Management & Security

Development

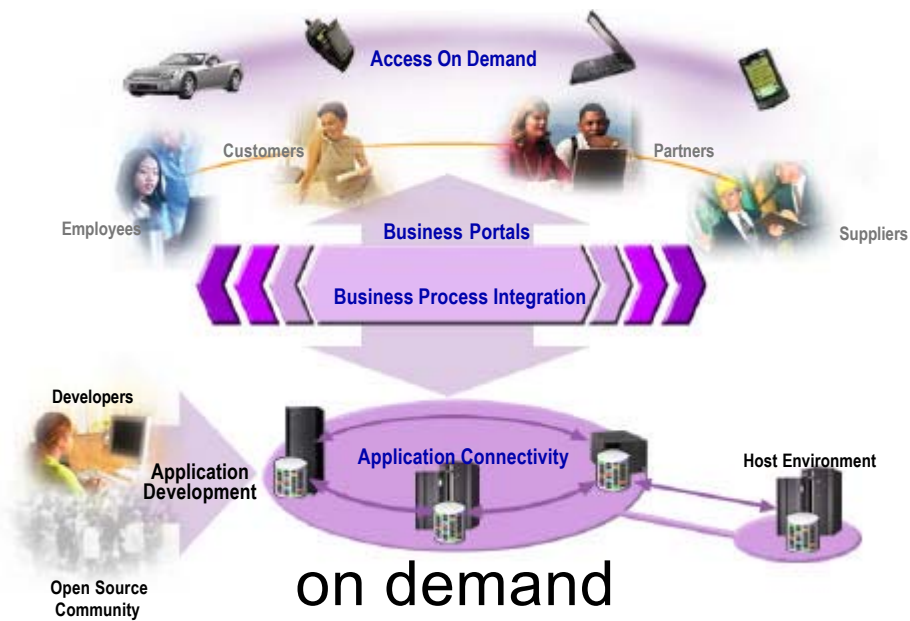

# Integration

# Integration

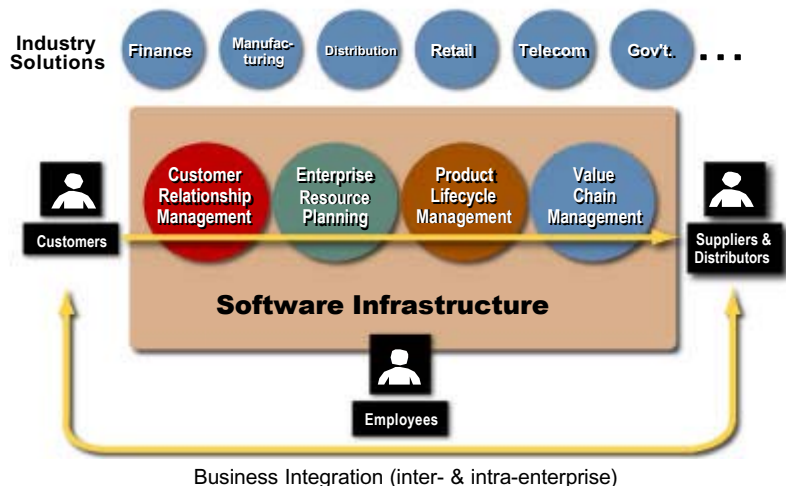

on demand

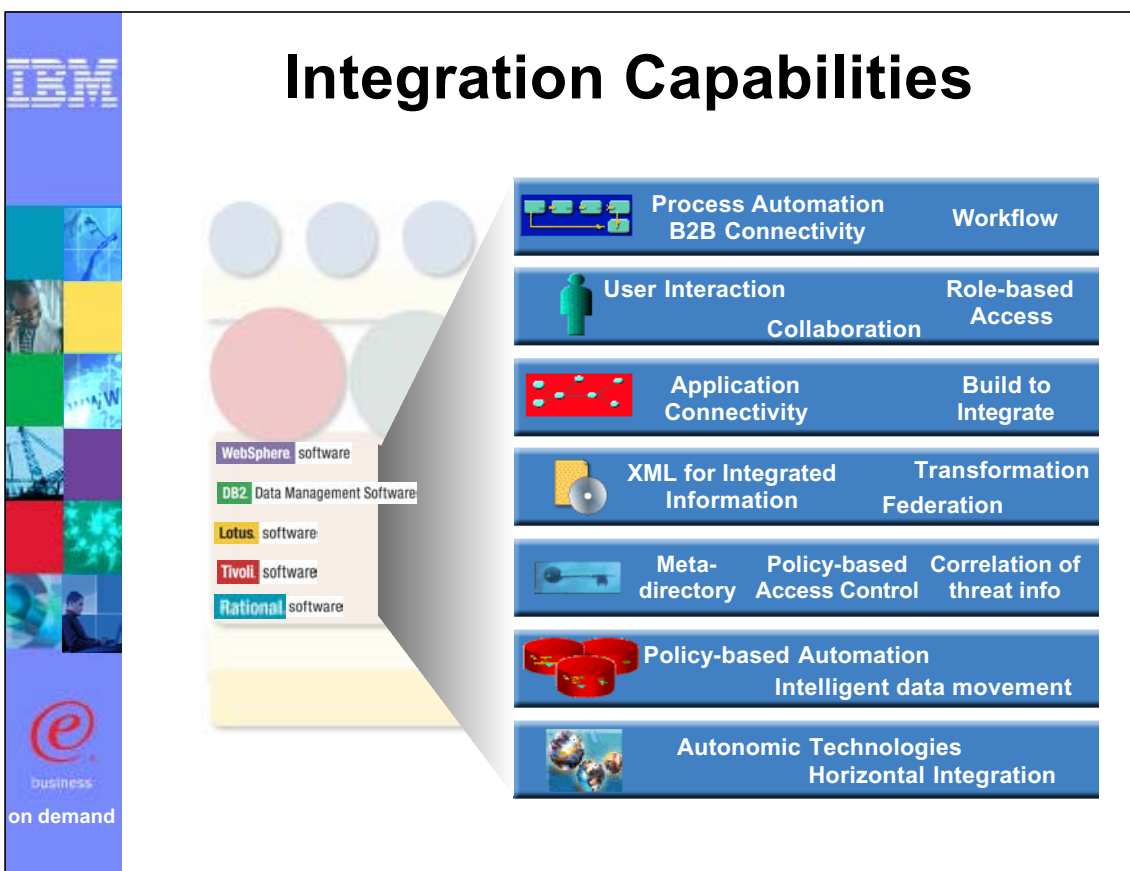

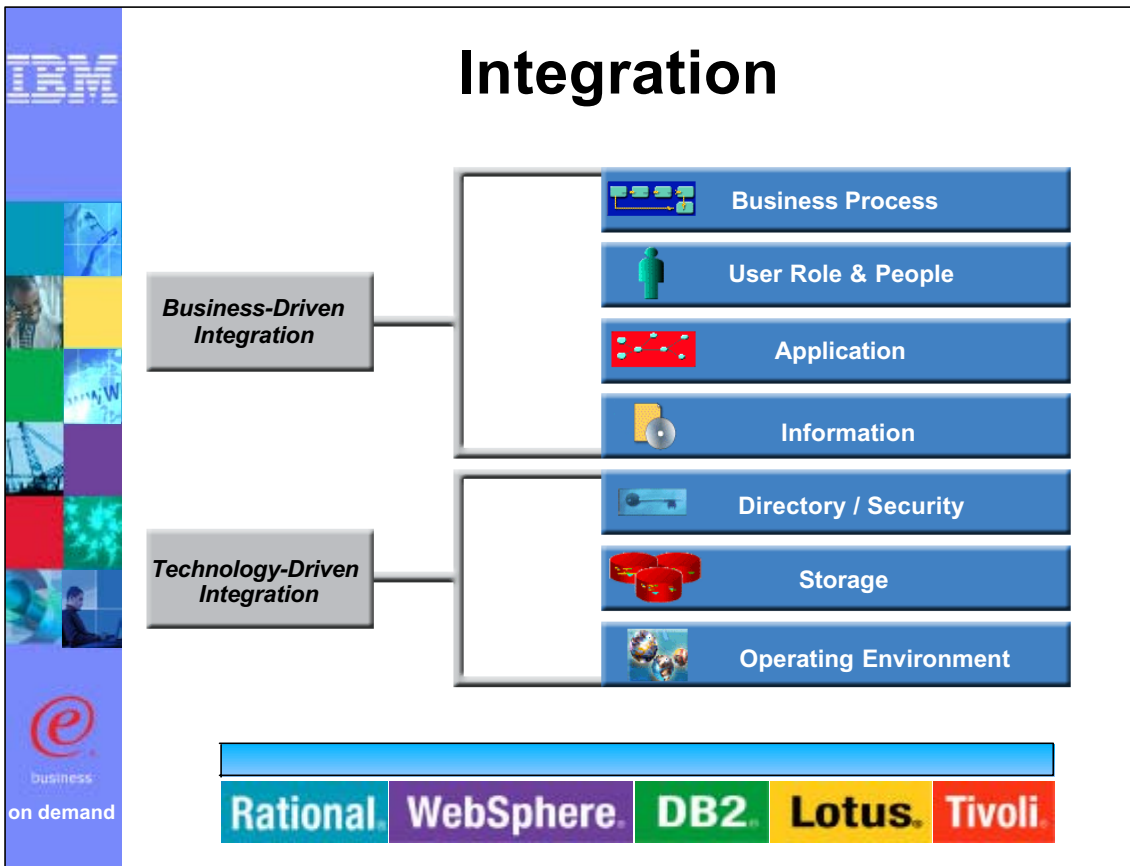

# Integration

- Integrated from Demand to Delivery
- Integration for heterogeneous environments
