

GREAT MILITARY PARK.

Report of Chickamauga and Chattanooga Park Commission.

Satisfactory Progress Made in the Work—Interest in the Park Rapidly Increasing Throughout the Country.

Gen. Henry V. Boynton, as chairman of the Chickamauga and Chattanooga national park commission, has submitted to the secretary of war the annual report of the commission, showing that satisfactory progress has been made in the establishment of the park in accordance with existing laws and the plan heretofore adopted by the war department. No change seems to the park commission to be advisable. No new legislation is suggested and no increase of the appropriation over that made for the current fiscal year is needed. The battle field of Lookout mountain has been added to the park during the past year at a cost of \$22,065, and it is hoped that ten or twelve acres on the top of the mountain at its north point may be acquired during the coming year, thus completing the purchase of land for the Chattanooga section of the park with the exception of small tracts on Missionary ridge. Interest in the park throughout the country is rapidly increasing. Most of the 26 state commissions cooperating with the national commission have been active in providing for the erection of monuments on the field. Many of the states which have erected regimental and battle monuments throughout the park are now engaged in putting up costly state monuments of imposing design. The state authorities of Tennessee and Georgia and the county and municipal authorities of Tennessee have been prompt and liberal in affording every legal facility for prosecuting the work of the commission.

Gen. Boynton says that the care taken in ascertaining lines of battle and the success attending the same, appears from the fact that every brigade line on each side has been established upon seven distinct fields, namely, Chickamauga, Wauhatchie, Lookout Mountain, Orchard Knob, Missionary Ridge, Tunnel Hill and Ringgold, and that no difference has arisen in regard to any of these, with a single exception—in the case of a line specifically and definitely located by Gen. Grant upon his official map of the battle of Chattanooga. In the location of the great multitude of regimental and battery positions in only one case has there been a difference between the national commission and the state commission, and no difficulty is anticipated in the settlement of the same.

During the past summer the Lookout Mountain fields have been cleared of underbrush, paths constructed to reach every portion of its rugged topography, and complete historical tablets cast for every brigade and division engaged. The eight artesian wells on the Chickamauga field have been tested by the unprecedented drought of the past season, and have been found abundantly able to supply water for camping and maneuvering troops. The use of the park as a refuge for southern coast and gulf garrisons during the period of yellow fever visitation has been demonstrated by the presence of the garrison from New Orleans upon the park.

The appropriation for the present year was \$75,000, out of which there remains a balance of \$57,800, which is considered sufficient to carry on the work until the end of the year.

THE SUPPLY OF EGGS.

few Are Exported and Not Many Are Imported.

Not many American eggs are exported, and not many eggs are imported; none except in seasons when eggs here run very high. The imported eggs come from Sweden, Germany and Austria. They come in boxes containing hundreds of dozens each packed in chopped straw. A few eggs in this country are still packed in straw in barrels, but the now well-nigh commonly used American egg package is a box containing 30 or 36 dozen. The eggs are packed in the now familiar strawboard racks, which are called fillers. The eggs are stood on end, each in a pigeon hole by itself, six dozen eggs in a layer. There are sheets of strawboard between the layers, and eggs are packed some five and some six layers to the box. Eggs are most costly in winter, but cold storage has done much to equalize the price of eggs the year round.

DISBAND BECAUSE DISABLED.

Quer' Pardonement of a College Football Eleven

In the East.

A dispatch from Wilmington Del., says: "The athletic department of Delaware college is confronted by an unhappy alternative. It longs to have the college eleven stay in the field and strive for football honors, but in view of the fact that every player on the team is suffering either from a broken leg, toe, nose or collar bone, it cannot see how it can do so. Therefore it has wisely, but reluctantly, decided to disband the football team and has cancelled all games that it has ahead."

Five of the players are so badly injured about the legs, shoulders and face that they will have to wear splints and use canes and crutches for several weeks. The athletic department at the college will have the appearance of a hospital until after Christmas.

JOKE ON AN IMMORTAL.

Anatole France's Astronomical Blunder in a Recent Novel.

One of the immortals, Anatole France, has furnished amusement for the literary world of Paris. There is little doubt that M. France is not skilled in the science of the stars, else he would not have committed the laughable blunder that appears in his latest novel, "Le Maquinist d'Osier."

In this volume he describes one of the principal characters as indicating to another on a night in May the constellation Gemini. It is pointed out that this constellation at the hour M. France mentions, between 11 o'clock and midnight, at that time of the year is very near or below the horizon. So much for an academician who would touch upon astronomy.

