CICS® Transaction Server for OS/390®

CICS Messages and Codes

Release 3

GC33-1694-02

Note!

Before using this information and the product it supports, be sure to read the general information under “Notices” on page vii.

Third edition, March 1999

This edition applies to Release 3 of CICS Transaction Server for OS/390, program number 5655-147, and to all subsequent versions, releases, and modifications until otherwise indicated in new editions. Make sure you are using the correct edition for the level of product.

The technical changes for this edition are summarized under "Summary of Changes," and are indicated by a vertical bar to the left of a change.

Order publications through your IBM representative or the IBM branch office serving your locality. Publications are not stocked at the address given below.

At the back of this publication is a page entitled “Sending your comments to IBM”. If you want to make comments, but the methods described are not available to you, please address them to:

IBM United Kingdom Laboratories, Information Development,
Mail Point 095, Hursley Park, Winchester, Hampshire, England, SO21 2JN.

When you send information to IBM, you grant IBM a nonexclusive right to use or distribute the information in any way it believes appropriate without incurring any obligation to you.

Preface

What this manual is about: This manual contains messages unique to CICS Transaction Server for OS/390 Release 3 and is intended for use as a quick reference. It is closely linked with the *CICS Problem Determination Guide* which should also be consulted if a message indicates that there is a CICS problem.

Who this manual is for: This manual is for anybody who needs to understand and respond to CICS messages, including system operators, system programmers, and certain terminal users.

What you need to know to understand this manual: You can refer to this manual for the meaning of a message without understanding the manual as a whole. Your understanding of CICS Transaction Server for OS/390 Release 3, however, will be enhanced by a knowledge of the types of message CICS produces, the different places it sends messages, and the different audiences it intends to reach.

How to use this manual: When you are using CICS as a system operator or terminal user, or scanning a queue containing CICS messages, have this manual available as a reference.

Online Messages and Codes: CICS Transaction Server for OS/390 Release 3 messages and abend code descriptions documented in this manual (with the exception of AXM messages, a small number of numeric abends and Transaction Dump Codes) are available online using the CICS transaction CMAC. For guidance on using CMAC, see the *CICS Supplied Transactions* manual.

Notes on terminology

The following terminology is used:

CICS used without any qualification refers to the CICS element of IBM CICS Transaction Server for OS/390

MVS refers to the operating system, which can either be an element of OS/390, or MVS/Enterprise System Architecture System Product (MVS/ESA SP).

DL/I refers to IMS/ESA DL/I (Data Language/I)

VTAM refers to ACF/VTAM

TCAM refers to the DCB interface of ACF/TCAM.

APPC is used throughout this manual to refer to LUTYPE6.2 (LU6.2).

“Module” is used in this manual to refer to a program unit that is discrete and identifiable with respect to the input or output from an assembler or compiler. For the purposes of this manual, a module is the minimal serviceable object.

Determining if a publication is current

IBM regularly updates its publications with new and changed information. When first published, both hardcopy and BookManager softcopy versions of a publication are usually in step. However, due to the time required to print and distribute hardcopy books, the BookManager version is more likely to have had last-minute changes made to it before publication.

Subsequent updates will probably be available in softcopy before they are available in hardcopy. This means that at any time from the availability of a release, softcopy versions should be regarded as the most up-to-date.

For CICS Transaction Server books, these softcopy updates appear regularly on the *Transaction Processing and Data Collection Kit* CD-ROM, SK2T-0730-xx. Each reissue of the collection kit is indicated by an updated order number suffix (the -xx part). For example, collection kit SK2T-0730-06 is more up-to-date than SK2T-0730-05. The collection kit is also clearly dated on the cover.

Updates to the softcopy are clearly marked by revision codes (usually a “#” character) to the left of the changes.

Book structure

This book contains:

CICS Transaction Server for OS/390

CICS Transaction Server for OS/390: Planning for Installation	GC33-1789
CICS Transaction Server for OS/390 Release Guide	GC34-5352
CICS Transaction Server for OS/390 Migration Guide	GC34-5353

Summary of changes

This book is based on the CICS Transaction Server for OS/390 Release 2 edition, GC33-1694-01. It has been updated to incorporate changes made for CICS Transaction Server for OS/390 Release 3. Changes since the last edition are indicated by vertical bars to the left of the changes.

Chapter 1. DFH messages

While CICS is running, it can produce several types of messages.

- Console messages advise the system operator of execution progress, or request a decision.
- Certain CICS-supplied support programs communicate directly with terminal operators.
- CICS management modules and support programs log significant events and error occurrences to transient data destinations; for example, to the control system master terminal (CSMT), or to the CICS database control log (CDBC) for the CICS-DBCTL interface.
- The CICS message switching program (DFHMSP) generates message switching responses (described in the *CICS Supplied Transactions* manual).
- CICS directs informational macro notes (mnotes) to programmers. These are not documented.
- Messages produced by CICS utility programs such as DFH£MOLS and DFHMNDUP. These messages are self-explanatory and are not documented.

With the exception of the AXM messages, a small number of numeric abends and the Transaction Dump Codes, the messages described in this book can also be viewed online using the CICS transaction CMAC. For guidance on using CMAC, see the *CICS Supplied Transactions* manual.

CICS DFH message Identifiers

Message identifiers are of two types.

DFHnnnn identifiers

These consist of the prefix “DFH” followed by a four digit message number. “DFH” is the IBM assigned identifier for CICS modules. The first two digits are the CICS module reference code as follows:

01 DFHSSIN

42 DFHZCNR

51 DFHCSDUP

52 DFHCSDUP

55 DFHCSDUP

56 DFHCSDUP

7x Command-level translators

The last two digits are assigned by CICS to identify the message or group of messages within an assembled program.

DFHccnnnn identifiers

These consist of the prefix “DFH” followed by a two-letter component identifier (*cc*), and a four-digit message number (*nnnn*). The component identifier shows the domain or the component which issues the message. Here is a list of component identifiers with associated domains and components:

AC The abnormal condition program component

AI The auto-install terminal model manager (AITM)

AM The RDO allocation manager

AP The application domain

AU The transaction affinities utility

| **BA** The CICS business transaction services (BTS) domain

BR Bridging to 3270 transactions

CA RDO command utility routine

CC The CICS catalog domain (local and global)

CE The sign on program component

| **CF** CICS coupling facility data tables server

CP The CPI Communications component

CR The ISC remote scheduler component

| **CZ** The CICS class libraries domain

DB The CICS database control component

DD The directory manager

| **DH** Document handler component

DM The domain manager domain

DS The dispatcher domain

DU The dump domain

DX The CICS database control component

| **EM** The Event Manager domain

ER The user backout program

EX The external CICS interface

FC The file control component
FE The FE terminal test program component
IC The interval control program
IN The indoubt testing tool
IR The interregion component
JC The online journal control component
KC The transaction/profile manager
KE The kernel domain
LD The loader domain
LG The logger domain
LM The lock manager domain
MC The BMS message control program component
ME The message domain
MN The monitor domain
MU The message editing utility program
MV The MVS RESMGR exit stub
| **NC** The Named counter sequence number server
NQ The enqueue manager domain
PA The parameter manager domain
PC The program control program component
PD The print dump exit routine DFHPDX
PG The program manager domain
PR The partner resource manager
PS The system spooler interface control module component
RD The RDO allocation manager
RM The recovery manager
RP CICS ONC RPC
RS The communications resynchronization program
RT The ISC transaction routing component
RU The recovery utility program
| **RX** The RRS-coordinated EXCI domain
| **SH** The Sheduler domain
SI The system initialization component
SK The sub task control program component
SM The storage manager domain
SN The signon component
| **SO** The CICS Sockets domain
SR The system recovery component
ST The statistics domain
SZ The front end programming interface (FEPI)
TC The terminal control program component
TD The transient data component
TF The terminal facility manager
TI The timer domain
TM The system termination program component
TO The terminal object resolution program component
TP The BMS terminal page retrieval program component
TR The trace domain
TS The temporary storage domain
UP The measured usage license charging support macro
US The user domain
WB The CICS Web Interface
XA The XRF alternate component
XC The XRF CICS availability manager
XG The XRF general component
XM The transaction manager
XO The XRF CICS availability manager
XQ The shared temporary storage queue pool server
XS The CICS security component
ZC The terminal control working set component
ZE The TCP error message writer component
ZN The syncpoint component

Thus the CICS message DFHAP0002 is issued from the application domain, identified by the two-character identifier AP.

Action codes

Certain messages (for example, DFHDB8208D) include an action code after the message identifier. Action codes give guidance to the operator of the type of action needed when the message appears on the system console. The following action codes are used:

A Immediate action (for example, mount a tape)

D Immediate decision (reply to a request, for example, enter “GO” or “CANCEL”)

E Eventual – action is required, but does not have to be taken immediately

I No action required (If issued via the message domain, these messages can be suppressed by specifying MSGLVL=0 as a system initialization override.)

Severity codes

Certain messages, especially those associated with messages to terminal operators and messages which come from CICS utilities, have a severity code. (DFHST0210 I, is an example.) A severity code indicates to the operator whether a message is associated with an error, and if so, how serious it is. The following severity codes are used:

E Error. Something has gone wrong and action is required of the user before CICS processing can continue.

I Information only. No action is required.

W Alert. Something may have gone wrong, a program loop for example, but CICS processing continues.

S Severe error. Something serious has gone wrong and immediate action is required. CICS processing is suspended until action has been taken.

Format of information

Information about each message is presented in the following format:

- **Message identifier** – in the form DFH*nnnn* or DFH*ccnnnn*
- **Message text** – the words and inserts which make up the message as displayed in CICS
- **Explanation** – the events leading to or following the production of the message
- **System action** – the action that has been or will be taken by CICS
- **User response** – the action recommended for the user (the console or terminal operator or system programmer)
- **Destination** – the device or log to which the message is sent. This is one of the following:
  - Console – refers to a terminal type attached to CICS. (Route codes are 2 and 11 unless otherwise stated.)
  - Terminal end user
  - TERMCDBC – terminals running the CDBC transaction.
  - SYSPRINT (System printer)
  - One of the following transient data queues:

    CADL VTAM resource definition log
    CAFF Transaction affinities utility messages
    CAIL Autoinstall terminal model manager (AITM) log
    CCPI Common programming interface for communications (CPI Communications) messages
    CCZM CICS classes
    CDBC CICS-DBCTL interface log
    CDB2 CICS DB2 messages
    CDUL Transaction dump messages
    CMIG Migration log for messages reporting the use of functions that are no longer supported
    CPLD PL/I dumps
    CPLI PL/I sysprint output
    CRDI Log for installed resource definitions
    CRPO ONC RPC messages
    CSBA BA domain message queue
    CSCC CICS client error log
    CSCS Sign on/off security log
    CSDH Document handler
    CSDL CEDA command log
    CSFL File allocation and related messages
    CSKL Log for transaction and profile resource definitions
    CSML Sign on/off messages
    CSMT Write term errors and abends from DFHTACP and DFHACP
    CSOO Sockets domain message queue
    CSPL Log for program resource definitions
    CSQL TDQUEUE messages
    CSRL Log for partner resource definitions
    CSSH Scheduler services
    CSSL Statistics log

CSTL Term I/O error messages from DFHTACP
CSNE Terminal error messages issued from DFHZNAC.
CSZL FEPI message queue
CWBO CICS Web Interface messages

Note: Destination CXRF is used by the alternate CICS system in an XRF environment until the other destinations are made available during the takeover.

- **Module(s)** – the name(s) of the module or modules that determined that the message should be sent. (This is not necessarily the module that issued the macro to write the message.)

XMEOUT parameters – Messages that can drive the XMEOUT global user exit include a list of XMEOUT parameters. The XMEOUT exit allows you to suppress or reroute messages that use the message domain.**:** A number of console messages should not be rerouted to a transient data queue. These include all DFHTD*nnnn* messages and certain DFHMEXM*nnnn* and DFHUS*nnnn* messages. A note to this effect is included in the descriptions of these messages.

For programming information about the XMEOUT user exit see the *CICS Customization Guide*

Route codes – Console messages can be sent to a number of console types. The type of console to which a particular message is sent is determined by the MVS route code. Each route code maps onto one console type. The meanings of the route codes normally used by CICS are as follows:

Code	Meaning
1	Master console action – indicates a change in system status demanding operator action
2	Master console information – indicates a change in system status (system default)
3	Tape pool status or other tape related information
4	Direct access pool status or other related information
5	Tape library information
6	Disk library information
7	Unit record pool information
8	Teleprocessing control status
9	System security checking
	Note: This route code suppresses the operator's reply on the screen and on SYSLOG
10	System error or maintenance information
11	Programmer information for the MVS log

Unless otherwise stated, console messages have the route codes '2' and '11'.

Message editing – You can use the message editing utility to change the text or language of those CICS messages that are issued via the message domain. Messages that cannot be changed using the utility include a note to this effect before the message destination. See the *CICS Operations and Utilities Guide* for more information about the message editing utility.

Console message reformatting – The "console message handling facility" is an optional feature of the CICS subsystem that can affect the appearance of CICS messages displayed on an MVS console. It is effective when you specify FORMATMSG=YES as an initialization parameter for the CICS subsystem, as described in the *CICS Transaction Server for OS/390 Installation Guide*. When this facility is used, it affects messages displayed on MVS system consoles in the following ways:

- The subsystem tries to ensure that all console messages issued by all CICS regions have a standard format. The standard format is:

```
Column number:    1           13       22
                  |           |        |
                  +DFHnnnn    applid   message-text
```

  The "plus" sign (+) is added by MVS to indicate that a problem-state program issued the message. It is not present when CICS issues the message while it is in supervisor state.

  The applid inserted into the message is the specific application identifier. This is the identifier that is specified in the system initialization parameter APPLID. It is the only operand when the XRF=NO system initialization parameter is specified, or the second operand when XRF=YES is specified.

- The subsystem adds routecodes specified in the ROUTECODES subsystem initialization parameter, so the messages might be sent to more console destinations than those implied in the body of this book.
- The subsystem reformats messages for all CICS releases, even those issued by CICS/OS/VS Version 1.

- The subsystem does not reformat messages that are issued by a CICS region that has not yet determined its applid. This includes messages that are issued while processing the system initialization table and its overrides.
- The subsystem routine that reformats the messages does not receive control until **after** the message has been recorded in the CICS job's job log. Therefore, the reformatting is not usually apparent in the job log.
- Messages issued by the message domain already contain the applid. The subsystem does not insert the applid into such messages, but it might insert blank characters to cause alignment into standard locations.
- If the original CICS message is a long one, adding the applid in the standard position might cause the message to exceed the maximum length for an MVS console message. In this case, the original message is suppressed (does not appear on the console), and a new message is issued using the MVS multiple-line console message service to split the message over several lines. Both the original message and perhaps several instances of the reformatted multiple-line message appear in the job log, but only one copy of the reformatted message is displayed on the console.
- For some messages where the applid normally follows a time and date stamp, inserting the applid in the standard position would have resulted in the applid being duplicated within the message. For these messages, the subsystem eliminates the time and date stamp, since they are available from other sources, and only one occurrence of the applid is shown.

Terminal identifiers – Some messages include a terminal identifier (*termid*) in the message text. This is normally shown as a 4-character identifier. However, when CICS cannot completely identify a terminal – for example, when intersystem communication is taking place, the terminal identifier is prefixed by the application identification (*applid*) of the system owning the terminal.

Abend code inserts – The transaction abend code insert (*abcode*) in some CICS messages is displayed as *'????'* when neither the EXEC CICS ABEND request nor the DFHPC TYPE=ABEND macro request specifies an abend code.

Dumps – A dump is generally available for printing when a CICS system abend or abnormal termination occurs, provided the relevant data set has been specified. The dump can be used for problem determination.

Terminology – The terms "abnormally terminates" and "abnormal termination" are frequently used in a general sense to relate, as applicable, to one of the following:

- The termination of CICS as a result of an MVS ABEND macro. (The term "abend" may also be used.)
- The termination of a transaction (task) as a result of a CICS transaction ABEND macro.

MVS user abend codes

DFH messages which accompany a CICS system, utility, or subtask abend have an associated MVS user abend code. Where possible, the value of this code is the numeric part of the corresponding DFH message. Thus DFH0305 has an 0305 user abend code. If an MVS abend code is issued but not the associated CICS message, the problem probably does not originate with CICS. See the description of the MVS abend code in the MVS *System Codes* manual for further information.

The highest possible value of an MVS user abend code is 4095, therefore any DFH message with a number higher than 4095 has an MVS user abend code that does not follow the above convention. The following are lists of the abend codes for messages with numbers above 4095, in order of abend code, and in order of message number.

Ordered by abend code

0108	DFH5263	0152	DFH5754	0195	DFHXG6440	0207	DFHXA6523
0121	DFH5100	0161	DFHAK5802	0196	DFHXG6441	0209	DFHXG6427

DFHXA6540	0200	DFHXG6444	0202	DFHXO6720	0224	DFH6529	0211

Notes:

1. All messages which appear in the JES job log are prefixed by a time stamp and job number. Because of this, some messages will have their message text truncated. If the full message text is required, consult the MVS log as all messages in the JES log are duplicated in the MVS system log.
2. User abend 0225 is internal to CICS. It is issued by DFHDTES when, during backout, an entry in a hash table has been marked empty where it should not be possible. This causes the CICS region to be abnormally terminated. If this abend occurs, you will need help to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFH01xx CICS subsystem messages

DFH0100 *CICS* **SUBSYSTEM IS NOW INITIALIZED**

Explanation: The CICS subsystem identified in an entry in an IEFSSNxx member of SYS1.PARMLIB has been successfully initialized.

System Action: None.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHSSIN

DFH0101 *CICS* **SUBSYSTEM WAS NOT INITIALIZED**

Explanation: The CICS subsystem identified in an entry in an IEFSSNxx member of SYS1.PARMLIB could not be successfully initialized.

System Action: The system continues without the services of the subsystem.

User Response: Use the preceding DFH01xx message to investigate the reason why the subsystem could not be initialized. After correction, re-IPL MVS to initialize the subsystem.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHSSIN

DFH0102 *CICS* **SUBSYSTEM COULD NOT LOAD MODULE** *module*

Explanation: When trying to initialize the CICS subsystem, module *module* could not be loaded into common storage. The module must either be in the MVS link pack or be capable of being loaded from a library in the MVS linklist concatenation by means of a LOAD GLOBAL=(YES,P) macro.

System Action: The system issues message DFH0101 and does not initialize the subsystem.

User Response: Investigate the reason why the module could not be loaded. After correction, re-IPL MVS to initialize the subsystem.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHSSIN

DFH0103 *CICS* **PARAMETER MEMBER NAME** *member* **IS INVALID**

Explanation: The third positional parameter in the subsystem definition for the CICS subsystem is not a valid member name because it contains more than eight characters. In the entry in an IEFSSNxx member of SYS1.PARMLIB that defines the CICS subsystem, a parameter is coded that is not a valid name for a member containing CICS initialization parameters.

System Action: The parameter coded is truncated to eight characters and the result is used as the member name for reading CICS parameters from SYS1.PARMLIB. Whether or not the resultant parameters are valid, the system later issues message DFH0101 and does not initialize the subsystem.

User Response: Correct the definition of the CICS subsystem in the IEFSSNxx member of SYS1.PARMLIB. After correction, re-IPL MVS to initialize the subsystem.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHSSIN

DFH0104 *CICS* **PARAMETER ERROR IN** *member* **-** *parameter*

Explanation: When examining CICS subsystem initialization parameters from the named member of SYS1.PARMLIB, a syntax error was detected. The record containing the error is shown in the message.

System Action: The system issues message DFH0101 and does not initialize the subsystem.

User Response: Correct the syntax error in the subsystem parameter. See the *CICS Intercommunication Guide* for details of the syntax of subsystem initialization parameters. After correction, re-IPL MVS to reinitialize the subsystem.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHSSIN

DFH0105 *CICS* **SUBSYSTEM INITIALIZATION IS NOT SUPPORTED FOR THIS MVS RELEASE**

Explanation: Initialization of the CICS subsystem is not supported on MVS releases earlier than MVS SP 2.2.0.

System Action: The system issues message DFH0101 and does not initialize the subsystem.

User Response: Defer implementation of the CICS subsystem services until after the prerequisite release of MVS is installed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHSSIN

DFH42xx (DFHZCNR) messages

DFH4200 *jobname tranid*

Explanation: *jobname* is the jobname of CICS in the MVS system. CICS transaction *tranid* has issued a TC READ request to the operator console.

System Action: The transaction is suspended pending a reply.

User Response: Enter a reply at the console.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHZCNR

DFH51xx (DFHCSDUP) messages

DFH5100 S SEVERE ERROR IN MODULE *modname*. ABEND CODE: *abcode*

Explanation: An internal error has occurred in module *modname*, when invoked by a CSD utility command.

System Action: Processing terminates abnormally with an operating system dump and abend code *abcode*. The CSD utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

User Response: See the description of abend code *abcode* for guidance.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5101 I *command* COMMAND EXECUTED SUCCESSFULLY.

Explanation: The execution of a CSD utility command *command* completed successfully.

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5102 I WARNING MESSAGES ISSUED WHILE PROCESSING *command* COMMAND.

Explanation: The CSD utility issued messages during syntax-checking and execution of the *command* command.

System Action: Normal utility processing continues to the end of the job.

User Response: Review the warning messages to see how they have affected utility processing. Then decide whether you need to submit a further CSD utility job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5103 I ERROR(S) OCCURRED WHILE PROCESSING *command* COMMAND.

Explanation: The CSD utility either found a syntax error in the utility command *command*, or the command *command* failed to execute correctly.

System Action: Utility command execution is terminated.

If commands are being read from a SYSIN data stream by the utility, then subsequent commands (except LIST) are checked for syntax only. (If the primary CSD file cannot be opened, LIST is not processed either.)

If commands are being read from a get-command exit, then DFHCSDUP attempts to process subsequent commands.

User Response: If the command failed because of syntax errors, correct the command.

If the command failed to execute correctly, this may have been caused by a previous error. In such a situation, an associated error message, such as DFH5275, should have been issued. Refer to these error messages for further guidance.

Correct all errors before trying to open the CSD file again.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5104 W SUBSEQUENT COMMANDS (EXCEPT LIST) ARE NOT EXECUTED BECAUSE OF ERROR(S) ABOVE.

Explanation: After the CSD utility program encounters an error, it ceases to execute any further commands read from a data stream (as opposed to supplied by a Put-Message exit routine). However, it continues to check the syntax of subsequent commands. The exception is the LIST command, which will still be executed if the primary CSD file can be opened.

System Action: Subsequent CSD utility commands (except LIST) are ignored.

User Response: Check for a syntax error in the commands used and correct it.

There should be associated error messages which identify the problem that caused DFHCSDUP to halt active processing. These messages should appear in DFHCSDUP output before. message DFH5104 is issued.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5105 W *command* COMMAND NOT EXECUTED BECAUSE OF PREVIOUS ERROR(S).

Explanation: If a syntax error (or an execution error) occurred in a command read from a data stream and processed earlier, no further commands (except for LIST commands) are executed. If the primary CSD file could not be opened, the LIST command is not executed either.

System Action: The CSD utility command is not executed.

User Response: Check for syntax errors or execution errors in commands processed earlier.

Correct the invalid commands.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5107 I COMMANDS EXECUTED SUCCESSFULLY: *nn* **COMMANDS GIVING WARNINGS:** *nn* **COMMANDS IN ERROR:** *nn*

Explanation: The CSD utility has completed input command processing.

Commands giving warnings may or may not have been executed successfully.

System Action: Normal processing continues to the end of the job.

User Response: If any CSD utility commands in error were executed, decide if the results are what you want.

If they are NOT what you want, correct them and resubmit them in another job.

If any commands were not executed, you must resubmit them. (See message DFH5108.)

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5108 I COMMANDS NOT EXECUTED AFTER ERROR(S): *nn*

Explanation: The CSD utility has completed input command processing. The number of commands not executed because of errors is indicated by *nn*.

System Action: Normal processing continues to the end of the job.

User Response: Correct the commands in error and resubmit them in another job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5109 I END OF DFHCSDUP UTILITY JOB. HIGHEST RETURN CODE WAS: *retcode*

Explanation: The CSD utility job is complete.

System Action: Control returns to the invoker, that is, either the operating system or to an invoking program.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5110 W ERROR FOUND IN 'PARM=' PARAMETER DATA ON EXEC JOB STEP. THIS DATA IS IGNORED.

Explanation: The value of the PARM parameter on the EXEC job in the JCL to run the DFHCSDUP utility is incorrect.

System Action: The PARM parameter is ignored. The CSD is opened for read and write operations.

User Response: Correct the erroneous PARM value. The incorrect value can be found in the job step.

The *CICS Operations and Utilities Guide* describes how to code the PARM parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5114 S THE *{PRIMARY | SECONDARY}* **CSD HAS NOT BEEN INITIALIZED. COMMAND NOT EXECUTED.**

Explanation: The primary CSD file must be initialized before any CSD utility command (other than the INITIALIZE or SERVICE commands) can be processed. If a secondary CSD file is used, it must always be initialized before this command can be processed. CICS issues this message if you try to break either of these rules, or if an attempt to initialize a CSD file fails to complete successfully

System Action: The CSD utility ignores the command.

User Response: Initialize the CSD file. You may first have to determine why a previous initialization attempt failed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5115 S THE PRIMARY CSD IS ALREADY INITIALIZED. COMMAND NOT EXECUTED.

Explanation: An INITIALIZE or a SERVICE command was encountered but the primary CSD file has already been initialized.

System Action: The INITIALIZE or SERVICE command is ignored.

User Response: Confirm that the correct CSD file was specified.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5116 S THE PRIMARY CSD HAS BEEN DEFINED WITH AN INVALID KEY LENGTH. PROCESSING IS TERMINATED.

Explanation: The CSD utility cannot initialize the CSD file because it has been defined to VSAM with an invalid key length.

System Action: The CSD file remains uninitialized, and no utility commands are processed.

User Response: Delete the CSD file, using VSAM Access Method Services (AMS). In the JCL defining the CSD cluster, change the AMS control statements to specify KEYS(22 0). Use this JCL to redefine the CSD file, and use the CSD utility to reinitialize it.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5117 S THE PRIMARY CSD HAS BEEN DEFINED WITH AN INVALID RECORD SIZE. PROCESSING IS TERMINATED.

Explanation: The CSD utility cannot initialize the CSD file, because it has been defined to VSAM with an invalid record length.

System Action: The CSD file remains uninitialized, and no utility commands are processed.

User Response: Delete the CSD file, using VSAM Access Method Services (AMS). In the JCL defining the CSD cluster, change the AMS control statements to specify RECORDSIZE(100 500). Use this JCL to redefine the CSD file, and use the CSD utility to reinitialize it.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5120 I *{PRIMARY | SECONDARY}* **CSD OPENED; DDNAME:** *ddname*

Explanation: The VSAM data set specified in the JCL has been successfully opened, and is identified as the primary or secondary CSD file. (All utility commands processed will use the same primary CSD file. Different secondary CSD files may be accessed by different utility commands.)

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5121 S I/O ERROR WHILE OPENING *{PRIMARY | SECONDARY}* **CSD; DDNAME:** *ddname*

Explanation: An I/O error occurred when reading or writing control records of the VSAM data set identified in the JCL as the primary or secondary CSD file.

System Action: The utility command is not executed.

User Response: Retry the utility command that failed. If the problem persists, restore the CSD file from your own backup procedures.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5122 S VSAM ERROR WHILE OPENING *{PRIMARY | SECONDARY}* **CSD; DDNAME:** *ddname*

Explanation: A VSAM error occurred when opening the data set identified in the JCL as a primary or secondary CSD file.

System Action: The utility command is not executed.

User Response: Refer to the VSAM diagnostics output in message DFH5179 for further information and guidance.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5123 I *{PRIMARY | SECONDARY}* **CSD CLOSED; DDNAME:** *ddname*

Explanation: The VSAM data set used as the primary or secondary CSD file has been successfully closed, with control records updated if necessary. (The primary CSD file is closed after all the utility commands have been processed; the secondary CSD file is closed after the command for which it was opened.)

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5124 S PROCESSING TERMINATED. CORRUPTED CSD CONTROL RECORD DETECTED WHILE CLOSING CSD; DDNAME: *ddname*

Explanation: A storage corruption is preventing the CSD control records from being updated when the CSD file is being closed.

System Action: No further CSD utility commands are processed.

User Response: Obtain a dump from DFHCSDUP together with a listing of the DFHCSDUP run and its JCL. Also try to obtain a print out of the CSD, using either IDCAMS or the DFHCSDUP LIST ALL option. The LIST will indicate where the errors have occurred because they do not print and are therefore easily identifiable.

Using the information available, determine the cause of the errors and correct them.

Resubmit the CSD utility commands that failed.

If you cannot resolve the problem, or if the problem persists, you will need further help from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5125 S ERROR OCCURRED WHILE CLOSING THE CSD. FILE IS FULL; DDNAME: *ddname*

Explanation: After processing the CSD utility commands, the CSD control records are updated before closing the data set.

Updating failed because data set *ddname* was full.

System Action: Utility command processing is terminated.

User Response: Initialize a new primary CSD file with a larger data set size. Then use the IDCAMS IMPORT and EXPORT commands to restore the CSD file onto a larger data set.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5126 S I/O ERROR WHILE CLOSING THE *{PRIMARY | SECONDARY}* **CSD; DDNAME:** *ddname*

Explanation: An I/O error occurred when reading or writing the control records of the CSD file, before closing VSAM data set *ddname*.

System Action: No further utility commands are executed.

User Response: Resubmit the utility commands that failed. If the problem persists, restore the CSD file from your own backup procedures.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5127 S VSAM ERROR WHILE CLOSING *{PRIMARY | SECONDARY}* **CSD; DDNAME:** *ddname*

Explanation: A VSAM error occurred when closing the data set *ddname* in the JCL as the primary or secondary CSD file.

System Action: No further CSD utility commands are executed.

User Response: Refer to the VSAM diagnostics output in message DFH5179 for further information and guidance.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5128 S PROCESSING TERMINATED. *{PRIMARY | SECONDARY}* **CSD ACCESSED BY ANOTHER USER AND COULD NOT BE SHARED. DDNAME:** *ddname*

Explanation: An attempt to open the CSD has returned an error from VSAM because the data set is not available for the type of processing requested.

This usually means that:

- An attempt has been made to open the CSD in non-RLS access mode, but the CSD is already being accessed from elsewhere in RLS access mode.
- An attempt has been made to open the CSD in RLS access mode, but the CSD is already being accessed from elsewhere in non-RLS access mode.
- An attempt has been made to open the CSD in non-RLS access mode and the CSD is already being accessed in non-RLS access mode, but the CSD cluster has been defined with SHAREOPTIONS that restrict its concurrent use.

System Action: The command is not executed.

User Response: You can change the access mode in which you are trying to open the CSD.

Note: You must specify PARM=CSD(READONLY) if you wish to open a recoverable CSD in RLS access mode from the DFHCSDUP utility program.

Alternatively, wait until the CSD file is no longer being accessed in the conflicting access mode, or until it becomes available again in accordance with the SHAREOPTIONS rules defined for the cluster.

If the conflict is due to SHAREOPTIONS and LIST is the only command you want to execute, you can specify PARM=CSD(READONLY).

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5130 E UNABLE TO LOCATE MODULE DFHCICS. PRIMARY CSD NOT INITIALIZED.

Explanation: The DFHCICS module is missing from the library.

System Action: Processing of the INITIALIZE command is terminated.

User Response: Ensure that the DFHCICS module is present in the library.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5131 I LIST *listid* **CREATED.**

Explanation: The INITIALIZE command has created the header for an IBM-protected list.

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5132 S UNABLE TO CREATE LIST *listid*

Explanation: The INITIALIZE command has failed when calling the CSD manager routing program, DFHDMP, to create a new list *listid* on the CSD file for the IBM-protected groups. The CSD file may be full or corrupt.

System Action: Processing of the INITIALIZE command is terminated.

User Response: Check that the data set size for the CSD file is large enough. If it is not, allocate more space.

If there is ample space and you suspect that the CSD file is corrupt, you need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5133 S CSD CONTAINS ONE OR MORE LISTS. NO LISTS MAY BE PRESENT ON THE CSD WHEN THE INITIALIZE COMMAND IS ISSUED.

Explanation: The CEDA transaction was used to create a list while the INITIALIZE command was executing.

System Action: Processing of the INITIALIZE command is terminated.

User Response: Redefine the data set and re-run the INITIALIZE command. The CEDA transaction must not be used until the initialization of the CSD file has been successfully completed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5134 S ERROR OCCURRED WHILE ADDING GROUP *grpname* **TO LIST** *listid*

Explanation: A call to the CSD manager routing program, DFHDMP, to write the definition of group *grpname* to the CSD file as a member of an IBM-protected list *listid* created an error. The CSD file may be full or corrupt.

System Action: Processing of the INITIALIZE command is terminated.

User Response: Increase the data set size for the CSD file and repeat the INITIALIZE request. If this fails, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5135 I GROUP *grpname* **ADDED TO LIST** *listid*

Explanation: A group definition *grpname* has been satisfactorily created on the CSD file in list *listid*.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5136 W GROUP *grpname* **IS ALREADY A MEMBER OF LIST** *listid*

Explanation: Group *grpname* already exists in list *listid*. CICS does not create a duplicate entry.

System Action: Normal utility processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5140 I TOTAL *xxxxxxxx* **DEFINITIONS CREATED:** *nn*

Explanation: CICS issued this message after migrating a CICS table. *nn* definitions of type *xxxxxxxx* have been created on the CSD file.

System Action: Normal utility processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5141 S UNABLE TO CREATE NEW GROUP *grpname*

Explanation: The MIGRATE command failed when calling the CSD manager routing program, DFHDMP, to create a new group *grpname* on the CSD file for the data in the table being migrated. The CSD file may be full, corrupt, or not initialized. The group name may be invalid.

System Action: Processing of the MIGRATE command is terminated.

User Response: Check the group name in the TOGROUP parameter. Reinitialize the CSD file with the INITIALIZE command, providing a larger data set size if necessary.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5142 E COMMAND NOT EXECUTED. *lgname* **WAS NOT UPDATED BECAUSE OF A PREVIOUS UPDATE FAILURE.**

Explanation: The list or group *lgname* cannot be used because an operation to update it, using the DFHCSDUP offline utility, failed to execute to completion.

This has probably happened in a previous execution of DFHCSDUP.

System Action: The command is not executed, and the execution of subsequent DFHCSDUP commands in the job stream is suppressed.

User Response: Use the DFHCSDUP VERIFY command to remove the in-flight flag detected when this message is produced.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5143 I GROUP *grpname* **CREATED.**

Explanation: A new CSD group, *grpname*, has been created for the data in the table being migrated.

System Action: Migration continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5145 E COMMAND NOT EXECUTED. *lgname* **HAS BEEN LOCKED BY APPLID:** *applid***, OPID:***opid* **TO PREVENT UPDATING.**

Explanation: The list or group *lgname* cannot be used because a user of the CEDA or CEDB transaction has enforced a LOCK command to prevent updating by other users.

System Action: The command is not executed.

If commands are being read from a SYSIN data stream, then subsequent commands (except the LISTcommand) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, then the DFHCSDUP utility attempts to process subsequent commands.

User Response: Negotiate with the user with the specified OPID and APPLID, or create a new group or list by taking a copy of the definitions in the locked one.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5146 E COMMAND NOT EXECUTED. *lgname* **IS CURRENTLY BEING UPDATED BY APPLID:***applid***, OPID:***opid*

Explanation: The list or group *lgname* cannot be used because:

- A user of the CEDA or CEDB transaction is currently running a command to update it
- A previous operation to update it using CEDA or CEDB failed to execute to completion.

System Action: The command is not executed.

If commands are being read from a SYSIN data stream, then subsequent commands (except the LIST command) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, then the DFHCSDUP utility attempts to process subsequent commands.

User Response: Resubmit the utility job to retry the command that failed. Perform the subsequent commands that were suppressed.

If this fails to resolve the problem, run the DFHCSDUP VERIFY command to remove the in-flight flag detected when this message is produced.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5147 E COMMAND NOT EXECUTED. *lgname* **ALREADY EXISTS AS A** *{GROUP | LIST}*

Explanation: The name chosen for the target group (or list) duplicates that of an existing group or list on the CSD file.

System Action: Processing of the utility command is terminated.

User Response: Choose a different name for the target group.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5148 E UNABLE TO GET STORAGE FOR *{FCT | RDT | LD}* **TABLE NAMED** *table*

Explanation: There is insufficient storage to satisfy a GETMAIN request for table *table*.

System Action: The system action depends on the table specified as follows:

LD (language definition table)
The CSD utility cannot process any commands, and terminates with a dump. The MVS user abend code is 0327.

FCT and RDT
The CSD utility cannot migrate the table, and terminates processing of the utility command.

User Response: Allocate additional storage. If your TCT assembly and link-editing is successful, the RDT should be in the library. The LD is in the load library of the supplied pregenerated CICS system.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5149 E COMMAND NOT EXECUTED. *xxxxxxxx* **IS IBM-PROTECTED.**

Explanation: A user attempted to add a definition to an IBM-supplied group or list (groups or lists beginning with DFH). This is not allowed.

System Action: The CSD utility does not create a definition.

User Response: Change the input command or TCT source data to name a target group or list whose name does not begin with DFH.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5150 W *xxxxxxx* **OPTION CONFLICTS WITH** *yyyyyyy* **OPTION AND IS IGNORED FOR** *restype resname*

Explanation: The options, *xxxxxxx* and *yyyyyyy*, specified for the resource type *restype* with name *resname* are mutually exclusive.

System Action: The utility ignores option *xxxxxxx*.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5155 W *{TDQUEUE} xxxxxxxx* **HAS SAME NAME AS AN IBM SUPPLIED DEFINITION IN GROUP** *grpname***.**

Explanation: The name of the migrated table entry, *xxxxxxxx*, matches the name of an IBM-supplied resource in IBM-protected group *grpname*, created by the INITIALIZE command.

System Action: CICS migrates this entry normally.

User Response: If necessary, rename the resource, using the CEDA transaction.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5156 W *{TDQUEUE}* **DID NOT MIGRATE. ITS PROPERTIES MATCH AN IBM-SUPPLIED DEFINITION IN GROUP** *grpname***.**

Explanation: The properties of the resource defined in the user's table entry are the same as those of the IBM-supplied resource of the same name contained in IBM-protected group *grpname*.

System Action: The entry for the user's resource is not migrated.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5159 I *resource object* **DEFINED IN GROUP** *grpname*

Explanation: The CSD utility has successfully added a resource definition to a group, where:

- *resource* is the type of resource (CONNECTION, FILE, JOURNALMODEL, LSRPOOL, MAPSET, PARTITIONSET, PARTNER, PROFILE, PROGRAM, SESSION, TDQUEUE, TERMINAL, TRANCLASS, TRANSACTION, or TYPETERM).
- *object* is the name of the object.
- *grpname* is the name of the group.

System Action: Normal utility processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5161 S TABLE *table* **MUST BE LINK-EDITED WITH AMODE(24) RMODE(24).**

Explanation: After loading the table *table*, the migration routine checks it has been linkedited with AMODE(24) RMODE(24) for migration purposes.

System Action: The MIGRATE command is not processed.

User Response: Relink the table with the correct attributes.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5164 W NO DEFINITION OF *resource object* **CREATED. THIS DUPLICATES AN EXISTING DEFINITION IN GROUP** *grpname*

Explanation: The CSD utility detected a CSD record with a matching key before adding the definition to the CSD file, where:

- *resource* is the type of resource.
- *object* is the name of the object.
- *grpname* is the name of the group.

System Action: The CSD utility does not migrate the resource definition to the CSD file. (If it is a transaction, a generated profile is not created either.)

User Response: Use the CEDA transaction to define the resource with a unique name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5165 S PROCESSING IS TERMINATED. AN ERROR OCCURRED WHILE WRITING *resource object* **TO THE CSD.**

Explanation: An error occurred when the CSD utility called DFHDMP to write the definition of the object *object* to the CSD file.

The CSD file may be full or corrupted.

resource is the type of resource.

System Action: If the CSD is full, the CSD utility issues message DFH5176, and then terminates with a return code of 12 in message DFH5109.

If the CSD is not full, the CSD utility terminates abnormally with message DFH5175, usually accompanied by one or more of the explanatory messages, DFH5177, DFH5178, and DFH5179.

User Response: Use the additional messages to determine the cause of the error and the appropriate user action required.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5166 E DISALLOWED CHARACTER IN *resource* **NAME** *object*

Explanation: The call to module DFHDMP has failed to construct a valid key for the record created on the CSD file because of an invalid character, or the resource name for the migrated table entry may be invalid. *resource* is the type of resource, and *object* is the name of the object.

System Action: A CSD record is not created for this definition. (If it is a transaction, a generated profile is not created either.)

User Response: Use the CEDA transaction to define the resource with a valid name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5167 S THE CSECTS IN TABLE *table* **HAVE BEEN LINK-EDITED IN THE WRONG ORDER.**

Explanation: While processing a MIGRATE command, the CSD utility has detected that the CSECTs in table *table* are in the wrong order. Input to the linkage editor omitted a control statement to order the CSECTs.

System Action: The CSD utility does not process the MIGRATE command.

User Response: Use the IBM-supplied procedure, DFHAUPLK, to assemble and link-edit CICS tables. This procedure ensures the correct ordering of CSECTs within the tables.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5168 S TABLE LOADED FROM LIBRARY MEMBER *table* **IS NOT A VALID** *{FCT | RDT | TCT}***.**

Explanation: After loading the table *table*, the migration routine checks the VMNAME field in the DFHVM expansion of the data area following the load point. This message is produced if VMNAME is not that of a valid table.

System Action: The MIGRATE command is not processed.

User Response:

1. Ensure that the correct table is present in the library, and that the TABLE parameter of the MIGRATE command is correct.
2. Ensure that an ORDER statement was processed in the JCL of the link-editing of the table.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5169 S PROCESSING IS TERMINATED. TABLE *table* **WAS ASSEMBLED FOR CICS RELEASE** *rrr***. REASSEMBLE FOR RELEASE** *sss***.**

Explanation: After loading the table *table*, the migration routine checks the VMVERS field in the DFHVM expansion of the data area following the load point. This field indicates the CICS release (*rrr*) for which the table was assembled, and is invalid for the CICS system (release *sss*) that is running.

System Action: The MIGRATE command is not processed.

User Response: Reassemble the table for the correct release of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5171 E NO DEFINITION FOR FILE DFHCSD CREATED. THE CSD SHOULD BE DEFINED IN THE SIT.

Explanation: The CSD utility detected an attempt to migrate a definition of the CSD to the CSD.

System Action: The CSD utility creates no definition for DFHCSD. Normal utility processing continues with the utility return code set to 8.

User Response: Remove the definition of the CSD from the FCT. Ensure that your definition of the CSD is added to the SIT.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5172 W NO DEFINITION FOR FILE *file* **CREATED. BDAM FILES ARE NOT SUPPORTED BY RDO.**

Explanation: The CSD utility detected an attempt to migrate a definition of a BDAM data set to the CSD. BDAM data sets are not supported by RDO.

System Action: The migration request is ignored. A definition for the named BDAM data set is not created. Normal utility processing continues, but the utility return code will be set to 4.

User Response: BDAM data sets should be defined to CICS using the FCT. Re-assemble your FCT with MIGRATION=COMPLETE on the TYPE=INITIAL macro after all VSAM data sets have been migrated. Use the generated FCT as you would in a non-RDO environment.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5173 SERVREQ=REUSE IS IGNORED IN THE DEFINITION OF FILE *filename* **BECAUSE IT IS NOT SUPPORTED BY RDO.**

Explanation: The CSD utility detected an attempt to migrate to the CSD the definition of VSAM file *filename* with SERVREQ=REUSE specified. RDO does not support files with the SERVREQ=REUSE attribute.

System Action: The SERVREQ=REUSE attribute of the file is ignored, and the file is migrated to the CSD without it. Normal utility processing continues, but the utility return code is set to 4.

CICS Transaction Server for OS/390 Release 3 supports the concept of empty files without the need to specify a separate FCT entry with SERVREQ=REUSE in order to load the data set. The SET FILE EMPTY command can be used for a file allocated to a data set defined as reusable. It specifies that the data set is set empty the next time the file is opened.

User Response: Eliminate use of SERVREQ=REUSE files from your installation.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5174 W PROCESSING IS TERMINATED. COMMAND CANNOT BE EXECUTED BECAUSE 'PARM=CSD(READONLY)' WAS SPECIFIED.

Explanation: This command requires the CSD to be opened for read-write access. Your job step specified read-only access for the CSD in the DFHCSDUP utility job stream.

System Action: This command is not executed.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST) are checked for syntax only. (If the primary CSD file cannot be opened, LIST is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Amend the JCL to specify 'PARM=CSD(READWRITE)'.

Note: If the CSD is recoverable, and you are accessing it in RLS mode, you cannot specify READWRITE access. To perform the command, access the CSD in non-RLS mode.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5175 S PROCESSING IS TERMINATED. UNEXPECTED RESPONSE FROM *function* IN CSD MANAGER.

Explanation: An invocation of the CSD manager, DFHDMP, has resulted in an error. The name of the function that failed is *function*.

System Action: DFHCSDUP issues additional messages and then

- Terminates **normally** for CSD open/close errors, and the CSD-full condition, or
- Terminates **abnormally** for all other situations.

User Response: Ensure that you have set up your CSD file correctly. If you have migrated your CSD file from a previous release, note that you should have increased your block size to 500. If necessary, use the diagnostics in the additional messages.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5176 S PROCESSING IS TERMINATED. CSD IS FULL.

Explanation: The VSAM data set containing the CSD file is full.

System Action: Execution of the CSD utility command is terminated.

If commands are being read from a SYSIN data stream, then subsequent commands (except LIST commands) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, then the DFHCSDUP utility attempts to process subsequent commands.

The DFHCSDUP utility leaves a system lock on the group being created at the time of failure. This lock prevents processing of the group by the CSD utility or the CEDA transaction.

User Response: First, use the DFHCSDUP VERIFY process to remove the system lock on the partly-created group. Normal RDO processing of the group should then be possible, enabling the group (or any unwanted definitions) to be deleted.

To recover the contents of the CSD file, define a larger data set and use the AMS REPRO command. Usually, you will be able to REPRO from the CSD file that became full. If you are unable to do this, use a backup copy. (You may be able to transfer definitions from the CSD file that filled up by using the DFHCSDUP COPY command with the FROMCSD option.)

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5177 S PROCESSING IS TERMINATED. CSD I/O ERROR OCCURRED.

Explanation: An I/O error occurred when executing a READ or WRITE of a CSD record on the primary or secondary CSD file.

System Action: DFHCSDUP issues additional messages and terminates abnormally.

User Response: Restore the CSD file to a new data set from your own backup, or create the new CSD file by using the INITIALIZE, COPY, and APPEND commands to restore existing definitions.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5178 S PROCESSING IS TERMINATED. SEVERE CSD ERROR OCCURRED.

Explanation: An error occurred during execution of the CSD manager, DFHDMP, to access the primary or secondary CSD file.

System Action: DFHCSDUP issues additional messages and terminates abnormally.

User Response: See the VSAM diagnostics given in message DFH5179.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5179 S VSAM ERROR. RETURN CODE = *nn* ERROR CODE = *ddd*(*yy*) CONTROL BLOCK TYPE = *{RPL | ACB}*

Explanation: VSAM returned the following diagnostics when an error occurred, where:

- *nn* is the hexadecimal VSAM return code
- *yy* is the hexadecimal VSAM error code (*ddd* is its decimal equivalent)
- CONTROL BLOCK TYPE points to the relevant error code subset as follows:
  - RPL = Request macro responses from VSAM
  - ACB = OPEN/CLOSE responses

  The error code is:
  - For CONTROL BLOCK TYPE = RPL, the reason code from byte 3 of the feedback word field in the RPL (RPLERRCD)
  - For CONTROL BLOCK TYPE = ACB, the reason code in the ERROR field in the ACB (ACBERFLG)

System Action: The CSD utility terminates command processing, and in some situations, produces an operating system dump.

User Response: For the meaning of the VSAM return and error codes, refer to the *DFSMS/MVS V1R3 Macro Instructions for Data Sets* manual.

When interpreting these diagnostics, ensure that the data set referenced in the JCL exists.

Check the following:

- The data set is being concurrently accessed by CICS running in another region.
- You are not attempting to open a recoverable CSD as READWRITE if DFHCSDUP specifies RLS access mode. You must specify PARM=CSD(READONLY) in this case.
- LOG is defined on the base cluster if RLS access mode is specified.

If DFHCSDUP specifies RLS access mode, a ‘record not found’ error could mean that the CSD has not been initialized.

Note: You must use non-RLS access mode to initialize a recoverable CSD.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5180 S PROCESSING IS TERMINATED. ERROR OCCURRED WHILE CSD WAS BEING READ BY *{SETBROWSE | GETNEXT} {SCANSETS | SCANOBJS}*

Explanation: When the LIST command invoked DFHDMP to scan the objects on the CSD file, an error occurred during execution of the DFHDMP function.

System Action: The CSD utility terminates with an MVS abend 0325.

User Response: This error should be reported. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5181 W NO MATCH FOUND FOR GENERIC *{GROUP | LIST}* **IDENTIFIER** *xxxxxxxx*

Explanation: The LIST command was executed with a generic group or list name, but no qualifying group or list exists on the CSD file.

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5182 W *{GROUP | LIST} xxxxxxxx* **DOES NOT EXIST.**

Explanation: The LIST command or the DELETE command was executed using the name of a group or list that does not exist on the primary CSD file.

System Action: The LIST command or the DELETE command is not processed. Subsequent commands may still be processed.

User Response: Correct the LIST command or the DELETE command to use a valid group or list name.

If a CSD upgrade is being performed, no user action is required.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5183 W *{GROUP | LIST} xxxxxxxx* **EXISTS AS A** *{GROUP | LIST}* **NAME.**

Explanation: The LIST command or the DELETE command was executed using a group name that is already in use as a list name, or using a list name that is already in use as a group name.

System Action: The LIST command or the DELETE command is not processed. Subsequent commands may still be processed.

User Response: Correct the LIST command or the DELETE command to use a valid group or list name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5184 S PROCESSING IS TERMINATED. INVALID OUTPUT FROM DFHPUP. CANNOT FORMAT DATA FOR UTILITY LISTING.

Explanation: There has been an internal logic error in the DFHCSDUP utility program. The data in the back-translated output buffer is invalid. The length code may be out of range or the data fields in the wrong sequence. One or more of the data fields may be invalid.

System Action: The CSD utility terminates with an MVS abend 0326.

User Response: This error must be reported.

Obtain a dump from DFHCSDUP together with a listing of the DFHCSDUP run and its JCL. Also try to obtain a print out of the CSD, using either IDCAMS or the DFHCSDUP LIST ALL option. The LIST will indicate where the error(s) have occurred because they will refuse to print and are therefore easily identifiable.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5186 W NO RESOURCES DEFINED IN GROUP *grpname* **OR NO GROUPS DEFINED IN LIST** *lstid*

Explanation: In executing a LIST command, the CSD utility has found a group or list header on the CSD file for which no corresponding group or list elements exist.

System Action: The utility continues to process the LIST command, but will not tabulate elements of the group or list named in the message.

User Response: Run the DFHCSDUP VERIFY utility.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5187 I *resource* **IS LOCKED, BUT IS NOT THE NAME OF A GROUP OR LIST.**

Explanation: The CSD utility detected a locked resource that is not a group or list. The reason is that an interrupt or failure occurred during a CEDA transaction or a previous utility job. A lock had been created but not the associated group or list.

System Action: The utility continues normal processing of the VERIFY command.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5188 I *{GROUP | LIST | RESERVED NAME} resource* **IS NOW AVAILABLE FOR USE.**

Explanation: The VERIFY command discovered that the resource was not available for the CEDA transaction or offline commands. The restriction on its availability, which was due to the failure of some previous command affecting it, has now been removed.

System Action: Normal processing of the VERIFY command continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5189 I CSD VERIFY PROCESS COMPLETED SUCCESSFULLY.

Explanation: The VERIFY command has been processed successfully, and any internal locks associated with groups and lists on the CSD file have been removed.

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5190 S COMMAND IS NOT EXECUTED. UNABLE TO GET STORAGE FOR SERVICE MODULE *progname*

Explanation: There is insufficient storage available to load the service module *progname*, that is to be loaded and executed by DFHCSDUP.

System Action: Utility command execution is terminated.

If commands are being read from a SYSIN data stream, then subsequent commands (except LIST commands) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, then DFHCSDUP attempts to process subsequent commands.

User Response: Ensure that there is sufficient storage allocated to load module *progname*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5191 I SERVICE PROGRAM *progname* **IS RUNNING.**

Explanation: The service module *progname* has been loaded correctly. Execution of the module has started.

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5192 S COMMAND IS NOT EXECUTED. CSD SERVICE LEVEL *ttt* **IS INCOMPATIBLE WITH CURRENT SERVICE LEVEL** *sss*

Explanation: Either the LEVEL parameter specified in the SERVICE command is wrong, or an incorrect version of the CSD file is being used as the secondary (input) CSD file.

System Action: The SERVICE command is not executed.

If commands are being read from a SYSIN data stream, then subsequent commands (except LIST commands) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, then DFHCSDUP attempts to process subsequent commands.

User Response: The SERVICE command may upgrade the service level of the CSD file only in increments of one. Check that the input CSD file is the intended one, and that the LEVEL parameter takes the value one higher than the current service level of the CSD file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5193 S COMMAND IS NOT EXECUTED. SERVICE MODULE *progname* **IS UNABLE TO UPGRADE CSD TO TARGET SERVICE LEVEL** *ttt*

Explanation: The LEVEL parameter specified in the SERVICE command is incompatible with the status of the service module *progname* being applied to the CSD file.

System Action: The SERVICE command is not executed.

If commands are being read from a SYSIN data stream, then subsequent commands (except LIST commands) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, then DFHCSDUP attempts to process subsequent commands.

User Response: Ensure that the service module *progname* being applied, is correctly updated with the service fix supplied by IBM. (It should have been amended so as to be able to process SERVICE commands at the target level *ttt*.)

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5194 I UPGRADING SERVICE STATUS OF CSD FROM LEVEL *sss* **TO LEVEL** *ttt*

Explanation: The loaded service module is performing the required upgrade of the CSD file from service level *sss* to service level *ttt*.

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5195 I EXECUTION OF SERVICE PROGRAM *progname* **COMPLETE.**

Explanation: The loaded service program *progname* has run to completion. Control is being transferred back to the CSD offline utility program, DFHCSDUP.

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5196 S COMMAND IS TERMINATED. ERROR OCCURRED WHILE READING CONTROL SECONDARY CSD RECORD.

Explanation: An I/O error has occurred on the specified CSD file.

System Action: The SERVICE command is terminated.

If commands are being read from a SYSIN data stream, then subsequent commands (except LIST) are checked for syntax only. (If the primary CSD file cannot be opened, LIST is not processed either.)

If commands are being read from a get-command exit, then DFHCSDUP attempts to process subsequent commands.

User Response: Retry the command, ensuring that a sufficiently large data set size is specified for the output (primary) CSD file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5197 S COMMAND IS TERMINATED. UNRECOGNIZED CONTROL RECORD ENCOUNTERED WHILE SECONDARY CSD WAS BEING READ.

Explanation: The contents of a control record of the secondary input CSD are invalid.

System Action: The SERVICE command is terminated.

If commands are being read from a SYSIN data stream, then subsequent commands (except LIST) are checked for syntax only. (If the primary CSD file cannot be opened, LIST is not processed either.)

If commands are being read from a get-command exit, then DFHCSDUP attempts to process subsequent commands.

User Response: Check that the input and output data sets have been correctly defined, and that the DDNAME for the secondary CSD file in the JCL corresponds to the OLDCSD parameter in the SERVICE utility command.

If the problem persists, you will need further help from IBM. First, obtain a dump from DFHCSDUP together with a listing of the DFHCSDUP run and its JCL. Also try to obtain a print out of the CSD using either IDCAMS or the DFHCSDUP LIST ALL option. The LIST indicates where the errors have occurred because they do not print and are therefore easily identifiable. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5198 I CSD RECORD MODIFIED FOR *xxxxxxxx*

Explanation: The specified modification to a record on the CSD file has taken place.

The insert, *xxxxxxxx*, is the element type.

System Action: Normal processing continues. If the modified record is an element in a GROUP or LIST, its date-and-time field is updated when copied to the output (primary) CSD file.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5199 W INVALID FIELD ENCOUNTERED IN EXISTING RECORD FOR *xxxxxxxx*

Explanation: An unexpected value was found in one of the fields of a CSD record that was to be modified for element *xxxxxxxx*.

System Action: Normal processing continues, and the invalid record is left unchanged on the new (primary) CSD file.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH52xx (DFHCSDUP) messages

DFH5200 S COMMAND NOT EXECUTED. NO VALID LANGUAGE TABLE WAS LOADED.

Explanation: Either the CSD utility found that the RDO language table had not been loaded correctly, or that it contained invalid data.

System Action: The CSD utility terminates, because it cannot process any commands.

User Response: Check that the correct version of the RDO language table (DFHEITCU) is in the program library.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5201 S *command* **COMMAND IS NOT VALID. COMMAND NOT EXECUTED.**

Explanation: The CSD utility does not recognize the command.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5202 S INCORRECT SYNTAX FOR *command* COMMAND. COMMAND NOT EXECUTED.

Explanation: The syntax of the command is incorrect.

System Action: The CSD utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5203 W RIGHT PARENTHESIS ASSUMED AFTER THE VALUE OF *xxxx*.

Explanation: The syntax of the command was incorrect. Either a right parenthesis has been omitted or a keyword value in excess of 256 bytes has been specified.

System Action: The CSD utility executes the command as if the right parenthesis was present.

User Response: Confirm that the correction applied by the utility generated the required command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5204 E COMMAND NOT EXECUTED. *xxxx* KEYWORD IS NOT VALID.

Explanation: The keyword *xxxx* is not valid on this command.

System Action: The utility command is ignored.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5205 E COMMAND NOT EXECUTED. NO VALUE WAS SPECIFIED FOR *xxxx*.

Explanation: The option *xxxx* is incomplete, possibly because a value has been omitted.

System Action: This CSD utility command is ignored.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5206 E COMMAND NOT EXECUTED. DUPLICATE SPECIFICATION OF *xxxx*.

Explanation: Option *xxxx* appears twice on a single CSD utility command.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5207 E COMMAND NOT EXECUTED. *xxxxxxxx* DOES NOT REQUIRE A VALUE.

Explanation: The CSD utility detected an input command coded with a value for option *xxxxxxxx* when no value was required.

System Action: The utility does not process the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5210 E COMMAND NOT EXECUTED. INVALID VALUE WAS SPECIFIED FOR *xxxx*.

Explanation: The CSD utility detected an input command coded with an invalid value for option *xxxx*.

System Action: The utility does not process the command.

User Response: Correct the value.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5211 E COMMAND NOT EXECUTED. OPERAND DELIMITER *x* WAS MISPLACED.

Explanation: The CSD utility has detected an input command coded with a misplaced option delimiter *x*.

System Action: The utility does not process the command.

User Response: Place the delimiter correctly.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5212 E COMMAND NOT EXECUTED. *comptype string* IS NOT UNIQUELY IDENTIFIABLE.

Explanation: An ambiguous DFHCSDUP command has been specified.

- *comptype* is the command component type
- *string* is the actual component.

System Action: The command is not executed. If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Correct the command syntax and retry. See accompanying message DFH5213 for further details of the command failure.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5213 E SPECIFIED *input* **COULD BE INTERPRETED AS** *match1* **OR** *match2***.**

Explanation: An ambiguous DFHCSDUP command has been specified.

- *input* is the ambiguous character string
- *match1* and *match2* are two possible interpretations of *input.*

System Action: The command is not executed. If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Correct the command syntax and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5214 W *keyword* **IS AN OBSOLETE KEYWORD. IT IS IGNORED.**

Explanation: The CSD utility has detected an input command coded with an obsolete keyword. The keyword specifies an option not valid for this release of CICS, but the command can be used as input to the CSD utility for an earlier release.

System Action: The utility ignores the keyword.

User Response: Confirm that the resulting utility command is correct for this release of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5215 E COMMAND NOT EXECUTED. A CLOSING PARENTHESIS HAS BEEN OMITTED FROM A NULL VALUE SPECIFIED ON AN ALTER COMMAND.

Explanation: A closing parenthesis was not added when a null value was specified for a keyword on an ALTER command. A closing parenthesis is automatically added for keyword values other than nulls.

System Action: The command is not executed. If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Correct the command syntax and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5216 E *restype resname* **IS NOT IN GROUP** *group***.**

Explanation: A nonexistent resource of type *restype* and name *resname*, has been specified on an ALTER command.

System Action: The command is not executed. If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Correct the command syntax and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5217 E COMMAND NOT EXECUTED. A CLOSING BRACKET HAS BEEN OMITTED FROM A *xxxx* **KEYWORD.**

Explanation: A closing bracket has been omitted from the *xxx* keyword on a DFHCSDUP DEFINE command.

System Action: The DEFINE command is not executed.

User Response: Correct the DEFINE command syntax and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5218 I ALTERING *Resourcetype Resourcename* **IN GROUP** *Groupname*

Explanation: During the execution of a generic ALTER command, the CSD batch update utility scans the CSD file for matches to the specified generic resource name and/or GROUP keyword. For every match, the utility processes the request and informs the user of the resulting *resourcename* and/or *groupname* respectively.

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5219 W NO MATCH FOUND ON CSD FILE FOR *Resourcetype Resourcename* **GROUP** *Groupname*

Explanation: The ALTER command was executed with a generic resource and/or group name, but no qualifying resource and/or group exist on the CSD file.

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5220 E COMMAND NOT EXECUTED. *xxxxxxxx* **MUST BE THE FIRST COMMAND.**

Explanation: The CSD utility found an INITIALIZE command after other commands.

System Action: The CSD utility ignores the command.

User Response: Confirm that the INITIALIZE command was misplaced.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5222 E COMMAND NOT EXECUTED. *xxxxxxxx* KEYWORD WAS OMITTED OR SPECIFIED INCORRECTLY.

Explanation: A required keyword *xxxxxxxx* was omitted from a CSD utility command.

System Action: The utility ignores the command.

User Response: Specify keyword *xxxxxxxx*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5223 E COMMAND NOT EXECUTED. *xxxxxxxx* KEYWORD CONFLICTS WITH *xxxxxxxx* KEYWORD.

Explanation: The syntax of the command is incorrect. Conflicting keywords have been specified.

System Action: The utility command is ignored.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5224 E COMMAND NOT EXECUTED. VALUE OF *xxxxxxxx* IS OUT OF VALID RANGE.

Explanation: The CSD utility detected an input command coded with a numeric value for value *xxxxxxxx* which was outside the valid range.

System Action: The utility does not process the command.

User Response: Correct the value.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5225 E COMMAND NOT EXECUTED. SAME NAME SPECIFIED FOR 'TO' AND *xxxxxxxx*.

Explanation: This message is issued for one of the following reasons:

1. The utility COPY command has been coded with the same group name for the source and target group.
2. The APPEND command has been coded with the same list name for the source and target list.
3. The ADD command has been coded with the same group name and list name.

System Action: The CSD utility or CICS ignores the command.

User Response: Correct the name (or names) in error.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5227 E COMMAND NOT EXECUTED. USE OF GENERIC NAME CONFLICTS WITH *xxxxxxxx* OPTION.

Explanation: A CSD utility command used a generic name; that is, one containing asterisk (*) or plus sign (+) characters, in conjunction with an option that conflicted with the use of generic names.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5228 E COMMAND NOT EXECUTED. ONLY ONE RESOURCE-TYPE KEYWORD CAN BE SPECIFIED.

Explanation: The CSD utility detected an input command coded with more than one resource-type keyword.

System Action: The utility does not process the command.

User Response: Correct the command to refer to only one resource-type keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5229 E COMMAND NOT EXECUTED. *xxxxxxxx* IS INVALID BECAUSE A RESOURCE-TYPE KEYWORD WAS SPECIFIED.

Explanation: The CSD utility detected an input command coded with a resource-type keyword (for example, PROGRAM, TRANSACTION) in a situation where a resource-type keyword is invalid.

System Action: The utility does not process the command.

User Response: Correct the command and resubmit.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5230 I ERASE COMMAND IS OBSOLETE. USE THE DELETE COMMAND.

Explanation: The CSD utility detected the obsolete ERASE command in its input.

System Action: The utility processes the command as a DELETE command.

