IV. Olavi Rudbeckij Atlanticæ, Seu Manheimij, Pars Tertia. In qua vetustissima majorum nostroram Atlantidum lapidibus, fago, ari, sive cortici Runas suas incidendi ratio, una cum tempore, quo illa primo cæperit, exponitur. Necnon Aurei numeri singulis annis tributi, & Signorum Cælestium, quæ abhinc ad Græcos & Latinos sunt translata, vera origo & sig-nificatio traditur. Et illæ a diliuvio Noachi primæ ætates, atque in illis prima Atlantidum nostrorum forma describuntur : que migrationes 🖝 bella sub Borco, seu Saturno, ejusq; filio Thoro seu Jove gesta sunt, recensentur : & denique Scytharum, Phœnicum & Amazonum bis ducibus in Indo-Scythiam & Phæniciam Jen Palæstinam e Suconia factæ expeditiones enarrantur. Quibus omnibus mythologiæ perplures, quarum sensus in hune usque diem incognitus, bic demum detectus prodit, jucundæ sane & perquam utiles adjunguntur. Upsalæ in fol. 1698.

This Learned Author divides this Third part of his Atlantica into thirteen Chapters. The first Chapter treats of the most Ancient Writings of the Hyperboreans, and the Custom of the Greeks, and other Nations, of taking some things from them. Here the Author, before he gives us an account of the Antiquity of their Runick Letters, tells us of a fragment of an ancient Writing

Writing on Velom, feen by Ericus Schroderus, An. 1627. and inferted by him in his Preface to his Lexicon Latino-Scandicum, as follows. It happen'd An. Christi 1001. that Olans, Monarch of the Northern World, well feeing the Runick Letters were the chief caufe that the Christian Religion had made no progress for about 185 years; when Bero the Third, King of Smeden, began to transplant it into the Kingdoms of Scandia, he call'd his Nobles together. and confulted with them concerning a total abslifting of the Runick Letters, and fubstituting the Latin Letters in their fread; and it was carried in the Affirmative. those Letters having maintain'd Idolatry, and the enormous Doctrine of the Gentiles, concerning the Gods of the Barbarians. Thus the Runick Letters being thrown by, together with a world of Monuments and Manuscripts, no Tomb was fet up after the ancient manner, nor no Monument erected, but all long neglected for feveral Centuries, till John Buram, a Swede, and fortunate enquirer into the Swedish Antiquities, began An. Christi 1598. laboriously to gather them from Aftronomical Staffs, and the most ancient Rocks of Sweden, and some way to restore them to their ancient glory. The Author having given us this fragment concerning the suppression, and restitution of the Runick Letters and Monuments, he proceeds to give an account of the Antiquity of them, and tells us that the faid Schroder in his forefaid Preface faid the Runes were Invented by Magog the Scythian, and communicated to Tuisco, chief Governour of the Germans, An. M. 1799. And he thinks it remarkable, that Magog is there mention'd Inventer of the Runes, at that particular time that himfelf has thewn, in his precedent Volume, from Pliny, Wormius, and their own Writings, that Atlas was one of the first Inventers of the Runick Calendars, from whom they are call'd Atlas's Calendars, or Runstaff's; whom he makes also Inventer of the true Golden Number, betwixt the year of the World 1800 and 1900, which Number stands an un-

undoubted argument for the true age of the Runick Calendars, and the fixteen Runick Letters, us'd by their Ancestors in writing, and being more ancient than the Letters of most other Nations, especially European, as many as have been feen to this day : And these Letters he fays were formerly rightly call'd by the name of Golden Apples. kept by Atlas, till he communicated them to Hercules. And in answer to those who pretend that the Runick Letters were a late Invention, he proves that the Greeks did not only use the Letters of their Ancestors, but likewise took from them their common way of writing the fame in the flexures, or windings of Dragons or Serpents, and often their common ways of Speaking. And to thew that their Anceftors neither receiv'd their Runes from those Goths, that came to them from Pont Euxine (as Conringius thought) where, formerly, going from them, they had feated themfelves; nor from the Greeks, Latins, or Hebrews; he here prefents us with a Table of the Letters of all these People. in which he has caus'd to be fet down the Figure, Power, Order, Number, and Signification in numbring of each, which clearly fets before the Eye what difference or fimilitude there is betwixt them : And concludes it as a certain and undoubted truth, that there is no Nation in the whole World, known to us, or heard of, which by unanfwerable Reasons and Monuments now in being, is able to thew, or produce Letters more ancient than theirs. On the contrary, he concludes the Greeks and Phenicians to have received their Letters from them ; Ancient Writers testifying that Ops, in former Ages, carry'd the Runick Letters, cut in Brais, to the Greeks; which the Author, in his first Volume, has shewn to have been before the time of Moles.

