# Structure of Template:Coordinate (german Wikipedia)

The screenshot shows the German Wikipedia edit page for the article "Zürich". The top navigation bar includes links for Artikel, Diskussion, Seite bearbeiten, Versionen/Autoren, Verschieben, and Beobachten. The main content area displays the source code for the page, which includes the {{Coordinate}} template with parameters: NS=47\_22\_44\_N\_8\_32\_24\_E\_type:city(366145)\_region:CH-ZH\_scale:40000|47° 23' N, 8° 32' O. Below the code, there is a license notice about copyright and a section for Zusammenfassung und Quellen.

Template Lat Lon Output option Additionally parameters:  
 {{Coordinate|NS=49.759681|EW=6.6440194|article=DMS |type=landmark|dim=25|region=DE-SN}}

Template

Lat Lon

Output option

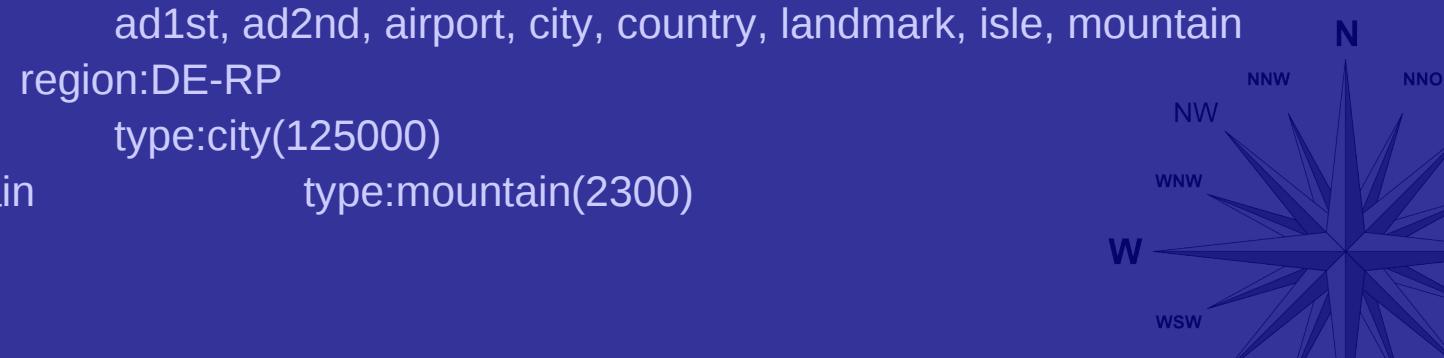

Additionally parameters:  
 type, size[m], region

- Relation of the coordinate

- To the whole article e.g. Porta Nigra
- To one point of the article text e.g. Sinking of the Titanic (+Parameter name)

- Parameters

- Types ad1st, ad2nd, airport, city, country, landmark, isle, mountain
- Region (ISO) region:DE-RP
- population type:city(125000)
- Height of a mountain type:mountain(2300)

# Result:

The screenshot shows the German Wikipedia page for the island of Pag. At the top, there's a navigation bar with links for 'Artikel' (Article), 'Diskussion' (Discussion), 'Seite bearbeiten' (Edit page), 'Versionen/Autoren' (Versions/Authors), and 'Anmelden' (Log in). Below the title 'Pag' is a red arrow pointing upwards towards the 'Seite bearbeiten' link. A sidebar on the left contains a search bar and buttons for 'Artikel' and 'Volltext'. The main content area starts with a red icon of a person running and the text: 'Dieser Artikel behandelt die kroatische Insel Pag. Für weitere Bedeutungen siehe Pag (Begriffsklärung.)'. To the right is a thumbnail image labeled 'Insel Pag' showing a coastal scene.