User Response: In future, use the DELETE command instead of the ERASE command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5231 E COMMAND NOT EXECUTED. *xxxxxxxx* **IS INCOMPATIBLE WITH THE MIGRATE COMMAND FOR** *table-type* **TABLES.**

Explanation: An attempt has been made to execute the MIGRATE command with an invalid table type and (or) an invalid keyword specified.

System Action: The CSD utility terminates.

User Response: Correct the command syntax and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5232 E COMMAND NOT EXECUTED. *xxxxxxxx* **PARAMETER MUST NOT BEGIN WITH 'DFH'.**

Explanation: In a CSD utility MIGRATE command, the *xxxxxxxx* parameter contained an invalid table name or group name.

System Action: The utility does not process the command.

User Response: Resubmit with a valid table name or group name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5233 E COMMAND NOT EXECUTED. *xxx* **TABLE TYPE IS NOT SUPPORTED BY RDO.**

Explanation: The CSD utility detected a TABLE parameter that referred to a CICS table type not supported by RDO.

RDO supports:

- Program, transaction, and terminal definitions (RDT)
- Files (FCT)
- Transient data queues (DCT).

System Action: The utility does not process the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5234 E COMMAND NOT EXECUTED. *command* **IS NOT SUPPORTED.**

Explanation: The CSD utility detected a command *command* in its input which is not supported by RDO.

System Action: The utility does not process the command.

User Response: Correct the command

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5235 E COMMAND NOT EXECUTED. GROUP OR LIST MUST BE SPECIFIED.

Explanation: A CSD utility EXTRACT command has been submitted. A GROUP or LIST name must be specified with an EXTRACT command.

System Action: The utility command is not executed. This message is followed by DFH5104.

User Response: Correct the invalid command by adding a valid GROUP or LIST name and rerun the utility job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5236 I A USER EXIT PROGRAM HAS BEEN SPECIFIED ON THE ENTRY LINKAGE AND ON THE USERPROGRAM KEYWORD. THE PROGRAM SPECIFIED ON THE ENTRY LINKAGE HAS BEEN IGNORED.

Explanation: An EXTRACT user-exit program has been specified via the entry parameter list and on the USERPROGRAM keyword of the EXTRACT command.

System Action: The program specified on the USERPROGRAM keyword is used.

User Response: Ensure that the user program used is the one intended.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5240 S PROCESSING TERMINATED. ERROR OCCURRED WHILE INPUT UTILITY COMMAND WAS BEING READ.

Explanation: The environment adaptor GETCARD utility cannot read an input utility command.

System Action: The CSD utility terminates abnormally without processing the input commands.

User Response: Check that the utility commands are prepared correctly and located correctly in the JCL. Check also that the DD statement defining the output data set startup job stream is correct. For JCL examples, refer to the CICS Operations and Utilities Guide.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5241 S PROCESSING TERMINATED. INVALID RECORD LENGTH ON INPUT UTILITY COMMAND DATA STREAM.

Explanation: The CSD utility detected incorrectly formatted input in the SYSIN data stream.

System Action: The CSD utility cannot process any commands. The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.

3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

User Response: Ensure that the output data set data stream is formatted with fixed length 80-byte records.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5242 E COMMAND NOT PROCESSED. TOO MANY CONTINUATION RECORDS FOR INPUT UTILITY COMMAND.

Explanation: The CSD utility detected an input command that was too long and extended over too many records.

System Action: The utility does not process the command.

User Response: This message may be caused by an error in the rejected command or in the preceding or subsequent commands in the input stream. Correct the commands in error.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5251 I *resource object* **IN GROUP** *grpname* **IS REPLACED.**

Explanation: A resource definition existed in both source and target groups. Based on the CSD utility commands submitted, the utility has replaced the definition in the target group with that from the source group.

- *resource* is the type of the resource
- *object* is the name of the object
- *grpname* is the name of the group.

System Action: Normal utility processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5252 I *resource object* **COPIED TO GROUP** *grpname***.**

Explanation: The CSD utility has correctly copied a resource definition to the specified group, where:

- *resource* is the type of resource
- *object* is the name of the object
- *grpname* is the name of the group.

System Action: Normal utility processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5253 E GROUP *grpname* **NOT FOUND IN CSD FILE - DDNAME:** *ddname*

Explanation: The CSD utility has detected a COPY command that attempted to copy definitions from the non-existent group, *grpname*, in the CSD specified in DDNAME *ddname*.

System Action: The utility does not process the command.

User Response: Either correct the group name in the command, or make sure that the specified CSD file is the correct one.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5254 E *resource object* **ALREADY EXISTS IN THE TARGET GROUP.**

Explanation: The CSD utility detected a command that attempted to add a definition to a group that already contained a definition of an object with the same name, where:

- *resource* is the type of resource
- *object* is the name of the object.

System Action: The CSD utility does not process the command.

User Response: Change the name in the command, or alter the name of the existing definition.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5255 E LIST *xxxxxxxx* **NOT FOUND IN CSD FILE - DDNAME:** *ddname*

Explanation: The CSD utility detected an APPEND or REMOVE command that referred to a nonexistent list in the CSD file specified in DDNAME *ddname*.

System Action: The utility does not process the command.

User Response: Either correct the list name in the command, or make sure that the specified CSD file is the correct one.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5256 E NO RESOURCES DEFINED IN GROUP *grpname***.**

Explanation: In executing a LIST command, the CSD utility has found a group header on the CSD file for which no group elements exist.

System Action: The CSD utility continues to process the LIST command, but will not list elements of the named group.

User Response: Run the DFHCSDUP VERIFY utility to verify the group.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5257 E LENGTH OF 'TO' PREFIX MUST BE LESS THAN OR EQUAL TO LENGTH OF 'GROUP' PREFIX.

Explanation: During the execution of a generic COPY command, the batch update utility found the length of the prefix of the generic group specified in the TO keyword to be greater than the length of the prefix of the generic GROUP keyword.

System Action: The utility ignores the command to prevent truncation of the TO group name.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5258 I COPYING GROUP *grpname1* **TO** *grpname2*

Explanation: During the execution of a generic COPY command, the CSD batch update utility scans the CSD file for matches to the generic GROUP keyword. For every match, the utility resolves the generic TO keyword, and informs the user of the resulting *grpname1* and *grpname2* respectively.

System Action: Normal processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5259 I UNRECOGNIZED RESOURCE TYPE FOUND IN THE CSD FILE AND HAS BEEN IGNORED.

Explanation: CICS has found an unrecognized resource type code in a CSD record. The unrecognized code does not match any of the function codes in the language definition table. This can occur for one of the following reasons:

1. You are using a CICS release that does not support a type of definition that was created on the CSD file by a later CICS release.
2. The language definition table (DFHEITSP or DFHEITCU) is invalid for this CICS release.
3. The CSD manager (DFHDMP) has passed an invalid CSD record buffer to DFHPUP. This is a CICS internal logic error.

System Action: The resource is ignored and the operation continues.

User Response: Determine which of the possible reasons caused the error. If you can eliminate reasons 1 and 2, you can assume that reason 3 applies.

Take action corresponding to the reason you have established as follows:

1. Ignore the message.
2. Ensure that the library contains versions of DFHEITSP and DFHEITCU that are valid for the CICS release you are running.
3. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5261 W RDT IS EMPTY. NO VTAM RESOURCES IN ASSEMBLED TABLE.

Explanation: The CSD utility detected an attempt to migrate a TCT that either contains no RDO-supported terminal or sessions definitions, or whose TYPE=INITIAL entry specifies MIGRATE=COMPLETE.

System Action: The utility does not create any CSD definitions.

User Response: Check the TCT source code to see if it contains any RDO-supported definitions. If it does, check that it has been correctly assembled (MIGRATE=YES specified) and link-edited.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5262 S INSUFFICIENT STORAGE TO BUILD TYPE-MATCHING CHAIN.

Explanation: During CSD utility processing, an internal error has occurred in the migration of a TCT. This is because of lack of storage for TYPETERM definitions.

System Action: The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

In any of the above cases, definitions that have already been migrated will remain on the CSD.

User Response:

1. Run the DFHCSDUP VERIFY utility.
2. Delete the groups created by the failing MIGRATE command.
3. Allocate a larger region size in the utility JCL, and retry the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5263 S ERROR IN INPUT RDT. INCORRECT SEQUENCE OF COMMANDS.

Explanation: During CSD utility processing, an internal error has occurred in the migration of a TCT. This is because of abnormal data in the assembled table.

System Action: The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

Definitions that have already been migrated will remain on the CSD. The MVS user abend code is 0308.

User Response:

1. Run the DFHCSDUP VERIFY utility.
2. Delete the groups created by the failing MIGRATE command.
3. Keep the assembly listing for the failing table and keep the DFHCSDUP dump, if available. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5264 W RESOURCE *object* **NOT DEFINED. GROUP** *grpname* **NOT AVAILABLE.**

Explanation: During the migration of a TCT, the CSD utility could not define a resource *object* because the target group *grpname* was not available. The utility has issued a previous message indicating the reason.

System Action: The utility creates no definition for resource *object*. Normal utility processing continues.

User Response: Review the original message. If necessary, recode the TYPE=GROUP macro in the TCT source to name a suitable group.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5265 W ACTION REQUIRED TO FIND A SUITABLE TYPETERM FOR TERMINAL *termid***.**

Explanation: While migrating a TCT, the CSD utility found a terminal definition for which it could not create a corresponding TYPETERM definition.

System Action: The utility adds the terminal definition to the CSD file, but it refers to a TYPETERM that may be unsuitable for this device.

User Response: Use the CEDA transaction to define a suitable TYPETERM and alter the TERMINAL definition to refer to the new TYPETERM.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5266 W SESSIONS *sessions* **NOT DEFINED BECAUSE OF ERROR IN ASSOCIATED CONNECTION.**

Explanation: An error has been detected during the migration of a TCT. When migrating a session, DFHCSDUP checks that the associated CONNECTION has been defined successfully. If it has not, DFHCSDUP abnormally terminates the session definition.

System Action: The specified SESSIONS resource is not migrated to the CSD. DFHCSDUP continues with the migration of subsequent TCT entries.

User Response: Use the diagnostic information in the output listing from the MIGRATE utility to determine why the CONNECTION definition has failed. You can then use RDO to DEFINE the CONNECTION and the SESSIONS to the CSD.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5267 E *resource object* **NOT MIGRATED. TARGET GROUP** *grpname* **IS LOCKED TO APPLID** *applid* **OPID** *opid* **AND CANNOT BE UPDATED AT PRESENT**

Explanation: It is not possible to put the resource *resource* into group *groupname*, because the group is currently locked to APPLID *applid* and OPID *opid*. The group will be unlocked again when the other user's operation is complete.

System Action: The utility does not create definitions for the resources named in the DFH5274 messages which follow. Normal utility processing continues with the utility return code set to 8.

User Response: Resubmit the job later, or choose a different name for the target group. If the group remains locked, consult with the user identified by APPLID and OPID. If the lock remains set for no apparent reason, issue the VERIFY command and resubmit.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5268 E *resource object* **NOT MIGRATED.** *grpname* **ALREADY EXISTS AS A LIST.**

Explanation: The name chosen for the target GROUP duplicates that of an existing LIST on the CSD.

System Action: The utility does not create definitions for the resources named in the DFH5274 messages which follow. Normal utility processing continues with the utility return code set to 8.

User Response: Choose a different name for the target group and change the appropriate TYPE=GROUP macro in the FCT source.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5269 E *resource object* **NOT MIGRATED. GROUP** *grpname* **IS IBM PROTECTED.**

Explanation: An attempt was made to add a definition to an IBM supplied group (groups beginning with "DFH").

System Action: The utility creates no definition for the resources named in the DFH5274 messages which follow. Normal utility processing continues with the utility return code set to 8.

User Response: Change the input source to name a different target group whose name does not begin with "DFH".

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5270 I *{GROUP | LIST} xxxxxxxx* **DELETED FROM THE CSD.**

Explanation: The CSD utility has successfully deleted a group or list from the primary CSD file.

System Action: Normal utility processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5271 S UNABLE TO DELETE *{GROUP | LIST} xxxxxxxx* **FROM THE CSD.**

Explanation: During CSD utility processing, an error in accessing the CSD file caused a delete operation to fail.

System Action: The utility does not process the DELETE command. The group or list to be deleted remains on the CSD file.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5272 I *resource object* **DELETED FROM GROUP.**

Explanation: The CSD utility successfully deleted the named resource, where:

- *resource* is the type of resource
- *object* is the name of the object.

System Action: Normal utility processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5273 W *resource object* **IS NOT IS GROUP** *grpname***.**

Explanation: The CSD utility detected an attempt to delete a resource which did not exist in the named group, where:

- *resource* is the type of resource
- *object* is the name of the object
- *grpname* is the name of the group.

System Action: The utility does not process the DELETE command.

User Response: Check that you have coded the group and resource names correctly.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5274 W *resource object* **NOT MIGRATED. GROUP** *grpname* **IS NOT AVAILABLE.**

Explanation: During the migration of an FCT, the CSD utility could not define the resource *resource* because the target group *groupname* was not available. The utility has issued a previous message indicating the reason why.

System Action: The utility creates no definition for the resource named *object*. Normal utility processing continues.

User Response: Review the original message. If necessary recode the TYPE=GROUP macro in the FCT source to name a suitable group.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5275 S COMMAND NOT EXECUTED. GROUP *grpname* **IS NOT THE MEMBER OF LIST** *listname***.**

Explanation: The REMOVE command being executed names a GROUP that is not a member of LIST *listname*.

System Action: The command is not executed.

If commands are being read from a SYSIN data stream, then subsequent commands (except LIST commands) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, then DFHCSDUP attempts to process subsequent commands.

User Response: Correct the command and resubmit a DFHCSDUP job to execute the failing command and any subsequent commands that were suppressed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5276 I GROUP *grpname* **REMOVED FROM LIST** *listname***.**

Explanation: The REMOVE command has successfully removed group *grpname* from LIST *listname*.

System Action: Normal execution continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5277 I LIST *list* **DELETED FROM CSD.**

Explanation: The final group has been removed from list *listname*. The list has therefore been deleted.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5280 I PROCESSING DEFINITIONS FROM LIBRARY MEMBER *xxxxxxxx***.**

Explanation: The CSD utility has successfully loaded data from the named library member.

System Action: Normal utility processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5281 S DATA LOADED FROM LIBRARY MEMBER *xxxxxxxx* **IS INVALID.**

Explanation: The CSD utility has found an error in data loaded from the named library member.

System Action: The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

User Response: Obtain a dump containing the failing library member.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5282 E UNABLE TO GET STORAGE FOR LIBRARY MEMBER *xxxxxxxx***.**

Explanation: There is insufficient storage available to load the library member *xxxxxxxx*.

System Action: The utility terminates processing of the command that required access to the named library member.

User Response: Allocate a larger region size in the utility JCL and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5283 S RDL SUBCOMMAND EXCEEDS 1024 BYTES: *xxxxxxxx***.**

Explanation: The CSD utility found an internal error in the data loaded while processing the indicated (truncated) UPGRADE, INITIALIZE, or MIGRATE command.

System Action: The CSD utility terminates abnormally.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5284 E ERROR ANALYZING RDL SUBCOMMAND: *xxxxxxxx***.**

Explanation: The CSD utility found an internal error in the data loaded while processing the indicated (truncated) UPGRADE, INITIALIZE, or MIGRATE command.

System Action: The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5285 E INVALID VERB IN RDL SUBCOMMAND: *xxxxxxxx***.**

Explanation: The CSD utility found an internal error in the data loaded while processing the indicated (truncated) UPGRADE, INITIALIZE, or MIGRATE command.

System Action: The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5286 E UNABLE TO CREATE RESOURCE DEFINITION ON CSD FILE, RDL SUBCOMMAND: *xxxxxxxx***.**

Explanation: This message is issued during the processing of the indicated (truncated) command for one of the following reasons:

1. The CSD is full (in which case, messages DFH5175 and DFH5176 accompanies this one)
2. The CSD was defined as read-only (in which case, message DFH5174 accompanies this message)
3. The TCT being migrated contained a terminal entry with a name unacceptable to RDO (in which case, message DFH5165 accompanies this message)
4. A list or group cannot be used due to the failure of a previous update operation (in which case, message DFH5142 accompanies this message)
5. The resource definition list being used to INITIALIZE or UPGRADE the CSD file contained a definition with an invalid resource name or group name
6. A logic error occurred in DFHCSDUP or an internal error was detected in the data contained in the loaded table.

System Action: The system action depends on the reason the message is issued, as follows.

1. Migration of the TCT table is terminated immediately.
2. Processing of the UPGRADE or INITIALIZE command is terminated
3. The utility attempts to:
   a. Close any files previously opened internally.
   b. Unload any extract exit routines that were dynamically loaded.
   c. Invoke the termination exit routine (if supplied).
   d. Return control to the invoker of the utility.
4. The command is not executed, and execution of further DFHCSDUP commands in the job stream is suppressed.
5. As in (3) above.
6. As in (3) above.

In ALL cases, all the definitions created by this command up to the point of failure remain on the CSD.

User Response: The user response depends on the reason the message is issued, as follows.

1. See message DFH5175 and DFH5176.
2. See message DFH5174.
3. Change the name of the terminal and all references to it. Also refer to the user response for message DFH5165.
4. See message DFH5142.
5. This is a CICS logic error. See instruction for 6 below.
6. This is a CICS logic error. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. A CICS background trace of the failure may aid them in problem diagnosis.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5287 EXTRACT TERMINATED AT USER'S REQUEST RC=*retcode***.**

Explanation: A batch job has issued a CSD utility EXTRACT command. The EXTRACT command has been terminated because of a non-zero value in register 15 on return from a user exit program. Subsequent messages will indicate any further problems encountered by the utility.

System Action: Execution of the utility command is terminated. This message is followed by DFH5104.

User Response: Determine the cause of the error detected by the user exit program using the return code *retcode* provided and the relevant documentation of the user exit program.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5290 W TABLE *tabtype* **MACRO** *mactype*=*value* **IS NOT SUPPORTED. VALUE IS CHANGED TO** *newvalue***.**

Explanation: During a table *tabtype* migration for macro *mactype*, *value* is not supported. *value* has been migrated as *newvalue*

System Action: The utility creates the definition for the resource with the changed value. Normal utility processing continues.

User Response: Review the object definition to ensure that the modified definition is acceptable.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5291 E UNABLE TO DEFINE OBJECT *object* **IN GROUP** *group***. MIGRATION IS TERMINATED.**

Explanation: The DFHCSDUP migration utility could not define *object* in the *group* specified. The migration cannot continue.

System Action: The utility terminates the migration of the table.

User Response: Verify that the specified group is the correct group and review prior errors to determine why the migration utility could not create the definition in the group.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5292 W OBJECT *object* **NOT DEFINED FOR TABLE ITEM** *name* **DUE TO PREVIOUS ERROR. MIGRATION CONTINUES.**

Explanation: The DFHCSDUP migration utility could not define *object* for the table item *name*. The migration continues.

During the migration of an RCT, the migration utility issues this message for all DB2TRAN definitions that refer to a DB2ENTRY definition that failed.

System Action: The utility continues the table migration without defining the object.

User Response: Correct the prior errors and manually define the skipped objects.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5293 W TOTAL *object* **DEFINITIONS SKIPPED DUE TO ERROR:** *number*

Explanation: CICS issues this message after migrating a CICS table. *number* definitions of type *object* were not migrated. See one or more DFH5292 messages issued prior to this message.

System Action: Utility processing continues.

User Response: Correct the prior errors and manually define the skipped objects.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5294 E *number object-1* **WERE NOT MATCHED WITH A CORRESPONDING** *object-2***.**

Explanation: CICS issues this message if there are *object-1* table definitions that have not been defined because the table was not defined correctly. *object-1* table definitions must refer to a *object-2* in the table.

System Action: The migration of the table ends.

User Response: Reassemble the table with the current release macro source.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5296 W TABLE *tabtype* **TYPE=***mactype parameter* **DOES NOT SUPPORT MULTIPLE VALUES.**

Explanation: Multiple values were specified for TYPE=*mactype parameter* The migration of the *tabtype* table supports only one value.

System Action: The migration utility ignores the additional values. The migration continues.

User Response: Review the migrated definition to ensure that the new single value is acceptable.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH55xx (DFHCSDUP) messages

DFH5501 E COMMAND NOT EXECUTED. *keyword* **MUST BE SPECIFIED**

Explanation: A keyword *keyword*, which is required in the command, has been omitted or was incorrectly specified. An earlier message identifies if the latter case is applicable.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5502 W *xxxxxxx* **IMPLIES** *yyyyyyy*

Explanation: The value *xxxxxxxx* specified in a DEFINE command has caused another value *yyyyyyyy*, which is not a normal default, to be assumed.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is acceptable. If you accept this default, no further action is required.

If the resultant default is not acceptable, you must decide whether to modify the definition, or to delete it and start again.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5503 E COMMAND NOT EXECUTED. *xxxxxxx* **OPTION CONFLICTS WITH** *yyyyyyy* **OPTION AND IS IGNORED.**

Explanation: Two options, *xxxxxxx* and *yyyyyyy*, that are mutually exclusive have been specified.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5504 E COMMAND NOT EXECUTED. USE OF *xxxxxxx* **OPTION IMPLIES** *yyyyyyy* **OPTION**

Explanation: Option *xxxxxx* requires another value, *yyyyyyy*.

System Action: The utility ignores the command.

User Response: Specify *yyyyyyy*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5505 W PROGRAM DFHMSP REQUIRES A TWASIZE OF AT LEAST 512

Explanation: A DEFINE PROGRAM command for the message switching program, DFHMSP, has given it a TWASIZE of less than 512 bytes. If it is to be a definition for the CICS-supplied program of that name then it will not execute correctly.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5506 E COMMAND NOT EXECUTED. FOR *xxxxxxx* **MANY OPTIONS, INCLUDING** *yyyyyyy* **ARE MEANINGLESS**

Explanation: A keyword or value has been specified that is not consistent with another.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5507 E COMMAND NOT EXECUTED. *xxxxxxx* **VALUE MUST BE GREATER THAN** *yyyyyyy* **VALUE.**

Explanation: A value has been specified that is not consistent with another. *xxxxxxx* must be greater than *yyyyyyy*.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5508 E COMMAND NOT EXECUTED. *xxxxxxx* **VALUE MUST BE LESS THAN OR EQUAL TO** *yyyyyyy* **VALUE.**

Explanation: A value has been specified that is not consistent with another. The value *xxxxxxx* must be less than or equal to *yyyyyyy*.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5509 E COMMAND NOT EXECUTED. *xxxxxxx* **NAME MUST NOT BE THE SAME AS** *yyyyyyy* **NAME**

Explanation: Some values in DEFINE commands must not be the same as the name of the resource. *xxxxxxx* must not have the same name as *yyyyyyy*.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5510 W *xxxxxxx* **NAMES BEGINNING WITH** *yyyyyyy* **ARE RESERVED AND MAY BE REDEFINED BY CICS**

Explanation: CICS supplies standard programs and transactions whose names you should usually avoid.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5511 W *xxxxxxx* **NAME** *yyyyyyy* **IS RESERVED AND MAY BE REDEFINED BY CICS**

Explanation: CICS supplies standard programs and transactions whose names you should usually avoid.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5512 W PROGRAM NAME BEGINS WITH 'DFH' BUT TRANSACTION NAME DOES NOT BEGIN WITH 'C'

Explanation: CICS supplies standard programs and transactions whose naming conventions you should avoid.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5513 E COMMAND NOT EXECUTED. THE SECOND VALUE OF *xxxxxxx* **MUST NOT BE GREATER THAN THE FIRST.**

Explanation: Some keywords take pairs of values which are essentially maximum and minimum values.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5514 E COMMAND NOT EXECUTED. WITH SESSNAME THERE CAN ONLY BE ONE COUNT AND ITS VALUE MUST BE 1.

Explanation: The use of SESSNAME in a DEFINE SESSIONS command means that a single-session, either for sending or receiving, is required.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5515 W AUTOPAGE(NO) HAS BEEN SPECIFIED FOR A 3270 PRINT DEVICE

Explanation: A DEFINE TYPETERM command has AUTOPAGE(NO) and DEVICE(3270P) or DEVICE(LUTYPE3).

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5516 W THE VALUES OF DEVICE AND SESSIONTYPE ARE EQUIVALENT TO DEVICE(*devtype***) AND HAVE BEEN REPLACED**

Explanation: A DEFINE TYPETERM command has a valid but obsolete DEVICE and SESSIONTYPE combination.

This DEVICE and SESSIONTYPE combination has been replaced by a simpler equivalent indicated by *devtype*.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect. The CICS Resource Definition Guide provides further information about device equivalents.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5517 E COMMAND NOT EXECUTED. *xxxxxxx* **PFX AND COUNT TOGETHER MAKE MORE THAN 4 CHARACTERS.**

Explanation: In a SESSIONS definition the RECEIVEPFX and SENDPFX values are used as prefixes for the names of as many sessions as are specified in the respective counts. These names cannot be more than 4 characters long.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5518 W XTRANIDS *xxxxxxx* **ARE RESERVED AND MAY BE REDEFINED BY CICS**

Explanation: CICS supplies programs and transactions whose names you should usually avoid.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5519 E COMMAND NOT EXECUTED. *xxxxxxx* **VALUE CONTAINS AN INVALID** *y***.**

Explanation: All character values in DFHCSDUP commands are subject to rules which, depending on the value, disallow certain characters.

System Action: The utility ignores the command.

User Response: Correct the command.

The CICS Resource Definition Guide provides further information about these rules under the individual attributes for the syntax of the DFHCSDUP command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5520 W THE VALUE OF DEVICE IS EQUIVALENT TO *xxxxxxx* **AND HAS BEEN REPLACED**

Explanation: A DEFINE TYPETERM command has a valid but obsolete DEVICE value which has been replaced by a simpler equivalent.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

The CICS Resource Definition Guide provides further information about these simpler equivalent devices.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5521 E COMMAND NOT EXECUTED. *xxxxxxx* **VALUE** *yyyyyyy* **IS INVALID.**

Explanation: A value *yyyyyyyy* has been specified for keyword *xxxxxxxx* which is not valid. It may for instance be non-numeric.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5522 E COMMAND NOT EXECUTED. LENGTH OF *xxxxxxx* **VALUE IS MORE THAN ALLOWED.**

Explanation: All character values in DEFINE commands are of limited length.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5523 E COMMAND NOT EXECUTED. FILE DFHCSD MUST BE DEFINED IN THE SIT AND NOT THE CSD.

Explanation: DFHCSD has been defined in the CSD rather than in the SIT. This is not allowed.

System Action: The utility ignores the command.

User Response: Correct the command. Define DFHCSD in the SIT.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5524 W BMS ROUTE FOR CONSOLE MAY CAUSE UNPREDICTABLE RESULTS IF MAPS OR TEXT(ACCUM) USED ON DEVICE.

Explanation: The routing of multiline maps or accumulated text to the console is not supported.

System Action: Normal processing continues.

User Response: Ensure that the unsupported console operations are disabled.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5525 W *xxxxxxxx* **VALUE IS NOT VALID,** *yyyyyyyy* **HAS BEEN ASSUMED**

Explanation: The value *xxxxxxxx* is not valid. The value *yyyyyyyy* has been assumed.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5526 E *xxxxxxxx* **MUST HAVE ROWS AND COLUMNS SPECIFIED**

Explanation: *xxxxxxxx* must have rows and columns specified.

System Action: The utility ignores the command.

User Response: Correct the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5527 E REMOTE OPTIONS ARE IGNORED FOR PROGRAMS STARTING WITH DFH.

Explanation: CICS supplies standard programs which are not allowed to have remote attributes.

System Action: The command is ignored.

User Response: Correct the command by deleting the remote attributes from the program definition.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5528 E COMMAND NOT EXECUTED. VALUE OF *keyword* **IS OUT OF VALID RANGE.**

Explanation: An invalid value has been supplied for the specified keyword.

System Action: The utility ignores the command.

User Response: Supply a valid keyword value and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5529 E *keyword* **OR** *keyword* **MUST BE SPECIFIED.**

Explanation: Neither of the indicated keywords has been specified. When defining a resource, you must specify one of these keywords.

System Action: The utility ignores the command.

User Response: Supply one of the indicated keywords and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5530 W XTRANIDS ENDING WITH *string* **ARE RESERVED AND MAY BE REDEFINED BY CICS.**

Explanation: CICS supplies programs and transactions whose names you should usually avoid.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5531 W XTRANIDS BEGINNING WITH *string* **ARE RESERVED AND MAY BE REDEFINED BY CICS.**

Explanation: CICS supplies programs and transactions whose names you should usually avoid.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5532 E COMMAND NOT EXECUTED. AN INVALID COMBINATION OF ROWS AND COLUMNS HAS BEEN SPECIFIED FOR ALTSCREEN.

Explanation: One of the specified values is zero and the other is non-zero. This is an invalid combination.

System Action: The utility ignores the command.

User Response: Ensure that a valid combination of ALTSCREEN rows and columns is specified. See the CICS Resource Definition Guide for details of valid combinations.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5533 W SPECIFIED *keyword1* **VALUE IS LESS THAN** *keyword2* **VALUE. THE DEFAULT VALUE HAS BEEN ASSUMED.**

Explanation: A value has been specified for *keyword1* that is incompatible with the value for *keyword2*.

System Action: DFHCSDUP assumes the default value for *keyword1* and processes the command.

User Response: Ensure that the resulting resource definition is acceptable.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5534 W WHEN YOU CHANGE THE VALUE OF DEVICE MANY OTHER VALUES MAY BE CHANGED FOR YOU.

Explanation: When ALTERing the DEVICE in a TYPETERM resource definition, the batch update utility changes forced values that are incompatible with the new DEVICE. However, dependent default values are not changed, and may now be incompatible.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect. See the *CICS Resource Definition Guide* for more guidance.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5535 E COMMAND NOT EXECUTED. *restype* **NAME** *resname* **IS RESERVED BY CICS.**

Explanation: The user specified a resource name *resname* for resource type *restype* which is reserved for use by CICS.

System Action: The utility ignores the command.

User Response: Specify a different resource name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5536 W *keyword1* **AND** *keyword2* **ATTRIBUTES ARE INCONSISTENT IF DEFINITION IS BEING SHARED WITH A BACK LEVEL RELEASE.**

Explanation: *keyword1* has been preceded by *keyword2*. However, *keyword1* has been kept for compatibility reasons. After updating the definition, the value specified for *keyword1* has become inconsistent with the value specified for *keyword2*.

System Action: The definition is created or updated.

User Response: If sharing the CSD file with a back level release, ensure that the resulting resource definition is acceptable. Otherwise, ignore the message.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5537 W PREFIX ALLOWED TO DEFAULT. USE OF DEFAULTS IS RECOMMENDED FOR MRO SESSIONS ONLY.

Explanation: A null value has been accepted for a send or receive prefix for an LU6.1 or MRO session. The default value '>' is supplied by CICS for send sessions and '<' for receive sessions. These values are the default prefixes for MRO session names. The use of these prefixes is allowed for LU6.1 sessions, but is not recommended if MRO session names with the same prefixes are in use because duplicate names may occur if large numbers of sessions are defined.

System Action: CICS will generate session names using these prefixes.

User Response: If this is an LU6.1 session it is recommended that a different prefix should be chosen.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5538 W *resource* **NAMES STARTING WITH** *x* **MAY CONFLICT WITH SYSTEM SESSIONS NAMES.**

Explanation: The resource *resource* has been given a name starting with the character *x* which might be used for system generated SESSIONS names.

System Action: The definition is created or updated.

User Response: Ensure there is no conflict with the name given to the resource and SESSIONS names.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5539 S *keyword* **IS NOT VALID BECAUSE IT STARTS WITH THE RESERVED CHARACTER OR STRING** *string***.**

Explanation: The name you have given to keyword *keyword* is not valid because the name begins with a reserved character or string such as “c” or “dfh”.

System Action: The definition is not created.

User Response: Change the name of the keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5540 W *xxxxxxx* **VALUE IS GREATER THAN** *yyyyyyy* **VALUE. THE LOWER VALUE TAKES PRECEDENCE.**

Explanation: A value has been specified that is not consistent with another. The value *xxxxxxx* is greater than value *yyyyyyy*. Value *yyyyyyy* takes precedence and overrides the higher value.

System Action: The definition is created or updated with the two values as specified.

User Response: Ensure that the two values are defined as you expect. You may decide to leave the values as specified and dynamically change the values online once the resource has been installed in the CICS system.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5541 E PROGRAM OR REMOTESYSTEM MUST BE SPECIFIED.

Explanation: None of the indicated keywords has been specified. When defining a transaction, you must specify one of these keywords.

System Action: The utility ignores the command.

User Response: Supply one of the indicated keywords and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5545 W PROGRAM SHOULD BE SPECIFIED WITH BREXIT.

Explanation: If the BREXIT option is specified, the PROGRAM option should also be specified. For compatibility with the Bridge transaction definitions in CTS 1.2, this is not mandatory, but if PROGRAM is not specified the transaction definition will not work.

System Action: The transaction definition is accepted.

User Response: Correct the command when migration from CTS 1.2 has been made.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCAP

DFH56xx (DFHCSDUP) messages

DFH5600 E UNABLE TO GET STORAGE FOR MODULE DFHCICS. PRIMARY CSD HAS NOT BEEN INITIALIZED.

Explanation: There is insufficient storage to load module DFHCICS.

System Action: Processing of the INITIALIZE command is terminated.

User Response: Ensure that there is sufficient storage to load the DFHCICS module.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5601 E UNABLE TO LOAD THE *{FCT | RDT | LD}* **TABLE NAMED** *table***.**

Explanation: Table *table* cannot be loaded.

System Action: The system action depends on the type of table.

LD
: DFHCSDUP cannot process the command. The utility attempts to:
  1. Close any files previously opened internally.
  2. Unload any EXTRACT exit routines that were dynamically loaded.
  3. Invoke the termination exit routine, if supplied.
  4. Return control to the invoker of the utility.

FCT or RDT
: The CSD utility cannot load the table, and terminates the processing of the utility command.

User Response: Refer to the preceding MVS message which should specify the reason for the failure.

If your FCT or TCT assembly and link-editing is successful, the FCT or RDT should be in the library. The LD is in the load library of the supplied pregenerated CICS system.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5602 E UNABLE TO UNLOAD THE *{FCT | RDT | LD}* **TABLE NAMED** *table***.**

Explanation: Table *table* cannot be unloaded.

System Action: The system action depends on the type of table.

LD
: DFHCSDUP cannot process the command. The utility attempts to:
  1. Close any files previously opened internally.
  2. Unload any EXTRACT exit routines that were dynamically loaded.
  3. Invoke the termination exit routine, if supplied.
  4. Return control to the invoker of the utility.

FCT or RDT
: The CSD utility cannot unload the table, and terminates the processing of the utility command.

User Response: Refer to the preceding MVS message which should specify the reason for the failure.

If your FCT or TCT assembly and link-editing is successful, the FCT or RDT should be in the library. The LD is in the load library of the supplied pregenerated CICS system.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5603 E UNABLE TO LOCATE THE *{FCT | RDT | LD | DCT}* **TABLE NAMED** *table***.**

Explanation: Table *table* cannot be located.

System Action: The system action depends on the type of table specified.

LD
: DFHCSDUP cannot process the command. The utility attempts to:
  1. Close any files previously opened internally.
  2. Unload any EXTRACT exit routines that were dynamically loaded.
  3. Invoke the termination exit routine, if supplied.
  4. Return control to the invoker of the utility.

FCT, RDT or DCT
: The CSD utility cannot locate the table, and terminates the processing of the utility command.

User Response: Determine the reason for the failure.

If your FCT, TCT or DCT assembly and link-editing is successful, the FCT, RDT or DCT should be in the library. The LD is in the load library of the supplied pregenerated CICS system.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5604 E UNABLE TO OBTAIN STORAGE FOR THE CROSS-REFERENCE TABLE NAMED *table*.

Explanation: DFHCSDUP was unable to obtain storage for table *table*.

System Action: DFHCSDUP cannot process the command.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST) are checked for syntax only. (If the primary CSD file cannot be opened, LIST is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Increase the region size and retry the command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5605 E DISALLOWED CHARACTER IN GROUP OR LIST NAME *object*.

Explanation: The call to module DFHDMP has failed to construct a valid key for the record created on the CSD file. This is because the group or list name contains an invalid character.

System Action: A CSD record is not created for this definition. (If it is a transaction, a generated profile is not created either.)

User Response: Use the CEDA transaction to define the resource with a valid name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5606 S COMMAND IS NOT EXECUTED. UNABLE TO LOAD THE SERVICE MODULE *progname*.

Explanation: The service module, *progname*, cannot be loaded due to insufficient storage.

System Action: Utility command execution is terminated. If commands are being read from a SYSIN data stream by the utility, then subsequent commands are checked for syntax only.

User Response: Retry the utility command with an increased region size.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5607 S COMMAND IS TERMINATED. AN ERROR OCCURRED WHILE READING THE FIRST SECONDARY CSD RECORD.

Explanation: An I/O error has occurred on the secondary CSD file.

System Action: The SERVICE command is terminated. If commands are being read from a SYSIN data stream by the utility, then subsequent commands are checked for syntax only.

User Response: Check that the input and output data sets have been correctly defined, and that the DDNAME for the secondary CSD file in the JCL corresponds to the FROMCSD parameter in the SERVICE utility command.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5608 S COMMAND IS TERMINATED. AN ERROR OCCURRED WHILE READING A SECONDARY CSD RECORD.

Explanation: An I/O error has occurred on the secondary CSD file.

System Action: The SERVICE command is terminated. If commands are being read from a SYSIN data stream by the utility, then subsequent commands are checked for syntax only.

User Response: Check that the input and output data sets have been correctly defined, and that the DDNAME for the secondary CSD file in the JCL corresponds to the FROMCSD parameter in the SERVICE utility command.

If the problem persists, try to obtain a print out of the CSD, using either IDCAMS or the DFHCSDUP LIST ALL option. The LIST will indicate where errors have occurred because they will not print and are therefore easily identifiable.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5609 S COMMAND IS TERMINATED. AN ERROR OCCURRED WHILE WRITING A PRIMARY CSD RECORD.

Explanation: An I/O error has occurred on the primary CSD file.

System Action: The SERVICE command is terminated. If commands are being read from a SYSIN data stream by the utility, then subsequent commands are checked for syntax only.

User Response: Retry the command, ensuring that a sufficiently large data set is specified for the output (primary) CSD file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5611 E COMMAND NOT EXECUTED. *parameter* **PARAMETER MUST BEGIN WITH 'DFH'.**

Explanation: In a CSD utility MIGRATE command, the specified parameter contained an invalid table name or group name.

System Action: The utility does not process the command.

User Response: Resubmit the MIGRATE command with a valid table name or group name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5612 I *resource object* **IN GROUP** *grpname* **IS UNCHANGED.**

Explanation: A resource definition existed in both source and target groups. Based on the CSD utility commands submitted, the utility has replaced the resource definition in the target group.

System Action: Normal utility processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5613 E UNABLE TO LOCATE THE LIBRARY MEMBER *member***.**

Explanation: The member is not in the libraries named in the JCL.

System Action: The utility terminates processing of the command that required access to library member *member*.

User Response: Ensure that the member is correctly link-edited into the library and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5614 E UNABLE TO LOAD THE LIBRARY MEMBER *member***.**

Explanation: DFHCSDUP could not load library member *member*.

System Action: The utility terminates processing of the command that required access to the library member.

User Response: Ensure that the member is correctly link-edited into the library and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5617 S COMMAND IS TERMINATED. AN UNRECOGNIZED TYPE OF RECORD WAS ENCOUNTERED WHILE SECONDARY CSD WAS BEING READ.

Explanation: The record-type field of an input CSD record is invalid.

System Action: The SERVICE command is terminated. If commands are being read from a SYSIN data stream by the utility, then subsequent commands are checked for syntax only.

User Response: Check that the input and output data sets have been correctly defined, and that the DDNAME for the secondary CSD file in the JCL corresponds to the FROMCSD parameter in the SERVICE utility command.

If the problem persists, try to obtain a print out of the CSD, using either IDCAMS or the DFHCSDUP LIST ALL option. The LIST will indicate where errors have occurred because they will not print and are therefore easily identifiable.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5618 I AN ATTENTION INTERRUPT WAS REQUESTED DURING DFHCSDUP EXECUTION.

Explanation: An attention interrupt has been requested while DFHCSDUP is executing in a TSO environment.

System Action: Normal utility processing continues.

Control is passed to a put-message exit if one has been specified on the extended entry linkage. Refer to the CICS Customization Guide for more information about put-message exits.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5619 W AN INVALID VALUE OF THE PAGESIZE PARAMETER HAS BEEN SPECIFIED. THE DEFAULT VALUE OF 60 LINES PER PAGE WILL BE USED.

Explanation: A value of the PAGESIZE parameter outside the allowed range (4–9999) has been specified.

System Action: The default value of 60 lines per page is taken.

User Response: Ensure that a valid PAGESIZE value is specified in future.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5620 E AN ILLEGAL RETURN CODE (RC= *ret-code***) HAS BEEN RETURNED FROM THE** *{INITIALIZATION | GET-COMMAND | TERMINATION}* **EXIT.**

Explanation: The specified user-exit routine has returned a disallowed return code.

System Action: Processing of the utility command is terminated. The exit is not disabled.

User Response: Investigate the specified exit routine for the cause of the illegal return code.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5621 E A NON-ZERO RETURN CODE HAS BEEN RETURNED FROM THE PUT-MESSAGE EXIT.

Explanation: The put-message exit routine has returned a disallowed return code.

System Action: Processing of the utility command is terminated and the put-message exit is disabled.

User Response: Investigate the put-message exit routine for the cause of the illegal return code.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5622 S THE SECONDARY CSD HAS BEEN CLOSED DURING CLEAN-UP PROCESSING FOLLOWING THE INTERCEPTION OF AN ABEND.

Explanation: An Abend has occurred during DFHCSDUP processing. The secondary CSD has been closed during post ABEND clean up processing.

System Action: Processing of the utility command is terminated.

User Response: Refer to prior messages for further information regarding this problem.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5623 S THE PRIMARY CSD HAS BEEN CLOSED DURING CLEAN-UP PROCESSING FOLLOWING THE INTERCEPTION OF AN ABEND.

Explanation: An abend has occurred during DFHCSDUP processing. The primary CSD has been closed during post ABEND clean up processing.

System Action: Processing of the utility command is terminated.

User Response: Refer to prior messages for further information regarding this problem.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5624 S THE EXTRACT EXIT PROGRAM HAS BEEN UNLOADED DURING CLEAN-UP PROCESSING FOLLOWING THE INTERCEPTION OF AN ABEND.

Explanation: An abend has occurred during the processing of an EXTRACT command. The extract exit program specified on the USERPROGRAM keyword of the EXTRACT utility command has been unloaded during post-abend clean-up processing.

System Action: The EXTRACT command is terminated.

User Response: Refer to prior messages for further information regarding the problem.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCSDUP

DFH5625 THE USER PROGRAM HAS PASSED AN INVALID DDNAME PARAMETER FOR *ddname* TO DFHCSDUP.

Explanation: The user program has supplied an alternative *ddname* as a parameter for either DFHCSD, SYSIN or SYSPRINT. The alternative ddname is invalid because it begins with a blank.

System Action: The default DDNAME is used instead.

User Response: Correct the invalid DDNAME parameter.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCSDUP

DFH5630 W NO IBM SUPPLIED DEFINITION FOUND FOR *resourcetype resourcename*.

Explanation: While performing a SCAN command, the named resource type was not found in the CSD file on any of the IBM supplied groups. Note that compatibility groups are not used for the SCAN command.

System Action: The utility continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCSDUP

DFH5631 I *resourcetype resourcename* IN GROUP *groupname1* MATCHES THE IBM SUPPLIED DEFINITION IN GROUP *groupname2*.

Explanation: While performing a SCAN command, the resource *resourcetype* name *resourcename* was found in group *groupname1* and it matches the IBM supplied definition in group *groupname2*

System Action: The utility continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCSDUP

DFH5632 I *resourcetype resourcename* IN GROUP *groupname1* DOES NOT MATCH THE IBM SUPPLIED DEFINITION IN GROUP *groupname2*.

Explanation: While performing a SCAN command, the resource *resourcetype* name *resourcename* was found in group *groupname1* and it does not match the IBM supplied definition in group *groupname2*

System Action: The utility continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCSDUP

DFH5633 I *resourcetype resourcename* **FOUND IN GROUP** *groupname***.**

Explanation: While performing a SCAN command, the resource *resourcetype* name *resourcename* was found in group *groupname*. No IBM supplied definition was found to perform a compare against.

System Action: The utility continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCSDUP

DFH5634 W *resourcetype resourcename* **NOT FOUND IN USER GROUPS.**

Explanation: While performing a SCAN command, the resource *resourcetype* name *resourcename* was not found in any user groups.

System Action: The utility continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCSDUP

DFH7xxx (DFHExP) command-level translator diagnostic messages

Diagnostic messages may be issued by the command-level translator (DFHEAP for assembler language, DFHECP for COBOL, DFHEDP for C, and DFHEPP for PL/I) in the course of processing programs written in assembler language, COBOL, C, or PL/I. Assembler-language messages are inserted as macro notes (MNOTES) in the translator output file and can be seen by either printing or assembling the translator output file.
COBOL, C, and PL/I messages are delivered to SYSPRINT.
The same diagnostics are issued by the command-level interpreter, by the master terminal transaction (CEMT), and by CEDA.

A diagnostic message can have three components: a message number, a severity code, and message text. Each message is of the form DFH7*nnnI c line text* where

- *nnn* is a number,
- *I* is the information message identifier,
- *c* is the severity code
- *line* is the line number of the error and
- *text* is the text of the message.

In assembler language, COBOL, C, and PL/I, diagnostic messages can be allocated a severity code. This severity code is represented by a letter that, if present, will appear in the message immediately following the message number and preceding the message text. There are five levels of severity. Those for assembler language, C and PL/I are different from those for COBOL. The meanings of the codes and the associated return codes for the languages are as follows:

Assembler, C or PL/I	Return code	COBOL
U = Unrecoverable	16	D = Disaster
S = Severe	12	E = Error
E = Error	8	C = Conditional
W = Warning	4	W = Warning
I = Information	0	I = Information

The message text consists of the message itself, which may or may not include inserts. The inserts are positions within the message text where, in the actual message, specific information is given on the reasons for the diagnostic message. Not all the diagnostic messages, however, require inserts.
Messages issued by the command-level translator are usually self-explanatory, and DFH7000 is an **example** of this type of message.

DFH7000I LISTING FILE CANNOT BE OPENED

Explanation: The listing data set was not opened.

System Action: The command-level translator is abnormally terminated. A dump is produced if a SYSABEND or SYSUDUMP DD statement has been provided.

User Response: Ensure the JCL is correct, or determine what is causing the error and preventing opening.

Destination: Console

Module(s): DFHEAP (for assembler language), DFHECP (for COBOL), DFHEDP (for C), DFHEPP (for PL/I)

DFHACxxxx (DFHACP) messages

DFHAC2001 *date time applid* **Transaction '***tranid***' is not recognized. Check that the transaction name is correct.**

Explanation: Either transaction *tranid* does not exist as an installed transaction definition, or it is disabled, or it contains invalid characters.

Note that destination CSMT is used for non-terminal transactions only.

System Action: Processing continues.

User Response: Enter a valid transaction identifier.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2002 *date time applid* **To use this transaction** *tranid* **you must sign on or have the right security level.**

Explanation: You are signed on using the default *userid* but this *userid* does not have access to the requested transaction.

System Action: CICS does not initialize the invoked transaction. Other processing continues and message DFHAC2003 is sent to destination CSMT.

User Response: Sign on with an authorized *userid*.

Destination: Terminal End User

Module: DFHACP

DFHAC2003 *date time applid* **Security violation has been detected term id =** *termid***, trans id =** *tranid***, userid =** *userid***.**

Explanation: The operator with user ID *userid* has invoked a transaction *tranid* at terminal *termid* for which the operator is not authorized.

System Action: CICS does not initialize the invoked transaction. Other CICS processing continues and either message DFHAC2002 or DFHAC2033 is sent to the terminal operator.

User Response: Refer to the *userid* in the preceding message, DFHXS1111 on the CSCS log, to determine the identity of the person trying to invoke transaction *tranid* and the reason for the attempt.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, termid, tranid, userid*

DFHAC2004 *time applid* **Transaction** *tranid* **has failed with abend AKCC. Resource backout was successful.**

Explanation: Transaction tranid is abnormally terminated with abend AKCC.

System Action: The transaction (task) is purged.

User Response: Resubmit the transaction.

Destination: Terminal End User

Module: DFHTFP

DFHAC2005 *time applid* **Transaction** *tranid* **has failed with abend** *abcode***.**

Explanation: Transaction *tranid* has been defined with INDOUBT(WAIT) or INDOUBT(COMMIT) and has been in communication with a partner APPC system. A session failure has occurred while the session was INDOUBT during an explicit or implicit syncpoint. An immediate resync was attempted but could not be completed.

System Action: The task is abnormally terminated with a transaction dump. Unless overridden, APPC resynchronization is retried when the remote system is available.

User Response: For more information, see the abend code *abcode*. If necessary, resubmit the transaction after the cause of the abend has been removed.

Destination: Terminal End User

Module: DFHACP

DFHAC2006 *date time applid* **Transaction** *tranid* **program** *program name* **abend** *primary abcode* **at** *termid***.**

Explanation: The system was unable to execute transaction *tranid*. *termid* identifies the terminal which initiated transaction *tranid*. If there is no associated terminal, *termid* appears as "????." Program *progname* is the highest level program and is taken from the installed program definition. *abcode* is the CICS abend code.

System Action: The task is abnormally terminated with a dump.

User Response: Refer to abend code *abcode* for further information and guidance on how to solve the problem. If the code is not available, it is a user code generated by an EXEC CICS ABEND ABCODE(*abcode*) command. This command has been issued by a user program or by an IBM program (for example, a programming language library module).

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid, program name, primary abcode, termid*

DFHAC2007 *date time applid* **Transaction** *tranid* **cannot run as CICS shutdown is in progress.**

Explanation: Transaction *tranid* cannot be run during system quiesce.

System Action: The system is in quiesce mode.

Note that destination CSMT is used for non-terminal transactions only.

User Response: Re-enter the transaction when CICS is in normal execution mode, or place an entry for this transaction in the transaction list table (XLT).

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2008 *date time applid* **Transaction** *tranid* **has been disabled and cannot be used.**

Explanation: Terminal *tranid* has been disabled.

Note that destination CSMT is used for non-terminal transactions only.

System Action: Other processing continues.

User Response: Notify the programmer responsible for this area that transaction *tranid* has been disabled.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2009 *date time applid* **Invalid non-terminal transaction** *tranid***.**

Explanation: Transaction *tranid* has been entered. No terminal is associated with this transaction. It may be that transaction *tranid* is a disabled transaction, or is one that cannot be run during system quiesce. Alternatively, an invalid transaction identifier may have been entered.

System Action: Other processing continues.

User Response: Determine and correct the reason for transaction *tranid*'s invalidity.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2010 *time applid* **Transaction** *tranid* **is not executable on terminal** *termid***.**

Explanation: A conflict has been detected between the options specified for transaction *tranid*'s definition and those specified on terminal *termid*'s DFHTCT table entry. For example, transaction *tranid* is reserved for the use of VTAM terminals but the input came from a non-VTAM terminal.

System Action: The input is ignored.

User Response: If transaction *tranid* is to be entered from terminal *termid*, ensure that the installed transaction definition value of DVSUPRT is compatible with the DFHTCT entry.

Destination: Terminal End User

Module: DFHACP

DFHAC2012 *date time applid* **Remote transaction** *tranid* **cannot be run on the local system.**

Explanation: Transaction *tranid* is specified as remote. An attempt to route the transaction to a remote system failed either because there is no MRO/ISC defined in the running CICS system, or because the remote system name specified in the definition of the transaction is the same as that of the local system.

Note that destination CSMT is used for nonterminal transactions only.

System Action: The task is abnormally terminated.

User Response: Ensure that:

- MRO/ISC support is correctly defined
- The remote transaction definition is correct.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2014 *date time applid* **Transaction** *tranid* **is not executable because system** *sysid* **is not available.**

Explanation: Transaction *tranid* is specified as remote. An attempt to route the transaction to a remote system failed because the link is out of service.

Note that destination CSMT is used for non-terminal transactions only.

System Action: CICS continues.

User Response: Wait until the link is available.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid, sysid*

DFHAC2015 *date time applid* **Console** *consname* **has not been defined to CICS. Input is ignored.**

Explanation: The console operator at the console named *consname* has directed a MODIFY command to the CICS region, but no terminal definition for that console is installed in the region, and autoinstall for consoles is not enabled.

System Action: The MODIFY command from the console is ignored.

User Response: Notify the system programmer, who should use RDO to DEFINE and INSTALL a console definition that matches the name of the console, or enable autoinstall for consoles.

Destination: CSMT and Terminal End User

Modules: DFHACP, DFHZATA2

XMEOUT Parameters: *date, time, applid, consname*

DFHAC2016 *date time applid* **Transaction** *tranid* **cannot run because program** *program name* **is not available.**

Explanation: Transaction *tranid* is not executable because the initial program for transaction *tranid* is not available. Possible reasons for this are:

1. The program is missing.
2. The installed program definition is missing.
3. The program is disabled.
4. The program name in the installed transaction definition is invalid.
5. The installed transaction has been defined as remote and therefore has no program name, but the name of the remote system is the same as that of the local system.

Note that destination CSMT is used for non-terminal transactions only.

System Action: Other processing continues.

User Response: Determine the cause of the error using the list given in the **Explanation**. The response depends on the reason as follows:

1. Load the program into the CICS program library.
2. Create an installed program definition for the program.
3. Enable the program.
4. Use a valid program name in the installed transaction definition.
5. Carry out whichever of the following is appropriate:
   - Use a local version of this transaction.
   - Use the correct remote version of this transaction.
   - Logon to the correct system and retry the transaction.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid, program name*

DFHAC2017 *date time applid* **Transaction** *tranid* **cannot run because terminal profile** *profname* **for the transaction is not available.**

Explanation: Transaction *tranid* is not executable because the terminal profile for the transaction is not available. This is because it has not been defined, or it has not been installed.

Note that destination CSMT is used for non-terminal transactions only.

System Action: Other processing continues.

User Response: Notify the system programmer or system administrator.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid, profname*

DFHAC2018 *date time applid* **An unrecognized Process Initialization Parameter (PIP) has been received in ATTACH for transaction** *tranid***.**

Explanation: CICS has received an LU type 6.2 attach header with invalid process initialization parameters (PIPs).

Note that destination CSMT is used for non-terminal transactions only.

System Action: CICS rejects the attach request.

User Response: Inspect the received PIP data and its associated generalized data stream (GDS) header to determine why the parameters are invalid.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2019 *date time applid* **Transaction** *tranid* **does not support unmapped conversations.**

Explanation: Transaction *tranid* received an attach request that required the use of the generalized data stream (GDS) to access unmapped conversations, but transaction *tranid* does not support the use of the GDS interface.

System Action: CICS rejects the attach request.

Note that destination CSMT is used for non-terminal transactions only.

User Response: Inspect the subsystem that sent the attach header to see if the correct transaction was requested. If the request was correct, check the CICS transaction definition.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2020 *time applid* **The conversation type requested by node** *netname* **was not recognized.**

Explanation: CICS received a conversation-type field in an attach header that was not TYPE=MAPPED or TYPE=UNMAPPED.

System Action: The attach request is rejected.

User Response: Notify the system programmer. The validity of the attach function management header (FMH) should be checked and the cause of the error identified.

Destination: Terminal End User

Module: DFHACP

DFHAC2021 *time applid* **An unsupported Data Blocking Algorithm (DBA) field in the attach Function Management Header (FMH) has been received from node** *netname***.**

Explanation: The received attach header contained a value for the reserved data blocking algorithm (DBA) field.

System Action: The attach request is rejected.

User Response: Notify the system programmer. The validity of the attach function management header (FMH) should be checked and the cause of the error identified.

Destination: Terminal End User

Module: DFHACP

DFHAC2022 *date time applid* **Transaction** *tranid* **has initiated an incorrect sync point level request.**

Explanation: The requested Synclevel does not match the synclevel negotiated in the Bind request, or Synclevel 2 was requested, but Lognames were not exchanged.

Note that destination CSMT is used for non-terminal transactions only.

System Action: The attach request is rejected.

User Response: Notify the system programmer. The subsystem that sent the attach header should be inspected to determine that the correct transaction was requested. If it was, the CICS transaction definition should be checked.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2023 *time applid* **An invalid sync point level has been requested by node** *netname***.**

Explanation: The synchronization level requested in the attach header is invalid for the session being used.

System Action: The attach request is rejected.

User Response: Notify the system programmer. The validity of the attach function management header (FMH) should be checked and the cause of the error identified. The value of the synchronization level in the attach header and the bind should be compared.

Destination: Terminal End User

Module: DFHACP

DFHAC2024 *date time applid* **A request from node** *netname* **has invalid security parameters.**

Explanation: The received attach header did not match the required security parameters specified in the bind.

Note that destination CSMT is used for non-terminal transactions only.

System Action: The attach request is rejected.

User Response: Notify the system programmer. The validity of the attach function management header (FMH) should be checked and the cause of the error identified. The value of the ACC requirements in the attach header and the bind should be compared.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2025 *time applid* **An invalid Unit of Work Identification (UOWID) has been supplied by node** *netname***.**

Explanation: The received attach header contained an invalid unit of work ID (UOWID). Either the format was wrong, or no UOWID was received when the sync point level required it. This error may also be raised if no conversation correlator is supplied when it is needed.

System Action: The attach request is rejected.

User Response: Notify the system programmer. The validity of the attach function management header (FMH) should be checked and the cause of the error identified. The value of the UOWID/conversation correlator and the sync point level in the attach header should be compared.

Destination: Terminal End User

Module: DFHACP

DFHAC2026 *time applid* **An invalid Function Management Header (FMH) has been supplied by node** *netname***.**

Explanation: The length field in the attach header was invalid.

System Action: The attach request is rejected.

User Response: Notify the system programmer. The validity of the attach function management header (FMH) should be checked and the cause of the error identified.

Destination: Terminal End User

Module: DFHACP

DFHAC2027 *date time applid* **Transaction** *tranid* **does not support conversation restart.**

Explanation: CICS will not accept LU type 6.2 attach headers with restart requested.

Note that destination CSMT is used for non-terminal transactions only.

System Action: The attach request is rejected.

User Response: Notify the system programmer. The subsystem that sent the attach header should be inspected to determine why restart was requested.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2028 *date time applid* **Transaction** *tranid* **cannot be used and has been ignored.**

Explanation: The transaction code CSAC or CESC, was entered from a terminal. This is not allowed.

System Action: If the transaction is CSAC, the transaction is run with no effect. If the transaction is CESC, the transaction is abnormally terminated with abend code ATOA.

User Response: Ensure that these transactions are not entered from a terminal.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2029 *date time applid* **Transaction** *tranid* **is not executable. The system specified by the dynamic routing program is unavailable.**

Explanation: Transaction *tranid* is specified as remote AND dynamic. An attempt to dynamically route transaction *tranid* to the remote system specified by the dynamic routing program has failed because the link is out of service.

Note that destination CSMT is used for non-terminal transactions only.

System Action: CICS continues.

User Response: Wait until the link becomes available, then try to dynamically route the transaction again.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2030 *date time applid* **All sessions are busy. Please try again.**

Explanation: Transaction *tranid* is specified as remote AND dynamic. An attempt to dynamically route transaction *tranid* to the remote system specified by the dynamic routing program has failed because no sessions are immediately available.

Note that destination CSMT is used for non-terminal transactions only.

System Action: CICS continues.

User Response: Wait until a session becomes available, then try to dynamically route the transaction again.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid*

DFHAC2031 *date time applid* **Automatic signon of operator of console** *consname* **has failed.**

Explanation: The console operator at the console named *consname* has directed a MODIFY command to the CICS region, and the console was defined with USERID(*FIRST) or USERID(*EVERY). When CICS tried to signon the operator automatically, the signon was rejected.

System Action: The MODIFY command from the console is ignored.

User Response: Contact the system programmer to give the userid in use at the console (which is identified in other messages on the log), the correct access to this console using RACF (or an equivalent External Security manager).

Destination: CSML and Terminal End User

Modules: DFHACP, DFHZATA2

XMEOUT Parameters: *date, time, applid, consname*

DFHAC2032 *date time applid* **CICS autoinstall for console** *consname* **has failed.**

Explanation: The console operator at the console named *consname* has directed a MODIFY command to the CICS region, but no terminal definition for that console is installed in the region, and an autoinstall for it has failed.

System Action: The MODIFY command from the console is ignored.

User Response: Notify the system programmer, who should investigate the failure by looking for abends and messages on the log of the CICS system.

Destination: CSML

Modules: DFHACP, DFHZATA2

XMEOUT Parameters: *date, time, applid, consname*

DFHAC2033 *time applid* **You are not authorized to use transaction** *tranid***. Check that the transaction name is correct.**

Explanation: Either an operator has attempted to execute transaction *tranid* while not authorized, or another transaction attempted to start transaction *tranid*, which was not authorized for this terminal.

System Action: Other processing continues. Message DFHAC2003 is sent to CSMT.

User Response: Either determine why the operator was trying to execute transaction *tranid* or enter an authorized transaction identifier.

Destination: Terminal End User

Module: DFHACP

DFHAC2034 *time applid* **CICS Logic Error. An invalid error code has been passed to DFHACP. Transaction:** *tranid* **Terminal:** *termid***.**

Explanation: An invalid error code has been passed to DFHACP.

System Action: Transaction *tranid* is terminated with a transaction dump. The dump code is AACA. Message DFHAC2035 is sent to the CSMT.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Terminal End User

Module: DFHACP

DFHAC2035 *date time applid* **An invalid error code has been passed to DFHACP. Transaction** *tranid* **is terminated. Terminal** *termid***.**

Explanation: An invalid error code has been passed to DFHACP.

System Action: Transaction *tranid* is terminated with a transaction dump. A transaction dump is taken. The dump code is AACA. Message DFHAC2034 is sent to the terminal user.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid, termid*

DFHAC2036 *date time applid* **Transaction** *tranid* **has failed with abend AKCC. Resource backout was successful.**

Explanation: Transaction tranid has abended AKCC.

System Action: The transaction (task) is purged.

User Response: Resubmit the transaction later.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2037 *date time applid* **Transaction** *tranid* **is not executable on terminal** *termid***.**

Explanation: A conflict has been detected between the options specified for transaction *tranid*'s definition and those specified on terminal *termid*'s DFHTCT table entry. For example, transaction *tranid* is reserved for the use of VTAM terminals but the input came from a non-VTAM terminal.

System Action: The input is ignored.

User Response: If transaction *tranid* is to be entered from terminal *termid*, ensure that the installed transaction definition value of DVSUPRT is compatible with the DFHTCT entry.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid, termid*

DFHAC2038 *date time applid* **The conversation type requested by node** *netname* **was not recognized.**

Explanation: CICS received a conversation-type field in an attach header that was not TYPE=MAPPED or TYPE=UNMAPPED.

System Action: The attach request is rejected.

User Response: Notify the system programmer. The validity of the attach function management header (FMH) should be checked and the failing subsystem identified.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2039 *date time applid* **An unsupported Data Blocking Algorithm (DBA) field in the attach Function Management Header (FMH) has been received from node** *netname***.**

Explanation: The received attach header contained a value for the reserved data blocking algorithm (DBA) field.

System Action: The attach request is rejected.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. Check the validity of the attach function management header (FMH), and identify the failing subsystem.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2040 *date time applid* **An invalid sync point level has been requested by node** *netname***.**

Explanation: The synchronization level requested in the attach header is invalid for the session being used.

System Action: The attach request is rejected.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. Check the validity of the attach function management header (FMH), and identify the failing subsystem. Compare the value of the synchronization level in the attach header and the bind.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2041 *date time applid* **An invalid Unit of Work Identification (UOWID) has been supplied by node** *netname***.**

Explanation: The received attach header contained an invalid unit of work ID (UOWID). Either the format was wrong, or no UOWID was received when the sync point level required it. This error may also be raised if no conversation correlator is supplied when it is needed.

System Action: The attach request is rejected.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. The validity of the attach function management header (FMH) should be checked

and the failing subsystem identified. The value of the UOWID/conversation correlator and the sync point level in the attach header should be compared.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2042 *date time applid* **An invalid Function Management Header (FMH) has been supplied by node** *netname***.**

Explanation: The length field in the attach header was invalid.