Speaking of Sepulchral Monuments, plac'd on Hillocks where Men were Buried, and having Dragons and Epitaphs cut in those Monuments, the Treasures of the perfons deceas'd being Buried with the Ashes of them in the fail faid Hillocks; he fays it was from this Cuftom of their Ancestors, that came that solemn story of Dragons lying on Gold; the Greeks and Latins alfo, by a common confent. affirming the Genius of a place to be worthipp'd under the form of a Serpent. So Servine on the fifth Æneid, No place is without a Genius, which is commonly shewn by a Serpent : And so Pers. Sat. 1. Pinge duos angues ; pueri Sacer As to the time that Letters began first to be eft locus. commonly cut on the Spires of Serpents cut in Rocks. and of the report of dead men being turn'd into Dragons, he fays we must look back to the times of Cadmus, whom he has prov'd to have liv'd in the time of Moles, and to have been descended of a Scythian Race; and who, with his Wife Hermione (as Bochartus tells us) were reported to have been turn'd into Snakes, because they had two Snakes of Stone erected in honour of them, by the Phanicians. And if they are faid by others to have been turn'd into Lyons, we must note, that in the Runick Monumental Stones. within the forms of Dragons and Serpents cut towards the outfides of them, there were also wont to be cut in them by their Ancestors the Images of Lyons. Horfes, Griffins, Dogs, Hawks, and other Animals; and this to denote the dead perfons Warlike Valour, Skill in Horsemanship, Pyracy, Robbing, Hunting, Oc. So he fays Ships are also vulgarly faid to be turn'd into Stones ; because in honour of persons deceas'd, who had been famous for Sea-fights and Pyracy, a Stone was erected, with the Image of a Ship cut in it; of which Stones they have great plenty.

And hence he thinks it easie to see that the Fables, *Henigma's*, or Ancient Acts of the Syrians, *Hegyptians*, *Greeks* and *Latins* can scarce be understood by any Man, unless he has first got good skill in their Tongue, and their peculiar ways of Speaking and Writing, and of their Ancient Monuments, and other things of that kind.

Having

Having told us, that their Anceftors were wont to cut their Runick Letters on Stones and Brass (as Plato also testifies from the Tables of Iss or Difa, carried from the Hyperboreans to the Isle of Delos, belonging to the Greeks) he fays, as for the Wood, which their Ancestors chiefly us'd for cutting their Laws on, and making their Runstaffs. and delineating their Sea-Charts, it was of Beech, or the Service-Iree : Even Kircher, a Foreigner, teltifying it concerning the former, and faying that thence even to this day in the Northern Countries they call a Book Buech, a Beech being call'd Buechaus: As for the Service-tree, it's call'd in the Gothick, Roon, Runebarstra, taking its name from the Runes themfelves, and is much efteem'd, as having a peculior property for that use, - as may be seen in the Author. From what he has faid concerning cutting in a Beech the Spires of Serpents, Letters, and Sea-Charts, he fays we have an easy Sense of a passage in Orphese concerning a Speaking-Beech, and of the Speaking Beeches at Dodona, the latter implying no more, but that the Flamines Diales, or Priefts cut Letters on Tables of Beech, in the form of a Serpent, by which future things were told to those that confulted the Oracle: Whence also Serpents were faid to give Anfwers, or Oracles, instead of Gods.

He adds one thing here, to corroborate what he faid in his first Volume, viz. that the Letter I, in nature of a prop, is the first of all the rest of the Letters, the rest being form'd of it, with Knees (Knan) being added to it. Now he fays the Bird Ibis, call'd by them a Stork, by reason of his subtility in finding out and devouring Serpents, is wont to be Pictured with his long Bill, holding a Serpent winding itself about it, after the same manner as it's seen in Mercury's Caduceus: As therefore this Bird is called Ibis, so by this same Mercury would teach the AEgyptians that the Letter I, which is the first in the word Ibis, denotes I to be the prop to all the other Letters, in their Runick Learning. By the long Bill of that Bird, Mercury Pppppppp pppp would would denote the Letter I's having the figure of a Staff, and the Serpent winding itfelf about the faid Bill, denotes only the formation of the reft of the Letters; fo that as the divers flexures and curvities of the Serpent are in regard to the Bill, fo is I in regard of all the Letters, form'd by the various Knees (Kna) in the prop I. Moreover, by the Serpent itfelf, that common way of their Ancestors of cutting Letters in the figures of Serpents is intimated.

From what he has intimated from the flexures of Serpents, and Runes cut in them, he fays a man may alfo eafily understand, why Atin, that is, Minerva, who is alfo called Pallas, wore Serpents on her Garments, viz. it being well known that Minerva is the President of Sciences and Letters, which the Author has shewn more than once to have been wont to be cut on the Spires and Skins of Serpents; she was accounted a Goddess by the Learned. Therefore it's worthy observation, that in her Helmet a Serpent is sen, markt as it were with Runick Letters; this only denoting, that from the Brain Judgment and Knowledge is drawn, for expounding memorable things.

He tells us alfo, that from feveral Monuments taken from the Sepulchres of their Ancestors, he finds it was usual with them to frame in the Boss of their Bucklers, made of Brass, one or more Heads of Mednsa, appearing frightful from the twisted Serpents about it, and Runick Characters cut on it, whereby they render'd themselves Invincible against any force of Weapons: And he fays, their Heroes, who went from their Country Eastward, pleas'd themselves in carrying such; among whom he counts the Valiant Agamemnon, descended, as the Author makes out, from their Ancestors.

