TRAPS-SET FOR ANGLERS.

Bincular and thespected Method of Entereing the Game Laws in Trit Hammetter.

A young New York fisherman who went into northern New Hampshire to try his luck early last summer ran across a new way of enforcing game laws. The New Hampshire statutes make it an offense to have in one's possession a trout under six inches in length, but the New Yorker didn't know

this, save the Sun. He was returning by train from a good day's sport, when the conductor, after taking up his ticket, strolled back and started a conversation. He asked the fisherman what luck he'd bad, and finally

asked to see the catch. The conductor tooked long and care-

fully at the fish. Pinally he said: "Young man, I'm a game warden of this state, an' some o' them fish are under size. I'll have to measure them." And measure them he did, finding that Ave were under length. It cost the youngster \$25 and costs to settle the bill with the state, and a part of that sum went

to the same warden conductor The fisherman didn't know the trick of the native, who, when he hauls out a trout that's under length, cuts off the tall and defies the warden to tell how long it was when caught.

Condition of the Horses to Count More Than Speed in New Contest.

NOVEL MILITARY RIDE.

Sir Evelyn Wood has invented a military ride under new conditions, which are to be tested over Salisbury plain,

reports Country Lafe. The conditions are 25 miles of distance to be covered, the riders steering by compass, and horses to be brought in in such good condition as to show no spor marks and be able to eat a feed of corn within half an hour of coming

to the winning post. Among the most important of the minor conditions attached to this ride is that which provides that the horse ridden shall have been the property of his rider for at least a fortnight, or if he be a government horse shall have sheen ridden regularly by the man who mounts him in the competition for a previous fortnight.

vantage from local knowledge, the ride is to be over a course that will be indicated to the riders by the markers posted at different places along its devious line, and each-marker will indicate to the rider only so much of the course as will suffice to take him to the next of these living signal posts.

THE POWER OF RADIUM.

As Ossee Would Drive a 50-Horse-Power Motor Car Around . the World.

The consular reports published by the department of commerce quote from the Anglo-Indian Review, "and ineleteresting and illuminating account" of - the possible future applications of fradium. The report says:

"The area where success is practically assured is at present not very large. but in the medical held, it is already fairly extensive. In the working of Xrays and in the marvelous results achieved in the treatment of cancer and blindness we have every hope for great and universally, benefiting results. In its industrial application we are somewhat restricted by the extremely limfied supply of radiom available, but it is stated that a small fraction of an ounce, properly employed, would probably provide a good light sufficient for several rooms and would not require rechewas during the present century. It · has been calculated that the energy stored un'in one gram of radium is sufficent to rate 500 stons weight a mile high. An orace would, therefore, suffice to drive a 50 horse-power motor car at the rate of 30 miles an hoar around the world "

COSTLIEST OF ALL KNIVES.

Piece of tuttery Made in Sheffield. England, Said to Be 34 orth # 1,500.

The most valuable knife in the world is to be seen in the collection of a famous firm of cutters in Sheffield, reports London Answers: It is large erough to fit the pocket of none but a giant and contains 75 blades, which can close up like those of an ordinary Anife Each of the larger blades is elaborately engraved and among the subjects of these strange pictures are views of Sheffield college, the city of York, Windsor castle, Arundel castle and a score of other famous scenes. The baft- are of mother-of pearl, carved with great skill. On one side the artist has depoted a stag heat and on the other a boar hant. When, asked as to the value of the knife, the firm report Well, we alculated it up to \$320 but that was before it was finished and then we reased to estaman, what it had gost "

RESTS ON DED OF NAILS.

Penitent l'abir Seeka to Sonthe His Conscience and Make a Living by tille of forture.

