Highlights

- *This service offering includes hands-on technology transfer, planning, configuration, and system monitoring and tuning.*

- *Focus is on maximum productivity while providing expertise and knowledge transfer.*

- *Delivered by consultants with deep product expertise gained through close work with product developers.*

Get your entire technical staff off to a quick start with IBM technology — and begin to maximize your return on investment immediately.

With the IBM® Fast Start Services for Informix® Dynamic Server, consultants from IBM Software Services for Data provide expertise and knowledge transfer to your staff, with a focus on maximum productivity.

By working closely with IBM's product development organization, our consultants ensure that they stay current with the most recent technology and Informix database administration techniques. As a result, the expertise they bring to your systems and database administrators ensures your

application development environment and database servers are configured to deliver high performance — making your organization highly productive — right from the start.

The IBM Fast Start Services for Informix Dynamic Server includes the following components:

Hands-on Technology Transfer

These sessions ensure that your database administrators will understand IBM product architectures and can successfully master the technology. IBM consultants provide detailed installation and product training focused on skills transfer; physical database layout; multithreading architecture; parallel data utilization; and recovery strategies.

Planning

Our consultants work with your staff on project planning for your database installation to make certain that database designs and implementation plans are appropriate to your business needs. We are involved early and work

closely with your staff to ensure you receive the maximum benefit from IBM technology.

Configuration

Accelerate your return on investment by having IBM experts assist throughout your database configuration process. We'll ensure efficient system throughput by working closely with your database administrators to configure your database and your system, enabling you to receive benefits — right from the start.

System Monitoring and Tuning

Our consultants work with your staff to determine utilization goals, set archiving and restoration strategies and train your database administrators to maintain optimal IBM Informix database performance. We'll provide guidelines for the maintenance of your IBM Informix database to ensure that it meets end-user application requirements.

For additional training

Training is a critical component of any successful database implementation. A primary goal of this offering is to accelerate your learning process, making your organization highly productive - right from the start. To build on the knowledge gained and for consistent long-term results, the IBM Fast Start Services for Informix Dynamic Server should be supplemented with training from IBM's recommended curriculum.
