Week 3

This week we also have some new assignments to do. Before the meeting with our coach, our team members had a team meeting in GROEP-T. The eight students had a new task division.

After our own meeting, at half past two, we have a meeting with our coach. Where he searched our wiki and told us some advantages and disadvantages. And we also explained our wiki to him. Then, he discussed with us about what is the new task in the follow weeks. There are some questions to be finished by us. We have to design and build an SSV. Calculate some data and in this first step, we are forbidden to use any simulation software. Furthermore, a simulation of our SSV taking part in the race also should be build.

In the end of the meeting, the coach taught us something that we need to use and he thought maybe not clear in the last week presentations. And we should take care of the weight of our SSV.

Our meeting with the coach takes us half an hour.

After Tuesday's class, we respectively finished our own assignments in this week.