Proceeding to give an account of the Writings of their Anceftors on Parchment, he fays they can fcarce find any Writer of theirs more ancient than him mention'd in ancient Histories, call'd fometimes Zennoner, fometimes Semunder, &c. being born in Island, about the year of Christ 1057.

1057. His Works confifting of meer Rhimes involv'd in obscure Fables, that he is now scarce understood by the late Island Poets, by whom the ancient Island Tongue by degrees has been deprav'd, by introducing new words : The Author, confidering the Writings of this Semnothes. or Semundur, and the form of Words, especially that part of his Writings, which is call'd Volupe, expounding things done near the times of the Destruction of Troy, agrees in judgment with Refenius, viz. that Saxo had another Edda, more ancient, and fuller of fabulous relations, than the Edda of Semundus, or Snorro, Olaus Magnus owning fuch an one to have been, and of which the prefent Edda is a fort of Compendium : And concludes that this Semundus. who liv'd about the year 1050, drew what he writ from another more ancient than himfelf, and is wholly of opinion that there once was one of the most antient of their Predeceffors in the North ufually ftil'd King, or God, call'd Semnon, or Sem, from whom (as he has thewn elfewhere) the Royal Family, and all the most ancient and noble perfons were call'd Semungar (Semnones) and whole Verles were celebrated by the Traditions of many : And others after him upon reading his Writings have got much Wifdom, and encreasing them with the Histories of their Times, and keeping his form of Writing, either affum'd his Name. or were given it by the People. Now, he fays, if we diligently look over all the Writings afcrib'd to the Semnones, we shall find no small diversity betwixt the form of that most ancient Semundus, or Semnon, and the rest of the Semundi that follow'd him; beside that the first of them compos'd his History a long while before the Trojan War ; the second come near the Age of the Trojans; a third brought his Writings to the times of Alexander the Great ; the last, which the Author has seen, reaches the first years of Christianity: And therefore he willingly subscribes to the opinion of these Islanders, who conclude the Edda of the most ancient Semundus was writ by the Ala's, that is, Ppppppppppp 2 b٧

by the Gods, viz. their God, or King Semmon and his Progeny; which Opinion is ftrengthen'd by the Testimony of Laertius, faying, that among the Celtes and Gauls Philosophy had its rife from the Druids, or those are call'd Semmothei: And as for the first places of abode of the Celtes, Gauls, Semmons and Druides, he has intimated before.

In his fecond Chaptet he treats of the force of the Golden Number, in foretelling various things, which in his fecond part of his Alantica he had promis'd to give an account of here. Which having done, he concludes this Chapter thus; the things I have related here, obferv'd by our Anceftors, concerning the Golden Number, are not therefore brought, that I think there is in it a greater force in foretelling future things, or more fecret efficacy, than in the other conjunctions of the Planets; but fimply to fet forth what our Anceftors thought concerning the motion of the Heavens and the Stars, on which account they were much celebrated by the Greeks.

The Third Chapter treats of the Celeftial Signs, whereof the chief, he fays, owe their first rife to Sweden. Here he fets forth, that Atlas, an Inhabitant of their Northern Lybia, was the Inventer of Aftrology, and of the Sphere. or motion of the Heavens; and that where Hercules is faid to have taken away the Golden Apples, there kept by a Dragon, he learnt this Skill of Aftrology from Atlas: and as for the Dragon, he fays it's worth noting that their Ancestors were wont to describe the keeping of the Golden Apples in the North by a Dragon, in a threefold respect; for they call'd their Runick Stones by the name of Golden Apples, as being cut with Letters, the prefervers of Immortality; which Letters they faid were kept within the Spires of Serpents. 2. They represented the whole Baltick. as a Dragon winding himfelf about all the Island, and keeping these Golden Apples. 3. The range of Stars, compassing about both the Bears in Heaven, had the name and form of a Dragon given them by their Ancestors, which

which they circumscrib'd within the space betwixt the 51 and 53 degrees of elevation, within which Dragon Sweden, together with the Baltick Sea, extends itself in an equal space. As for those that would see the form of their Baltick Sea, set forth under the figure of Hercules and a Dragon, he refers them to that ancient Monument set forth in Begerus's Spicilegium Antiquitatis; where Hercules appears clad with a Lyons Skin, and holding in one hand a Club, and in the other a Golden Apple, having a Dragon under it, from whose Belly and Feet a vast River flows, by which artifice their Baltick Sea is denoted, going under the name of a Dragon.

As for the Signs of the Zodiack, he fays neither the Chaldeans, Affyrians, Greeks nor Latins have affign'd any cause why the Names and Images of Aries, Taurus, Gemini. &c. are given them, rather than those of Kings and Valiant Heroes: Nor can the account of these be adjusted to any Country fo well as to their North: Having regard to their way of computing the Year, he begins with Capricorn : By this he fays their Ancestors would denote nothing but their Juni Goat, Julen soocken; and therefore in their Runick Calendar at the beginning of the Year they have pictur'd the Horn of this Goat, which they us'd in their drinkings as a peculiar Symbol of Joy for the revolution of the Sun. Then alfo they were wont to call Councils for undertaking Wars, which also was intimated by the figure of a Goat, or Capricern, and fo the Names of Goat and Horn gave the Name of Capricorn. Now neither the Assignment, Agyptians. Greeks nor Latins, in the first times began their Year from Capricorn; but borrowed this Custom from the North a long time after. Next Capricorn comes Aquarius, which is wont to be painted Emptying a great Pot of Water : for while the Sun is in this Sign the cold relaxes, and the Snow melts on the thirteenth day of the Feast Juni, and the Earth in the month of February produces great Rains 01