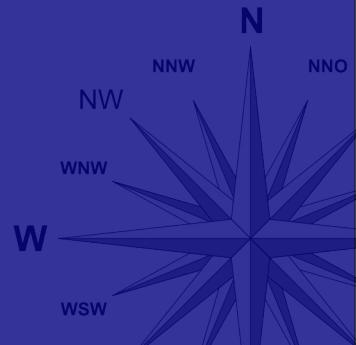

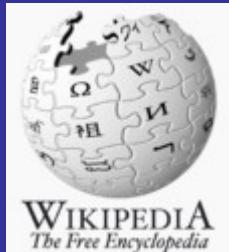

## „Geohack“

The screenshot shows the 'Map sources/GeoHack' page. At the top, there's a navigation bar with links for 'Vorlage' (Template), 'Diskussion' (Discussion), 'Seite bearbeiten' (Edit page), 'Versionen/Autoren' (Versions/Authors), and a language switcher. Below the title 'Map sources/GeoHack' is a red arrow pointing downwards towards the bottom of the page. On the left, there's a small image of Earth and text about the service being written by Magnus and based on an extension by Egil. The main content area includes a table with geographical coordinates and parameters like UTM, Zoom, and Region. It also features a sidebar with an 'Inhaltsverzeichnis' (Table of Contents) and a section for 'Globale Anwendungen' (Global Applications). Red arrows point from the 'Globale Anwendungen' section down to a dark grey banner at the bottom containing the text 'different map services (Google Maps, OSM, ....)'. A small image of the Wikipedia globe logo is visible in the bottom left corner.

## Eiffelturm

Der **Eiffelturm** (frz.: *Tour Eiffel* [tūr eifɛl]) ist das wohl bekannteste Wahrzeichen von Paris und steht weltweit als Symbol für Frankreich. Der Stahlfachwerkturm ist nach seinem Erbauer Alexandre Gustave Eiffel benannt. Er ist eine der größten Touristenattraktionen mit mehr als 6 Millionen Besuchern jährlich. Im Jahr 2002 wurde der insgesamt 200-millionste Besucher empfangen.

## Aoraki

(Weitergeleitet von Mount Cook)

Dieser Artikel behandelt den Berg Mount Cook (Eliaskette)

Der **Aoraki** oder **Mount Cook** ist der höchste Berg Neuseelands. Er befindet sich in den Neuseeländischen Alpen im Mackenzie-Distrikt der Region Canterbury.

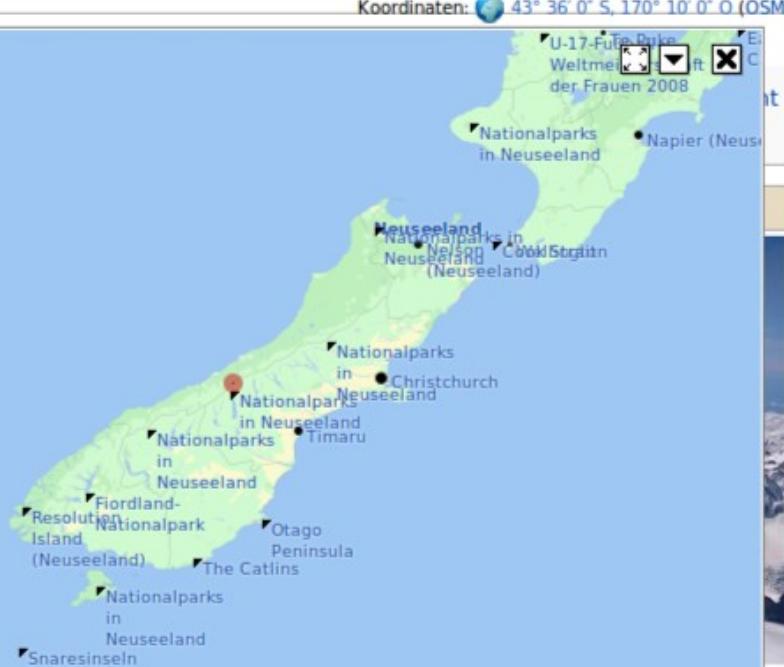

Mount Cook ist das Zentrum des Aoraki-Mount-Cook-Nationalparks. Der Park wurde 1953 eingerichtet und 707 km² mit 95 Prozent seiner Fläche als Nationalpark ausgewiesen. 70 Prozent des Parks sind vergletschert. Der Gipfel des Berges ist durch den Tasman-Gletscher (27 km) an den Haast-Pass angebunden.

