

IV. *An Extract of a Letter from the late Mr. Edw. Lhwyd to Dr. Tancred Robinson; giving an Account of some uncommon Plants growing about Pensans and St. Ives in Cornwall.*

Pensans, Sept. 22. 1700.

S I R;

I Have met with no Birds or Fish, since our coming hither, that I suspect for undescribed: Only two or three *Stelle*, and some other *Exanguia marina* have occur'd, which I have not seen before on our *British* Coasts.

We have also met with the *Capillus Veneris verus* in abundance on the Sea Clifts about *St. Ives*. 2. *Dr. Sheppard's Scrophularia Scorodoniae folio*. 3. *Blattaria lutea*; an *lutea minor* Park? But the Leaves of ours are not jagged: Also all the Plants mentioned by Mr Ray to grow here; excepting the *Gnaphalium marinum*, which should grow by this Town; and two or three more, which being at some distance, we have not looked for.

We have also found some *Fuai*, which perhaps may be new: And I am told the Fishermen sometimes take up the *Corallina marina reticulata* by their Hooks; but I have not yet seen one of them.

E. LHWYD.
