there was no viewing it with your Eyes, without raifing a Sadnefs in your Heart.

VII. An Extract of a Memoir, concerning the Discovery of a Passage by Land to California; with a Map and Description of that Country. Presented to the Royal Council of Guadalaxara in Mexico, by Francis Maria Picolo. Taken from the Letters of the Missionary Jesuits, printed at Paris.

Guadalaxara, February 10, 1702.

My Lords,

I N Obedience to the Orders you fome Days ago honoured me with, I fhall give you an Exact and Faithful Account of the Difcoveries and Settlements, that Father *de Salvatierra* and my felf have made in *California*, for these five Years past, that we have been in this large Country.

We imbarked in October 1697, and paffed the Sea that feparates California from New Mexico. As foon as we fet Foot on Land, the People being ignorant of our Defign, (as not understanding our Language, or we theirs) imagining that we came to take from them their Pearl Fishery, as had been attempted feveral times before by others, came in great Multitudes against us, who had but an inconfiderable Number of Spaniards to detend us. The Violence with which they attack'd us, and multitude of Darts and Stones they threw at us, our Soldiers suffained fovigorously, that they beat 'em back with Success, and foon put them to flight.

Thofe

These Inaians, after this Defeat, became more tractable; and feeing they could not gain any thing on us by force, deputed fome amongst 'em to come and Treat with us. We receiv'd them very friendly, and foon learned of them enough of their Language, to let 'em know the reason of our coming into their Country. These Deputies undeceived the rest; fo that being fatisfied of our good Intentions, they came to us in great Numbers, and shew'd a great deal of Joy to see that we were willing to instruct them in our Religion. This happy Disposition incouraged us to study throughly the Monqui Language; in which, and in instructing the People, we spent two Years.

After this we thought of discovering other Nations; which that we might do more fuccessfully, the Father de Salvatierra, and my felf, refolved to separate, and take two different ways: He went to the North, and I to the South and West. By this means Father de Salvatierra, by little and little, discover'd all those Habitations, that, at present, compose the Missions of Loretto, Conche, and St. John of Londo; and I, all that Country, at present, call'd the Mission of St. Francis Xavier of Biaundo, which extends it felf to the South Sea.

In proceeding each of us his way, we observed feveral Nations of different Tongues mixt together : Some of them spoke the Monqui, which we understood; and others the Laymon, which we yet knew nothing of. This obliged us to learn the Laymon, which is of greater Extent than the Monqui, and seems to be Universal in this Large Country. We apply'd our felves so close to the Study of this second Language, that we learn'd it in a little time, and began to Preach indifferently in either.

Since our fecond Difcoveries we have divided all this Country into four Miffions. The first is that of Concho, or our Lady of Loretto. The second, that of Biaundo, or St. Francis Xavier. The third, that of Yodivinegge, or our Lady of Grief. And the fourth, which is not yet founded, or so well establish'd as the other three, is that of St. John of Londo.

Every Miffion contains feveral Towns : That of Loretto-Concho, has nine belonging to it; viz. Liggige, two Leagues from Concho; Jetti three Leagues; Tuidda four Leagues : These three lie to the North, and the fix following to the South : Vonu two Leagues diftant : Numpolo four Leagues ; Chuyenqui nine Leagues ; Liggui twelve Leagues; Tripue fourteen Leagues; Loppu fifteen Leagues. There are eleven Towns in the Miffion of St. Francis Xavier of Biaundo, viz. Quimiauma, or the Guardian Angal, at two Leagues diftance; Lichu, or the Mountain of the Knight, at three Leagues; Yenuyomu at five Leagues; Undua at fix Leagues; Enulaylo at ten Leagues; Picolopri at twelve Leagues; Ontra at fifteen Leagues; Onemaito at twenty Leagues: Thefe eight lie to the South, the two following to the North; Nuntei at three Leagues, and Obbe at eight Leagues : Cuivuco, or St. Rofalia, at four Leagues diffance towards the Eaft. The Miffion of our Lady of Grief comprehends only Unubbe, on the North; Niumqui, or St. Joseph; and Todivinegge, or our Lady of Grief, which gives Name to the whole Miffion. Niumqui and Yodiviuegge are two Towns very well Peopled, and near one another. Laftly, the Miffion of St. John of Londo contains five or fix Towns. The principal are Teupnon, or St. Bruno, three Leagues diftant to the East: Anchu, at the fame diftance. to the North: Tamonqui, at four Leagues; and Diutro at fix, both towards the East: Besides Trippue and Loppu, two Towns to the South, lately difcovered.

