

Delivering Results with Predictive Analytics

Michael Alessandro & Rob Risany,
IBM

Information On Demand 2010

The Premier Forum for Information & Analytics

Gain Insight. Optimize Results.

Agenda

- Introduction to SPSS and Predictive Analytics
- Key application areas
- Q&A

SPSS: Industry Leader in Predictive Analytics

- 40+ year heritage
- Drove the creation of the Predictive Analytics market
- Acquired by IBM October 2009

**Enables organizations to predict future events
and proactively act upon that insight to drive
better business outcomes**

Deploying the Predictive Advantage

Predict & Act

Transformational Deployment of Predictive Models:

- Leverage current data to drive better decisions
- Make robust predictions on current and future cases
- Embed predictive models into points of interaction

↑
"NOW"

Insight Driven Predictive Analytics:

- Algorithms automatically discover significant patterns
- "Learn" from historical data – create *predictive models*
- Valuable insight into behavior improves strategic and operational decision making

↑
"NOW"

Traditional BI and Conventional Analysis:

- KPIs and metrics provide insight
- Aggregate data up to and including current point in time
- Self guided exploration of data

↑
"NOW"

Sense & Respond

IDC - Independent Financial Impact Studies

*“The median ROI for the projects that **incorporated predictive technologies** was 145%, compared with a median ROI of 89% for those projects that did not.”*

Source: IDC, “Predictive Analytics and ROI: Lessons from IDC’s Financial Impact Study”

