General Manager's Message

ATS is not only a name or a company. It is a passion, a desire to grow, serve and excel. Its success story is carved by untiring hard work, dedication and adherence of its team members to its cause. For our clients, ATS is a name which stands for its commitment, customer care, integrity, product knowledge, trouble free services and competitive prices.

All of that have been achievable with the grace of Almighty Allah, and untiring hard work of ATS team members. All of the team members are thankful to their clients for their complete faith in ATS as well as their suppliers for their complete support, responsiveness and soft corner for ATS.

Our mission is to develop an everlasting as well as blossoming relationship with our clients. ATS ensures that it's top of the range customized services offerings facilitate not only current but also future requirements of its customers. We strongly believe that only by offering a wide range of high quality services and by exquisite customer care we will be in a mutually beneficial bonding with our customers.

We are not looking for the seeds inside the apple, we are more interested about the apples inside the seed.

CAPABILITIES

Capabilities

Arabian Technical Services is a leading provider of full range of tailor made & high standard services. The company offers and provides a highly dedicated and experienced team of Health Safety and Environment specialists, Quality professionals, Training, Auditing, and Supply of Professionals in all fields.

ATS Focus Areas

-  Quality, Health, Safety and Environment: Oil and Gas, Infrastructure and High Rise Buildings Projects

- ▣ Quality, Health, Safety and Environment Consultancy Services
- ▣ Training and Development Services in Engineering, Technical, technology and Management Professions
- ▣ Supply of Professional HSE & QA/QC personnel

ATS Strength

▣ Consultancy Services

A consultant provides expertise to clients who require a particular type of knowledge or service for a specific period, thus providing an economy to the client. In other situations, companies implementing a major project may need additional experienced staff in a particular field to assist with the work during that period. This is where Arabian Technical Services (ATS), as a Quality, Health, Safety and Environmental Management Consultant, comes in.

ATS acts as facilitator that advises and assists organizations in developing new strategies or solving problems regarding Quality, Health, Safety and Environmental Management.

ATS deals with management consulting which involves the identification and cross-fertilization of best practices, analytical techniques, change management and coaching skills, technology implementations, strategy development or even the simple advantage of an outsider's perspective.

The consultancy services provided by ATS warrants:

- ▣ A pool of talent that can be quickly mobilized as required.
- ▣ Reassures the client about the quality of the consultants supplied.
- ▣ Gives the client access to the experience and methodologies of the whole consultancy rather than an individual.

Quality Management Systems

Increasing pressure from competition has made it so that having efficient Quality Management is necessary to keep an organization's position in the market place. Creating consistently high quality products and services is only possible for organizations that have successful quality management. ATS provides professional quality and environmental management solutions for total quality management and continual process improvement.

Established in 2006, ATS Quality has enjoyed growing interest and success. Growth is based on a common sense approach to management systems supported by a solid understanding and experience of practical business requirements.

Experienced over broad range of industries and technologies, ATS will bring innovative solutions combined with best practice, ensuring that a client's business can benefit from the best available methods in Quality Assurance. ATS Quality strength is flexibility. No shortcuts, No "Off the shelf" solutions. Services are tailored to meet a client's unique business needs.

ATS will help its clients in modeling quality management systems as per International Standard ISO 9001:2000.

Health and Safety Management System

Professional management tailored to clients' business needs is an ATS service, which provides effective, economical Health & Safety Management Consultancy for businesses.

Systems will be established to make relevant information available to employees, contractors, clients, and the public concerning the effects of ATS activities on the health and safety of people. Relevant information shall be made available to facilitate continual improvement in performance. There shall be consultation and communication with staff to promote involvement in improvement programs.

ATS offers a consultancy dedicated to Safety & Risk Management. The company provides a complete risk management programme that encompasses all OH&S, Facility and building management, client & legal requirements. ATS will develop Health Safety and Environment systems to obtain OHSAS 18001.

Environmental Management Systems

An Environment Management System (EMS) is a tool for managing the impacts of an organization's activities on the environment. It provides a structured approach to planning and implementing environment protection measures. An EMS integrates environmental management into a company's daily operations, long term planning and other quality management systems.