Blick auf Mt. Cook aus Süd-Ost

Hochsprache lautet der Name des Berges Aorangi (zu deutsch: „Durchbohrer“)

Koordinaten: 43° 36' 0" S, 170° 10' 0" O (OSM)

## Brandenburger Tor

Koordinaten: 52° 30' 59" N, 13° 22' 40" O [OSM]

Data CC-BY-SA by OpenStreetMap, CC-BY-SA by Wikipedia

Dieser Artikel beschäftigt sich mit dem Wahrzeichen der Stadt Berlin; zu anderen Bauwerken mit diesem Namen siehe [Brandenburger Tor \(Begriffsklärung\)](#).

Das **Brandenburger Tor** in Berlin steht am Pariser Platz in der Dorotheenstadt im Ortsteil Mitte (Bezirk Mitte). Es wurde in den Jahren von 1788 bis 1791 auf Anweisung des preußischen Königs Friedrich Wilhelm II. von Carl Gotthard Langhans errichtet und ist das wichtigste Wahrzeichen der Stadt. Zugleich ist das Tor ein nationales Symbol, mit dem viele wichtige Ereignisse der Geschichte Berlins, Deutschlands, Europas und der Welt des 20. Jahrhunderts

WIKIMEDIA  
COMMONS

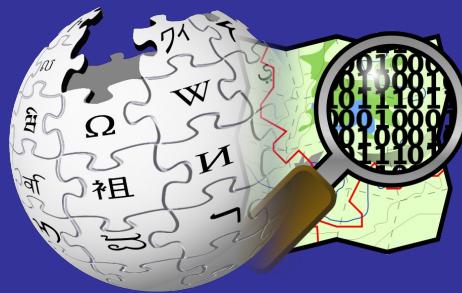

# Cooperation with OpenStreetMap

- Wikipedia wants to have maps inside articles
- This maps should be optimized for wikipedia content and contain special informations
- We want to geocode more than point objects
- So Wikimedia Deutschland e.V sponsor last year a server in toolserver-cluster to experiment with OSM-data.

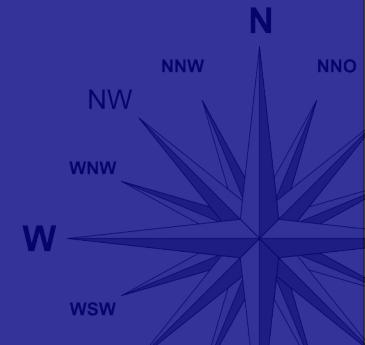

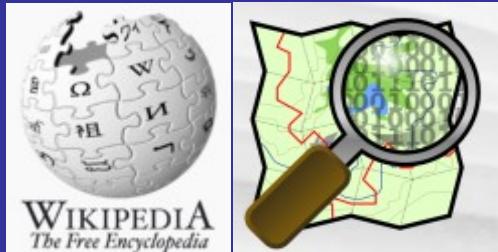

# Cooperation with OpenStreetMap

- We setup a rendering stack on this server:
- (osm2pgsql → Postgres (with PostGIS and hstore))
- → Mapnik → OpenLayers)

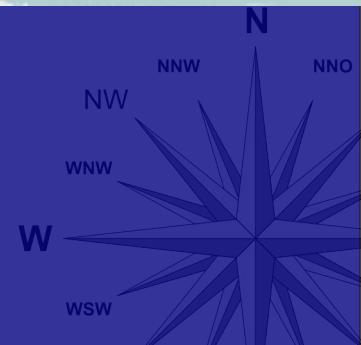

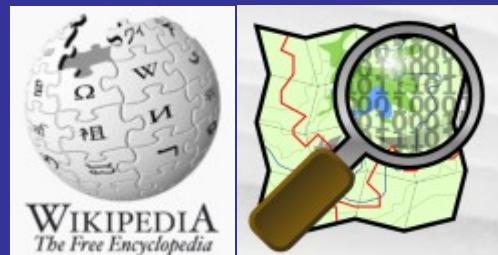

So we have live-data and can rendering everthing:

- <http://toolserver.org/~osm/locale/>
- <http://toolserver.org/~osm/styles/>

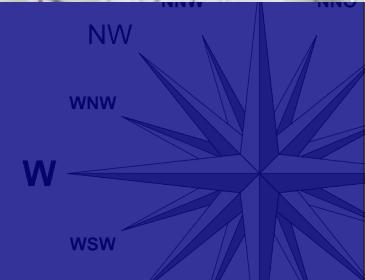

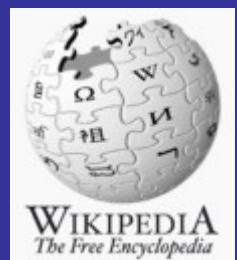

# Cooperation with OpenStreetMap

Multilingual  
maps

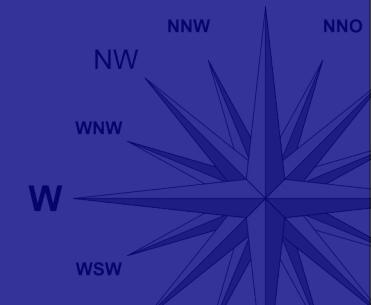

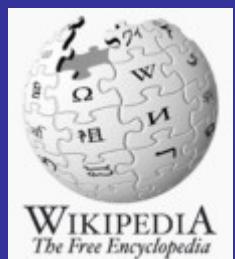

# Cooperation with OpenStreetMap

Different  
styles:

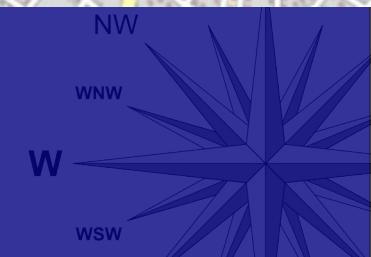

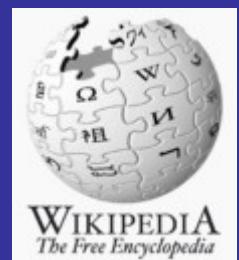

# Cooperation with OpenStreetMap

Different  
styles:

# Cooperation with OpenStreetMap

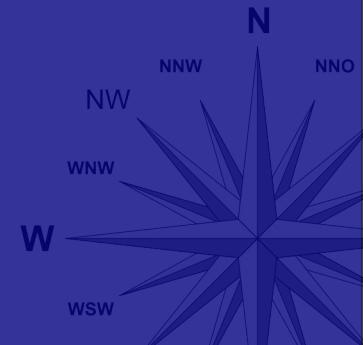

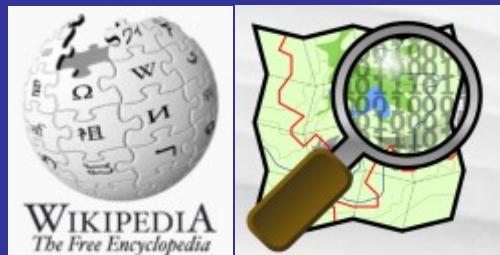

Different  
styles:

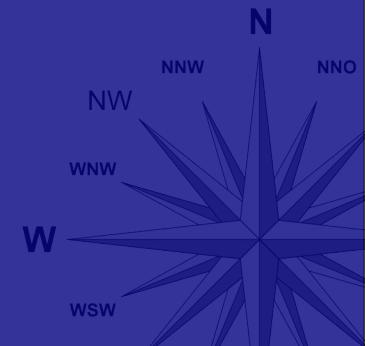

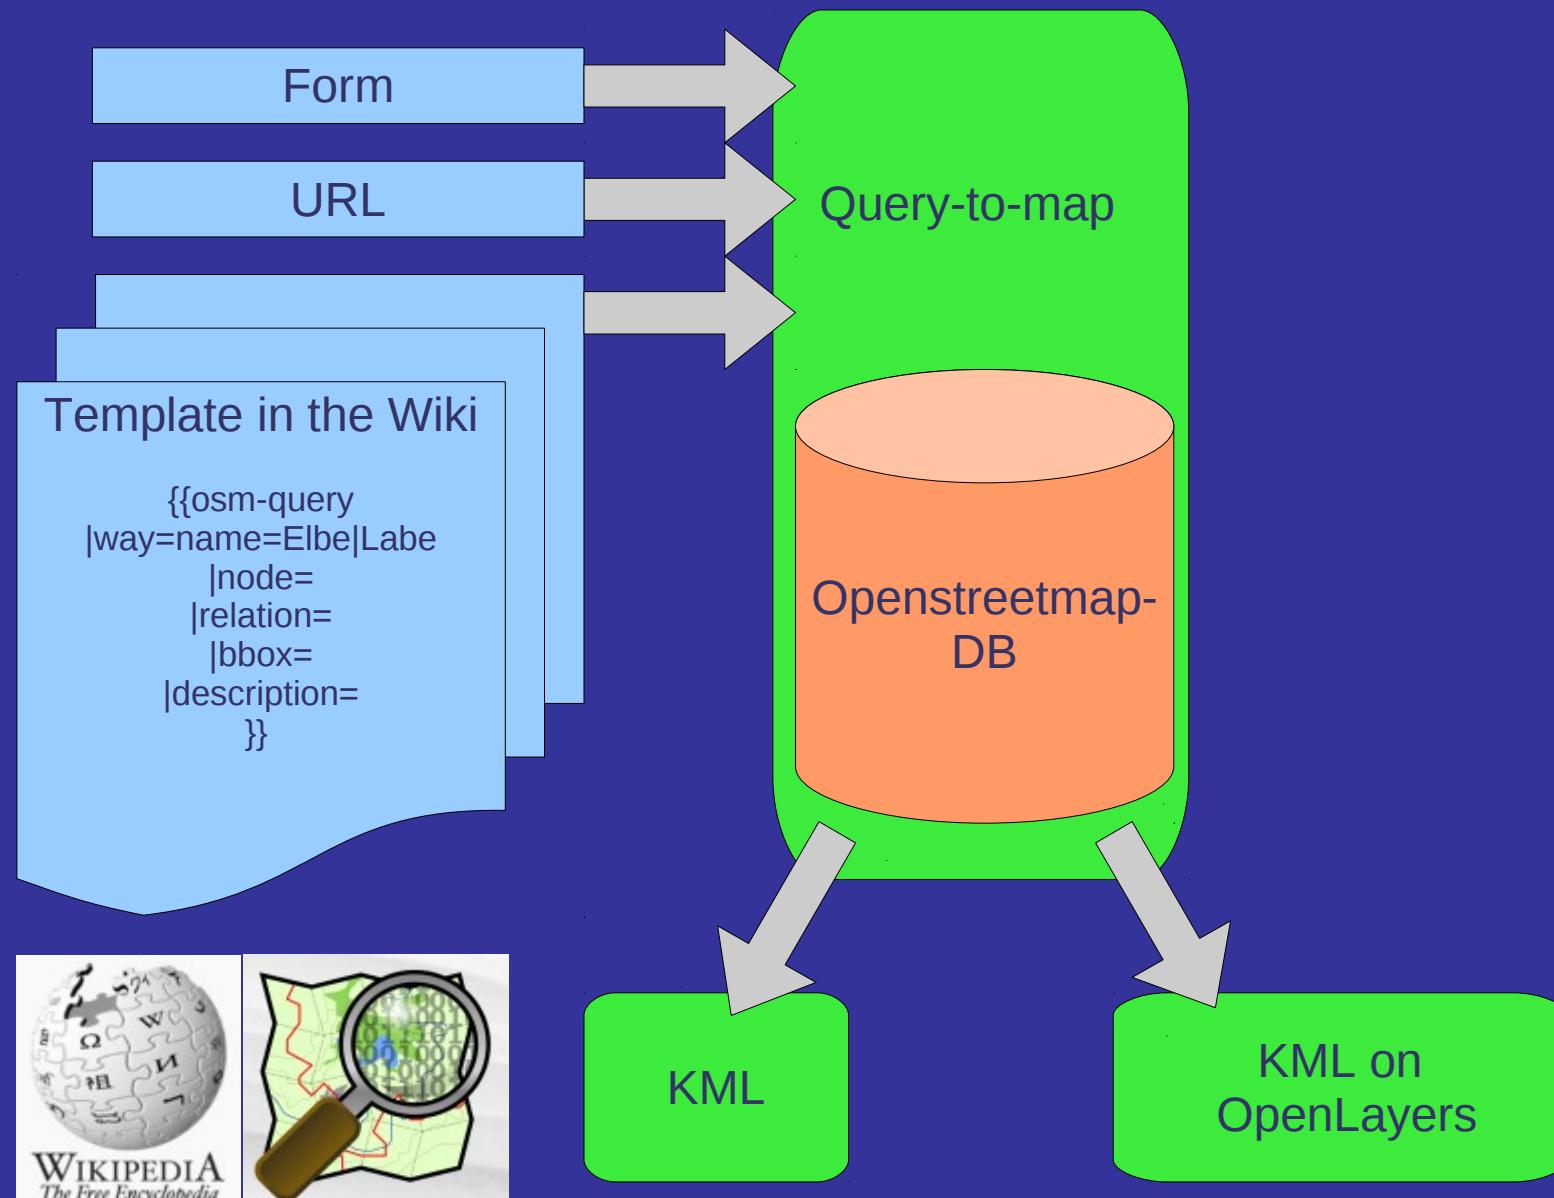

# Query-to-map Project

Starting Point:

- We want to geocode more than point objects, but can't save this data inside wikitext.
- Writing little requests inside wikitext could be a solution.