Wherein They Differ.

Broadly speaking, the essential differences between the merchant-ships and warships is that the former are designed to carry their loads, or principal portions thereof, low down in the hold, whereas warships have to carry their heavy burdens of armor and armament high up on their sides.

Oxford.

Oxford university has a freshman class of 725 this year. Of these only 300 come from the great public schools, Eton sending 48; Winchester, 30; Rugby, Charterhouse, Harrow and Marlborough, over 20 each, and 11 other schools over 10 each. The rest come from small grammar schools, only 20 having been educated by private tutors. There are only 20 students from the British colonies and a few from American and German universities.

Bombay.

Bombay is the second largest town in the British empire.

L'ABEILLE DE LA NOUVELLE-ORLEANS

Est très répandue en Louisiane et dans tous les Etats du Sud. Sa publicité offre donc un commerce des avantages exceptionnels. Prix de l'abonnement, pour l'année: Edition quotidienne, \$12 00; Edition hebdomadaire, \$3 00.

HIS MIND IS CLEAR.

St. Louis Man Turning to Chalk Talks of His Infirmitiy.

Frank Ritter, the St. Louis saloon-keeper who is turning into chalk, doesn't let his prospective fate sour his disposition. He said recently:

"Yes, I am content. What's the use of being any other way? It can't be helped so we might as well make the best of it. I am glad that I'm alive; there are a whole lot dead, and I'm only half dead," and Ritter laughed at his own joke.

"Yes, if these pieces of chalk were taken from my hand now and exposed awhile to the air you could readily write your name on a blackboard. What brought it? I don't know. The doctors don't know, and I guess it makes much difference anyway. I never think about it. I have got plenty of friends, and I am getting along in life when a man hasn't many more years to live."

"I was born in 1831, and came to St. Louis from Paducah, Ky., in 1845. From that date until 1866 I was on the river, working up from a cabin boy to steward.

I was at the battle of Vicksburg—that is, on a steamer, and didn't take part in it. This disease of mine began about 15 years ago. It didn't amount to much at first, but it grew right along. I have had my leg cut eight times, and then the doctor shook his head, one day.

"I told him I knew what he was thinking about. It was about taking the leg off. He said yes, and I told him to go ahead. So there you are. It came off. Oh, yes, it goes right along. I don't know what it will amount to. Come around some time and take lunch with me."

Ritter is now in a condition that prevents him from moving around without assistance, but is still jovial and is glad that he is living.

MADE STARTLING DISCOVERIES.

Bulletin of Astronomical Work at Flagstaff; To Be Published.

Prof. J. Z. Peebles, who has been in charge of the Lowell Observatory at Flagstaff, A. T., since Mr. Lowell went east, passed through Albuquerque, N. M., the other night on his way to Boston, accompanied by S. L. Boothroyd, who has been associated with him in astronomical work.

The gentlemen are taking the records of the observatory to Boston to consult with Mr. Lowell and to prepare for the publication of a bulletin setting forth the work which has been accomplished at Flagstaff and the new headquarters which have been made.

The still, clear atmosphere at Flagstaff makes it an ideal point of observation, and it is understood that a large number of discoveries of great interest and value to the astronomical world have been made there within the last few months. None of these discoveries, some of which are said to be of a rather startling nature, will be given to the public until the bulletin mentioned is published in Boston.

USES "X RAY" ON AN INDIAN.

Right Tackle of Carlisle Football Eleven Examined for Injuries.

Martin Wheelock, right tackle of the Carlisle football eleven, a big Indian, six feet high, became acquainted with the latest acquisition to the white man's science, the X-ray, at the J. H. Wood Wright memorial hospital at New York city.

During the game with Brown, Wheelock had plunged headlong into a mass play directed against him. He tried to rise, but his right shoulder prevented.

Wheelock was deeply interested in the performance. The bones in his hand were shown him, and he was delighted. Then the ray was turned on his injured shoulder, and it was plainly seen he had suffered a fracture. The physicians declared that the man was the finest specimen of humanity they had ever seen.

The hospital authorities believe that Wheelock will be able to play again during the present season.

TRADE WITH HONG KONG.

Americans Have the Reputation of Practicing Fraud.

Consul Wildeman, at Hong Kong, informs the state department that the largest items of import from the United States to that place are flour and petroleum. Regarding lumber he says there would be no trouble in selling if shipped subject to approval. Americans, he adds, have the reputation of practicing frauds in selling goods, and especially is this true of whisky of American manufacture that is sold in Hong Kong. The exports from Hong Kong to the United States for the year ended June 30, 1897, amounted in value to \$1,950,785, the principal items being rice, \$427,995; refined sugar, \$321,260; tea, \$105,795; "Chinese" provisions, \$136,950; "peanut" oil, \$103,315.

