sound

- <u>a</u> Hissing of pressure releases
- <u>b</u> Warning buzzers, bells, and other alarms
- 40 Informal methods of identification
 - <u>a</u> Verbal reports by bystanders or responsible persons
 - <u>b</u> Occupancy type
 - <u>c</u> Incident location

		<u>e</u>	Trade and common names	
		f	Container characteristics like markings, color, or shape	
		g	Non-regulated industry standards	
	<u>h</u>		Experience and judgment	
		<u>i</u>	Use of the senses	
	<u>50</u>	Decisions that can risk human life should never rely son informal methods of identification. Informal clues identification can be useful before formal identification completed when it is unreliable, or unattainable.		
(i)0	0 Limitations of using the senses in determining the absence of hazardous materials (2-2.1.11)			
	1	Odor:		
	<u>2</u>	Sight:_		
	<u>3</u>	Sound:		
	<u>4</u>	Risk o	f Injury	
		<u>a</u>	Too close to smell	
		<u>b</u>	Too close to see	
		<u>c</u>	Touching	
		<u>d</u>	Taste	
	<u>50</u>		ergency personnel should be especially watchful for eness Page 33	

Visual physical/chemical indicators

<u>d</u>

the onset of any symptoms of chemical exposure which can occur separately or in clusters depending on the chemical.

- <u>a</u> Some symptoms include the following:
 - <u>1</u> Changes in respiration: difficulty breathing, tightness of the chest, irritation of the nose and throat, suffocation, respiratory arrest.
 - Changes in consciousness: dizziness, drowsiness, confusion, fainting, unconsciousness, coma.
 - <u>3</u> Abdominal distress: nausea, vomiting, cramping
 - 4 Change in activity level: fatigue, weakness, stupor, hyperactivity, restlessness, anxiety, giddiness, faulty judgment.
 - Visual disturbances: double vision, blurred vision, cloudy vision, burning of the eyes, dilated pupils.
 - Skin changes: burning sensations, reddening, paleness, fever, chills
 - Changes in excretion or thirst: uncontrolled tears, profuse sweating, mucus flowing from the nose, diarrhea, frequent urination, bloody stool, intense thirst
 - <u>8</u> Pain: headache, muscle ache, stomachache, chest pain, localized pain at sites of substance contact.
- <u>b0</u> At the onset of physical symptoms, those affected should withdraw immediately to a safe location for decontamination.

b.0000 Given a shipping paper, Material Safety Data Sheets(MSDS), and various U.S. and Canadian placards and/or labels, identify the presence of a hazardous material within 20 minutes and with 19 out of 19 evaluation elements identified correctly.

Awareness Page 34

(2-2.2)

- (1) Difficulties in determining the specific names of hazardous materials in both facilities and transportation (2-2.2.1).
 - (a) Facilities
 - 1 Materials not included on inventories
 - 2 MSDS's wrong or not on file
 - 3 NFPA 704 symbols are not mandatory
 - 4 Facility managers not available
 - (b)0 Transportation
 - 1 Placards or labels missing
 - Placards and labels do not usually list specific product names
 - <u>3</u> Mixed loads are not placarded for all items in the shipment
 - 4 Shipping papers may not be available
- (2)00 Sources for obtaining the names of UN\NA identification numbers for, or types placard associated with hazardous materials in transportation (2-2.2.2)
 - (a) DOT Emergency Response Guidebook
 - (b) Shipping papers
 - (c) 49 CFR 172
 - (d) Canadian Dangerous Goods Guide to Initial Emergency Response
- (3)0 Sources for obtaining names of hazardous materials in a facility
 - (a) Material Safety Data Sheets
 - (b) Markings on Container Awareness Page 35

c.00	UN/N locate	a current DOT Emergency Response Guidebook (ERG), a specific name, A number, and/or placard/label type for a specific hazardous material, emergency information within the guidebook within 20 minutes with at 7 out of 17 evaluation elements identified correctly. (2-2.3)
	(1)	The ERG is an initial, ready, quick reference information resource.