Customer Analytics

Acquire, Grow & Retain

Two Sides to Customer Analytics

Attract more and better customers

Grow customer value

Retain profitable customers

Example: Customer Retention

Example: Marketing & Offering Optimization

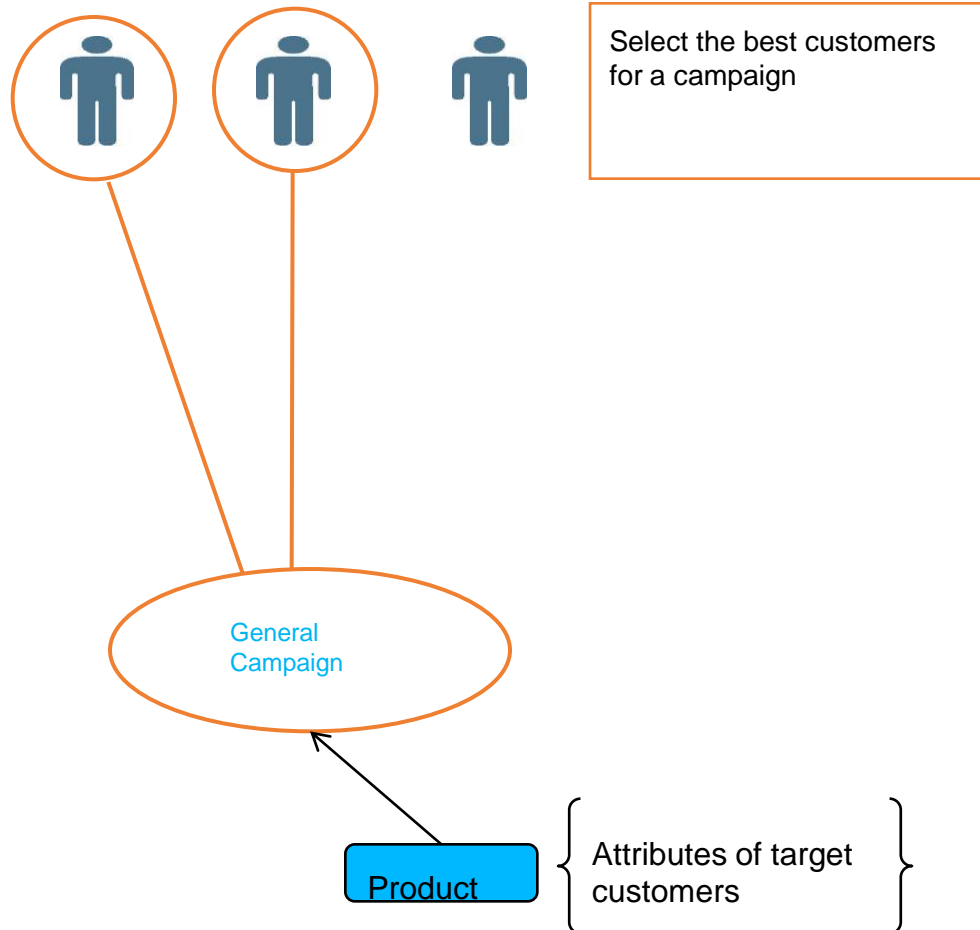

What We've All Experienced: Mass Marketing

Traditional Approach

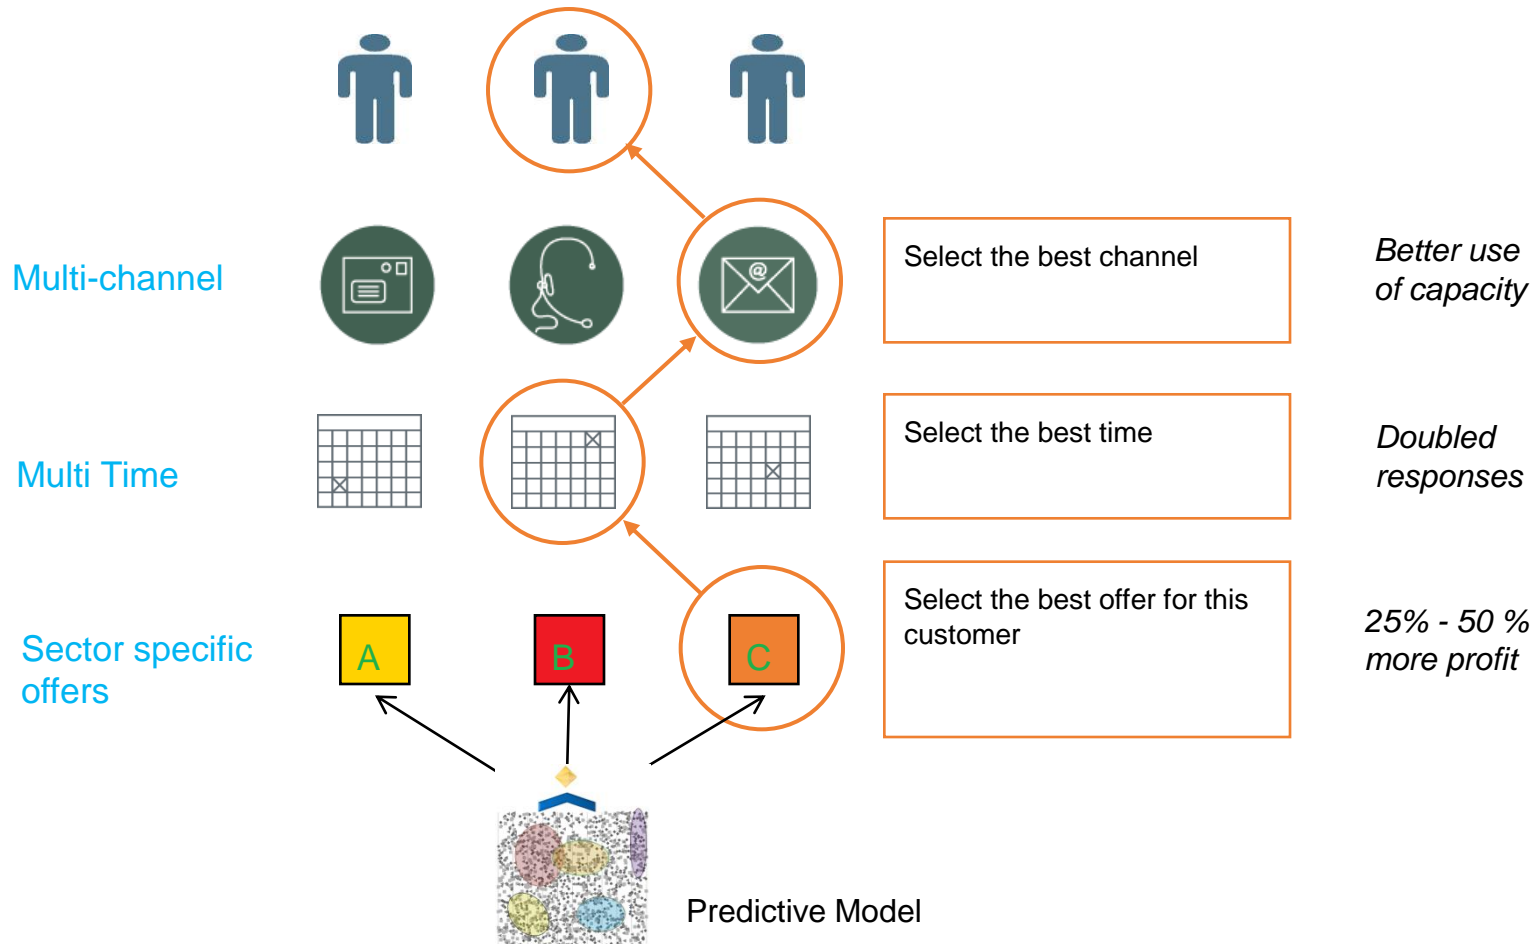

Generalize the needs faced by potential customers, **and then blanket the population** or people with those attributes

The IBM SPSS Approach: Customer Centric Marketing

SPSS Predictive Analytics:
Predict the needs, preferences and risks of *individual* customers

Customer Centric Marketing

Optimize the web experience of key customers

The screenshot shows the DNB Bank website interface. At the top, there is a search bar and navigation links for home, help, sitemap, and log in. The main banner features a family on a beach with the text "DNB banking, make your life more simple". Below the banner is a navigation menu with links for home, about us, press room, products & services, investor relations, career, and online banking. On the left, there is a sidebar with links for Overview, Accounts, Payments & Transfers, Investments, and Account Services. The main content area displays a personalized welcome message: "Welcome back! Customer Number: 10853. Last login: Wednesday 23 april 2009 12:01". Below this, there are two highlighted offers: "Theatre" and "Home Equity Loan", both with "Find out more" links. A table of accounts is shown below, and a promotional banner for "9 months cd at 3.25% APY" is visible on the right.

Bank account nr:	Product	Amount
51.82.33.145	Savings	USD 5,618.34