A bed of nails may not be as suggestive of comfortable repose as is presented when thoughts flutter about the poetic realin where rose-petal couches and sweet-clover pillows prevail; or when they hover around the high feather beds and eiderdown comforts beafen into a fluffy softness and freshness by the thrifty German housswife; nor yet, even, when they come down to the practical, sanitary, spring mattress and its hair-top of the utilitarian American home. But nevertheless, says the San Francisco Chronicle, this bed of nails is a balm to the ruffled conscience of the "Penitent Fakeer," of India, and a glory to his spiritual pride, for he poses on his uninviting couch in full view of his fellow men that they may be edi-

fied by his heroic mortification and self-

The particular fakir represented was seen on a public wayside in Dehra Doon by Rev. W. J. P. Morrison, a missionary recently visiting here riom India. A photograph was secured by the devotee in his penitential attitude. By special yow he occupies day and night his literally penetrating couch; whether he becomes accustomed to the prod of nalls, so that his nerves carry no message from them to his brain, or his cutlete hardens to a degree of numbed endurance, he alone can answer, which he probably does not desire to do, inasmuch as sitting on nails when the outside world is convinced that the effort is agonizing is a fine business proposition. Pilgrimages, so common throughout the orient, are made from different places, and the passers pay tribute to Mela, the great.

No matter what reposeful recuperation the man who has taken unto himself a bed of nails by night and a chair of nails by day may take when out of sight, he becomes, at least to occidental eyes, a subject of as much surprised interest as he is of veneration to his country folk. No matter what unctions and ointments he may possibly use to soothe his bruised flesh when the pilgrim and the edified son or daughter of India has placed an offering within reach and gone out of view, there must be, as far as ordinary perception goes,

mails press irritationly toward the bone. for the weight of the penitent will bear heavily at some points. The westerner, when bringing the situation vividly before the mind, has to concede that there are less harassing ways in this world of making one's living. But, whatever the deceptions, the legerdemain, if any, is practiced in reclining on piercing nails whether or not the "nail 'nenitent" is sincerely seeking to atone for the errors of his way, and to fortify his spiritual nature, there remains the fact that enough people of the east believe in him to make it all worth while and still numbers of them are strengthened and encouraged in their religious faith by their trust in the sincerity of the fakir.

QUEEN IN DOUBLE SENSE.

Louise of Deumark, the Mother of Crowned Heads, Maintained Her Position in the Home.

The late Queen Louise of Denmark was a shy woman, who preferred a full inner life to a shimmy external one. She possessed in an extraordinary degree the power of "suggesting" to others without appearing to wish or will. Though masterful, she never appeared to seek for mastery in family or other matters. and she retained to the last day of her bit her maternal haid on the hearts of her children and kin. Those who entered the family by marriage became amenable to her moral sussion. Sheanderstood that a way to hold her own with them was to avoid all intrusion in their homes and affairs.

When the imperial, royal and exiled kindred gathered round the late queen of Denmark, at Fredensborg, they accented absolutely her sway as mother and mistress of the house. The law of primageniture ruled, thus the princess of Wajes took precedence in Denmark, except on state occasions, over her younger sister, the empress of Russia She sat beside her mother in driving out in the queen's little dogcart, and the empress sat at their back holding on by the side-rails, with her feet on the board and her knees close to her chin. And King Christian was, incontestably, "his wife's husband." -- Emily Crawford in Everybody's Magazine

Discovery of Radium.

. The first suggestion toward the discovery of radium came when a western college professor demonstrated the fact that many common substances have the nower of storing up sunlight and emitting it again at night. Common sugar is the most luminous of these substances. Not only does the sugar end light at night, but the discoverer was able to talle photographs by means. of it in an otherwise perfectly dark room. Among the substances tried with the sugar was aranium, an ore which was Becquerel discovered, diseas not reed adduct to enable it to give off religious, but which emits them spontaneously all the time, night and day. For excess the lead of Be sphere! More and M. Curie made an extra styre sevamoration et socializable who having radio-active it has a tash of endless separation, of a scienal dividings, of onstant assayings, until at last northing was left but the sair that is now known as radium saif -Everybody'a

WILD TURKEYS.