Mr. Wildeman says there is great deal of talk about adopting the gold standard for Hong Kong, as merchants complain of the fluctuations of silver, and the matter will be brought before the colonial legislature.

WEDS IN A HURRY.

Town Courts and Marriages a Georgian Woman Within a Week.

The peculiar circumstances under which a marriage took place at Marietta, Ga., a few days ago, have just become public. W. M. Comes, of Iowa, arrived in town Saturday, a week ago, to visit his old friend, William Glassman. On the way to his residence he learned that Glassman was dead, but as he had known the widow in Iowa he visited her. A mutual attachment sprung up. He courted her on Sunday, secured the license Wednesday, and married her Friday.

GERMANY'S EXHIBITION.

Making Plans for a Big Display at Paris in 1900.

Consul Monaghan, at Chemnitz, has sent to the state department a report of the plans made by Germany for its exhibition in Paris in 1900. Dr. Richter, who took a prominent part in the world's fair at Chicago, has returned to Germany from Paris well satisfied with the space allotted for the exhibition of German industries and manufactures. Mr. Monaghan says that the Germans will make every effort to have a splendid showing, and are completing arrangements for that purpose as fast as possible. Germany will have an industrial palace 700 meters square on the banks of the Seine near the Quai d'Orsay.

OXFORD.

Oxford university has a freshman class of 725 this year. Of these only 300 come from the great public schools, Eton sending 48; Winchester, 30; Rugby, Charterhouse, Harrow and Marlborough, over 20 each, and 11 other schools over 10 each. The rest come from small grammar schools, only 20 having been educated by private tutors. There are only 20 students from the British colonies and a few from American and German universities.

An Aluminium Yacht.

A ten-ton racing yacht of aluminum has been constructed. It cost \$10,000 but is only about half the weight of a similar steel one.

WHEREIN THEY DIFFER.

Broadly speaking, the essential differences between the merchant-ships and warships is that the former are designed to carry their loads, or principal portions thereof, low down in the hold, whereas warships have to carry their heavy burdens of armor and armament high up on their sides.

MAY LOSE CHILD WIFE.

GEN CLAY NOW ALONE IN HIS KENTUCKY MANSION.

Young Mrs. Cassius M. Clay Goes to Home of Her Brother on a Visit and May Forget to Return.

Gen. Cassius Marcellus Clay's young wife left the Clay mansion, Whitehill, ten days ago and went to the home of her brother, "Cell" Richardson, at Valley View, Ky., ten miles away, on the Kentucky river.

"Cell" worked for Gen. Clay several years and was his overseer when the general married the little 14-year-old Doris two years ago. He acted as one of the general's guards during the time the old man kept his place under martial law when he was getting married, but he and Clay did not get along well together and six months ago "Cell" left and went back to his former home at Valley View.

The child wife seemed well contented as long as her brother and his family lived on the place, but since then has shown signs of being displeased with her peculiar life, and the neighbors were not at all surprised when she left home two weeks ago and went to her brother's.

She had not quarreled with Gen. Clay when she left, but said she wished to pay her brother a visit.

The general has always tried to gratify her every wish and so told her she could go. She is staying longer, however, than he expected, and those who have been to his house say he is uneasy lest she should not return.

Doris has grown into a strong woman and weighs more than 140 pounds. She good looking and will soon be 17 years old. Her distinguished husband is just 70 years her senior. No heir has come to bless their union, much to the disappointment of the venerable husband.

It is hinted that Doris had met and become infatuated with a young man from Valley View, but this cannot be verified, and is probably the idle story of gossips.

Gen. Clay has provided every comfort for his young wife. He buys the most expensive clothing for her, has her dresses made by an experienced dressmaker, has carefully looked after her education, both in the English branches and in music, and has been more like a father to her than a husband. She is an excellent cook, and the general never tires in extolling her ability to prepare a tempting meal.

On the other hand, she has been devoted to him and takes great pride in ministering to his wants. With her own hands she cooks every morsel of food she eats and anticipates his slightest wish. She has learned to know which books he likes best, and she keeps them within easy reach.

Whitehill was a happy home until Doris's brother left the place, and the general is seriously considering bringing him back. It is believed by his most intimate friends that should the general do this his child wife would gladly return and take up again the strange life she has been leading for the past two years.