43.01.01.234	Mortgage 1	USD 123,333.00
43.01.01.134	Mortgage 2	USD 200,000.00
53.06.07.123	Bankaccount	USD 8,899.00

Personalized marketing offers, presented automatically to each and every on-line customer

Recommend related products

Follow-up based on purchases and experience

Customer Retention: Reactive Mode

Retain profitable customers

Customers Order / Buy Goods

Vendor passively supplies to customers

Customer "uses" good—some happily, some not

Management Reviews Sales Reports

Dissatisfied customers defect

Vendor delivers / supplies to fewer customers

Extremely unhappy customers "infect" others

Bad numbers start to make people nervous.....

The IBM SPSS Approach: Proactive Mode

Retain profitable customers

Customers selects the RIGHT product

Vendor actively recommend services which are best for customer

Customer "uses" good—some happily, some not

Outreach to predicted At risk customers

Impressed customers tell friends

Company gets better at providing what customers need

Good numbers get people promoted

Customer Analytics in Action: Major Nordic Bank Issuing 900,000 credit contracts per year

- BEFORE:
 - Issuing cost per contract: 240 EUR
 - Credit Card issuing on average in 6 working days
 - 3,500 people involved
- AFTER:
 - Decisions in 30 Seconds
 - Excluded human error and waiting time in issuing credit contracts
 - Decreased headcount involved in Credit issuing process 9 times
 - Improved employee productivity: 833%
 - Cost per credit contract issued decreased from 240€ → 32 €

Threat Analytics

Detect, Mitigate, Prevent

INFINITY

Embedded predictive models in claims process to assess claims risk and identify subrogation opportunities