System Action: The attach request is rejected.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. Check the validity of the attach function management header (FMH), and identify the failing subsystem.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2043 *date time applid* **Transaction has been rejected - CICS system is being recovered. Please wait for completion of recovery.**

Explanation: A request to initiate a transaction was received while the CICS system was in the process of recovering the session following an XRF takeover or persistent sessions restart. The error is detected by DFHZSUP, which then drives DFHACP to issue this message.

Note that destination CSMT is used for non-terminal transactions only.

System Action: Depending upon the recovery notification requested for this terminal, the system will send either the recovery message or initiate the recovery transaction specified on the RECOVNOTIFY option of the typeterm definition for this terminal (see the *CICS Resource Definition Guide* for details).

User Response: After the recovery notification has been received, the user is able to continue operations.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid*

DFHAC2044 *date time applid* **An error occurred while trying to send SYNCPOINT ROLLBACK to terminal** *termid***.**

Explanation: An attempt was made to send a SYNCPOINT ROLLBACK request. A nonzero return code was received by the sender of the request.

System Action: ABORT processing is initiated for terminal *termid*.

User Response: Notify the system programmer. Use trace to find the value of the return code from the SYNCPOINT ROLLBACK request. For IRC, the meaning of the return code can be found in the *CICS Data Areas* manual.

Destination: CSMT

Module: DFHZIS1

XMEOUT Parameters: *date, time, applid, termid*

DFHAC2045 *date time applid* **CICS autoinstall for console** *consname* **was rejected by the autoinstall control program.**

Explanation: The console operator at the console named *consname* has directed a MODIFY command to the CICS region, but no terminal definition for that console is installed in the region, and an autoinstall for it has failed because the autoinstall program has rejected the install request.

System Action: The MODIFY command from the console is ignored.

User Response: Notify the system programmer, who should alter the autoinstall program to allow this console to be installed.

Destination: CSMT

Modules: DFHACP, DFHZATA2

XMEOUT Parameters: *date, time, applid, consname*

DFHAC2047 *date time applid* **While performing an attach for node** *netname* **a security violation was detected.**

Explanation: A request to attach a remote transaction failed due to a security problem. The security fields extracted from the Attach FMH5 were passed to the Security Domain to signon the user in the remote system, but the signon call failed.

System Action: The attach request is rejected.

User Response: Examine the trace to determine the reason for the signon failure. Check that if the userid, password or profile are passed on the Attach FMH5, then they are valid.

Destination: CSMT and Terminal End User

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2050 *time applid* **An invalid function management header (FMH) has been supplied by node** *netname***.**

Explanation: The access security information length field in the attach header is invalid.

System Action: An exception trace entry containing the invalid FMH5 is issued. The attach request is rejected.

User Response: Notify the system programmer. Check the validity of the attach function management header and identify the cause of the error.

Destination: Terminal End User

Module: DFHACP

DFHAC2051 *date time applid* **An invalid Function Management Header (FMH) has been supplied by node** *netname***.**

Explanation: The Access Security Information length field in the attach header was invalid.

System Action: An exception trace entry containing the invalid FMH5 has been issued. The attach request is rejected.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. Check the validity of the attach function management header (FMH), and identify the failing subsystem.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2052 *time applid* **While performing an attach for node** *netname* **a security violation was detected.**

Explanation: A password was required in the attach FMH5, but was missing. A user ID was found, however, because the attach did not specify already verified (AV) or persistent signed-on (PV1), a password should have been present.

System Action: An exception trace entry is issued tracing the invalid FMH5. The attach request is rejected.

User Response: Notify the system programmer. Inspect the subsystem that sent the attach header to determine why the password was not sent.

Destination: Terminal End User

Module: DFHACP

DFHAC2053 *date time applid* **While performing an attach for node** *netname* **a security violation was detected.**

Explanation: A password was required in the attach FMH5, but was missing. A user ID was found, however, since the attach did not specify already verified (AV) or persistent signed-on (PV1), a password should have been present.

System Action: An exception trace entry is issued tracing the invalid FMH5. The attach request is rejected.

User Response: Notify the system programmer. Inspect the subsystem that sent the attach header to determine why the password was not sent.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2054 *time applid* **You are not authorized to access this system.**

Explanation: The attach header that was sent to the remote system did not match the required security parameters specified in the bind.

System Action: The attach request is rejected by the remote system and the session is unbound. The remote system issues messages DFHAC2055 on CSMT and DFHZC4946 on CSNE.

User Response: Inform the system programmer. Investigate the reason why the attach request failed. See messages DFHAC2055 on CSMT and DFHZC4946 on CSNE issued by the remote system for more diagnostic information.

Destination: Terminal End User

Module: DFHACP

DFHAC2055 *date time applid* **An attach request from node** *netname* **has sent BIND/FMH5 security data that is invalid.**

Explanation: A request to attach a task has been received across an APPC link. However, there is an error in the FMH attach parameters. An attach parameter is present that is not authorized by the bind security indicators.

System Action: The attach request is rejected and the session is unbound. An exception trace point (number 1737) for component TF is issued, tracing the invalid attach header (FMH type 5). Message DFHZC4946 on CSNE contains sense information to help identify the reason for the failure.

User Response: Investigate the cause of the error which is in the remote system. Use the FMH5 in the exception trace, to determine why the remote system sent an invalid attach request.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2056 *time applid* **You are not authorized to access this system.**

Explanation: The attach header that was sent to the remote system did not conform to the APPC protocol.

System Action: The attach request is rejected by the remote system and the session is unbound. The remote system will produce messages DFHAC2057 on CSMT and DFHZC4947 on CSNE.

User Response: Inform the system programmer. Investigate the reason why the attach request failed. See messages DFHAC2057 on CSMT and DFHZC4947 on CSNE issued by the remote system for more diagnostic information.

Destination: Terminal End User

Module: DFHACP

DFHAC2057 *date time applid* **While performing an attach for node** *netname* **a security violation was detected.**

Explanation: A request to attach a task has been received across an APPC link. However, the FMH attach parameters do not conform to the APPC protocol.

System Action: The attach request is rejected and the session is unbound. An exception trace point (number 1737) for component TF is issued tracing the invalid attach header (FMH type 5). Message DFHZC4947 is issued.

User Response: Investigate the cause of the error which is in the remote system. Use the FMH5 in the exception trace to determine why the remote system sent an invalid attach request. See message DFHZC4947 on CSNE which contains sense information to help identify the reason for the failure.

If the remote system has an earlier release of CICS or CICS on another platform then you may need to set USEDFLTUSER. See Attach Time Security and the USEDFLTUSER option in the *CICS RACF Security Guide*.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, netname*

DFHAC2201 *time applid* **Transaction** *tranid* **has lost contact with its coordinator system during syncpoint processing and has abended with code ASP1. The unit of work is shunted until contact is restored.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. The coordinator of the syncpoint is not this CICS system but is remote.

Transaction *tranid* has lost contact with its coordinator system during the critical period of syncpoint processing known as the 'indoubt window'.

In accordance with the transaction definition (WAIT YES), the unit of work is not completed but is allowed to wait for resynchronization with the coordinator system. The transaction is abnormally

terminated with abend code ASP1. The unit of work is shunted to await the return of the coordinator system.

If possible, a conditional message *condmsg* from the linked system is appended to this message.

System Action: Message DFHAC2231 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: None. Any updates performed by the unit of work are resolved automatically when resynchronization with the coordinator takes place.

Alternatively, the user may force resolution of the updates independently of the coordinator system by making a CEMT request to commit or to back out the unit of work.

Destination: Terminal End User

Module: DFHTFP

DFHAC2202 *time applid* **Transaction** *tranid* **has lost contact with its coordinator system during syncpoint processing and has abended with code ASPO. All updates will be unilaterally committed.** *condmsg*

Explanation: Transaction *tranid* has lost contact with its coordinator system during the critical period of syncpoint processing known as the 'indoubt window'. The transaction is abnormally terminated with abend code ASPO.

In accordance with the transaction definition (WAIT NO and ACTION COMMIT), all recoverable updates performed by the unit of work are unilaterally committed. Note that integrity of updates may be lost because the coordinator system may either commit or back out its changes.

If possible, a conditional message *condmsg* from the linked system is appended to this message.

System Action: Message DFHAC2232 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: None. In accordance with the transaction definition, all updates are unilaterally committed.

Destination: Terminal End User

Module: DFHTFP

DFHAC2203 *time applid* **Transaction** *tranid* **has lost contact with its coordinator system during syncpoint processing and has abended with code ASPP. All updates will be unilaterally backed out.** *condmsg*

Explanation: Transaction *tranid* has lost contact with its coordinator system during the critical period of syncpoint processing known as the 'indoubt window'. The transaction is abnormally terminated with abend code ASPP.

In accordance with the transaction definition (WAIT NO and ACTION BACKOUT), all recoverable updates performed by the unit of work are unilaterally backed out. Note that integrity of updates may be lost because the coordinator system may either commit or back out its changes.

If possible, a conditional message *condmsg* from the linked system is appended to this message.

System Action: Message DFHAC2233 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: None. In accordance with the transaction definition, all updates are unilaterally backed out.

Destination: Terminal End User

Module: DFHTFP

DFHAC2206 *time applid* **Transaction** *tranid* **failed with abend** *abcode***. Updates to local recoverable resources backed out.** *condmsg*

Explanation: Transaction *tranid* is abnormally terminated with abend code *abcode*. Any changes to recoverable resources in the local system that have been performed by the current unit of work are backed out.

abcode is either a CICS transaction abend code or a user abend code generated by a CICS ABEND ABCODE(*abcode*) command. This command is issued either by a user program or by an IBM program (for example, a programming language library module).

If possible, a conditional message *condmsg* from the remote system will be appended to this message.

When this message is issued in the terminal owning region because a remote transaction has failed, there may be no recoverable resources to be backed out in the local system. In this case, the conditional message tells you whether or not resources in the remote system have been backed out.

System Action: Message DFHAC2236 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: Use the abend code, *abcode*, to diagnose the problem. In a transaction routing environment, the original cause of the failure is usually indicated in the conditional message. If the abend is issued by an IBM program product other than CICS, the code is documented in the library of that other product.

Resubmit the transaction after the cause of the original abend has been removed.

Destination: Terminal End User

Module: DFHTFP

DFHAC2215 *time applid* **A CICS-generated syncpoint request has failed because a connected system has requested that the UOW be rolled back. Transaction** *tranid* **has been abnormally terminated with code ASPF.** *condmsg*

Explanation: CICS has been unable to comply with an internally generated syncpoint request because a connected system has notified it that the unit of work must be rolled back. (This may also occur as a result of a session failure or a protocol error).

Transaction *tranid* is abnormally terminated with abend code ASPF. Any changes to recoverable resources that have been performed by the current unit of work are backed out.

If possible, a conditional message *condmsg* from the linked system is appended to this message.

System Action: Message DFHAC2245 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: Determine why the connected system sent the indication to roll back the unit of work.

Resubmit the transaction after the cause of the indication to roll back has been removed.

Destination: Terminal End User

Module: DFHTFP

DFHAC2216 *time applid* **Transaction termination processing has failed because a connected system has requested that the UOW be rolled back. Transaction** *tranid* **has been abnormally terminated with code ASPN.** *condmsg*

Explanation: CICS has been unable to complete normal transaction termination processing because a connected system has notified it that the unit of work must be rolled back. (This may also occur as a result of a session failure or a protocol error).

Transaction *tranid* is abnormally terminated with abend code ASPN. Any changes to recoverable resources that have been performed by the current unit of work are backed out.

If possible, a conditional message *condmsg* from the linked system is appended to this message.

System Action: Message DFHAC2246 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: Determine why the connected system sent the indication to roll back the unit of work.

Resubmit the transaction after the cause of the indication to roll back has been removed.

Destination: Terminal End User

Module: DFHTFP

DFHAC2217 *time applid* **Transaction** *tranid* **has requested rollback, but was using a type of processing for which rollback is not supported. The transaction has been abnormally terminated with code ASP8.** *message*

Explanation: An application requested syncpoint rollback, but was using a type of processing that does not support rollback, for example LU6.1.

Transaction *tranid* is abnormally terminated with abend code ASP8. Any changes to recoverable resources that have been performed by the current unit of work will be backed out.

If possible, a conditional message *condmsg* from the linked system will be appended to this message.

System Action: Message DFHAC2247 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: Refer to the explanation of abend ASP8.

Destination: Terminal End User

Module: DFHTFP

DFHAC2218 *time applid* **Transaction** *tranid* **has failed with abend ASP7 following the failure of a local resource owner in the prepare phase of syncpoint. Updates will be backed out.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. Resources local to this CICS system, for example files, temporary storage, or transient data, have been updated, and so the local resource owners have been sent a syncpoint request. A local resource owner has replied 'No' to a request to 'Prepare', during the two phase syncpoint protocol.

Transaction *tranid* is abnormally terminated with abend code ASP7. Any changes to recoverable resources that have been performed by the current unit of work are backed out.

If possible, a conditional message *condmsg* from the linked system is appended to this message.

System Action: Message DFHAC2248 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: Refer to the explanation of abend ASP7.

Destination: Terminal End User

Module: DFHTFP

DFHAC2219 *time applid* **Transaction** *tranid* **has failed with abend ASP7 following the failure of a remote system in the prepare phase of syncpoint. Updates will be backed out.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. Resources remote to this CICS system, for example files, temporary storage, transient data on remote CICS systems, or database managers communicating via the RMI, have been updated, and so the remote resource owners have been sent a syncpoint request. A remote resource owner has replied 'No' to a request to 'Prepare', during the two phase syncpoint protocol.

Transaction *tranid* is abnormally terminated with abend code ASP7. Any changes to recoverable resources that have been performed by the current unit of work are backed out.

If possible, a conditional message *condmsg* from the linked system is appended to this message.

System Action: Message DFHAC2249 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: Refer to the explanation of abend ASP7.

Destination: Terminal End User

Module: DFHTFP

DFHAC2220 *time applid* **The coordinator system has indicated that the current unit of work is to be backed out. Transaction** *tranid* **has been abnormally terminated with abend ASP3.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. The coordinator of the syncpoint is not this CICS system but is remote. During the syncpoint protocol the remote coordinator has decided that the unit of work cannot be committed and must be backed out.

Transaction *tranid* is abnormally terminated with abend code ASP3. Any changes to recoverable resources that have been performed by the current unit of work are backed out.

If possible, a conditional message *condmsg* from the linked system is appended to this message.

System Action: Message DFHAC2250 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: Refer to the remote coordinator system to discover the reason why the unit of work was backed out.

Destination: Terminal End User

Module: DFHTFP

DFHAC2221 *time applid* **Transaction** *tranid* **has failed with abend ASPQ. Syncpoint commit processing has failed while communicating with a remote system.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. Resources remote to this CICS system such as files, temporary storage, and transient data on remote CICS systems have been updated, and so the remote resource owners have been sent a syncpoint request. A failure occurred during phase 2 of syncpoint protocol.

Transaction *tranid* has abnormally terminated with abend code ASPQ. Recoverable resources have successfully been committed but a subsequent error occurred.

If possible, a conditional message *condmsg* from the linked system is appended to this message.

System Action: Message DFHAC2251 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: Refer to the associated messages already issued by the communication components of CICS to determine the cause of the intersystem session problem.

Destination: Terminal End User

Module: DFHTFP

DFHAC2222 *time applid* **Transaction** *tranid* **has lost contact with its coordinator system during syncpoint processing. No updates have been performed by this system; it has abended with code ASPR.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. The coordinator of the syncpoint is not this CICS system but is remote.

Transaction *tranid* has lost contact with its coordinator system during the critical period of syncpoint processing known as the 'indoubt window'. However no recoverable resources have been updated by this system, so there is no data integrity problem.

Transaction *tranid* is abnormally terminated with abend code ASPR.

If possible, a conditional message *condmsg* from the linked system is appended to this message.

System Action: Message DFHAC2252 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: Refer to messages on the remote system to determine if the remote resources were backed out or committed.

Destination: Terminal End User

Module: DFHTFP

DFHAC2223 *time applid* **Transaction** *tranid* **has failed with abend ASP2 due to the links to the remote systems being in an invalid state. Updates will be backed out.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. Resources remote to this CICS system, for example files, temporary storage, transient data on remote CICS systems, or database managers communicating via the RMI, have been updated, and so the remote resource owners would be sent a syncpoint request. The links to the remote resource owners are in an invalid state to be sent the PREPARE request of the two phase syncpoint protocol.

Transaction *tranid* is abnormally terminated with abend code ASP2. Any changes to recoverable resources that have been performed by the current unit of work are backed out.

System Action: Message DFHAC2253 is sent to the master terminal operator (destination CSMT). Normal abend processing continues.

User Response: See the explanation of abend ASP2 for guidance.

Destination: Terminal End User

Module: DFHTFP

DFHAC2230 *date time applid* **Transaction** *tranid* **terminal** *termid* **not executed due to I/O error at session startup.** *message*

Explanation: Transaction *tranid* could not be executed because an I/O error occurred in the start-up program on terminal *termid*.

System Action: Transaction *tranid* is not executed.

User Response: Correct the cause of the I/O error, which is probably due to the terminal not being powered on.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid, termid, message*

DFHAC2231 *date time applid* **Transaction** *tranid* **running program** *program name* **term** *termid* **has lost contact with its coordinator system during syncpoint and has abended with code ASP1. The unit of work is shunted until contact is restored***{. EXCI job = }exci_id***.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. The coordinator of the syncpoint is not this CICS system but is remote.

Transaction *tranid* has lost contact with its coordinator system during the critical period of syncpoint processing known as the 'indoubt window'.

In accordance with the transaction definition (WAIT YES), the unit of work is not completed. It is allowed to wait for resynchronization with the coordinator system. The transaction is abnormally terminated with abend code ASP1. The unit of work is shunted to await the return of the coordinator system.

Exci Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

In the case of an MRO or an ISC APPC (parallel sessions) connected system, *termid* is a terminal identifier (transaction routing) or a session identifier, *sysid* is the identifier of the linked CICS system. The display ends with the termination message *condmsg* issued by the linked system.

System Action: If possible, message DFHAC2201 is sent to the terminal user. Normal abend processing continues.

User Response: Refer to explanation of abend code ASP1.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, program name, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2232 *date time applid* **Transaction** *tranid* **running program** *program name* **term** *termid* **has lost contact with its coordinator system during syncpoint and has abended with code ASPO. All updates will be unilaterally committed***{. EXCI job = }exci_id. condmsg*

Explanation: Transaction *tranid* has lost contact with its coordinator system during the critical period of syncpoint processing known as the 'indoubt window'. The transaction is abnormally terminated with abend code ASPO.

In accordance with the transaction definition (WAIT NO and ACTION COMMIT), all recoverable updates performed by the unit of work are unilaterally committed. Note that integrity of updates may be lost since the coordinator system may either commit or back out its changes.

Exci Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

In the case of an MRO or an ISC APPC (parallel sessions) connected system *termid* is a terminal identifier (transaction routing) or a session identifier, *sysid* is the identifier of the linked CICS system. The display ends with the termination message *condmsg* issued by the linked system.

System Action: If possible, message DFHAC2202 is sent to the terminal user. Normal abend processing continues.

User Response: None. In accordance with the transaction definition, all updates are unilaterally committed.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, program name, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2233 *date time applid* **Transaction** *tranid* **running program** *program name* **term** *termid* **has lost contact with its coordinator system during syncpoint and has abended with code ASPP. All updates will be unilaterally backed out***{. EXCI job = }exci_id. condmsg*

Explanation: Transaction *tranid* has lost contact with its coordinator system during the critical period of syncpoint processing known as the 'indoubt window'. The transaction is abnormally terminated with abend code ASPP.

In accordance with the transaction definition (WAIT NO and ACTION BACKOUT), all recoverable updates performed by the unit of work are unilaterally backed out. Note that integrity of updates may be lost since the coordinator system may either commit or back out its changes.

Exci Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

In the case of an MRO or an ISC APPC (parallel sessions) connected system, *termid* is a terminal identifier (transaction routing) or a session identifier, and *sysid* is the identifier of the linked CICS system. The display ends with the termination message *condmsg* issued by the linked system.

System Action: If possible, message DFHAC2203 is sent to the terminal user. Normal abend processing continues.

User Response: None. In accordance with the transaction definition, all updates are unilaterally backed out.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, program name, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2234 *date time applid* **A commit failure has occurred during syncpoint processing for transaction** *tranid***, terminal** *termid***. The transaction will be allowed to complete normally** *{. EXCI job = }exci_id. condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. Resources local to this CICS system, for example files, temporary storage, or transient data, have been updated. A commit failure occurred during phase 2 of the syncpoint protocol for a local resource owner.

Exci Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

termid is a terminal identifier (transaction routing) or a session identifier.

System Action: If possible, message DFHAC2204 is sent to the terminal user. For an EXEC CICS SYNCPOINT, processing completes normally and processing continues with the next unit of work. For EXEC CICS RETURN, the transaction completes normally.

Resources affected by the commit failure remain locked and the unit of work is shunted.

User Response: Refer to earlier messages issued by the local resource owner to determine the cause of the commit failure.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2235 *date time applid* **A backout failure has occurred during syncpoint processing for transaction** *tranid*, **terminal** *termid*. **The transaction will be allowed to complete normally** *{. EXCI job = }exci_id*. *condmsg*

Explanation: An attempt to back out a unit of work has suffered a backout failure. For the local resource owner(s) that suffered the backout failure, the resources updated by the unit of work remain locked. All other resources are backed out.

Exci Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

termid is a terminal identifier (transaction routing) or a session identifier.

System Action: If possible, message DFHAC2205 is sent to the terminal user. For an EXEC CICS SYNCPOINT, processing completes normally and processing continues with the next unit of work. For EXEC CICS RETURN, the transaction completes normally.

Resources affected by the backout failure remain locked and the unit of work is shunted.

User Response: Refer to an earlier messages issued by the local resource owner to determine the cause of the backout failure.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2236 *date time applid* **Transaction** *tranid* **abend** *secondary abcode* **in program** *program name* **term** *termid*. **Updates to local recoverable resources will be backed out***{. EXCI job = }exci_id*. *condmsg*

Explanation: Transaction *tranid* is abnormally terminated with abend code *abcode* in program *progname*. Any changes to recoverable resources in the local system that have been performed by the current unit of work are backed out.

EXCI Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

In the case of an MRO or an ISC APPC (parallel sessions) connected system, *termid* is a terminal identifier (transaction routing) or a session identifier, and *sysid* is the identifier of the linked CICS system. The display ends with the termination message *condmsg* issued by the linked system.

When this message is issued in the Terminal Owning region because a remote transaction has failed, there may be no recoverable resources to be backed out in the local system. In this case, the conditional message will tell you whether or not resources in the remote system have been backed out.

Program *progname* will be unknown when the message is issued in a Terminal Owning region.

System Action: If possible, message DFHAC2206 is sent to the terminal user. Normal abend processing continues.

User Response: See the description of the abend code *abcode* for guidance. In a transaction routing environment, the original cause of the failure is usually indicated in the conditional message. If *abcode* is not a CICS abend, it is a user code, in which case you should consult the programmer responsible for this area.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, secondary abcode, program name, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2245 *date time applid* **A CICS-generated syncpoint request could not be completed normally because a connected system has requested that the unit of work be rolled back. Transaction** *tranid* **running program** *program name* **term** *termid* **has been abnormally terminated with code ASPF***{. EXCI job = }exci_id*. *condmsg*

Explanation: CICS has been unable to complete an internally generated syncpoint request because a connected system has notified it that the unit of work must be rolled back. (This may also occur as a result of a session failure or a protocol error).

Transaction *tranid* is abnormally terminated with abend code ASPF in program *progname*. Any changes to recoverable resources that have been performed by the current unit of work are backed out.

Exci Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

In the case of an MRO or an ISC APPC (parallel sessions) connected system, *termid* is a terminal identifier (transaction routing) or a session identifier, and *sysid* is the identifier of the linked CICS system. The display ends with the termination message *condmsg* issued by the linked system.

System Action: If possible, message DFHAC2215 is sent to the terminal user. Normal abend processing continues.

User Response: Determine why the connected system sent the indication to roll back the unit of work.

Resubmit the transaction after the cause of the indication to roll back has been removed.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, program name, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2246 *date time applid* **Transaction termination processing could not be completed normally because a connected system has requested that the unit of work be rolled back. Transaction** *tranid***, terminal** *termid* **has been abnormally terminated with code ASPN***{. EXCI job = }exci_id***.** *condmsg*

Explanation: CICS has been unable to complete normal transaction termination processing because a connected system has notified it that the unit of work must be rolled back. (This may also occur as a result of a session failure or a protocol error).

Transaction *tranid* is abnormally terminated with abend code ASPN. Any changes to recoverable resources that have been performed by the current unit of work are backed out.

Exci Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

In the case of an MRO or an ISC APPC (parallel sessions) connected system, *termid* is a terminal identifier (transaction routing) or a session identifier, and *sysid* is the identifier of the linked CICS system. The display ends with the termination message *condmsg* issued by the linked system.

System Action: If possible, message DFHAC2216 is sent to the terminal user. Normal abend processing continues.

User Response: Determine why the connected system sent the indication to roll back the unit of work.

Resubmit the transaction after the cause of the indication to roll back has been removed.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2247 *date time applid* **Transaction** *tranid* **running program** *program name* **term** *termid* **has requested rollback, but was using a type of processing for which rollback is not supported. The transaction has been abnormally terminated with code ASP8** *{. EXCI job = }exci_id***.** *condmsg*

Explanation: An application requested syncpoint rollback, but was using a type of processing that does not support rollback, for example LU6.1.

Transaction *tranid* is abnormally terminated with abend code ASP8 in program *progname*. Any changes to recoverable resources that have been performed by the current unit of work will be backed out.

Exci Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. In the case of an MRO or an ISC APPC (parallel sessions) connected system *termid* is a terminal identifier (transaction routing) or a session identifier, and *sysid* is the identifier of the linked CICS system. The display ends with the termination message *condmsg* issued by the linked system.

System Action: If possible, message DFHAC2219 is sent to the terminal user. Normal abend processing continues.

User Response: Refer to explanation of abend code ASP7.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, program name, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2250 *date time applid* **The coordinator system has indicated that the current unit of work is to be backed out. Transaction** *tranid* **running program** *program name* **term** *termid* **has been abnormally terminated with abend ASP3***{. EXCI job = }exci_id***.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. The local unit of work is part of a larger unit of work, and is not the coordinator in the syncpoint. The coordinator is either in a remote system or is another unit of work in the local system (if the transaction is the result of a RUN SYNCHRONOUS command). During the syncpoint protocol the coordinator has decided that the unit of work cannot be committed and must be backed out.

Transaction *tranid* is abnormally terminated with abend code ASP3 in program *progname*. Any changes to recoverable resources that have been performed by the current unit of work are backed out.

Exci Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used this, can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

In the case of an MRO or an ISC APPC (parallel sessions) connected system *termid* is a terminal identifier (transaction routing) or a session identifier, and *sysid* is the identifier of the linked CICS system. The display ends with the termination message *condmsg* issued by the linked system.

System Action: If possible, message DFHAC2220 is sent to the terminal user. Normal abend processing continues.

User Response: Refer to the coordinator system to determine the reason why the unit of work was backed out.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, program name, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2251 *date time applid* **Transaction** *tranid* **running program** *program name* **term** *termid* **has failed with abend ASPQ. Syncpoint commit processing has failed while communicating with a remote system***{. EXCI job = }exci_id***.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. Resources remote to this CICS system such as files, temporary storage, and transient data on remote CICS systems have been updated, and so the remote resource owners have been sent a syncpoint request. A failure occurred during phase 2 of syncpoint protocol.

Transaction *tranid* is abnormally terminated with abend code ASPQ in program *progname*. Recoverable resources have successfully been committed but a subsequent error occurred.

EXCI job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of *jobname.stepname.procname - MVSid* and identifies the EXCI client job. The stepname and procname may be omitted. *MVSid* identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS; not a real terminal.

In the case of an MRO or an ISC APPC (parallel sessions) connected system, *termid* is a terminal identifier (transaction routing) or a session identifier, *sysid* is the identifier of the linked CICS system, and the display ends with the termination message *condmsg* issued by the linked system.

System Action: If possible, message DFHAC2221 is sent to the terminal user. Normal abend processing continues.

User Response: Refer to associated messages already issued by the communication components of CICS to determine the cause of the intersystem session problem.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, program name, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2252 *date time applid* **Transaction** *tranid* **in program** *program name* **term** *termid* **has lost contact with its coordinator system during syncpoint processing. No updates have been performed by this system; it has abended with code ASPR***{. EXCI job = }exci_id***.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. The coordinator of the syncpoint is not this CICS system but is remote.

Transaction *tranid* has lost contact with its coordinator system during the critical period of syncpoint processing known as the 'indoubt window'. However no recoverable resources have been updated by this system and so there is no data integrity problem.

Exci Job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of 'jobname.stepname.procname - MVSid' and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

In the case of an MRO or an ISC APPC (parallel sessions) connected system, *termid* is a terminal identifier (transaction routing) or a session identifier, and *sysid* is the identifier of the linked CICS system. The display ends with the termination message *condmsg* issued by the linked system.

System Action: If possible, message DFHAC2222 is sent to the terminal user. Normal abend processing continues.

User Response: Refer to messages on the remote system to determine if the remote resources were backed out or committed.

Destination: CSMT

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, program name, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2253 *date time applid* **Transaction** *tranid* **running program** *program name* **term** *termid* **has failed with abend ASP2 due to the links to the remote systems being in an invalid state. Updates will be backed out***{. EXCI job = }exci_id***.** *condmsg*

Explanation: An application has requested syncpoint, either via EXEC CICS SYNCPOINT or implicitly via EXEC CICS RETURN. Resources remote to this CICS system, for example files, temporary storage, transient data on remote CICS systems, or database managers communicating via the RMI, have been updated, and so the remote resource owners would be sent a syncpoint request. The links to the remote resource owners are in an invalid state to be sent the PREPARE request of the two phase syncpoint protocol.

Transaction *tranid* is abnormally terminated with abend code ASP2 in program *progname*. Any changes to recoverable resources that have been performed by the current unit of work are backed out.

Exci job =*exci_id* is added when *tranid* is a server transaction running on behalf of a non CICS job using the external CICS interface (EXCI). The exci_id consists of *jobname.stepname.procname - MVSid* and identifies the EXCI client job. The stepname and procname may be omitted. The MVSid identifies the MVS system on which the EXCI client job is running. If MRO/XCF is being used, this can be different from the MVS system on which this CICS system is running. The MVSid is the SMF system identification (SID), hence the MVSid will be omitted if SMF is not active. Terminal *termid* represents the connection between the EXCI client and CICS rather than a real terminal.

In the case of an MRO or an ISC APPC (parallel sessions) connected system, *termid* is a terminal identifier (transaction routing) or a session identifier and *sysid* is the identifier of the linked CICS system. The display ends with the termination message *condmsg* issued by the linked system.

System Action: If possible, message DFHAC2223 is sent to the terminal user. Normal abend processing continues.

User Response: See the explanation of abend code ASP2 for guidance.

Module: DFHTFP

XMEOUT Parameters: *date, time, applid, tranid, program name, termid, {1=. EXCI job = }, exci_id, condmsg*

DFHAC2259 *date time applid* **Transaction** *tranid* **abend** *primary abcode* **in program** *program name* **term** *termid* **DFHPEP not linked.**

Explanation: Transaction *tranid* is abnormally terminated with abend code *abcode*. An error occurred in attempting to link to the user-written program error program (DFHPEP). The error prevented DFHPEP from being given control.

If CICS terminates abnormally because of a program control restart failure, this message can appear during shutdown.

System Action: Depending on the reason for the failure, CICS may abnormally terminate or continue.

User Response: The transaction abend code, *abcode*, gives the reason for the original transaction failure.

Determine why DFHPEP could not be invoked. It may be disabled.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid, primary abcode, program name, termid*

DFHAC2260 *date time applid* **Transaction** *tranid* **disabled by DFHPEP.**

Explanation: Transaction *tranid*, which has abnormally terminated, has been disabled. This is either as a result of user code in DFHPEP, or because the transaction has abended with abend ASRD or ASRE and DISMACP=YES has been specified (or allowed to default) in the startup parameters. No further use can be made of transaction *tranid*.

System Action: Processing continues.

User Response: Correct the cause of the abnormal termination and enable the transaction.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid*

DFHAC2261 System *sysid* **sent message (sense code** *cccccccc***). '***tacbmsg***'.**

Explanation: A transaction, which has abnormally terminated, has received a negative response and an explanatory warning message from system *sysid*. The message *tacbmsg* is supplied from the remote system.

System Action: Processing continues.

User Response: Correct the reason for the abnormal termination in the remote system and run the transaction again.

Destination: Terminal End User

Module: DFHACP

DFHAC2262 *date time applid* **System** *sysid* **sent message (sense code** *cccccccc***).** *tacbmsg*

Explanation: A transaction, which has abnormally terminated, has received a negative response and an explanatory warning message from system *sysid*. The message *tacbmsg* is supplied from the remote system.

System Action: Processing continues.

User Response: Correct the reason for the abnormal termination in the remote system and run the transaction again.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, sysid, cccccccc, tacbmsg*

DFHAC2263 *date time applid* **Transaction** *tranid* **abend** *primary abcode* **in program** *program name* **term** *termid* **DFHPEP has abnormally terminated.**

Explanation: Transaction *tranid* has abended and the abnormal completion program (DFHACP) has linked to the user-written error program (DFHPEP). The error program has also abended.

System Action: Processing continues.

User Response: The transaction abend code *abcode* gives the reason for the original transaction failure. Correct the cause of the abnormal termination in the error program and run the transaction again.

Destination: CSMT

Module: DFHACP

XMEOUT Parameters: *date, time, applid, tranid, primary abcode, program name, termid*

DFHAC2603 Syst.sense *systsense*,*termid*,*taskid*, **No authorization**

Explanation: An operator has attempted to execute a transaction for which the operator was not authorized. Alternatively, the operator's authorization was set to the capability of the default user and the requested transaction has a security value greater than 1.

System Action: Other processing continues.

User Response: Either sign on or confirm authority to enter this transaction as appropriate. See messages DFHAC2002 and DFHAC2003 for further information.

Destination: Terminal End User

Module: DFHACP

DFHAC2605 Syst.sense *systsense*,*termid*,*taskid*, **Insufficient resource**

Explanation: The system was unable to execute the transaction at this time.

System Action: The transaction is purged.

User Response: Resubmit the transaction later.

Destination: Terminal End User

Module: DFHACP

DFHAC2606 Syst.sense *systsense*,*termid*,*taskid*, **Function not executable**

Explanation: Either the transaction was not valid during system quiesce, or the transaction has been disabled.

System Action: The system action is error specific. For an invalid transaction during system quiesce, refer to the **System Action** of message DFHAC2007.

For a transaction that has been disabled, refer to the **System Action** of message DFHAC2008.

User Response: The user response is error specific.

For an invalid transaction during system quiesce, refer to the **User Response** of message DFHAC2007. For a transaction that has been disabled, refer to the **User Response** of message DFHAC2008.

Destination: Terminal End User

Module: DFHACP

DFHAIxxxx messages

DFHAI0101I *applid* **AITM initialization has started.**

Explanation: This is an informational message indicating that Auto-install terminal model manager (AITM) initialization has begun.

System Action: Initialization continues.

User Response: None.

Destination: Console

Module: DFHAIIN

XMEOUT Parameter: *applid*

DFHAI0102I *applid* **AITM initialization has ended.**

Explanation: This is an informational message indicating that Auto-install terminal model manager (AITM) initialization has completed.

System Action: CICS initialization continues.

User Response: None.

Destination: Console

Module: DFHAIIN

XMEOUT Parameter: *applid*

DFHAI0103I *applid* **AITM initialization has failed.**

Explanation: Autoinstall terminal model manager (AITM) initialization has failed.

System Action: Message DFHSI1521 is issued and initialization is terminated. A further error message from another domain may also be issued.

User Response: This error is identified by a trace entry. Refer to DFHSI1521, and any other error message issued, for further guidance.

Destination: Console

Module: DFHAIIN

XMEOUT Parameter: *applid*

DFHAI0201I *date time applid* **Terminal Model** *modelname* **has been re-installed.**

Explanation: This is an audit log message indicating that a record of the dynamic replacement of auto-install terminal model *modelname* has been made in the transient data destination.

System Action: The system continues normally.

User Response: None.

Destination: CAIL

Module: DFHAITM

XMEOUT Parameters: *date, time, applid, modelname*

DFHAI0202I *date time applid* **Terminal Model** *modelname* **has been installed.**

Explanation: This is an audit log message indicating that a record of the dynamic addition of auto-install terminal model *modelname* has been made in the transient data destination.

System Action: The system continues normally.

User Response: None.

Destination: CAIL

Module: DFHAITM

XMEOUT Parameters: *date, time, applid, modelname*

DFHAI0203I *date time applid* **Terminal Model** *modelname* **has been discarded.**

Explanation: This is an audit log message indicating that a record of the dynamic deletion of auto-install terminal model *modelname* has been made in the transient data destination using the DISCARD command.

System Action: The system continues normally.

User Response: None.

Destination: CAIL

Module: DFHAITM

XMEOUT Parameters: *date, time, applid, modelname*

DFHAMxxxx messages

DFHAM4800 I New group *grpname* **created.**

Explanation: A new group *grpname* has been created on the CSD.

System Action: Processing continues.

User Response: None.

Destination: Terminal End User

Module: DFHAMP

DFHAM4801 I New list *lstname* **created.**

Explanation: A new list *lstname* has been created on the CSD.

System Action: Processing continues.

User Response: None.

Destination: Terminal End User

Module: DFHAMP

DFHAM4802 E *applid name* **is an invalid name.**

Explanation: The name *name* in the command is invalid.

System Action: Processing continues.

User Response: Specify a valid name.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, name*

DFHAM4803 E *applid* **Install failed because an existing definition for file** *filename* **could not be deleted.**

Explanation: An attempt was made to install file *filename*. File *filename* already exists and cannot be deleted. This condition can occur if an existing file definition in an FCT or on the CSD, was installed as enabled or open.

System Action: The install fails.

User Response: Rectify the problem and try the install again.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, filename*

DFHAM4804 E *applid* **Invalid LIST name** *listname***.**

Explanation: The GRPLIST parameter of the system initialization table (SIT) specifies a list name *listname* that contains characters unacceptable to RDO.

System Action: CICS issues the request 'ENTER ALTERNATIVE NAME OR CANCEL'.

User Response: Enter a valid list name **or** enter 'CANCEL', correct the GRPLIST parameter in the SIT, and reinitialize CICS.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, listname*

DFHAM4805 E Unable to perform operation: *name* **is locked to APPLID** *applid***, OPID** *opid* **to prevent updating.**

Explanation: An attempt has been made to lock, or update, a group or a list that is currently locked to another user.

System Action: Processing continues.

User Response: Reenter the command when the group or the list is not locked.

Destination: Terminal End User

Module: DFHAMP

DFHAM4806 E *applid* **Group name** *grpname* **exists as a LIST name.**

Explanation: The system initialization table (SIT) GRPLIST parameter names a list that contains an unusable group name *grpname*. CICS cannot find this group because no resources are defined as belonging to it, and also because a list of the same name already exists in the CSD.

Note: A group and a list cannot coexist with the same name.

System Action: CICS issues the request 'IS START-UP TO BE CONTINUED? REPLY GO OR CANCEL'.

If you reply 'GO', CICS is initialized with all the valid definitions in the list.

User Response: If you do not require group *grpname*, enter 'GO'.

If group *grpname* is essential, enter 'CANCEL', and reinitialize CICS with a different GRPLIST name as a SIT override parameter. Then use the CEDA transaction to review and correct the faulty list.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, grpname*

DFHAM4808 E Object already exists in this group.

Explanation: An attempt has been made to define an object in a group, but an object with the same name already exists.

System Action: The definition on the CSD is presented to the user to overtype.

User Response: Reenter the command with a different object name, or change the existing definition.

Destination: Terminal End User

Module: DFHAMP

DFHAM4809 E Date/time fields do not match (object updated by another user).

Explanation: The definition of an object on the CSD has been changed while the user was altering the definition.

System Action: Processing continues.

User Response: Reenter the command.

Destination: Terminal End User

Module: DFHAMP

DFHAM4810 E Object not found (deleted by another user).

Explanation: The definition of an object on the CSD has been deleted while the user was altering the definition.

System Action: Processing continues.

User Response: Determine why the definition has been deleted. Recreate and update the object if necessary.

Destination: Terminal End User

Module: DFHAMP

DFHAM4811 E *applid name1* **does not contain** *name2***.**

Explanation: The required object *name2* could not be found on the CSD in group *name1*.

System Action: Processing continues.

User Response: Determine why the definition cannot be found.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, name1, name2*

DFHAM4814 E *applid* **List name** *listname* **exists as a group name.**

Explanation: The GRPLIST parameter of the system initialization table (SIT) specifies an invalid list name *listname*. CICS cannot find the list because a group of the same name already exists in the CSD.

Note: A group and a list cannot coexist with the same name.

System Action: CICS issues the request 'ENTER ALTERNATIVE NAME OR CANCEL'.

User Response: Enter a valid list name, **or** enter 'CANCEL', correct the GRPLIST system initialization parameter and reinitialize CICS.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, listname*

DFHAM4815 E Group *grpname* **not found in this list.**

Explanation: The AFTER/BEFORE name entered in the command could not be found in this list. The definition could have been deleted while the user was viewing the outcome of an EXPAND command.

System Action: Processing continues.

User Response: Reenter the command with a group name that exists on this list.

Destination: Terminal End User

Module: DFHAMP

DFHAM4816 E *applid* **Unable to install group** *grpname* **- group not found.**

Explanation: The GRPLIST parameter of the system initialization table (SIT) names a list that contains an unusable group name *grpname*. CICS cannot find group *grpname* because no resources are defined as belonging to it.

System Action: CICS issues the request 'IS START-UP TO BE CONTINUED? REPLY GO OR CANCEL'.

If you reply 'GO', CICS is initialized with all the valid definitions in the list.

User Response: If you do not require group *grpname*, enter 'GO'.

If group *grpname* is essential, enter 'CANCEL', and reinitialize CICS with a different GRPLIST name as a SIT override parameter. Then use the CEDA transaction to review and correct the faulty list.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, grpname*

DFHAM4819 E Group already exists in this list.

Explanation: The group already exists in the list.

System Action: Processing continues.

User Response: Determine why the group exists and reenter the command, perhaps with a different group name.

Destination: Terminal End User

Module: DFHAMP

DFHAM4820 S Unable to perform request - CSD full.

Explanation: The CSD file is full.

System Action: Processing continues.

User Response: Reenter the command when more space is available.

Destination: Terminal End User

Module: DFHAMP

DFHAM4821 S *applid* **Unable to perform request - I/O error to CSD.**

Explanation: An error occurred while the CSD file was being accessed during CICS initialization. This may be because the disk containing the CSD file was mounted incorrectly.

System Action: CICS terminates.

User Response: Retry the CICS initialization. If the problem persists, a hardware fault probably exists, and you should load a backup copy of the CSD.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4823 S *applid* **Unable to perform request - DFHCSD not open.**

Explanation: The CSD file (DFHCSD) is not open.

System Action: Other processing continues.

User Response: Ask the master terminal operator to open the file. The DFHCSD is defined in the bringup JCL and/or in the SIT.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4824 S *applid* **Unable to perform request - Insufficient function in file definition for DFHCSD.**

Explanation: During initialization, CICS has found a GRPLIST parameter in the SIT, but cannot access the CSD file because of an error in the file definition entry for DFHCSD.

The most likely cause of this error is an incorrectly coded CSDACC parameter in the SIT entry for DFHCSD.

System Action: CICS terminates.

User Response: Before the next CICS initialization, correct the error in the system initialization parameters for DFHCSD.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4825 S *applid* **Unable to perform request - File Control has returned an INVREQ response.**

Explanation: The file control file request handler (DFHFCFR) does not have sufficient function to support the CEDA command entered.

System Action: The CEDA command is ignored.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4826 S *applid* **Unable to perform request - CSD corrupted or not initialized.**

Explanation: During initialization, CICS finds a GRPLIST parameter in the SIT, but cannot access the CSD file because:

1. The CSD file has not been initialized, or
2. CSD initialization did not complete successfully, or
3. the CSD file has been corrupted.

System Action: CICS terminates.

User Response: If you have not used the CSD file before, initialize it using the offline utility, DFHCSDUP, and check the output listing from the utility for successful completion.

If you have used the CSD file before, it has probably been corrupted. In this case, load a backup copy of the CSD file and use it in place of the corrupted file.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4827 S *applid* **Unable to perform request - DFHCSD could not be installed.**

Explanation: During initialization, CICS finds a GRPLIST parameter in the system initialization table (SIT), but cannot access the CSD file because file control failed to install it.

System Action: CICS terminates.

User Response: Before the next CICS initialization, ensure that you have a SIT with the correct parameters for the definition of the DFHCSD file.

Assemble a new SIT as necessary.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4828 E *applid* **Group** *grpname* **not found.**

Explanation: The group name *grpname* in the command could not be found.

System Action: The command is ignored.

User Response: Retry the command with a group name that exists.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, grpname*

DFHAM4829 S *applid* **Storage violation. CSD primary control record not updated.**

Explanation: The in-store version of the CSD primary record was corrupted.

System Action: The version on the CSD was not updated and is not necessarily affected.

User Response: None.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4830 E *restype resname* **already exists in the target group.**

Explanation: The COPY operation could not be performed, as a duplicate has been found in the target group.

System Action: The COPY command is ignored.

User Response: Reenter the command with the MERGE or the REPLACE option.

Destination: Terminal End User

Module: DFHAMP

DFHAM4831 E The new name *name* **is longer than the four characters allowed for** *restype* **names.**

Explanation: The specified name *name* is invalid because it is longer than four characters.

System Action: The command is ignored.

User Response: Enter a valid name.

Destination: Terminal End User

Module: DFHAMP

DFHAM4832 E *applid* **Unable to open TDQUEUE** *tdqname* **because the DFHINTRA data set is not open.**

Explanation: An attempt to install the transient data queue *tdqname* on the CICS system has been rejected because the DFHINTRA data set is not open.

System Action: Processing continues. The definition is not installed.

User Response: It is not possible to install intrapartition definitions on a system that does not have a DFHINTRA data set defined and opened. If DFHINTRA has been defined, it may have failed to open during initialization. It is necessary to repair the data set and restart the system in order to open it.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, tdqname*

DFHAM4833 E *applid* **A security error has occurred while attempting to install TDQUEUE** *tdqname***. The definition has not been installed.**

Explanation: An attempt to install the transient data queue *tdqname* on the CICS system has been rejected because of an error encountered while performing a security check for the userid included within the definition.

System Action: Processing continues. The definition is not installed.

User Response: Refer to the associated messages issued by the security manager for further guidance. Reinstall the definition once the error has been corrected.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, tdqname*

DFHAM4834 E *applid* **Install of** *{TDQUEUE | PROCESSTYPE} resourcename* **failed because the installed definition is not disabled.**

Explanation: An attempt to install the resource *resourcename* on the CICS system has failed because the resource is not disabled.

System Action: Processing continues. The definition is not installed.

User Response: The specified resource must be disabled before it can be installed. Ensure that the resource is in the required state and then install the new definition.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, {1=TDQUEUE, 2=PROCESSTYPE}, resourcename*

DFHAM4835 E *applid* **Install of TDQUEUE** *tdqname* **failed because the queue has already been defined to the system, and initialization is still in progress.**

Explanation: An attempt to install the transient data queue *tdqname* on the CICS system has failed because the the queue has already been defined to the system and initialization has not completed.

It is not possible to replace a TD resource definition while CICS is still initializing. This problem only occurs during a cold or initial start of the system where both DCT macro and RDO definitions are being used, or where more than one group is being installed as part of GRPLIST processing.

System Action: Processing continues. The definition is not installed.

User Response: Remove one of the entries from the macro definition or RDO group so that the failure does not reccur on a subsequent cold or initial start.

Destination: Console and Terminal End User

Module: DFHAMTD

XMEOUT Parameters: *applid, tdqname*

DFHAM4836 E *applid* **Install of DB2CONN** *db2conn-name* **failed because a DB2CONN is already installed and is in use.**

Explanation: An attempt to install the DB2CONN *db2conn-name* on the CICS system has failed because there is an existing DB2CONN installed and it is in use by the CICS-DB2 adapter.

System Action: Processing continues. The definition is not installed.

User Response: Only one DB2CONN can be installed on the CICS system at a time. The install of a second DB2CONN implies the discarding of the first DB2CONN and all its associated DB2ENTRYs and DB2TRANs.

A DB2CONN definition can be replaced or discarded only when it is not in use by the CICS-DB2 adapter. Ensure that the CICS-DB2 interface has been stopped before trying to install a DB2CONN definition.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, db2conn-name*

DFHAM4837 E *applid* **Install of**{ *DB2ENTRY | DB2TRAN* }*name* **failed because a DB2CONN is not installed.**

Explanation: An attempt to install the DB2ENTRY or DB2TRAN *name* on the CICS system failed because there is no DB2CONN installed. DB2TRANs and DB2ENTRYs can be installed only after a DB2CONN has been installed.

System Action: Processing continues. The definition is not installed.

User Response: Install a DB2CONN definition and then retry the install of the DB2ENTRY or DB2TRAN.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, {1=DB2ENTRY , 2= DB2TRAN }, name*

DFHAM4838 E *applid* **Install of DB2ENTRY** *db2entry-name* **failed because an existing definition could not be deleted. The existing definition is not disabled.**

Explanation: An attempt to install the DB2ENTRY *db2entry-name* on the CICS system has failed because there is an existing DB2ENTRY of the same name which is not in a disabled state.

System Action: Processing continues. The definition is not installed.

User Response: Existing DB2ENTRY definitions can be replaced only when the DB2ENTRY is in a disabled state. Issue a command to disable the DB2ENTRY and then retry the install.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, db2entry-name*

DFHAM4839 E *applid* **List** *listname* **not found.**

Explanation: The system initialization table (SIT) used for CICS initialization contains a GRPLIST parameter, but CICS cannot find the list *listname* in the CSD file.

System Action: CICS issues the request 'ENTER ALTERNATIVE NAME OR CANCEL'.

User Response: Enter a valid list name.

If no suitable user-defined list exists, you can initialize a minimum-function system with GRPLIST=DFHLIST, then use the CEDA transaction to review and correct the faulty list, to install the required group, and to rebuild a suitable list. Finally, cancel CICS, correct the GRPLIST parameter in the SIT, and reinitialize CICS.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, listname*

DFHAM4840 W Group *grpname* **not appended - group already exists in target list.**

Explanation: The group *grpname* already exists in the target list.

System Action: The group definition is not appended.

User Response: None.

Destination: Terminal End User

Module: DFHAMP

DFHAM4841 E *applid* **Install failed because definition of** *restype resname* **is in use by task no.** *taskno* **(transaction id.** *tranid***).**

Explanation: An attempt was made to install object definition *restype resname* on the CICS system, but the installation failed because a read lock was held on that definition by task *taskno*.

System Action: No definitions have been installed.

User Response: Try the command again later.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, restype, resname, taskno, tranid*

DFHAM4842 E *applid* **Install failed because** *restype resname* **is currently in use.**

Explanation: An attempt was made to install object definition *restype resname* on the CICS system, but the installation failed because the object was in use.

System Action: No definitions have been installed.

User Response: Try the command again later.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, restype, resname*

DFHAM4843 W *applid ttttttt nnnnnnnn* **is internally locked to OPID** *opid* **APPLID** *applid***.**

Explanation: The identified group or list *ttttttt* is internally locked to operator *opid* on CICS system *applid* when an install is attempted. This could occur at a cold or initial start when the CSD is shared between several CICS regions and operations on that group or list are incomplete.

System Action: The install continues.

User Response: Check that the installed definitions correspond to your requirements.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, tttttttt, nnnnnnnn, opid, applid*

DFHAM4844 W *restype resname1* **in group** *grpname1* **has the same name as a** *restype* **later in group** *grpname2***.**

Explanation: The CHECK command encountered a duplicate object name.

System Action: None in the CHECK command, but the earlier definition will be ignored when the definitions are installed, because they both belong to the same CICS table in which duplicate entries may not exist.

User Response: Determine why the duplicate condition exists and rectify it if necessary.

Destination: Terminal End User

Module: DFHAMP

DFHAM4845 W *restype1 resname1* **referenced by** *restype2 resname2* **in group** *grpname* **cannot be found.**

Explanation: The CHECK command found a reference in a transaction definition to an object definition that does not exist.

System Action: None in the CHECK command, but errors may occur if that definition is installed and used.

User Response: Determine why the object definition cannot be found and rectify it if necessary.

Destination: Terminal End User

Module: DFHAMP

DFHAM4846 W The *xxxxxxxx* **of transaction** *tranid1* **in group** *grpname* **duplicates that of transaction** *tranid2* **in group** *grpname***.**

Explanation: The CHECK command found a transaction definition with the same alias as another transaction.

System Action: No system action occurs for the CHECK command. However, errors may occur if that definition is installed and used.

User Response: Determine why the duplicate situation occurs and rectify it if necessary.

Destination: Terminal End User

Module: DFHAMP

DFHAM4847 W RELOAD(YES) has been specified for non-RPG program *progname* **referenced by transaction** *tranid* **in group** *grpname***.**

Explanation: The CHECK command found a transaction definition that referenced a non-RPG II program for which RELOAD=YES was specified.

System Action: If the definition is installed, CICS will not release storage for the first program invoked by a transaction unless the language is RPG II.

User Response: Specify RELOAD (NO).

Destination: Terminal End User

Module: DFHAMP

DFHAM4848 W Program *progname* **in group** *grpname* **specifies language RPG which is not supported on CICS.**

Explanation: The CHECK command, executing under CICS Transaction Server for OS/390 encountered an RPG II program definition. RPG II is not supported on CICS.

System Action: If the definition is installed, the program language is overwritten.

User Response: Change the language as appropriate.

Destination: Terminal End User

Module: DFHAMP

DFHAM4849 W NETNAME *netname* **of** *{CONNECTION | TERMINAL} rsrcname1* **in group** *grpname1* **duplicates that of** *{CONNECTION | TERMINAL} rsrcname2* **in group** *grpname2***.**

Explanation: The CHECK command found a connection or terminal definition with a NETNAME that is the same as the NETNAME defined in another connection or terminal definition.

System Action: None in the CHECK command. However, it is not possible to install two terminals or a terminal and a connection with the same NETNAME. Also, you cannot have two or more APPC links with the same NETNAME, an APPC link and an LUTYPE6.1 link with the same NETNAME or two or more IRC connections with the same NETNAME.

User Response: Determine why the duplication exists and rectify the problem.

Destination: Terminal End User

Module: DFHAMP

DFHAM4850 E *applid* **Install of DB2TRAN** *db2tran-name* **failed because DB2ENTRY** *db2entry-name* **to which it refers has not been installed.**

Explanation: An attempt to install the DB2TRAN *db2tran-name* on the CICS system has failed because the DB2ENTRY to which it refers, *db2entry-name*, has not been installed.

System Action: Processing continues. The definition is not installed.

User Response: Ensure that the name of DB2ENTRY in the DB2TRAN definition is correct. Install the necessary DB2ENTRY definition first then retry the install of the DB2TRAN.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, db2tran-name, db2entry-name*

DFHAM4851 E *applid* **Install of***{ DB2ENTRY | DB2TRAN | DB2CONN }name* **failed because of a security error.**

Explanation: An attempt to install the DB2CONN, DB2ENTRY, or DB2TRAN *name* on the CICS system has been rejected because of an error encountered while performing a security check.

System Action: Processing continues. The definition is not installed.

User Response: See the associated messages issued by the security manager for further guidance. Correct the error. Then reinstall the definition.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, {1=DB2ENTRY , 2= DB2TRAN , 3= DB2CONN }, name*

DFHAM4852 W *restype* **name** *resname* **begins with 'DFH'. Such names are reserved and may be redefined by CICS.**

Explanation: A name beginning with DFH was specified.

System Action: If the definition is installed, errors may occur.

User Response: Names beginning with “DFH” are reserved and may be redefined by CICS. You should avoid starting names with “DFH”.

Destination: Terminal End User

Module: DFHAMP

DFHAM4853 E *applid* **Install of DB2TRAN** *db2tran-name* **failed because another DB2TRAN is installed with the same transid.**

Explanation: An attempt to install the DB2TRAN *db2tran-name* on the CICS system has failed because there is an another DB2TRAN installed that specifies the same transid. You cannot install two DB2TRANs that specify the same transid.

System Action: Processing continues. The definition is not installed.

User Response: Examine the installed DB2TRAN definitions using inquire DB2TRAN commands to determine the name of the DB2TRAN specifying the same transid. If appropriate, discard that DB2TRAN and then reinstall this DB2TRAN.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, db2tran-name*

DFHAM4854 W The specified *{GROUP | LIST}* **contains** *objtype* **objects but no** *restype* **found.**

Explanation: The specified GROUP or LIST contains objects that need a resource type of *restype* but no such resource type is listed in the GROUP or LIST.

System Action: Processing continues.

User Response: This may not be an error, but ensure that the resource type *restype* is installed before installing the GROUP or LIST.

Destination: Terminal End User

Module: DFHAMP

DFHAM4855 W DVSUPRT(VTAM) must be specified for PROFILE *profname* **referenced by transaction** *tranid* **in group** *grpname***.**

Explanation: The CHECK command found a definition for a CICS-supplied transaction *tranid* without DVSUPRT(VTAM) specified in profile *progname*.

System Action: Unpredictable results occur if the definition is installed and used.

User Response: Specify DVSUPRT(VTAM).

Destination: Terminal End User

Module: DFHAMP

DFHAM4856 W INBFMH(ALL) must be specified for PROFILE *profname* **referenced by transaction** *tranid* **in group** *grpname***.**

Explanation: The CHECK command found a definition for a CICS-supplied transaction *tranid* without INBFMH(ALL) specified in profile *progname*.

System Action: The system abnormally terminates with abend code AXFO if the definition is installed and used.

User Response: Specify INBFMH(ALL).

Destination: Terminal End User

Module: DFHAMP

DFHAM4857 W The specified *{GROUP | LIST}* **contains more than one** *objtype***.**

Explanation: The specified GROUP or LIST contains more than one resource type *objtype*.

System Action: Processing continues.

User Response: Remove the duplication.

Destination: Terminal End User

Module: DFHAMP

DFHAM4858 S *applid* **Unable to perform request - DFHCSD not enabled.**

Explanation: The system initialization table (SIT) used for CICS initialization contains a GRPLIST parameter, but CICS cannot use the CSD file because it is disabled.

System Action: CICS terminates.

User Response: If you want to use the CSD file, check the system initialization parameters for DFHCSD and your JCL **before** the next CICS initialization.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4859 S *applid* **Unable to perform request - The CSDSTRNO operand in the System Initialization Table (SIT) is too small.**

Explanation: Insufficient VSAM strings are available to allow CEDA to proceed.

System Action: No CEDA commands may be executed.

User Response: Wait until other CEDA users have terminated their sessions, or specify a CSDSTRNO value of twice the number of concurrent CEDA transactions in the SIT.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4860 W The specified LIST contains DB2ENTRY or DB2TRAN definitions before a DB2CONN definition.

Explanation: The specified LIST contains DB2ENTRY and/or DB2TRAN definitions in a group containing no DB2CONN definition. No DB2CONN definition preceeds it in the list.

System Action: Processing continues.

User Response: A DB2CONN definition must be installed before DB2ENTRY and DB2TRAN definitions can be sucessfully installed. Ensure a DB2CONN definition is placed in a group before all

DB2ENTRY and DB2TRAN definitions in the list, or in the first group in the list containing DB2ENTRYs or DB2TRANs.

Destination: Terminal End User

Module: DFHAMP

DFHAM4861 W XTRANID of transaction *tranid* **in group** *grpname* **duplicates transaction ID** *tranid* **in group** *grpname***.**

Explanation: The check command found a transaction *tranid* in group *grpname* whose XTRANID duplicated a previous transaction ID.

System Action: No system action occurs for the CHECK command. However, the alias is ignored if the definitions are installed.

User Response: Determine why the duplication exists and rectify the problem.

Destination: Terminal End User

Module: DFHAMP

DFHAM4862 W transaction id *tranid* **in group** *grpname* **duplicates XTRANID of transaction** *tranid* **in group** *grpname***.**

Explanation: The check command found a transaction *tranid* in group *grpname* whose XTRANID duplicated a previous transaction ID.

System Action: No system action occurs for the CHECK command. However, the first transaction in the message is ignored if the definitions are installed.

User Response: Determine why the duplication exists and rectify the problem.

Destination: Terminal End User

Module: DFHAMP

DFHAM4863 I *name* **is now locked. No group or list of that name exists.**

Explanation: The LOCK command executed successfully, but no group or list of name *name* was found on the CSD file.

System Action: The name is locked.

User Response: None.

Destination: Terminal End User

Module: DFHAMP

DFHAM4864 S *applid* **Unable to perform operation - DFHCSD cannot be opened.**

Explanation: The system initialization table (SIT) used for CICS initialization contains a GRPLIST parameter, but CICS cannot use the CSD file for one of the following reasons:

1. The startup JCL does not contain the definition of the CSD file (DFHCSD).
2. The DDNAME or data set name of the CSD file is incorrectly coded in the startup JCL.
3. VSAM has diagnosed that the CSD file cannot be opened.
4. CICS file control cannot open DFHCSD because insufficient storage has been allocated by the job REGION= parameter.

System Action: CICS terminates.

User Response: The action to solve the problem depends on the cause as follows:

1. Correct the JCL.
2. Correct the JCL.
3. Check the system operator's console for VSAM messages, and correct all VSAM errors.
4. Increase the size limit of the DSAs or EDSAs.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4865 S *applid* **Unable to perform operation - DFHCSD currently accessed by another user.**

Explanation: The system initialization table (SIT) used for CICS initialization contains a GRPLIST parameter. However, CICS cannot get read access to the CSD file because another region is accessing it, and the CSD cluster is defined to VSAM with SHAREOPTIONS(1).

System Action: CICS terminates.

User Response: To avoid a recurrence of this problem, recreate the CSD file specifying SHAREOPTIONS(2). See the *CICS System Definition Guide* for further details.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4866 E Unable to perform operation: *name* **is IBM protected.**

Explanation: The user has attempted to change the contents of a group or list whose name begins with "DFH". These are IBM-protected.

System Action: The command is not executed.

User Response: You can copy from IBM-supplied groups or lists and change the **copied** group or list.

Destination: Terminal End User

Module: DFHAMP

DFHAM4867 E File name DFHCSD is reserved and must not be modified.

Explanation: You cannot define the CSD on the CSD itself.

System Action: The command is not executed.

User Response: Define DFHCSD via SIT options.

Destination: Terminal End User

Module: DFHAMP

DFHAM4868 W The LSRPOOLID of the LSRPOOL *lsrname* **in group** *grpname* **duplicates that of LSRPOOL** *lsrname* **in group** *grpname***.**

Explanation: When invoking the CEDA CHECK command, an LSRPOOL definition *lsrname* in group *grpname* was found which duplicated the LSRPOOLID of another LSRPOOL.

System Action: Processing continues.

User Response: Determine why the duplication exists and rectify the problem.

Destination: Terminal End User

Module: DFHAMP

DFHAM4869 E Single resource install of *restype resname* **in group** *grpname* **is not allowed.**

Explanation: The install of *restype resname* is not allowed via single resource install. It must be installed via group install.

System Action: The command is not executed.

User Response: Install group *grpname* via group install.

Destination: Terminal End User

Module: DFHAMP

DFHAM4870 E *applid* **Install failed for program** *progname* **- language RPG is not supported under MVS.**

Explanation: The GRPLIST parameter of the system initialization table (SIT) names a list in which a group contains a program *progname* that was defined with LANGUAGE(RPG).

System Action: CICS initialization continues. The definition in error is ignored.

User Response: Redefine program *progname* with the correct LANGUAGE definition.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, progname*

DFHAM4871 W *applid* **File** *filename* **has been installed but set** *filename* **failed.**

Explanation: Setting DSNAME and ENABLED takes place separately from the main part of INSTALL for a FILE, and can fail.

System Action: The file is installed but its state is not set.

User Response: Use the CEMT SET FILE command.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, filename, filename*

DFHAM4872 S *applid* **Unable to connect to CICS catalog.**

Explanation: DFHAMP was unable to connect to the CICS catalog for terminal installs.

System Action: CICS terminates.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4873 S *applid* **Unable to disconnect the CICS catalog.**

Explanation: DFHAMP was unable to disconnect the CICS catalog for terminal installs.

