VOLUME 1
NEW YORK, THURSDAY, APRIL 22, 1846.

APPARATUS FOR KIYANING TIMBER.

THERE is little to be said in favor of the present state of the timber trade, and, indeed, the subject has been so fully treated of in former numbers of the ADVOCATE, that we have no occasion to enlarge on the subject at present.

The price of labor has increased, and the wages of those who work are much less than they were several years ago; but it must be remembered that the price of wood has also increased, so as to compensate the difference.

The timber trade is now in a very parlous condition, and the prospects for the future are not encouraging.

The timber trade is now in a very parlous condition, and the prospects for the future are not encouraging.
New Orleans We are now in receipt of several interesting communications from a new paper of Mr. Bonn, of the Boston Daily Times, which gives news of the most important events that have transpired in the city of New Orleans, and which in no small degree is calculated to excite the curiosity of the public. It is said that the city of New Orleans has been the scene of many important events, and that the people of that city are deeply interested in the result of these events. The New Orleans paper is published every Saturday, and contains a variety of news and information, which is of great interest to the public. The paper is well written, and contains a great deal of valuable information, which is of great importance to the public.

New Inventions

The Royal Society of London have recently received a communication from Mr. B. B. B. B., of the University of London, in which he describes a new invention which he has recently made. The invention is said to be of the greatest importance, and is calculated to excite the interest of the public. The communication is well written, and contains a great deal of valuable information, which is of great importance to the public.

Lavoisier's Water Meter—The Royal Society of London have recently received a communication from Mr. Lavoisier, in which he describes a new invention which he has recently made. The invention is said to be of the greatest importance, and is calculated to excite the interest of the public. The communication is well written, and contains a great deal of valuable information, which is of great importance to the public.

Peter Murray—We have recently received a communication from Mr. Peter Murray, in which he describes a new invention which he has recently made. The invention is said to be of the greatest importance, and is calculated to excite the interest of the public. The communication is well written, and contains a great deal of valuable information, which is of great importance to the public.

Jeffrey's Improved Acid Batteries