- *Improved detection of fraudulent claims*
- *Time to refer suspicious claims for investigation reduced from 14 days to under 24 hours*
- *Time to identify subrogation opportunities reduced from 26 days to 10 days*
- *Subrogation rate increased from 15-16% to 19-20%*
- *403% Gain in Three Months!*

Predictive Analytics used in:

- Credit Risk Management
- Fraud detection
- Anti-money laundering
- Policing/security
- Network Intrusion Detection

Business Scenario: Border Protection

**A stream of cars
approaches a
border crossing.**

Asset Analytics

Managing, Maintaining, & Securing Assets

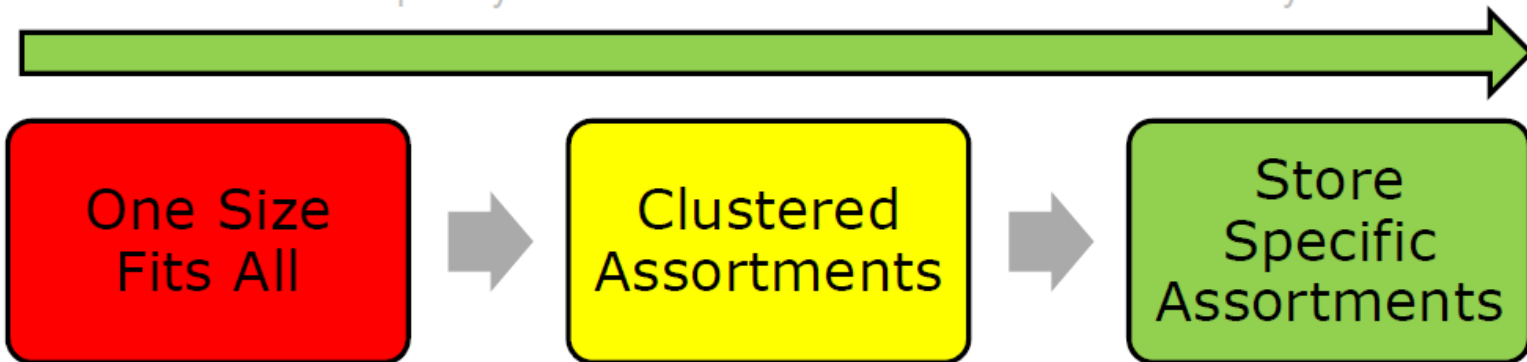

The Key to Meeting Customer Needs in Retail

- Have the Right Stuff...
- ...at the right location...
-at the right time.....
-and with the right stuff together!