- Infrastructure optimized for Industry

Business Integration (inter- & intra-enterprise)

# Information Integration

## The Building Blocks

Access	Web services	SQL	XQuery
Features	Store Search Federate Cache	Transform	Replicate
Foundation	Scalable	Manageable	Available

**Information Integration**

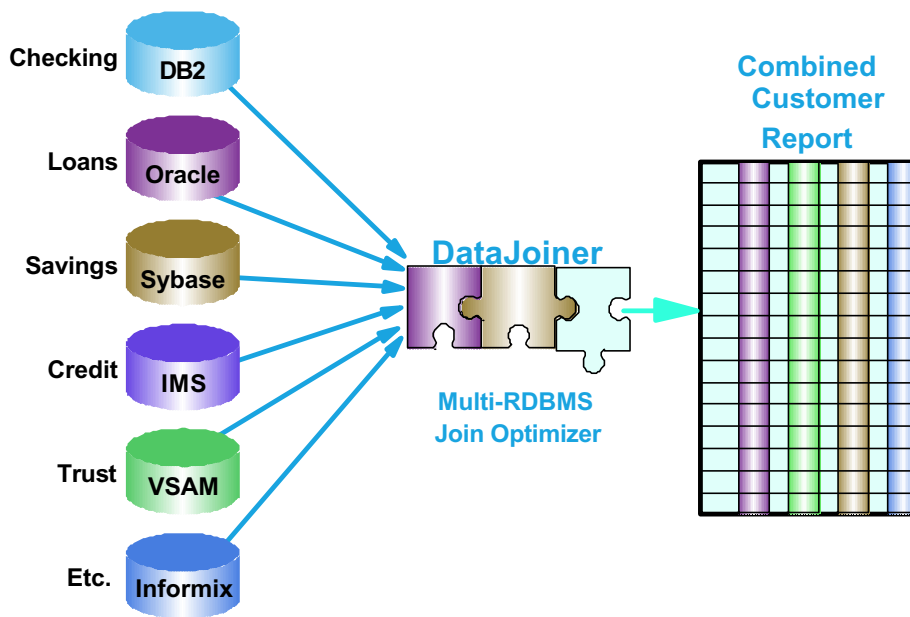