Mayer Many Enemies Who Prey on Them and Practice Great Canning in Eluding Danger.

The turkey is a curious bird in one particular, that it can never be thoroughly domesticated. No matter how long in captivity it is shy and fearful and prefers to roost on the branches of a tree instead of in the best barn

in its wild state the turkey is even more wary and it may be said with truth that it needs all its wariness as a precaution against its numerous ene-

mies, saya Golden Days. Among the chief foes of the wild turiley is the wildent. As 300n as a brood of young turkeys are big enough to be turned adrift by their mather to carn their own living the wildcalle mouth begins to water for them, and he brings his cunning in play to cap-

He needs his cunning, too, for the young turkeys, although they cannot fly yet, can run faster than a deer, and their faculty in hiding themselves on the faintest suspicion of dangerand they are always on the sharp lookout for danger-equals the wellknown disappearing ability of the young grouse and quail.

A wildcat stands but little chance of catching a young wild tarkey by crouching on a limb and pouncing down upon it, as the suspicious fowl surveys its surroundings on every nide, and above and below, with every step it takes and every mouthful it eats. It has to be a more than wary beast that takes it by surprise.

But the wildcar has tactics. Discovering a brood of young turkeys, he knows that there is no use tryings to keep his proximity a secret, so he takes pains to let the turkeys see him stealing along in their rear. That hurries the flock onward, but the birds presently stop and look back to see if the enemy is still in pursuit.

The wildcat keeps himself in sight. but aniways comes into view of the turkeys as sneaking out of a hiding place. He does this three or four times, and then disappears in the for-

lie has satisfied himself as to the exa t direction the flock will keep. and left-on their suspirious nature the

Bone sing that the fee is a repute 10 the rear, the turkeys are on the alert in that direction particularly.

The wildcat knows his business, and, making a circuit in the woods, he comes out far ahead of the turkeys, right in the path they are feeding along, and hides himself behind a log. a rock or aný obstacle near which the turkeys will presently pass, still guarding cautiously their rear.

The flock feed on their way. They reach the spot where their unsuspected foe is lying in wait. Suddenly there is a spring, a scuffle, a faint gobble and a scattering of the brood, and away bounds the wildcar with one of the number for his dinner.

Imring the callow period of the turkey hen's brood the mother turkey canstantly watches for and instantly warns her chicks against another ruthless foe. This is the chicken bawk.

It is wonderful how quickly the hen turkey detects the coming of the hawk. She discovers it nearly as soon as the hawk, in his sparing place annous the clouds, has got his eye on her and her brook. While the hawk is dropping down upon them the old turkey utters a sharp and posultar cry, and instantly every chick either scampers to a hiding-place or falis over on the ground and simulates death as perfectly as the passim ever

The proving chicken hawk will dine on nothing but what he captures alive and kills. How the young turkeys know that is more than anyone can say, but it is evident that they do know it. If they are true to their instinct, and remain as they fall until the mother gives them the signal that the danger is over, the bawk, seeing nothing but dead game on the ground, as he supposes, will sail away again.

The mother will not give the signal to her broad that all is well until the hawk is out of sight, and then, at her call, up will jump every 'possum-playing chick.

It sometimes happens that a chick is impatient, and attempts to run things itself, coming to life before it gets the word from its mother. The chick that does so is lost, for the hovering hawk will have its talons on it instantly, although the imprudent chick has quickly obeyed a second order from its mother in the burbesq and pretended to be dead again.

FORBIDDEN MARRIAGES.

Amended Law in Michigan Speriftes Distinctly What Relations Are Probletted.