or deep Snows; upon diffolving of which by the growing warmth, towards the end of Aquarius, many Rivers are every where discover'd. The *Egyptians* cannot claim this Sign to themfelves, becaufe the Inundation of the Nile begins with the Ingress of the Sun into Cancer, and is compleated in 100 days; nor have they any Rains, or very rarely. In other Countries towards the South, viz. Greece. Syria, Italy and Spain, where-ever Snow falls, it prefently melts, while the Sun is in Capricorn. The Sign Pifces is most aptly plac'd next, because affoon as the fattish fruitful moisture of the melted Snow, from various Places of the Lands, subfides and flows to the Ponds and Torrents, the Fishes, drawn by its sweetness, betake themselves to the Shores, and growing luftful, there engender : and their ancient Country-men observ'd this time of the year as most proper for Filhing; whereas the *Hgyptians* take Filh chief. ly when the Nile overflows, viz. in the months of June and July, and effectially in November: therefore they could not be the Inventers of this Sign. The fourth place is given to Aries, which Sign denotes the time, when the Snows being melted, Sheep, Goats, Swine and the like, are put to feed abroad. Now, this reason can scarce hold in any other Country, especially Southern; for in Germany Cattel feed abroad almost all the Winter, and so in Affyria, Ægypt, &c. Taurus is aptly made the fifth Sign, answering to the midst of April, and the midst of May, because Cows and the like cannot be fent out to Pastures till the Grass is pretty high, which in their Country is not till the faid months, near the Summer. Nor can the Southern Countries claim this reason, for with them, from February and March, and in Greece, Italy, Spain, Judea and Ægypt, all kinds of Herds may live abroad all the year. And by this Sign of the Bull, Antiquity would intimate, that at this time the Earth is Plowed and Sown with Barley, which in Germany is usually done in the month of March; and in Judea and Egypt it's now in Ear. The fixth

fixth Sign is the Naked Twins, denoting that when the Sur is come to this Sign, the Water is fo warm, that Children may then freely wash themselves in Rivers and Lakes. also that Saylors may then night and day fet to Sea; for by these Twins they chiefly denoted Castor and Pollux (Gastor ock Boldur) those most skilful Masters of Sea Affairs, of whom the former kept watch by Night, the latter by Nor can any Southern Man, with folid Reafon. Dav. fay that those things belong to them. The Æthiopians and Æg uptians may walk themselves in Rivers all the year. and in other parts of the World, Sailers may fet to Sea as well in Winter as Summer: But in his Country it's very rarely the Seas or Lakes are open to Sailers, before the Sun enters this Sign. The Seventh Sign is Cancer, in which the Sun is faid to turn his courfe, and go backward like a Now, tho with other Nations the Sun goes away Crab. and returns, yet with them the Sun never is in a degree of Latitude in Heaven, to enlighten whole Nights with his Rays, nor going away does he caufe fo lafting darknefs, as to feem wholly as it were to be held under; fo that his going Crab-like and return are more fensible to them. The eighth Sign is called the Lyon or Dog, chiefly for this reafor, that at this time of the year, when the Sun is in Sirins, whatfoever Animals are killed, and are not prefently preferv'd, either by Boyling, Roafting or Baking, for Humane use, they are presently corrupted or confum'd by the heat of the Sun, as by a Lyon or Dog, the most voracious and fiery of Animals; and tho in other Countries Flesh at this time rots and confumes, yet there the heat of the Sun is more lafting than to answer but to one Sign : for with fome it lasts 2, with others 4, nay, and 5 months. whereas in the Northern Countries it fcarce preffes but while the Sun stays in that Sign; wherefore this month with them is peculiarly called Rotemanem. Rotmonth. The ninth Sign is exprest by the Image of a Virgin, holding in her hand an Ear of Corn, intimating that then is the time of

of Harvest, viz. in their August. Now this cannot be affigned to Ægypt or Affyria, they gathering their Havestin April, May and June; and the Greeks, Italians and Spaniards do it a whole month before the North. Libra, the tenth Sign is aptly joyned to the foregoing, answering to the months of September and October, because after Husbandmen had gathered a plentiful Harvest, and Thrasht out fome Corn they commenc'd Fairs, and changing their Goods, get Salt, Flesh and Fish for their Corn, all which things are done by the Balance, or Scales, as may be seen in the most antient Laws of their Country. And therefore at this day in the Metropolis of Sweden, Stockholm, and elfewhere, the greatest Fairs throughout the Kingdom are yearly kept about this time, for fuch changes ; whereas in other Countries he scarce thinks such a Merchandizing, by change of Corn, proper at this time, their Harvests being gather'd long before. The eleventh Sign is the Scorpion, an Animal infamous for ftinging and killing: By this the Ancients would intimate, that the power of the Sun and Earth was now wholly become dead; the Sun in the farthest parts of Smeden lying hid under the Horizon for many whole days and nights together, the Earth being Frozen, and cover'd with Snow, producing no Fruits, and fo lying as a dead Carcafs. Now, with the Ægyptians and Allyrians Fruits, and Plants are at this time at their chief growth, for in January or February their standing Corn begins to shoot forth into Ears. The Twelfth Sign is Sagittarius, because that time in the North is fittest for Hunting, the Snow there fallen at that time being but thin and unfrozen lo that they clearly flow the footfleps of wild Beasts, and give a free passage to Hunters in the Woods : Whereas in the months of January and February, fo great Snows fall, that they make Hunting very unealy and dif-Nor can the Ægyptians, or Asyrians affert the Inficult. vention of this Sign to themfelves, Snows being in a manner unknown to them, and rare in Italy and Greece, and fall