Having given you an Account of the State of Religion in this New Colony, I fhall proceed to anfwer, as well as I can, those other Articles you did the Honour to ask me; and ihall relate what we observed concernthe Customs and Dispositions of these People, their manner of Living, and the Product of their Country.

California is pretty well placed in our common Maps. The Heats in Summer are very great along the Sea-Coafts; and it feldom Rains: But the Air of the Inland Countries is more temperate, and the Heats not fo exceffive. It is the fame in Winter proportionally. In the Rainy Seafon there are Floods; but when that is over, inftead of Rain, the Dew falls in fuch plenty every Morning, that one would think it had Rained; which renders the Earth very Fruitful. In the Months of April, May and June, there falls with the Dew a fort of Manna, which congeals and hardens upon the Leaves of Reeds, from whence they gather it: It is as fweet as Sugar, tho' not altogether fo White.

The Climate must needs be Healthy, if we may judge of it by our felves and those that were with us. For during the five Years we were in this Kingdom, we continued very well in Health, notwithstanding the great Fatigues we underwent: And of the other Spaniards there died but two; one of which was a Woman, who occasion'd her own Death, by imprudently bathing her felf when she was near Lying-in.

There are in California (as in the most beautiful Countries in the World) Large Plains, Pleafant Vallies, Excellent Pastures, at all time; for great and small Cattle; fine Springs of running Water, Brooks and Rivers, with their Banks cover'd with Willows, Reeds, and Wild Vines. In their Rivers they have plenty of Fish, especially Crayfish, which they keep in a kind of Confervatories, till they have occasion for them: Three of these Confervatories I have seen, that were very large and beautiful. There is also plenty of Xicames, of a better Taste than those of Mexico. So that we may conclude California to be a very fruitful Country. On the the Mountains there are all the Year long *Mefcales*, a Fruit peculiar to this Country; and in moft Seafons, large Piftachio's of feveral forts, and Figs of different Colours. The Trees are very beautiful; and amongft others, that which the *Chinos* (who are the Natives of the Country) call *Palo Santo*, bears a great deal of Fruit; from this they draw Excellent Frankincenfe.

As this Country abounds in Fruit, it does no lefs in Grain : of which there are fourteen forts that the People feed on. They use the Roots of Trees and Plants, and among others, those of the Tyuca, to make their Bread There are Excellent Skirrets; a fort of red Strawøf. berries, of which they eat plentifully; and Citrons and Water-Melons, of an extraordinary fize. The Land is fo good, that most Plants bear Fruit three times a Year: So that with fome labour in cultivating it, and skill in managing the Water, they render the Country extreamly fertile. Nor is there any fort of Fruit or Grain, but what they gather in great abundance; which we experienc'd our felves: For bringing with us from New Spain Corn, Indian Wheat, Peafe, Lentils, &c. we fowed them, and had a very plentiful Increase, tho' we had not any Cattle or proper Inftruments to Till the Ground.

Befides feveral forts of Animals that we knew, which are here in plenty, and are good to eat, as Stags, Hares, Coneys, and the like; we found two forts of Deer, that we knew nothing of: We call them Sheep, becaufe they fomewhat refemble ours in make. The firft fort is as large as a Calf of one or two Years old: Its Head is much like that of a Stag; and its Horn⁻, which are very large, like those of a Ram : Its Tail and Hair are speckled, and shorter than a Stags: But its Hoof is large, round, and cleft as an Oxes. I have eaten of these Beafts; their Flesh is very tender and delicious. The other fort of Sheep, fome of which are White, and others Black, Black, differ less from ours: They are larger, and have a great deal more Wool, which is very good, and eafy to be Spun and Wrought. Befides these Animals, that ferve for Food, there are Lyons, wild Cats, and many others of the like, as in New Spain. We brought to California fome Cows, and ftore of fmall Cattel, as Sheep and Goats; which would have increafed very much, had not the Neceffity we were once in, obliged us to kill the greatest part of them. We likewise brought with us Horses and Colts to sto ftock the Country, and began to breed up Hogs; but as these do a great deal of damage in the Villages, and the Women are afraid of them, we have resolved to extirpate them.

As for Fowls, there are in *California* all that are in *Mexico* and *New Spain*; as Pigeons, Turtle-Doves, Larks, Patridges of an exquisite Tatte, and in great Quantities, Geese, Ducks, and many other sorts both of River and Sea-Fowls.