ATS, as an Environmental Management Consultancy, assists a company in the following:

-  minimize environmental liabilities;
-  maximize the efficient use of resources;
-  reduce waste;
-  demonstrate a good corporate image;
-  build awareness of environmental concern among employees;
-  Increase profit, improving environmental performance, through more efficient operations.

Project Management Services

Quality Management

Managing steady growth creates a need to streamline complex projects; efficient use of scarce resources is critical to business success. For a successful business, managing time, meeting quality objectives, and keeping costs within budget are essential requirements; rules of the classic triangle of time, quality, and cost in project management. However, quality management is the most important among all equals; a factor so critical to project integrity and a measure of resource efficiency.

Arabian Technical Services (ATS) has always believed that:-

The quality of a product is vital to the continued success of a business. A well-prepared marketing strategy might bring a customer to the door, but if the delivered product fails to satisfy expectations, customers never return. Businesses must develop their standards for quality and constantly reinforce those values. Compromising on quality pushes customers away and gives

more opportunities to competitors. ATS is a watch guard of quality principles that create effective business organizations.

Project Quality Management includes developing a project plan, defining project goals and objectives. Specifying tasks or how goals will be achieved, what resources are needed, and associating budgets and timelines for completion are at the heart of ATS services. It also includes implementing the project plan, along with careful controls to stay on the "critical path", that is, to ensure the plan is being managed and implemented according to plan. ATS Quality Management services are tailored, from assistance in contractor selection to complete project management operations, in order to meet client requirements.

ATS quality services include:

-  Total Project Quality Management Services
-  Project Quality Assurance with Project Quality Plan, Inspection and Test Plans, Audits & Inspections & Witness for Testing
-  Preparation of Welding Procedure Specifications (WPSs), Procedure Qualification Records (PQRs) & Welding Performance Qualifications (WPQs)
-  Quality Control Procedures
-  Supply of Specialist Personnel

Health, Safety and Environment Management

At ATS, Health, Safety and Environmental (Health Safety and Environment) responsibilities are integral to the way it conducts business and translate ATS principles in providing Health Safety and Environment Management Services in the market. Successful handling of a Health Safety and Environment system is an essential component of a business strategy. Through observance and encouragement of this policy, ATS assists clients in protecting the environment and the overall well-being of all of stakeholders, specifically, employees, clients, contractors, and communities. In order to achieve these objectives, ATS enables clients' business processes to identify Health Safety and Environment risks arising from business activities and to reduce them to the lowest practical levels.

ATS takes a proactive approach towards enabling clients to build capacity in managing safe work environments for all employees and to be accountable for promoting continued safety education and training for all employees, assigning responsibility for all aspects of the work, continuously reviewing work procedures to identify potential areas of improvement, and ensuring a thorough evaluation of all incidents.

Project Auditing Services

Audit is a systematic and wherever possible, independent examination to determine whether activities and related results conform to planned arrangements and whether these arrangements are implemented effectively and are suitable to achieve the organization's policy and objectives.

ATS believes that an audit should achieve three goals:

-  To identify existing problems in a project;
-  To identify areas where problems may occur if changes are not made; and
-  To support the resolution of problems by recommending where changes should be made.

Quality Audit

A project quality audit (sometimes called a Quality Assurance Review) and subsequent action plan will improve business processes within the organization. Ideally, a contract should include the option for such an independent assessment or some other means to assure that the project is on track and will deliver the quality that the client expects within the schedule and budget targets.

ATS report is generated using a tested methodology and provides the following:

-  An independent perspective, with unbiased insight on project status and results

-  Assessment of the quality of project deliverables
-  Evaluation against best practices
-  Recommendations and alternatives.

Health, Safety and Environment Audit

The health, safety and environment management audit that ATS adopts is a structured process of collecting independent information on the efficiency, effectiveness and reliability of the total Health Safety and Environment management system and drawing up plans for corrective action.

Project Health Safety and Environment auditing provides the method for monitoring and controlling Health Safety and Environment activities and procedures throughout the life of the project. It comprises of two activities:

-  Formal audits
-  Unscheduled inspections

The formal audits provide a more comprehensive and formal assessment of compliance with Health Safety and Environment procedures and plans. They are carried out at key points during the project life cycle. The unscheduled inspections are unplanned and impulsive inspections carried out during the day or night. This helps in the true assessment of compliance with Health Safety and Environment standards.