# Information Integration

**Information Integration**

# DB2 Information Integrator

**Information Integration Optimized**

# Application Connectivity

## WebSphere MQ

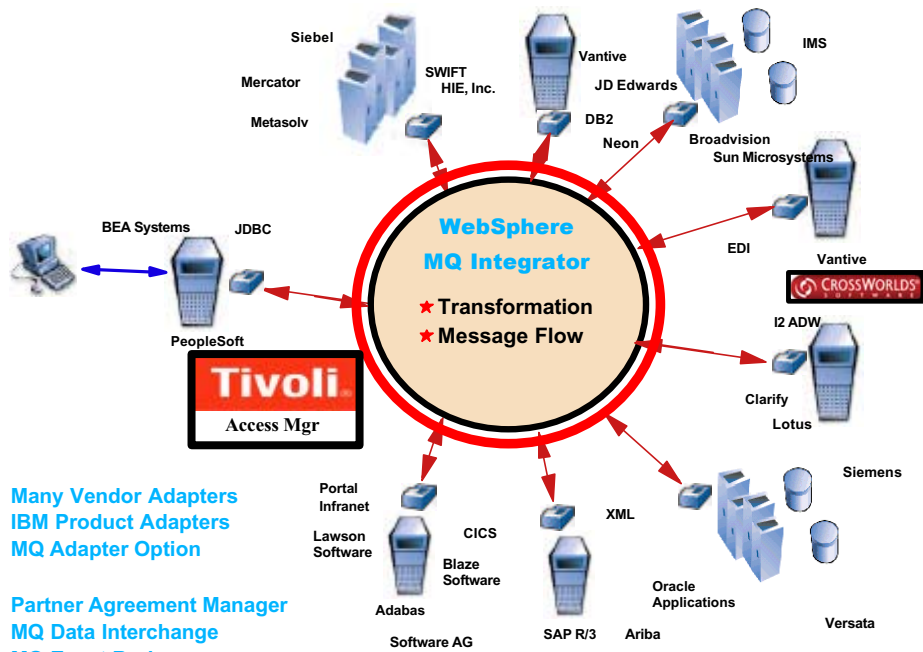

- Message Queuing:
  - ▶ Simplifies programming
  - ▶ Asynchronous operation
  - ▶ Assured delivery, once and only once