The Sea affords great Plenty of very good Fifh: They take Pilchers, Anchovies, and Tunnys; which laft they catch with their Hands on the Shoar. We often fee Whales, and all forts of Tortoifes. The Shoars are fill'd with Heaps of Shells, larger than those of Mother of Pearl. The Salt that they have, is not from the Sea, but out of Pits: It is as bright as Chrystal, and fo hard that they are often forced to break it with Hammers. It is a very good Commodity in New Spain, where Salt is fcarce.

California has been known near these two Centuries; and its Coasts are famous for the Pearl Fishery, which has made the Europeans to defirous of establishing a Trade here. It is certain, if the King would erect a Fishery here at his own Charge, he might draw great advantage from it. Nor do I doubt but that there are Mines to be found in several places, if they were fought L 1 for; for; fince the Country is under the fame Degree as the Provinces of *Cinalao* and *Sonora*, where there are very rich ones.

Tho' Heaven has been to bountiful to the Californians, and the Earth brings forth of it felf what it does not produce elsewhere without a great deal of Labour and Pains, yet they make no effeem of the Plenty and Riches of their Country; contenting themfelves with what is only necessary for Life, they take little care for the reft. The In-land parts of the Country are very Populous, efpecially towards the North: And tho' there is fcarce a Town, but what has 20, 30, 40, or 50 Families in it, yet they have no Houfes; but defend themselves from the heat of the Sun in the day time under the Shade of the Trees, and of their Leaves and Branches make a fort of Roof against the Inclemency of the Night. In the Winter they fhut themfelves in Caves in the Earth, and live there together little better than like fo many Beafts.

The Men go naked; at leaft all were fo, that we faw. They wear about their Head, a fine linnen Fillet, or fort of Network; and about their Neck, and fometimes about their Arms, for Ornament, Mother of Pearl in divers Figures, very finely wrought, and prettily intermixt with little round Fruits, fomewhat like the Beads of a Chaplet. They have no other Arms than Bows and Arrows, and a fort of Javelin, which they always carry in their Hand, either to kill their Game, or defend themfelves from their Enemies; for their Towns often make War upon one another.

The Women are fomewhat more modeftly cloathed, wearing from their Wafte down to their Knees a kind of Apron, made of Reeds very neatly wrought and matted together. They cover their Shoulders with with the Skins of Beafts, and wear about their Heads, like the Men, a very curious kind of Net-work; which our Soldiers find fo convenient, that they make use of them to tye up their Hair with. They, as well as the Men, have Necklaces of Mother of Pearl, mixt with the Stones of some forts of Fruit and Sea-schells, hanging down to their Waste; and Bracelets, in like manner of the fame.

The common Imployment of both Men and Women, is Spinning. They make their Thread of long Plants, which ferve them inftead of Hemp and Flax; or elfe of a Cotton-like Substance found in the Shell of fome forts of Fruit. Of the finer fort of Thread. they make the Ornaments abovementioned, and of the coarfer, Fishing-Nets, and Sacks or Bags for feveral Uses. The Men moreover, of certain Plants, whofe Fibres are very clofe and thick fet, and which they are very well skilled in working, imploy themfelves in making Difhes, and other Kitchin Necessaries, of all Fashions and Sizes. The smaller Pieces ferve for drinking Cups; those that are larger, for Plates and Difnes, and fometimes for Umbrello's for the Women; and the largest fort for Baskets to gather Fruit in, and fometimes for Pans and Bafins to drefs their Meat in: But they take care to keep them continually moving, while they are over the Fire, for if the Flame catch them they are foon burnt

The Californians have a great deal of Livelinefs, and are naturally addicted to Rallery; as we found when we began first to instruct them: For if we committed any Errour in their Language, they jested and made Sport at us. But after we were grown better acquainted and more familiar with them, if we committed any Faults, they civilly advised us of them. L l 2 And And if at any time we explained any Mystery, or Point of Morality, not conformable to their Prejudices and Errors, they waited for the Preacher after Sermon, and disputed against him with a great deal of force and Wit: If we could give them good Reafons for it, they listen'd very attentively; and when at last convinced, submitted, and did accordingly. We have not found among them any Form of Government, Religion, or Regular Worship. They adore the Moon, and cut their Hair, (as I remember) in her Decrease, in Honour of their Deity; which they give to their Priests, who imploy it to several Superfitious Uses. Every Family makes Laws as they please, which is plainly the reason that they are so often at War with one another.