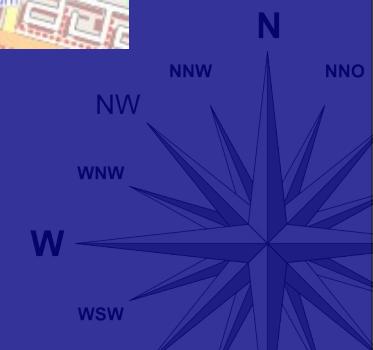

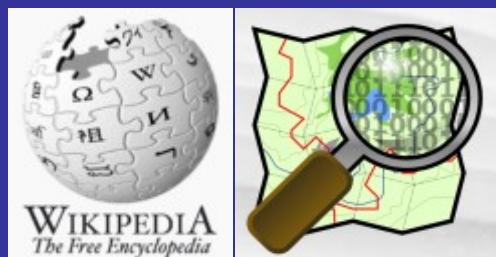

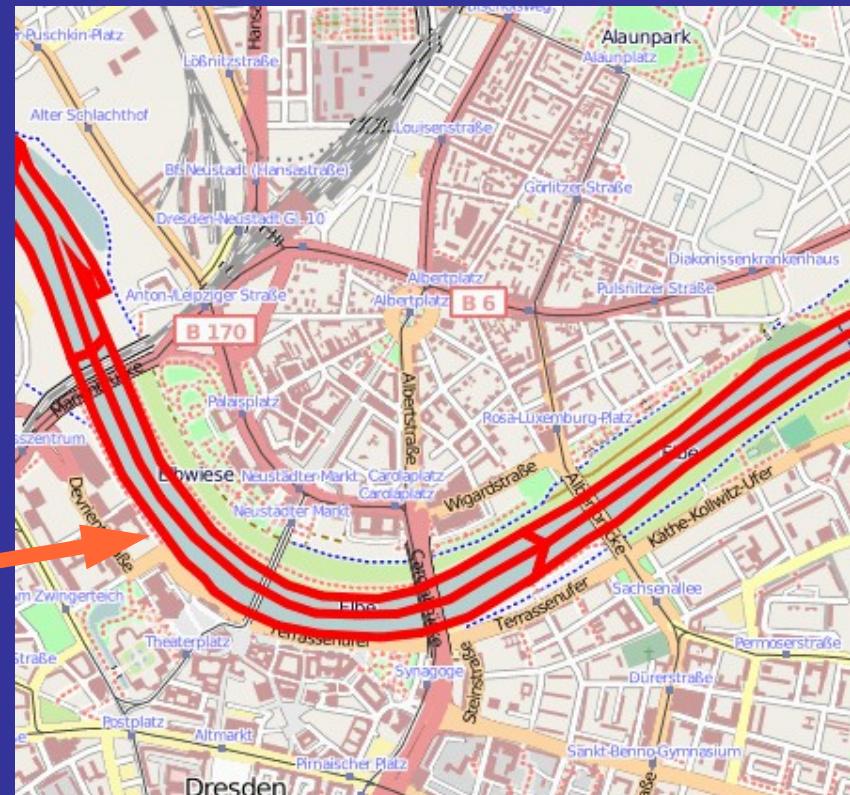

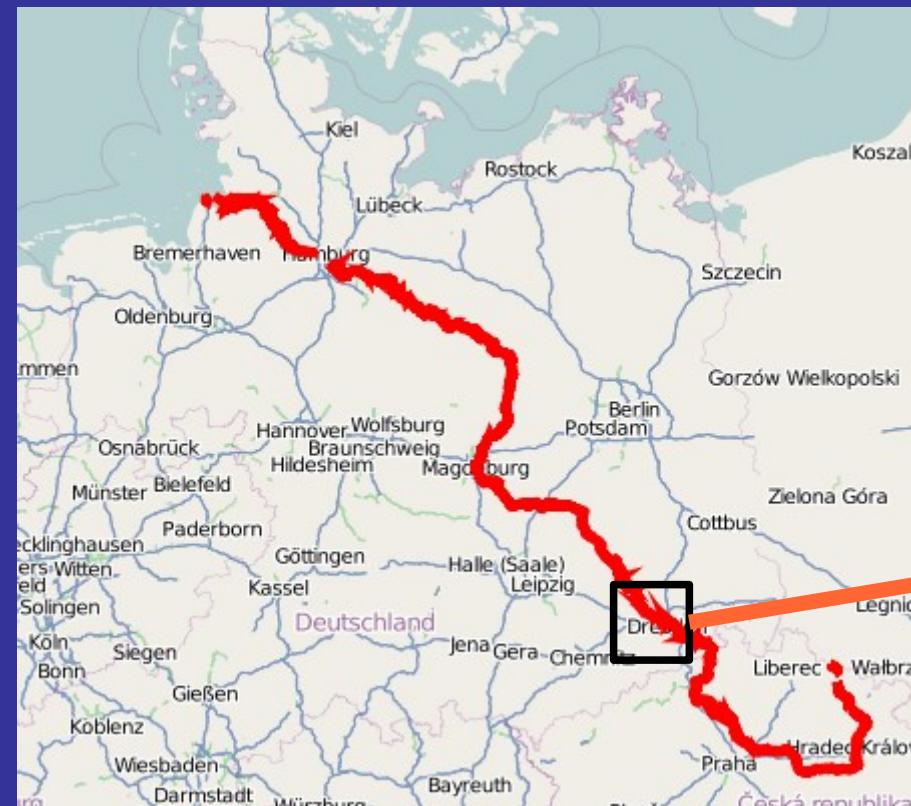

# Query-to-map II

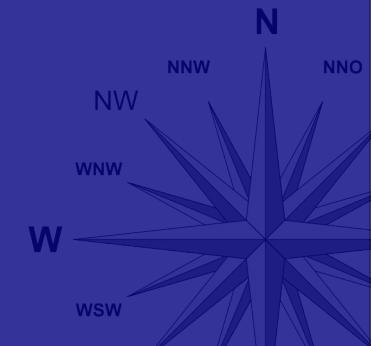

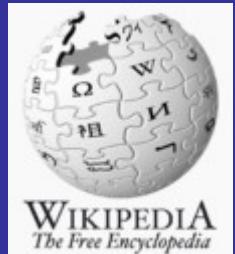