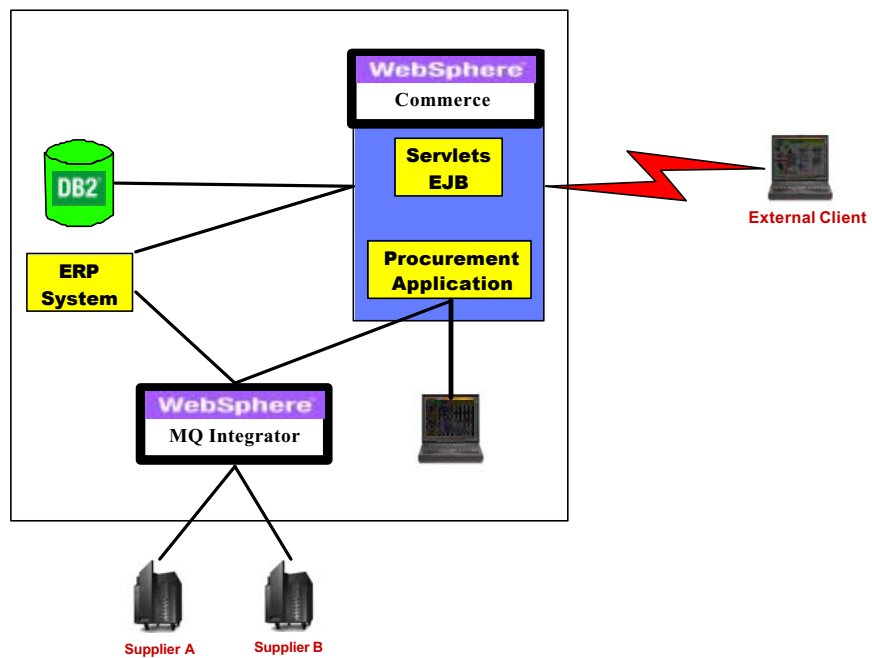

**Available on 39 platforms, 70% market share in the messaging market**

# WebSphere MQ Integrator

# Integration

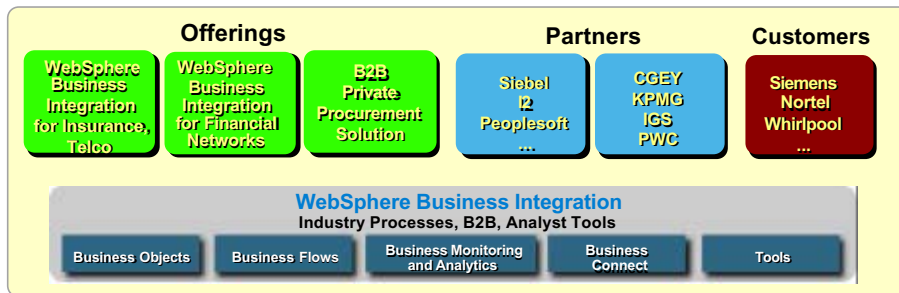

# Business Process Integration

- ◆ Work flows according to process rules and roles
- ◆ Business rules are enforced

Incorporating technology from former products and acquisitions such as:

- MQ Workflow
- CrossWorlds
- Holisofx

- ▶ Automotive
- ▶ Electronics
- ▶ Financial Markets
- ▶ Government
- ▶ Retail
- ▶ Telecommunications

# WebSphere Business Integration

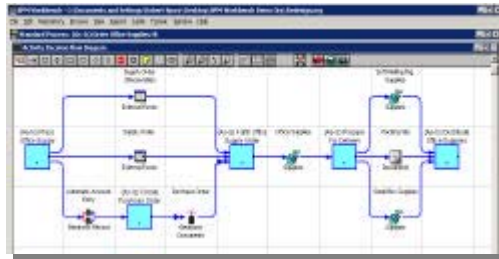

- Model** and simulate the business processes.
- Integrate** the islands of processing.
- Connect** customers and business partners.
- Monitor** the business processes end to end.
- Manage** the business effectiveness and improve the processes.