System Action: CICS terminates.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4874 E *applid* **Install of** *{TSMODEL | ENQMODEL} rsrce-name1* **failed because** *{PREFIX | ENQNAME} attribute-name* **already exists in** *{TSMODEL | ENQMODEL} rsrce-name2***.**

Explanation: An attempt to install the resource *rsrce-name1* on the CICS system has failed because the attribute *attribute-name* already exists in the installed resource *rsrce-name2*.

If the resource being installed is an ENQMODEL, another ENQMODEL with the same or a more generic nested enqname is installed and enabled.

System Action: Processing continues. The definition is not installed.

User Response: If you are sure you need to install resource *rsrce-name1* you need to discard resource *rsrce-name2* before attempting the re-install.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, {2=TSMODEL, 3=ENQMODEL}, rsrce-name1, {2=PREFIX, 3=ENQNAME}, attribute-name, {2=TSMODEL, 3=ENQMODEL}, rsrce-name2*

DFHAM4875 E Unable to perform operation: *name* **is currently being updated by APPLID** *applid* **OPID** *opid* **- please retry later.**

Explanation: The command which you issued cannot be performed because another user of CEDA is currently changing the contents of the group/list to which you referred.

System Action: The command is not executed.

User Response: Try the command again.

Destination: Terminal End User

Module: DFHAMP

DFHAM4876 W PARTNER *partnername* **specifies NETNAME** *netname* **which is not found in any CONNECTION definition that specifies access method = VTAM.**

Explanation: There is no VTAM connection within the current group for the netname referenced in the specified partner.

System Action: Other processing continues.

User Response: None.

Destination: Terminal End User

Module: DFHAMP

DFHAM4877 W PARTNER *partnername* **specifies a NETNAME and PROFILE for which there is no common implied SESSIONs definition.**

Explanation: The netname in a partner definition implies an associated connection definition which is in turn associated with a session definition. The profile definition referenced in a partner definition specifies a modename which can be associated with a sessions definition.

Within the current group, there is no common sessions definition implied by the specified partner definition.

System Action: Other processing continues.

User Response: None.

Destination: Terminal End User

Module: DFHAMP

DFHAM4879 W *{GROUP | LIST} name* **has been partially installed.**

Explanation: During the execution of an INSTALL command for the group or list *name*, some of the elements in the group or list installed successfully, but at least one failed.

System Action: Messages are produced indicating why the element or elements failed to install.

User Response: Use the messages already produced to determine why the install failed and to rectify the problem.

Destination: Terminal End User

Module: DFHAMP

DFHAM4880 S *applid* **Unable to perform operation - not allowed by file attributes for DFHCSD.**

Explanation: The CSDACC parameter in the system initialization table for DFHCSD does not allow CEDA to complete the command entered. The CSDACC parameter specifies the type of access permitted to the file. This can be one of the following:

READWRITE
READONLY

In order for a particular command to function, the access must be set appropriately.

System Action: The CEDA command is ignored.

User Response: Correct the CSDACC parameter in the SIT. The DFHCSD is defined in the bringup JCL and/or in the SIT.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4881 I Group *name* **deleted.**

Explanation: The Group *grpname* has been deleted from the CSD.

System Action: Processing continues.

User Response: Check that the deleted group is not present on any list.

Destination: Terminal End User

Module: DFHAMP

DFHAM4882 W The *{TPNAME | XTPNAME}* **of transaction** *tranid* **in group** *grpname* **duplicates the** *{TPNAME | XTPNAME}* **of transaction** *tranid* **in group** *grpname***.**

Explanation: The CHECK command found a transaction whose XTPNAME matches the TPNAME of another transaction.

System Action: No system action occurs for the CHECK command, but the XTPNAME or TPNAME for the first transaction in the message is ignored if the definitions are installed.

User Response: Determine why the duplication exists. To rectify the problem, rename either the TPNAME or the XTPNAME.

Destination: Terminal End User

Module: DFHAMP

DFHAM4883 I List *listname* **deleted.**

Explanation: The List *listname* has been deleted from the CSD.

System Action: Processing continues.

User Response: Ensure that the deleted list is not used at a cold or initial start as the GRPLIST DFHSIT parameter.

Destination: Terminal End User

Module: DFHAMP

DFHAM4884 S *restype* **name** *resname* **is reserved by CICS.**

Explanation: The name *resname* you have selected for resource type *restype* is reserved by CICS and cannot be user defined.

System Action: The command is rejected.

User Response: Redefine *resname* and resubmit the command.

Destination: Terminal End User

Module: DFHAMP

DFHAM4886I *applid* **Installing list** *listname* **which matches specified generic list** *genlist***.**

Explanation: The GRPLIST parameter of the system initialization table (SIT) specifies a list name *genlist* that contains generic characters. While searching the CSD file, the list name *listname* was found to match the specified generic list.

System Action: The list name *listname* is installed.

User Response: None.

Destination: Console

Module: DFHAMP

XMEOUT Parameters: *applid, listname, genlist*

DFHAM4887 I *applid* **Unrecognized resource type found in the CSD file and has been ignored.**

Explanation: CICS has found an unrecognized resource type code in a CSD record. The unrecognized code does not match any of the function codes in the language definition table. This can occur for one of the following reasons:

1. You are using a CICS release that does not support a type of definition that was created on the CSD file by a later CICS release.
2. The language definition table (DFHEITSP or DFHEITCU) is invalid for this CICS release.
3. The CSD manager (DFHDMP) has passed an invalid CSD record buffer to DFHPUP. This is a CICS internal logic error.

System Action: The resource is ignored and the operation continues.

User Response: Determine which of the possible reasons caused the error. If you can eliminate reasons 1 and 2, you can assume that reason 3 applies.

Take action corresponding to the reason you have established as follows:

1. Ignore the message.
2. Ensure that the library contains versions of DFHEITSP and DFHEITCU that are valid for the CICS release you are running.
3. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameter: *applid*

DFHAM4888 I Group *groupname* **removed from list** *listname***.**

Explanation: During the execution of a DELETE command, the group *groupname* was deleted from the CSD. As a result of that, the list *listname* was updated to remove the deleted group from it.

System Action: Processing continues.

User Response: None.

Destination: Terminal End User

Module: DFHAMP

DFHAM4889 E *applid* **Install of** *{JOURNALMODEL | TSMODEL} resourcename* **failed because** *attribute attname* **is invalid.**

Explanation: An attempt to install object definition JOURNALMODEL/TSMODEL *resourcename* on the CICS system failed because the *attribute attname* specified is not correct.

System Action: The definition is not installed.

User Response: Correct the invalid parameter of the resource definition.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, {1=JOURNALMODEL, 2=TSMODEL}, resourcename, attribute, attname*

DFHAM4890 E *applid* **Install of TDQUEUE** *tdqname* **failed because the TYPE has not been specified.**

Explanation: An attempt to install the named TDQUEUE *tdqname* on the local CICS system failed because it has been defined with the REMOTESYSTEM attribute and the TYPE cannot be determined.

System Action: The definition is not installed.

User Response: Make the definition a dual purpose one by specifying both REMOTE attributes and TYPE.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, tdqname*

DFHAM4891 W *restype* **name** *resname* **begins with 'C'. Such names are reserved and may be redefined by CICS.**

Explanation: A resource name starting with C was specified. Names starting with C are reserved and may be redefined by CICS.

System Action: If the definition is installed, errors may occur.

User Response: Specify a different resource name.

Destination: Terminal End User

Module: DFHAMP

DFHAM4892 W *date time applid* **Install for group** *grpname* **has completed with errors.**

Explanation: The install of group *grpname* is now complete. All resources that are valid for installation have been installed, and recorded if appropriate, on the CICS catalog. There were errors during the installation of some resources in the group and these resources have been backed-out.

System Action: CICS continues. CICS issues messages identifying the cause of each installation failure.

User Response: Use the associated messages, available via the messages panel if CEDA is being used, or issued to transient data queues CSMT and CADL during system startup, to determine the cause of the errors. Once the cause of the errors has been eliminated, reinstall the group to install the missing definitions.

Destination: CADL

Module: DFHAMP

XMEOUT Parameters: *date, time, applid, grpname*

DFHAM4893 I *date time applid* **Install for group** *grpname* **has completed successfully.**

Explanation: The install of group *grpname* is now complete. All resources that are valid for installation have been installed, and recorded if appropriate, on the CICS catalog.

System Action: CICS continues

User Response: None

Destination: CADL

Module: DFHAMP

XMEOUT Parameters: *date, time, applid, grpname*

DFHAM4894 E *applid* **Install of** *{ENQMODEL} rsrcename1* **failed because installed** *{ENQMODEL} rsrcename2* **is not disabled.**

Explanation: An attempt to install the resource *rsrcename1* on the CICS system has failed because the resource *rsrcename2* is already installed and is not disabled.

System Action: Processing continues. The definition is not installed.

User Response: Resource *rsrcename2* must be disabled or discarded before resource *rsrcename1* can be installed. Ensure that resource *rscename2* is in the required state and then install the new definition.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, {3=ENQMODEL}, rsrcename1, {3=ENQMODEL}, rsrcename2*

DFHAM4895 E *applid* **Install of TSMODEL** *resourcename* **in group** *groupname* **failed because TS was started using an assembled TST without the MIGRATE option.**

Explanation: An attempt to install the TSMODEL *resource_name* in group *groupname* on the CICS system has failed because the system was started using an assembled TST without the MIGRATE option.

System Action: Processing continues. The definition is not installed.

User Response: If you want to install TSMODELs using RDO then either start CICS with a TST assembled with the

TYPE=(INITIAL,MIGRATE) option or don't specify a TST in your SIT parameters.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, resourcename, groupname*

DFHAM4896 E *applid* **Install of TDQUEUE** *tdqname* **failed because the queue is not closed.**

Explanation: An attempt to install the transient data queue *tdqname* on the CICS system has failed because the data set associated with this extrapartition TD queue is not closed.

System Action: Processing continues. The definition is not installed.

User Response: Intrapartition queues must be disabled, and extrapartition queues must be disabled and closed before they can be redefined. Ensure that the queue is in the required state and then install the new definition.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, tdqname*

DFHAM4897 W *applid* **The definition of** *{TDQUEUE | TCPIPSERVICE} resourcename* **specified** *{OPENTIME=INITIAL | STATUS=OPEN}* **but the open failed.**

Explanation: An attempt to install the resource *resourcename* on the CICS system has succeeded but the resource cannot be opened.

System Action: The definition is installed.

User Response: Determine the cause of the failure and then open the resource.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, {1=TDQUEUE, 7=TCPIPSERVICE}, resourcename, {1=OPENTIME=INITIAL, 7=STATUS=OPEN}*

DFHAM4898 E *applid* **Installation of** *{TDQUEUE | PROCESSTYPE} resourcename* **failed because of insufficient storage.**

Explanation: An attempt to install the resource *resourcename* on the CICS system has failed because insufficient storage is available to build the entry.

System Action: The definition is not installed.

User Response: Inform your system programmer. See the *CICS Problem Determination Guide* for guidance on dealing with storage problems.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, {1=TDQUEUE, 2=PROCESSTYPE}, resourcename*

DFHAM4899 E *applid* **TDQUEUE** *tdqname* **cannot be replaced because the existing definition is for a different queue type.**

Explanation: An attempt to install the transient data queue *tdqname* on the CICS system failed because its definition type is different from that of the definition already defined to the system.

System Action: The definition is not installed.

User Response: Either change the new definition so that it has the same type as the one currently installed on the system, or discard the current definition and then install the new one.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, tdqname*

DFHAM4901 E *applid* **Install of REQUESTMODEL** *resourcename1* **failed because a duplicate pattern already exists in** *resourcename2***. Current patterns are: OMGMODULE:** *Omgmodule* **OMGINTERFACE:** *Omginterface* **OMGOPERATION:** *Omgoperation* **TRANID:** *Tranid***.**

Explanation: An attempt to install the resource *resourcename1* on the CICS system has failed because a duplicate pattern has been found in *resourcename2*.

System Action: The definition is not installed.

User Response: Verify the patterns being installed for resource *resourcename1* against those for *resourcename2* before re-trying the install.

Destination: Console and Terminal End User

Module: DFHAMOP

XMEOUT Parameters: *applid, resourcename1, resourcename2, Omgmodule, Omginterface, Omgoperation, Tranid*

DFHAM4903 E *applid* **Install for TCPIPSERVICE** *tcpipservice* **has failed because the service is open.**

Explanation: The install of TCPIPSERVICE *tcpipservice* has failed because the service is open.

System Action: The install fails.

User Response: Close the service and retry the install.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, tcpipservice*

DFHAM4904 W *applid* **Opening TCPIPSERVICE** *tcpipservice* **has failed because port** *portno* **is already in use.**

Explanation: Opening TCPIPSERVICE *tcpipservice* has failed because the specified port number is in use.

System Action: The resource is installed but left in the closed state. Message DFHSO0109 is issued to the transient data queue CSOO.

User Response: Check that the port number specified is not already in use. Refer to the description of the message DFHSO0109 for more information.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, tcpipservice, portno*

DFHAM4905 E *applid* **Install failed for** *resource***. Option** *opt* **is not available on this system.**

Explanation: The install of the resource *resource* has failed because the current CICS system has not been configured to support the specified option *opt*.

System Action: The install fails.

User Response: Reconfigure the CICS system by specifying appropriate system initialization parameters to support the specified option. Then restart CICS.

Destination: Console and Terminal End User

Module: DFHAMDH

XMEOUT Parameters: *applid, resource, opt*

DFHAM4906 W *applid* **Opening TCPIPSERVICE** *tcpipservice* **has failed because port** *portno* **is not authorized.**

Explanation: Opening TCPIPSERVICE *tcpipservice* has failed because the specified port number is not authorized.

System Action: The resource is installed and left in the closed state. The message DFHSO0111 is written to the transient data queue CSOO.

User Response: Select a port that is authorized. See the description of message DFHSO0111 for more information.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, tcpipservice, portno*

DFHAM4907 W *applid* **Opening TCPIPSERVICE** *tcpipservice* **has failed because the IP address is not known.**

Explanation: Opening TCPIPSERVICE *tcpipservice* has failed because the specified IP address is not known.

System Action: The resource is installed but left in the closed state. The message DFHSO0110 is written to the transient data queue CSOO.

User Response: Select an IP address which is known. Refer to the description of message DFHSO0110 for more information.

Destination: Console and Terminal End User

Module: DFHAMP

XMEOUT Parameters: *applid, tcpipservice*

DFHAM4908 E *applid* **Install of DOCTEMPLATE** *doctemplate1* **failed because TEMPLATENAME(***template***) already exists in DOCTEMPLATE** *doctemplate2***.**

Explanation: The install of DOCTEMPLATE *doctemplate1* has failed because the TEMPLATENAME selected is already in use as the full template name for document template *doctemplate2*.

System Action: The install fails.

User Response: Either select a different TEMPLATENAME for *doctemplate1*, or discard the document template definition for *doctemplate2*.

Destination: Console and Terminal End User

Module: DFHAMDH

XMEOUT Parameters: *applid, doctemplate1, template, doctemplate2*

DFHAM4909 E *applid* **Install of DOCTEMPLATE** *doctemplate* **failed. DDNAME(***ddname***) not found.**

Explanation: The install of DOCTEMPLATE *doctemplate* has failed because the DDNAME(*ddname*) selected is not the name of a Data Definition statement for a partitioned dataset in the JCL for the current CICS job. *ddname* should be allocated to a PDS containing document templates to be used by the Document Handler domain.

System Action: The install fails.

User Response: Either select a DDNAME that does exist in the JCL for the current CICS job, or stop and restart CICS with the required DD statement added.

Destination: Console and Terminal End User

Module: DFHAMDH

XMEOUT Parameters: *applid, doctemplate, ddname*

DFHAM4910 E *applid* **Install of DOCTEMPLATE** *doctemplate* **failed. MEMBER(***membername***) not found in** *datasetname***.**

Explanation: The install of DOCTEMPLATE *doctemplate* has failed because member *membername* was not found in the partitioned dataset *datasetname*.

System Action: The install fails.

User Response: Ensure that member *membername* exists in the template library before installing the DOCTEMPLATE That references it.

Destination: Console and Terminal End User

Module: DFHAMDH

XMEOUT Parameters: *applid, doctemplate, membername, datasetname*

DFHAPxxxx messages

DFHAP0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively:

- Unexpected data has been input,
- Storage has been overwritten, or
- There has been a program check within a user program.

The code *aaa* is, if applicable, a 3-digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa*, is a user abend code produced either by CICS or by another product on the user's system.

If X'*offset*' contains the value X'FFFF', then module *modname* was in control at the time of the abend, but the program status word (PSW) was not addressing this module.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer.

Look up the MVS code *aaa*, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

If the *modname* insert contains the value *????*, then CICS was unable to determine which module has abnormally terminated. In this case, examine the system dump to determine which area of code has caused the program check.

The user should examine other messages to determine what the module which issued this message was doing at the time the abend occurred. From these messages they can deduce which product has produced the abend code *bbbb*. If *bbbb* is identified as a CICS code, it may be either alphameric or numeric.

- If the CICS code is alphameric (for example AKEA) then it is a CICS transaction abend code.
- If the CICS code is numeric (for example 1310), it refers to a CICS message (DFHTS1310 in our example).

If the user abend code is from another product (for example, IMS), refer to the appropriate messages and codes manual to determine the cause of the abend.

The entries in the appropriate manuals will give the user guidance regarding the nature of the error, and may also give some guidance concerning the appropriate user response.

Note: The program check may have occurred in a user program. If this is the case, the program check is usually followed by an ASRA or an ASRB transaction abend and a transaction dump.

If you want to suppress system dumps that precede ASRA and ASRB abends, you must specify this on an entry in the dump table, using either CEMT or an EXEC CICS command. Further guidance on suppressing system dumps can be found in the *CICS System Definition Guide*.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHABAB, DFHAFMT, DFHAPDM, DFHAPDN, DFHAPEX, DFHAPIQ, DFHAPJC, DFHAPNT, DFHAPSM, DFHAPST, DFHAPSI, DFHAPXM, DFHAPXME, DFHDKMR, DFHEDFE, DFHEISR, DFHICXM, DFHMRXM, DFHSAIQ, DFHSIPLT, DFHSRP, DFHSTDT, DFHSTFC, DFHSTLK, DFHSTLS, DFHSTSZ, DFHSTTD, DFHSTTM, DFHSTTR, DFHSTTS, DFHSUEX, DFHTDXM, DFHTMP, DFHTSUT, DFH62XM

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHAP0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System Action: An exception entry is made in the trace table (X'*code*' in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

If this message is issued from DFHAPEX or DFHSUEX, and the exit point is XDUREQ, then a system dump is not taken in order to prevent recursive dumping.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system administrator. This failure indicates a serious error in CICS. If you have not requested termination in the dump table, you may want to terminate CICS. For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHABAB, DFHAFMT, DFHAPDM, DFHAPDN, DFHAPEX, DFHAPJC, DFHAPLI, DFHAPLJ, DFHAPSI, DFHAPSIP, DFHAPSM, DFHAPST, DFHAPTI, DFHAPTIM, DFHAPTIX, DFHAPXM, DFHAPXME, DFHCJVM, DFHDKMR, DFHERM, DFHEISR, DFHICXM, DFHPCPG, DFHSIPLT, DFHSTDT, DFHSTFC, DFHSTJC, DFHSTLK DFHSTLS, DFHSTSZ, DFHSTTD, DFHSTTM, DFHSTTR, DFHSTTS, DFHSUEX, DFHSUZX, DFHTMP, DFHTDXM, DFHVEH, DFHXCPA, DFHXSWM, DFHZCUT

XMEOUT Parameters: *applid, X'code', modname*

DFHAP0003 *applid* **Insufficient storage (code** *X'code'***) in module** *modname***.**

Explanation: A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code X'*code*' is the exception trace point id which uniquely identifies the place where the error was detected.

System Action: An exception entry is made in the trace table (code X'*code*' in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer.

Try increasing the size of the DSA or EDSA. See the *CICS System Definition Guide* or the *CICS Customization Guide* for further information on controlling CICS storage.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHAPDM, DFHAPSIP

XMEOUT Parameters: *applid, X'code', modname*

DFHAP0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

If this message is issued from DFHAPEX or DFHSUEX, and the exit point is XDUREQ, then a system dump is not taken in order to prevent recursive dumping.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that the module *modname* will be terminated and CICS will continue.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHAFMT, DFHAPDM, DFHAPDN, DFHAPEX, DFHAPIQ, DFHAPJC, DFHAPSM, DFHAPST, DFHAPSI, DFHAPXM, DFHAPXME, DFHDKMR, DFHEDFE, DFHEISR, DFHICXM, DFHSAIQ, DFHSIPLT, DFHSTDT, DFHSTFC, DFHSTJC, DFHSTLK, DFHSTLS, DFHSTSZ, DFHSTTD, DFHSTTM, DFHSTTR, DFHSTTS, DFHSUEX, DFHTDXM, DFHTSUT

XMEOUT Parameters: *applid, X'offset', modname*

DFHAP0005 *applid* **A hardware error has occurred (module** *modname***, code** *X'code'***). MVS Store Clock found inoperative.**

Explanation: A hardware error has occurred during the running of module *module*. The MVS store clock facility is the timing mechanism for the operating system.

The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the MVS store clock to determine whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHZCUT

XMEOUT Parameters: *applid, modname, X'code'*

DFHAP0100 *applid* **Suffixed module** *modname* **cannot be loaded. Enter new suffix, 'YES'(unsuffixed), 'NONE'(dummy), or 'CANCEL'**

Explanation: During AP domain initialization, a suffixed CICS module or table could not be loaded.

System Action: The AP domain initialization routines wait for the operator to:

- Enter an alternative two-character suffix,
- Enter 'YES' to request the unsuffixed version,
- Enter 'NONE' to request that a dummy version of the program or table be loaded, or
- Enter 'CANCEL'.

  If 'CANCEL' is entered, CICS is abnormally terminated at the end of the nucleus process.

User Response: Determine whether the suffix is correct. If it is not, enter one of the replies listed in the System Action.

If you enter 'CANCEL', correct the error by adding the module to the appropriate library and then restart CICS.

Destination: Console

Module: DFHSIB1

XMEOUT Parameters: *applid, modname*

DFHAP0101 *applid* **Suffixed module** *modname* **cannot be loaded.**

Explanation: During AP domain initialization, a suffixed CICS module or table could not be loaded. This message is issued for all suffixable modules which cannot be located after CANCEL has been specified in response to a preceding DFHAP0100 message.

System Action: The AP domain initialization continues until the end of the nucleus load process. CICS is then abnormally terminated with a dump.

User Response: Determine whether the suffix is correct. If it is not, either correct the SIT or name the correct suffix via an override for the next initialization of CICS. Otherwise correct the error by adding the module to the appropriate library.

Destination: Console

Module: DFHSIB1

XMEOUT Parameters: *applid, modname*

DFHAP0501 *date time applid* **Program** *progname* **has issued an ADDRESS CSA command that is no longer supported.**

Explanation: The program *progname* has attempted to address the CSA. This function is no longer supported. The address returned is now fetch protected. Any attempt to reference this address results in an abend.

System Action: CICS continues.

User Response: Remove this command from the application program. Translate and compile. Remove any references to the address that was previously returned.

Destination: CMIG

Module: DFHEEI

XMEOUT Parameters: *date, time, applid, progname*

DFHAP0601 *applid* **Force purge of transaction id** *tranid* **transaction number** *trannum* **has been deferred because the transaction is executing post commit syncpoint processing.**

Explanation: CICS has received a request to force purge a transaction. The target of the force purge request is part way through processing the second phase of a two phase syncpoint. If the purge was accepted at this time, the target transaction would be abended and this would cause CICS to fail with a U0408 abend. There is no way of purging the target transaction while it is in this state. Transactions should only remain in this state for a short period of time. A subsequent attempt to force purge the transaction may preempt the deferred abend issued by the system when this condition was detected. This would result in the transaction being purged from the system faster than if the deferred purge is left to take effect.

System Action: CICS defers the purge until the target transaction is no longer protected against purge.

User Response: Retry the purge after a short interval if the target transaction has not ended.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Module: DFHAPXME

XMEOUT Parameters: *applid, tranid, trannum*

DFHAP0602 *applid* **Force purge of transaction id** *tranid* **transaction number** *trannum* **has been deferred because the transaction is executing transaction backout.**

Explanation: CICS has received a request to force purge a transaction. The target of the force purge request is part way through transaction backout processing (either as a result of an earlier transaction abend, or a syncpoint rollback request). If the purge was accepted at this time, the target transaction would be abended and this would cause CICS to fail with a U0405 abend. There is no way of purging the target transaction while it is in this state. Transactions should only remain in this state for a short period of time. A subsequent attempt to force purge the transaction may preempt the deferred abend issued by the system when this condition was detected. This would result in the transaction being purged from the system faster than if the deferred purge is left to take effect.

System Action: CICS defers the purge until the target transaction is no longer protected against purge.

User Response: Retry the purge after a short interval if the target transaction has not ended.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Module: DFHAPXME

XMEOUT Parameters: *applid, tranid, trannum*

DFHAP0603 *applid* **Forcepurge of transaction ID** *tranid*, **transaction number** *trannum*, **recovery token** *X'rtoken'* **has been deferred because the transaction is waiting for a DLI request in DBCTL to complete.**

Explanation: CICS has received a request to forcepurge a transaction. The target of the forcepurge request is waiting in DBCTL (or an IMS DC system which CICS thinks is a DBCTL) for the DLI request to complete. If the forcepurge was accepted at this time, the IMS system would fail with a U113 abend. The target transaction cannot be purged while it is in this state. Transactions should only remain in this state for a short time, unless the transaction is requesting some data or resource held by some other task in DBCTL. The recovery token may be used to identify which DBCTL thread corresponds to your task. (Issue /DIS CCTL ALL against the relevant DBCTL). One of the other active threads probably holds the resource you are waiting for. A subsequent attempt to forcepurge the transaction may preempt the deferred abend issued by the system when this condition was detected. This would result in the transaction being purged from the system faster than if the deferred purge is left to take effect.

System Action: CICS defers the forcepurge until the target transaction is no longer protected against purge.

User Response: Retry the forcepurge after a short interval if the target transaction has not ended. If the purge is still deferred, you will not be able to purge this transaction until the resource it is waiting for is released.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Module: DFHAPXME

XMEOUT Parameters: *applid, tranid, trannum, X'rtoken'*

DFHAP0604 *applid* **Forcepurge of transaction ID** *tranid*, **transaction number** *trannum*, **recovery token** *X'rtoken'* **has been deferred because the transaction is on a CICS-DB 2 ready queue waiting for a thread or TCB to become available.**

Explanation: CICS has received a request to forcepurge a transaction. The target of the forcepurge request is queued on a CICS-DB2 ready queue awaiting a DB2 thread or TCB to become available. The target transaction cannot be purged while it is in this state.

If the CEMT INQUIRE TASK panel shows the task with an htype value of 'CDB2TCB', this means the task is awaiting a CICS-DB2 subtask TCB to become available. If the htype value is 'CDB2RDYQ, this means the task is awaiting a CICS-DB2 thread to become available, and Hvalue identifies the pool, or the particular DB2ENTRY against which it is queued. Transactions should remain in this state only for a short time.

System Action: CICS defers the forcepurge until the target transaction is no longer protected against purge.

User Response: If the task is queued awaiting a CICS-DB2 subtask TCB, you can increase the value of TCBLIMIT in the

DB2CONN. If the transaction is awaiting a CICS-DB2 thread, you can increase the THREADLIMIT value in the DB2ENTRY, or in the DB2CONN for the pool.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Module: DFHAPXME

XMEOUT Parameters: *applid, tranid, trannum, X'rtoken'*

DFHAP0701 *applid* **An abend (code** *abcode***) has occurred in exit program** *progname* **at exit point** *xxxxxxxx***.**

Explanation: An abnormal end (abend) or program check has occurred in the program *progname*. This implies that there is an error in the error program, that unexpected data has been input, or storage has been overwritten.

The code is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: CICS makes an exception entry in the trace table and returns a zero return code to the exit point. CICS also produces a system dump unless:

- You have specifically suppressed dumps in the dump table, or
- The exit point is XDUREQ. No dump is taken in order to avoid recursive dumping.

Either CICS continues unless you have specified in the dump table that CICS should terminate.

Or This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. If this is the case, a zero return code is returned to the CICS management module.

User Response: There might be a logic error in the user exit program *progname*. DISABLE the exit program from all exit points, by using the EXITALL operand in the EXEC CICS DISABLE, and correct the error.

For programming information about coding user exit programs see the *CICS Customization Guide*.

Destination: Console

Modules: DFHSUEX, DFHUEH

XMEOUT Parameters: *applid, abcode, progname, xxxxxxxx*

DFHAP0704 *applid* **A possible loop has been detected in exit program** *progname* **at exit point** *xxxxxxxx***.**

Explanation: The exit program *progname* was in control and the transaction has consumed more CPU time than has been specified in the ICVR. There is probably a loop.

System Action: CICS returns a zero return code to the exit point. CICS also produces a system dump unless

- You have specifically suppressed dumps in the dump table, or
- The exit point is XDUREQ. No dump is taken in order to avoid recursive dumping.

User Response: There is a probable logic error in the user exit program *progname*. DISABLE the exit program from all exit points by using the EXITALL operand in the EXEC CICS DISABLE, and correct the error.

Refer to the *CICS Customization Guide* for further information about coding user exit programs.

If you think there is no loop, you can increase the runaway task time interval in the ICVR by using CEMT. This is explained in the *CICS Supplied Transactions* manual.

Destination: Console

Modules: DFHSUEX, DFHUEH

XMEOUT Parameters: *applid, progname, xxxxxxxx*

DFHAP0705 W *date time applid* **The enable of task related user exit program** *progname* **has caused CICS to force taskdataloc(below) for all transactions.**

Explanation: Task-related user exit program *progname* has been enabled with options TASKSTART and LINKEDITMODE, and *progname* has been linkedited AMODE 24. This ensures that it is always invoked in amode 24. An amode 24 task-related user exit program can only be invoked if the calling transaction is defined with TASKDATALOC(below).

By enabling the AMODE 24 task-related user exit for task start, the user has forced CICS to force all subsequent transactions to run with taskdataloc(below).

System Action: CICS continues, but for the remainder of the CICS run, CICS insists that all transactions run with taskdataloc(below).

User Response: To avoid all transactions having to run with taskdataloc(below), modify the task-related user exit so that it is capable of running AMODE(31) when invoked for task start.

Ideally the task-related user exit should be modified so that it always runs AMODE 31 for whoever is the caller. In this case the exit program can be linkedited with the AMODE 31 attribute, and enabled with the LINKEDITMODE option. This ensures CICS always invokes it in AMODE 31.

Alternatively the task-related user exit could be modified so it is capable of being invoked in either amode. In this case the exit should be enabled without the LINKEDITMODE option. This means the exit will be invoked in the amode of its caller. For CICS calls such as task start, this will always be AMODE 31, but it does allow the exit to be invoked AMODE 24 for calls from an amode 24 application if this is desired.

See the *CICS Resource Definition Guide*. for more information on the TASKDATALOC option.

See the *CICS Customization Guide* for programming information on the LINKEDITMODE option when enabling task-related user exits.

Destination: Console and Transient Data Queue CSMT

Module: DFHUEM

XMEOUT Parameters: *date, time, applid, progname*

DFHAP0706 *applid* **A probable loop has been detected in task related user exit program** *progname***.**

Explanation: The task related user exit program *progname* was in control and the transaction has consumed more CPU time than has been specified in the ICVR. There is probably a loop.

System Action: CICS produces a system dump unless you have specifically suppressed dumps in the dump table.

User Response: There is a probable logic error in the task

related user exit program *progname*. DISABLE the exit program and correct the error.

Refer to the *CICS Customization Guide* for programming information about task-related user exit programs.

If there is no loop, you can avoid this problem by increasing the runaway task time interval in the ICVR using CEMT. This is explained in the *CICS Supplied Transactions*.

Destination: Console

Module: DFHERM

XMEOUT Parameters: *applid, progname*

DFHAP0707 *applid* **An abend (code** *abcode***) has occurred in task related user exit program** *progname***.**

Explanation: An abnormal end (abend) or program check has occurred in the task related user exit program *progname*. This implies that there is an error in the exit program, that unexpected data has been input, or storage has been overwritten.

The code is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, X'0C1' or X'D37'). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: CICS makes an exception entry in the trace table and produces a system dump unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

User Response: There might be a logic error in the task related user exit program *progname*. DISABLE the task related user exit program and correct the error.

For programming information about coding task related user exit programs see the *CICS Customization Guide*.

Destination: Console

Module: DFHERM

XMEOUT Parameters: *applid, abcode, progname*

DFHAP1006 *applid* **Resource definition recovery has failed with code** *X'code'* **in module** *modname***.**

Explanation: An error has been detected in module *modname* during startup. The code X'*code*' is the exception trace point ID which uniquely identifies the error and where it was detected.

System Action: An exception entry is made in the trace table (X'*code*' in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

This is a critical error and CICS is terminated even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. This failure indicates a serious error in CICS. For further information about CICS exception trace entries, see the *CICS Diagnosis Reference*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHAPRDR, DFHTCRP

XMEOUT Parameters: *applid, X'code', modname*

DFHAP1007 *applid* **A GETMAIN has failed for a resource definition control block code** *X'code'* **in module** *modname***.**

Explanation: An storage request has failed in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies the error and where it was detected.

System Action: An exception entry is made in the trace table (X'*code*' in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system administrator. This failure may indicate that you need to increase the size limits of the EDSAs. EDSA storage limits are specified by the EDSALIM system initialization parameter. See the *CICS System Definition Guide* for more guidance on EDSALIM. For further information about CICS exception trace entries, see the *CICS Diagnosis Reference*.

Destination: Console

Module: DFHAPRDR

XMEOUT Parameters: *applid, X'code', modname*

DFHAP1200 *applid* **A CICS request to the Language Environment/370 has failed. Reason code** *rc***.**

Explanation: CICS has attempted to communicate with AD/Cycle Language Environment/370, but due to an error, the function requested by CICS could not be performed.

System Action: If the error occurs during system initialization, then the initialization continues but without support for the Language Environment/370. If the error occurs in a user application program, then the transaction is abnormally terminated.

User Response: For an explanation of the Language Environment/370 return code *rc*, refer to the Language Environment/370 *Debugging Guide and Runtime Messages* manual.

If the error occurs during system initialization, check that the Language Environment/370 modules and the modules required for the languages supported by that environment have been correctly installed. In particular ensure that:

- The interface module CEECCICS has been placed in a library concatenated to the STEPLIB DD statement of the CICS startup job stream
- The required modules in the CSD have been defined (these modules are listed in the file CEESAMP which is supplied with the sample files on the distribution tape).

Destination: Console

Module: DFHAPLI

XMEOUT Parameters: *applid, rc*

DFHAP1201 *applid* **CICS is unable to initialize COBOL2 support. Reason code** *rc***.**

Explanation: During system initialization, CICS could not correctly initialize VS COBOL II support. The reason code *rc* is a hexadecimal return code from the VS COBOL II module IGZ9CIC (alias IGZECIC).

System Action: CICS continues initialization, but transactions invoking VS COBOL II programs will abend.

User Response: The reason for the failure is explained in an associated IGZ message. IGZ messages are documented in the *VS COBOL II Application Programming Debugging Guide*.

Ensure that VS COBOL II has been installed successfully, and that the necessary steps to enable CICS support for VS COBOL II have been carried out. These are listed in the *VS COBOL II Installation and Customization* manual.

In particular, ensure that you have placed the COBOL-CICS interface module, IGZECIC, in a library concatenated to the STEPLIB DD statement of the CICS startup job stream. Also ensure that the VS COBOL II environment specific modules (ESM) IGZExxxx being used are those from COB2CICS. Check that COB2CICS appears before COB2LIB in the STEPLIB concatenation.

Destination: Console

Module: DFHAPLI

XMEOUT Parameters: *applid, rc*

DFHAP1202I *applid* **CICS is unable to initialize C/370 support. Reason code** *rc***.**

Explanation: During system initialization, CICS could not initialize C/370 correctly.

The C/370 support module, EDCCICS, has been loaded correctly, but the necessary setup is not complete.

System Action: CICS continues initialization, but transactions invoking C programs will abend.

User Response: Check that you have installed C/370 successfully and have carried out the necessary steps to enable CICS support for C. For details of the meaning of reason code *rc*, refer to the *IBM C/370 User's Guide* (SC09-1264-03).

Destination: Console

Module: DFHAPLI

XMEOUT Parameters: *applid, rc*

DFHAP1203I *applid* **Language Environment/370 is being initialized.**

Explanation: This is an informatory message indicating that CICS is initializing support for the Language Environment/370.

System Action: System initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHAPLI

XMEOUT Parameter: *applid*

DFHAP1204I *applid* **COBOL2 is being initialized.**

Explanation: This is an informatory message indicating that CICS is initializing support for VS COBOL II.

System Action: System initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHAPLI

XMEOUT Parameter: *applid*

DFHAP1205I *applid* **C/370 is being initialized.**

Explanation: This is an informatory message indicating that CICS is initializing support for C/370.

System Action: System initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHAPLI

XMEOUT Parameter: *applid*

DFHAP1212 *date time applid* **The program** *program_name* **was defined as** *language1* **but CICS has redefined it as** *language2***.**

Explanation: You have defined program *program_name* as *language1*. During validation CICS determined that *language1* is not a valid language for *program_name* and has redefined the program with *language2*.

CICS is able to determine the program language automatically. It is therefore not necessary for users to pass the language of a program to CICS via an autoinstall exit.

System Action: Processing continues.

User Response: None. This message is issued for information only.

Destination: CSTL

Module: DFHAPLI

XMEOUT Parameters: *date, time, applid, program_name, language1, language2*

DFHAP1213 *applid* **An unexpected error has occurred during language initialization.**

Explanation: Either an error was detected when CICS tried to load one of the required language interface modules, or the region size you have defined for CICS is too small.

During the language initialization phase of CICS startup, an unexpected error has occurred while CICS was initializing the necessary support. Possibly CICS has determined that there is insufficient storage to enable run-time language support to be correctly installed. Application program execution is likely to be severely restricted if CICS continues.

System Action: CICS initialization continues.

User Response: You should examine the console log for any error messages which may have been issued by the operating system immediately preceding this CICS message. If no operating system messages were issued, it is likely that there is insufficient storage for CICS to continue and you should restart CICS with a larger region size.

Destination: Console

Module: DFHAPLI

XMEOUT Parameter: *applid*

DFHAP1214 *applid* **Language Environment/370 global ENVAR option defined with invalid CICS program options.**

Explanation: An error has been detected in the Language Environment global runtime ENVAR option. The ENVAR string contains a substring in the form 'CICSVAR=xx....xx', but 'xx....xx' is an invalid or unsupported program option. At this level of CICS, the only valid options are 'THREADSAFE' or 'QUASIRENT'.

System Action: The incorrect ENVAR substring is ignored.

User Response: Refer to the *CICS System Definition Guide* for information on how to define program options in the ENVAR string.

Destination: Console

Module: DFHAPLI

XMEOUT Parameter: *applid*

DFHAP1215 *applid* **Invalid CICS program options found in ENVAR string in program** *pgmname***.**

Explanation: The application program contains user-defined Language Environment runtime options, and an error has been detected in the specification of the ENVAR option. The ENVAR string contains a substring in the form 'CICSVAR=xx....xx', but 'xx....xx' is an unsupported or invalid program option. At this level of CICS, the only supported options are 'THREADSAFE' or 'QUASIRENT'.

System Action: The incorrect ENVAR substring is ignored.

User Response: Refer to the *CICS System Definition Guide* for information on how to define program options in the ENVAR string.

Destination: Console

Module: DFHAPLI

XMEOUT Parameters: *applid, pgmname*

DFHAP1216 *date time applid* **Attempt to change the HFS working directory to** *pathname* **has failed. Runtime error message is** *errmsg*

Explanation: The CICS-JVM interface attempted to change the working directory to *pathname* as specified via the CICS_HOME environment variable contained in the DFHJVM member of the SDFHENV dataset. The change directory command failed and the runtime message *errmsg* appended to the end of this message documents why the command failed.

System Action: The CICS-JVM interface is unable to change to the specified directory to open the stdin, stdout and stdout streams. The CICS transaction is abended with abend code AJMA.

User Response: Examine *errmsg* to determine why the change directory command failed. If necessary correct the setting of environment variable CICS_HOME in the DFHJVM member of the SDFHENV dataset.

Destination: CSMT

Module: DFHCJVM

XMEOUT Parameters: *date, time, applid, pathname, errmsg*

DFHAP1217 *date time applid* **Attempt to fetch user replaceable module DFHJVMAT has failed.**

Explanation: The CICS JVM interface issued a fetch to load user replaceable module DFHJVMAT. The native C fetch request failed.

System Action: The CICS transaction is abended with abend code AJM9.

User Response: Ensure that C program DFHJVMAT is present in a dataset in the CICS STEPLIB concatenation. Examine messages output by language environment/370 to determine why the fetch request failed.

Destination: CSMT

Module: DFHCJVM

XMEOUT Parameters: *date, time, applid*

DFHAP1218 *date time applid* **JVM failed to find the CICS Wrapper class** *classname*

Explanation: The CICS JVM interface invoked the JVM to locate the CICS Wrapper class *classname* used to set up the operating environment before executing the user Java class. The JVM failed to find the CICS Wrapper class on the HFS.

System Action: The CICS transaction is abended with abend code AJM2.

User Response: Examine the value set for CLASSPATH in the DFHJVM member of the SDFHENV dataset. The pathname for the CICS supplied dfjwrap.jar must be present in CLASSPATH.

Destination: CSMT

Module: DFHCJVM

XMEOUT Parameters: *date, time, applid, classname*

DFHAP1400 *applid* **The IIOP transaction cannot be started this way.**

Explanation: The IIOP transaction was not started by the CICS attach mechanism.

System Action: The IIOP Facility is terminated.

User Response: For instance, do not try to start the IIOP transaction from a terminal.

Destination: Console and Terminal End User

Modules: DFHIIOP, DFHIIOPA

XMEOUT Parameter: *applid*

DFHAP1401 *date time applid* **Unable to determine the transaction id. The tranid 'CIOD' will be used.**

Explanation: The inquire on the CEDA 'Request model' definition to determine the transaction name was not successful.

System Action: The transaction name 'CIOD' will be used as the default.

User Response: Check the CEDA definitions for the 'Request model'.

Destination: CSMT

Module: DFHIIOP

XMEOUT Parameters: *date, time, applid*

DFHAP1402 *date time applid* **The IIOP transaction has abended, the abend was** *abend***, the program was** *program***.**

Explanation: The IIOP transaction has abended.

System Action: The IIOP Facility is terminated.

User Response: Examine the dump and trace to determine the cause of the abend.

Destination: CSMT

Modules: DFHIIOP, DFHIIOPA

XMEOUT Parameters: *date, time, applid, abend, program*

DFHAP1403 *date time applid* **The IIOP header data is invalid; the message size was** *size***.**

Explanation: The IIOP transaction received an invalid header in a message and has returned an error message.

System Action: The IIOP Facility issues another receive.

User Response: Examine the contents of the returned error message.

Destination: CSMT

Module: DFHIIOP

XMEOUT Parameters: *date, time, applid, size*

DFHAP1404 *date time applid* **Cannot attach the IIOP transaction.**

Explanation: The Attach of the required transaction has failed.

System Action: The IIOP Facility re-issues a receive.

User Response: Check the transaction and the model definitions, for example CIOD and CIOF.

Destination: CSMT

Module: DFHIIOP

XMEOUT Parameters: *date, time, applid*

DFHAP1405 *date time applid* **Cannot link to program DFJIIOP, response=***response***, reason=***reason***.**

Explanation: The EXEC CICS LINK to DFJIIOP, the CORBA interface, failed.

System Action: The IIOP Facility is terminated.

User Response: Examine the return code to determine the cause of failure. See the *CICS Application Programming Reference* for an explanation of the EXEC CICS LINK responses.

Destination: CSMT

Module: DFHIIOPA

XMEOUT Parameters: *date, time, applid, response, reason*

DFHAP1406 *date time applid* **The call to the Socket domain failed, refer to earlier messages from TCP/IP and the Socket domain.**

Explanation: The call to the Socket domain failed.

System Action: The IIOP Facility is terminated.

User Response: Examine the previous messages from the Socket domain and TCP/IP to determine the cause.

Destination: CSMT

Modules: DFHIIOP, DFHIIOPA

XMEOUT Parameters: *date, time, applid*

DFHAP1407 *date time applid* **The GETMAIN call to aquire storage has failed, response=***response***, reason=***reason***.**

Explanation: The GETMAIN call has failed.

System Action: The IIOP Facility is terminated.

User Response: Examine the return code to determine the cause of failure.

Destination: CSMT

Modules: DFHIIOP, DFHIIOPA

XMEOUT Parameters: *date, time, applid, response, reason*

DFHAP1408 *date time applid* **No Socket domain session token was supplied to the CIOP transaction when it was started.**

Explanation: The IIOP transaction was started without a Socket domain session token.

System Action: The IIOP Facility is terminated.

User Response: This transaction must only be started by the Socket domain.

Destination: CSMT

Module: DFHIIOP

XMEOUT Parameters: *date, time, applid*

DFHAP1409 *date time applid* **The Link to the URM DFHXOPUS failed; the default userid will be used, response=***response***, reason=***reason***.**

Explanation: The EXEC CICS LINK to the User Replaceable Module DFHXOPUS has failed.

System Action: The default userid will be used to run the CORBA code.

User Response: None; if you are happy to let the userid default, otherwise check that the DFHXOPUS (URM) has been placed in the correct library. See "CICS for MVS/ESA.: Application Programming Reference" for an explanation of the EXEC CICS LINK responses.

Destination: CSMT

Module: DFHIIOP

XMEOUT Parameters: *date, time, applid, response, reason*

DFHAUxxxx Transaction affinity utility messages

DFHAU2101 *date time applid* **CAFF CANNOT START BECAUSE IT IS ALREADY IN USE.**

Explanation: Transaction CAFF is already being used when an attempt is made to start another CAFF transaction.

System Action: The second CAFF transaction is terminated because only one instance of CAFF is permitted.

User Response: Check where CAFF is currently in use. Only one user should be attempting to run the Detector at a given time.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF and Terminal End User

Module: CAUCAFF1

DFHAU2102 *date time applid* **DETECTOR IS NOT** *state***.**

Explanation: An attempt was made to start, stop, pause, or continue the Detector from transaction CAFF. However, the Detector was not in an appropriate state *state* to make the change.

System Action: The Detector state is not changed.

User Response: Check why the Detector is currently in that state.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF and Terminal End User

Module: CAUCAFF1

DFHAU2103 *date time applid* **DETECTOR IS ALREADY STOPPED.**

Explanation: An attempt was made to stop the Detector from transaction CAFF when the Detector was already STOPPED.

System Action: No action is taken.

User Response: Check why the Detector is currently in that state.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF and Terminal End User

Module: CAUCAFF1

DFHAU2104 INVALID KEY PRESSED.

Explanation: The terminal operator has pressed a function key in response to a screen displayed by transaction CAFF, but the function key was not valid for that screen.

System Action: The function key is ignored.

User Response: Use the correct function key.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF1, CAUCAFF2, CAUCAFF7

DFHAU2105 *date time applid* **CAFF SESSION HAS ENDED.**

Explanation: Transaction CAFF has ended.

System Action: The state of the Detector is unchanged.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF and Terminal End User

Module: CAUCAFF1

DFHAU2106 OPTION MUST BE Y(YES) OR N(NO).

Explanation: You have entered an incorrect value for this CAFF operation option.

System Action: The CAFF operation options are not changed unless all of the input is correct.

User Response: Correct the invalid input.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF2

DFHAU2107 DATASPACE SIZE MUST BE AN INTEGER (10 TO 2000MB).

Explanation: You have entered an incorrect value for the Detector dataspace size. This gives the size in megabytes.

System Action: The CAFF operation options are not changed unless all of the input is correct.

User Response: Correct the invalid input with an integer in the range 10 through 2000.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF2

DFHAU2110 NO AMENDMENTS WERE ENTERED.

Explanation: You have pressed the ENTER key on the CAFF operation options screen (CAFF02) but no changes have been input.

System Action: No options are changed.

User Response: Enter any changes then press the ENTER key again.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF2

DFHAU2111 *date time applid* **CAFF OPTIONS UPDATED.**

Explanation: Transaction CAFF has successfully amended the operation options.

System Action: The operation options held on VSAM control file CAUCNTL are updated.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF and Terminal End User

Module: CAUCAFF2

DFHAU2114 RECORDS RESTORED.

Explanation: The Detector is being started with the restore data option set to Y. Records from the previous Detector run are retained on the affinity data files (CAUAFF1, CAUAFF2, CAUAFF3).

Records for those affinity command types being detected on this Detector run were found on the files and were read into the dataspace.

System Action: The Detector is started with any records from a previous run retained on the affinity data files and read into the dataspace.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF3

DFHAU2115 *date time applid* **AFFINITY FILES EMPTIED.**

Explanation: The Detector is being started with the restore data option set to N. All existing affinity records were deleted from the affinity data files (CAUAFF1, CAUAFF2, CAUAFF3).

System Action: The Detector is started with empty affinity data files.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF and Terminal End User

Module: CAUCAFF3

DFHAU2116 DATASPACE IS TOO LARGE. NO STORAGE IS AVAILABLE.

Explanation: An attempt to start the Detector has failed because the table manager (CAUTABM) cannot obtain the requested storage for the MVS dataspace. The MVS real storage manager does not have enough resources.

System Action: The Detector start is abandoned and the Detector is stopped.

User Response: Decrease the dataspace size via the CAFF operation options.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF3

DFHAU2117 DATASPACE IS TOO LARGE. IEFUSI LIMIT REACHED.

Explanation: An attempt to start the Detector has failed because the table manager (CAUTABM) cannot obtain the requested storage for the MVS dataspace. The MVS exit IEFUSI has imposed a limit on address space size.

System Action: The Detector start is abandoned and the Detector is stopped.

User Response: Either use the CAFF operation options to decrease the dataspace size, or ask your MVS system programmer to increase the IEFUSI limit.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF3

DFHAU2118 NO RECORDS RESTORED.

Explanation: The Detector is being started with the restore data option set to Y. Records from the previous Detector run are retained on the affinity data files (CAUAFF1, CAUAFF2, and CAUAFF3).

No records for those affinity command types being detected on this Detector run were found on the files, so none were read into the dataspace.

System Action: The Detector is started with any records from a previous run retained on the affinity data files.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF3

DFHAU2119 *date time applid* **CICS IS TERMINATING.**

Explanation: Transaction CAFF has ended because it has found that the CICS region has entered the quiesce state before shutdown.

System Action: Transaction CAFF is terminated. If the Detector state is anything other than STOPPED, transaction CAFB will stop the Detector.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF and Terminal End User

Module: CAUCAFF1

DFHAU2120 PRESS F5 TO CONFIRM START WITH DATA RESTORE.

Explanation: Press the F5 key to confirm that the Detector is to be started with the restore data option set to Y.

System Action: If you press the F5 key, the Detector is started with affinity data retained on the affinity data files and read into the dataspace. If you press any other key, the Detector is not started.

User Response: Press F5 to start the Detector.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF1

DFHAU2121 PRESS F5 TO CONFIRM START WITHOUT DATA RESTORE.

Explanation: Press the F5 key to confirm that the Detector is to be started with the restore data option set to N.

System Action: If you press the F5 key, the Detector is started with all of the data on the affinity data files deleted. If you press any other key, the Detector is not started.

User Response: Press the F5 key to start the Detector.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF1

DFHAU2122 PRESS F6 TO CONFIRM STOP DETECTOR.

Explanation: Press the F6 key to confirm that the Detector is to be stopped. The affinity data in the dataspace is saved to the affinity data files.

System Action: If you press the F6 key, the Detector is stopped and any changes made to the affinity data in the dataspace since the last save is saved to the affinity data files. If any other key is pressed, the Detector is not stopped.

User Response: Press the F6 key to stop the Detector.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF1

DFHAU2125 *applid* **CAFF CANNOT START WITHOUT DETECTOR ACTION.**

Explanation: The transaction ID CAFF has been entered without a Detector action at a console device. It is mandatory to supply a Detector action with CAFF at a console device.

System Action: Transaction CAFF is not initiated.

User Response: Ensure that an action (start, stop, pause, or continue) is entered after the CAFF transaction ID.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUCAFF1

DFHAU2127 EMBEDDED BLANK IN TRANSID PREFIX IS INVALID.

Explanation: The transaction ID prefix entered on screen CAFF02 is invalid. The input is rejected because it contains an embedded blank character.

System Action: The CAFF operation options are not changed unless all of the input is correct.

User Response: Correct the invalid input.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: CAUCAFF2

DFHAU2201 *date time applid* **CICS** *command object* **FAILED. RESP** *eibresp* **RESP2** *eibresp2* **RCODE** *eibrcode*

Explanation: Transaction CAFF or CAFB received an invalid response when issuing the EXEC CICS command *command*. The response is in *eibresp*, *eibresp2*, and *eibrcode*. If present, *object* gives the object operated on by the command.

System Action: The transaction is terminated with abend code AUZA and the Detector is stopped.

User Response: For further details of the exception *eibresp* refer to the command *command* in the *CICS Application Programming Reference* manual or the *CICS System Programming Reference* manual.

For further guidance on how to deal with system problems see too the *CICS Problem Determination Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1, CAUCAFF2, CAUCAFF3, CAUCAFF4, CAUCAFF5, CAUCAFF6, CAUCAFF7, CAUCAFB1, CAUCAFB2

DFHAU2202 *date time applid* **VSAM** *filetype* **FILE** *filename command* **FAILED. RESP** *eibresp* **RESP2** *eibresp2*

Explanation: Transaction CAFF or CAFB received an invalid response when issuing the EXEC CICS command *command* on VSAM file *filename* of type *filetype*. The response is in *eibresp* and *eibresp2*.

System Action: The transaction is terminated with abend code AUZB and the Detector is stopped.

User Response: For further details of the exception *eibresp* refer to the command in the *CICS Application Programming Reference* manual or the *CICS System Programming Reference* manual.

For further guidance on how to deal with system problems, see the *CICS Problem Determination Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1, CAUCAFF2, CAUCAFF3, CAUCAFF4, CAUCAFF5, CAUCAFF6, CAUCAFB2

DFHAU2203 *date time applid* **INTERNAL ERROR DETERMINING STATE IN TRANSACTION** *transaction* **PROGRAM** *program***.**

Explanation: Detector program *program* in transaction *transaction* was unable to determine the Detector state from either the VSAM control file record or from the Detector exit GWA.

System Action: The transaction is terminated with abend code AUZC and the Detector is stopped.

User Response: Attempt to reenter transaction CAFF. If you are still unable to use CAFF, run the VSAM job to delete and define the VSAM control file CAUCNTL. If this fails, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1, CAUCAFF2

DFHAU2204 *date time applid* **CAFF IS BEING USED BY USER** *userid***.**

Explanation: User *userid* is using transaction CAFF.

System Action: This user has exclusive use of transaction CAFF.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1

DFHAU2205 *date time applid* **FILE** *filename* **CANNOT BE USED BY THIS CICS SYSTEM.**

Explanation: File *filename* was first used by a CICS system with a different CICS specific APPLID, and is therefore not useable by a CICS system with specific APPLID *applid*.

System Action: The transaction is terminated with abend code AUZD and the Detector is stopped.

User Response: Ensure that the file *filename* is the correct file for the CICS system in question. If the correct file cannot be located, run the VSAM job to delete and define file *filename*. If *filename* was the control file (CAUCNTL), the CAFF operation options may need to be amended via CAFF because the file is recreated with default option values. If *filename* was an affinity data file (that is CAUAFF1, CAUAFF2, or CAUAFF3), set the restore data option to N when the Detector is next started via CAFF.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1, CAUCAFF3

DFHAU2206 *date time applid* **CICS** *command* **PROGRAM** *program* **FAILED. RESP** *eibresp* **RCODE** *eibrcode*

Explanation: Transaction CAFF or CAFB received an invalid response when issuing the EXEC CICS command *command* for Detector user exit program *program*.

System Action: The transaction is terminated with abend code AUZF and the Detector is stopped.

User Response: For further details of the exception *eibresp* see the command *command* in the *CICS System Programming Reference* manual.

For further guidance on how to deal with system problems, see the *CICS Problem Determination Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1, CAUCAFF3, CAUCAFF4, CAUCAFF5, CAUCAFF6, CAUCAFB1

DFHAU2210 *date time applid* **CAUTABM CREATE DATASPACE FAILED. REASON** *reason_code* **ERROR** *error_code*

Explanation: Transaction CAFF received an invalid response when issuing a call to the table manager (CAUTABM) to create the MVS dataspace when starting the Detector.

System Action: The transaction is terminated with abend code AUZH and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code.

If it is AUTM_DSPSERV_CREATE_ERROR, *error_code* is the value of GPR 0 after the MVS DSPSERV CREATE call.

If it is AUTM_ALESERV_ADD_ERROR, *error_code* is the value of GPR 15 after the MVS ALESERV ADD call.

Use the appropriate MVS manual to find out the meaning of the error code.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF3

DFHAU2211 *date time applid* **CAUTABM CREATE TABLE FAILED. REASON** *reason_code* **TABLE** *table_number*

Explanation: Transaction CAFF received an invalid response when issuing a create table call to the table manager (CAUTABM) for table *table_number*.

System Action: The transaction is terminated with abend code AUZI and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF3, CAUCAFF6

DFHAU2212 *date time applid* **CAUTABM ADD ELEMENT FAILED. REASON** *reason_code* **TABLE** *table_number*

Explanation: Transaction CAFF received an invalid response when issuing an add element call to the table manager (CAUTABM) for table *table_number*.

System Action: The transaction is terminated with abend code AUZJ and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code and table number.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF3

DFHAU2214 *date time applid* **DETECTOR STATE CHANGED TO** *state***.**

Explanation: Transaction CAFF has changed the Detector state to *state*.

System Action: The state of the Detector is now *state*.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1, CAUCAFF3, CAUCAFF4, CAUCAFF5, CAUCAFF6

DFHAU2216 *date time applid* **CAUTABM DESTROY POOL FAILED. REASON** *reason_code* **ERROR** *error_code*

Explanation: Transaction CAFF received an invalid response when issuing a call to the table manager (CAUTABM) to destroy the MVS dataspace when stopping the Detector.

System Action: The transaction is terminated with abend code AUZN and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code.

If it is AUTM_DSPSERV_DELETE_ERROR, the error code is the value of GPR 0 after the MVS DSPSERV DELETE call.

If it is AUTM_ALESERV_DELETE_ERROR, the error code is the value of GPR 15 after the MVS ALESERV DELETE call.

Use the appropriate MVS manual to find out the meaning of the error code.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF4

DFHAU2217 *date time applid* **CAUTABM DESTROY TABLE FAILED. REASON** *reason_code* **TABLE** *table_number*

Explanation: Transaction CAFF received an invalid response when issuing a destroy table call to the table manager (CAUTABM) for table *table_number*.

System Action: The transaction is terminated with abend code AUZO and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code and table number.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF6

DFHAU2218 *date time applid* **CAFF HAS ABENDED** *abcode* **IN PROGRAM** *program***.**

Explanation: This message is issued by the Transaction Affinities Utility. The HANDLE ABEND exit program of Detector transaction CAFF has been driven to handle transaction abend *abcode* that occurred within CAFF. The failing program is *program*.

System Action: The transaction is terminated with a transaction dump, with a dumpcode of *abcode*, and the Detector is stopped.

User Response: See the description of abend *abcode* for guidance.

Note: This message cannot be changed with the message editing utility.

Destination: Console and Transient Data Queue CAFF

Module: CAUCAFFE

DFHAU2220 *date time applid* **CAUCAFP CREATE CPOOL FAILED. REASON** *reason_code*

Explanation: Transaction CAFF received an invalid response when issuing a call to the CAFB request queue manager (CAUCAFP) to create its storage in the MVS CPOOL.

System Action: The transaction is terminated with abend code AUZQ and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code. Ensure that there is sufficient storage in your system for at least 4KB of MVS CPOOL.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF3

DFHAU2221 *date time applid* **CAUCAFP CALL FAILED. FUNCTION** *function_code* **REASON** *reason_code*

Explanation: Transaction CAFF or CAFB received an invalid response when issuing a call to the CAFB request queue manager (CAUCAFP) to perform function *function_code*.

System Action: The transaction is terminated with abend code AUZR and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code and function code.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF4, CAUCAFF5, CAUCAFB1

DFHAU2222 *date time applid* **CAUCAFP DESTROY CPOOL FAILED. REASON** *reason_code*

Explanation: Transaction CAFF received an invalid response when issuing a call to the CAFB request queue manager (CAUCAFP) to destroy its MVS CPOOL storage.

System Action: The transaction is terminated with abend code AUZS and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF4

DFHAU2224 *date time applid* **ERROR CALCULATING SPACE UTILIZATION.**

Explanation: An error occurred during the calculation of the percentage of the dataspace currently occupied by affinity data.

System Action: The transaction is terminated with abend code AUZU and the Detector is stopped.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1

DFHAU2225 *date time applid* **UNSUPPORTED TYPE OF CAFF TASK INITIATION.**

Explanation: Transaction CAFF has been initiated in a way which is not allowed. The only valid ways to initiate CAFF are:

- From a terminal
- From a console
- By issuing an EXEC CICS START TRANSID('CAFF') command from another task.

System Action: The transaction is terminated with abend code AUZV and the Detector is stopped.

User Response: Use one of the methods above to initiate CAFF.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1

DFHAU2226 *date time applid* **INCORRECT CAFF ACTION.**

Explanation: Transaction CAFF received an incorrect value for *action* when it was started by another task using the EXEC CICS START TRANSID('CAFF') FROM(*action*) command, or started from a terminal by entering CAFF *action*. The only acceptable actions are:

- START
- STOP
- PAUSE
- CONTINUE

System Action: The CAFF transaction is terminated.

User Response: Restart CAFF using a valid action.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF and Terminal End User

Module: CAUCAFF1

DFHAU2227 *date time applid* **NONTERMINAL CAFF TASK INITIATING.**

Explanation: Transaction CAFF has been initiated as a background nonterminal task.

System Action: CAFF runs in the background.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1

DFHAU2228 *date time applid* **CAUTABM REPLACE ELEMENT FAILED. REASON** *reason_code* **TABLE** *table_number*

Explanation: Transaction CAFF or CAFB received an invalid response when issuing a call to the table manager (CAUTABM) to replace a table element for table *table_number*.

System Action: The transaction is terminated with abend code AUZY and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code and table number.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF3, CAUCAFB2

DFHAU2229 *date time applid* **UT/TT TABLE UPDATE FAILED. FUNCTION** *function_code* **REASON** *reason_code* **TABLE** *table_number*

Explanation: Transaction CAFF received an invalid response when issuing a call to the table manager (CAUTABM) to update either the userid table (UT) or the termid table (TT).

System Action: The transaction is terminated with abend code AUZZ and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code, table number and function code.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF3, CAUCAFF6

DFHAU2230 *date time applid* **VSAM AFFINITY FILE** *filename* **HEADER READ FAILED. RESP** *eibresp* **RESP2** *eibresp2*

Explanation: Transaction CAFF received an invalid response when issuing an EXEC CICS READ command for the header record on VSAM affinity data file *filename*, when the Detector was starting with the restore data option set to Y. Either an incorrect file has been allocated for the affinity data file *filename* or the file is empty.

System Action: The transaction is terminated with abend code AUZ1 and the Detector is stopped.

User Response: Check that the correct file is allocated, and that the Detector has previously been started with the same files.

The first time the Detector is started, the CAFF restore data option must be N. If the restore data option is initially set to Y, CAFF is abnormally terminated with this message because initially the VSAM affinity data files are empty. The affinity file header records are added by CAFF after the Detector has been started for the first time.

For further details of the exceptions *eibresp* and *eibresp2* refer to the READ command in the *CICS Application Programming Reference* manual.

For further guidance on how to deal with system problems, see the *CICS Problem Determination Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF3

DFHAU2231 *date time applid* **NUMBER OF RECORDS RESTORED IS** *count***.**

Explanation: The Detector has been started with the restore option set to Y. This message gives the number of affinity records that were restored from the VSAM affinity data files to the MVS dataspace.

System Action: The Detector is now RUNNING.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF3

DFHAU2233 *date time applid* **CAUCAFDT CALL FAILED. REASON** *reason_code***.**

Explanation: The Transaction Affinities Utility date formatter program (CAUCAFDT) was unable to format the packed Julian date passed to it by its caller.

