

IBM CICS Transaction Gateway for OS/2 - README v3.1.0

Welcome to the IBM CICS Transaction Gateway ...

This file contains important information about the IBM CICS Transaction Gateway that may not be available in the printed documentation.

In the following information <ctg-dir> refers to the directory in which you installed the Transaction Gateway.

Summary of Topics

=====

- CICS Transaction Gateway SSL support and VAJ v3.0
- IBM NetStation support
- DBCS and the Java APIs and Terminal Servlet
- Service and Updates
- Client README information

CICS Transaction Gateway SSL support and VAJ v3.0

=====

When importing the CICS Transaction Gateway v3.1 classes into Visual Age for Java v3.0 you may be warned that a package containing com.ibm.sslight.* has been replaced. This is because the CICS Transaction Gateway ships with a later level of SSLight (SSL). Please ensure that this level of com.ibm.sslight remains available to your client application when developing with Visual Age for Java.

IBM NetStation Support

=====

Applets running within the JVM supplied with the NC browser fail to make successful connections with the CICS Transaction Gateway. Message number 6652E is returned to the Applet. Currently there is no solution to this problem.

DBCS and the Java APIs and Terminal Servlet

=====

The higher level EPI Classes, EPI Beans and the Terminal Servlet do not support 3270 datastreams that contain DBCS fields.

Service and Updates

=====

Service and updates will be made available via the Internet.