***Deployed Separately or Together to meet project needs.***

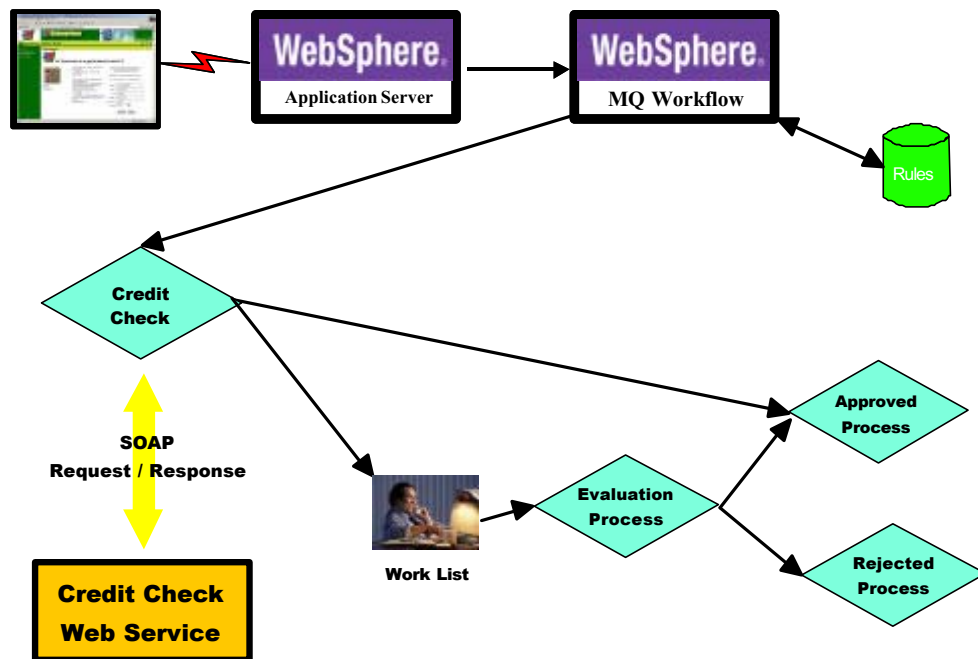

# Business Process Management

Activity	Instance ID	Start Date	End Date	Status	Owner	Priority	Instance Type
Activity 1	Instance 1	2008-08-14 10:00:00	2008-08-14 10:00:00	Completed	Admin	1	Normal
Activity 2	Instance 2	2008-08-14 10:00:00	2008-08-14 10:00:00	Completed	Admin	1	Normal
Activity 3	Instance 3	2008-08-14 10:00:00	2008-08-14 10:00:00	Completed	Admin	1	Normal
Activity 4	Instance 4	2008-08-14 10:00:00	2008-08-14 10:00:00	Completed	Admin	1	Normal

# Process Management

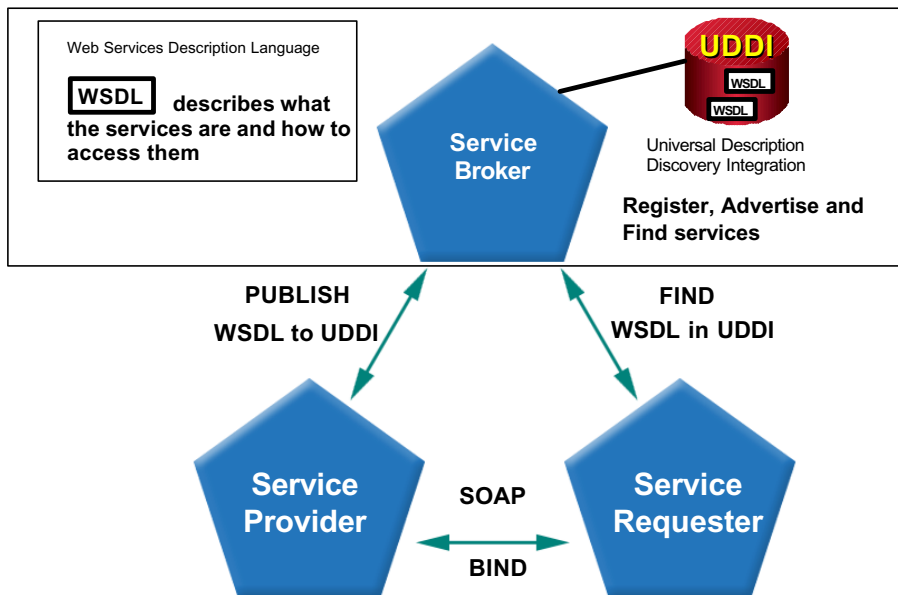

# Web Services

Web Services enables e-business on demand in order to leverage internal or external resources.