System Action: Question marks are used for the date instead.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF1

DFHAU2234 *date time applid* **CAFF FAILED TO OBTAIN THE TRACE TABLE.**

Explanation: An error occurred while attempting to obtain the affinities utility internal trace table.

System Action: The transaction is terminated with abend code AUZK and the Detector is stopped.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF3

DFHAU2235 *date time applid* **CAFF FAILED TO RELEASE THE TRACE TABLE.**

Explanation: An error occurred while attempting to release the affinities utility internal trace table.

System Action: The transaction is terminated with abend code AUZL and the Detector is stopped.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF4

DFHAU3301 *date time applid* **CAFB TASK INITIATING.**

Explanation: Transaction CAFB has been initiated by CAFF. CAFB saves affinity data from the dataspace to the affinity data files.

System Action: The Detector continues running.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB1

DFHAU3302 *date time applid* **CAFB RECEIVED AN INVALID REQUEST.**

Explanation: Transaction CAFB has received an invalid request to perform one of its functions from another component of the Detector (CAFF or a Detector exit program).

System Action: The transaction is terminated with abend code AUYA and the detector is stopped.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB1

DFHAU3303 *date time applid* **CAFB HAS ABENDED** *abcode* **IN PROGRAM** *program***.**

Explanation: This message is issued by the Transaction Affinities Utility. The HANDLE ABEND exit program of Detector transaction CAFB has been driven to handle transaction abend *abcode* that occurred within CAFB. The failing program is *program*.

System Action: The transaction is terminated with a transaction dump, with a dumpcode of *abcode*, and the Detector is stopped.

User Response: See the description of abend *abcode* for guidance.

Note: This message cannot be changed with the message editing utility.

Destination: Console and Transient Data Queue CAFF

Module: CAUCAFBE

DFHAU3304 *date time applid* **CAFB ABENDING. SYSTEM ERROR ELSEWHERE IN DETECTOR.**

Explanation: Transaction CAFB received a request to abend from another component of the Detector. The request was sent because of an error encountered elsewhere, either in CAFF or a Detector exit program.

System Action: The transaction is terminated with abend code AUYC and the Detector is stopped.

User Response: Refer to any earlier messages on the CAFF transient data queue for the cause of the error.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB1

DFHAU3305 *date time applid* **CAFB SAVE STARTED BECAUSE OF** *{STOP | TIME | TRIGGER | PAUSE}***.**

Explanation: Transaction CAFB is starting a scan of the affinity tables in the dataspace to write any data changed since the previous save to the affinity data files. The save was started for one of the following reasons:

STOP Detector stopped

TIME Save interval reached

TRIGGER Activity count reached

PAUSE Detector paused.

Note that the latter three reasons can only occur when the CAFF perform periodic saves option is set to Y.

System Action: CAFB saves changed data elements from the dataspace to the affinity data files.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB2

DFHAU3306 *date time applid* **CAFB SAVE ENDED.** *count* **RECORDS SAVED.**

Explanation: Transaction CAFB has finished the scan of the affinity tables in the dataspace and wrote *count* records to the affinity data files.

System Action: The number of records given by *count* were saved to the affinity data files.

User Response: If the CAFF perform periodic saves option is set to Y and *count* has been consistently near zero for the past few saves, this may indicate that the Detector has detected all the affinities it can and may be stopped.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB2

DFHAU3307 *date time applid* **CAFB TERMINATED. THE DETECTOR IS STOPPING.**

Explanation: Transaction CAFB received a request from CAFF to terminate because the Detector is stopping.

System Action: The transaction is terminated and the Detector is stopped.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB1

DFHAU3308 *date time applid* **MESSAGE RECEIVED FROM PROGRAM** *program***.**

Explanation: Transaction CAFB received a message from program *program* to write to the CAFF transient data queue.

System Action: The associated message is written to CAFF. This is the only mechanism available to the Detector exit programs when they wish to issue a message.

User Response: See the following message on the CAFF transient data queue.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB1

DFHAU3310 *date time applid* **INVALID FILE NUMBER FOR TABLE IN GWA.**

Explanation: Transaction CAFB found an incorrect value (the affinity file number) in an internal array in the Detector global work area (GWA). This implies that the GWA has been corrupted.

System Action: The transaction is terminated with abend code AUYE and the Detector is stopped.

User Response: Determine the cause of the corruption. It could be due to an application accidentally overwriting the GWA.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB2, CAUCAFF3

DFHAU3311 *date time applid* **TRANSACTION CAFB MUST BE INITIATED BY TRANSACTION CAFF.**

Explanation: Transaction CAFB has been initiated incorrectly, that is it was not initiated by CAFF. Its CICS startcode indicates something other than EXEC CICS START with no data.

System Action: The transaction is terminated with abend code AUYF and the Detector is stopped.

User Response: The CAFB transaction can only be started by the Detector control transaction CAFF.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB1

DFHAU3312 *date time applid* **CAFB ABENDING. CICS IS TERMINATING.**

Explanation: Transaction CAFB found that CICS entered the quiesce state before shutdown and the Detector was still RUNNING.

System Action: The transaction is terminated with abend code AUYG and the Detector is stopped.

User Response: None. To avoid this, always stop the Detector before shutting down CICS. The CAFF STOP action can be submitted from a CICS shutdown PLT program, using an EXEC CICS START command.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB1

DFHAU3313 *date time applid* **INVALID ADDRESS FOR** *program* **IN THE GWA.**

Explanation: Transaction CAFF or CAFB found that the address of Detector program *program* in the global work area (GWA) was a null value. This implies that the GWA has been corrupted.

System Action: The transaction is terminated with abend code AUYH and the Detector is stopped.

User Response: Attempt to determine the cause of the corruption. It could be due to an application accidentally overwriting the GWA.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF4, CAUCAFF5, CAUCAFB1

DFHAU3314 *date time applid* **CAUTABM CALL FAILED. FUNCTION** *function_code* **REASON** *reason_code* **TABLE** *table_number*

Explanation: Transaction CAFF or CAFB received an invalid response when issuing a call to the table manager (CAUTABM) to access a table element for table *table_number*.

System Action: The transaction is terminated with abend code AUYI and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code, table number, and function code.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB2, CAUCAFF6

DFHAU3315 *date time applid* **FILE** *filename* **IS FULL.**

Explanation: Transaction CAFB received a NOSPACE response when issuing EXEC CICS WRITE for VSAM affinity file *filename*. The file is full.

System Action: The transaction is terminated with abend code AUYJ and the Detector is stopped.

User Response: Allocate more space to the file and rerun the Detector. For guidance on how much space to allocate, see the *CICS Transaction Affinities Utility Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB2

DFHAU4100 *date time applid* **CAUTABM CALL FAILED. FUNCTION** *function_code* **REASON** *reason_code* **TABLE** *table_number*

Explanation: One of the Detector exit programs received an unexpected response when issuing a call to the table manager (CAUTABM).

Note that the message is issued by transaction CAFB on behalf of the exit program.

System Action: Transaction CAFB is terminated with abend code AUXA and the Detector is stopped.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code, table number, and function code.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFB1

DFHAU4200 *date time applid* **DATASPACE IS FULL.**

Explanation: Transaction CAFF or a Detector exit program received a reason code of AUTM_NO_STORAGE when issuing a call to the table manager (CAUTABM) to either create a new table or add an element to a table. The dataspace is full.

Note that if this situation was encountered by a Detector exit program, the message is issued by transaction CAFB on its behalf.

System Action: Transaction CAFF or CAFB is terminated with abend code AUXB and the Detector is stopped.

User Response: Increase the dataspace size via the CAFF options and rerun the Detector. For guidance on how much space to allocate, see the *CICS Transaction Affinities Utility Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: CAFF

Module: CAUCAFF3, CAUCAFF6, CAUCAFB1

DFHAU5000 FUNCTION CALL *number* **IS INVALID FOR MODULE** *module***.**

Explanation: A module of the Reporter or Builder has been called with an invalid function number. This indicates an internal logic error in the Reporter or Builder.

System Action: The Reporter or Builder is terminated.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREPFM, CAUREPPM, CAUBLD

DFHAU5001 FILE *filename* **DOES NOT CONTAIN A CONTROL RECORD. RUN TERMINATED.**

Explanation: If file *filename* is CAUCNTL, it does not contain the expected control record. If *filename* is CAUAFF1, CAUAFF2 or CAUAFF3, it has not been initialized with a header record or one or more of the files are not affinity data files.

System Action: The Reporter is terminated.

User Response: Check that the correct files are being submitted to the Reporter. If the files are correct, ensure that the Detector has been run at least once. These files are initialized by the Detector the first time it is run.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREP

DFHAU5002 AFFINITY FILES ARE NOT FOR THE SAME CICS APPLID. RUN TERMINATED.

Explanation: One or more of files CAUCNTL, CAUAFF1, CAUAFF2, or CAUAFF3 were not initialized by the same CICS system.

System Action: The Reporter is terminated.

User Response: The most likely cause of this error is one or more incorrect filenames in the JCL that runs the Reporter. Correct the problem and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREP

DFHAU5003 UNABLE TO OPEN FILE *filename***. RC** *return_code* **REASON** *reason_code*

Explanation: The Reporter, Builder, or Scanner has been unable to open *filename*.

System Action: The Reporter, Builder, or Scanner is terminated.

User Response: If the codes are zero, it was a non-VSAM file that failed to open.

Otherwise the *return_code* is as returned by VSAM in GPR 15, and the *reason_code* is the result of a subsequent SHOWCB ACB FIELDS=(ERROR) macro call. Check these in the *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets* to determine the cause of the error.

The most likely cause of this message is missing or incorrect filenames in the JCL that runs the job. Correct the problem and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREPFM, CAULMS

DFHAU5004 GENCB FAILED FOR FILE *filename***. CB** *control_block* **RC** *return_code* **REASON** *reason_code*

Explanation: The generation of a VSAM *control_block* failed for Reporter file *filename*.

System Action: The Reporter is terminated.

User Response: The *return_code* and *reason_code* are returned by VSAM in GPR 15 and GPR 0 respectively. Check the *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets* to determine the cause of the error. Correct the problem and rerun the job. If the problem persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREPFM

DFHAU5005 FILE NUMBER *filenum* **IS INVALID.**

Explanation: The file manager module (CAUREPFM) used by the Reporter and the Builder has been called with an invalid file number *filenum*.

System Action: The Reporter or Builder is terminated.

User Response: Rerun the job. If the problem persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREPFM

DFHAU5006 ATTEMPTING TO *{READ FROM | WRITE TO}* **THE** *{OUTPUT | INPUT}* **FILE** *filename***.**

Explanation: The Reporter or Builder attempted to read from the output file or write to the input file specified by *filename*.

System Action: The Reporter or Builder is terminated.

User Response: Rerun the job. If the problem persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREPFM

DFHAU5007 RPL NUMBER *rplnum* **IS INVALID FOR FILE** *filename***.**

Explanation: The RPL number *rplnum* is invalid for Reporter file *filename*.

System Action: The Reporter is terminated.

User Response: Rerun the job. If the problem persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREPFM

DFHAU5008 TABLE NUMBER *table_number* **IS INVALID.**

Explanation: A request by the Reporter to read a table from the affinity data files was being processed but *table_number* was not valid.

System Action: The Reporter is terminated.

User Response: Rerun the job. If the problem persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREPFM

DFHAU5009 COMMAND *command* **FAILED FOR FILE** *filename***. RPL** *rplnum* **RC** *returncode* **REASON** *reason_code*

Explanation: The VSAM *command* has failed to execute for Reporter file *filename*.

System Action: The Reporter is terminated.

User Response: The *return_code* is as returned by VSAM in GPR 15, and the *reason_code* is the result of a subsequent SHOWCB RPL FIELDS=(FDBK) macro call. Check these in the *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets* If the problem persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREPFM

DFHAU5010 INVALID ATTEMPT TO POSITION A NON-VSAM FILE.

Explanation: The Reporter has attempted file positioning on a non-VSAM file. This indicates a potential internal logic error in the Reporter.

System Action: The Reporter is terminated.

User Response: Rerun the job. If the problem persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREPFM

DFHAU5011 NO TRANSACTION ENTRIES FOR TRANGROUP *trangroup***. REPORT INCOMPLETE.**

Explanation: The Reporter could not find any transaction entries in the affinity data files for transaction group *trangroup*. This means, for example, that a record was found for a named temporary storage queue, but no records were found detailing the transactions that used that queue.

This is probably caused by a Detector abend or a CICS crash occurring in the middle of a Detector save, so the data saved to the affinity files is only partly complete. It could also be caused by incorrect files.

System Action: The Reporter continues.

User Response: Check the validity of the affinity files as far as is possible. For example, check that the correct set of files is being input and that one is not from a different run of the Detector. Determine whether the Detector did abend or if CICS did not terminate normally; this is indicated by message DFHAU5035 appearing at the start of the Reporter output. If message DFHAU5011 occurs frequently, rerun the Detector to produce a more complete set of data.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: CAUREPRM

DFHAU5012 INVALID PARM SPECIFIED. $SUMMARY ASSUMED.

Explanation: When invoking the Scanner, a PARM field has been specified on the EXEC that does not contain valid information.

System Action: The Scanner uses the default PARM of $SUMMARY.

User Response: Correct the PARM information and rerun if required.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAULMS

DFHAU5013 *{GETMAIN | FREEMAIN}* **HAS FAILED. RETURN CODE** *return_code*

Explanation: A Scanner or Builder MVS GETMAIN or MVS FREEMAIN macro has failed to execute successfully.

System Action: The Scanner or Builder is terminated.

User Response: Check the appropriate MVS manual for the meaning of *return_code*, which is the value of GPR 15 after the macro call. Correct the problem and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAULMS, CAUBLD, CAUBLDMR

DFHAU5014 INVALID PARM KEYWORD SPECIFIED. CORRECT AND RERUN.

Explanation: When invoking the Builder, a PARM field has been specified on the EXEC that contains an invalid keyword. The allowable keywords are MATCH, STATE, CONTEXT, and DSPSIZE.

System Action: The Builder is terminated.

User Response: Correct the PARM information and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLD

DFHAU5015 INVALID *{MATCH | STATE | CONTEXT}* **VALUE SPECIFIED. CORRECT AND RERUN.**

Explanation: When invoking the Builder, a PARM field has been specified on the EXEC that contains an invalid value for the keyword given.

Keyword	Allowed values
MATCH	LUNAME and USERID
STATE	ACTIVE and DORMANT
CONTEXT	plexname, one through eight characters

System Action: The Builder is terminated.

User Response: Correct the PARM information and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLD

DFHAU5016 DSPSIZE VALUE IS NOT NUMERIC. CORRECT AND RERUN.

Explanation: When invoking the Builder, a PARM field has been specified on the EXEC that contains an invalid value for keyword DSPSIZE. A character other than a digit in the range 0 through 9 was encountered. The value must be an integer in the range 2 through 2000.

System Action: The Builder is terminated.

User Response: Correct the PARM information and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLD

DFHAU5017 DSPSIZE IS INVALID. IT MUST BE BETWEEN 2 AND 2000.

Explanation: When invoking the Builder, a PARM field has been specified on the EXEC that contains an invalid value for keyword DSPSIZE. The value must be an integer in the range 2 through 2000.

System Action: The Builder is terminated.

User Response: Correct the PARM information and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLD

DFHAU5018 LOAD OF CAUTABM HAS FAILED. AC *abcode* **RC** *reason_code*

Explanation: The Builder attempted to load the table manager module (CAUTABM) but the MVS LOAD macro failed. The *abcode* is returned in GPR 1 and is the abend code that would have resulted had the task abended. The *reason_code* is returned in GPR 15 and is the reason code associated with the abend.

System Action: The Builder is terminated.

User Response: The MVS *abcode* and *reason_code* should indicate the cause of the error. Correct the problem and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLD

DFHAU5019 DATASPACE IS TOO LARGE. NO STORAGE AVAILABLE.

Explanation: The Builder received a response from the table manager (CAUTABM) reporting that it was unable to obtain the amount of storage requested for the MVS dataspace because the MVS real storage manager does not have enough resources.

System Action: The Builder is terminated.

User Response: Decrease the dataspace size specified on the PARM field of the EXEC statement in the job, and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLD

DFHAU5020 DATASPACE IS TOO LARGE. IEFUSI LIMIT REACHED.

Explanation: The Builder received a response from the table manager (CAUTABM) that it was unable to obtain the amount of storage requested for the MVS dataspace, because MVS exit IEFUSI has imposed a limit on address space size.

System Action: The Builder is terminated.

User Response: Either decrease the dataspace size specified on the PARM field of the EXEC statement in the job, or ask your MVS system programmer to increase the IEFUSI limit. Rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLD

DFHAU5021 CAUTABM CREATE DATASPACE FAILED. REASON *reason_code* **ERROR** *error_code*

Explanation: The Builder received an invalid response when issuing a call to the table manager (CAUTABM) to create the MVS dataspace.

System Action: The Builder is terminated.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code.

If it is AUTM_DSPSERV_CREATE_ERROR, *error_code* is the value of GPR 0 after the MVS DSPSERV CREATE call.

If it is AUTM_ALESERV_ADD_ERROR, *error_code* is the value of GPR 15 after the MVS ALESERV ADD call. Use the appropriate MVS manual to find out the meaning of the error code.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLD

DFHAU5022 CAUTABM CREATE TABLE FAILED. REASON *reason_code* **TABLE** *table_number*

Explanation: The Builder received an invalid response when issuing a create table call to the table manager (CAUTABM) for table *table_number*.

System Action: The Builder is terminated.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code and the table number.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLD

DFHAU5023 KEYWORD *keyword* **IS INVALID OR UNEXPECTED.**

Explanation: When reading statements from its REPGRPS input stream, the Builder encountered a keyword it did not recognize, or a keyword that occurred in an unexpected place.

System Action: The Builder skips to the next input statement and continues, but terminates when the end of the input is encountered.

User Response: Refer to the *CICS Transaction Affinities Utility Guide* to correct the statement, and rerun the job. A likely cause of this message is the omission of the terminating semicolon from the preceding statement.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDIN

DFHAU5024 KEYWORD *keyword* **IS MISSING.**

Explanation: When reading statements from its REPGRPS input stream, the Builder encountered a statement in which the required keyword *keyword* was missing.

System Action: The Builder skips to the next input statement and continues, but terminates when the end of the input is encountered.

User Response: Refer to the *CICS Transaction Affinities Utility Guide* to correct the statement, and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDIN

DFHAU5025 A VALUE OF *value* **IS INVALID FOR KEYWORD** *keyword***.**

Explanation: When reading statements from its REPGRPS input stream, the Builder encountered an invalid value for keyword *keyword*.

System Action: The Builder skips to the next keyword and continues, but terminates when the end of the input is encountered.

User Response: Refer to the *CICS Transaction Affinities Utility Guide* to correct the statement, and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDIN

DFHAU5026 INVALID CREATE TYPE.

Explanation: When reading statements from its REPGRPS input stream, the Builder encountered a CREATE statement. The only keywords that are allowed to follow immediately after the CREATE keyword are TRANGRP and DTRINGRP.

System Action: The Builder skips to the next input statement and continues, but will terminate when the end of the input is encountered.

User Response: Refer to the *CICS Transaction Affinities Utility Guide* to correct the statement, and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDIN

DFHAU5027 INCORRECT NUMBER OF BRACKETS.

Explanation: When reading statements from its REPGRPS input stream the Builder encountered a keyword for which a corresponding value was expected. This value is invalid because it:

- Does not start with a bracket
- Does not end with a bracket
- Contains a bracket in the middle
- Spans input lines.

System Action: The Builder skips to the next input statement and continues, but terminates when the end of the input is encountered.

User Response: Refer to the *CICS Transaction Affinities Utility Guide* to correct the statement, and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDIN

DFHAU5028 MISSING SEMICOLON.

Explanation: When reading statements from its REPGRPS input stream the Builder encountered the end of the input in the middle of a statement, implying that a terminating semicolon is missing from the last statement.

System Action: The Builder is terminated.

User Response: Refer to the *CICS Transaction Affinities Utility Guide* to correct the statement, and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDIN

DFHAU5029 KEYWORD *keyword* **IS DUPLICATED.**

Explanation: When reading statements from its REPGRPS input stream the Builder encountered a keyword that occurred more than once in the same statement. Duplicate keywords are not allowed.

System Action: The Builder continues, but terminates when the end of the input is encountered.

User Response: Refer to the *CICS Transaction Affinities Utility Guide* to correct the statement, and rerun the job. the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDIN

DFHAU5030 NO VALID STATEMENTS IN REPGRPS. PROCESSING TERMINATED.

Explanation: When reading statements from its REPGRPS input stream the Builder did not find a single complete statement.

System Action: The Builder is terminated.

User Response: The most likely cause of this message is an empty input file. Correct the problem and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLDMR

DFHAU5031 CAUTABM ERROR *function* **ELEMENT. TABLE** *table_number* **REASON** *reason_code* **MODULE** *progname*

Explanation: Builder module *progname* received an unexpected response when issuing a call to the table manager (CAUTABM).

System Action: The Builder is terminated.

User Response: The *function* is the operation being performed. See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code and the table number.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLDMR, CAUBLDOT

DFHAU5032 NO HEADER RECORD FOUND. STATEMENT IGNORED.

Explanation: When reading statements from its REPGRPS input stream, the Builder encountered a CREATE statement. However, no HEADER statement had been encountered first. The HEADER statement is mandatory and must be the first statement in each data set in the REPGRPS concatenation.

System Action: The Builder skips to the next input statement and continues, but terminates when the end of the input is encountered.

User Response: Ensure that each data set in the REPGRPS concatenation has a HEADER statement as the first statement in the data set. Correct the problem and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDMR

DFHAU5033 DUPLICATE TRANGRP NAME.

Explanation: When reading statements from its REPGRPS input stream, the Builder encountered a CREATE TRANGRP statement. However, the trangroup name supplied in the statement is not unique within the current input data set. Duplicate trangroup names are not allowed.

System Action: The Builder skips to the next input statement and continues, but terminates when the end of the input is encountered.

User Response: Ensure that each CREATE TRANGRP statement within the data set specifies a unique trangroup name. If this is already the case, the probable cause of this message is that the HEADER statement is missing from the data set. Correct the problem and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDMR

DFHAU5034 TRANGRP DOES NOT ALREADY EXIST.

Explanation: When reading statements from its REPGRPS input stream, the Builder encountered a CREATE DTRINGRP statement. However, no corresponding valid CREATE TRANGRP statement for the trangroup in question was encountered.

System Action: The Builder skips to the next input statement and continues, but terminates when the end of the input is encountered.

User Response: Either the CREATE TRANGRP statement was missing or was in error. Correct the problem and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDMR

DFHAU5035 AFFINITY DATA MAY BE INCOMPLETE BECAUSE OF *{DETECTOR | UNKNOWN}* **ABEND.**

Explanation: The control record on affinity control file CAUCNTL indicates that the Detector did not stop cleanly, for the reason given.

DETECTOR The Detector abended

UNKNOWN CICS terminated abnormally as a result of either a crash or EXEC CICS PERFORM SHUTDOWN IMMEDIATE

If this occurred during a Detector save, then the data on the affinity files may be incomplete.

System Action: The Reporter continues.

User Response: Incomplete data may be indicated by frequent appearance of message DFHAU5011. If this case, rerun the Detector to produce a more complete set of data.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREP

DFHAU5036 DATASPACE IS FULL.

Explanation: A Builder module received a reason code of AUTM_NO_STORAGE when issuing a call to the table manager (CAUTABM) to add an element to a table. The dataspace is full.

System Action: The Builder is terminated.

User Response: Increase the dataspace size specified on the PARM field of the EXEC statement in the job, and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLDMR

DFHAU5037 NO VALID TRANSIDS IN REPGRPS. PROCESSING TERMINATED.

Explanation: When reading statements from its REPGRPS input stream, the Builder did not find a single valid CREATE DTRINGRP statement.

System Action: The Builder is terminated.

User Response: The most likely cause of this message is an input stream that contains valid CREATE TRANGRP statements, but no CREATE DTRINGRP statements. Correct the problem and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLDMR

DFHAU5038 INVALID AFFLIFE FOR AFFINITY.

Explanation: When reading statements from its REPGRPS input stream, the Builder encountered a CREATE TRANGRP statement. However, the value specified for AFFLIFE is not one of those permitted given the value specified for AFFINITY.

System Action: The Builder skips to the next input statement and continues, but terminates when the end of the input is encountered.

User Response: Refer to *CICS Problem Determination Guide* to correct the statement, and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDMR

DFHAU5039 PARM KEYWORD IS DUPLICATED. CORRECT AND RERUN.

Explanation: When invoking the Builder or Reporter, a PARM field has been specified on the EXEC that contains a duplicate keyword. Duplicate keywords are not allowed.

System Action: The Builder or Reporter is terminated.

User Response: Correct the PARM information and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUBLD

DFHAU5040 INVALID REMOVE TYPE.

Explanation: When reading statements from its REPGRPS input stream, the Builder encountered a REMOVE statement. The only keyword allowed to follow immediately after the REMOVE keyword is TRANGRP.

System Action: The Builder skips to the next input statement and continues, but terminates when the end of the input is encountered.

User Response: Refer to the *CICS Transaction Affinities Utility Guide* to correct the statement, and rerun the job. Alternatively, comment out the statement.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: CAUBLDIN

DFHAU5041 CAUCAFDT CALL FAILED. REASON *reason_code***.**

Explanation: The Transaction Affinities Utility date formatter program (CAUCAFDT) was unable to format the packed Julian date passed to it by its caller.

System Action: Question marks are used for the date instead.

User Response: See the *CICS Transaction Affinities Utility Guide* for the meaning of the reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAULMS, CAUREPPM

DFHAU5042 INVALID PARM KEYWORD SPECIFIED. CORRECT AND RERUN.

Explanation: When invoking the Reporter, a PARM field has been specified on the EXEC that contains an invalid keyword. The only allowable keyword is WORSEN.

System Action: The Reporter is terminated.

User Response: Correct the PARM information and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREP

DFHAU5043 INVALID *{WORSEN}* **VALUE SPECIFIED. CORRECT AND RERUN.**

Explanation: When invoking the Reporter, a PARM field has been specified on the EXEC that contains an invalid value for the keyword given.

Keyword	Allowed values
WORSEN	YES and NO

System Action: The Reporter is terminated.

User Response: Correct the PARM information and rerun the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: CAUREP

DFHBAxxxx messages

DFHBA0001 *applid* **An abend (code** *code***) has occurred at offset** *X'offset'* **in module** *module***.**

Explanation: An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the program check or abend indicated that CICS was executing at offset X'*offset*' in module *modname*. This may have been caused by corruption of CICS code or control blocks.

System Action: A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHBAAC, DFHBAAC1, DFHBAAC2, DFHBAAC3, DFHBAAC4, DFHBAAC5, DFHBAAC6, DFHBAAR1, DFHBABR, DFHBACO1, DFHBACR, DFHBADM, DFHBALR1, DFHBALR2, DFHBALR3, DFHBALR4, DFHBALR5, DFHBALR6, DFHBALR7, DFHBALR8, DFHBALR9, DFHBAPR, DFHBAPT1, DFHBASP, DFHBATT, DFHBAUE, DFHBAVP1, DFHBAXM

XMEOUT Parameters: *applid, code, X'offset', module*

DFHBA0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *module***.**

Explanation: The BA domain has received an unexpected error response from some other part of CICS. The operation requested by recovery manager is described by code X'*code*'.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System Action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the cause of the problem as follows:

1. Determine if the problem can be explained by any previous messages issued from some other CICS component.
2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHBAAC, DFHBAAC1, DFHBAAR1, DFHBABR, DFHBACO1, DFHBACR, DFHBADM, DFHBALR1, DFHBAPR, DFHBAPT1, DFHBASP, DFHBATT, DFHBAUE, DFHBAXM

XMEOUT Parameters: *applid, X'code', module*

DFHBA0101 *date time applid* **An error has occurred while writing an auditlog record to log** *logname***. Logging has been suspended.**

Explanation: The BA Write audit record request has failed.

System Action: Normal processing continues with logging of audit records to the specified log suspended.

User Response: Determine if the problem can be explained by any previous messages issued from some other CICS component. If the log is successfully reconnected, audit logging will be resumed, see message DFHBA0102. If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSBA

Module: DFHBAAR2

XMEOUT Parameters: *date, time, applid, logname*

DFHBA0102 *date time applid* **Auditlog writing to log** *logname* **has been successfully resumed.**

Explanation: The BA Write audit record requests has resumed after being suspended.

System Action: Audit logging has resumed.

User Response: None.

Destination: Console and Transient Data Queue CSBA

Module: DFHBAAR2

XMEOUT Parameters: *date, time, applid, logname*

DFHBA0103 *date time applid terminal userid tranid* **processtype definition entry** *processtype* **has been deleted.**

Explanation: This is an audit log message indicating that Processtype entry *processtype* has been deleted using the DISCARD command Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System Action: The system continues normally.

User Response: None.

Destination: CSBA

Module: DFHBATT

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, processtype*

DFHBA0104 *date time applid* **The root activity of process** *processname* **of processtype** *processtype* **has completed status ABENDED, code** *abendcode***. TRANSID(***transid***) USERID(***userid***).**

Explanation: This indicates that the root activity of the process *processname*, of processtype *processtype*, has completed abnormally with abendcode *abendcode*.

- *transid* is the tranid of the activation that completed the activity.
- *userid* is the user identifier of the transaction that completed the activity.

System Action: The root activity is marked complete abended in the BTS repository in the normal way and the system continues normally.

User Response: None.

Destination: CSBA

Module: DFHBAAC

XMEOUT Parameters: *date, time, applid, processname, processtype, abendcode, transid, userid*

DFHBA0201 Module *module* **load of DFHMEBM failed, reason code** *X'rcode'* **system code** *X'scode'***.**

Explanation: The program has failed to load module DFHMEBM.

The message contains the name of the module that detected the error, the reason code and the system code from the failed load.

System Action: The program terminates with return code 12.

User Response: Use the reason code and system code contained in the message to determine the reason for the failed load.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0202 Module *module* **load of** *modname* **failed, reason code** *X'rcode'* **system code** *X'scode'***.**

Explanation: The program has failed to load the language table.

The message contains the name of the module that detected the error, the language table name, the reason code and the system code from the failed load.

System Action: The program terminates with return code 12.

User Response: Use the reason code and system code contained in the message to determine the reason for the failed load.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0203 Error opening SYSPRINT in module *module***.**

Explanation: Error opening SYSPRINT.

The message contains the name of the module with the error.

System Action: The program terminates with return code 12.

User Response: Check if any additional system messages have been issued that may help you to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0204 Module *module* **exec parameter error, missing open bracket at position** *position***(+).**

Explanation: An exec parameter error has been detected.

An open bracket is missing after a keyword. The name of the module that detected the error and the approximate position of the missing bracket are contained in the message.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0205 Module *module* **exec parameter error, missing close bracket at position** *position***(+).**

Explanation: An exec parameter error has been detected.

A close bracket is missing after the keyword field. The message contains the name of the module that detected the error and the approximate position of the missing bracket.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0206 Module *module* **exec parameter error, invalid keyword at position** *position***.**

Explanation: An exec parameter error has been detected.

A invalid keyword has been found. The message contains the module name that detected the error and the position of the invalid keyword.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0207 Module *module* **exec parameter error, invalid translate field at position** *position***.**

Explanation: An exec parameter error has been detected.

An invalid translate keyword field has been located. The message contains the name of the module that detected the error and the position of the invalid keyword field.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0208 Module *module* **exec parameter error, duplicate translate keyword at position** *position***.**

Explanation: An exec parameter error has been detected.

A duplicate translate keyword has been found. The message contains the name of the module that detected the error and the position of the duplicate translate keyword.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0209 Module *module* **exec parameter error, invalid pagesize field at position** *position***.**

Explanation: An exec parameter error has been detected.

An invalid pagesize field has been found. The message contains the name of the module that detected the error and the position of the invalid field.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0210 Module *module* **exec parameter error, duplicate pagesize keyword at position** *position***.**

Explanation: An exec parameter error has been detected.

A duplicate pagesize keyword has been found. The message contains the name of the module that detected the error and the position of the duplicate keyword.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0211 Module *module* **exec parameter error, invalid NATLANG field at position** *position***.**

Explanation: An exec parameter error has been detected.

An invalid natlang field has been found. The message contains the name of the module that detected the error and the position of the invalid field.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0212 Module *module* **exec parameter error, duplicate NATLANG keyword at position** *position***.**

Explanation: An exec parameter error has been deetcted.

A duplicate natlang keyword has been found. The message contains the name of the module that detected the error and the position of the duplicate keyword.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0213 Open of SYSIN failed in module *module*.

Explanation: An open of SYSIN failed.

The message contains the name of the module that detected the error.

System Action: The program terminates with return code 12.

User Response: Check if any additional system messages have been issued that may help you to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Modules: DFHATUP DFHBARUP

DFHBA0214 Module *module* invalid keyword at position *position*.

Explanation: A SYSIN parameter error has been detected.

A invalid keyword has been found. The message contains the name of the module that detected the error and the position of the invalid keyword.

System Action: The program terminates with return code 12 after all the SYSIN parameters have been processed.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Modules: DFHATUP DFHBARUP

DFHBA0215 Module *module* invalid keyword field length at position *position*.

Explanation: A sysin parameter error has been detected.

An invalid keyword field length has been detected. The message contains the name of the module that detected the error and the position of the invalid field.

System Action: The program terminates with return code 12 after all the sysin parameters have been processed.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Modules: DFHATUP DFHBARUP

DFHBA0216 Module *module* invalid keyword field at position *position*.

Explanation: A sysin parameter error has been detected.

An invalid keyword field has been found. The message contains the name of the module that detected the error and the position of the invalid keyword.

System Action: The program terminates with return code 12 after all the sysin parameters have been processed.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Modules: DFHATUP DFHBARUP

DFHBA0217 Module *module* unexpected keyword at position *position*.

Explanation: A sysin parameter error has been detected.

An unexpected keyword has been found. The message contains the name of the module that detected the error and the position of the unexpected keyword.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Modules: DFHATUP DFHBARUP

DFHBA0218 Module *module* duplicate auditlog keyword at position *position*.

Explanation: A sysin parameter error has been detected.

A duplicate auditlog keyword has been found. The message contains the name of the module that detected the error and the position of the duplicate keyword.

System Action: The program terminates with return code 12 after all the sysin parameters have been processed.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Modules: DFHATUP DFHBARUP

DFHBA0219 Module *module* continuation not allowed.

Explanation: A sysin parameter error has been detected.

A parameter card contains an invalid continuation character. The message contains the name of the module that detected the error.

System Action: The program terminates with return code 12 after all the sysin parameters have been processed.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Modules: DFHATUP DFHBARUP

DFHBA0220 Module *module* unexpected end of file.

Explanation: A sysin parameter error has been detected.

The last sysin card read before end of file was reached has a continuation indicator. The message contains the name of the module that detected the error.

System Action: The program terminates with return code 12.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Modules: DFHATUP DFHBARUP

DFHBA0221 Error opening *file* **in module** *module***.**

Explanation: An open of the auditlog has failed.

The message contains the name of the module that detected the error and the name of auditlog data set.

System Action: The program terminates with return code 12.

User Response: Check if any additional system messages have been issued that may help you to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Module: DFHATUP

DFHBA0222 Module *module* **terminated because of errors, check SYSPRINT for details.**

Explanation: The program has detected errors that have caused it to terminate.

Additional error messages have been output to SYSPRINT.

System Action: The program terminates with return code 12.

User Response: Use the additional messages output to SYSPRINT to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0223 Module *module* **terminated because of errors, check previous console messages for details.**

Explanation: The program has detected errors that have caused it to terminate.

Additional error message will have been issued at the console.

System Action: The program terminates with return code 12.

User Response: Use the additional messages issued at the console to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0224 Gencb failed in module *module***. R15 =** *X'r15val'* **R0 =** *X'r0val'***.**

Explanation: A Vsam gencb macro call has failed.

The message contains the name of the module that issued the failed gencb and the register 15 and 0 values at the time of the error. At the time of the error register 15 contains the return code and register 0 contains the reason code. The reason code is only valid if the return code is 4.

System Action: The program terminates with return code 12.

User Response: Use the return code and reason code values to determine the cause of the problem.

Check if any additional system messages have been issued that may help you to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Module: DFHBARUP

DFHBA0225 Modcb failed in module *module***. R15 =** *X'r15val'* **R0 =** *X'r0val'***.**

Explanation: A Vsam modcb macro call has failed.

The message contains the name of the module that issued the failed modcb and the register 15 and 0 values at the time of the error. At the time of the error register 15 contains the return code and register 0 contains the reason code. The reason code is only valid if the return code value is 4.

System Action: The program terminates with return code 12.

User Response: Use the return code and reason code values to determine the cause of the problem.

Check if any additional system messages have been issued that may help you to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Module: DFHBARUP

DFHBA0226 Showcb failed in module *module***. R15 =** *X'r15val'* **R0 =** *X'r0val'***.**

Explanation: A Vsam showcb macro call has failed.

The message contains the name of the module that issued the failed showcb and the register 15 and 0 values at the time of the error. At the time of the error register 15 contains the return code and register 0 contains the reason code. The reason code is only valid if the return code value is 4.

System Action: The program terminates with return code 12.

User Response: Use the return code and reason code values to determine the cause of the problem.

Check if any additional system messages have been issued that may help you to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Module: DFHBARUP

DFHBA0227 Error opening *file* **in module** *module***. R15 =** *X'r15val'* **reason code =** *X'reasval'***.**

Explanation: A Vsam open macro call has failed.

The message contains the name of the data set being opened, the name of the module issuing the open, the register 15 and reason code values at the time of the error. At the time of the error register 15 contains the return code.

System Action: If the register 15 value is 4 the program continues. If the register 15 value is 8 or greater the program terminates with return code 12.

User Response: Use the return code and reason code values to determine the cause of the problem.

Check if any additional system messages have been issued that may help you to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Module: DFHBARUP

DFHBA0228 Error closing *file* **in module** *module***. R15 =** *X'r15val'* **reason code =** *X'reasval'***.**

Explanation: A Vsam close macro call has failed.

The message contains the name of the data set being closed, the name of the module issuing the close, the register 15 and reason code values at the time of the error. At the time of the error register 15 contains the return code.

System Action: The program continues. This may indicate a problem with the repository data set.

User Response: Use the return code and reason code values to determine the cause of the problem.

Check if any additional system messages have been issued that may help you to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Module: DFHBARUP

DFHBA0229 Get for *file* **failed in module** *module***. R15 =** *X'r15val'* **reason code =** *X'reasval'***.**

Explanation: A Vsam get macro call has failed.

The message contains the name of the data set that the get is being issued against, the name of the module issuing the get, the register 15 and reason code values at the time of the error. At the time of the error register 15 contains the return code.

System Action: The program terminates with return code 12.

User Response: Use the return code and reason code values to determine the cause of the problem.

Check if any additional system messages have been issued that may help you to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Module: DFHBARUP

DFHBA0230 Point for *file* **failed in module** *module***. R15 =** *X'r15val'* **reason code =** *X'reasval'***.**

Explanation: A Vsam point macro call has failed.

The message contains the name of the data set that the point failed on, the name of the module issuing the point, the register 15 and reason code values at the time of the error. At the time of the error register 15 contains the return code.

System Action: The program terminates with return code 12.

User Response: Use the return code and reason code values to determine the cause of the problem.

Check if any additional system messages have been issued that may help you to determine the cause of the problem.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Module: DFHBARUP

DFHBA0231 The set of records associated with the activity or process being read are not complete.

Explanation: The set of process or activity records being read is incomplete.

System Action: The program continues processing with the next process or activity.

User Response: If the repository file is being accessed by a CICS region while the DFHBARUP job is running the CICS region or regions have deleted the set of records being processed by DFHBARUP.

If this is not the case then further investigation will be required.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Module: DFHBARUP

DFHBA0232 No records selected by module *module***.**

Explanation: No records have been selected for printing.

The message contains the name of the module involved.

System Action: The program completes with return code 0.

User Response: Check that the selection parameters are correct and the correct file is being processed.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0233 Module *module* **has completed processing.**

Explanation: Processing has completed.

The message contains the name of the module involved.

System Action: The program completes with return code 0.

User Response: None

Destination: Console

Modules: DFHATUP DFHBARUP

DFHBA0234 Module *module* **has a duplicate repository keyword at position** *position***.**

Explanation: A sysin parameter error has been detected.

A duplicate repository keyword has been found. The message contains the name of the module that detected the error and the position of the duplicate keyword.

System Action: The program terminates with return code 12 after all the sysin parameters have been processed.

User Response: Correct the error and submit the job again.

If the problem cannot be determined and corrected, you will need further assistance from IBM.

Destination: SYSPRINT

Module: DFHBARUP

DFHBRxxxx Bridging to 3270 Transactions messages

DFHBR0201 *date time applid* **Transaction** *tranid* **abend** *abcode* **in bridge exit** *brexit* **bridge transaction** *bridge*

Explanation: The Bridge exit *brexit* terminated abnormally with abend code *abcode*.

abcode is either a CICS transaction abend code or a user abend code generated by a CICS ABEND ABCODE(*abcode*) command. This command is issued either by a user program or by an IBM program (for example, a programming language library module).

Unless the abend occurred whilst the bridge exit was processing the termination or abend call, this abend will also result in CICS issuing a ABRQ abend. In this case a DFHAC2236 abend message will follow this message. See that message for details about recoverable resources.

System Action: Abend ABRQ will be issued unless the transaction is calling the bridge exit for termination or abend processing.

User Response: Use the abend code *abcode* to diagnose the problem. If the abend is issued by an IBM program product other than CICS, the code is documented in the library of that other product.

Alternatively, there might be a logic error in the bridge exit program *brexit*. For programming information about coding bridge exit programs see the *CICS Customization Guide*.

Destination: CSMT

Modules: DFHBRIC, DFHBRMS, DFHBRSP, DFHBRTC, DFHBRXM, DFHBRRM

XMEOUT Parameters: *date, time, applid, tranid, abcode, brexit, bridge*

DFHCAxxxx messages

DFHCA5100 S *date time applid netname tranid* **Severe error in module** *modname***. Abend code:** *abcode*

Explanation: An internal error has occurred in module *modname*, when invoked by a CSD utility command.

System Action: Processing terminates abnormally with an operating system dump and abend code *abcode*.

The CSD utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

User Response: See the description of abend code *abcode* for guidance.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, modname, abcode*

DFHCA5101 I *date time applid netname tranid command* **command executed successfully.**

Explanation: The execution of a CSD utility command *command* completed successfully.

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, command*

DFHCA5102 I *date time applid netname tranid* **Warning message(s) issued while processing** *command* **command.**

Explanation: The CSD utility issued messages during syntax-checking and execution of the *command* command.

System Action: Normal utility processing continues to the end of the job.

User Response: Review the warning messages to see how they have affected utility processing. Then decide whether you need to submit a further CSD utility job.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, command*

DFHCA5103 I *date time applid netname tranid* **Error(s) occurred while processing** *command* **command.**

Explanation: The CSD utility either found a syntax error in the utility command *command*, or the command *command* failed to execute correctly.

System Action: Utility command execution is terminated.

If commands are being read from a SYSIN data stream by the utility, subsequent commands (except LIST) are checked for syntax only. (If the primary CSD file cannot be opened, LIST is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: If the command failed because of syntax errors, correct the command.

If the command failed to execute correctly, this may have been caused by a previous error. In this case, an associated error message, such as DFHCA5275, should have been issued. Refer to these error messages for further guidance.

Correct all errors before trying to open the CSD file again.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, command*

DFHCA5104 W *date time applid netname tranid* **Subsequent commands (except LIST) are not executed because of error(s) above.**

Explanation: After the CSD utility program encounters an error, it ceases to execute any further commands read from a data stream (as opposed to supplied by a put-message exit routine). However, it continues to check the syntax of subsequent commands. The exception is the LIST command, which is still executed if the primary CSD file can be opened.

System Action: Subsequent CSD utility commands (except LIST) are ignored.

User Response: Check for a syntax error in the commands used, and correct it.

There should be associated error messages which identify the problem that caused DFHCSDUP to halt active processing. These messages should appear in the DFHCSDUP output before message DFHCA5104 is issued.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5105 W *date time applid netname tranid command* **command not executed because of previous error(s).**

Explanation: If a syntax error (or an execution error) occurred in a command read from a data stream and processed earlier, no further commands (except for LIST commands) are executed. If the primary CSD file could not be opened, the LIST command is not executed either.

System Action: The CSD utility command is not executed.

User Response: Check for syntax errors or execution errors in commands processed earlier.

Correct the invalid commands.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, command*

DFHCA5107 I *date time applid netname tranid* **Commands executed successfully:** *ns* **Commands giving warning(s):** *nw* **Commands in error:** *ne*

Explanation: The CSD utility has completed input command processing.

Commands giving warnings may or may not have been executed successfully.

System Action: Normal processing continues to the end of the job.

User Response: If any CSD utility commands in error were executed, decide if the results are what you want.

If not, correct them and resubmit in another job.

If any commands were not executed, you must resubmit them. (See message DFHCA5108.)

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, ns, nw, ne*

DFHCA5108 I *date time applid netname tranid* **Commands not executed after error(s):** *nn*

Explanation: The CSD utility has completed input command processing. The number of commands not executed because of errors is indicated by *nn*.

System Action: Normal processing continues to the end of the job.

User Response: Correct the commands in error and resubmit them in another job.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, nn*

DFHCA5109 I *date time applid netname tranid* **End of DFHCSDUP utility job. Highest return code was:** *retcode*

Explanation: The CSD utility job is complete.

System Action: Control returns to the invoker, that is, either to the operating system or to an invoking program.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, retcode*

DFHCA5110 W *date time applid netname tranid* **Error found in 'PARM=' parameter data on EXEC job step. This data is ignored.**

Explanation: The value of the PARM parameter on the EXEC statement in the JCL to run the DFHCSDUP utility is incorrect.

System Action: The PARM parameter is ignored. The CSD is opened for read and write operations.

User Response: Correct the erroneous PARM value. The incorrect value can be found in the job control language used to execute DFHCSDUP.

The *CICS Operations and Utilities Guide* describes how to code the PARM parameter.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5114 S *date time applid netname tranid* **The** *csdtype* **CSD has not been initialized. Command not executed.**

Explanation: The primary CSD file must be initialized before any CSD utility command (other than the INITIALIZE or SERVICE commands) can be processed. If a secondary CSD file is used, it must always be initialized before this command can be processed. CICS issues this message if you try to break either of these rules, or if an attempt to initialize a CSD file fails to complete successfully

System Action: The CSD utility ignores the command.

User Response: Initialize the CSD file. You may first have to determine why a previous initialization attempt failed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, csdtype*

DFHCA5115 S *date time applid netname tranid* **The primary CSD is already initialized. Command not executed.**

Explanation: An INITIALIZE or a SERVICE command was encountered but the primary CSD file has already been initialized.

System Action: The INITIALIZE or SERVICE command is ignored.

User Response: Confirm that the correct CSD file was specified.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5116 S *date time applid netname tranid* **The primary CSD has been defined with an invalid key length. Processing is terminated.**

Explanation: The CSD utility cannot initialize the CSD file because it has been defined to VSAM with an invalid key length.

System Action: The CSD file remains uninitialized, and no utility commands are processed.

User Response: Delete the CSD file, using VSAM Access Method Services (AMS). In the JCL defining the CSD cluster, change the AMS control statements to specify KEYS(22 0). Use this JCL to redefine the CSD file, and use the CSD utility to reinitialize it.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5117 S *date time applid netname tranid* **The primary CSD has been defined with an invalid record size. Processing is terminated.**

Explanation: The CSD utility cannot initialize the CSD file, because it has been defined to VSAM with an invalid record length.

System Action: The CSD file remains uninitialized, and no utility commands are processed.

User Response: Delete the CSD file, using VSAM Access Method Services (AMS). In the JCL defining the CSD cluster, change the AMS control statements to specify RECORDSIZE(100 500). Use this JCL to redefine the CSD file, and use the CSD utility to reinitialize it.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5120 I *date time applid netname tranid csdtype* **CSD opened; ddname:** *ddname*

Explanation: The VSAM data set specified in the JCL has been successfully opened, and is identified as the primary or secondary CSD file. (All utility commands processed will use the same primary CSD file. Different secondary CSD files may be accessed by different utility commands.)

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, csdtype, ddname*

DFHCA5121 S *date time applid netname tranid* **I/O error while opening** *csdtype* **CSD; ddname:** *ddname*

Explanation: An I/O error occurred when reading or writing control records of the VSAM data set identified in the JCL as the primary or secondary CSD file.

System Action: The utility command is not executed.

User Response: Retry the utility command that failed. If the problem persists, restore the CSD file from your own backup procedures.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, csdtype, ddname*

DFHCA5122 S *date time applid netname tranid* **VSAM error while opening** *csdtype* **CSD; ddname:** *ddname*

Explanation: A VSAM error occurred when opening the data set identified in the JCL as a primary or secondary CSD file.

System Action: The utility command is not executed.

User Response: Refer to the VSAM diagnostics output in message DFHCA5179 for further information and guidance.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, csdtype, ddname*

DFHCA5123 I *date time applid netname tranid csdtype* **CSD closed; ddname:** *ddname*

Explanation: The VSAM data set used as the primary or secondary CSD file has been successfully closed, with control records updated if necessary. (The primary CSD file is closed after all the utility commands have been processed; the secondary CSD file is closed after the command for which it was opened.)

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, csdtype, ddname*

DFHCA5124 S *date time applid netname tranid* **Processing terminated. Corrupted** *csdtype* **CSD control record detected while closing CSD; ddname:** *ddname*

Explanation: A storage corruption is preventing the CSD control records from being updated when the CSD file is being closed.

System Action: No further CSD utility commands are processed.

User Response: Obtain a dump from DFHCSDUP together with a listing of the DFHCSDUP run and its JCL. Also try to obtain a print out of the CSD, using either IDCAMS or the DFHCSDUP LIST ALL option. The LIST will indicate where the errors have occurred because they do not print and are therefore easily identifiable.

Using the information available, determine the cause of the errors and correct them.

Resubmit the CSD utility commands that failed.

If you cannot resolve the problem, or if the problem persists, you will need further help from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, csdtype, ddname*

DFHCA5125 S *date time applid netname tranid* **Error occurred while closing** *csdtype* **CSD. File is full; ddname:** *ddname*

Explanation: After processing the CSD utility commands, the CSD control records are updated before closing the data set.

Updating failed because data set *ddname* was full.

System Action: Utility command processing is terminated.

User Response: Initialize a new primary CSD file with a larger data set size. Then use the IDCAMS IMPORT and EXPORT commands to restore the CSD file onto a larger data set. If you have a recoverable CSD and you update it from CICS in RLS mode, there are extra steps required to ensure that any retained locks remain associated with the data set. These are explained in the *CICS Recovery and Restart Guide*.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, csdtype, ddname*

DFHCA5126 S *date time applid netname tranid* **I/O error while closing** *csdtype* **CSD; ddname:** *ddname*

Explanation: An I/O error occurred when reading or writing the control records of the CSD file before closing VSAM data set *ddname*.

System Action: No further utility commands are executed.

User Response: Resubmit the utility commands that failed. If the problem persists, restore the CSD file from your own backup procedures.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, csdtype, ddname*

DFHCA5127 S *date time applid netname tranid* **VSAM error while closing** *csdtype* **CSD; ddname:** *ddname*

Explanation: A VSAM error occurred when closing the data set *ddname* in the JCL as the primary or secondary CSD file.

System Action: No further CSD utility commands are executed.

User Response: Refer to the VSAM diagnostics output in message DFHCA5179 for further information and guidance.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, csdtype, ddname*

DFHCA5128 S *date time applid netname tranid* **Processing terminated.** *csdtype* **CSD accessed by another user and could not be shared. ddname:** *ddname*

Explanation: An attempt to open the CSD has returned an error from VSAM because the data set is not available for the type of processing requested.

This usually means that

- An attempt has been made to open the CSD in non-RLS access mode, but the CSD is already being accessed from elsewhere in RLS access mode.
- An attempt has been made to open the CSD in RLS access mode, but the CSD is already being accessed from elsewhere in non-RLS access mode.
- An attempt has been made to open the CSD in non-RLS access mode, and the CSD is already being accessed in non-RLS access mode, but the CSD cluster has been defined with SHAREOPTIONS that restrict its concurrent use.

System Action: The command is not executed.

User Response: You can change the access mode in which you are trying to open the CSD.

Note: You must specify PARM=CSD(READONLY) if you wish to open a recoverable CSD in RLS access mode from the DFHCSDUP utility program.

Alternatively, wait until the CSD file is no longer being accessed in the conflicting access mode, or until it becomes available again in accordance with the SHAREOPTIONS rules defined for the cluster.

If the conflict is due to SHAREOPTIONS and LIST is the only command you want to execute, you can specify PARM=CSD(READONLY).

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, csdtype, ddname*

DFHCA5130 E *date time applid netname tranid* **Unable to locate module DFHCICS. Primary CSD not initialized.**

Explanation: The DFHCICS module is missing from the library.

System Action: Processing of the INITIALIZE command is terminated.

User Response: Ensure that the DFHCICS module is present in the library.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5131 I *date time applid netname tranid* **List** *listid* **created.**

Explanation: The INITIALIZE command has created the header for an IBM-protected list.

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, listid*

DFHCA5132 S *date time applid netname tranid* **Unable to create list** *listid*

Explanation: The INITIALIZE command has failed when calling the CSD manager routing program, DFHDMP, to create a new list *listid* on the CSD file for the IBM-protected groups. The CSD file may be full or corrupt.

System Action: Processing of the INITIALIZE command is terminated.

User Response: Check that the data set size for the CSD file is large enough. If it is not, allocate more space.

If there is ample space and you suspect that the CSD file is corrupt, you need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, listid*

DFHCA5133 S *date time applid netname tranid* **CSD contains one or more lists. No lists may be present on the CSD when the INITIALIZE command is issued.**

Explanation: The CEDA transaction was used to create a list while the INITIALIZE command was executing.

System Action: Processing of the INITIALIZE command is terminated.

User Response: Redefine the data set and rerun the INITIALIZE command. The CEDA transaction must not be used until the initialization of the CSD file has been successfully completed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5134 S *date time applid netname tranid* **Error occurred while adding group** *grpname* **to list** *listid*

Explanation: A call to the CSD manager routing program, DFHDMP, to write the definition of group *grpname* to the CSD file as a member of an IBM-protected list *listid* created an error. The CSD file may be full or corrupt.

System Action: Processing of the INITIALIZE command is terminated.

User Response: Increase the data set size for the CSD file and repeat the INITIALIZE request. If this fails, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, grpname, listid*

DFHCA5135 I *date time applid netname tranid* **Group** *grpname* **added to list** *listid*

Explanation: A group definition *grpname* has been satisfactorily created on the CSD file in list *listid*.

System Action: Processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, grpname, listid*

DFHCA5136 W *date time applid netname tranid* **Group** *grpname* **is already a member of list** *listid*

Explanation: Group *grpname* already exists in list *listid*. CICS does not create a duplicate entry.

System Action: Normal utility processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, grpname, listid*

DFHCA5140 I *date time applid netname tranid* **Total** *xxxxxxxx* **definitions created:** *nn*

Explanation: CICS issued this message after migrating a CICS table. *nn* definitions of type *xxxxxxxx* have been created on the CSD file.

System Action: Normal utility processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx, nn*

DFHCA5141 S *date time applid netname tranid* **Unable to create new group** *grpname*

Explanation: The MIGRATE command failed when calling the CSD manager routing program, DFHDMP, to create a new group *grpname* on the CSD file for the data in the table being migrated. The CSD file may be full, corrupt, or not initialized. The group name may be invalid.

System Action: Processing of the MIGRATE command is terminated.

User Response: Check the group name in the TOGROUP parameter. Reinitialize the CSD file with the INITIALIZE command, providing a larger data set size if necessary.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, grpname*

DFHCA5142 E *date time applid netname tranid* **Command not executed.** *lgname* **was not updated because of a previous update failure.**

Explanation: The list or group *lgname* cannot be used because an operation to update it, using the DFHCSDUP offline utility, failed to execute to completion.

This has probably happened in a previous execution of DFHCSDUP.

System Action: The command is not executed, and the execution of subsequent DFHCSDUP commands in the job stream is suppressed.

User Response: Use the DFHCSDUP VERIFY command to remove the in-flight flag detected when this message is produced.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, lgname*

DFHCA5143 I *date time applid netname tranid* **Group** *grpname* **created.**

Explanation: A new CSD group, *grpname*, has been created for the data in the table being migrated.

System Action: Migration continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, grpname*

DFHCA5145 E *date time applid netname tranid* **Command not executed.** *lgname* **has been locked by applid:** *applid* **opid:** *opid* **to prevent updating.**

Explanation: The list or group *lgname* cannot be used because a user of the CEDA or CEDB transaction has enforced a LOCK command to prevent updating by other users.

System Action: The command is not executed.

If commands are being read from a SYSIN data stream, subsequent commands (except the LIST command) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, the DFHCSDUP utility attempts to process subsequent commands.

User Response: Negotiate with the user with the specified OPID and APPLID, or create a new group or list by taking a copy of the definitions in the locked one.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, lgname, applid, opid*

DFHCA5146 E *date time applid netname tranid* **Command not executed.** *lgname* **is currently being updated by applid:** *applid* **opid:** *opid*

Explanation: The list or group *lgname* cannot be used because:

- A user of the CEDA or CEDB transaction is currently running a command to update it
- A previous operation to update it using CEDA or CEDB failed to execute to completion.

System Action: The command is not executed.

If commands are being read from a SYSIN data stream, subsequent commands (except the LIST command) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, the DFHCSDUP utility attempts to process subsequent commands.

User Response: Resubmit the utility job to retry the command that failed. Perform the subsequent commands that were suppressed.

If this fails to resolve the problem, run the DFHCSDUP VERIFY command to remove the in-flight flag detected when this message is produced.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, lgname, applid, opid*

DFHCA5147 E *date time applid netname tranid* **Command not executed.** *lgname* **already exists as a** *group-or-list*

Explanation: The name chosen for the target group (or list) duplicates that of an existing group or list on the CSD file.

System Action: Processing of the utility command is terminated.

User Response: Choose a different name for the target group.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, lgname, group-or-list*

DFHCA5148 E *date time applid netname tranid* **Unable to get storage for** *tabletype* **table named** *table*

Explanation: There is insufficient storage to satisfy a GETMAIN request for table *table*.

System Action: The system action depends on the table specified as follows:

LD (language definition table)
The CSD utility cannot process any commands, and terminates with a dump. The MVS user abend code is 0327.

FCT and RDT
The CSD utility cannot migrate the table, and terminates processing of the utility command.

User Response: Allocate additional storage. If your TCT assembly and link-editing is successful, the RDT should be in the library. The LD is in the load library of the supplied pregenerated CICS system.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, tabletype, table*

DFHCA5149 E *date time applid netname tranid* **Command not executed.** *xxxxxxxx* **is IBM-protected.**

Explanation: A user attempted to add a definition to an IBM-supplied group or list (groups or lists beginning with DFH). This is not allowed.

System Action: The CSD utility does not create a definition.

User Response: Change the input command or TCT source data to name a target group or list whose name does not begin with DFH.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5155 W *date time applid netname tranid tdqueue xxxxxxxx* **has same name as an IBM-supplied definition in group** *grpname*

Explanation: The name of the migrated table entry, *xxxxxxxx*, matches the name of an IBM-supplied resource in IBM-protected group *grpname*, created by the INITIALIZE command.

System Action: CICS migrates this entry normally.

User Response: If necessary, rename the resource, using the CEDA transaction.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, tdqueue, xxxxxxxx, grpname*

DFHCA5156 W *date time applid netname tranid TDqueue xxxxxxxx* **did not migrate. Its properties match an IBM-supplied definition in group** *grpname*

Explanation: The properties of the resource defined in the user's table entry are the same as those of the IBM-supplied resource of the same name contained in IBM-protected group *grpname.*

System Action: The entry for the user's resource is not migrated.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, TDqueue, xxxxxxxx, grpname*

DFHCA5159 I *date time applid netname tranid resource object* **defined in group** *grpname*

Explanation: The CSD utility has successfully added a resource definition to a group, where:

- *resource* is the type of resource (CONNECTION, FILE, JOURNALMODEL, LSRPOOL, MAPSET, PARTITIONSET, PARTNER, PROFILE, PROGRAM, SESSION, TDQUEUE, TERMINAL, TRANCLASS, TRANSACTION, or TYPETERM).
- *object* is the name of the object.
- *grpname* is the name of the group.

System Action: Normal utility processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object, grpname*

DFHCA5161 S *date time applid netname tranid* **Table** *table* **must be link-edited with AMODE(24) RMODE(24)**

Explanation: After loading the table *table*, the migration routine checks it has been linkedited with AMODE(24) RMODE(24) for migration purposes.

System Action: The MIGRATE command is not processed.

User Response: Relink the table with the correct attributes.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, table*

DFHCA5164 W *date time applid netname tranid* **No definition of** *resource object* **created. This duplicates an existing definition in group** *grpname*

Explanation: The CSD utility detected a CSD record with a matching key before adding the definition to the CSD file, where:

- *resource* is the type of resource.
- *object* is the name of the object.
- *grpname* is the name of the group.

System Action: The CSD utility does not migrate the resource definition to the CSD file. (If it is a transaction, a generated profile is not created either.)

User Response: Use the CEDA transaction to define the resource with a unique name.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object, grpname*

DFHCA5165 S *date time applid netname tranid* **Processing is terminated. An error occurred while writing** *resource object* **to the CSD.**

Explanation: An error occurred when the CSD utility called DFHDMP to write the definition of the object *object* to the CSD file.

The CSD file may be full or corrupted.

resource is the type of resource.

System Action: If the CSD is full, the CSD utility issues message DFHCA5176, and then terminates with a return code of 12 in message DFHCA5109.

If the CSD is not full, the CSD utility terminates abnormally with message DFHCA5175, usually accompanied by one or more of the explanatory messages, DFHCA5177, DFHCA5178, and DFHCA5179.

User Response: Use the additional messages to determine the cause of the error and the appropriate user action required.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object*

DFHCA5166 E *date time applid netname tranid* **Disallowed character in** *resource* **name** *object*

Explanation: The call to module DFHDMP has failed to construct a valid key for the record created on the CSD file because of an invalid character, or the resource name for the migrated table entry may be invalid. *resource* is the type of resource, and *object* is the name of the object.

System Action: A CSD record is not created for this definition. (If it is a transaction, a generated profile is not created either.)

User Response: Use the CEDA transaction to define the resource with a valid name.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object*

DFHCA5167 S *date time applid netname tranid* **The CSECTs in table** *table* **have been link-edited in the wrong order.**

Explanation: While processing a MIGRATE command, the CSD utility has detected that the CSECTs in table *table* are in the wrong order. Input to the linkage editor omitted a control statement to order the CSECTs.

System Action: The CSD utility does not process the MIGRATE command.

User Response: Use the IBM-supplied procedure, DFHAUPLK, to assemble and link-edit CICS tables. This procedure ensures the correct ordering of CSECTs within the tables.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, table*

DFHCA5168 S *date time applid netname tranid* **Table loaded from library member** *table* **is not a valid** *tabletype***.**

Explanation: After loading the table *table*, the migration routine checks the VMNAME field in the DFHVM expansion of the data area following the load point. This message is produced if VMNAME is not that of a valid table.

System Action: The MIGRATE command is not processed.

User Response:

1. Ensure that the correct table is present in the library, and that the TABLE parameter of the MIGRATE command is correct.
2. Ensure that an ORDER statement was processed in the JCL of the link-editing of the table.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, table, tabletype*

DFHCA5169 S *date time applid netname tranid* **Processing is terminated. Table** *table* **was assembled for CICS release** *rrr***. Reassemble for release** *sss***.**

Explanation: After loading the table *table*, the migration routine checks the VMVERS field in the DFHVM expansion of the data area following the load point. This field indicates the CICS release (*rrr*) for which the table was assembled, and is invalid for the CICS system (release *sss*) that is running.

System Action: The MIGRATE command is not processed.

User Response: Reassemble the table for the correct release of CICS.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, table, rrr, sss*

DFHCA5171 E *date time applid netname tranid* **No definition for file DFHCSD created. The CSD should be defined in the SIT.**

Explanation: The CSD utility detected an attempt to migrate a definition of the CSD to the CSD.

System Action: The CSD utility creates no definition for DFHCSD. Normal utility processing continues with the utility return code set to 8.

