Files
LMS104a.z01 1,048,576,000   05/04/2004 09:47a
LMS104a.z02 1,048,576,000   05/04/2004 09:51a
LMS104a.z03 1,048,576,000   05/04/2004 09:54a
LMS104a.zip   279,759,421   05/04/2004 09:55a

LMS104b.z01 1,048,576,000   05/04/2004 10:00a
LMS104b.zip   861,174,977   05/04/2004 10:03a

These are 2 spanned zip files - LMS104a and LMS104b - that can be unzipped with WinZip 8.1 or later.

It has been run in a 640 Meg VMware session with good results.
Log on to Win2K:
UserID: administrator
Password: **westford**   (This password is to avoid a virus)

All other passwords are password.

marcp has a customization set associated.

You can access IBM Directory Manager (on the desktop) to modify LDAP. First do a "Rebind" with "cn=root"/"password".

The best way to add a user is to select a user and "Duplicate" it. Then change the key info. Be thorough.

Log on as georgep/password. This ID is enrolled in most of the courses deployed - including 2 NETg courses.

To start:
1. Click on Services icon in the top Taskbar - (Looks like gears)
2. Find IBM Tivoli Directory Server, select, right click, start
3. Click on Start LMS in the top Taskbar.
4. When "Pause" appears, you are ready to go.
5. Click on the "Launch Internet Explorer"
   - The link bar has links to LMS and WAS Admin

If you need to add users to LDAP, use the IBM Tivoli Directory Configuration tool. Stop the server and import an ldif. There is a sample: c:\updateLDAP.ldif that you could use as a template.

Administrators (password="password"):
LMS - georgep
LMS - lmsadmin

WAS - wasadmin/password