- › Dynamic integration between businesses
- › Providing service to customers
- › Accessing services from partners and suppliers
- › Accelerate and reduce the cost of integration
- › Save on infrastructure deployment and manpower
- › Reduce skill requirements

# Web Services

*Applications interact with each other using Web standards*

# Web Services Standards

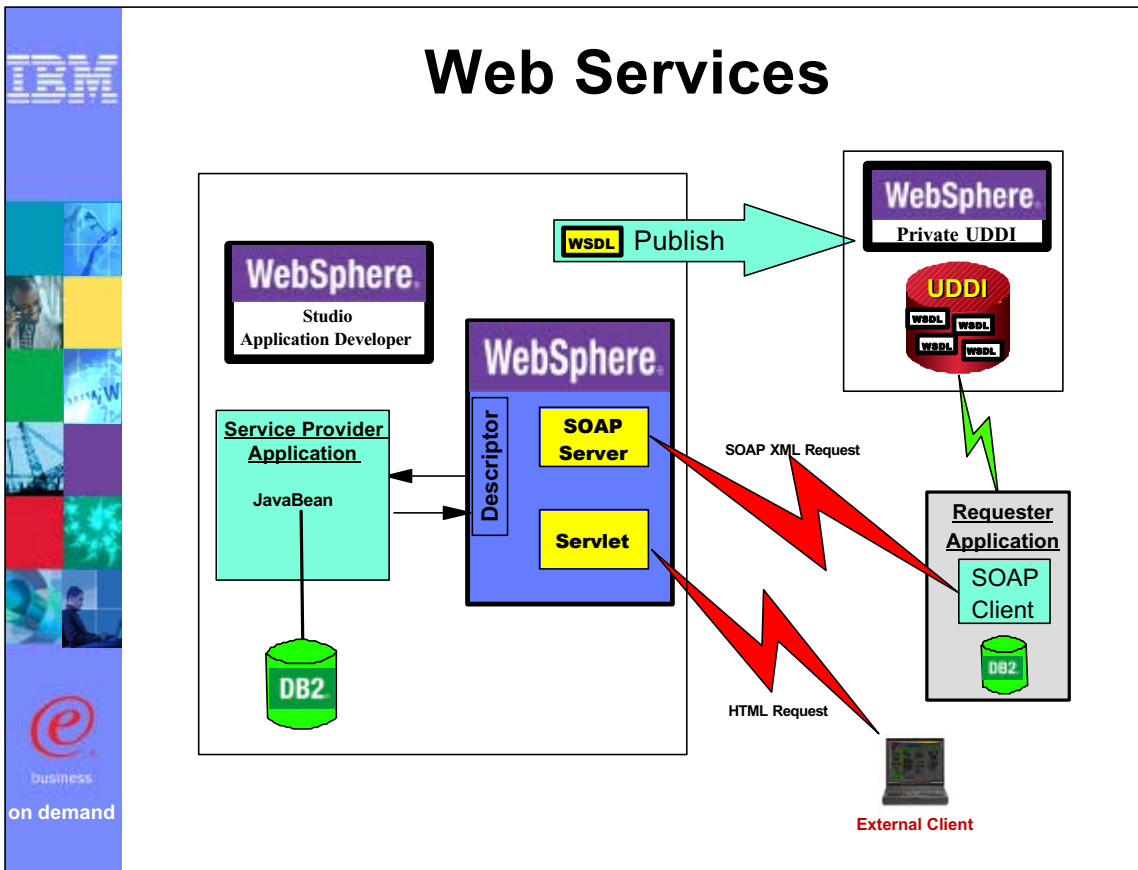

- Standardized specifications:
  - ▶ **XML** defines a universal way of representing any data, making data integration simple
  - ▶ **SOAP** uses XML as messages to define a universal Web service requests, making process integration simple
  - ▶ **WSDL** specifies all information needed for integration, making universal application assembly tools possible
  - ▶ **UDDI** is a special Web service which allows users and applications to locate required Web services
- Two important advances:
  - ▶ **WS-I.org** formed to achieve seamless interoperability
  - ▶ **WS-Security** defines message-level security for SOAP
  - ▶ **BPEL4WS** business process execution language for Web services (workflow specification)