fell not but in *January*, and lye fecure without melting: The Sun alfo being entred into another Sign, viz. Capricorn. From all thefe things the Author thinks it clearly appears that the nature of the Signs, and the Names and Images given them, are fo order'd, that they flew what must be duly and orderly done by Husbandmen in each part of the year in their Oeconomical affairs, and this according to the nature of the Country: And as their Ancients thought nothing more neceflary for the fupport of Mortals than the Cultivation of the Earth, fo they thought nothing more conducing to that, than a diligent observation of the Sun and Stars, as they act on these Sublunary Bodies.

The Author next proceeds to give an account of certain Monuments of Stone, of the Ægyptians, Greeks and Romans; from which he strengthens what he has faid concerning the 12 Coeleftial Signs, and the Oeconomical Reafons of them: And next confiders the later Almanacks, both those that were written on Parchment by Monks, or others, us'd in their Country when Christianity was first introduc'd there, about the year 800: the use of the Runflaffs being then by degrees taken away. And also the late printed Almanacks, introduc'd with Printing, and thews what is retain'd in them of the Cœlestial Signs of their Anceftors, together with their explication, thereby to confirm what he had faid before. From the Signs of the Zodiack he paffes to the other Celeftial Signs, and fays he has shewn in his precedent Volumes, that many of them had a Northern Original. As for the time that the knowledge of the Celeftial Bodies, under the likenefs and feign'd figures of Men and other Animals, came to the Greeks. Chaldeans and Ægyptians, some think Hercules, the Son of Thor or Jupiter and Alcmena carried it to them : But Lucian in his Tract of Astrology says this Knowledge is ancient, and the Invention of the Ancient Kings, whom the Gods Qqqqqqqqqqqq

Gods lov'd: And that the Greeks Heard nothing of Astrology from the *Æthiopians* or *Ægyptians*; but Orpheus, the Son of Oleagrus and Calliope, first deliver'd those things to them, tho he did it not clearly and openly, but cover'd them under certain mystical Veils.

In the fourth Chapter, and the five following, the Author treats of the fix Ages of the World. In this fourth he treats of the Golden Age, or the first Age from the beginning of the World. Here the Author fays, he thinks those of the Learned Christians did well, who endeavour'd to induce the Gentiles to a belief of the Scriptures, from the Writings of the Gentiles themfelves, they containing a relation of many famous facts, which are confirm'd by the Scriptures : But, he fays, if those Doctors had began from the Genealogies of the ancient Pagan Kings, and thewn from the beginning, how these answer'd, Race by Race, to the Genealogies of the Jews, they would have made the Coelestial Doctrine more clear to them; fince thence they might have collected, that he, to whom the fact of another was imputed. liv'd at the same time with him whose tact it was. And because as far as he knows, no man has throughly handled this, he here propofes to fhew, beginning with the first Age after the Creation of the World, how, both their Ancestors, and other Pagans, with respect to Posterity. from one Generation to another, have propagated many things agreeing to Sacred Writ : For performing which, in his Accounts of the fecond, third and fourth Age, he has given us three Chronological Tables. And in his Account of the Golden Age in this Chapter, he thinks it appears from the words of Hefiod, concerning that Age, joyn'd with the Voluspa, and the Scriptures well confider'd. that their Ancestors were the first known for Empire in the World, and for their fingular Wildom, Juffice and Fortitude.

The

The fifth Chapter treats of the fecond, or Silver Age, which he fays was ended at the Deluge, by reafon of Men's Crimes.

The fixth Chapter treats of the third Age, call'd Rocky or Stony, mention'd in the Voluspa: Which Age Hefeed feems to have made the Brazen; tho the reft of the Ancient Greek and Latin Poets make some mention of it, call'd Rocky, because Noab's Ark rested on a Mountain, whence by the Northern Histories and the Scalds the Men of this Age are faid to be sprung or descended from Mountains: And whereas Deucalion and his Wife are faid to have thrown Stones over their Heads, whence Men and Women sprung up, this he says denotes Noab's Descent with his Family from Mount Araret, leaving the Mountain behind them.

The feventh Chapter treats of the fourth, or Brazen, or A/hen Age; and began, he fays, with their King Maderus, or Mannus; because, by reason of his Strength and brawny Limbs, he was faid to be made of A/h; or because in his time their Ancestors began to use Darts and Clubs of A/h; the Destruction of Thebes or Troy putting an end to this Age.