User Response: Remove the definition of the CSD from the FCT. Ensure that your definition of the CSD is added to the SIT.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5172 W *date time applid netname tranid* **No definition for file** *file* **created. BDAM files are not supported by RDO.**

Explanation: The CSD utility detected an attempt to migrate a definition of a BDAM data set to the CSD. BDAM data sets are not supported by RDO.

System Action: The migration request is ignored. A definition for the named BDAM data set is not created. Normal utility processing continues, but the utility return code will be set to 4.

User Response: BDAM data sets should be defined to CICS using the FCT. Reassemble your FCT with MIGRATION=COMPLETE on the TYPE=INITIAL macro after all VSAM data sets have been migrated. Use the generated FCT as you would in a non-RDO environment.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, file*

DFHCA5173 W *date time applid netname tranid* **SERVREQ=REUSE is ignored in the definition of file** *filename* **because it is not supported by RDO.**

Explanation: The CSD utility detected an attempt to migrate to the CSD the definition of VSAM file *filename* with SERVREQ=REUSE specified. RDO does not support files with the SERVREQ=REUSE attribute.

System Action: The SERVREQ=REUSE attribute of the file is ignored, and the file is migrated to the CSD without it. Normal utility processing continues, but the utility return code is set to 4.

CICS Transaction Server for OS/390 Release 3 supports the concept of empty files without the need to specify a separate FCT entry with SERVREQ=REUSE in order to load the data set. The SET FILE EMPTY command can be used for a file allocated to a data set defined as reusable. It specifies that the data set is set empty the next time the file is opened.

User Response: Eliminate use of SERVREQ=REUSE files from your installation.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, filename*

DFHCA5174 S *date time applid netname tranid* **Processing is terminated. Command cannot be executed because 'PARM=CSD(READONLY)' was specified.**

Explanation: This command requires the CSD to be opened for read-write access. Your job step specified read-only access for the CSD in the DFHCSDUP utility job stream.

System Action: This command is not executed.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST) are checked for syntax only. (If the primary CSD file cannot be opened, LIST is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Amend the JCL to specify 'PARM=CSD(READWRITE)'.

Note: If the CSD is recoverable and you are accessing it in RLS mode, you cannot specify READWRITE access. In order to perform the command, you need to access the CSD in non-RLS mode.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5175 S *date time applid netname tranid* **Processing is terminated. Unexpected response from** *function* **in CSD manager.**

Explanation: An invocation of the CSD manager, DFHDMP, has resulted in an error. The name of the function that failed is *function*.

System Action: DFHCSDUP issues additional messages, then:

- Terminates **normally** for CSD open/close errors, and the CSD-full condition, or
- Terminates **abnormally** for all other situations.

User Response: Ensure that you have set up your CSD file correctly. If you have migrated your CSD file from a previous release, note that you should have increased your block size to 500. If necessary, use the diagnostics in the additional messages.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, function*

DFHCA5176 S *date time applid netname tranid* **Processing is terminated. CSD is full.**

Explanation: The VSAM data set containing the CSD file is full.

System Action: Execution of the CSD utility command is terminated.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, the DFHCSDUP utility attempts to process subsequent commands.

The DFHCSDUP utility leaves a system lock on the group being created at the time of failure. This lock prevents processing of the group by the CSD utility or the CEDA transaction.

User Response: First, use the DFHCSDUP VERIFY process to remove the system lock on the partly-created group. Normal RDO processing of the group should then be possible, enabling the group (or any unwanted definitions) to be deleted.

To recover the contents of the CSD file, define a larger data set and use the AMS REPRO command. Usually, you will be able to REPRO from the CSD file that became full. If you are unable to do this, use a backup copy.

If your CSD is a recoverable data set and you update it from CICS in RLS mode, there are additional steps to be taken when using REPRO to ensure that any retained locks remain associated with the data set. These are explained in the *CICS Recovery and Restart Guide*.

You may be able to transfer definitions from the CSD file that filled up by using the DFHCSDUP COPY command with the FROMCSD option.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5177 S *date time applid netname tranid* **Processing is terminated. CSD I/O error occurred.**

Explanation: An I/O error occurred when executing a READ or WRITE of a CSD record on the primary or secondary CSD file.

System Action: DFHCSDUP issues additional messages and terminates abnormally.

User Response: Restore the CSD file to a new data set from your own backup, or create the new CSD file by using the INITIALIZE, COPY, and APPEND commands to restore existing definitions.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5178 S *date time applid netname tranid* **Processing is terminated. Severe CSD error occurred.**

Explanation: An error occurred during execution of the CSD manager, DFHDMP, to access the primary or secondary CSD file.

System Action: DFHCSDUP issues additional messages and terminates abnormally.

User Response: See the VSAM diagnostics given in message DFHCA5179.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5179 S *date time applid netname tranid* **VSAM error. Return code =** *nn* **Error code =** *ddd(yy)* **Control block type =** *type*

Explanation: VSAM returned the following diagnostics when an error occurred, where:

- *nn* is the hexadecimal VSAM return code
- *yy* is the hexadecimal VSAM error code (*ddd* is its decimal equivalent)
- CONTROL BLOCK TYPE points to the relevant error code subset as follows:
  - RPL = Request macro responses from VSAM
  - ACB = OPEN/CLOSE responses

  The error code is:
  - For CONTROL BLOCK TYPE = RPL, the reason code from byte 3 of the feedback word field in the RPL (RPLERRCD)
  - For CONTROL BLOCK TYPE = ACB, the reason code in the ERROR field in the ACB (ACBERFLG)

System Action: The CSD utility terminates command processing, and in some situations, produces an operating system dump.

User Response: For the meaning of the VSAM return and error codes, refer to the *DFSMS/MVS V1R3 Macro Instructions for Data Sets* manual.

When interpreting these diagnostics, ensure that the data set referenced in the JCL exists.

Check the following:

- The data set is being concurrently accessed by CICS running in another region.
- You are not attempting to open a recoverable CSD as READWRITE if DFHCSDUP specifies RLS access mode. You must specify PARM=CSD(READONLY) in this case.
- LOG is defined on the base cluster if RLS access mode is specified.

If DFHCSDUP specifies RLS access mode, a 'record not found' error could mean that the CSD has not been initialized.

Note: You must use non-RLS access mode to initialize a recoverable CSD.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, nn, ddd(yy), type*

DFHCA5180 S *date time applid netname tranid* **Processing is terminated. Error occurred while CSD was being read by** *function subfunction*

Explanation: When the LIST command invoked DFHDMP to scan the objects on the CSD file, an error occurred during execution of the DFHDMP function.

System Action: The CSD utility terminates with an MVS abend 0325.

User Response: This error should be reported. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, function, subfunction*

DFHCA5181 W *date time applid netname tranid* **No match found for generic** *group-or-list* **identifier** *xxxxxxxx*

Explanation: The LIST command was executed with a generic group or list name, but no qualifying group or list exists on the CSD file.

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, group-or-list, xxxxxxxx*

DFHCA5182 W *date time applid netname tranid group-or-list xxxxxxxx* **does not exist.**

Explanation: The LIST command or the DELETE command was executed using the name of a group or list that does not exist on the primary CSD file.

System Action: The LIST command or the DELETE command is not processed. Subsequent commands may still be processed.

User Response: Correct the LIST command or the DELETE command to use a valid group or list name.

If a CSD upgrade is being performed, no user action is required.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, group-or-list, xxxxxxxx*

DFHCA5183 W *date time applid netname tranid group-or-list xxxxxxxx* **exists as a** *list-or-group* **name.**

Explanation: The LIST command or the DELETE command was executed using a group name that is already in use as a list name, or using a list name that is already in use as a group name.

System Action: The LIST command or the DELETE command is not processed. Subsequent commands may still be processed.

User Response: Correct the LIST command or the DELETE command to use a valid group or list name.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, group-or-list, xxxxxxxx, list-or-group*

DFHCA5184 S *date time applid netname tranid* **Processing is terminated. Invalid output from DFHPUP. Cannot format data for utility listing.**

Explanation: There has been an internal logic error in the DFHCSDUP utility program. The data in the back-translated output buffer is invalid. The length code may be out of range or the data fields in the wrong sequence. One or more of the data fields may be invalid.

System Action: The CSD utility terminates with an MVS abend 0326.

User Response: This error must be reported.

Obtain a dump from DFHCSDUP together with a listing of the DFHCSDUP run and its JCL. Also try to obtain a print out of the CSD, using either IDCAMS or the DFHCSDUP LIST ALL option. The LIST indicates where the error(s) have occurred because they do not print and are therefore easily identifiable.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5186 W *date time applid netname tranid* **No** *objects* **defined in** *grpname listid*

Explanation: In executing a LIST command, the CSD utility has found a group or list header on the CSD file for which no corresponding group or list elements exist.

System Action: The utility continues to process the LIST command, but will not tabulate elements of the group or list named in the message.

User Response: Run the DFHCSDUP VERIFY utility.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, objects, grpname, listid*

DFHCA5187 I *date time applid netname tranid resource* **is locked, but is not the name of a group or list.**

Explanation: The CSD utility detected a locked resource that is not a group or list. The reason is that an interrupt or failure occurred during a CEDA transaction or a previous utility job. A lock had been created but not the associated group or list.

System Action: The utility continues normal processing of the VERIFY command.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource*

DFHCA5188 I *date time applid netname tranid object-type name* **is now available for use.**

Explanation: The VERIFY command discovered that the resource was not available for the CEDA transaction or offline commands. The restriction on its availability, which was due to the failure of some previous command affecting it, has now been removed.

System Action: Normal processing of the VERIFY command continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, object-type, name*

DFHCA5189 I *date time applid netname tranid* **CSD verify process completed successfully.**

Explanation: The VERIFY command has been processed successfully, and any internal locks associated with groups and lists on the CSD file have been removed.

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5190 S *date time applid netname tranid* **Command is not executed. Unable to get storage for service module** *progname*

Explanation: There is insufficient storage available to load the service module *progname*, that is to be loaded and executed by DFHCSDUP.

System Action: Utility command execution is terminated.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Ensure that there is sufficient storage allocated to load module *progname*.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, progname*

DFHCA5191 I *date time applid netname tranid* **Service program** *progname* **is running.**

Explanation: The service module *progname* has been loaded correctly. Execution of the module has started.

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, progname*

DFHCA5192 S *date time applid netname tranid* **Command is not executed. CSD service level** *ttt* **is incompatible with current service level** *sss*

Explanation: Either the LEVEL parameter specified in the SERVICE command is wrong, or an incorrect version of the CSD file is being used as the secondary (input) CSD file.

System Action: The SERVICE command is not executed.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: The SERVICE command may upgrade the service level of the CSD file only in increments of one. Check that the input CSD file is the intended one, and that the LEVEL parameter takes the value one higher than the current service level of the CSD file.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, ttt, sss*

DFHCA5193 S *date time applid netname tranid* **Command is not executed. Service module** *progname* **is unable to upgrade CSD to target service level** *ttt*

Explanation: The LEVEL parameter specified in the SERVICE command is incompatible with the status of the service module *progname* being applied to the CSD file.

System Action: The SERVICE command is not executed.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Ensure that the service module *progname*, being applied, is correctly updated with the service fix supplied by IBM. (It should have been amended so as to be able to process SERVICE commands at the target level *ttt*.)

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, progname, ttt*

DFHCA5194 I *date time applid netname tranid* **Upgrading service status of CSD from level** *sss* **to level** *ttt*

Explanation: The loaded service module is performing the required upgrade of the CSD file from service level *sss* to service level *ttt*.

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, sss, ttt*

DFHCA5195 I *date time applid netname tranid* **Execution of service program** *progname* **complete.**

Explanation: The loaded service program *progname* has run to completion. Control is being transferred back to the CSD offline utility program, DFHCSDUP.

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, progname*

DFHCA5196 S *date time applid netname tranid* **Command is terminated. Error occurred while reading control secondary CSD record.**

Explanation: An I/O error has occurred on the specified CSD file.

System Action: The SERVICE command is terminated.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST) are checked for syntax only. (If the primary CSD file cannot be opened, LIST is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Retry the command, ensuring that a sufficiently large data set size is specified for the output (primary) CSD file.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5197 S *date time applid netname tranid* **Command is terminated. Unrecognized control record encountered while secondary CSD was being read.**

Explanation: The contents of a control record of the secondary input CSD are invalid.

System Action: The SERVICE command is terminated.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST) are checked for syntax only. (If the primary CSD file cannot be opened, LIST is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Check that the input and output data sets have been correctly defined, and that the DDNAME for the secondary CSD file in the JCL corresponds to the OLDCSD parameter in the SERVICE utility command.

If the problem persists, you will need further help from IBM. First, obtain a dump from DFHCSDUP together with a listing of the DFHCSDUP run and its JCL. Also try to obtain a printout of the CSD using either IDCAMS or the DFHCSDUP LIST ALL option. The LIST indicates where the errors have occurred because they do not print and are therefore easily identifiable. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5198 I *date time applid netname tranid* **CSD record modified for** *resource-type resource-name***,** *group-or-list group-or-list-name*

Explanation: The specified modification to a record on the CSD file has taken place.

System Action: Normal processing continues. If the modified record is an element in a GROUP or LIST, its date-and-time field is updated when copied to the output (primary) CSD file.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource-type, resource-name, group-or-list, group-or-list-name*

DFHCA5199 W *date time applid netname tranid* **Invalid field encountered in existing record for** *resource-type***:** *resource-name group-or-list***:** *group-or-list-name*

Explanation: An unexpected value was found in one of the fields of a CSD record that was to be modified for element *resource-name* of type *resource-type*.

System Action: Normal processing continues, and the invalid record is left unchanged on the new (primary) CSD file.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource-type, resource-name, group-or-list, group-or-list-name*

DFHCA5200 S *date time applid netname tranid* **Command not executed. No valid language table was loaded.**

Explanation: The utility found that the RDO language table had not been loaded correctly, or that it contained invalid data.

System Action: The utility terminates because it cannot process any commands.

User Response: Check that the correct version of the RDO language table (DFHEITSP) is in the program library.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5201 S *date time applid netname tranid* **'***command***' command is not valid. Command not executed.**

Explanation: The CSD utility does not recognize the command.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, command*

DFHCA5202 S *date time applid netname tranid* **Incorrect syntax for '***command***' command. Command not executed.**

Explanation: The syntax of the command is incorrect.

System Action: The CSD utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, command*

DFHCA5203 W *date time applid netname tranid* **Right parenthesis assumed after the value of '***xxxx***'.**

Explanation: The syntax of the command was incorrect. Either a right parenthesis has been omitted or a keyword value in excess of 256 bytes has been specified.

System Action: The utility executes the command as if the right parenthesis was present.

User Response: Confirm that the correction applied by the utility generated the required command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxx*

DFHCA5204 E *date time applid netname tranid* **Command not executed. '***xxxx***' keyword is not valid.**

Explanation: The keyword *xxxx* is not valid on this command.

System Action: The utility command is ignored.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxx*

DFHCA5205 E *date time applid netname tranid* **Command not executed. No value was specified for '***xxxx***'.**

Explanation: The option *xxxx* is incomplete, possibly because a value has been omitted.

System Action: The utility command is ignored.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxx*

DFHCA5206 E *date time applid netname tranid* **Command not executed. Duplicate specification of '***xxxx***'.**

Explanation: Option *xxxx* appears twice on a single utility command.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxx*

DFHCA5207 E *date time applid netname tranid* **Command not executed. '***xxxxxxxx***' does not require a value.**

Explanation: The utility detected an input command coded with a value for option *xxxxxxxx* when no value was required.

System Action: The utility does not process the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5210 E *date time applid netname tranid* **Command not executed. Invalid value was specified for '***xxxx***'.**

Explanation: The utility detected an input command coded with an invalid value for option *xxxx*.

System Action: The utility does not process the command.

User Response: Correct the value.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxx*

DFHCA5211 E *date time applid netname tranid* **Command not executed. Operand delimiter '***x***' was misplaced.**

Explanation: The utility has detected an input command coded with a misplaced option delimiter *x*.

System Action: The utility does not process the command.

User Response: Place the delimiter correctly.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, x*

DFHCA5212 E *date time applid netname tranid* **Command not executed.** *comptype* **'***string***' is not uniquely identifiable.**

Explanation: An ambiguous DFHCSDUP or CREATE command has been specified.

- *comptype* is the command component type
- *string* is the actual component.

System Action: The command is not executed. For DFHCSDUP, if commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Correct the command syntax and retry. See accompanying message DFHCA5213 for further details of the command failure.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, comptype, string*

DFHCA5213 E *date time applid netname tranid* **Specified** *input* **could be interpreted as** *match1* **or** *match2*

Explanation: An ambiguous DFHCSDUP or CREATE command has been specified.

- *input* is the ambiguous character string
- *match1* and *match2* are two possible interpretations of *input.*

System Action: The command is not executed. For DFHCSDUP, if commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Correct the command syntax and retry.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, input, match1, match2*

DFHCA5214 W *date time applid netname tranid keyword* **is an obsolete keyword. It is ignored.**

Explanation: The utility has detected an input command coded with an obsolete keyword. The keyword specifies an option not valid for this release of CICS.

System Action: The utility ignores the keyword.

User Response: Confirm that the resulting utility command is correct for this release of CICS.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, keyword*

DFHCA5215 E *date time applid netname tranid* **Command not executed. A closing parenthesis has been omitted from a null value specified on an ALTER command.**

Explanation: A closing parenthesis was not added when a null value was specified for a keyword on an ALTER command. A closing parenthesis is automatically added for keyword values other than nulls.

System Action: The command is not executed. If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Correct the command syntax and retry.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5216 E *date time applid netname tranid restype resname* **is not in group** *group*

Explanation: A nonexistent resource of type *restype* and name *resname*, has been specified on an ALTER command.

System Action: The command is not executed. If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Correct the command syntax and retry.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, restype, resname, group*

DFHCA5217 E *date time applid netname tranid* **Command not executed. A closing bracket has been omitted from a** *xxxx* **keyword.**

Explanation: A closing bracket has been omitted from the *xxxx* keyword on a CREATE or DFHCSDUP DEFINE command.

System Action: The command is not executed.

User Response: Correct the command syntax and retry.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxx*

DFHCA5218 I *date time applid netname tranid* **Altering** *Resourcetype Resourcename* **in group** *Groupname*

Explanation: During the execution of a generic ALTER command, the CSD batch update utility scans the CSD file for matches to the specified generic resource name and/or GROUP keyword. For every match, the utility processes the request and informs the user of the resulting *resourcename* and/or *groupname* respectively.

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCSDUP

XMEOUT Parameters: *date, time, applid, netname, tranid, Resourcetype, Resourcename, Groupname*

DFHCA5219 W *date time applid netname tranid* **No match found on CSD file for** *Resourcetype Resourcename* **group** *Groupname*

Explanation: The ALTER command was executed with a generic resource and/or group name, but no qualifying resource and/or group exist on the CSD file.

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCSDUP

XMEOUT Parameters: *date, time, applid, netname, tranid, Resourcetype, Resourcename, Groupname*

DFHCA5220 S *date time applid netname tranid* **Command not executed. '***xxxxxxxx***' must be the first command.**

Explanation: The CSD utility found an INITIALIZE command after other commands.

System Action: The CSD utility ignores the command.

User Response: Confirm that the INITIALIZE command was misplaced.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5222 E *date time applid netname tranid* **Command not executed. '***xxxxxxxx***' keyword was omitted or specified incorrectly.**

Explanation: A required keyword *xxxxxxxx* was omitted from a CSD utility command.

System Action: The utility ignores the command.

User Response: Specify keyword *xxxxxxxx*.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5223 E *date time applid netname tranid* **Command not executed. '***xxxxxxxx***' keyword conflicts with '***xxxxxxxx***' keyword.**

Explanation: The syntax of the command is incorrect. Conflicting keywords have been specified.

System Action: The utility command is ignored.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx, xxxxxxxx*

DFHCA5224 E *date time applid netname tranid* **Command not executed. The value of** *operand* **is outside the valid range for** *keyword***.**

Explanation: A numeric value of *operand* was detected, which is outside the permitted range of values for the keyword *keyword*.

System Action: The command is not executed.

User Response: Correct the value.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, operand, keyword*

DFHCA5225 E *date time applid netname tranid* **Command not executed. Same name specified for '***xxxxxxxx***' and '***xxxxxxxx***'.**

Explanation: This message is issued for one of the following reasons:

1. The utility COPY command has been coded with the same group name for the source and target group.
2. The APPEND command has been coded with the same list name for the source and target list.
3. The ADD command has been coded with the same group name and list name.

System Action: The CSD utility or CICS ignores the command.

User Response: Correct the name (or names) in error.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx, xxxxxxxx*

DFHCA5227 E *date time applid netname tranid* **Command not executed. Use of generic name conflicts with '***xxxxxxxx***' option.**

Explanation: A CSD utility command used a generic name; that is, one containing asterisk (*) or plus sign (+) characters, in conjunction with an option that conflicted with the use of generic names.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5228 E *date time applid netname tranid* **Command not executed. Only one resource-type keyword may be specified.**

Explanation: The CSD utility detected an input command coded with more than one resource-type keyword.

System Action: The utility does not process the command.

User Response: Correct the command to refer to only one resource-type keyword.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5229 E *date time applid netname tranid* **Command not executed. '***xxxxxxxx***' is invalid because a resource-type keyword was specified.**

Explanation: The CSD utility detected an input command coded with a resource-type keyword (for example, PROGRAM, TRANSACTION) in a situation where a resource-type keyword is invalid.

System Action: The utility does not process the command.

User Response: Correct the command and resubmit.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5230 I *date time applid netname tranid* **ERASE command is obsolete. Use the DELETE command.**

Explanation: The CSD utility detected the obsolete ERASE command in its input.

System Action: The utility processes the command as a DELETE command.

User Response: In future, use the DELETE command instead of the ERASE command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5231 E *date time applid netname tranid* **Command not executed. '***xxxxxxxx***' is incompatible with the MIGRATE command for** *tabletype* **tables.**

Explanation: An attempt has been made to execute the MIGRATE command with an invalid table type and (or) an invalid keyword specified.

System Action: The CSD utility terminates.

User Response: Correct the command syntax and resubmit the job.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx, tabletype*

DFHCA5232 E *date time applid netname tranid* **Command not executed. '***xxxxxxxx***' parameter must not begin with 'DFH'.**

Explanation: In a CSD utility MIGRATE command, the *xxxxxxxx* parameter contained an invalid table name or group name.

System Action: The utility does not process the command.

User Response: Resubmit with a valid table name or group name.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5233 E *date time applid netname tranid* **Command not executed. '***tabletype***' table type is not supported by RDO.**

Explanation: The CSD utility detected a TABLE parameter that referred to a CICS table type not supported by RDO.

RDO supports:

- Program, transaction, and terminal definitions (RDT)
- Files (FCT)
- Transient data queues (DCT).

System Action: The utility does not process the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, tabletype*

DFHCA5234 E *date time applid netname tranid* **Command not executed. '***command***' command is not supported.**

Explanation: The CSD utility detected a command *command* in its input which is not supported by RDO.

System Action: The utility does not process the command.

User Response: Correct the command

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, command*

DFHCA5235 E *date time applid netname tranid* **Command not executed. Group or list must be specified.**

Explanation: A CSD utility EXTRACT command has been submitted. A GROUP or LIST name must be specified with an EXTRACT command.

System Action: The utility command is not executed. This message is followed by DFHCA5104.

User Response: Correct the invalid command by adding a valid GROUP or LIST name and rerun the utility job.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5236 I *date time applid netname tranid* **A user-exit program has been specified on the entry linkage and on the userprogram keyword. The program specified on the entry linkage has been ignored.**

Explanation: An EXTRACT user-exit program has been specified via the entry parameter list and on the USERPROGRAM keyword of the EXTRACT command.

System Action: The program specified on the USERPROGRAM keyword is used.

User Response: Ensure that the user program used is the one intended.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5240 S *date time applid netname tranid* **Processing terminated. Error occurred while input utility command was being read.**

Explanation: The environment adaptor GETCARD utility cannot read an input utility command.

System Action: The CSD utility terminates abnormally without processing the input commands.

User Response: Check that the utility commands are prepared correctly and located correctly in the JCL. Check also that the DD statement defining the output data set startup job stream is correct. For JCL examples, refer to the CICS Operations and Utilities Guide.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5241 S *date time applid netname tranid* **Processing terminated. Invalid record length on utility command data stream.**

Explanation: The CSD utility detected incorrectly formatted input in the SYSIN data stream.

System Action: The CSD utility cannot process any commands. The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

User Response: Ensure that the output data set data stream is formatted with fixed length 80-byte records.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5242 E *date time applid netname tranid* **Command not processed. Too many continuation records for input utility command.**

Explanation: The CSD utility detected an input command that was too long and extended over too many records.

System Action: The utility does not process the command.

User Response: This message may be caused by an error in the rejected command or in the preceding or subsequent commands in the input stream. Correct the commands in error.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5251 I *date time applid netname tranid resource object* **in group** *grpname* **is replaced.**

Explanation: A resource definition existed in both source and target groups. Based on the CSD utility commands submitted, the utility has replaced the definition in the target group with that from the source group.

- *resource* is the type of the resource
- *object* is the name of the object
- *grpname* is the name of the group.

System Action: Normal utility processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object, grpname*

DFHCA5252 I *date time applid netname tranid resource object* **copied to group** *grpname*

Explanation: The CSD utility has correctly copied a resource definition to the specified group, where:

- *resource* is the type of resource
- *object* is the name of the object
- *grpname* is the name of the group.

System Action: Normal utility processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object, grpname*

DFHCA5253 E *date time applid netname tranid* **Group** *grpname* **not found in CSD file - ddname:** *ddname*

Explanation: The CSD utility has detected a command that attempted to retrieve definitions from the non-existent group, *grpname*, in the CSD specified in DDNAME *ddname*.

System Action: The utility does not process the command.

User Response: Either correct the group name in the command, or make sure that the specified CSD file is the correct one.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, grpname, ddname*

DFHCA5254 E *date time applid netname tranid resource object* **already exists in the target group.**

Explanation: The CSD utility detected a command that attempted to add a definition to a group that already contained a definition of an object with the same name, where:

- *resource* is the type of resource
- *object* is the name of the object.

System Action: The CSD utility does not process the command.

User Response: Change the name in the command, or alter the name of the existing definition.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object*

DFHCA5255 E *date time applid netname tranid* **List** *xxxxxxxx* **not found in CSD file - ddname:** *ddname*

Explanation: The CSD utility detected an APPEND or REMOVE command that referred to a nonexistent list in the CSD file specified in DDNAME *ddname*.

System Action: The utility does not process the command.

User Response: Either correct the list name in the command, or make sure that the specified CSD file is the correct one.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx, ddname*

DFHCA5256 E *date time applid netname tranid* **No resources defined in group** *grpname*

Explanation: In executing a LIST command, the CSD utility has found a group header on the CSD file for which no group elements exist.

System Action: The CSD utility continues to process the LIST command, but will not list elements of the named group.

User Response: Run the DFHCSDUP VERIFY utility to verify the group.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, grpname*

DFHCA5257 E *date time applid netname tranid* **Length of 'TO' prefix must be less than or equal to length of 'GROUP' prefix.**

Explanation: During the execution of a generic COPY command, the batch update utility found the length of the prefix of the generic group specified in the TO keyword to be greater than the length of the prefix of the generic GROUP keyword.

System Action: The utility ignores the command to prevent truncation of the TO group name.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5258 I *date time applid netname tranid* **Copying group** *grpname1* **to** *grpname2*

Explanation: During the execution of a generic COPY command, the CSD batch update utility scans the CSD file for matches to the generic GROUP keyword. For every match, the utility resolves the generic TO keyword, and informs the user of the resulting *grpname1* and *grpname2* respectively.

System Action: Normal processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, grpname1, grpname2*

DFHCA5259 I *date time applid netname tranid* **Unrecognized resource type found in the CSD file and has been ignored.**

Explanation: CICS has found an unrecognized resource type code in a CSD record. The unrecognized code does not match any of the function codes in the language definition table. This can occur for one of the following reasons:

1. You are using a CICS release that does not support a type of definition that was created on the CSD file by a later CICS release.
2. The language definition table (DFHEITSP or DFHEITCU) is invalid for this CICS release.
3. The CSD manager (DFHDMP) has passed an invalid CSD record buffer to DFHPUP. This is a CICS internal logic error.

System Action: The resource is ignored and the operation continues.

User Response: Determine which of the possible reasons caused the error. If you can eliminate reasons 1 and 2, you can assume that reason 3 applies.

Take action corresponding to the reason you have established as follows:

1. Ignore the message.
2. Ensure that the library contains versions of DFHEITSP and DFHEITCU that are valid for the CICS release you are running.
3. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5261 W *date time applid netname tranid* **RDT is empty. No VTAM resources in assembled table.**

Explanation: The CSD utility detected an attempt to migrate a TCT that either contains no RDO-supported terminal or sessions definitions, or whose TYPE=INITIAL entry specifies MIGRATE=COMPLETE.

System Action: The utility does not create any CSD definitions.

User Response: Check the TCT source code to see if it contains any RDO-supported definitions. If it does, ensure that it has been correctly assembled (MIGRATE=YES specified) and link-edited.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5262 S *date time applid netname tranid* **Insufficient storage to build types-matching chain.**

Explanation: During CSD utility processing, an internal error has occurred in the migration of a TCT. This is because of lack of storage for TYPETERM definitions.

System Action: The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

In any of the above cases, definitions that have already been migrated remain on the CSD.

User Response:

1. Run the DFHCSDUP VERIFY utility.
2. Delete the groups created by the failing MIGRATE command.
3. Allocate a larger region size in the utility JCL, and retry the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5263 S *date time applid netname tranid* **Error in input RDT. Incorrect sequence of commands.**

Explanation: During CSD utility processing, an internal error has occurred in the migration of a TCT. This is because of abnormal data in the assembled table.

System Action: The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

Definitions that have already been migrated remain on the CSD. The MVS user abend code is 0308.

User Response:

1. Run the DFHCSDUP VERIFY utility.
2. Delete the groups created by the failing MIGRATE command.
3. Keep the assembly listing for the failing table and keep the DFHCSDUP dump, if available.
4. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5264 W *date time applid netname tranid* **Resource** *object* **not defined. Group** *grpname* **not available.**

Explanation: During the migration of a TCT, the CSD utility could not define a resource *object* because the target group *grpname* was not available. The utility has issued a previous message indicating the reason.

System Action: The utility creates no definition for resource *object*. Normal utility processing continues.

User Response: Review the original message. If necessary, recode the TYPE=GROUP macro in the TCT source to name a suitable group.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, object, grpname*

DFHCA5265 W *date time applid netname tranid* **Action required to find a suitable typeterm for terminal** *termid***.**

Explanation: While migrating a TCT, the CSD utility found a terminal definition for which it could not create a corresponding TYPETERM definition.

System Action: The utility adds the terminal definition to the CSD file, but it refers to a TYPETERM that may be unsuitable for this device.

User Response: Use the CEDA transaction to define a suitable TYPETERM and alter the TERMINAL definition to refer to the new TYPETERM.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, termid*

DFHCA5266 W *date time applid netname tranid* **Sessions** *sessions* **not defined, because of error in associated connection.**

Explanation: An error has been detected during the migration of a TCT. When migrating a session, DFHCSDUP checks that the associated CONNECTION has been defined successfully. If it has not, DFHCSDUP abnormally terminates the session definition.

System Action: The specified SESSIONS resource is not migrated to the CSD. DFHCSDUP continues with the migration of subsequent TCT entries.

User Response: Use the diagnostic information in the output listing from the MIGRATE utility to determine why the CONNECTION definition has failed. You can then use RDO to DEFINE the CONNECTION and the SESSIONS to the CSD.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, sessions*

DFHCA5267 E *date time applid netname tranid resource* **Not migrated. Group** *grpname* **is locked to applid:** *applid* **opid:** *opid* **and cannot be updated at present.**

Explanation: It is not possible to put the resource *resource* into group *groupname*, because the group is currently locked to APPLID *applid* and OPID *opid*. The group will be unlocked again when the other user's operation is complete.

System Action: The utility does not create definitions for the resources named in the DFHCA5274 messages which follow. Normal utility processing continues with the utility return code set to 8.

User Response: Resubmit the job later, or choose a different name for the target group. If the group remains locked, consult with the user identified by APPLID and OPID. If the lock remains set for no apparent reason, issue the VERIFY command and resubmit.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, grpname, applid, opid*

DFHCA5268 E *date time applid netname tranid resource* **not migrated.** *grpname* **already exists as a list.**

Explanation: The name chosen for the target GROUP duplicates that of an existing LIST on the CSD.

System Action: The utility does not create definitions for the resources named in the DFHCA5274 messages which follow. Normal utility processing continues with the utility return code set to 8.

User Response: Choose a different name for the target group and change the appropriate TYPE=GROUP macro in the FCT source.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, grpname*

DFHCA5269 E *date time applid netname tranid resource* **not migrated. Group** *grpname* **is IBM-protected.**

Explanation: An attempt was made to add a definition to an IBM supplied group (groups beginning with "DFH").

System Action: The utility creates no definition for the resources named in the DFHCA5274 messages which follow. Normal utility processing continues with the utility return code set to 8.

User Response: Change the input source to name a different target group whose name does not begin with "DFH".

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, grpname*

DFHCA5270 I *date time applid netname tranid group-or-list xxxxxxxx* **deleted from the CSD .**

Explanation: The CSD utility has successfully deleted a group or list from the primary CSD file.

System Action: Normal utility processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, group-or-list, xxxxxxxx*

DFHCA5271 S *date time applid netname tranid* **Unable to delete** *group-or-list xxxxxxxx* **from the CSD .**

Explanation: During CSD utility processing, an error in accessing the CSD file caused a delete operation to fail.

System Action: The utility does not process the DELETE command. The group or list to be deleted remains on the CSD file.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, group-or-list, xxxxxxxx*

DFHCA5272 I *date time applid netname tranid resource object* **deleted from group** *grpname*

Explanation: The CSD utility successfully deleted the named resource, where:

- *resource* is the type of resource
- *object* is the name of the object.

System Action: Normal utility processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object, grpname*

DFHCA5273 W *date time applid netname tranid resource object* **is not in group** *grpname*

Explanation: The CSD utility detected an attempt to delete a resource which did not exist in the named group, where:

- *resource* is the type of resource
- *object* is the name of the object
- *grpname* is the name of the group.

System Action: The utility does not process the DELETE command.

User Response: Check that you have coded the group and resource names correctly.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object, grpname*

DFHCA5274 W *date time applid netname tranid resource object* **not defined. Group** *grpname* **not available.**

Explanation: During the migration of an FCT or RCT, the CSD utility could not define the resource *resource* because the target group *groupname* was not available. The utility has already issued a message indicating the reason.

System Action: The utility creates no definition for the resource named *object*. Normal utility processing continues.

User Response: Review the original message. If necessary, recode the TYPE=GROUP macro in the FCT or RCT source to name a suitable group.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object, grpname*

DFHCA5275 E *date time applid netname tranid* **Group** *grpname* **is not a member of list** *listname*

Explanation: The REMOVE command being executed names a GROUP that is not a member of LIST *listname*.

System Action: The command is not executed.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST commands) are checked for syntax only. (If the primary CSD file cannot be opened, the LIST command is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Correct the command and resubmit a DFHCSDUP job to execute the failing command and any subsequent commands that were suppressed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, grpname, listname*

DFHCA5276 I *date time applid netname tranid* **Group** *grpname* **removed from list** *listname*

Explanation: The REMOVE command has successfully removed group *grpname* from LIST *listname*.

System Action: Normal execution continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, grpname, listname*

DFHCA5277 I *date time applid netname tranid* **List** *list* **deleted from CSD .**

Explanation: The final group has been removed from list *listname*. The list has therefore been deleted.

System Action: Processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, list*

DFHCA5280 I *date time applid netname tranid* **Processing definitions from library member** *xxxxxxxx*

Explanation: The CSD utility has successfully loaded data from the named library member.

System Action: Normal utility processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5281 S *date time applid netname tranid* **Data loaded from library member** *xxxxxxxx* **is invalid**

Explanation: The CSD utility has found an error in data loaded from the named library member.

System Action: The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

User Response: Obtain a dump containing the failing library member.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5282 E *date time applid netname tranid* **Unable to get storage for library member** *xxxxxxxx*

Explanation: There is insufficient storage available to load the library member *xxxxxxxx*.

System Action: The utility terminates processing of the command that required access to the named library member.

User Response: Allocate a larger region size in the utility JCL and resubmit the job.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5283 S *date time applid netname tranid* **RDL subcommand exceeds 1024 bytes:** *xxxxxxxxxxxx****....***

Explanation: The CSD utility found an internal error in the data loaded while processing the indicated (truncated) UPGRADE, INITIALIZE, or MIGRATE command.

System Action: The CSD utility terminates abnormally.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxx, xxxx, xxxx*

DFHCA5284 E *date time applid netname tranid* **Error analyzing RDL subcommand:** *xxxxxxxxxxxx****....***

Explanation: The CSD utility found an internal error in the data loaded while processing the indicated (truncated) UPGRADE, INITIALIZE, or MIGRATE command.

System Action: The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxx, xxxx, xxxx*

DFHCA5285 E *date time applid netname tranid* **Invalid verb in RDL subcommand:** *xxxxxxxxxxxx****....***

Explanation: The CSD utility found an internal error in the data loaded while processing the indicated (truncated) UPGRADE, INITIALIZE, or MIGRATE command.

System Action: The utility attempts to:

1. Close any files previously opened internally.
2. Unload any extract exit routines that were dynamically loaded.
3. Invoke the termination exit routine (if supplied).
4. Return control to the invoker of the utility.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxx, xxxx, xxxx*

DFHCA5286 E *date time applid netname tranid* **Unable to create resource definition on CSD file:** *xxxxxxxxxxxx****....***

Explanation: This message is issued during the processing of the indicated (truncated) command for one of the following reasons:

1. The CSD is full (in which case, messages DFHCA5175 and DFHCA5176 accompanies this one)
2. The CSD was defined as read-only (in which case, message DFHCA5174 accompanies this message)
3. The TCT being migrated contained a terminal entry with a name unacceptable to RDO (in which case, message DFHCA5165 accompanies this message)
4. A list or group cannot be used due to the failure of a previous update operation (in which case, message DFHCA5142 accompanies this message)
5. The resource definition list being used to INITIALIZE or UPGRADE the CSD file contained a definition with an invalid resource name or group name

6. A logic error occurred in DFHCSDUP or an internal error was detected in the data contained in the loaded table.

System Action: The system action depends on the reason the message is issued, as follows.

1. Migration of the TCT table is terminated immediately.
2. Processing of the UPGRADE or INITIALIZE command is terminated
3. The utility attempts to:
   a. Close any files previously opened internally.
   b. Unload any extract exit routines that were dynamically loaded.
   c. Invoke the termination exit routine (if supplied).
   d. Return control to the invoker of the utility.
4. The command is not executed, and execution of further DFHCSDUP commands in the job stream is suppressed.
5. As in (3) above.
6. As in (3) above.

In ALL cases, all the definitions created by this command up to the point of failure remain on the CSD.

User Response: The user response depends on the reason the message is issued, as follows.

1. See message DFHCA5175 and DFHCA5176.
2. See message DFHCA5174.
3. Change the name of the terminal and all references to it. Also refer to the user response for message DFHCA5165.
4. See message DFHCA5142.
5. This is a CICS logic error. See instruction for 6 below.
6. This is a CICS logic error. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. A CICS background trace of the failure may aid them in problem diagnosis.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxx, xxxx, xxxx*

DFHCA5287 E *date time applid netname tranid* **Extract terminated at user's request. RC=***retcode*

Explanation: A batch job has issued a CSD utility EXTRACT command. The EXTRACT command has been terminated because of a nonzero value in register 15 on return from a user exit program. Subsequent messages indicate any further problems encountered by the utility.

System Action: Execution of the utility command is terminated. This message is followed by DFHCA5104.

User Response: Determine the cause of the error detected by the user exit program, using the return code *retcode* provided and the relevant documentation of the user exit program.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, retcode*

DFHCA5290 W Table *tabtype* **macro** *mactype***=***value* **is not supported. Value is changed to** *newvalue***.**

Explanation: During a table *tabtype* migration for macro *mactype*, *value* is not supported. *value* has been migrated as *newvalue*.

System Action: The utility creates the definition for the resource with the changed value. Normal utility processing continues.

User Response: Review the object definition to ensure that the modified definition is acceptable.

Destination: SYSPRINT

Module: DFHCSDUP

DFHCA5291 E Unable to define object *object* **in group** *group***. Migration is terminated.**

Explanation: The DFHCSDUP migration utility could not define *object* in the *group* specified. The migration cannot continue.

System Action: The utility terminates the migration of the table.

User Response: Verify that the specified group is the correct group and review prior errors to determine why the migration utility could not create the definition in the group.

Destination: SYSPRINT

Module: DFHCSDUP

DFHCA5292 W Object *object* **not defined for table item** *name* **due to previous error. Migration continues.**

Explanation: The DFHCSDUP migration utility could not define *object* for the table item *name*. The migration continues.

During the migration of an RCT, the migration utility issues this message for all DB2TRAN definitions that refer to a DB2ENTRY definition that failed.

System Action: The utility continues the table migration without defining the object.

User Response: Correct the prior errors and manually define the skipped objects.

Destination: SYSPRINT

Module: DFHCSDUP

DFHCA5293 W Total *object* **definitions skipped due to error:** *number*

Explanation: CICS issues this message after migrating a CICS table. *number* definitions of type *object* were not migrated. See one or more DFHCA5292 messages issued prior to this message.

System Action: Utility processing continues.

User Response: Correct the prior errors and manually define the skipped objects.

Destination: SYSPRINT

Module: DFHCSDUP

DFHCA5294 E *number object-1* **were not matched with a corresponding** *object-2***.**

Explanation: CICS issues this message if there are *object-1* table definitions that have not been defined because the table was not defined correctly. *object-1* table definitions must refer to a *object-2* in the table.

System Action: The migration of the table ends.

User Response: Reassemble the table with the current release macro source.

Destination: SYSPRINT

Module: DFHCSDUP

DFHCA5296 W Table *tabtype* **TYPE=***mactype parameter* **does not support multiple values.**

Explanation: Multiple values were specified for TYPE=*mactype parameter* The migration of the *tabtype* table supports only one value.

System Action: The migration utility ignores the additional values. The migration continues.

User Response: Review the migrated definition to ensure that the new single value is acceptable.

Destination: SYSPRINT

Module: DFHCSDUP

DFHCA5501 E *date time applid netname tranid* **Command not executed.** *keyword* **must be specified.**

Explanation: A keyword *keyword*, which is required in the command, has been omitted or was incorrectly specified. An earlier message identifies if the latter case is applicable.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, keyword*

DFHCA5502 W *date time applid netname tranid xxxxxxx* **implies** *yyyyyyy***.**

Explanation: The value *xxxxxxxx* specified in a DEFINE or CREATE command has caused another value *yyyyyyyy*, which is not a normal default, to be assumed.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is acceptable. If you accept this default, no further action is required.

If the resultant default is not acceptable, you must decide whether to modify the definition, or to delete it and start again.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5503 E *date time applid netname tranid* **Command not executed.** *xxxxxxx* **option conflicts with** *yyyyyyy* **option and is ignored.**

Explanation: Two options, *xxxxxxx* and *yyyyyyy*, that are mutually exclusive have been specified.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5504 E *date time applid netname tranid* **Command not executed. Use of** *xxxxxxx* **option implies** *yyyyyyy* **option must be specified.**

Explanation: Option *xxxxxxx* requires another value, *yyyyyyy*.

System Action: The utility ignores the command.

User Response: Specify *yyyyyyy*.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5505 W *date time applid netname tranid* **Program DFHMSP requires a TWASIZE of at least 528.**

Explanation: A DEFINE or CREATE TRANSACTION command for the message switching program, DFHMSP, has given it a TWASIZE of less than 528 bytes. If it is to be a definition for the CICS-supplied program of that name, it will not execute correctly.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5506 E *date time applid netname tranid* **Command not executed. For** *xxxxxxx* **many options, including** *yyyyyyy***, are meaningless.**

Explanation: A keyword or value has been specified that is not consistent with another.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5507 E *date time applid netname tranid* **Command not executed.** *xxxxxxx* **value must be greater than** *yyyyyyy* **value.**

Explanation: A value has been specified that is not consistent with another. *xxxxxxx* must be greater than *yyyyyyy*.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5508 E *date time applid netname tranid* **Command not executed.** *xxxxxxx* **value must be less than or equal to** *yyyyyyy* **value.**

Explanation: A value has been specified that is not consistent with another. The value *xxxxxxx* must be less than or equal to *yyyyyyy*.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5509 E *date time applid netname tranid* **Command not executed.** *xxxxxxx* **name must not be the same as** *yyyyyyy* **name.**

Explanation: Some values in DEFINE or CREATE commands must not be the same as the name of the resource. *xxxxxxx* must not have the same name as *yyyyyyy*.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5510 W *date time applid netname tranid xxxxxxx* **names beginning with** *yyyyyyy* **are reserved and may be redefined by CICS.**

Explanation: CICS supplies standard programs and transactions whose names you should usually avoid.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5511 W *date time applid netname tranid xxxxxxx* **name** *yyyyyyy* **is reserved and may be redefined by CICS.**

Explanation: CICS supplies standard programs and transactions whose names you should usually avoid.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5512 W *date time applid netname tranid* **Program name begins with 'DFH' but transaction name does not begin with 'C'.**

Explanation: CICS supplies standard programs and transactions whose naming conventions you should avoid.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5513 E *date time applid netname tranid* **Command not executed. The second value of** *xxxxxxx* **must not be greater than the first.**

Explanation: Some keywords take pairs of values which are essentially maximum and minimum values.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx*

DFHCA5514 E *date time applid netname tranid* **Command not executed. With SESSNAME there can only be one COUNT and its value must be 1.**

Explanation: The use of SESSNAME in a DEFINE or CREATE SESSIONS command means that a single-session, either for sending or receiving, is required.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5515 W *date time applid netname tranid* **AUTOPAGE(NO) has been specified for a 3270 print device.**

Explanation: A DEFINE or CREATE TYPETERM command has AUTOPAGE(NO) and DEVICE(3270P) or DEVICE(LUTYPE3).

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5516 W *date time applid netname tranid* **The values of DEVICE and SESSIONTYPE are equivalent to DEVICE(***devtype***) and have been replaced.**

Explanation: A DEFINE or CREATE TYPETERM command has a valid but obsolete DEVICE and SESSIONTYPE combination.

This DEVICE and SESSIONTYPE combination has been replaced by a simpler equivalent indicated by *devtype*.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect. The CICS Resource Definition Guide provides further information about device equivalents.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, devtype*

DFHCA5517 E *date time applid netname tranid* **Command not executed.** *prefix* **and COUNT together make more than four characters.**

Explanation: In a SESSIONS definition, the *prefix* parameter (SENDPFX or RECEIVEPFX) is used to generate session names by adding numeric suffixes up to the corresponding count value (SENDCOUNT or RECEIVECOUNT). Since the session names cannot be longer than four characters, when the count of sessions exceeds 99 the prefix can only be one character.

System Action: The command is not executed.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, prefix*

DFHCA5518 W *date time applid netname tranid* **XTRANIDS** *xxxxxxx* **are reserved and may be redefined by CICS.**

Explanation: CICS supplies programs and transactions whose names you should usually avoid.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx*

DFHCA5519 E *date time applid netname tranid* **Command not executed.** *xxxxxxx* **value contains an invalid** ***y*****.**

Explanation: All character values in CREATE and DFHCSDUP commands are subject to rules which, depending on the value, disallow certain characters.

System Action: The utility ignores the command.

User Response: Correct the command.

The CICS Resource Definition Guide provides further information about these rules under the individual attributes for the syntax of the DFHCSDUP command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, y*

DFHCA5520 W *date time applid netname tranid* **The value of DEVICE is equivalent to** *xxxxxxx* **and has been replaced.**

Explanation: A DEFINE or CREATE TYPETERM command has a valid but obsolete DEVICE value which has been replaced by a simpler equivalent.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

The CICS Resource Definition Guide provides further information about these simpler equivalent devices.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx*

DFHCA5521 E *date time applid netname tranid* **Command not executed.** *xxxxxxx* **value** *yyyyyyy* **is invalid.**

Explanation: A value *yyyyyyyy* has been specified for keyword *xxxxxxxx* which is not valid. It may for instance be non-numeric.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5522 E *date time applid netname tranid* **Command not executed. Length of** *xxxxxxx* **value is more than allowed.**

Explanation: A character value in a DEFINE or CREATE command is too long.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx*

DFHCA5523 E *date time applid netname tranid* **Command not executed. File DFHCSD must be defined in the SIT and not the CSD.**

Explanation: DFHCSD has been defined in the CSD rather than in the SIT. This is not allowed.

System Action: The utility ignores the command.

User Response: Correct the command. Define DFHCSD in the SIT.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5524 W *date time applid netname tranid* **BMS route for console may cause unpredictable results if maps or TEXT(ACCUM) used on device.**

Explanation: The routing of multiline maps or accumulated text to the console is not supported.

System Action: Normal processing continues.

User Response: Ensure that the unsupported console operations are disabled.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5525 W *date time applid netname tranid xxxxxxxx* **value is not valid,** *yyyyyyyy* **has been assumed.**

Explanation: The value *xxxxxxxx* is not valid. The value *yyyyyyyy* has been assumed.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx, yyyyyyyy*

DFHCA5526 E *date time applid netname tranid xxxxxxxx* **must have rows and columns specified.**

Explanation: *xxxxxxxx* must have rows and columns specified.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxxx*

DFHCA5527 E *date time applid netname tranid* **Command not executed. Remote options are ignored for programs starting with DFH.**

Explanation: CICS supplies standard programs which are not allowed to have remote attributes.

System Action: The command is ignored.

User Response: Correct the command by deleting the remote attributes from the program definition.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5528 E *date time applid netname tranid* **Command not executed. Value of** *keyword* **is out of valid range.**

Explanation: An invalid value has been supplied for the specified keyword.

System Action: The utility ignores the command.

User Response: Supply a valid keyword value and retry.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, keyword*

DFHCA5529 E *date time applid netname tranid keyword* **or** *keyword* **must be specified.**

Explanation: Neither of the indicated keywords has been specified. When defining a resource, you must specify one of these keywords.

System Action: The utility ignores the command.

User Response: Supply one of the indicated keywords and retry.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, keyword, keyword*

DFHCA5530 W *date time applid netname tranid* **XTRANIDS ending with** *string* **are reserved and may be redefined by CICS.**

Explanation: CICS supplies programs and transactions whose names you should usually avoid in resource definitions.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, string*

DFHCA5531 W *date time applid netname tranid* **XTRANIDS beginning with** *string* **are reserved and may be redefined by CICS.**

Explanation: CICS supplies programs and transactions whose names you should usually avoid in resource definitions.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, string*

DFHCA5532 E *date time applid netname tranid* **Command not executed. An invalid combination of rows and columns has been specified for** *ALTSCREEN***.**

Explanation: One of the specified values is zero and the other is nonzero. This is an invalid combination.

System Action: The utility ignores the command.

User Response: Ensure that a valid combination of ALTSCREEN rows and columns is specified. See the CICS Resource Definition Guide for details of valid combinations.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, ALTSCREEN*

DFHCA5533 W *date time applid netname tranid* **Specified** *keyword1* **value is less than** *keyword2* **value. The default value has been assumed.**

Explanation: A value has been specified for *keyword1* that is incompatible with the value for *keyword2*.

System Action: The utility assumes the default value for *keyword1* and processes the command.

User Response: Ensure that the resulting resource definition is acceptable.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, keyword1, keyword2*

DFHCA5534 W *date time applid netname tranid* **When you change the value of DEVICE many other values may be changed for you.**

Explanation: When ALTERing the DEVICE in a TYPETERM resource definition, the batch update utility changes forced values that are incompatible with the new DEVICE. However, dependent default values are not changed, and may now be incompatible.

System Action: Normal utility processing continues.

User Response: Check that the resulting resource definition is as you expect. See the *CICS Resource Definition Guide* for more guidance.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5535 E *date time applid netname tranid* **Command not executed.** *restype* **name** *resname* **is reserved by CICS.**

Explanation: The user specified a resource name *resname* for resource type *restype* which is reserved for use by CICS.

System Action: The utility ignores the command.

User Response: Specify a different resource name.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, restype, resname*

DFHCA5536 W *date time applid netname tranid keyword1* **and** *keyword2* **attributes are inconsistent if definition is being shared with a back-level release.**

Explanation: *keyword1* has been preceded by *keyword2*. However, *keyword1* has been kept for compatibility reasons. After updating or creating the resource, the value specified for *keyword1* has become inconsistent with the value specified for *keyword2*.

System Action: The resource is created or updated.

User Response: If sharing the resource with a back level release, ensure that the resulting resource definition is acceptable. Otherwise, ignore the message.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, keyword1, keyword2*

DFHCA5537 W *date time applid netname tranid* **Prefix allowed to default. Use of defaults is recommended for MRO sessions only.**

Explanation: A null value has been accepted for a send or receive prefix for an LU6.1 or MRO session. The default value '>' is supplied by CICS for send sessions and '<' for receive sessions. These values are the default prefixes for MRO session names. The use of these prefixes is allowed for LU6.1 sessions, but is not recommended if MRO session names with the same prefixes are in use, because duplicate names may occur if large numbers of sessions are defined.

System Action: CICS generates session names using these prefixes.

User Response: If this is an LU6.1 session, it is recommended that a different prefix should be chosen.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5538 W *date time applid netname tranid resource* **names starting with** *x* **may conflict with system sessions names.**

Explanation: The resource *resource* has been given a name starting with the character *x*, which might be used for system-generated SESSIONS names.

System Action: The definition is created or updated.

User Response: Ensure there is no conflict with the name given to the resource and SESSIONS names.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, x*

DFHCA5539 S *date time applid netname tranid keyword* **is not valid because it starts with the reserved character or string** *string***.**

Explanation: The name you have given to keyword *keyword* is not valid because the name begins with a reserved character or string such as “C” or “DFH”.

System Action: The definition is not created.

User Response: Change the name of the keyword.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, keyword, string*

DFHCA5540 W *date time applid xxxxxxx* **value is greater than** *yyyyyyy* **value. The lower value takes precedence.**

Explanation: A value has been specified that is not consistent with another. The value *xxxxxxx* is greater than value *yyyyyyy*. Value *yyyyyyy* takes precedence and overrides the higher value.

System Action: The definition is created or updated with the two values as specified.

User Response: Ensure that the two values are defined as you expect. You may decide to leave the values as specified and dynamically change the values online once the resource has been installed in the CICS system.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, xxxxxxx, yyyyyyy*

DFHCA5542 E *date time applid netname tranid* **Command not executed.** *xxxxxxx* **and** *yyyyyyy* **must be the same length.**

Explanation: Two options, *xxxxxxx* and *yyyyyyy*, have been specified but the length of the respective operands must be the same.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5543 E *date time applid netname tranid* **Command not executed. Generic characters must be in the same position in** *xxxxxxx* **and** *yyyyyyy***.**

Explanation: Two options, *xxxxxxx* and *yyyyyyy*, have been specified containing generic characters. The generic characters must be placed in the same position for both keywords.

System Action: The utility ignores the command.

User Response: Correct the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, xxxxxxx, yyyyyyy*

DFHCA5600 E *date time applid netname tranid* **Unable to get storage for module DFHCICS. Primary CSD not initialized.**

Explanation: There is insufficient storage to load module DFHCICS.

System Action: Processing of the INITIALIZE command is terminated.

User Response: Ensure that there is sufficient storage to load the DFHCICS module.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5601 E *date time applid netname tranid* **Unable to load the** *tabletype* **table named** *table***.**

Explanation: Table *table* cannot be loaded.

System Action: The system action depends on the type of table.

LD

DFHCSDUP cannot process the command. The utility attempts to:

1. Close any files previously opened internally.
2. Unload any EXTRACT exit routines that were dynamically loaded.
3. Invoke the termination exit routine, if supplied.
4. Return control to the invoker of the utility.

FCT or RDT

The CSD utility cannot load the table, and terminates the processing of the utility command.

User Response: Refer to the preceding MVS message which should specify the reason for the failure.

If your FCT or TCT assembly and link-editing is successful, the FCT or RDT should be in the library. The LD is in the load library of the supplied pregenerated CICS system.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, tabletype, table*

DFHCA5602 E *date time applid netname tranid* **Unable to unload the** *tabletype* **table named** *table***.**

Explanation: Table *table* cannot be unloaded.

System Action: The system action depends on the type of table.

LD

DFHCSDUP cannot process the command. The utility attempts to:

1. Close any files previously opened internally.
2. Unload any EXTRACT exit routines that were dynamically loaded.
3. Invoke the termination exit routine, if supplied.
4. Return control to the invoker of the utility.

FCT or RDT

The CSD utility cannot unload the table, and terminates the processing of the utility command.

User Response: Refer to the preceding MVS message which should specify the reason for the failure.

If your FCT or TCT assembly and link-editing is successful, the FCT or RDT should be in the library. The LD is in the load library of the supplied pregenerated CICS system.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, tabletype, table*

DFHCA5603 E *date time applid netname tranid* **Unable to locate the** *tabletype* **table named** *table***.**

Explanation: Table *table* cannot be located.

System Action: The system action depends on the type of table specified.

LD

DFHCSDUP cannot process the command. The utility attempts to:

1. Close any files previously opened internally.
2. Unload any EXTRACT exit routines that were dynamically loaded.
3. Invoke the termination exit routine, if supplied.
4. Return control to the invoker of the utility.

FCT, RDT or DCT

The CSD utility cannot locate the table, and terminates the processing of the utility command.

User Response: Determine the reason for the failure.

If your FCT, TCT or DCT assembly and link-editing is successful, the FCT, RDT or DCT should be in the library. The LD is in the load library of the supplied pregenerated CICS system.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, tabletype, table*

DFHCA5604 E *date time applid netname tranid* **Unable to obtain storage for the cross-reference table named** *table***.**

Explanation: DFHCSDUP was unable to obtain storage for table *table*.

System Action: DFHCSDUP cannot process the command.

If commands are being read from a SYSIN data stream, subsequent commands (except LIST) are checked for syntax only. (If the primary CSD file cannot be opened, LIST is not processed either.)

If commands are being read from a get-command exit, DFHCSDUP attempts to process subsequent commands.

User Response: Increase the region size and retry the command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, table*

DFHCA5605 E *date time applid netname tranid* **Disallowed character in group or list name** *object***.**

Explanation: The call to module DFHDMP has failed to construct a valid key for the record created on the CSD file. This is because the group or list name contains an invalid character.

System Action: A CSD record is not created for this definition. (If it is a transaction, a generated profile is not created either.)

User Response: Use the CEDA transaction to define the resource with a valid name.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, object*

DFHCA5606 S *date time applid netname tranid* **Command is not executed. Unable to load the service module** *progname***.**

Explanation: The service module, *progname*, cannot be loaded due to insufficient storage.

System Action: Utility command execution is terminated. If commands are being read from a SYSIN data stream by the utility, subsequent commands are checked for syntax only.

User Response: Retry the utility command with an increased region size.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, progname*

DFHCA5607 S *date time applid netname tranid* **Command is terminated. An error occurred while reading the first secondary CSD record.**

Explanation: An I/O error has occurred on the secondary CSD file.

System Action: The SERVICE command is terminated. If commands are being read from a SYSIN data stream by the utility, subsequent commands are checked for syntax only.

User Response: Check that the input and output data sets have been correctly defined, and that the DDNAME for the secondary CSD file in the JCL corresponds to the FROMCSD parameter in the SERVICE utility command.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5608 S *date time applid netname tranid* **Command is terminated. Error occurred while reading a secondary CSD record.**

Explanation: An I/O error has occurred on the secondary CSD file.

System Action: The SERVICE command is terminated. If commands are being read from a SYSIN data stream by the utility, subsequent commands are checked for syntax only.

User Response: Check that the input and output data sets have been correctly defined, and that the DDNAME for the secondary CSD file in the JCL corresponds to the FROMCSD parameter in the SERVICE utility command.

If the problem persists, try to obtain a print out of the CSD, using either IDCAMS or the DFHCSDUP LIST ALL option. The LIST indicates where errors have occurred because they will not print and are therefore easily identifiable.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5609 S *date time applid netname tranid* **Command is terminated. Error occurred while writing a primary CSD record.**

Explanation: An I/O error has occurred on the primary CSD file.

System Action: The SERVICE command is terminated. If commands are being read from a SYSIN data stream by the utility, subsequent commands are checked for syntax only.

User Response: Retry the command, ensuring that a sufficiently large data set is specified for the output (primary) CSD file.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5611 E *date time applid netname tranid* **Command not executed. '***parameter***' parameter must begin with 'DFH'.**

Explanation: In a CSD utility MIGRATE command, the specified parameter contained an invalid table name or group name.

System Action: The utility does not process the command.

User Response: Resubmit the MIGRATE command with a valid table name or group name.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, parameter*

DFHCA5612 I *date time applid netname tranid resource object* **in group** *grpname* **is unchanged.**

Explanation: A resource definition existed in both source and target groups. Based on the CSD utility commands submitted, the utility has replaced the resource definition in the target group.

System Action: Normal utility processing continues.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, resource, object, grpname*

DFHCA5613 E *date time applid netname tranid* **Unable to locate the library member** *member***.**

Explanation: The member is not in the libraries named in the JCL.

System Action: The utility terminates processing of the command that required access to library member *member*.

User Response: Ensure that the member is correctly link-edited into the library and resubmit the job.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, member*

DFHCA5614 E *date time applid netname tranid* **Unable to load the library member** *member***.**

Explanation: DFHCSDUP could not load library member *member*.

System Action: The utility terminates processing of the command that required access to the library member.

User Response: Ensure that the member is correctly link-edited into the library and resubmit the job.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, member*

DFHCA5617 S *date time applid netname tranid* **Command is terminated. Unrecognised type of record encountered while secondary CSD was being read.**

Explanation: The record-type field of an input CSD record is invalid.

System Action: The SERVICE command is terminated. If commands are being read from a SYSIN data stream by the utility, subsequent commands are checked for syntax only.

User Response: Check that the input and output data sets have been correctly defined, and that the DDNAME for the secondary CSD file in the JCL corresponds to the FROMCSD parameter in the SERVICE utility command.

If the problem persists, try to obtain a print out of the CSD, using either IDCAMS or the DFHCSDUP LIST ALL option. The LIST indicates where errors have occurred because they will not print and are therefore easily identifiable.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5618 I *date time applid netname tranid* **An attention interrupt was requested during DFHCSDUP execution.**

Explanation: An attention interrupt has been requested while DFHCSDUP is executing in a TSO environment.

System Action: Normal utility processing continues.

Control is passed to a put-message exit if one has been specified on the extended entry linkage. Refer to the CICS Customization Guide for more information about put-message exits.

User Response: None.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5619 W *date time applid netname tranid* **An invalid value of the PAGESIZE parameter has been specified. The default value of 60 lines per page will be used.**

Explanation: A value of the PAGESIZE parameter outside the allowed range (4–9999) has been specified.

System Action: The default value of 60 lines per page is taken.

User Response: Ensure that a valid PAGESIZE value is specified in future.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5620 E *date time applid netname tranid* **An illegal return code (RC=***ret-code***) has been returned from the** *exit* **exit.**

Explanation: The specified user-exit routine has returned a disallowed return code.

System Action: Processing of the utility command is terminated. The exit is not disabled.

User Response: Investigate the specified exit routine for the cause of the return code.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid, ret-code, exit*

DFHCA5621 E *date time applid netname tranid* **A non-zero return code has been returned from the put-message exit.**

Explanation: The put-message exit routine has returned a disallowed return code.

System Action: Processing of the utility command is terminated and the put-message exit is disabled.

User Response: Investigate the put-message exit routine for the cause of the return code.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5622 S *date time applid netname tranid* **The secondary CSD has been closed during clean-up processing following the interception of an abend.**

Explanation: An abend has occurred during DFHCSDUP processing. The secondary CSD has been closed during post-ABEND cleanup processing.

System Action: Processing of the utility command is terminated.

User Response: Refer to prior messages for further information regarding this problem.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5623 S *date time applid netname tranid* **The primary CSD has been closed during clean-up processing following the interception of an abend.**

Explanation: An abend has occurred during DFHCSDUP processing. The primary CSD has been closed during post-ABEND cleanup processing.

System Action: Processing of the utility command is terminated.