Under the amended marriage law of Michigan the marriage of "cousins of the first degree" is prohibited, and it will become the duty of the county clock to ascertain whether such relationship exists between the candidates for marriage, reports the Detroit Trib-

The law which is now smended to include first cousins specifies distinctly what other relation, in law or consanguinity, are prohibited from wedding with each other, and to make positive that no illegal marriage occur through his fault, the careful county clerk, before issuing a license, should inquire:

"Is this woman your mother, grandmother, stepmother, grandfather's wife, son's wife, grandson's wife, wife's mother, wife's grandmother, wife's daughter, wife's granddaughter, or your sister, brother's daughter, sister's daughter, father's sister, or mother's sister, or cousin of the first degree?" Reversing the sexes the same questions apply to the woman. It is recalled that Rev. Father Ternes, of Detroit, one day had a room full of lawyers busy sear hing the authorities to discover whether a man could marry "his widow's niece". The investigation had proceeded some time when it auddenly struck one of the "learned counsel' that a wife could not be a widow until her husband's death, and the laugh was on the lawyers

PROPER AUTOMOBILE TEST.

Trip Made by I'me Men from San Francisco to New York Wlike out Arrident.

A new transcontinental record for automobiles has been established by two men who drove a comparatively small machine of American make from San Francisco to New York, says the Brooklyn Eagle. They left the former city on June 20. They arrayed here muddy, tired, but not materially the worse for their uncommon experience. They averaged about 80 miles a day. They crossed mountains. They traversed deserts. They trundied over all of made in all seets and condu-

thous of weather. And through it all their machine met with no serious mishap, a fact which will help reduce the automabile joke of the funny papers to its proper level of inconspiculty. Once before the continent was crossed by an automobilist, out he did not make asgood time as did these two people. This most recent test of endurance is worth a great deal more in the development of the motor car than all the homicidal road races that have ever been arranged In Europe or elsewhere, "Lighty miles a day is not a high average and it could doubtless be bettered by larger cars and by more reckless drivers bill it is fast enough to show what the automobile is capable of in the way of endurance. And endurance, or the capacity 's wear well, not speed, should be the first essertial in the construction of a motor

INDIAN NATION IS NO MORE.

Last Chief of the Once Great Cher-Lees Has Been Chosen to an Empty Honor.

The last Cherokee election has been hell, the last chief of the Cherokee Lation has been hosen, now a nation no tonger but in nanier-swallowed up by the print Amelican meter, its name and identity lost forever, reports the Kahsas City Journal. Medday, August 3, Hed, will be a memorable day in Cherokee Listory. The sun rose clear and bene with respletident beauty over the Cheroker land, from the plains of Kansas on the north to in thill and woods

of Arliansus on the south. All was Stir and bustle among the Cherolices that day, for it was their last tribal election. The refwere two candidates for chief, one representing the socalled progressive party and the other the nonprogressive element, mostly the fullblood Indians, to whom it was a solemn occasion. All day long from morn till sunset the bartle of the ballots went on each side striving for mastery; and when the sun went down that night the star of Cherokee tribal goverument had set forever-the progressive party had won, and the last hopes of the fullbloods had vanished. Henceforth they would be subjected to the white rule, and as a nation and separate people realize that they no longer ex-

Longest Baseball Throw.

The langest distance a man has ever thrown a baseball is a little more than 381 feet. The record for women was held, antil recently by a Vassar charapion, who threw a half 181 feet. There has now arisen in Tacoma, Wash., a your, 2 woman who heat that record by 24 feet Anatomists have frequently explained that the formation of a womat 4 shoulder-blades privally her from throwing straight and tag but the Tacoma record, 2 Offeet, in just about the distance from the deep outfield to the home place. Evolution seems to be at wors producing shoulder-blades that will enable the Anim an girl to share the delights of the national came.

THE HIGHBALL IN WAR.

Potency of the American Thirst Semedy Illustrated in a Panama Revolution.

Our esteemed neighbor, Panams, places the world under emphatic obligations by producing something novel in the way of revolutions. The governmental convulsion the other day was due, not to a general uprising or disaffection in the army, but to the untamed thirst of Gen Varquez Cobos, relates the Philadelphia North American.

