# The Wikipedia lists are built with template structures.

```

    {{Tabelrij rijksmonument

This allows easy Wiki-editing, and we can import them into our laaaarge monuments database with all monuments available. One set of lists (e.g. one country) is configured by a tech-sawy person **once**.

# enter erfgoedbot!

**erfgoed** is Dutch for “heritage”, and a **bot** is a little program that automates dumb or boring work for us.

**erfgoedbot** runs at night and harvests the lists at Wikipedia and all the uploaded images with identifiers and updates the large database with this information.

Based on this, erfgoedbot puts them in the correct categories at Wikimedia Commons.

See [[User:ErfgoedBot]] on your Wikipedia for a localised infographic