More Complexity • More Effort • Better Assortment Accuracy

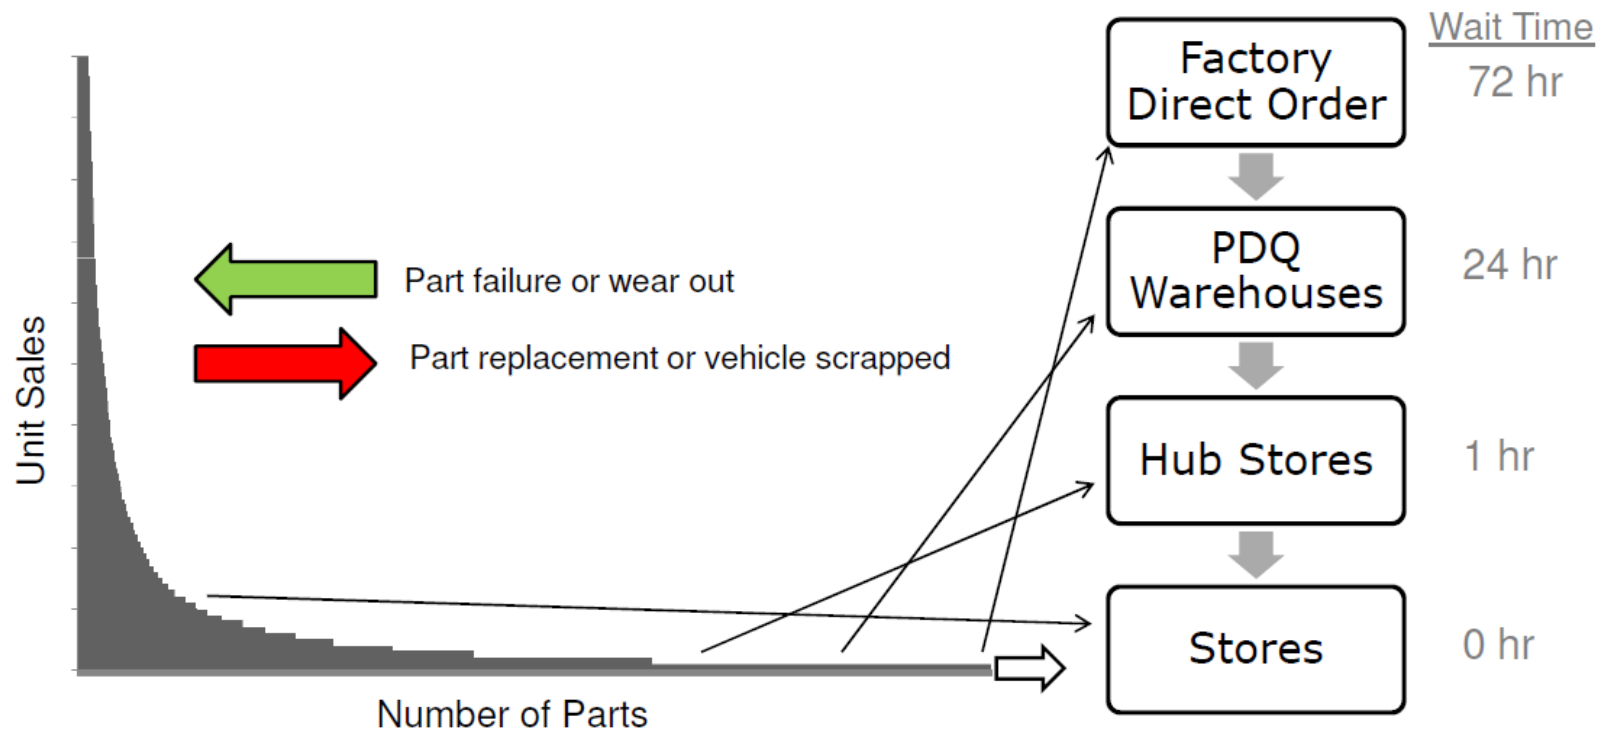

Long Tail Supply Chain Management

**Major Auto
Parts
Retailer**