# DB2 Web Query Tool

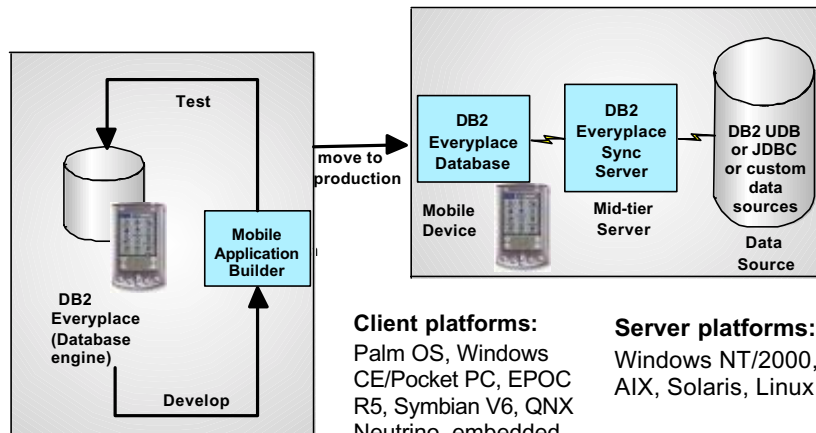

**Client Environments**

# DB2 Everyplace Solution

Application Development using C/C++ and Java with industry standard tools or MAB.

**Client platforms:**

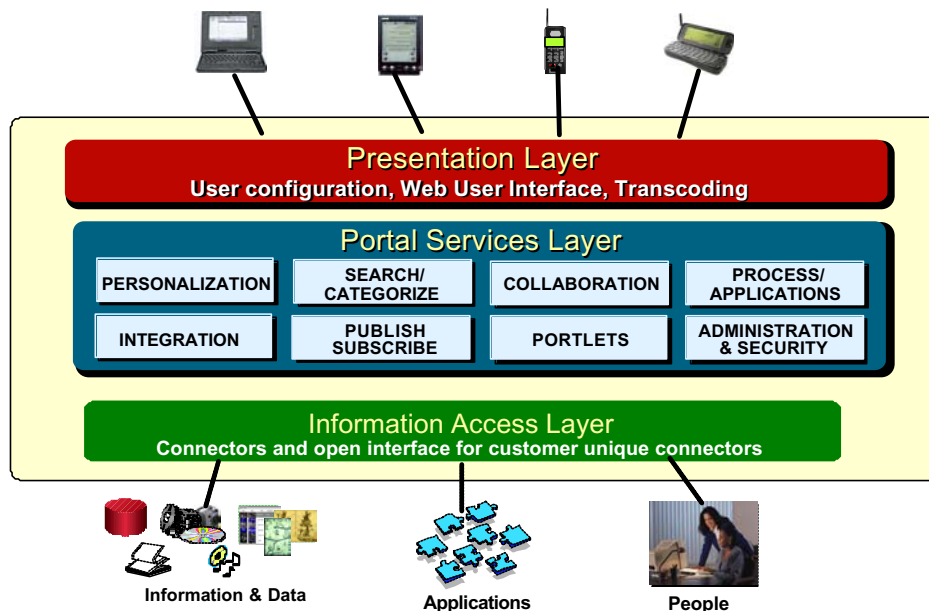

Palm OS, Windows CE/Pocket PC, EPOC R5, Symbian V6, QNX Neutrino, embedded Linux, Linux, and Win32

**Server platforms:**

Windows NT/2000, AIX, Solaris, Linux

# Portals

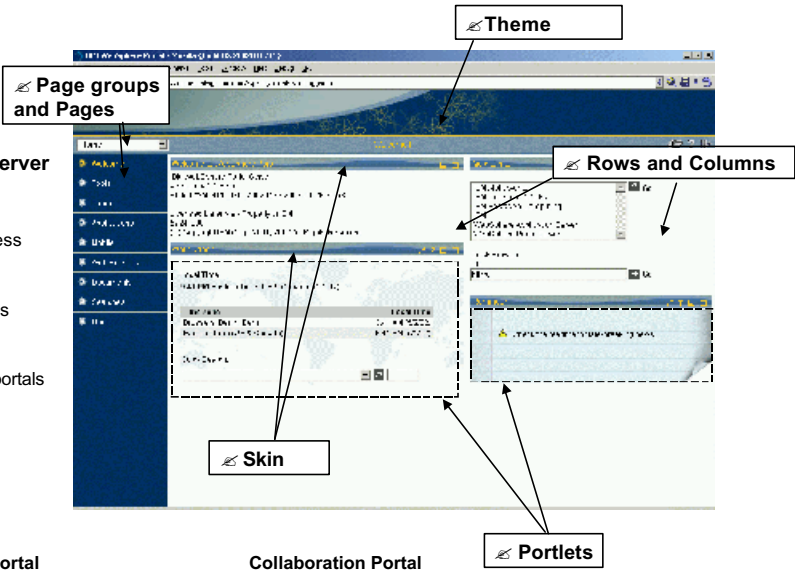

e business on demand

# WebSphere Portal

## The basic portal server

- presentation
- content access
- application access
- personalization
- portlets
- users and groups
- security
- web services
- multi-language portals
- accessibility