The eighth Chapter treats concerning the fifth Age, or the Age of the Heroes. Here he fays it's worth noting, that Hefod fays the Heroes that remain'd after this Age and the Trojan War, took their Seats in the most remote parts of the World, and in the Elystan Fields, meaning their Atlantica. And this, he fays, is most worthy to be noted, that after the destruction of Troy, and the return of the remaining Heroes, we can find none of the Greek and Latin Writers calling any King or Great Men of their own or other Nations by the Title of Jupiter, Neptune, Hercales, or Pluto: But as these were of the stock of their Saturn, Jupiter, Atlas, so these were only call'd by those Names of the Gods. Some of those Heroes marrying with Qqqqqqqqqqqqq 2 foreign Mortal Women, had Children, which therefore were call'd Demi-gods : Their chief Heroes being faid to be Immortal, not that they did not dye, but because they were thought to revive under the form of other Men. It's observ'd that after Jupiter return'd with the fix Gods that accompany'd him from Troy, the use of his Name vamissifier also with the Greeks; whence the Greek Writers con-clude, that after that time Jupiter cohabited no more with natural Women: He observes, it was the custom of their ancient Kings and Giants not to marry with Women of a low flature, least the Race should expire, which custom continued till the time of Alexander the Great ; and this Cuftom, he fays, continued among the Helfingi till the beginning of the last Age (as he was told by the Governor of that Province) for which reafon perhaps, they are feen. for the most part, to excel the rest of the Inhabitants of Smeden, in bulk and stature to this day ; whence if a Man be feen to exceed the common stature, it passes as a common Proverb, to call him a Long Helfinger.

The ninth Chapter treats of the Sixth or Iron Age. Here the Author quotes the Voluspa and Hessian, giving an account of this Age, in which all things were in confusion, and by the words of the Voluspa, this Age seems to be confounded in part with the former Age, and to end with the Trojan War.

The tenth Chapter treats of the first form of Government among the Northern Nations. Here the Author gives an account of the most Ancient of their Ancestors that fettled themselves in Sweden; and this chiefly from the Scripture, and shews they were the Sons of Japheth, among whom the chief was Gog, which name he fays, among them was a Title of Honour given to Kings, Heroes and Giants; and therefore the first of their Ancestors being a Giant, was honour'd with that Title, and from the Posterity of this Gog, many places of Sweden have drawn their their names; of which he gives many inftances: So the na co of Magog or Mangog, in the Swediff Tongue, fignifis a Valiant and Stout Man; from whence many other places in Sweden have their names. So he fays, Mefhecus, another of the Suns of Japheth, was the Progenitor of the Finlanders, who are most Northerly, whence they are ftill called Mefar. As for the name of Finlanders, they have it from the Swedes; and he mentions several places in Finland that have their name from Meshecus: And so from other Sons of Japheth other places in Sweden have their names.

He tells us, Greece, Afia, India and Ægypt took the word Pygmy from their Country, chiefly from the Finlanders; for thefe and the Swedes call Boys from the 7th or 8th to the 11th or 12th year Pyckior and Poikar, and Girls Pigor and Pikar; and Men by the Swedes are called Man, by the Finlanders Mias: Hence therefore Pygman, or Pygmias, or Poikmias fignify one in Stature a Boy, but in Age a Man; and fo from the Laplanders and Finlanders the word $\Pi_{UYM^{ZI}}$ came to the Greeks.

He observes, that as no Nation in the World has been fo prone to Parables and obscure description of things, as the Swedes; fo they are now most tenacious of their ancient Custom, which, both a common Book fill'd with Ænigmatical questions, and in a manner all the Epithalamia that come forth, sufficiently prove.

He tells us from Scroder, that Magog was the Inventer of the Runes; and fays there is no room for doubting, but Atinus, Atlas and Magog were one and the fame perfon. And after having given a large account of the extent of the ancient Dominions belonging to the Northern Inhabitants, he fays, as for the Sons and Grandchildren of Magog, or their first Atlas, their Names writers do not well agree; yet in the firsth Generation they do much differ: For he that by Hefood and Apollodorus is called Cælius, is the fame that his Country-men and the Islandere call sail Kelins, Uran-kolle, Bune, Bariki; and this is the first to whom their Ancestors ascribe the first form of Swedish Government.

Being convinced of a Gigantick Race of Men, by many vaft Skeletons he had found in Sepulchral Monuments, he gives inftances of feveral Giants of a vaft Stature, who about the time of Alexander the Great grew lefs, the Goths about that time returning from South Scythia, or Turkey and Afia, being men of a leffer flature, and caufing a mixture of divers Nations; and he thinks he may fafely fay, that before the times of Chrift, the Men of their Country were 5 or 6 of their Ells in height, which he confirms by many Teftimonies.

