RAISING CANARY BIRDS

GERMANY CONTROLS WORLD'S MARKET OF CANARIES.

Unprecedented Gold Rush Demands for the Young Birds Sends Prices to Unprecedented Heights.

By FREDERICK W. HARRIS

September 23, 1927

New York.

The demand for young canaries in Germany has reached such proportions that it now constitutes a serious threat to the market for the birds in this country. The demand is for the young birds, which are now valued at a hundred dollars each, and the supply is sufficient to satisfy the demand only if the price is kept high.

The canaries are valued in Germany because of their singing ability. They are raised in large flocks and are kept in cages. The cages are made of wire and are roughly rectangular in shape. The canaries are fed on a diet of seeds and fruits, and they are kept in a warm, dry environment.

The canaries are raised in the country and are sold in the cities. The price of the young birds is determined by the demand and supply. The demand is controlled by the number of people who are willing to pay the price. The supply is controlled by the number of canaries that are available.