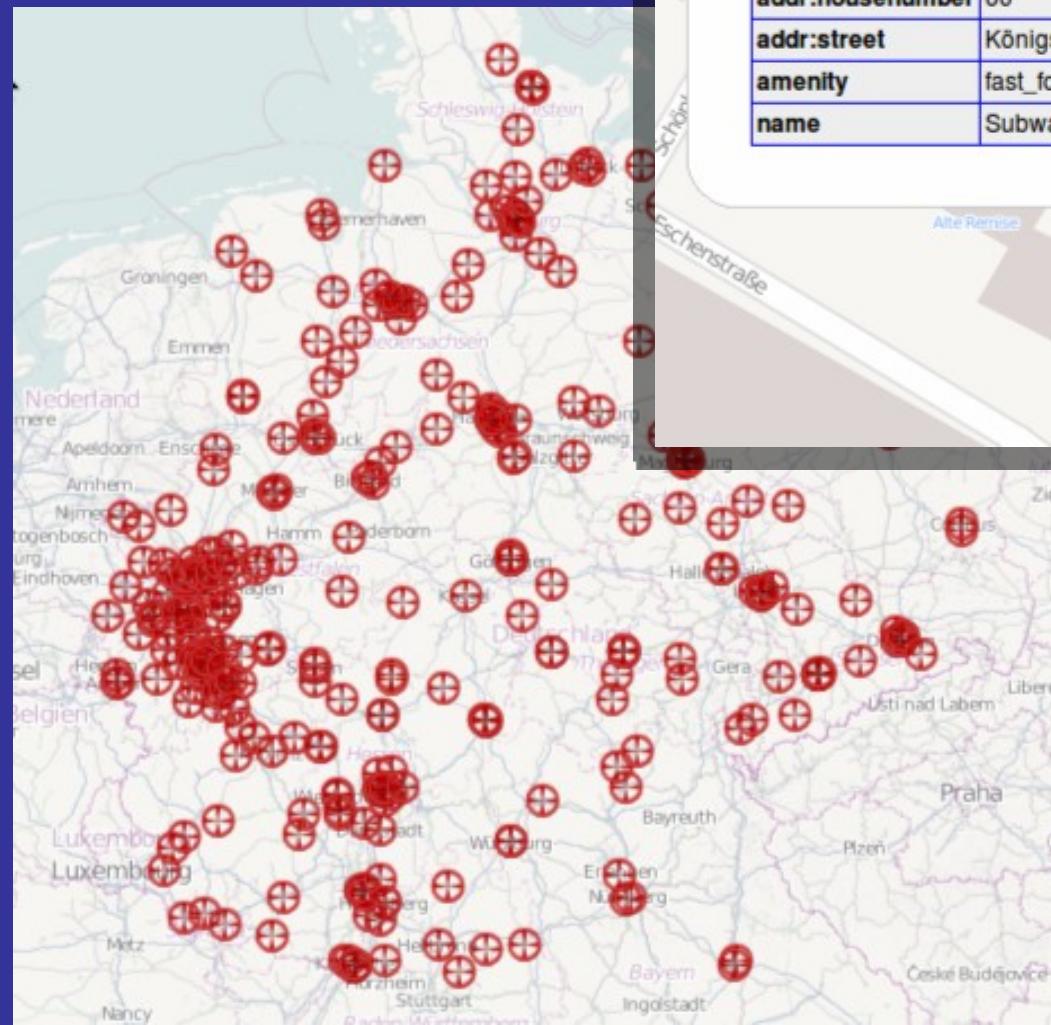

# Query-to-map

Beispiel: name=Elbe&key=\*&types=lines

# Query-to-map

Beispiel: name=Subway&key=\*&types=points

# Cooperation with OpenStreetMap

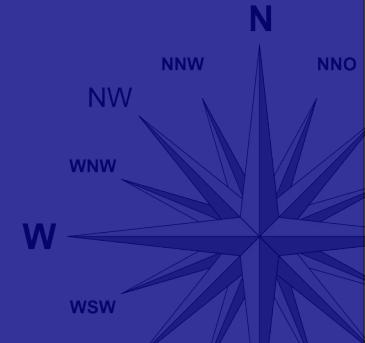

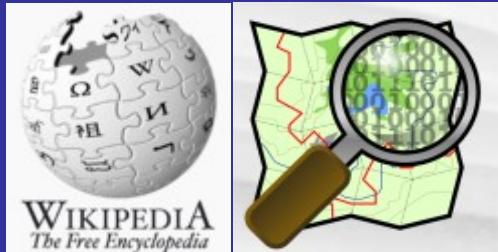

- Summary
- Both project can win:

Wikipedia brings publicity, longer experience, special aspects (history, different languages, knowlegde)

- Wikipedia get the data and maps and can use the whole software stack

- Goal:

- Bring the OSM-maps to the live system so that users get a better user experience
