Podsystem claims 'first affordable, multi-network SIM' for applications needing gigabyte usage

Podsystem Ltd, a mobile virtual network operator (MVNO) specialising in data SIM cards for M2M, has launched a gigabyte SIM card that connects to any network in any EU country at a fixed low cost. These SIMs can roam on every network available in each of the 35 European countries covered. If a network goes down or there is limited coverage in the area, it will automatically connect to the next available network.

The new MultiNet Gigabyte SIM cards have been designed for 'gigabyte hungry' M2M applications such as security and video. These applications normally face huge roaming costs when they connect to other networks, both within individual EU countries and abroad.

For the growing market in high usage M2M applications – including video, security, CCTV and surveillance cameras – roaming costs have always represented a barrier to widespread rollout, due to the high levels of data these applications require. Traditional multi-network SIMs do not enable gigabyte usage since the cost at these levels of data would be too high. Podsystem's MultiNet Gigabyte SIMs scale from 100Mb up to 5Gb of data and cost around €50.00 for 1GB, a price which, until now, has been impossible to achieve with multi-network SIMs.

For M2M companies, cost control is not the only advantage of Podsystem's MultiNet SIMs. The ability of

the SIM to automatically connect to the next available network if coverage is lost is a vital feature for devices that have sealed units or are located out in the field or in rural areas. Often M2M companies spend time and money contracting engineers to solve problems that could be resolved automatically in seconds by a MultiNet SIM. Although many operators have recently introduced roaming M2M SIM cards, these are restricted to one network, meaning that if the network goes down or loses coverage in a particular area, service to the M2M device will be interrupted.

"From our experience working with M2M companies over the last 11 years, we identified the need for a true multi-network solution for the video and security sectors, one that would allow the market to expand both nationally and internationally without the barriers caused by high prices for data at these usage levels," commented Charles Towers-Clark, CEO of Podsystem. "Our MultiNet SIMs enable such companies to ensure a cost effective, seamless service whether they are roaming within the UK or across Europe."

In addition to the new range of MultiNet SIMs, Podsystem offers an online administration platform and billing system, enabling them to control all aspects of their SIMs at any time, from activations to real-time data monitoring and billing at prices determined by the reseller. 

Charles Towers-Clark, CEO of Podsystem: Cost-effective, seamless service

MultiNet Gigabyte SIM cards connect to any network in 35 European countries

Las tarjetas SIM multi-red eliminan los costes asociados con el roaming en redes europeas

Strada, la empresa de soluciones de localización, control y gestión de flotas, ha anunciado hoy que ha incorporado tarjetas SIM multi-red (MultiNet) de Podsystem en sus dispositivos de localización para proporcionar a sus clientes un servicio Europeo a un coste fijo sin la necesidad de cambiar la tarjeta SIM del dispositivo ni pagar el coste de roaming. El nuevo servicio cubre toda Europa y la tarjeta SIM se conecta a todas las redes en todos los países europeos. Las soluciones de Strada permiten a sus clientes optimizar la gestión de la flota, reducir costes, mejorar la calidad de su servicio, aumentar la seguridad y el confort de los conductores y ganar en productividad y flexibilidad.