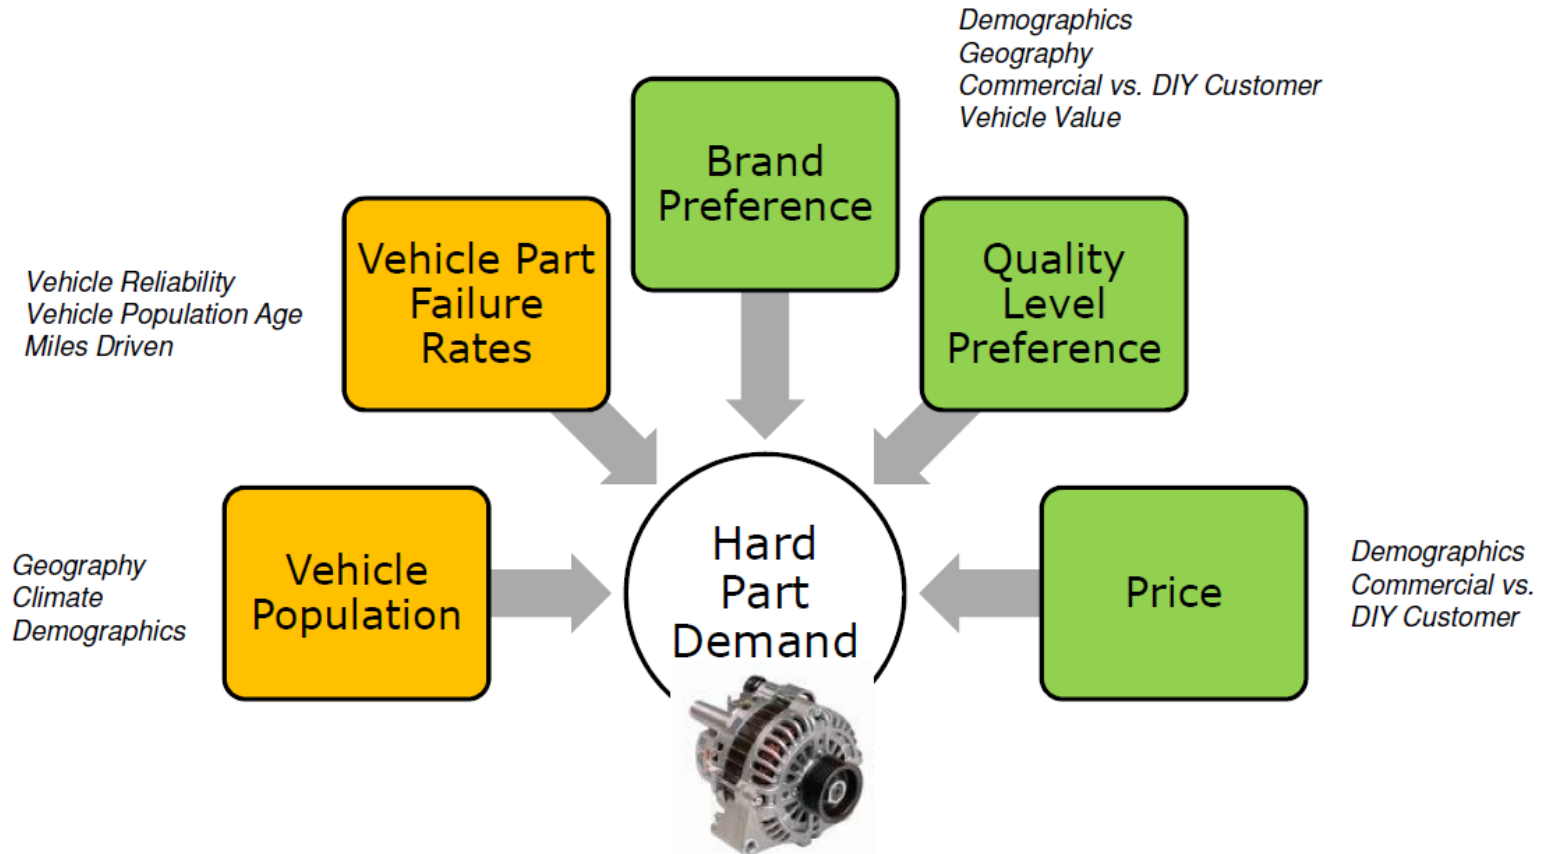

- About 80% of a store's unit sales come from 20% of the stocked parts
- Advance is a long tail retailer confined to a traditional brick-n-mortar store

