TO TEST PRESERVED SEED.

A TEST for preserving seed, which has given results that are most encouraging, is being conducted at the Chicago Experimental Farm by Professor F. W. King, head of the plant-breeding department of the University of Illinois.

This test is made by planting the seeds in a row at the rate of one per foot and growing them through one season. The seed thus preserved is then replanted and grown through another season. If the plants are healthy and vigorous and the yield of grain is good, the seed is considered to be preserved.

DRUG MARY GROWS.

A new medicine named "Drug Mary" has been brought out by the American Medical Association. It is said to have no known side effects and to be effective in the treatment of a wide range of conditions, including colds, flu, and respiratory infections.

NEW USE FOR SYSTEM.

A new use for the system is being investigated by the National Institute of Mental Health. The system is being used to treat patients with depression.

AMERICAN ENGINEERS DEFEND.

American engineers are being held in captivity in Europe, and the Department of the Interior has been asked to take steps to secure their release. The engineers were captured while working on a project that is of national importance.