User Response: Refer to prior messages for further information regarding this problem.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5624 S *date time applid netname tranid* **The extract exit program has been unloaded during clean-up processing following the interception of an abend.**

Explanation: An abend has occurred during the processing of an EXTRACT command. The extract exit program specified on the USERPROGRAM keyword of the EXTRACT utility command has been unloaded during post-ABEND cleanup processing.

System Action: The EXTRACT command is terminated.

User Response: Refer to prior messages for further information regarding the problem.

Destination: CSMT

Module: DFHCAP

XMEOUT Parameters: *date, time, applid, netname, tranid*

DFHCA5630 W *date time applid* **No IBM supplied definition found for** *resourcetype resourcename***.**

Explanation: While performing a SCAN command, the named resource type was not found in the CSD file on any of the IBM supplied groups. Note that compatibility groups are not used for the SCAN command.

System Action: The utility continues.

User Response: None.

Destination: CSMT

Module: DFHCSDUP

XMEOUT Parameters: *date, time, applid, resourcetype, resourcename*

DFHCA5631 I *date time applid resourcetype resourcename* **in group** *groupname1* **matches the IBM supplied definition in group** *groupname2***.**

Explanation: While performing a SCAN command, the resource *resourcetype* name *resourcename* was found in group *groupname1* and it matches the IBM supplied definition in group *groupname2*.

System Action: The utility continues.

User Response: None.

Destination: CSMT

Module: DFHCSDUP

XMEOUT Parameters: *date, time, applid, resourcetype, resourcename, groupname1, groupname2*

DFHCA5632 I *date time applid resourcetype resourcename* **in group** *groupname1* **does not match the IBM supplied definition in group** *groupname2***.**

Explanation: While performing a SCAN command, the resource *resourcetype* name *resourcename* was found in group *groupname1* and it does not match the IBM supplied definition in group *groupname2*.

System Action: The utility continues.

User Response: None.

Destination: CSMT

Module: DFHCSDUP

XMEOUT Parameters: *date, time, applid, resourcetype, resourcename, groupname1, groupname2*

DFHCA5633 I *date time applid resourcetype resourcename* **found in group** *groupname***.**

Explanation: While performing a SCAN command, the resource *resourcetype* name *resourcename* was found in group *groupname*. No IBM supplied definition was found to perform a compare against.

System Action: The utility continues.

User Response: None.

Destination: CSMT

Module: DFHCSDUP

XMEOUT Parameters: *date, time, applid, resourcetype, resourcename, groupname*

DFHCA5634 W *date time applid resourcetype resourcename* **not found in user groups.**

Explanation: While performing a SCAN command, the resource *resourcetype* name *resourcename* was not found in any user groups.

System Action: The utility continues.

User Response: None.

Destination: CSMT

Module: DFHCSDUP

XMEOUT Parameters: *date, time, applid, resourcetype, resourcename*

DFHCCxxxx messages

DFHCC0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in the** *{local | global}* **catalog, module** *modname*

Explanation: An abnormal end (abend) or program check has occurred in module *modname* and will have occurred in either the local (DFHLCD) or the global (DFHGCD) catalog domains. This implies that there may be an error in CICS code.

Alternatively,

- Unexpected data has been input, or
- Storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: An exception entry is made in the trace table, provided that trace is available at this time. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Then look up the CICS alphanumeric code in this manual. This will tell you, for example, whether the error was a program check, an abend, a runaway or a recovery percolation, and may give you some guidance concerning user response.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHCCCC, DFHCCDM

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', {1=local, 2=global}, modname*

DFHCC0004 *applid* **A possible loop has been detected in the** *{local | global}* **catalog at offset** *X'offset'* **in module** *modname*

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHCCDM, DFHCCCC

XMEOUT Parameters: *applid, {1=local, 2=global}, X'offset', modname*

DFHCC0100 *applid* **Global Catalog initialization failure.** *{GENERATE ACB | OPEN ACB | GENERATE RPL | OPEN, SHOWCB.}* **R15 = X'***yy***' VSAM error code = X'** *zz***'**

Explanation: A VSAM error has occurred during global catalog initialization.

The VSAM codes given are explained in the *VSAM Programmer's Guide, GC26-3838*.

The possible versions of this message include the text

- "GENERATE ACB".
- "GENERATE RPL".

  The GENCB failed with the R15 condition given in X'*yy*'.

  The X'*zz*' code is only meaningful if X'*yy*' is X'04' when: X'*zz*' is the error code returned by VSAM Register 0 in response to a GENCB macro.
- "OPEN ACB".

  OPEN has failed with the R15 condition code X'*yy*'. This was followed by a successful SHOWCB which has placed the OPEN error code into X'*zz*'. Also see the message that VSAM writes to the operator console and programmer's listing.
- "OPEN, SHOWCB".

  OPEN has failed with the R15 condition code X'*yy*'.

  This was followed by a SHOWCB which failed, and the R0 return code from the SHOWCB is given in X'*zz*'. Also see the message that VSAM writes to the operator console and programmer's listing.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: A system dump is produced, then CICS is terminated.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Look up the error codes in the *VSAM Programmer's Guide*, correct it then retry.

If this fails, notify the system programmer. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHCCDM

XMEOUT Parameters: *applid, {1=GENERATE ACB, 2=OPEN ACB, 3=GENERATE RPL, 4=OPEN, SHOWCB.}, yy, zz*

DFHCC0101 LOCAL CATALOG INITIALIZATION ERROR. *{GENERATE ACB | OPEN ACB | GENERATE RPL | OPEN, SHOWCB.}***R15 = X'***yy***' VSAM ERROR CODE = X'***zz***'**

Explanation: A VSAM error has occurred during local catalog initialization.

The VSAM codes given are explained in the *VSAM Programmer's Guide, GC26-3838*.

The possible versions of this message include the text

- "GENERATE ACB".
- "GENERATE RPL".

  The GENCB failed with the R15 condition given in X'*yy*'.

  The X'*zz*' code is only meaningful when X'*yy*' is X'04' when: X'*zz*' is the error code returned by VSAM Register 0 in response to a GENCB macro.
- "OPEN ACB".

  OPEN has failed with the R15 condition code X'*yy*'. This was followed by a successful SHOWCB which has placed the OPEN error code into X'*zz*'. Also see the message that VSAM writes to the operator console and programmer's listing.
- "OPEN, SHOWCB".

  OPEN has failed with the R15 condition code X'*yy*'.

  This was followed by a SHOWCB which failed, and the R0 return code from the SHOWCB is given in X'*zz*'. Also see the message that VSAM writes to the operator console and programmer's listing.

System Action: A system dump is produced, then CICS is terminated.

User Response: Look up the error codes in the *VSAM Programmer's Guide*, correct it then retry. If this fails, notify the system programmer.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCCDM

DFHCC0102 *applid* **Global Catalog data set is already in use.**

Explanation: The VSAM error reported in the previous DFHCC0100 message suggests that the global catalog is already being used, possibly by another CICS region. The global catalog data set cannot be shared.

System Action: CICS is terminated.

User Response: Ensure that the DFHGCD DD statement for this CICS specifies a different global catalog data set from any CICS job that is already running.

If CICS still fails, notify the system programmer. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHCCDM

XMEOUT Parameter: *applid*

DFHCC0103 LOCAL CATALOG DATA SET IS ALREADY IN USE.

Explanation: The VSAM error reported in the previous DFHCC0101 message suggests that the local catalog is already being used, possibly by another CICS region. The local catalog data set cannot be shared.

System Action: CICS is terminated.

User Response: Ensure that the DFHLCD DD statement for this CICS specifies a different local catalog data set from any CICS job that is already running.

If CICS still fails, notify the system programmer. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCCDM

DFHCC0104 AN ABEND HAS OCCURRED DURING INITIALIZATION OF CATALOG DOMAIN IN MODULE DFHCCDM.

Explanation: DFHCCDM's recovery routine received control during pre-initialization of the local catalog (CC) domain.

System Action: A system dump with dump code KERNDUMP is taken and CICS terminates.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCCDM

DFHCC0200 *applid* **VSAM error on the** *{local | global}* **catalog data set. VSAM return code in R15 = X'***yy***' RPL-FDBK=X'***zz***'.**

Explanation: A catalog VSAM operation has produced the VSAM error given.

An exception trace, code CC 2B60 or GC 2B60 has also been made.

System Action: A system dump is produced, then CICS is terminated. This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If possible, correct the VSAM error and restart CICS. For the meaning of the return codes, refer to the *VSAM Programmer's Guide GC26-3838*.

Inform the system programmer because this indicates a possible error in CICS code. You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHCCCC

XMEOUT Parameters: *applid, {1=local, 2=global}, yy, zz*

DFHCC0201 VSAM ERROR ON THE LOCAL CATALOG DATA SET, VSAM RETURN CODE IN R15 = X'*yy***' FDBK=X'***zz***'.**

Explanation: A local catalog VSAM operation has produced the VSAM error given.

An exception trace, code CC 2B60 or GC 2B60 has also been made.

System Action: A system dump is produced then CICS is terminated. This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

User Response: If possible correct the VSAM error and restart CICS. For the meaning of the return codes, refer to the *VSAM Programmer's Guide GC26-3838*.

Inform the system programmer as this indicates a possible error in CICS code. You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCCCC

DFHCC0202 *applid* **The** *{local | global}* **catalog has started to use new secondary space allocation.**

Explanation: Secondary space may be specified when the catalog data sets DFHLCD and DFHGCD are defined. This message is issued when the catalog starts using an additional space allocation.

See the *CICS System Definition Guide* for more information on controlling CICS storage.

System Action: An exception entry is made in the trace table, provided that trace is available at this time.

User Response: There are two possibilities.

- The system is in a loop which involves calls to the catalog to write onto the catalog data set. This is the most likely cause if the system suddenly starts to produce this message repeatedly.
- Insufficient primary space was allocated for the catalog when it was defined. This is the most likely cause if this message is produced either:
  - during or shortly after CICS initialization, or
  - this message is only produced infrequently (and only a few are ever produced).

Look for any other symptoms of possible looping, and act accordingly. If looping has occurred then the system programmer should redefine the catalog during the next CICS initial start.

If CICS was not looping then notify the system programmer, who should increase the primary space allocated for this data set during the next CICS initial start.

Destination: Console

Module: DFHCCCC

XMEOUT Parameters: *applid, {1=local, 2=global}*

DFHCC0203 *applid* **The** *{local | global}* **catalog is full.**

Explanation: The specified catalog data set (DFHLCD or DFHGCD) is full. There are two possible reasons for this error:

- The system is in a loop which involves calls to the catalog to write onto the catalog data set.
- Insufficient primary space was allocated for the catalog when it was defined. This is the most likely cause if this message is issued during or shortly after CICS initialization.

System Action: If the error occurs during initialization, a system dump is produced then CICS is terminated. If the error occurs after initialization, the domain invoking the catalog services will decide what action is appropriate.

User Response: Check for any other symptoms of looping and act accordingly.

If CICS is not looping, notify the system programmer who should increase the primary space allocated for this data set during the next CICS initial start.

If CICS is looping, this indicates an error in CICS code. You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHCCCC

XMEOUT Parameters: *applid, {1=local, 2=global}*

DFHCC0300 DFHCCUTL ERROR REPORT. ERROR {OPENING DFHLCD.|WRITING TO DFHLCD. R15 = X'*yy***' VSAM RPL FEEDBACK CODE = X'***zz***'.}**

Explanation: The initialization of the local catalog data set, DFHLCD, has failed for the reasons given in the resulting job output.

System Action: Job terminates.

User Response: For the meaning of the VSAM codes, refer to the *VSAM Programmer's Guide GC26-3838*.
Correct cause of error indicated and retry.

DFHCExxxx messages

DFHCE3500 Unable to interpret keyword data. Sign-on is terminated.

Explanation: The keyword data supplied when invoking the sign on transaction is invalid.

System Action: Signon terminates.

User Response: Use the correct format to invoke the sign on transaction. The correct format is:

```
CESN USERID=userid,GROUPID=groupid,
     PS=password,NEWPS=new_password,
     LANGUAGE=language_code
```

See the *CICS Supplied Transactions* manual.

Destination: Terminal End User

Module: DFHSNP

DFHCE3501 Invalid keyword. Sign-on is terminated.

Explanation: The keyword which was entered was invalid.

System Action: The sign on transaction terminates.

User Response: Use a valid character keyword within the range 1-8.

Destination: Terminal End User

Module: DFHSNP

DFHCE3502 Your userid must be 1-8 characters. Sign-on is terminated.

Explanation: The value of the USERID keyword has less than 1 or more than 8 characters.

System Action: Sign on terminates.

User Response: Use a valid userid.

Destination: Terminal End User

Module: DFHSNP

DFHCE3503 Your password must be 1-8 characters. Sign-on is terminated.

Explanation: The value of the PS keyword has less than 1 or more than 8 characters.

System Action: Sign on terminates.

User Response: Use a valid password.

Destination: Terminal End User

Module: DFHSNP

DFHCE3504 Your new password must be 1-8 characters. Sign-on is terminated.

Explanation: The value of the NEWPS keyword has less than 1 or more than 8 characters.

System Action: Signon terminates.

User Response: Use a valid new password.

Destination: Terminal End User

Module: DFHSNP

DFHCE3506 Your groupid must be 1-8 characters. Sign-on is terminated.

Explanation: The value of the GROUPID keyword has less than 1 or more than 8 characters.

System Action: Signon terminates.

User Response: Use a valid group name.

Destination: Terminal End User

Module: DFHSNP

DFHCE3507 Your language code must be three characters. Sign-on is terminated.

Explanation: The value of the LANGUAGE keyword is not a three-letter code.

System Action: Signon terminates.

User Response: Use a valid language code.

Destination: Terminal End User

Module: DFHSNP

DFHCE3520 Please type your userid.

Explanation: The system requests a userid.

System Action: None.

User Response: Enter your userid.

Destination: Terminal End User

Module: DFHSNP

DFHCE3521 CICS sign-on. Please type your userid.

Explanation: The system requests a userid.

System Action: The system waits for a response.

User Response: Enter your userid.

Destination: Terminal End User

Module: DFHSNP

DFHCE3522 CICS sign-on. Please type your userid==>

Explanation: The system requests a userid.

System Action: The system waits for a response.

User Response: Enter your userid.

Destination: Terminal End User

Module: DFHSNP

DFHCE3523 Please type your password.

Explanation: The system requests a password.

System Action: The system waits for a response.

User Response: Enter your password.

Destination: Terminal End User

Module: DFHSNP

DFHCE3524 Please type your password==>@@@@@@@@

Explanation: The system requests a password. *@@@@@@@@* represents a character string provided by CICS to prevent the password being seen.

System Action: The system waits for a response.

User Response: Enter your password.

Destination: Terminal End User

Module: DFHSNP

DFHCE3525 Your password has expired. Please type your new password.

Explanation: The system requires a new password.

System Action: The system waits for a response.

User Response: Enter a new password.

Destination: Terminal End User

Module: DFHSNP

DFHCE3526 Your password has expired. Please type your new password==>@@@@@@@@

Explanation: The system requests a new password. *@@@@@@@@* represents a character string provided by CICS to prevent the new password being seen.

System Action: The system waits for a response.

User Response: Enter a new password.

Destination: Terminal End User

Module: DFHSNP

DFHCE3527 Use your magnetic (OPID) card or press ENTER to cancel.

Explanation: A magnetic card is required.

System Action: The system waits for an opid (magnetic) card.

User Response: Supply badge or terminate transaction.

Destination: Terminal End User

Module: DFHSNP

DFHCE3528 Signon failed during SECLABEL checking.

Explanation: The signon request has failed because the external security manager (ESM) detected a critical error.

System Action: The signon transaction terminates.

User Response: Refer to message DFHSN1108 on the CSCS log for the information and actions necessary to resolve this problem.

Destination: Terminal End User

Module: DFHSNP

DFHCE3529 The ESM is currently not accepting signons. Please try later.

Explanation: The signon request has failed because the external security manager (ESM) was in a tranquil state. When in a tranquil state, only signons from special users are accepted.

System Action: The sign on transaction terminates.

User Response: The ESM has probably been put into a tranquil state to allow for ESM database maintenance. Determine whether maintenance is currently occurring and how long it will take. When maintenance is finished the tranquil state should be removed from the ESM which will allow you to sign on to CICS. If the ESM has not been put into a tranquil state then, refer to message DFHSN1108 on the CSCS log for the information and actions necessary to resolve this problem.

Destination: Terminal End User

Module: DFHSNP

DFHCE3530 Your userid is invalid. Please retype.

Explanation: Your userid is invalid.

The system requests a userid.

System Action: The system waits for a response.

User Response: Enter a valid userid.

Destination: Terminal End User

Module: DFHSNP

DFHCE3531 Your userid is invalid. Please retype==>

Explanation: Your userid is invalid.

The system requests a userid.

System Action: The system waits for a response.

User Response: Enter a valid userid.

Destination: Terminal End User

Module: DFHSNP

DFHCE3532 Your password is invalid. Please retype.

Explanation: The password entered was invalid.

System Action: The system waits for a response.

User Response: Enter a valid password.

Destination: Terminal End User

Module: DFHSNP

DFHCE3533 Your password is invalid. Please retype==>@@@@@@@@

Explanation: The password entered was invalid.

System Action: The system waits for a response.

User Response: Enter a valid password.

Destination: Terminal End User

Module: DFHSNP

DFHCE3534 Your new password is invalid. Please retype.

Explanation: The new password entered was invalid.

System Action: None.

User Response: Enter a valid password.

Destination: Terminal End User

Module: DFHSNP

DFHCE3535 Your new password is invalid. Please retype==>@@@@@@@@

Explanation: The new password entered was invalid.

System Action: The system waits for a response.

User Response: Enter a valid password.

Destination: Terminal End User

Module: DFHSNP

DFHCE3536 Invalid OPID. Please enter a valid card or press ENTER to cancel.

Explanation: The OPID entered is invalid.

System Action: The system waits for a response.

User Response: Enter a valid card or press ENTER to cancel the signon.

Destination: Terminal End User

Module: DFHSNP

DFHCE3537 Language is invalid. Please retype.

Explanation: The language code entered is invalid.

System Action: The system waits for a response.

User Response: Enter a valid language code.

Destination: Terminal End User

Module: DFHSNP

DFHCE3538 Language is invalid. Please retype==>

Explanation: The language code entered is invalid.

System Action: The system waits for a response.

User Response: Enter a valid language code.

Destination: Terminal End User

Module: DFHSNP

DFHCE3539 Please reenter the new password for verification.

Explanation: You have entered a new password in the new password field and you are now being prompted to reenter the same password to assure yourself of the new password data.

System Action: The system waits for a response.

User Response: Reenter the new password in the password field.

Destination: Terminal End User

Module: DFHSNP

DFHCE3541 Security interface error (*rc*). Sign-on is terminated.

Explanation: An error has been detected in an external security manager. *rc* is the return code from the external security manager.

System Action: Signon terminates.

User Response: For a RACF signon, *rc* is the return code from the RACINIT macro. See the appropriate RACF manual for details of the macro return codes. The return codes are macro specific.

Destination: Terminal End User

Module: DFHSNP

DFHCE3542 Sign-on is not allowed at this terminal. Your sign-on is ignored.

Explanation: The sign on transaction cannot be executed at the current terminal for one of the following reasons:

- The terminal is defined with a preset userid that cannot be changed by signing on
- The terminal is a surrogate of a terminal in another CICS region, but the sign on transaction is not executing within a session established by the CRTE transaction.

System Action: The sign on transaction terminates.

User Response: Do not use the sign on transaction at this terminal.

Destination: Terminal End User

Module: DFHSNP

DFHCE3543 You have cancelled your sign-on request. Sign-on is terminated.

Explanation: The user has pressed ENTER when an OPID card was requested or has entered PF3 on a 3270 terminal device.

System Action: The sign on transaction terminates.

User Response: Retry the sign on procedure.

Destination: Terminal End User

Module: DFHSNP

DFHCE3544 Terminal authorization failed. Sign-on is terminated.

Explanation: RACF has responded to a security request with 'Terminal not authorized' and RACF response code X'30'.

System Action: The sign on transaction terminates.

User Response: Inform the systems programmer, who should refer to message DFHSN1118 on the CSCS log for the relevant information and actions necessary to resolve this problem.

Destination: Terminal End User

Module: DFHSNP

DFHCE3545 Application authorization failed. Sign-on is terminated.

Explanation: RACF has responded to a security request with 'Application not authorized' and RACF response code X'34'.

System Action: The sign on transaction terminates.

User Response: Inform the systems programmer, who should refer to message DFHSN1119 on the CSCS log for the relevant information and actions necessary to resolve this problem.

Destination: Terminal End User

Module: DFHSNP

DFHCE3546 Your signon *{userid | group access}* has been revoked. Signon is terminated.

Explanation: The response from RACF indicates that either the userid that you use to signon to CICS, or your access to the RACF group that contains it, has been revoked by the system.

System Action: The signon transaction terminates.

User Response: Contact your RACF administrator, who can re-authorize the revoked user ID.

Destination: Terminal End User

Module: DFHSNP

DFHCE3547 Security is not active. Sign-on cannot be performed.

Explanation: A request to sign on to the CICS system was rejected because the CICS security system was not active.

A user can only sign on to CICS when CICS security is active.

The CICS security system is activated using the system initialization parameter SEC=YES.

System Action: The sign on transaction terminates.

User Response: None.

Destination: Terminal End User

Module: DFHSNP

DFHCE3548 *date time applid* **Critical error has occurred in DFHSNP. Codes:** *1*,*2*,*3*,*4*,*5***.**

Explanation: The sign on program, DFHSNP, is abnormally terminated due to a critical error.

The five codes indicate the cause of the error and where the error occurred.

Code 1 is an abend code. It can be one of ASNA, ASNB or ASNC.

Codes 2, 3, 4 and 5 are codes which help IBM to identify the source of the error. They are id_location, EIBFRCODE, EIBRESP and EIBRESP2.

System Action: DFHSNP is abnormally terminated with a transaction dump.. Message DFHAC2206 is normally issued, but if no terminal is associated with the task, DFHAC2236 may be issued instead.

User Response: Refer to message DFHAC2206 or DFHAC2236. If DFHAC2236 has been issued, the absence of a terminal is probably the reason for the abend.

Use the abend code given in the message to determine the reason for the error and the course of action to take. This enables you to determine whether the abend was caused by user error or by an error in CICS code. (An error in CICS code is signalled by abend code ASNA.)

If you suspect an error in CICS code, you need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHSNP

XMEOUT Parameters: *date, time, applid, 1, 2, 3, 4, 5*

DFHCE3549 Sign-on is complete (Language *language***).**

Explanation: The user has successfully signed on to the CICS system.

System Action: CICS is ready to receive user transactions.

User Response: Use terminal as required for CICS transactions.

Destination: Terminal End User

Module: DFHSNP

DFHCE3550 Sign-off option must be LOGOFF or GOODNIGHT. Sign-off is ignored.

Explanation: An option other than LOGOFF|GOODNIGHT was detected.

System Action: The sign-off transaction terminates.

User Response: Specify the correct option when invoking sign-off.

Destination: Terminal End User

Module: DFHSFP

DFHCE3551 *date time applid termid* **DFHSNP has detected an invalid COMMAREA. It has been ignored. The data is lost.**

Explanation: While processing a CESN transaction DFHSNP was passed a commarea that was not its own. This may be the result of an application issuing the EXEC CICS RETURN TRANSID(...) COMMAREA(...) with a *transid* of nulls (X'00000000'). This could be because the pointer to the *transid* is incorrectly set up or may be part of the system design.

System Action: DFHSNP continues with CESN transaction processing.

User Response: Investigate whether this message is issued validly as part of the system design, in which case the message can be ignored, or is an error. Investigate the previous transaction at this terminal.

Destination: CSMT

Module: DFHSNP

XMEOUT Parameters: *date, time, applid, termid*

DFHCE3560 Sign-off is not allowed at this terminal. Sign-off is ignored.

Explanation: The sign-off transaction cannot be executed at the current terminal for one of the following reasons:

- The terminal is defined with a preset userid that cannot be changed by signing off
- The terminal is a surrogate of a terminal in another CICS region, but the sign-off transaction is not executing within a session established by the CRTE transaction.

System Action: The sign-off transaction terminates.

User Response: Do not use the sign-off transaction at this terminal.

Destination: Terminal End User

Module: DFHSFP

DFHCE3570 Your groupid is invalid. Please retype.

Explanation: Your group identifier is invalid.

The system requests a group identifier.

System Action: The system waits for a response.

User Response: Enter a valid group identifier.

Destination: Terminal End User

Module: DFHSNP

DFHCE3571 Your groupid is invalid. Please retype==>

Explanation: Your group identifier is invalid.

The system requests a group identifier.

System Action: The system waits for a response.

User Response: Enter a valid group identifier.

Destination: Terminal End User

Module: DFHSNP

DFHCE3587 You cannot signon at this terminal at this time.

Explanation: You cannot signon at this terminal at this time. The SNSCOPE initialization parameter disallows signon to more than one terminal at a time. An internal failure during SNSCOPE checking means that CICS is unable to confirm if the user is already signed on elsewhere. The failure has occurred because the limit of concurrent MVS ENQ requests has been reached.

System Action: The signon transaction terminates. Message DFHUS0120 will have been written to the console. See the explanation of this message for further information.

User Response: Please report this problem to your CICS systems programmer.

Destination: Terminal End User

Module: DFHSNP

DFHCE3588 You are already signed on at another terminal. Signon cannot be performed.

Explanation: You cannot sign on at the current terminal because you are already signed on at another terminal. The SNSCOPE initialization parameter for the CICS system does not allow you to sign on to more than one terminal at a time.

System Action: The sign on transaction terminates.

User Response: Sign off from the other terminal before you attempt to sign on again.

Destination: Terminal End User

Module: DFHSNP

DFHCE3589 The external security manager is inactive. Signon cannot be performed.

Explanation: You cannot sign on because the external security manager is not active.

System Action: The sign on transaction terminates.

User Response: Wait until the external security manager has been reactivated before attempting to sign on again.

Destination: Terminal End User

Module: DFHSNP

DFHCE3590 Sign-off is complete.

Explanation: If the user issued a CESN to sign on to the system, then sign-off has been successful. If the user was not signed on, and CICS security was active (SEC=YES system initialization parameter) then message DFHSN1213 is written to the CSCS log to indicate that the user has logged off but has not been allowed to sign off.

System Action: Other processing continues.

User Response: Use the terminal as required for CICS transactions.

Destination: Terminal End User

Module: DFHSFP

DFHCE3591 Sign-off is complete. LOGOFF option is invalid when using CRTE.

Explanation: The terminal is now signed off. The LOGOFF option which was specified has been ignored as it is invalid when using CRTE.

System Action: The CICS system, to which the user has connected via CRTE, has been signed off.

User Response: Do not use the LOGOFF option when signing off via CRTE.

Destination: Terminal End User

Module: DFHSFP

DFHCE3592 Sign-off is complete. GOODNIGHT option is invalid when using CRTE.

Explanation: The terminal is now signed off. The GOODNIGHT option which was specified has been ignored as it is invalid when using CRTE.

System Action: The CICS system, to which the user has connected via CRTE, has been signed off.

User Response: Do not use the GOODNIGHT option when signing off via CRTE.

Destination: Terminal End User

Module: DFHSFP

DFHCE3598 *date time applid* **Critical error has occurred in DFHSFP. Codes:** *1*,*2*,*3*,*4*,*5*.

Explanation: The signoff program, DFHSFP, will abnormally terminate due to a critical error.

The five codes indicate the cause of the error and where the error occurred.

Code 1 is an abend code. It can be ASFA, ASFB or ASFC.

Codes 2, 3, 4 and 5 are codes which help IBM to identify the source of the error. They are id_location (in hexadecimal), EIBFRCODE, EIBRESP and EIBRESP2.

System Action: DFHSFP is abnormally terminated with a transaction dump. Message DFHAC2206 is normally issued, but if no terminal is associated with the task, DFHAC2236 may be issued instead.

User Response: Refer to message DFHAC2206 or DFHAC2236. If DFHAC2236 has been issued, the absence of a terminal is probably the reason for the abend.

Use the abend code given in the message to determine the reason for the error and the course of action to take. This will enable you to determine whether the abend was caused by user error or by an error in CICS code. (An error in CICS code is signalled by abend code ASFA.)

If you suspect an error in CICS code, you need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHSFP

XMEOUT Parameters: *date, time, applid, 1, 2, 3, 4, 5*

DFHCFxxxx messages

DFHCF0101I CF data table server initialization is in progress.

Explanation: The coupling facility data table server program has started execution.

System Action: Initialization continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFMN

DFHCF0102I CF data table server for pool *poolname* **is now active.**

Explanation: The coupling facility data table server for the named pool has completed initialization and is now ready to accept connections.

System Action: The server waits for connection requests or operator commands.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFMN

DFHCF0103 CF data table server initialization failed because the POOLNAME parameter was not specified.

Explanation: The coupling facility data table server program needs to know the name of the associated coupling facility data table pool in order to complete initialization, but no pool name was specified in the SYSIN or PARM field parameters.

System Action: The server is terminated.

User Response: Ensure that the parameter **POOLNAME=***name* is specified either in the SYSIN parameters or in the PARM field of the JCL for the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFMN

DFHCF0104 CF data table server initialization failed because program DFHCFMN is not APF authorized.

Explanation: The coupling facility data table server main program DFHCFMN cannot complete initialization because it is not running with APF authorization.

System Action: The server is terminated.

User Response: Ensure that the coupling facility data table server program DFHCFMN is loaded from an APF authorized library and has been link-edited with the option AC(1).

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFMN

DFHCF0111I CF data table server for pool *poolname* **is terminating.**

Explanation: The coupling facility data table server has started termination processing, so no further requests will be processed.

System Action: Termination continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFMN

DFHCF0112I CF data table server has terminated, return code *retcode***, reason code** *rsncode***.**

Explanation: The coupling facility data table server has completed termination processing. For normal termination, the return code and reason code are both zero. If the termination was caused by an error, the return code will be 8 and the reason code will be the number of the previous DFHCFnnnn message giving the reason for termination.

System Action: The coupling facility data table server program returns control (via the AXM termination routines) to MVS for job step termination.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFMN

DFHCF0113 CF data table server completion code is *cmpcode***, reason code** *rsncode***.**

Explanation: The coupling facility data table server has terminated after intercepting an abnormal termination (ABEND) request. If the completion code is a system completion code, it is shown as three hexadecimal digits, otherwise it is shown as four decimal digits for a user completion code. Any associated reason code is shown as a four byte hexadecimal value, which will be zero if no reason code was provided.

System Action: The coupling facility data table server program returns control (via the AXM termination routines) to MVS for job step termination.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFMN

DFHCF0201I Processing *type parameters*

Explanation: The coupling facility data table server parameter processing routine is interpreting the specified parameter string. The first word gives the type of parameter (SYSIN/PARM/SET/DISPLAY/PRINT) and the rest is the specified parameters optionally followed by descriptive comment text after one or more spaces. If the parameters start with an asterisk or a space, the whole line is taken as descriptive comments.

System Action: Any specified parameters will be processed.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFPR

DFHCF0202 Unknown parameter keyword: *keyword*

Explanation: This parameter keyword did not match any of the defined parameter keywords for the coupling facility data table server.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter keyword (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0203 Value *value* **for parameter** *keyword* **is incorrect. It must be a name of up to 8 characters.**

Explanation: The value of this parameter should have been specified as a name containing not more than 8 characters.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0204 Value *value* **for parameter** *keyword* **is incorrect. It must be a decimal number.**

Explanation: The value of this coupling facility data table server parameter should have been specified as a decimal number but was not in a valid format. (Numeric parameters can optionally be followed by the letter K, M or G to denote the appropriate powers of 1024).

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0205 Value *value* **for parameter** *keyword* **is greater than the maximum allowed value** *maximum***.**

Explanation: The value of this coupling facility data table server parameter exceeded the maximum allowed value, given in the message.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0206 Value *value* **for parameter** *keyword* **is less than the minimum allowed value** *minimum***.**

Explanation: The value of this coupling facility data table server parameter was less than the minimum allowed value, given in the message.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0207 Value *value* **for parameter** *keyword* **is incorrect. It should be a time hh:mm:ss or hh:mm or a number of seconds.**

Explanation: The value of this coupling facility data table server parameter did not conform to the correct syntax for a time interval.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0208 Parameter keyword *keyword* **is not supported for** *command***.**

Explanation: A coupling facility data table server parameter keyword was specified in a context where it is not valid, such as an attempt to **SET** a parameter which can only be specified at initialization time, or to specify at initialization time a parameter which is only valid on **DISPLAY**.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: If the error occurred at initialization, remove the incorrect parameter and restart the server. If it occurred on a server command, check that the command and parameter were correctly entered.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0209 Parameter text contains invalid character: *text*

Explanation: The coupling facility data table server parameter processing routine found some unexpected text when attempting to process parameters.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameters (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0210 Parameter keyword *keyword* **should not have a value for** *command***.**

Explanation: A coupling facility data table server parameter keyword was specified in the form *keyword=value* in a context where it was not expected, for example on a **DISPLAY** command.

System Action: Processing of the current line of parameters is terminated.

User Response: Reenter the command without specifying a value for the parameter to be displayed.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0211I Parameter value: *keyword***=***value*

Explanation: This message is issued to show the current value of a coupling facility data table server parameter setting in response to a **DISPLAY** or **PRINT** command.

System Action: Processing continues normally.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0212 Value *value* **for parameter** *keyword* **is incorrect. It must be one of** *validlist***.**

Explanation: The value of this coupling facility data table server parameter was not recognized. It should have been specified as one of the indicated list of values.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0213 Value for parameter *keyword* **is missing. The correct form is keyword=value.**

Explanation: A parameter keyword was specified without an associated parameter value on a coupling facility data table server **SET** command or in a SYSIN or PARM parameter string. Note that the only character which should appear between the parameter keyword and its intended value is the equals sign, without any extra spaces.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Reenter the parameter specification in the correct form *keyword=value*.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0214 Value *value* **for parameter** *keyword* **is incorrect. Pattern matching is not supported in this context.**

Explanation: A parameter value containing one of the pattern matching (wild card) characters '*', '%' or '?' was specified in a context where only a single identifier is supported.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0215 Value *value* **for applid.uowid parameter** *keyword* **is incorrect. The APPLID part should be a name of up to 8 characters.**

Explanation: The value of this coupling facility data table server parameter did not conform to the correct syntax for the APPLID part of a unit of work identifier.

System Action: Processing of the current line of parameters is terminated.

User Response: Correct the parameter value and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0216 Value *value* **for applid.uowid parameter** *keyword* **is incorrect. The UOWID part should be 16 hexadecimal digits or '*'.**

Explanation: The value of this coupling facility data table server parameter did not conform to the correct syntax for a unit of work identifier.

System Action: Processing of the current line of parameters is terminated.

User Response: Correct the parameter value and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0217 Parameter keyword *keyword* **requires a table name. It should be preceded by TABLE=name in the same command line.**

Explanation: This coupling facility data table server parameter can only be set for a specific table, but it was not preceded by a **TABLE=***name* parameter in the same command line.

System Action: Processing of the current line of parameters is terminated.

User Response: Insert the parameter **TABLE=***name* before the specified keyword and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0218 TABLE=*table* **was specified without any table-related parameter.**

Explanation: A coupling facility data table server **SET** command was issued including a parameter of the form **TABLE=***name* to select a specific table, but it was not followed by any table-related parameter within the same command.

System Action: The table name parameter is ignored.

User Response: If a table-related parameter was to be set, ensure that it is included on the same **SET** command as the table name.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFPR

DFHCF0301I Console operator *consname* **issued command:** *command*

Explanation: A coupling facility data table server operator command has been issued via the MVS **MODIFY** or **STOP** command. This message identifies the console name (or TSO userid) from which the command was issued and the text of the command.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFOP

DFHCF0302I *command* **command ignored because no valid parameters were given.**

Explanation: A coupling facility data table server command was issued which had no valid parameters on it but was otherwise syntactically valid. The command has had no effect.

System Action: Processing continues normally.

User Response: Ensure that the command was entered correctly.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOP

DFHCF0303I *command* **command has been processed.**

Explanation: A coupling facility data table server command has been processed successfully.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOP

DFHCF0304I STOP command is waiting for connections to be closed. Number of active connections = *connections***.**

Explanation: A coupling facility data table server **STOP** command has been issued (either via an MVS **STOP** command or via an MVS **MODIFY** command with the text **STOP**) but there are still active connections to the server, so the **STOP** command has not yet taken effect.

System Action: The server rejects any further attempts to establish new connections, but continues processing requests for existing connections. Each time a connection is terminated, this message will be repeated as long as there are more active connections.

User Response: Further information about the connections which are still active may be obtained using the command **DISPLAY CONNECTIONS**.

If the server needs to be shut down without waiting for connections to be closed, issue the server **CANCEL** command. Note that this will immediately terminate any active connections, causing any further requests for that server to be given a SYSIDERR indication. (The MVS **CANCEL** command can also be used, but should preferably be avoided because it will prevent the server from producing its normal closedown statistics and reports).

Note that if a CICS region is abnormally terminated while server connect or disconnect processing is in progress, or is terminated without going through end of task processing (for example using the **FORCE** command) there is a slight chance that the server will not be notified that the connection has been terminated. In this case the server will not be able to be closed down with the server **STOP** command, but only with the server **CANCEL** command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOP

DFHCF0305I STOP command has been processed.

Explanation: Processing of a coupling facility data table server **STOP** command has now been successfully completed. This means that there are no longer any active connections and the server is ready to close down.

System Action: The coupling facility data table server starts termination processing.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOP

DFHCF0306 CF data table server does not support this command: *command*

Explanation: An operator command was addressed to the coupling facility data table server using the MVS **MODIFY** command, but the first word of the **MODIFY** parameter text is not a recognized server command (**SET**, **DISPLAY**, **PRINT**, **STOP**, **CANCEL** or an accepted abbreviation for one of these).

System Action: The command is ignored.

User Response: Correct and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOP

DFHCF0307I CANCEL command has been processed. Number of active connections = *connections***.**

Explanation: A coupling facility data table server **CANCEL** command has been issued, either from an operator console or internally by the server in response to a severe error such as coupling facility failure. This message includes the number of active connections which may be affected by this command.

System Action: The server terminates immediately, without waiting to close connections.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOP

DFHCF0308 CF data table server does not support CICS commands. To close it down, you can use the STOP command.

Explanation: An operator command which appears to be a CICS command (a four-character transaction code of the form 'CExx') was addressed to the coupling facility data table server using the MVS **MODIFY** command.

System Action: The command is ignored.

User Response: Correct and reenter the command. If the intention is to close down the server, use the server **STOP** or **CANCEL** command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOP

DFHCF0321 Pool state error, reason code *reason***, processing** *request* **request for table** *table***, key** *key***, task** *task***, region** *region***.**

Explanation: Integrity checks during coupling facility data table request processing found that data or control information in the pool list structure was in a state that should not be possible in normal processing. The reason codes are based on the response codes returned by the internal coupling facility interface.

- Reason codes:

  2 Entry exceeds maximum data length.

  3 Entry not found.

  4 Wrong version.

  5 Wrong list authority.

  6 Maximum number of entries in list reached.

  7 No space left in structure.

All of these conditions can also occur in normal processing. This message is only issued if the condition occurs in a case where it should not occur, or when the normal retry action following the condition cannot be performed. For example, a wrong version response from the coupling facility interface normally simply indicates that an entry has changed, causing the entry to be read again, and this is only treated as a pool state error if the data or control information in the changed entry is not consistent with the expected state of the record.

System Action: The request is terminated with a pool state error exception.

User Response: This indicates that some data in the pool has become inconsistent or corrupted. There is no known way that this can happen unless a program other than the coupling facility data table server is used to access the pool. If this error occurs for data records in a particular table, it may be necessary to delete the table to clear up the problem. If it occurs for other control information, it may be necessary to recreate the pool.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRQ

DFHCF0331I Table *table* **maximum records limit now set to** *maxrec* **(was** *oldmax***). Current number of records is** *records***.**

Explanation: The maximum number of records allowed to be stored in the specified table has been successfully modified in response to a coupling facility data table server **SET TABLE** command with the **MAXRECS** parameter. The previous maximum number is shown, and the current number of records. The new or previous maximum number may also be shown as **NOLIMIT** for the special value indicating that no limit applies. (For a recoverable table with uncommitted updates, this number includes the original versions of changed records, as these are retained until syncpoint time to allow for possible backout).

System Action: Processing continues using the new value for the maximum number of records. If the current number of records already exceeds this value, no further records can be added (or, for a recoverable table, updated) until enough records have been deleted to bring the current number below the limit.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0332I Table *table* was not found.

Explanation: The table specified on a coupling facility data table server **SET TABLE** command was not found in the pool.

System Action: The command is ignored.

User Response: Ensure that the table name was entered correctly, and that the command was addressed to the correct pool server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0333 Pool state error, reason code *reason*, processing SET command for table *table*.

Explanation: The status of the table specified on a coupling facility data table server **SET TABLE** command could not be modified because the control information in the list structure was in a state that should not be possible in normal processing. The reason codes are based on the response codes returned by the internal coupling facility interface.

- Reason codes:

  2 Entry exceeds maximum data length.

  3 Entry not found.

  4 Wrong version.

  5 Wrong list authority.

  6 Limit number of entries in list reached.

  7 No space left in structure.

All of these conditions can also occur in normal processing. This message is only issued if the condition occurs in a case where it should not occur, or when the normal retry action following the condition cannot be performed.

System Action: The command is ignored.

User Response: This indicates that some data in the pool has become inconsistent or corrupted. There is no known way that this can happen unless a program other than the coupling facility data table server is used to access the pool. If this error occurs for attempts to modify a particular table, it may be necessary to delete the table to clear up the problem. If it occurs for other control information, it may be necessary to recreate the pool.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0334 Table *table* status could not be modified, CF access error.

Explanation: During processing of a coupling facility data table server **SET TABLE** command, an unexpected error response was received. This message is preceded by message DFHCF0441 giving the details of the coupling facility access error.

System Action: The command is ignored.

User Response: Check the system log for a preceding DFHCF0441 message and see the explanation of that message.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0335I Table *table* is now marked as available.

Explanation: The state of the specified table has been changed from unavailable to available in response to a coupling facility data table server **SET TABLE** command with the option **AVAILABLE=YES**.

System Action: Processing continues. New OPEN requests for the table will now be allowed.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0336I Table *table* is now marked as unavailable.

Explanation: The state of the specified table has been changed from available to unavailable in response to a coupling facility data table server **SET TABLE** command with the option **AVAILABLE=NO**.

System Action: Processing continues. New OPEN requests for the table will be rejected with an indication that the table is unavailable.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0337I Table *table* was already marked as available.

Explanation: This is a response to the coupling facility data table server **SET TABLE** command with the parameter **AVAILABLE=YES** when the table is already marked as available.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0338I Table *table* was already marked as unavailable.

Explanation: This is a response to the coupling facility data table server **SET TABLE** command with the parameter **AVAILABLE=NO** when the table is already marked as unavailable.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0341I Server request statistics for table *table*:

Explanation: This message gives table access statistics for the current coupling facility data table server, listing the total number of requests of each type handled since the previous statistics reset. It is issued in response to a **DISPLAY** or **PRINT** command which includes the **TABLESTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output. Note that this message is suppressed if all statistics are zero.

The detailed message layout is as follows:

```
Table:        Open     Close  Set Attr    Delete     Stats
                 n         n         n         n         n
Record:      Point   Highest      Read  Read Del    Unlock
                 n         n         n         n         n
              Load     Write   Rewrite    Delete  Del Mult
                 n         n         n         n         n
```

System Action: Processing continues.

User Response: The statistics are described in detail in the DFHCFS7D data area. The individual fields have the following meanings:

- Table requests:
  - **Open** Number of successful OPEN requests for the table
  - **Close** Number of successful CLOSE requests for the table
  - **Set Attr** Number of times new table status was set
  - **Delete** Number of times the table of that name was deleted
  - **Extract** Number of times table access statistics were extracted
- Record requests:
  - **Point** Number of POINT requests
  - **Highest** Number of requests for current highest key
  - **Read** Number of READ requests (including those for UPDATE)
  - **Read Del** Number of combined READ and DELETE requests
  - **Unlock** Number of UNLOCK requests
  - **Loads** Number of records written by initial load requests
  - **Write** Number of WRITE requests for new records
  - **Rewrite** Number of REWRITE requests
  - **Delete** Number of DELETE requests
  - **Del Mult** Number of multiple (generic) delete requests

The coupling facility architecture supports some options and types of request such as combined READ and DELETE which are not currently supported by CICS File Control, but the server supports them for completeness. Server request counts for such options and request types are always zero.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCN

DFHCF0342I Server request statistics for all tables:

Explanation: This message gives overall request statistics for the current coupling facility data table server, listing the total number of requests of each type handled since the previous statistics reset. It is issued in response to a **DISPLAY** or **PRINT** command which includes the **TABLESTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Table:        Open     Close  Set Attr    Delete     Stats   Inquire
                 n         n         n         n         n         n
Record:      Point   Highest      Read  Read Del    Unlock
                 n         n         n         n         n
              Load     Write   Rewrite    Delete  Del Mult
                 n         n         n         n         n
UOW:       Prepare    Retain    Commit   Backout   Inquire   Restart
                 n         n         n         n         n         n
```

System Action: Processing continues.

User Response: The statistics are described in detail in the DFHCFS8D data area. The individual fields have the following meanings:

- Table requests:
  - **Open** Number of successful OPEN requests for the table
  - **Close** Number of successful CLOSE requests for the table
  - **Set Attr** Number of times new table status was set
  - **Delete** Number of times the table of that name was deleted
  - **Extract** Number of times table access statistics were extracted
  - **Inquire** Number of inquire table requests
- Record requests:
  - **Point** Number of POINT requests
  - **Highest** Number of requests for current highest key
  - **Read** Number of READ requests (including those for UPDATE)
  - **Read Del** Number of combined READ and DELETE requests
  - **Unlock** Number of UNLOCK requests
  - **Loads** Number of records written by initial load requests
  - **Write** Number of WRITE requests for new records
  - **Rewrite** Number of REWRITE requests
  - **Delete** Number of DELETE requests
  - **Del Mult** Number of multiple (generic) delete requests
- UOW requests:
  - **Prepare** Number of units of work prepared
  - **Retain** Number of units of work whose locks were retained
  - **Commit** Number of units of work committed

Backout Number of units of work backed out

Inquire Number of unit of work inquire requests

Restart Number of times recoverable connections were restarted

The coupling facility architecture supports some options and types of request such as combined READ and DELETE which are not currently supported by CICS File Control, but the server supports them for completeness. Server request counts for such options and request types are always zero.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCN

DFHCF0343I The number of recently accessed tables matching *table* is *number*.

Explanation: This gives the number of tables matching the specified name expression which were accessed via this coupling facility data table server within the current statistics interval. This is shown at the end of the response to a **DISPLAY TABLESTATS=***name* command, following any DFHCF0341I messages for matching tables and a DFHCF0342I message if all tables were selected.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCN

DFHCF0351I Connection: Job *jobname* Applid *applid* Idle *idletime*

Explanation: This describes a single connection from a CICS region to the coupling facility data table server, in response to the server command **DISPLAY CONNECTIONS** or **PRINT CONNECTIONS**. The information shows the job name, the generic APPLID and the time in hours, minutes and seconds since the most recent table request or inquire call was issued using the connection.

System Action: A message in this form is issued for each active connection to the current server, then message DFHCF0352I is issued to show the total number of active connections.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCN

DFHCF0352I Total connections to this server: *connections*.

Explanation: This describes the total number of active connections from CICS regions to the coupling facility data table server, in response to the server command **DISPLAY CONNECTIONS** or **PRINT CONNECTIONS**.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCN

DFHCF0361I Table names: *table1 table2 table3 table4 table5*

Explanation: This message lists up to five table names in response to the coupling facility data table server command **DISPLAY TABLES** or **PRINT TABLES**.

System Action: This message is issued as many times as is necessary to list all current table names, then message DFHCF0362I is issued to show the total number of tables.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFIQ

DFHCF0362I The total number of tables in the pool is *tables*.

Explanation: This describes the total number of tables within the the pool, in response to the coupling facility data table server command **DISPLAY** (or **PRINT**) **TABLES** or **TABLEUSERS**.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFIQ

DFHCF0363I Details for table *table*:

Explanation: This message shows table details in response to the coupling facility data table server command **DISPLAY TABLE=***name* or **PRINT TABLE=***name*.

The detailed message layout is as follows:

```
Attributes:   Recsize  Keylength   Max recs  Upd Model  Init Load
                     n          n          n          x          x
Status:     Available  Open mode     Access    Sharing     Loaded
                     x          x          x          x          x
Statistics:     Users    Servers      Opens    Records
                     n          n          n          n
```

System Action: Processing continues.

User Response: The individual fields have the following meanings:

- Attributes:

  Recsize Record size specified when table was created.

  Keylength Key length specified when table was created.

  Max recs Indicates the current limit value if any which has been set on the number of records in the table, or 'NO' if there is no current limit value.

  Upd model Indicates the update model being used: 'CONT' or 'CONT+' for the contention model, 'LOCK' for the non-recoverable locking model or 'RECOV' for the recoverable locking model. For a contention model table where the maximum record size is 63 or less, this usually shows 'CONT+', which indicates that access has been further optimized by storing the record data in the coupling facility entry adjunct area, instead of using separate data elements.

  Init Load Indicates whether initial load was required: 'YES' or 'NO'.

- Status:

  Available Indicates whether new opens are currently allowed: 'YES' or 'NO'.

  Open mode Indicates whether the table is open for read/write access, open for read-only access or not open: 'R/W', 'R/O' or 'NONE'.

  Access Indicates whether the table is currently open for exclusive access, or otherwise indicates shared: 'EXCL' or 'SHR'.

  Sharing Indicates what level of shared access is currently allowed for the table, 'R/W', 'R/O' or 'NONE'.

  Loaded Indicates 'YES' if the table has been loaded or if loading is not required, otherwise 'NO'.

- Statistics

  Users Indicates the current number of users of this table, which is normally the number of CICS regions that currently have it open. It is also possible for a CICS region to have the same table open more than once at a time using different file names.

  Servers Indicates the number of server regions that currently have the table open internally for recoverable access. For a non-recoverable table this is zero. For a recoverable table, this is normally the same as the number of CICS regions which have currently have the table open, but when there are unresolved recoverable changes a server may have the table open internally even when the CICS region has not explicitly opened it, or has explicitly closed it.

  Opens Indicates the total number of opens issued for this table since it was created.

  Records Indicates the current number of records in the table.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFIQ

DFHCF0364 No table was found matching *table***.**

Explanation: A table name specified on the coupling facility data table server command **DISPLAY** (or **PRINT**) **TABLE=***name* or **TABLEUSERS=***name* did not match any existing table in the pool.

System Action: The command is ignored.

User Response: Ensure that the table name was entered correctly, and that the command was addressed to the correct pool server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFIQ

DFHCF0365I The number of tables in the pool matching *table* **is** *tables***.**

Explanation: This indicates the number of matching tables within the pool for which information was displayed in response to the coupling facility data table server command **DISPLAY** (or **PRINT**) **TABLES=***name* or **TABLEUSERS=***name* where the table name contained one or more wild card characters.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFIQ

DFHCF0366I Table *table* **users:** *region1 region2 region3 region4*

Explanation: This message lists the names (normally the CICS APPLIDs) of up to four regions which are currently using the named coupling facility data table, in response to the coupling facility data table server command **DISPLAY** (or **PRINT**) **TABLEUSERS**. A region is considered to be using a table if it has one or more files open for the table, or if it has one or more unresolved units of work which have made recoverable updates to the table.

System Action: This message is issued as many times as is necessary to list all regions which are currently using the table (sorted by name). If one of the regions was in the process of loading the table, message DFHCF0367I is issued to identify that region. Finally, message DFHCF0368I is issued to show the total number of users.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFIQ

DFHCF0367I Table *table* **is being loaded by region** *region***.**

Explanation: If a table specified on the coupling facility data table server command **DISPLAY** (or **PRINT**) **TABLEUSERS** is currently open for loading, this message is issued to identify the name (normally the CICS APPLID) of the region which is loading it. This name also appears in the list of regions using the table.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFIQ

DFHCF0368I The number of regions using table *table* **is** *users***.**

Explanation: This indicates the total number of regions which are currently using the table specified on the coupling facility data table server command **DISPLAY** (or **PRINT**) **TABLEUSERS**.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFIQ

DFHCF0371I Table *table* **has now been deleted.**

Explanation: The specified table was successfully deleted in response to a coupling facility data table server **DELETE TABLE=***name* command.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0372I Table *table* **was not found.**

Explanation: The table specified on a coupling facility data table server **DELETE TABLE=***name* command was not found in the pool.

System Action: The command is ignored.

User Response: Ensure that the table name was entered correctly, and that the command was addressed to the correct pool server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0373I Table *table* **cannot be deleted because it is in use.**

Explanation: The table specified on a coupling facility data table server **DELETE TABLE=***name* command is currently open for access, so it cannot be deleted.

System Action: The command is ignored.

User Response: Check that the correct table name was entered. Ensure that the table is closed from all regions which are no longer using it. The server command **DISPLAY TABLE=***name* can be used to determine how many users currently have the table open, or whether one or more servers have it open for recoverable access.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0374 Table *table* **could not be deleted, CF access error.**

Explanation: During processing of a coupling facility data table server **DELETE TABLE=***name* command, an unexpected error response was received. This message is preceded by message DFHCF0441 giving the details of the coupling facility access error.

System Action: The command is ignored.

User Response: Check the system log for a preceding DFHCF0441 message and see the explanation of that message.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFOC

DFHCF0381I APPLID *applid* **is connected on** *system***.**

Explanation: This message is issued in response to a successful coupling facility data table server **DISPLAY APPLID** command. This is issued for each recoverable connection matching the given APPLID name or pattern, or for all recoverable connections if no APPLID value was given.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0382I APPLID *applid* **is not currently connected.**

Explanation: This message is issued in response to a coupling facility data table server **DISPLAY APPLID** command for a single APPLID when the given APPLID does not match any active recoverable connection.

System Action: Processing continues.

User Response: Check that the correct APPLID was entered.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0383I APPLID *applid* **total connections:** *applids***.**

Explanation: This message is issued at the end of the responses to a coupling facility data table server **DISPLAY APPLIDs** command to summarize the total number of connections listed. The total is zero if no matching connections were found.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0384I APPLID *applid* **UOW status:** *indoubts* **in doubt,** *commits* **in commit,** *backouts* **in backout, active on** *system*

Explanation: This message is issued in response to a coupling facility data table server **DISPLAY UOWID** command where the APPLID identifies a CICS region that has an active recoverable connection to the pool on the indicated MVS system. If UOWID details were requested, this message follows the details for the individual units of work. The *indoubts* count represents units of works which have been prepared for commit but have not yet been scheduled to be committed or backed out. The *commits* count represents units of work for which commit processing is in progress. The *backouts* count represents units of work for which backout processing is in progress.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0385I APPLID *applid* **UOW status:** *indoubts* **in doubt,** *commits* **in commit,** *backouts* **in backout, not active**

Explanation: This message is issued in response to a coupling facility data table server **DISPLAY UOWID** command for an APPLID which identifies a CICS region that previously established a recoverable connection to the pool and has recoverable work pending, but is not currently connected to the pool. If UOWID details were requested, this message follows the details for the individual units of work. The *indoubts* count represents units of work which have been prepared for commit but have not been scheduled to be committed nor backed out. These will normally be resolved by resynchronization processing when the connection is restarted. The *commits* count represents units of work for which commit processing has been started, and will be completed when the connection is restarted. The *backouts* count represents units of work for which backout processing has been started, and will be completed when the connection is restarted.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0386I UOWID *applid.uowid* **is in doubt.**

Explanation: This message is issued in response to a coupling facility data table server **DISPLAY UOWID** command. The unit of work has been prepared for commit, but has been neither committed nor backed out. If the APPLID is currently inactive, the state will normally be resolved by resynchronization processing the next time it is restarted.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0387I UOWID *applid.uowid* **is being committed.**

Explanation: This message is issued in response to a coupling facility data table server **DISPLAY UOWID** command. The unit of work has started the commit process. If the APPLID is currently inactive, the commit process will be completed the next time it is restarted.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0388I UOWID *applid.uowid* **is being backed out.**

Explanation: This message is issued in response to a coupling facility data table server **DISPLAY UOWID** command. The unit of work has started to be backed out. If the APPLID is currently inactive, the backout process will be completed the next time it is restarted.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0389 UOWID *applid.uowid* **was not found.**

Explanation: This message is issued in response to a coupling facility data table server **DISPLAY UOWID** command.

System Action: Processing continues.

User Response: Check that the correct UOWID was entered.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0390I UOWID *applid.uowid* **total matching entries:** *uowids*

Explanation: This message is issued at the end of the responses to a coupling facility data table server **DISPLAY UOWIDs** command to summarize the total number of units of work listed. The total is zero if no matching units of work were found.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0391 APPLID *applid* **does not have any unresolved units of work.**

Explanation: This message is issued in response to a coupling facility data table server **SET** command which attempted to modify the recovery status for the given APPLID. There are no unresolved units of work in the pool which match the given APPLID.

System Action: The requested function is ignored.

User Response: Check that the correct APPLID was entered.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0392 APPLID *applid* **recovery status cannot be modified while it is connected.**

Explanation: This message is issued in response to a coupling facility data table server **SET** command which attempted to modify recovery status for the given APPLID. This is not possible if the APPLID is already connected to the pool, on this server or another server.

System Action: The requested function is ignored.

User Response: Check whether the correct APPLID was entered.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0393 APPLID *applid* **recovery status cannot be modified because connection restart failed with reason code** *reason***.**

Explanation: This message is issued in response to a coupling facility data table server **SET** command which attempted to modify recovery status for the given APPLID. The attempt failed because the server was unable to establish a recoverable connection on behalf of that APPLID. The reason code from the failing internal FCCU RESTART function is included.

System Action: The requested function is ignored.

User Response: See the server trace file and job log for further details about the failure.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0394 UOWID *applid.uowid* **is not in doubt.**

Explanation: This message is issued in response to a coupling facility data table server **SET** command which attempted to modify the recovery status of a specific unit of work. The APPLID had one or more unresolved units of work and was successfully restarted, but the UOWID did not match any in-doubt unit of work owned by that APPLID after restart completed. Note that if the unit of work was previously in the process of being committed or backed out, restart processing will have resolved it.

System Action: The requested function is ignored. A further message will appear indicating whether any units of work remain unresolved after the successful restart.

User Response: Check that the correct APPLID and UOWID were entered.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0395I APPLID *applid* **now has no unresolved units of work.**

Explanation: This message is issued in response to a successful coupling facility data table server **SET** command to perform restart processing. All units of work associated with the APPLID were resolved by restart processing (which means that they must have been in commit or backout processing).

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0396I APPLID *applid* **units of work remaining in doubt:** *indoubts***.**

Explanation: This message is issued in response to a successful coupling facility data table server **SET** command to perform restart processing. One or more units of work remain in doubt.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0397I APPLID *applid* **units of work now committed:** *commits***.**

Explanation: This message is issued in response to a successful coupling facility data table server **SET** command which committed one or more units of work.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0398I APPLID *applid* **units of work now backed out:** *backouts***.**

Explanation: This message is issued in response to a successful coupling facility data table server **SET** command which backed out one or more units of work.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0399 UOWID *applid.uowid* **syncpoint failed, reason code** *reason***.**

Explanation: This message is issued in response to a coupling facility data table server **SET** command which attempted to commit or backout the given UOWID but failed. The reason code from the failing internal FCCU COMMIT or BACKOUT function is included.

System Action: The requested function is ignored.

User Response: See the server trace file and job log for further details about the failure.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0401I Connected to CF structure *strname***.**

Explanation: The coupling facility data table server has successfully established a connection to the coupling facility list structure for the table pool, using the IXLCONN macro.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0402I CF structure *strname* **was allocated by this connection.**

Explanation: The coupling facility data table pool list structure did not previously exist and was allocated as part of the connection process.

System Action: List structure initialization will be performed if necessary.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0403 Connection to CF structure *strname* **failed, IXLCONN return code** *retcode***, reason code** *rsncode***.**

Explanation: The IXLCONN macro to connect the coupling facility data table server to its pool list structure failed.

System Action: The coupling facility data table server is terminated.

User Response: See the documentation of the IXLCONN macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code. If the reason code is of the form `xxxx0C08`, indicating structure allocation failure, this message will be followed by message DFHCF0409 giving the facility reason code for each coupling facility in which allocation was attempted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0404 CF structure *strname* **cannot be used because it has been allocated with attribute** *attribute***.**

Explanation: The coupling facility data table server has successfully connected to its pool list structure but has found that the structure has been allocated using an IXLCONN structure attribute keyword which is not supported by the server.

System Action: The server is terminated.

User Response: This probably indicates that the structure has been allocated or modified by some program other than the coupling facility data table server program. In this case, the incorrect structure should be deleted (using the MVS **SETXCF FORCE** command) so that it will be reallocated correctly when the server is restarted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0405 CF structure *strname* **element size** *elemsize* **is incorrect. It should be a power of 2 in the range 256 to 4096.**

Explanation: The list structure element size specified in the **ELEMSIZE** initialization parameter for the coupling facility data table server is not a power of two, or is outside the range supported by the coupling facility interface.

System Action: The server is terminated (without attempting to connect to the list structure).

User Response: Correct the **ELEMSIZE** parameter and restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0406 Initialization failed for CF structure *strname* **with response** *response***.**

Explanation: Coupling facility data table server processing to initialize the pool list structure failed with an abnormal internal response code.

System Action: The server is terminated.

User Response: If the response code is 8 (I/O error), it indicates that an IXLLIST macro gave an abnormal return code, in which case a previous DFHCF0441 message will have been issued giving the IXLLIST return code and reason code. If this response code is any other value, this indicates that the list structure is in a state which should not occur, probably indicating that it was allocated or modified by a program other than the coupling facility data table server. In this case the structure may need to be deleted (using the MVS **SETXCF FORCE** command) so that it will be reallocated when the server is restarted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0407 CF structure *strname* is not available for shared use.

Explanation: The coupling facility data table pool is currently locked for exclusive use by some other job such as a pool unload or reload job. (This serialization uses an MVS ENQ with scope SYSTEMS, major name 'SYSZDFH' and minor name equal to the structure name, 'DFHCFLS_poolname').

System Action: The server is terminated.

User Response: Check whether a pool maintenance job is currently running. If it is, wait until it has finished before trying to start the server again. You can find out what jobs are currently using the pool using this MVS command:

```
DISPLAY GRS,RES=(SYSZDFH,'DFHCFLS_poolname')
```

Note that for this command the pool name must be exactly eight characters, padded with trailing spaces if necessary.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0408 CF structure *strname* is not available for exclusive use.

Explanation: The current coupling facility data table unload or reload job requires exclusive use of the pool, but some other job is running which already has shared or exclusive use of the pool. (This serialization uses an MVS ENQ with scope SYSTEMS, major name 'SYSZDFH' and minor name equal to the structure name, 'DFHCFLS_poolname').

System Action: The server is terminated.

User Response: Check whether a coupling facility data table server or maintenance job is currently running. If it is, wait until it has finished before trying to run the current job again. You can find out what jobs are currently using the pool using this MVS command:

```
DISPLAY GRS,RES=(SYSZDFH,'DFHCFLS_poolname')
```

Note that for this command the pool name must be exactly eight characters, padded with trailing spaces if necessary.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0409 CF structure *strname* could not be allocated in facility *cfname*, reason code *rsncode*.

Explanation: If a previous coupling facility data table server message DFHCF0403 indicated an IXLCONN failure because the structure could not be allocated, this message is issued for each coupling facility in which allocation was attempted to show the facility reason code indicating why structure allocation failed. If the reason code is known to the server, the name of the reason code is given (as defined in the MVS macro IXLYCONA, but without the 'ConaRsn' prefix), otherwise its decimal value is shown.

If the response indicates InvalidStructureSize, this means that the initial list structure size (specified on the server **POOLSIZE** parameter or in the CFRM policy **INITSIZE** parameter) is not large enough to contain the required structure control information. The size of the control information is affected by the number of list headers (determined by the server **MAXTABLES** parameter) and by the maximum structure size specified in the CFRM policy.

System Action: The server is terminated.

User Response: If further details are required, see the descriptions of the reason codes in the source of the MVS macro IXLYCONA which maps the connect answer area.

If the response was InvalidStructureSize, increase the initial structure size specification in the server **POOLSIZE** parameter or the CFRM policy **INITSIZE** parameter to ensure that there is enough space for data in addition to the structure control information. Also, check that the server **MAXTABLES** parameter and the maximum structure size specified in the CFRM policy are not unnecessarily large. See the CICS *System Definition Guide* for more information on how to estimate pool sizes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0410 CF structure *strname* cannot be used, coupling facility maintenance level is too low.

Explanation: Initialization test routines executed against the allocated list structure gave incorrect results, indicating that the coupling facility control code does not include all maintenance necessary to support coupling facility data tables.

System Action: The server is terminated.

User Response: Ensure that the required level of coupling facility maintenance is applied.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0411I CF structure *strname* now has *percentage*% of entries in use.

Explanation: This message is issued by the coupling facility data table server when the percentage of list entries in use within the list structure increases past certain set threshold levels, or when it decreases past a threshold level after previously being at a higher level. This message is also issued immediately after a structure alter request has completed in order to show how the percentage has been affected by changes in the structure size or entry to element ratio. The percentage is calculated using information that is returned by successful coupling facility access requests, so if the message was triggered by structure alter completion and the current server has not processed any successful requests recently, the information may not be accurate.

System Action: The warning threshold is increased to the next higher level (normally 5% higher if less than 95%, otherwise 1% higher), or decreased to the previous lower level depending on whether the usage is increasing or decreasing. If the structure usage is increasing and the structure element to entry ratio is not making full use of the available space, the server may issue an automatic IXLALTER request to adjust the ratio.

User Response: Note that the structure may soon become full, preventing tables from being created. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and any active servers will be able to use the increased space immediately.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0412I CF structure *strname* now has *percentage*% of elements in use.

Explanation: This message is issued by the coupling facility data table server when the percentage of list data elements in use within the list structure increases past certain set threshold levels, or when it decreases past a threshold level after previously being at a higher level. This message is also issued immediately after a structure alter request has completed in order to show how the percentage has been affected by changes in the structure size or entry to element ratio. The percentage is calculated using information that is returned by successful coupling facility access requests, so if the message was triggered by structure alter completion and the current server has not processed any successful requests recently, the information may not be accurate.

System Action: The warning threshold is increased to the next higher level (normally 5% higher if less than 95%, otherwise 1% higher), or decreased to the previous lower level depending on whether the usage is increasing or decreasing. If the structure usage is increasing and the structure element to entry ratio is not making full use of the available space, the server may issue an automatic IXLALTER request to adjust the ratio.

User Response: Note that the structure may soon become full, preventing tables from being created. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be altered dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and any active servers will be able to use the increased space immediately.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0413I Issuing alter request to adjust CF structure *strname* entry/element ratio to *entries*/*elements*.

Explanation: The coupling facility data table server has determined that the ratio of free entries to free elements is significantly different from the ratio of entries to elements actually in use. It is issuing an IXLALTER macro to request the coupling facility to adjust the ratio to make better use of the coupling facility storage.

System Action: The server continues by issuing the IXLALTER macro. A further message will be issued when the structure alter request is accepted or rejected by MVS.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0414I Alter request successfully started for CF structure *strname*.

Explanation: The coupling facility data table server has successfully started a structure alter request to change the entry to element ratio for the list structure.

System Action: The server event exit will be notified by MVS when the structure alter request completes and a further message will then be issued.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0415I Alter request rejected for CF structure *strname*, another alter request for this structure is already active.

Explanation: The coupling facility data table server attempted to start a structure alter request using IXLALTER to change the entry to element ratio for the list structure, but this was rejected by the system because another structure alter request was already active.

System Action: The server event exit will be notified by MVS when the structure alter request completes and a further message will then be issued.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0416 Alter request failed for CF structure *strname*, IXLALTER return code *retcode*, reason code *rsncode*.

Explanation: The coupling facility data table server attempted to start a structure alter request to change the entry to element ratio for the list structure, but this was rejected by the system with an unexpected return code.

System Action: The current structure alter attempt is abandoned. Another attempt may be made when the minimum alter interval has expired.

User Response: See the documentation of the IXLALTER macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0417I Alter request completed normally for CF structure *strname*.

Explanation: The coupling facility data table server has been notified by the system that a structure alter request has completed normally.

System Action: New values for the structure size and numbers of elements and entries are stored. This message is followed by messages DFHCF0411 and DFHCF0412 to indicate the new usage percentages.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0418I Alter request ended abnormally for CF structure *strname* with status *status*.

Explanation: The coupling facility data table server has been notified by the system that a structure alter request has ended abnormally. The two bytes of status information in this message are taken from EEPLALTERENDSTATEFLAGS in the event exit parameter list (defined in the MVS macro IXLYEEPL).

System Action: No action is taken as a result of this notification, but any problem which caused the alter request to fail may result in other related problems.

User Response: If further information is required, look for MVS messages on the system log indicating the reason for the structure alter request failure. For further information about the status flags, see the source of the MVS macro IXLYEEPL.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0419I Alter request ended normally for CF structure *strname* but target was not attained.

Explanation: The coupling facility data table server has been notified by the system that a structure alter request has ended normally but that the target ratio or target size was not attained.

System Action: New values for the structure size and numbers of elements and entries are stored. This message is followed by messages DFHCF0411 and DFHCF0412 to indicate the new usage percentages.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0424 Connectivity has been lost to CF structure *strname*. The CF data table server cannot continue.

Explanation: The coupling facility data table server has been notified by the system that connectivity has been lost to the coupling facility containing the pool list structure.

System Action: The server issues an internal **CANCEL** command to terminate itself immediately.

User Response: Restart the server when connectivity to the coupling facility from the current system has been reestablished. If connectivity is still available from other systems, CICS transactions which require access to the affected pool should be diverted to those systems if possible.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0425 CF structure *strname* has failed. The CF data table server cannot continue.

Explanation: The coupling facility data table server has been notified by the system that the pool list structure has been lost due to coupling facility structure failure. All tables and data records in the pool have been lost.

System Action: Each server for the affected pool issues an internal **CANCEL** command to terminate itself immediately.

User Response: If another coupling facility is available and is included in the CFRM preference list for the failed structure, restart the servers to cause a fresh copy of the list structure to be allocated on the alternate coupling facility. If no other coupling facility is available, wait until the original coupling facility has been made available again before restarting the servers.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0431I Access statistics for CF structure *strname*:

Explanation: This message gives a summary of coupling facility access statistics. It is issued in response to a coupling facility data table server **DISPLAY** or **PRINT** command which includes the **CFSTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Requests:              Reads    Writes  Rewrites   Deletes
 Table data records        n         n         n         n
 Data list controls        n         n         n         n
 Table index list          n         n         n         n
 UOW index list            n         n         n         n
 APPLID index list         n         n         n         n
 Lock release msgs         n         n
Responses:  Asynch    Normal   Len err   Not fnd  Vers chk
                n         n         n         n         n
                   List chk List full  Str full   I/O err
                          n         n         n         n
```

System Action: Processing continues.