Many factors drive hard part demand

**Major Auto
Parts
Retailer**

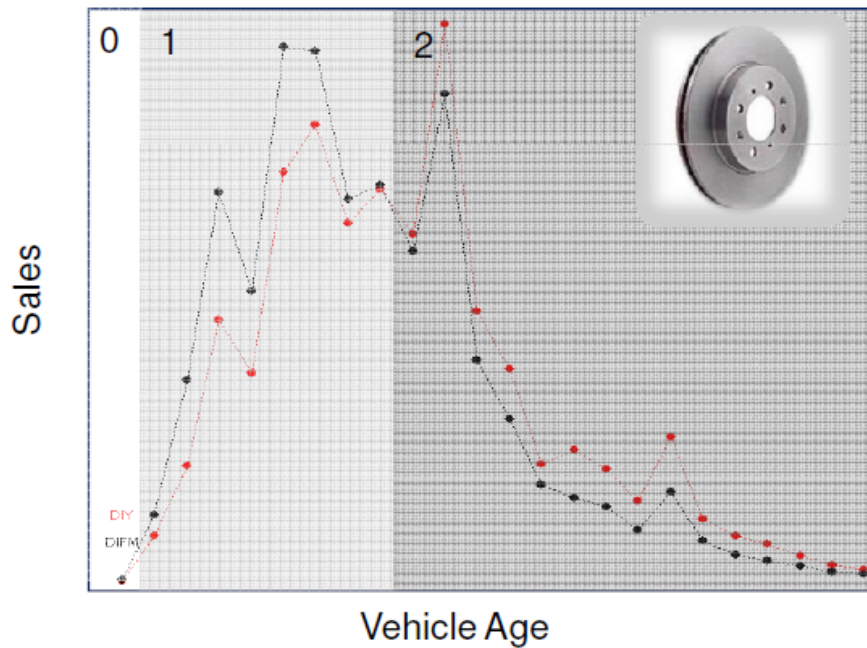

Descriptive Analysis of Vehicle Lifecycle Tells the Story

- Phase 0: Warranty repair
- Phase 1: Commercial > DIY – Increasing Sales
- Phase 2: DIY > Commercial – Decreasing Sales

Vehicle Part Failure Rates

Brake Rotors

Crank Shaft Repair Sleeves

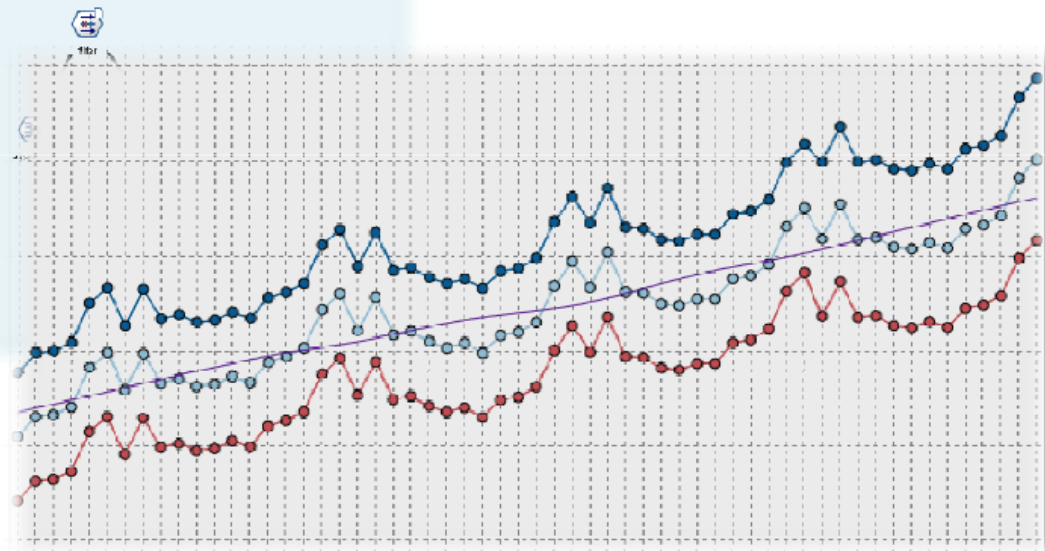

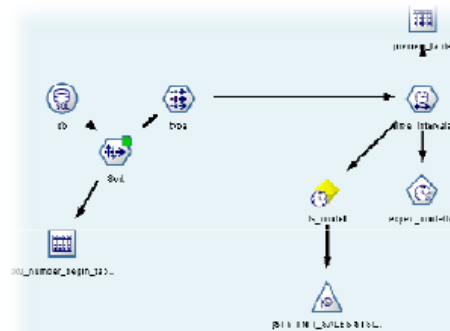

Forecasting Models Examine Each Part and Predict What's Next

- Forecasting models help determine where each part is in the repair cycle

PASW Modeler

Association Models Help Craft Ideal Product Mix

- Having all the right parts together to complete the job is key to completing the sale
- Our Parts Pros (in the stores) have tremendous parts knowledge and let the customers know which parts are required
- We mine the sales transactions (almost 1 billion) to learn these associations (and customer preferences) to ensure our assortments have the parts co-located