Speaking of their Cume, which lyes beyond the Baltick, over against Phlagra, he fays it was known formerly for horrible Magick, and the Impostures of Witches; where Ulysfer and Æneas were feduc'd, confulting the old Fatetelling Cumean Sibyl, call'd the Prophetess of Hell, because the liv'd in the remotest part North, as it were in a Subterraneous place: This Sibyl being different from the Cumean Sibyl of Italy,

Having flewn in his former Volumes, that the Crofs was in use in the first times, and cut in most of their Rumick Monuments; this he fays Intimated to Posterity, that in those Tombs were laid the Bones of Commanders, and Men famous for Valour both by Sea and Land, who, while alive, with a vigorous Arm manag'd the Club of Thor or Jupiter, made like a Crois.

The eleventh Chapter treats of the form of Government of the Atlanticks, under Saturn, and his Expedition. Here the Author, after a long fearch into the origin of the word Chetim, finds that as fome call'd the Goths, Gothi, Gytha, Geta, fo they call'd their Land Gutheim, Gythiam, Chetim; whence he thinks he has made it plain that Chitim, the Son of Javan, Grandfon of Japheth, and Great Grandfon

Grandfon of Noab, chofe that Country for his Seat, and gave it his Name : He had a Son whole Name was Celius. or Vranus, who had Saturn or Boreus, under whom was the Golden Age. This Saturn had many Children and Grand-children, whom he made Petty Kings, and carried fome with him in his Expeditions, and made them Kings abroad over the Nations he conquer'd, hence they were called Tiodanar, Titans, that is, Kings of People; which Celebrated Name past to the Greeks, Pherecydes calling them Hyperborean Titans, and the Poet Subterraneous Gods, or who possent the Seats of the Inferi, in the farthest parts North. Now the Smeden had many Titans. yet the House of Atimus or Neptune had this Prerogative, that all Sweden was divided into ten Countries, according to the number of his Sons, and the chief Empire was in them. and their Progeny, and one of them was chosen as Monarch; whence they were called Kurar, Electors. Thofe petty Kings or Cures at first being ten, were afterward increas'd to twelve, with a prefiding Monarch. When thefe 12 Gods with their Prefident were to fit in Judgment, they chiefly made choice to fit under an A/b, by reason of the wonderful order of its Leaves, there being fix Leaves on each fide the Stalk, and one on the top, fitly answering to that Seffion of the Gods : He also notes that Ships with them were call'd Askar, because built of Ask; and fays the name of this Tree is taken from As, a Divine Title, becaufe it gives a refreshing shade to the Gods, as they fit to dispense their Laws. He tells us also, they made their Tribunals on the tops of Mountains and Hills, and guarded them with Stones fet in a Circle about them, of which Circles there are still many to be feen in his Country.

Speaking concerning the recourse of Foreigners to Sweden, to confult the Gods concerning past and future things, he gives us some of the chief of their Customs, agreeing with what the Greeks and Latins write. The Colder

Golden Apples, reftoring the Gods themfelves to life, that is, which fet forth the Acts of their Ancestors, and incitements to Virtue, and diffwafives from Vice, are Interpreted by him of Letters, which were cut on Stones or Wood, or writ on Parchment. And these Stones, Tables, Parchments and Lapland Tympana, from their oblong figure, have got the Name of Pine Apples, Apples and Eggs: And those Letters that were writ on Parchment or Magical Tympana, were cover'd with a Gold colour, from the Bark of an Alder : Therefore that Alder was much effeem'd by their Ancestors, and is now by the Laplanders : fince from its Inward Bark, ground with the Teeth, they get a Gold colour, wherewith they Paint all kinds of Letters and figures on their Tympana. Now, as for what some are faid to descend into Hell carried on Alder Sticks, it is from thence, that in their Divinations they use those kinds of Sticks, in the Barks of which they had cut Letters and Circles, compaffing about the Stick, like the various Spires of Serpents. As for the God they call upon in these Divinations, he fays it's Saturn, and his Worlbippers using the Drum are call'd Saturnines. Therefore he that by the help of the Drum would feek counfel of the Gods, takes in one hand a Golden Apple, in the other a Hammer made like a Crofs of Alder, or Horn, he ought also to have a Serpent, made of Copper, as not much differing from Gold in colour. which upon the beat of the Hammer on the head of the Drum, leaps in and out, till it fettles on fome Letter or Figure, flewing that to be it, from whence the Anfwer is Moreover, the Saturnine, upon beating the Drum given. a while, fell into a Trance, as the he were dead; and the Laplanders then, by mistake, thought the Soul went out of the Body, and having learnt many things, return'd again ; whereas their Ancestors, with Plutarch, thought the Soul did not go out of the Body, but fome time yielded, and gave a loofe to the Genius, which having roll'd about

about inwardly, told it many things it had feen and heard without. Now the things they defire to fee are of various kinds, either the Souls of the Dead, or the Actions of Men at a great diftance, or paft or future things. And he gives inftances of fome perfons who came from other Countries to theirs, to fee the Ghofts of their Anceftors rais'd after this manner. And Plato owns that all the Tradition concerning the Elysian Fields and Hell owes its rife to their North, which being cut on a Table of Brafs, was carried by Ops from the Hyperboreans to Delos, belonging to the Greeks.

