STORY OF A MALAIA FEVER
When the Doctor Comes with the Fever of the Jungle.

The following particulars are taken from the letter of a young American girl who, after spending two years in a large American Missionary Hospital in the Malay States, was recently taken ill with a fever of the jungle, and at first considered it to be an ordinary case of fever of the tropics.

The young lady's name is Miss...., and she was born in...., and at the age of twenty-two years she went to...., where she spent two years in a large American Missionary Hospital. During this time she became intimately acquainted with the natives of the country, and was much interested in their welfare.

The hospital is situated on the banks of the Sungai River, which runs through the centre of the jungle, and is about thirty miles long. The hospital is a large building, and is surrounded by a thick forest, which is inhabited by many wild animals, such as tigers, leopards, and elephants.

The young lady was staying in one of the rooms on the second floor of the hospital, and was much disturbed by the noise of the jungle outside, which was very loud and peculiar. She soon learned that the noise was caused by the monkeys and other wild animals, which were always very active and noisy.

On the evening of the day before her illness, the young lady was reading a book in her room, when she suddenly heard a loud scream from the jungle. She looked out of the window, and saw a large monkey hanging by its tail from the branch of a tree, and a tiger, which was about to attack it. The young lady was much frightened, and ran to the hospital staff, who came immediately to her assistance.

The young lady was taken to the doctor, who examined her carefully, and found that she was suffering from a fever of the jungle. He prescribed a course of medicine, and advised her to rest in bed, and to eat light food.

The young lady was much relieved by the doctor's advice, and soon began to recover. She spent the next few days in bed, and was much interested in the animals and birds that she could see from her window.

A few weeks later, the young lady was well enough to go out of the hospital, and she soon became much interested in the natural history of the country, and in the many wild animals that she could see in the jungle.

The young lady spent a few months in the hospital, and then returned to her home country. She wrote a book about her experiences in the Malay States, and it is now much admired by the public.

THE TUGELA RIVER.

The Tugela River, which flows through the heart of the Transvaal, is one of the most picturesque and romantic scenes in South Africa. It rises in the Drakensberg Mountains, and flows northwards through a series of mountain passes, and then enters the lowlands of the Transvaal, where it forms a beautiful lake, called the Tugela Dam.

The lake is surrounded by a beautiful landscape, and is visited by many tourists, who come to see the magnificent scenery, and to enjoy the cool water of the lake.

The Tugela Dam is one of the most important water supplies in South Africa, and is used for the irrigation of a large area of land. It is also used for the generation of electricity, and is connected by a network of canals and reservoirs to the surrounding districts.

The Tugela River is a source of great beauty and interest, and is visited by a large number of tourists every year.

FOREIGN CUSHION.

The Foreign Cushion is a large piece of furniture, which is made of mahogany, and is used for the comfort of a large number of people. It is a large couch, with a back and arms, and is covered with richly embroidered cloth. It is used for the comfort of the sick and the aged, and is placed in the lounge of the hospital, where it is much admired by the visitors.

The Foreign Cushion is one of the most beautiful pieces of furniture in the hospital, and is much admired by the visitors who come to see the beautiful scenery of the country.

DEPT'S FAVORITE PET.

The Department's favorite pet is a small dog, which is called the "Mongoose." It is a small animal, with a brown coat, and is much admired by the visitors to the hospital. The Mongoose is a useful animal, and is used for the detection of rats and other vermin. It is much admired by the visitors to the hospital, and is a great comfort to the staff.

SUSAN ROSE.

SUSAN ROSE, the favorite pet of the Department, was a small dog, which was much loved by the visitors to the hospital. It was a small animal, with a brown coat, and was much admired by the public.