## Enterprise Portal

- security manager
- enterprise content management
- IBM Lotus Instant Messaging and IBM Lotus Team Workplace licenses (emeetings, application sharing, whiteboards)

## Collaboration Portal

- places and memberships
- people and place awareness
- instant messaging
- team rooms
- extended search
- site analytics

## Express

- User based

# on demand Management

## Understanding the Technology

- *Manage business processes*
  - *Service Levels*
  - *Relationships*

- *Manage IT Resources*
  - *Provision IT to support business processes*
  - *Align IT resources with business policies*

- *Manage users & experience*
  - *Identity details*
  - *Security*
  - *Roles & responsibilities*
  - *Provision based on roles*
  - *Transaction performance*

## Tivoli Portfolio

### Configuration & Operations

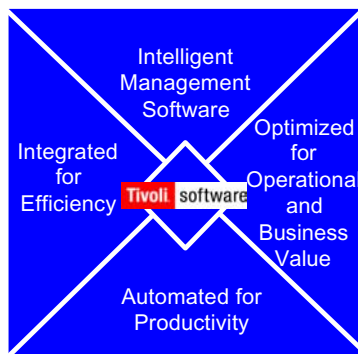

Best practices through role-based configuration

- Reduce costs
- Automate control
- Improve efficiencies

### Security Management

Trusted identity management as an e-business cornerstone

- Automate identity management
- Mitigate security risks
- Maximize business efficiency and ROI

### Performance & Availability

Business success based on IT alignment

- Integrated best practices & autonomic technology for rapid ROI
- Rapid deployment

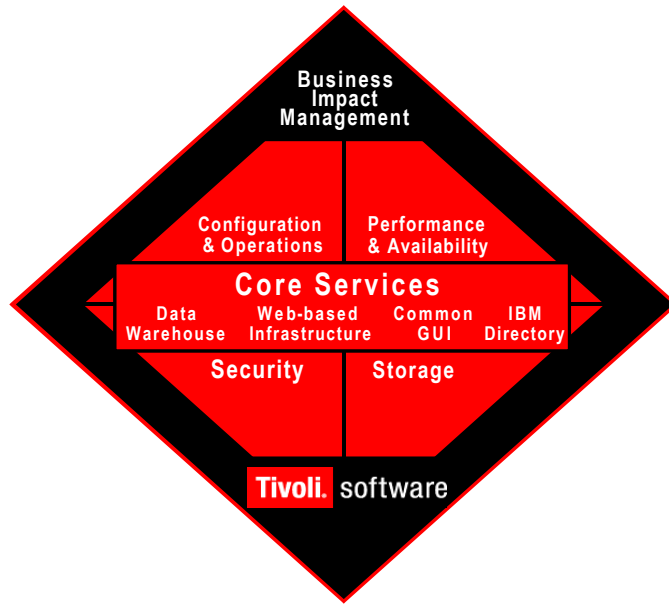

### Storage Management

Business continuance

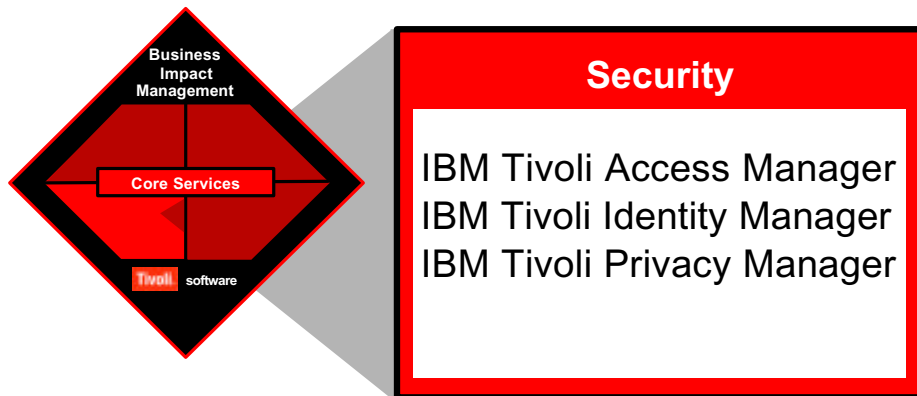

- Comprehensive management of system wide storage for ROI
- Simplified SAN management
- Backup & recovery
