

Changes to CICS Transaction Gateway for OS/390 Readme

Additional sections:

CICS Transaction Server v1.2 and v1.3 - APARS

CTS v1.2 users require PQ31270 to be applied to the product before CICS Transaction Gateway v3.1 can be used.

CTS v1.3 users require PQ25809 to be applied to the product before CICS Transaction Gateway v3.1 can be used.

CICS Transaction Gateway SSL support and VAJ v3.0

=====

When importing the CICS Transaction Gateway v3.1 classes into Visual Age for Java v3.0 you may be warned that a package containing com.ibm.sslight.* has been replaced. This is because the CICS Transaction Gateway ships with a later level of SSLight (SSL). Please ensure that this level of com.ibm.sslight remains available to your client application when developing with Visual Age for Java.

Documentation

=====

To view the PDF documentation you need to install the PDF library on a workstation that can run the Adobe Acrobat Reader. Currently there is no Adobe Acrobat Reader available for OS/390.

Adobe Acrobat Readers are provided on the CD-ROM, you will find them in a subdirectory for each platform under the Adobe directory. Choose your platform and run the Reader install program.

Later versions of these Readers may be available, see <http://www.adobe.com>

The PDF library for this product is located in the /ctg/docs directory. This library (cclha60i.tar.Z) is a compressed TAR archive format, this can be transferred (in binary format) to a number of platforms and extracted. TAR archives are standard for UNIX platforms, however, Windows/OS-2 have a number of tools available which can extract this archive format.

If you have the product CD-ROM, you will also find individual PDF books in the PDF directory.

Replace previous list with:

APAR Fixes in v3.1.0

PQ27201 The Comma (,) is not allowed as a decimal point