The twelfth Chapter treats of Jupiter, and his form of Government, and Expeditions at feveral times about the year of the World 2100. The Author having prov'd by many strong Arguments in his precedent Volumes, that Jupiter was the Son of Saturn in Sweden, and held his Empire there; he undertakes to shew here that he went thence to other Countries and fubdued them. which has been the occasion various Nations and Cities claiming his place of Birth and Sepulchre to themfelves; 2mong whom he first numbers those of Crete. Belides what he has faid in his precedent Volumes to prove Jupiter to have been of their Country, he fays many Names given him by his Country men as well as Foreigners prove it. As 1. The name of Thys and Thyson. 2. Dian, which name was also common to the 12 Gods or Druids constituted by him to judge the People, and take care of Sacred 2. Thor, from which name various Cities, Villages. Rites. Places of Judicature, Groves, Lakes, Kings and other Illustrious Persons afterwards drew their Names. And their Ancestors conveyed this Royal Name of Thor to the Greeks and Latins, of which he gives feveral in-So he fays the Town Thordona or Tortona in frances. Greece, called by the Greeks Dodona, was built by Thor; to that the most ancient Oracle of the Greeks, in which Rrrrrrrrrr Thores

Thorns or Jupiter was worthipt, was called Tortona or Dodo. ne, the Origin of which name the Greeks could not find ; and no wonder, fince they confulting the Oracle concerning the names to be given the Gods were answered, that they must use the barbarous names. Thor, he fays, among other names given him, was call'd Fluge guden, from his driving away Magical Flies with his Hammer; the name Fluge-guden being the fame with Belzebub, mentioned in the Scriptures. As for the Magical Flies, they were Damons in the Shape of Blue Flies, which the Finlanders kept in a Magical Pouch or Satchel, they being call'd by them Gan, that is Spirits, which they daily fent forth for their Magical uses, viz. to bring them news from all parts of the Universe, and to do things destructive to Men, Oc. And these Flies were driven away by facrificing to Thor, the the Victims offer'd by the Jems in the Temple at Hierusalem were freed from Flies, by reason of the Jews Faith in God. He gives us other Titles of Thor, and teaches us many other things from the Ætymology of Names, too long for me to fet down.

The thirteenth Chapter treats of the migration of the Atlantiques under Jupiter, Bacchus, Inachus and others, to divers parts of the World, as Thracia, Bactra, Ægypt, but especially into Phænicia.

Here the Author fets forth, that Jupiter having got a notable Victory over the Giants and Amazons, mention'd in the precedent Chapter, this ftruck a terror into other Nations; and therefore the remaining Giants, and all of the Royal Family, whom he had driven out of Smeden; fortify'd themfelves abroad; and as they opprest all men by Sea and Land, Jupiter being call'd to the affiftance of the opprest, at length subdued them, whereupon his Famgrew throughout the World: And he undertook mary Expeditions, causing two Goats (Bacchi) to be mare, wherewhereof one was like a Roman Dattering Ram, to batter down their Fortifications, hich were made of Stones without Mortar, or of We 1 and Dirt: The other was for caffing Fire out of it, whence he conceives the Greeks made their Monster Chimana; and of which two Engines he gives a particular defeription. And tells us, Jupiter, or *Ibor, Ofiris* and Bacchus, are but divers appellations of one and the fame Son sprung from Saturn. And the fole reafon why Bacchus is pictur'd with Horns, is that he was formidable both by Land and Sea to Enemies, for his most sharp and strong Horns. And their Ancestors call'd Ships by the Names of Cattel, Bulls and Cows, and fuch were the Cattel of Gerion, which Hercules took from him.

He fays he has fhewn before that Neptune by them was call'd Oggur, Aggerus, Hacon, Ake, &c. And the Kingdom of Smeden, Ogyheim, Ogycia (Ogygia) and that under him, and in the times of his Brethren and Anceftors those great Expeditions were made throughout the World with Ships, for the most part by Rivers, Seas and Lakes, which by the Writers of the Gentiles were call'd Inundations of Waters.

From the Phenician Language he conceives we may draw a most firm Argument that they are a Colony of theirs a what he has faid before concerning the race of the Phenibians, and the greatness and colour of their Bodies, coufirming the fame. And therefore, left any people in the North, or neighbouring to the Phenicians, thould claim this Glory to themfelves, he adds here for a close a Table of fome words in the Chief and Mother Tongues of the reft; that these being compar'd with the Runick or Phanician Words it may clearly appear how close an Allegiance there is betwint the Southian or Swedijh, and the Phaemician Languages. Now those most Ancient Tongues, to which in a manner all the reft owe their Elich, are these; the Scythian or Swedish, the Ranich to Phenician, the German. man, Hebrew, Greek, Latin, Sclavonian and Finnick. Mariy words of each of which he has given us in a Table, which being compar'd together, the *Phænician Lasguage* appears to be in a manner the fame with the Scythiam or Swediff. Moreover, by confidering the Divine Worthip. Cuftoms and Letters of the *Phænicians*, he finds they owe their rife to the Scythians. As for the time of this Expedition of *Thor* and *Bacchus*, whom, as well as his chief Deputies, Mercurius, Inachus, and the reft, the Poets call by the Names of Hercules, Fanefus, Dionyfus and Titan, he concludes it to have fallen in with the times of Abraham, and his Great Grandfather Saruck, with which he finds the Scriptures to agree.