The gallant man was led by some lighthearted person to tamper with the American highball. Possessing a temperament attuned to the innocuous beverages of France and Spain, he made a fatal erfor in attempting to harmonize with It the acductive drink offered by "el Americano," and the resulting discord was frightful,

After the first one the general was more impressed with the dignity and power of his position than he had ever been before in his career. After the secand he decided that he was the savior of his country, or ought to be. The third brought to him visions of an oppressed Panama, and the fourth and fifth fired his martial heart to deeds of patriotic

Straightway he assembled the army, overthrew the government, chased the governor to the woods - and fell asleep. When he awoke he was under arrest, and is still in seclusion trying to find out what happened.

MATHEMATICS AND LAUNCHING

Vant Amount of Calculation Secreasry in Ploating the Great 1 rancis.

The launch of a vessel is primarily a matter of mathematics. In a ship of immense size it calls for a vast amount of calculation before the first isted is taken in the actual work, says Franklin Matthews, in Outlog. In the first place the specific gravity of the vessel must be figured out so as to allow for the various strains to which the hull is subjected on its slanting journey into the water, with its sudden plunge as the how drops from the-ways. An enormous amount of data must be collected to fix this center of gravity. The weight of all the material that has gone into the versel up to the time of the launching.

we ght of chains and ansocia and other material placed on board preparatory to the launch, must all be considered. When the center of gravity is fixed the successful shipbuilder konws just how to build his launch ing ways, and just where to strengthen them. He knows then, by a little calculation, how long-each part of the vessel will be subjected to certain strains and how best to prepare for them. He can figure almost to the secand how long the ship will be in sliding into the water.

ARE SET AGAINST BEER.

Illinois Farmers Make Short Work of a Cold Storage Plant and lie Contents.

"If there is any place in the middle west where the people are out and out against the saloon business it is down in the central lilinois corn belt," said a drummer the other day who knows every merchant in the state south of Bloomington. "The farmers and wise men of the little towns don't mind taking a nip of whisky whenever they get the chance, but they're set against anybody handing it out over a bar.

"I was down at Murdock, a little burgin Douglas county, only a few miles from Tuscola, a couple of weeks ago, and I saw an exhibition of the rural dislike for beer that is to be sold: It seems that some man had erreted a storage plant there and had shapped in about 19 cases of beer It wasn't being sold there, I believe, but was being shipped to other little towns -- Newman, Camargo and Hume. Well, when the Murdock people learned there was a booze joint in their town they armed themselves with axes, crowbars and what not and attacked the cold-storage plant. They ripped off the roof, tore down the doors and smashed things in general, and when they were through there was a mud puddle of beer about the place. Some of the fellows gazed sadly at the wasted beverage, but not one of them. had dared to suggest distributing the contents of the cases. No, they're set against beer down there, but they alllike a nip occasionally."

FISHMONGERING RAILROAD. New Hampenire Line That Lacd to

Supply Customers at All the Mattons.

While looking through a pile of old papers the Exeter correspondent came across the following article in a New York paper of the cate of February 6, 1859, under the caption of "The Smelt Railroad? says the Manchester Union.

"It is well known that the Portsmouth ratiroad has to turn everything to account to pay running expenses, and, many are the jokes they perpetrate upon the emductors in reference to their shifts to get a living it is said that one of them last year was accustomed to bring fish from Portsmouth!

on's them out on the way to Com-

"One day he brought glong smelts. dealing out to on tomers at every station, till he got to Suncook, where he blew his horn and an old woman came out and wanted six, just a pattern-all I've got left you're in the nick of time." said he, and he began to count them. and found only five. "How's this" I should have six, and he began to county his fingers, and reckon over how he had disposed of the four dozen be had starre. ed with After awhile, I have it, hold on a little while and I'll be back! said he and he can the train back seven miles to a place where he had let a woman have one more than she had paid for, got it, came to k to suncook and let the can we man have the six she wanted, and then the 'smelt' train went to Cope and."