Water Pump

Carma

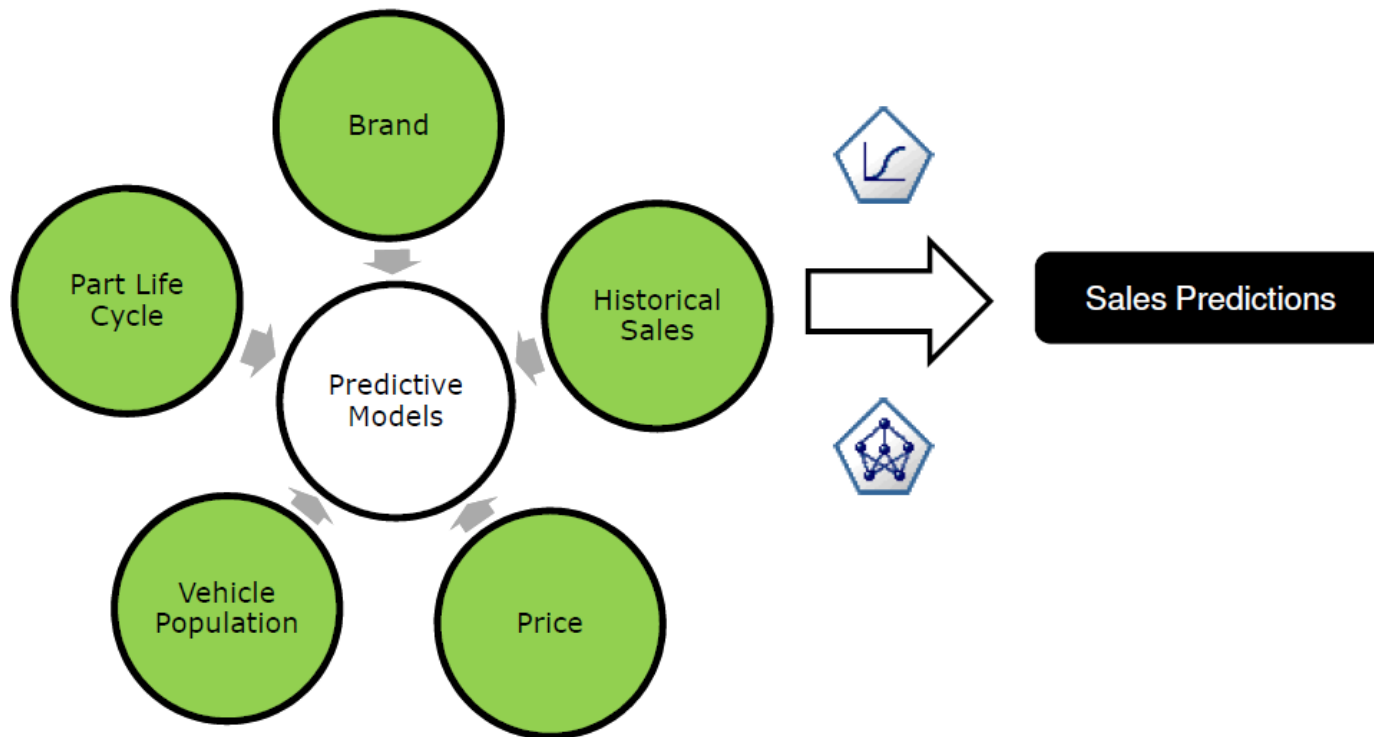

Timing Belt

Multiple algorithms are used to determine location specific nuances

- Logistic regression, decision trees, regression and neural network predictive models help determine which parts will sell in specific locations

Embedded predictive analytics into real world manufacturing processes to identify part castings with a high tendency to failure

- *Increased efficiency and accuracy of quality control processes resulting in a **60% reduction in failure costs***
- *Dynamic notification to clients of upcoming failures*