User Response: The statistics are described in detail in the DFHCFS6D data area. The individual fields have the following meanings:

- Table data record request counts:
  - **Reads** Number of data entry reads.
  - **Writes** Number of data entry writes.
  - **Rewrites** Number of data entry rewrites.
  - **Deletes** Number of data entry deletes.
- Data list controls request counts:
  - **Reads** Number of reads to check list usage (open or inquire).
  - **Writes** Number of times a new data list was allocated.
  - **Rewrites** Number of times data list controls were modified.
  - **Deletes** Number of times a data list was deleted for reuse.
- Table index list request counts:
  - **Reads** Number of table index reads.
  - **Writes** Number of table index writes to create new tables.
  - **Rewrites** Number of table index writes to update table status.

Delete Number of table index deletes.

- Unit of work index list request counts:

  Reads Number of UOW list reads.

  Writes Number of UOW list writes (usually at PREPARE).

  Rewrites Number of UOW list rewrites (usually at COMMIT).

  Deletes Number of UOW list deletes (usually after COMMIT).

- Lock release notify message request counts:

  Reads Number of lock release messages read by this server.

  Writes Number of lock release messages sent by this server.

- Response counts:

  Asynch Number of requests for which completion was asynchronous.

  Normal Number of normal responses.

  Len error Entry data was larger than the input buffer length, which normally results in a retry with a larger buffer.

  Not fnd The specified entry (table or item) was not found.

  Vers chk A version check failed for an entry being updated, indicating that another task had updated it first.

  List chk A list authority comparison failed, usually meaning that the table is in the process of being deleted.

  List full A table reached the maximum number of items, causing the relevant list to be marked as full.

  Str full The list structure became full.

  I/O err Some other error code was returned by IXLLIST.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0432I Table pool statistics for CF structure *strname***:**

Explanation: This message gives a summary of the usage statistics for the table pool list structure. It is issued in response to a coupling facility data table server **DISPLAY** or **PRINT** command which includes the **POOLSTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Structure:    Size  Max size Elem size   Tables:   Current   Highest
                nK        nK         n                  n         n
Lists:       Total    In use  Max used   Control      Data
                 n         n         n         n         n
               100%        n%        n%        n%        n%
Entries:     Total    In use  Max used      Free  Min free   Reserve
                 n         n         n         n         n         n
               100%        n%        n%        n%        n%        n%
Elements:    Total    In use  Max used      Free  Min free   Reserve
                 n         n         n         n         n         n
               100%        n%        n%        n%        n%        n%
```

System Action: Processing continues.

User Response: The statistics are described in detail in the DFHCFS6D data area. Pool usage statistics are calculated from information returned by recent coupling facility requests, and are not always very accurate, especially if the relevant information has not been accessed recently by the current server. The number of tables and the number of lists are updated each time the server opens or closes a table, but are not reliably updated at other times. The element and entry counts are updated on successful completion of most types of coupling facility access request.

The individual fields have the following meanings:

- Structure:

  Size Current allocated size of the list structure.

  Max size Maximum size to which this structure could be altered.

  Elem size Data element size used for the structure.

- Tables:

  Current Number of tables currently in existence.

  Highest Highest number of tables at any time (since last reset).

- Lists:

  Total Maximum number of list headers in the structure.

  In Use Number currently in use.

  Max Used Maximum number in use (since last reset).

  Control Number of lists in use for control information.

  Data Number of lists in use for table data.

- Entries:

  Total Total entries in the currently allocated structure (initially set at structure connection time and updated on completion of any structure alter request).

  In Use Number of entries currently in use.

  Max Used Maximum number in use (since last reset).

  Free Number of entries currently free (total minus used).

  Min Free Minimum number of free entries (since last reset).

  Reserve Number of entries reserved for rewrites and server use.

- Elements:

  Total Total data elements in the currently allocated structure (initially set at structure connection time and updated on completion of any structure alter request).

  In Use Number of elements currently in use.

  Max Used Maximum number in use (since last reset).

  Free Number of elements currently free (total minus used).

  Min Free Minimum number of free elements (since last reset).

  Reserve Number of elements reserved for rewrites and server use.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0441 CF structure *strname* **request failed, IXLLIST return code** *retcode***, reason code** *rsncode***.**

Explanation: A coupling facility access request issued by the coupling facility data table server using the IXLLIST macro gave an abnormal return code.

System Action: The failing request is given an I/O error indication, giving an IOERR condition if it originated from a CICS API request.

User Response: See the documentation of the IXLLIST macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0442 CF structure *strname* **request failed, structure is full.**

Explanation: A coupling facility access request issued by the coupling facility data table server using the IXLLIST macro failed because there are insufficient free entries or elements to store the new data in the structure.

System Action: The failing request is given a NOSPACE indication if it originated from a CICS API request. For reload processing, if an automatic structure alter is in progress, the request may be suspended until the outcome of the alter request is known, then retried. This message will not be issued again for further failures until the used numbers of elements and entries fall well below the warning threshold.

User Response: Any tables which are no longer in use should be deleted so that the space can be reused. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and any active servers will be able to use the increased space immediately. However, if this action is possible it should normally have been taken in response to earlier warning message before the structure became full.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0443 CF structure *strname* **request failed, all lists are in use.**

Explanation: A coupling facility access request issued by the coupling facility data table server using the IXLLIST macro failed because all list headers defined in the structure are now in use. The number of list headers is determined by the **MAXTABLES** server initialization parameter when the structure is allocated.

System Action: The failing request is given a NOSPACE indication if it originated from a CICS API request. This message will not be issued again for further failures while the shortage of list entries remains.

User Response: Any tables which are no longer in use should be deleted to free up data lists. As the number of lists is fixed when the structure is allocated, the only way to increase the number of lists is to unload the structure, use the MVS **SETXCF FORCE,STR** command to delete it then reload it with a larger **MAXTABLES** parameter.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0444I CF request has been suspended to await structure alter completion.

Explanation: A coupling facility access request issued from the coupling facility data table server address space (during reload processing) ran out of space in the list structure, but an automatic structure alter attempt to free up more space is either already active or is being started at this point. The request is therefore being suspended to await the outcome of the structure alter attempt.

System Action: The request is suspended until the structure alter request completes (normally or abnormally), then message DFHCF0445I is issued and the request is retried.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0445I CF request is being retried after structure alter completion.

Explanation: A coupling facility data table access request which was suspended to await the completion of a structure alter request is now being retried because the alter request has either completed or failed.

System Action: The suspended request will be restarted.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0446 CF structure *strname* **free space is below reserve level. New records will be rejected.**

Explanation: The coupling facility data table server has detected that the number of free list entries or data elements in the pool structure has fallen below the reserve levels specified on the server parameters **ENTRYRESERVEMIN**, **ENTRYRESERVEPC**, **ELEMENTRESERVEMIN** and **ELEMENTRESERVEPC**.

System Action: Any request to create a new record or table in the pool will be rejected for as long as the amount of free space remains below the reserve levels. The failing request is given a NOSPACE indication if it originated from a CICS API request. If free space later increases beyond the reserve levels, requests will be allowed again, and when the amount of free space exceeds the reserve levels by a reasonable margin (based on the server **ENTRYWARNINC** and **ELEMENTWARNINC** parameters) message DFHCF0447 will be issued.

User Response: Use the server command **DISPLAY POOLSTATS** to obtain further information about the current pool usage. Any tables which are no longer in use should be deleted so that the space can be reused. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option,

and any active servers will be able to use the increased space immediately. However, if this action is possible it should normally have been taken in response to earlier warning messages.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0447 CF structure *strname* **free space is no longer below reserve level.**

Explanation: The coupling facility data table server issues this message after a recent shortage of free space caused message DFHCF0446 to be issued but the free space has now increased to beyond the reserve levels by a reasonable margin (based on the server **ENTRYWARNINC** and **ELEMENTWARNINC** parameters).

System Action: Processing continues.

User Response: Use the server command **DISPLAY POOLSTATS** to obtain further information about the current pool usage. Note that even if this message is produced, the structure may still be very short of space and further action may be necessary, as described for message DFHCF0446.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0451 Purge for CF structure *strname* **failed, IXLPURGE return code** *retcode***, reason code** *rsncode***.**

Explanation: A coupling facility data table access request was terminated abnormally and the server issued an IXLPURGE macro to ensure any active IXLLIST request was purged before releasing the I/O buffer, but the IXLPURGE macro gave a non-zero return code.

System Action: The error is ignored because this only occurs when a request is already being terminated abnormally.

User Response: See the documentation of the IXLPURGE macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0461I Disconnected from CF structure *strname***.**

Explanation: The coupling facility data table server has successfully disconnected from the pool list structure (using the IXLDISC macro) during termination.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0462 Disconnect from CF structure *strname* **failed, IXLDISC return code** *retcode***, reason code** *rsncode***.**

Explanation: The IXLDISC macro to disconnect the coupling facility data table server from its pool list structure failed.

System Action: The error is ignored, as disconnection only occurs when the server is already terminating.

User Response: See the documentation of the IXLDISC macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0471 CF structure *strname* **already has the maximum of** *maxconn* **servers active.**

Explanation: An attempt was made to connect an additional coupling facility data table server to a pool list structure which already has the maximum number of active connections supported by the current version of the server. The coupling facility accepted the connection, but the server does not support this number of simultaneous connections to the pool, so the connection could not be used.

The server has been designed to support a fixed maximum number of connections per pool, which is the same as the maximum number of connections to a list structure supported by current coupling facility implementations, and the maximum number of systems in a sysplex. This means that if this message occurs, a level of coupling facility must be in use which supports more connections, and one or more of those connections must be in use by a program other than the coupling facility data table server, as the server only supports one connection per system within a sysplex.

System Action: The server is terminated.

User Response: Ensure that no programs other than the data table server are connected to the list structure.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFCF

DFHCF0501 External security manager was not found, table security cannot be supported.

Explanation: Table-specific security checks for coupling facility data table OPEN, SET and DELETE requests were requested in the server parameters or assumed by default, but the external security manager data areas needed by the server security interface (in particular the RCVT) were not found.

System Action: The server is terminated.

User Response: If these security checks are not required, specify **SECURITY=NO** in the server parameters, in which case each CICS region that is authorized to connect to the server will be able to open or delete any table in the pool. If table security checks are required, ensure that the external security manager is installed and active before starting the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0502 External security manager is inactive, table security cannot be supported.

Explanation: Table-specific security checks for coupling facility data table OPEN, SET and DELETE requests were requested in the server parameters or assumed by default, but the external security manager is not active.

System Action: The server is terminated.

User Response: If these security checks are not required, specify **SECURITY=NO** in the server parameters, in which case each CICS region that is authorized to connect to the server will be able to open or delete any table in the pool. If table security checks are required, ensure that the external security manager is installed and active before starting the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0503 External security manager does not support global in-storage profiles, table security cannot be supported.

Explanation: Table-specific security checks for coupling facility data table OPEN, SET and DELETE requests were requested in the server parameters or assumed by default, but the external security manager does not support the GLOBAL option for loading security profiles (known as global RACLIST), which is required in order to support cross-memory mode security checking.

System Action: The server is terminated.

User Response: If these security checks are not required, specify **SECURITY=NO** in the server parameters, in which case each CICS region that is authorized to connect to the server will be able to open or delete any table in the pool. If table security checks are required, it will be necessary to upgrade the external security manager to a level which supports global in-storage profiles.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0504 External security manager does not support cross-memory mode, table security cannot be supported.

Explanation: Table-specific security checks for coupling facility data table OPEN, SET and DELETE requests were requested in the server parameters or assumed by default, but the external security manager does not support authorization (FASTAUTH) requests in cross-memory mode, which are required in order to perform table security checks.

System Action: The server is terminated.

User Response: If these security checks are not required, specify **SECURITY=NO** in the server parameters, in which case each CICS region that is authorized to connect to the server will be able to open or delete any table in the pool. If table security checks are required, it will be necessary to upgrade the external security manager to a level which supports cross-memory mode authorization requests.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0505 RACROUTE REQUEST=EXTRACT gave R15=*rc*, SAFPRRET=*retcode*, SAFPRREA=*rsncode*.

Explanation: Table-specific security checks for coupling facility data table OPEN, SET and DELETE requests were requested in the server parameters or assumed by default, but the external security manager EXTRACT function used to obtain the userid during server initialization gave an unexpected non-zero return code. This message shows the RACROUTE register 15 return code and the external security manager return and reason codes returned in the SAF request parameter list.

System Action: The server is terminated with message DFHCF0506.

User Response: See the documentation of the RACROUTE macro with REQUEST=EXTRACT in *OS/390 Security Server External Security Interface (RACROUTE) Macro Reference* (GC28-1922) for the explanation of the return and reason codes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0506 Security EXTRACT function failed, table security cannot be supported.

Explanation: Table-specific security checks for coupling facility data table OPEN, SET and DELETE requests were requested in the server parameters or assumed by default, but the external security manager EXTRACT function issued to obtain the userid during server initialization gave an unexpected return code.

System Action: The server is terminated.

User Response: See the preceding message DFHCF0505 for the details of the reason for the failure. If these security checks are not required, specify **SECURITY=NO** in the server parameters, in which case each CICS region that is authorized to connect to the server will be able to open or delete any table in the pool.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0507 RACROUTE REQUEST=LIST, ENVIR=CREATE, CLASS='*class*', GLOBAL=YES gave R15=*rc*, SAFPRRET=*retcode*, SAFPRREA=*rsncode*.

Explanation: Table-specific security checks for coupling facility data table OPEN, SET and DELETE requests were requested in the server parameters or assumed by default, but the external security manager LIST function to load the security profiles during server initialization gave an unexpected non-zero return code. This message shows the RACROUTE register 15 return code and the external security manager return and reason codes returned in the SAF request parameter list.

System Action: The server is terminated with message DFHCF0508.

User Response: See the documentation of the RACROUTE macro with REQUEST=LIST in *OS/390 Security Server External Security Interface (RACROUTE) Macro Reference* (GC28-1922) for the explanation of the return and reason codes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0508 Security LIST function failed, table security cannot be supported.

Explanation: Table-specific security checks for coupling facility data table OPEN, SET and DELETE requests were requested in the server parameters or assumed by default, but the external security manager LIST function issued to load the security profiles during server initialization gave an unexpected return code.

System Action: The server is terminated.

User Response: See the preceding message DFHCF0507 for the details of the reason for the failure. If these security checks are not required, specify **SECURITY=NO** in the server parameters, in which case each CICS region that is authorized to connect to the server will be able to open or delete any table in the pool.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0511 Attempt to open table *table* was rejected because the external security manager is not available.

Explanation: The coupling facility data table server was attempting to perform a security check for whether the connected region was allowed to open that data table, but the external security manager was unexpectedly unavailable, even though it had been available at server initialization time.

System Action: The table open request is rejected.

User Response: Note that no further table open requests will succeed unless the external security manager is reactivated.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0512 RACROUTE REQUEST=FASTAUTH for resource *resource* gave R15=*rc*, SAFPRRET=*retcode*, SAFPRREA=*rsncode*.

Explanation: A coupling facility data table OPEN, SET or DELETE security check gave a non-zero return code. This message indicates the resource name used for the check, the RACROUTE register 15 return code and the external security manager return and reason codes returned in the SAF request parameter list.

System Action: Access to the table is rejected with message DFHCF0513.

User Response: See the documentation of the RACROUTE macro with REQUEST=FASTAUTH in *OS/390 Security Server External Security Interface (RACROUTE) Macro Reference* (GC28-1922) for the explanation of the return and reason codes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0513 Attempt to open table *table* was rejected by the external security manager.

Explanation: A security check was performed by the coupling facility data table server to determine whether the connected region was allowed to open the named table, and the external security manager indicated that access was not allowed.

System Action: The table open request is rejected.

User Response: See the preceding message DFHCF0512 for the specific reason that access was rejected. Check that the correct table name was specified. Ensure that the client region is authorized to access the resource matching the table name (prefixed by the server region userid if **SECPRFX=YES** was specified) in the CICS file resource class (usually 'FCICSFCT').

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0521 RACROUTE REQUEST=LIST, ENVIR=DELETE, CLASS='*class*' gave R15=*rc*, SAFPRRET=*retcode*, SAFPRREA=*rsncode*.

Explanation: The external security manager LIST function to unload the in-storage security profiles during coupling facility data table server termination gave an unexpected non-zero return code. This message shows the RACROUTE register 15 return code and the external security manager return and reason codes returned in the SAF request parameter list.

System Action: Server termination processing continues.

User Response: See the documentation of the RACROUTE macro with REQUEST=LIST in *OS/390 Security Server External Security Interface (RACROUTE) Macro Reference* (GC28-1922) for the explanation of the return and reason codes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFXS

DFHCF0601I Starting statistics collection for interval since *lasttime*.

Explanation: The coupling facility data table server is about to collect interval, end of day or closedown statistics. This message identifies the start of the time interval to which the statistics apply, which is either the time that the server was started up or the time of the last reset, which occurs whenever interval or end of day statistics are produced.

System Action: The server proceeds with statistics collection.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFST

DFHCF0602I Statistics collection completed, reset performed.

Explanation: Coupling facility data table server statistics have been collected and counters have been reset. This occurs for interval or end of day statistics.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFST

DFHCF0603I Statistics collection completed.

Explanation: Coupling facility data table server statistics have been collected but counters have not been reset. This normally occurs at server closedown.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFST

DFHCF0604 Timer SET failed, return code *retcode***, reason code** *rsncode***.**

Explanation: The statistics subtask in the coupling facility data table server tried to set up a timer wait interval but failed.

System Action: The interval statistics function is terminated with message DFHCF0606.

User Response: Check the return code and reason code. A return code of 4 indicates an attempt to set up more than one concurrent timer interval, which indicates a logic error in the server. The reason code in this case is the MVS STIMERM identifier for the existing timer interval. A return code of 8 indicates that the MVS STIMERM macro failed, in which case the reason code indicates the return code received from STIMERM SET.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFST

DFHCF0605 Timer CANCEL failed, return code *retcode***, reason code** *rsncode***.**

Explanation: The statistics subtask in the coupling facility data table server tried to cancel a timer wait interval but failed.

System Action: The interval statistics function is terminated with message DFHCF0606.

User Response: Check the return code and reason code. A return code of 4 indicates an attempt to cancel a nonexistent timer interval, which indicates a logic error in the server. A return code of 8 indicates that the MVS STIMERM macro failed, in which case the reason code indicates the return code received from STIMERM CANCEL.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFST

DFHCF0606 Statistics collection function is no longer available.

Explanation: The statistics collection subtask in the coupling facility data table server was unable to continue processing and has terminated. The reason will have been indicated by an earlier message.

System Action: The interval statistics subtask terminates and no further interval statistics or end of day statistics will be produced for this run of the server.

User Response: See the earlier message indicating the reason for the termination of the subtask.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFST

DFHCF0610I Statistics written to SMF, return code was *retcode***.**

Explanation: Coupling facility data table server statistics have been sent to SMF. The return code from the SMFEWTM macro is indicated in this message. A non-zero return code usually indicates that SMF recording was suppressed because of current SMF options or an installation exit.

System Action: Processing continues.

User Response: If the return code is non-zero but SMF statistics were expected to be successfully written, see the documentation of the SMFEWTM macro in *OS/390 MVS System Management Facilities (SMF)* (GC28-1783) for more information about return codes.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFST

DFHCF0651 Restart processing cannot open table *table***, reason code** *reason***.**

Explanation: An application region has attempted to restart its connection to the coupling facility data table server, but an unresolved unit of work for that region has updated a table which cannot be opened at present, so restart processing cannot be completed. This message only occurs if the table is still in existence; if it has been deleted, the updates are simply discarded. The reason code is from the file open routine in module DFHCFOC, and indicates why the file could not be opened. In the current implementation, there are no user functions which could prevent a file from being opened by restart, so this condition should not be possible.

System Action: Restart processing is terminated and recoverable tables cannot be accessed until it is successfully retried.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0652 Pool state error, reason code *reason*, **processing** *function* **request for UOWID** *uowid*, **task** *task*, **region** *region*.

Explanation: Integrity checks during coupling facility data table server syncpoint or restart processing found that data or control information in the list structure was in a state that should not be possible in normal processing. The reason codes are based on the response codes returned by the internal coupling facility interface.

- Reason codes:

  2 Entry exceeds maximum data length.

  3 Entry not found.

  4 Wrong version.

  5 Wrong list authority.

  6 Limit number of entries in list reached.

  7 No space left in structure.

All of these conditions can also occur in normal processing. This message is only issued if the condition occurs in a case where it should not occur, or when the normal retry action following the condition cannot be performed. For example, a wrong version response from the coupling facility interface normally simply indicates that an entry has changed, causing the entry to be read again, and this is only treated as a pool state error if the data or control information in the changed entry is not consistent with the expected state of the record.

System Action: The current syncpoint or restart operation is terminated with a pool state error exception.

User Response: This indicates that some data in the pool has become inconsistent or corrupted. There is no known way that this can happen unless a program other than the coupling facility data table server is used to access the pool. If this error occurs for changes to a particular table, it may be necessary to delete the table to clear up the problem. If it occurs for other control information, it may be necessary to recreate the pool.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFSP

DFHCF0701I CF data table pool *poolname* **is to be unloaded.**

Explanation: The coupling facility data table server program has been started with the **UNLOAD** option requesting that the table pool is unloaded to a sequential data set.

System Action: The server starts to process the unload request. In this case, the rest of cross-memory server initialization is bypassed as it will not be needed.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFUL

DFHCF0702I CF data table pool *poolname* **has been successfully unloaded.**

Explanation: The coupling facility data table pool has been unloaded successfully.

System Action: The server closes down normally.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFUL

DFHCF0703I Number of unloaded tables: *tables*. **Blocks written:** *blocks*.

Explanation: This message provides additional information about the results of the coupling facility data table pool unload process, giving the number of tables which were unloaded and the number of 4K data blocks written to the unloaded table pool data set.

System Action: Server termination continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFUL

DFHCF0704 DFHCFUL data set for unload could not be opened.

Explanation: The data set to contain the unloaded coupling facility data table pool could not be opened.

System Action: Unload processing is terminated and the server is closed down with message DFHCF0706.

User Response: Check that the DFHCFUL DD statement is present in the JCL for the unload job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFUL

DFHCF0705 Unload access to CF structure *strname* **failed with response** *response*.

Explanation: The coupling facility data table pool unload process failed because of a problem with coupling facility access.

System Action: Unload processing is terminated and the server is closed down with message DFHCF0706.

User Response: If the response code is 8, this indicates that an unexpected IXLLIST error occurred, for which a previous message DFHCF0441 will have been issued. Any other response code indicates an internal logic error.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFUL

DFHCF0706 Unload for CF data table pool *poolname* was unsuccessful.

Explanation: The coupling facility data table pool unload process failed. The reason will have been described in a previous message.

System Action: The server is terminated.

User Response: See the previous message giving the reason for the unload failure. Note that any unload data set produced in this case will be incomplete and will not be valid for reload purposes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFUL

DFHCF0721 CF data table *table* has been successfully unloaded, *records* records.

Explanation: The named coupling facility data table has been unloaded. Note that if any recoverable updates were pending, the number of table entries unloaded may be slightly larger than the number of records, as the entry for the original record is retained until syncpoint in case it is needed for backout.

System Action: Unload processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFUL

DFHCF0731 *uowids* units of work were unloaded for recoverable connection *applid*.

Explanation: One or more unresolved recoverable units of work were found for the specified recoverable connection identifier during coupling facility data table pool unload processing.

System Action: Unload processing will include the status of those units of work in the unloaded data, to allow them to be resolved after the pool is reloaded.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFUL

DFHCF0801I CF data table pool *poolname* is to be reloaded.

Explanation: The coupling facility data table server program has been started with the **RELOAD** option requesting that the table pool is to be reloaded from a sequential data set produced using the **UNLOAD** option.

System Action: The server starts to process the reload request. In this case, the rest of cross-memory server initialization is bypassed as it will not be needed.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRL

DFHCF0802I CF data table pool *poolname* has been successfully reloaded.

Explanation: The coupling facility data table pool has been reloaded successfully.

System Action: The server closes down normally.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRL

DFHCF0803I Tables reloaded: *tables*. Tables bypassed: *duplicates*. Blocks read: *blocks*.

Explanation: This message provides additional information about the results of the coupling facility data table pool reload process. Tables on the unloaded data set are bypassed during reload processing if they already exist in the pool (for example as a result of a previous reload which could not be completed due to lack of space).

System Action: Server termination processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRL

DFHCF0804 DFHCFRL data set for reload could not be opened.

Explanation: The data set containing the coupling facility data table pool to be reloaded could not be opened.

System Action: Reload processing is terminated and the server is closed down with message DFHCF0808.

User Response: Check that the DFHCFRL DD statement is present in the JCL for the reload job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRL

DFHCF0805 Reload access to CF structure *strname* failed with response *response*.

Explanation: The coupling facility data table pool reload process failed because of a problem with coupling facility access.

System Action: Reload processing is terminated and the server is closed down with message DFHCF0808.

User Response: If the response code is 8, this indicates that an unexpected IXLLIST error occurred, for which a previous message DFHCF0441 will have been issued. Any other response code indicates an internal logic error.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRL

DFHCF0806 Unexpected end of file encountered on reload data set.

Explanation: End of file was encountered on the data set containing the unloaded coupling facility data table pool before the logical end of the unloaded data was encountered.

System Action: Reload processing is terminated and the server is closed down with message DFHCF0808.

User Response: This indicates that the unloaded data set is incomplete, perhaps because the unload process was abnormally terminated.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRL

DFHCF0807 Reload data set contains incorrect data near block *block*, offset *offset*.

Explanation: The coupling facility data table pool reload process failed because the unloaded pool data set is not in the correct format.

System Action: Reload processing is terminated and the server is closed down with message DFHCF0808.

User Response: Check that the correct data set is being used and that the unload process completed normally.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRL

DFHCF0808 Reload for CF data table pool *poolname* was unsuccessful.

Explanation: The coupling facility data table pool reload process could not be completed. The reason will have been described in a previous message.

System Action: The program is terminated.

User Response: See the previous message giving the reason for the reload failure.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRL

DFHCF0809 Reload for CF structure *strname* failed, structure is full.

Explanation: Coupling facility data table pool reload processing failed because there are insufficient free entries or elements to store the new data in the structure.

System Action: Reload processing is terminated and the server is closed down with message DFHCF0808.

User Response: If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and the reload job can then be run again as soon as the alter request completes, in which case it will skip over duplicate information which has already been successfully reloaded. If the structure is at its maximum size, use the MVS **SETXCF FORCE** command to delete the structure, then increase the **SIZE** and **INITSIZE** parameters in the current CFRM policy and activate the updated policy, and rerun the reload job. The approximate amount of information which could not be reloaded can be estimated by comparing the numbers of blocks read and tables reloaded, as described by following message DFHCF0803, with the corresponding numbers from message DFHCF0703 in the unload job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRL

DFHCF0810 Reload for CF structure *strname* failed, all lists are in use.

Explanation: Coupling facility data table pool reload processing failed because all list headers defined in the structure are now in use.

System Action: Reload processing is terminated and the server is closed down with message DFHCF0808.

User Response: Use the MVS **SETXCF FORCE** command to delete the structure, then change the reload job **MAXTABLES** parameter to a value at least as large as the number of tables in the unloaded data, preferably much larger to allow for future expansion, then rerun the reload job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHCFRL

DFHCF0821 CF data table *table* has been successfully reloaded, *records* records.

Explanation: The named coupling facility data table has been reloaded. Note that if any recoverable updates were pending, the number of table entries reloaded may be slightly larger than the number of records, as the entry for the original record is retained until syncpoint in case it is needed for backout.

System Action: Reload processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFRL

DFHCF0822 CF data table *table* is already defined, reloading has been bypassed.

Explanation: A coupling facility data table which was being reloaded was found to have the same name as an existing table within the pool.

System Action: Reloading of the table is bypassed, and reload processing continues with the next table.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFRL

DFHCF0831 *uowids* **units of work were reloaded for recoverable connection** *applid***.**

Explanation: Coupling facility data table pool reload processing has reloaded one or more unresolved recoverable units of work for the specified recoverable connection identifier.

System Action: Reload processing restores the status of those units of work from the unloaded data, to allow them to be resolved when the connection is next restarted.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFUL

DFHCF0832 *uowids* **duplicate units of work were skipped for recoverable connection** *applid***.**

Explanation: Coupling facility data table pool reload processing found one or more unresolved recoverable units of work in the unloaded data which were found to be already present in the current pool, so they were bypassed in this reload run. This should only happen if the reload job was run more than once, for example to resume reloading after increasing the pool size.

System Action: Reload processing skips units of work which are already identified as active in the current pool.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFUL

DFHCF0911I R12=*prv* **RQ Entry** *function* **Table=***table* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and information from the FCCR parameter list is being traced on entry to the request module DFHCFRQ.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFRQ

DFHCF0912I R12=*prv* **RQ Exit** *response* **Table=***table* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and information from the FCCR parameter list is being traced on exit from the request module DFHCFRQ.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFRQ

DFHCF0913I R12=*prv* **RQ Lock** *status* **Table=***table* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and the state of a record lock is being traced. (This message is not used in the normal cases of reading a record whose lock is available or releasing a record when no other task expressed an interest in it).

- Record lock status values:

  OWNED The lock is already held by the same task.

  BUSY The lock is held by another active task.

  RETAINED The lock has previously been marked as retained.

  RETAIN The lock is for an inactive task and will be retained.

  RECLAIM The lock is inactive and can be reclaimed immediately.

  BACKOUT The lock will be reclaimed after backing out any change.

  POST Other tasks are being notified that a lock was released.

  WAIT The current task is being suspended to await a lock.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFRQ

DFHCF0921I R12=*prv* **IQ Entry** *function* **Table=***table* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and information from the FCCI parameter list is being traced on entry to the inquire module DFHCFIQ.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFIQ

DFHCF0922I R12=*prv* **IQ Exit** *response* **Table=***table* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and information from the FCCI parameter list is being traced on exit from the inquire module DFHCFIQ.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFIQ

DFHCF0931I R12=*prv* **OC Entry** *function* **Table=***table*
Task=*tasknum region*

Explanation: Coupling facility data table server request tracing is active and information from the FCCT parameter list is being traced on entry to the open/close module DFHCFOC.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFOC

DFHCF0932I R12=*prv* **OC Exit** *response* **Table=***table*
Task=*tasknum region*

Explanation: Coupling facility data table server request tracing is active and information from the FCCT parameter list is being traced on exit from the open/close module DFHCFOC.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFOC

DFHCF0933I R12=*prv* **OC Closing table** *table* **for** *region* **on** *system***.**

Explanation: Coupling facility data table server request tracing is active and the open/close module DFHCFOC is closing a table on behalf of a region or server which has terminated.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFOC

DFHCF0941I R12=*prv* **CF Entry** *request options modifiers*
R1=*parmlst table*

Explanation: Coupling facility data table server tracing of coupling facility accesses is active and information from the request interface parameter list is being traced on entry to the coupling facility interface module DFHCFCF. The three-character request mnemonics used by the internal coupling facility interface consist of a two-character code indicating the type of operation followed by a one-character code indicating the type of object on which the operation is performed.

- Coupling facility interface operations:

  CRx Create

  DLx Delete

  INx Inquire

  MDx Modify

  RDx Read

  RWx Rewrite

  WRx Write (new)

- Coupling facility interface objects:

  xxA APPLID entry

  xxD Data record entry

  xxI Index entry

  xxL List controls (for list containing data records)

  xxM Message entry (for lock release notification)

  xxU Unit of work entry

- The options flags may include the following hexadecimal values:

  80 Read key greater than or equal

  40 Read key less than or equal

  20 Compare entry version with given value

  10 Suppress data transfer (transfer adjunct area only)

  08 Access oldest entry with same key (for before-image)

  04 Write new entry with same key (for after-image)

  02 Non-increasing rewrite (so retry if structure full)

The modifier field is only used at present to specify the target connection number for a lock message, in hexadecimal form.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFCF

DFHCF0942I R12=*prv* **CF IXLLIST Req=***request* **Adj=***adjarea*
Buf=*buffer* **List=***listnum* **Rsn=***rsncode*

Explanation: Coupling facility data table server tracing for coupling facility accesses is active and the result from an IXLLIST macro is being traced. The information traced includes an abbreviation of the type of request being performed, the addresses of the adjunct area and data buffer (zero when not used), the number of the list being accessed and the reason code returned by the macro. See the documentation of the IXLLIST macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for further details, including the explanation of the reason code.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFCF

DFHCF0943I R12=*prv* **CF IXLLIST** *keyword=value*

Explanation: Coupling facility data table server tracing for coupling facility accesses is active and an IXLLIST parameter or result value (key, authority value or version) is being traced in hex and (if relevant) character format.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFCF

DFHCF0944I R12=*prv* **CF Exit** *response table*

Explanation: Coupling facility data table server tracing for coupling facility accesses is active and information from the request interface parameter list is being traced on exit from the CF request module DFHCFCF.

- Response codes:

  OK Normal completion.

  LEN ERROR Data to be read exceeds buffer length.

  NOT FOUND No entry was found with the given key.

  DUPLICATE Add was rejected because key already exists.

  WRONG VER Change was rejected because version did not match.

  AUTH FAIL List authority value did not match.

  LIST LIM List has reached maximum number of entries.

  I/O ERROR IXLLIST error other than any of the above.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFCF

DFHCF0951I R12=*prv* **SP Entry** *function* **UOWID=***uowid* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and information from the FCCU parameter list is being traced on entry to the syncpoint module DFHCFSP.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFSP

DFHCF0952I R12=*prv* **SP Exit** *response* **UOWID=***uowid* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and information from the FCCU parameter list is being traced on exit from the syncpoint module DFHCFSP.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFSP

DFHCF0953I R12=*prv* **SP Lock** *action* **UOWID=***uowid* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and a record lock action is being traced. The only lock action traced at present is 'POST', when a lock is being released after another task expressed interest in it.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFSP

DFHCF0954I R12=*prv* **SP UOW** *status* **UOWID=***uowid* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and a unit of work is being processed during restart processing.

- Unit of work status values:

  INDOUBT The UOW needs to be resolved by the client region.

  COMMIT The UOW is being committed.

  BACKOUT The UOW is being backed out.

  DELETE No further changes were found so the UOW is being deleted.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFSP

DFHCF0955I R12=*prv* **SP Table** *table* **UOWID=***uowid* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and the named table is being processed as part of commit or backout processing.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFSP

DFHCF0956I R12=*prv* **SP Record state** *action* **UOWID=***uowid* **Task=***tasknum region*

Explanation: Coupling facility data table server request tracing is active and the current record state is being traced before commit or backout processing.

- The record state may include the following hexadecimal values:

  80 The record is locked.

  40 The record was changed in some way.

  20 The record was created by this unit of work.

  10 The record was updated by this unit of work.

  08 The record was deleted by this unit of work.

  04 The record lock is marked as retained.

  01 This was the first record updated by this unit of work.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHCFSP

DFHCF0999I Trace *text*

Explanation: This message is used by the coupling facility data table server for non-specific debugging traces in multiple modules, for use by service personnel. It should not appear in normal execution unless debugging traces were deliberately activated, or an internal logic error was encountered.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Module: various

DFHCPxxxx messages

DFHCP0101I *applid* **CPI initialization has started.**

Explanation: This is an informational message indicating the start of CPI initialization.

System Action: Initialization continues.

User Response: None. You can suppress this message with the system initialization parameter MSGLVL=0.

Destination: Console

Module: DFHCPIN1

XMEOUT Parameter: *applid*

DFHCP0102I *applid* **CPI initialization has ended.**

Explanation: This is an informational message indicating that CPI initialization has completed successfully.

System Action: Initialization continues.

User Response: None. You can suppress this message with the system initialization parameter MSGLVL=0.

Destination: Console

Module: DFHCPIN1

XMEOUT Parameter: *applid*

DFHCP0103I *applid* **CPI initialization has failed.**

Explanation: CPI has failed to initialize successfully.

System Action: Message DFHSI1522 will be issued following this message. CICS will terminate or continue initialization depending upon the operator's response to message DFHSI1522.

An exception trace entry will be written at the time the failure was detected.

Other CICS components called by CPI initialization may also issue messages or write trace entries.

User Response: Decide whether CICS can continue execution without CPI support, and respond accordingly to message DFHSI1522.

You should also investigate why CPI failed to initialize.

Destination: Console

Module: DFHCPIN1

XMEOUT Parameter: *applid*

DFHCP0701I *date time applid tranid program name* **CPI-C verb** *verb* **used unrecognized CONVERSATION_ID** *Conversation_ID***.**

Explanation: The application program has used an unrecognized conversation_ID on one of its calls to CPI-C. This could mean that:

- The application program has not created a conversation successfully using either the CMINIT (Initialize_Conversation) or the CMACCP (Accept_Conversation) verbs, or
- The application program has used the conversation_ID supplied to it by CPI-C incorrectly.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Determine which error has occurred and amend the application program accordingly.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPIC

XMEOUT Parameters: *date, time, applid, tranid, program name, verb, Conversation_ID*

DFHCP0702I *date time applid tranid program name Conversation_ID* **CPI-C verb** *verb* **was disallowed because of the conversation state** *state***.**

Explanation: The CPI-C state machine detected a state error. This means that the conversation was in the wrong state to issue this verb.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_STATE_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Use the state machine defined in the *SAA CPI Communications Reference* manual, (SC26-4399), and the CICS trace information to determine the sequence of CPI-C calls issued that caused the state error. Amend the application program in accordance with the supplied guidelines.

Destination: CCPI

Module: DFHCPIC

XMEOUT Parameters: *date, time, applid, tranid, program name, Conversation_ID, verb, state*

DFHCP0705I *date time applid tranid program name Conversation_ID* **invalid conversation_type parameter (***X'conv_type***') supplied on the CMSCT (Set_Conversation_Type) verb.**

Explanation: The application program has called CMSCT (Set_Conversation_Type) with an invalid conversation_type parameter value.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSCT in the application program to use a valid conversation_type parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSA

XMEOUT Parameters: *date, time, applid, tranid, program name, Conversation_ID, X'conv_type'*

DFHCP0706I *date time applid tranid program name conversation_ID* **the supplied conversation_type parameter of CM_MAPPED_CONVERSATION conflicts with the current setting of the fill characteristic CM_FILL_BUFFER.**

Explanation: The application program has called CMSCT (Set_Conversation_Type) with a conversation_type parameter of CM_MAPPED_CONVERSATION when it had previously used the CMSF (Set_Fill) verb to set the *fill* characteristic.

This is not allowed in CPI-C.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program so that it does not use these two verbs in this invalid combination.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSA

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0707I *date time applid tranid program name conversation_ID* **the supplied conversation_type parameter CM_MAPPED_CONVERSATION conflicts with the current setting of log_data.**

Explanation: The application program has called CMSCT (Set_Conversation_Type) with a conversation_type parameter of CM_MAPPED_CONVERSATION when it had previously used the CMSLD (Set_Log_Data) verb to create some Log Data.

This is not allowed in CPI-C.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program so that it does not use these two verbs in this invalid combination.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSA

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0708I *date time applid tranid program name conversation_ID* **invalid deallocate_type parameter (***X'deallocate_type***') supplied on the CMSDT (Set_Deallocate_Type) verb.**

Explanation: The application program has called CMSDT (Set_Deallocate_Type) with an invalid deallocate_type parameter.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSDT in the application program to use a valid deallocate_type parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSB

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, X'deallocate_type'*

DFHCP0709I *date time applid tranid program name conversation_ID* **the supplied deallocate_type parameter** *deallocate_type* **conflicts with the current setting of the sync_level characteristic** *sync_level*.

Explanation: The application program has called CMSDT (Set_Deallocate_Type) with a deallocate_type of *deallocate_type* and with the sync_level characteristic set to *sync_level*.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program to remove this conflict.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSB

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, deallocate_type, sync_level*

DFHCP0710I *date time applid tranid program name conversation_ID* **invalid error_direction parameter (***X'error_direction'***) supplied on the CMSED (Set_Error_Direction) verb.**

Explanation: The application program has called CMSED (Set_Error_Direction) with an invalid error_direction parameter.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSED in the application program to use a valid error_direction parameter.

Destination: CCPI

Module: DFHCPCSC

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, X'error_direction'*

DFHCP0711I *date time applid tranid program name conversation_ID* **invalid fill parameter (***X'fill'***) supplied on the CMSF (Set_Fill) verb.**

Explanation: The application program has called CMSF (Set_Fill) with an invalid fill parameter *fill*.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSF in the application program to use a valid fill parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSD

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, X'fill'*

DFHCP0712I *date time applid tranid program name conversation_ID* **CMSF (Set_Fill) call conflicts with the current conversation_type of CM_MAPPED_CONVERSATION.**

Explanation: The application program has called CMSF (Set_Fill) when the conversation_type is CM_MAPPED_CONVERSATION.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program to remove this conflict.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSD

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0713I *date time applid tranid program name conversation_ID* **CMSLD (Set_Log_Data) call conflicts with the current conversation_type of CM_MAPPED_CONVERSATION.**

Explanation: The application program has called CMSLD (Set_Log_Data) when the conversation_type is CM_MAPPED_CONVERSATION.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program to remove this conflict.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSE

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0714I *date time applid tranid program name conversation_ID* **log_data_length (***log_data_length***) supplied on CMSLD (Set_Log_Data) verb is not in the range 0-512.**

Explanation: The application program has called CMSLD (Set_Log_Data) with a log_data_length parameter that is not in the range 0–512.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSLD in the application program to use a valid log_data_length parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSE

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, log_data_length*

DFHCP0718I *date time applid tranid program name conversation_ID* **invalid mode_name_length parameter (***mode_name_length***) supplied on the CMSMN (Set_Mode_Name) verb.**

Explanation: The application program has called CMSMN (Set_Mode_Name) with a mode_name_length parameter outside the range of 0 –8.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSMN in the application program to use a valid mode_name_length parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSF

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, mode_name_length*

DFHCP0721I *date time applid tranid program name conversation_ID* **the partner_lu_name_length (***partner_lu_name_len***) supplied on the CMSPLN (Set_Partner_LU_Name) verb is not in the range 1-17.**

Explanation: The application program has called CMSPLN (Set_Partner_LU_Name) with a partner_lu_name_length parameter outside the range 1–17.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect either on the conversation or conversation characteristics.

User Response: Amend CMSPLN in the application program to use a partner_lu_name_length parameter within the range 1-17.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSG

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, partner_lu_name_len*

DFHCP0724I *date time applid tranid program name conversation_ID* **invalid prepare_to_receive_type parameter (***X'ptr_type***) supplied on the CMSPTR (Set_Prepare_To_Receive_Type) verb.**

Explanation: The application program has called CMSPTR (Set_Prepare_To_Receive_Type) with an invalid prepare_to_receive_type parameter.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSPTR in the application program to use a valid prepare_to_receive_type parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSH

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, X'ptr_type'*

DFHCP0725I *date time applid tranid program name conversation_ID* **the supplied prepare_to_receive_type parameter CM_PREP_TO_RECEIVE_CONFIRM is incompatible with the current setting of the sync_level characteristic CM_NONE.**

Explanation: The application program has called CMSPTR (Set_Prepare_To_Receive_Type) with a prepare_to_receive_type parameter of CM_PREP_TO_RECEIVE_CONFIRM and with the sync_level characteristic set to CM_NONE.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program to remove this conflict.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSH

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0726I *date time applid tranid program name conversation_ID* **invalid receive_type parameter (***X'receive_type***) supplied on the CMSRT (Set_Receive_Type) verb.**

Explanation: The application program has called CMSRT (Set_Receive_Type) with an invalid receive_type parameter.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSRT in the application program to use a valid receive_type parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSI

DFHCP0727I *date time applid tranid program name conversation_ID* **invalid return_control parameter (***X'return_control'***) supplied on the CMSRC (Set_Return_Control) verb.**

Explanation: The application program has called CMSRC (Set_Return_Control) with an invalid return_control parameter.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSRC in the application program to use a valid return_control parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSJ

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, X'return_control'*

DFHCP0728I *date time applid tranid program name conversation_ID* **invalid send_type parameter (***X'send_type'***) supplied on the CMSST (Set_Send_Type) verb.**

Explanation: The application program has called CMSST (Set_Send_Type) with an invalid send_type parameter.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSST in the application program to use a valid send_type parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSK

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, X'send_type'*

DFHCP0729I *date time applid tranid program name conversation_ID* **the supplied send_type parameter CM_SEND_AND_CONFIRM is incompatible with the current setting of the sync_level characteristic CM_NONE.**

Explanation: The application program has called CMSST (Set_Send_Type) with a send_type parameter of CM_SEND_AND_CONFIRM and with the sync_level characteristic set to CM_NONE.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program to remove this conflict.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Module: DFHCPCSK

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0730I *date time applid tranid program name conversation_ID* **invalid sync_level parameter (***X'sync_level'***) supplied on the CMSSL (Set_Sync_Level) verb.**

Explanation: The application program has called CMSSL (Set_Sync_Level) with an invalid sync_level parameter.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSSL in the application program to use a valid sync_level parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSL

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, X'sync_level'*

DFHCP0731I *date time applid tranid program name conversation_ID* **the supplied sync_level parameter CM_NONE is incompatible with the current setting of the send_type characteristic CM_SEND_AND_CONFIRM.**

Explanation: The application program has called CMSSL (Set_Sync_Level) with a sync_level parameter of CM_NONE. The send_type is CM_SEND_AND_CONFIRM.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program to remove this conflict.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSL

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0732I *date time applid tranid program name conversation_ID* **the supplied sync_level parameter** *sync_level* **is incompatible with the current setting of the deallocate_type characteristic** *deallocate_type***.**

Explanation: The application program has called CMSSL (Set_Sync_Level) with a sync_level parameter of *sync_level*. The deallocate_type is *deallocate_type*.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program to remove this conflict.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSL

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, sync_level, deallocate_type*

DFHCP0733I *date time applid tranid program name conversation_ID* **the supplied sync_level parameter CM_NONE is incompatible with the current setting of the prepare_to_receive_type characteristic CM_PREP_TO_RECEIVE_CONFIRM.**

Explanation: The application program has called CMSSL (Set_Sync_Level) with a sync_level parameter of CM_NONE.

CM_PREP_TO_RECEIVE_CONFIRM is the prepare_to_receive_type.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program to remove this conflict.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSL

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0734I *date time applid tranid program name conversation_ID* **tp_name_length parameter (***tp_name_length***) supplied on the CMSTPN (Set_TP_Name) verb is not in the range 1-64.**

Explanation: The application program has called CMSTPN (Set_TP_Name) with an tp_name_length parameter outside the range 1–64.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend CMSTPN in the application program to use a valid tp_name_length parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCSM

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, tp_name_length*

DFHCP0740I *date time applid tranid program name* **No incoming conversation to accept.**

Explanation: The application program has called CMACCP (Accept_conversation) when there is no incoming conversation.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_STATE_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Ensure that there is an incoming conversation to accept.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCAC

XMEOUT Parameters: *date, time, applid, tranid, program name*

DFHCP0741I *date time applid tranid program name* **Duplicate call to CMACCP (Accept_Conversation).**

Explanation: The application program has called CMACCP (Accept_conversation) more than once.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_STATE_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program so that it only calls CMACCP once.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCAC

XMEOUT Parameters: *date, time, applid, tranid, program name*

DFHCP0742I *date time applid tranid program name* **Session is not available for CPI-C as it is already in use by another process.**

Explanation: The application program has called CMACCP (Accept_conversation) when it was already using the session for another process, for example, EXEC Interface DTP.

System Action: CICS returns control to the application program with return_code CM_PRODUCT_SPECIFIC_ERROR.

User Response: Ensure that the application uses only CPI-C on this session.

Destination: CCPI

Module: DFHCPCAC

XMEOUT Parameters: *date, time, applid, tranid, program name*

DFHCP0743I *date time applid tranid program name* **Unable to use CPI-C as this transaction was initiated by ATI.**

Explanation: The application program has called CMACCP (Accept_conversation) after it was started by Automatic Transaction Initiation (ATI). This is not supported.

System Action: CICS returns control to the application program with return_code CM_PRODUCT_SPECIFIC_ERROR.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Ensure that applications abide by this restriction.

Destination: CCPI

Module: DFHCPCAC

XMEOUT Parameters: *date, time, applid, tranid, program name*

DFHCP0747I *date time applid tranid program name conversation_ID* **CMCFM (Confirm) call conflicts with sync_level CM_NONE.**

Explanation: The application program has called CMCFM (Confirm) when the sync_level is set to CM_NONE. This is not allowed.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program so this conflict no longer occurs.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCCM

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0749I *date time applid tranid program name* **Unrecognized sym_dest_name (***sym_dest_name***) supplied on the CMINIT (Initialize_Conversation) verb.**

Explanation: The application program has called CMINIT (Initialize_Conversation). The sym_dest_name parameter is unrecognized.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program and the partner resource definition to ensure that the sym_dest_name parameter is correct.

The *CICS Resource Definition Guide* explains how to use the partner resource correctly.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPCIC

XMEOUT Parameters: *date, time, applid, tranid, program name, sym_dest_name*

DFHCP0750I *date time applid tranid program name* **Unrecognized profile** *profile_name* **supplied in partner resource** *sym_dest_name***.**

Explanation: The application program has called CMINIT (Initialize_Conversation). The profile found in the sym_dest_name supplied is unrecognized.

System Action: CICS returns control to the application program with return_code CM_PRODUCT_SPECIFIC_ERROR.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program and the partner resource definition to ensure that the sym_dest_name parameter is correct.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

In addition, the *CICS Resource Definition Guide* gives further information on partner resource definitions.

Modules: DFHCPCIC

XMEOUT Parameters: *date, time, applid, tranid, program name, profile_name, sym_dest_name*

DFHCP0751I *date time applid tranid program name conversation_ID* **invalid requested_length parameter** *requested_length* **supplied on CMRCV (Receive).**

Explanation: The application program has called CMRCV (Receive) with a requested_length parameter that has a value greater than 32767.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program to use a valid value for the requested_length parameter.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Modules: DFHCPCRI, DFHCPCRW

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, requested_length*

DFHCP0752I *date time applid tranid program name conversation_ID* **data passed on call to CMSEND contains an invalid GDS record.**

Explanation: The application program has called CMSEND (Send_Data). Data passed on this call contains an invalid generalized data stream (GDS) record.

Note: This message is only issued on a basic conversation. That is, when conversation_type is set to CM_BASIC_CONVERSATION.

System Action: The data is not sent.

CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Amend the application program to ensure that this parameter is correct.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called together with information about GDS records.

The *CICS Distributed Transaction Programming Guide* provides additional information about GDS records.

Destination: CCPI

Module: DFHCPCLR

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0753I *date time applid tranid program name conversation_ID* **invalid send_length parameter** *send_length* **supplied on CMSEND (send_data).**

Explanation: The application program has called CMSEND (Send_Data) with a send_length parameter that is not in the range 0–32767 bytes.

System Action: CICS returns control to the application program with return_code CM_PROGRAM_PARAMETER_CHECK.

User Response: The send_length parameter should not exceed 32767 bytes. Amend CMSEND to send data that is within the range 0–32767 bytes. This may entail sending the data in two chunks.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called.

Destination: CCPI

Modules: DFHCPCN1, DFHCPCN2, DFHCPCN3, DFHCPCN4, DFHCPCN5

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, send_length*

DFHCP0754I *date time applid tranid program name conversation_ID* **data sent so far is currently in the middle of a GDS record so cannot send CMDEAL, CMCFM or CMPTR requests.**

Explanation: The application is using a basic conversation (that is, the conversation_type characteristic has been set to CM_BASIC_CONVERSATION).

The application has not sent all the data associated with the last Generalized Data Stream (GDS) record.

However, the application has tried to send one of the following requests:

- a CMDEAL (Deallocate),
- a CMCFM (Confirm), or
- a CMPTR (Prepare_to_receive).

System Action: CICS returns control to the application program with return_code CM_PROGRAM_STATE_CHECK.

The CPI-C verb has no effect on either the conversation or the conversation characteristics.

User Response: Inspect the data sent to determine why the previous send was in error. Check if the error was caused by the application truncating the last record or if there was an error in one of the length fields which caused CPI-C to misinterpret the data-stream and amend the application program accordingly.

The *SAA CPI-C Reference* manual, (SC26-4399), provides a detailed description of all the CPI-C verbs and how they should be called together with information about GDS records.

The *CICS Distributed Transaction Programming Guide* provides additional information about GDS records.

Destination: CCPI

Module: DFHCPCLR

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID*

DFHCP0756 *date time applid tranid program name conversation_ID* **received an unrecognized sense_code** *X'sense_code'* **from the partner** *{program | program - }tp_name***.**

Explanation: A sense code received from the partner program on a remote system was unrecognized. This could be for one of two reasons.

- a protocol error, or
- the partner program is running on a later release and new sense codes have been added to the APPC architecture.

System Action: CICS returns control to the application program with either return_code CM_DEALLOCATE_ABEND or CM_PROGRAM_ERROR_PURGING. This depends on whether the unrecognized sense code has been interpreted as an error or interpreted as a conversation abend.

Note: *tp_name* is present only if this message is being issued on the front-end system.

User Response: Use the sense code provided in the message and your knowledge of the two communicating systems to determine which of the two possible cases documented above is the error.

If the error is a protocol error, you need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCPI

Module: DFHCPCLR

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, X'sense_code', {2=program, 1=program - }, tp_name*

DFHCP0757I *date time applid tranid program name conversation_ID* **unrecognized netname** *netname* **supplied for CMALLC (Allocate) verb.**

Explanation: The allocation of a session for this conversation failed due to an unrecognized netname *netname*.

This value is derived from the partner_lu_name specified either in the partner resource for the conversation, or on a CPI-C CMSPLN (set_partner_lu_name) verb.

System Action: CICS returns control to the application program with return_code CM_PARAMETER_ERROR.

No session is allocated.

User Response: Amend the application program to use a recognized netname.

Destination: CCPI

Module: DFHCPCLR

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, netname*

DFHCP0758I *date time applid tranid program name conversation_ID* **unrecognized mode_name** *mode_name* **supplied for CMALLC (Allocate) verb.**

Explanation: The allocation of a session for this conversation failed due to an unrecognized mode name *mode_name*.

This value is specified either in the profile named in the partner resource for the conversation, or on a CPI-C CMSMN (Set_mode_name) verb.

System Action: CICS returns control to the application program with return_code CM_PARAMETER_ERROR.

No session is allocated.

User Response: Amend the application program to use a recognized mode_name.

Destination: CCPI

Module: DFHCPCLR

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, mode_name*

DFHCP0759I *date time applid tranid program name conversation_ID* **invalid use of the SNA service TP** *X'tp_name'*

Explanation: The allocation of a session for conversation *conversation_id* failed because the transaction program (TP) specified in the conversation control block (CPC) is an SNA service TP. This is not allowed.

System Action: CICS returns control to the application program with return_code CM_PARAMETER_ERROR.

User Response: Amend the application program so that it uses a different TP.

Destination: CCPI

Module: DFHCPCAL

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, X'tp_name'*

DFHCP0760I *date time applid tranid program name conversation_ID* **an invalid partner_lu_name** *partner_lu_name* **was specified for the CMALLC (Allocate) verb.**

Explanation: The allocation of a session has failed. This is because the partner_lu_name specified in the conversation control block (CPC) does not conform to the following rules.

1. The partner_lu_name may take one of the following forms:
   - Netname (1-8 characters long), or
   - Network.netname (where network and netname are EACH 1-8 characters long).
2. Netname and network both consist of the following character sets, where the first character is always alphabetic.
   - A-Z
   - a-z
   - @
   - $
   - #
   - 0-9

   Note: Lower case letters are translated to uppercase.

System Action: The session is not allocated.

CICS returns control to the application program with return_code CM_PARAMETER_ERROR.

User Response: Depending on the application, the partner_lu_name either comes from the partner resource (specified on the CMINIT (initialize_conversation) verb in the sym_dest_name parameter) or an optional CMSPLN (set_partner_lu_name) verb. This value needs to be changed to conform to the rules above.

Destination: CCPI

Module: DFHCPCAL

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, partner_lu_name*

DFHCP0761I *date time applid tranid program name conversation_ID* **an invalid mode_name** *mode_name* **was specified for the CMALLC (Allocate) verb.**

Explanation: The allocation of a session for conversation *conversation_id* has failed. This is because the mode_name *mode_name* specified in the conversation control block (CPC) is not allowed.

System Action: No session is allocated.

CICS returns control to the application program with return_code CM_PARAMETER_ERROR.

User Response: Amend the application program so that it uses a different mode_name.

Destination: CCPI

Module: DFHCPCAL

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, mode_name*

DFHCP0763I *date time applid tranid program name conversation_ID* **the mode_name** *mode_name* **specified for the CMALLC (Allocate) verb is unknown to VTAM.**

Explanation: The allocation of a session for conversation *conversation_ID* has failed. This is because the mode_name specified in the conversation control block (CPC) is known to the remote system, but is unknown to VTAM.

System Action: No session is allocated.

CICS returns control to the application program with return code CM_PARAMETER_ERROR.

User Response: Amend the application program so that it uses a different mode_name.

Destination: CCPI

Module: DFHCPCLR

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, mode_name*

DFHCP0764I *date time applid tranid program name* **Partner Resource Manager is unavailable.**

Explanation: The application program has called CMINIT (Initialize_Conversation), but the partner resource manager (which provides access to the partner resource table) is not available.

System Action: CICS returns control to the application program with return_code CM_PRODUCT_SPECIFIC_ERROR.

User Response: First determine whether message DFHPR0106 was issued during CICS initialization; if so, refer to the advice given for that message. Otherwise it appears that CICS-owned storage (either the static storage address list, or the PR static storage) has been overlaid. Refer to the *CICS Problem Determination Guide* for guidance on how to deal with storage violations.

Destination: CCPI

Module: DFHCPCIC

XMEOUT Parameters: *date, time, applid, tranid, program name*

DFHCP0765I *date time applid tranid program name conversation_ID* **CPI-C verb** *verb* **was disallowed because of the BACKOUT-REQUIRED program state.**

Explanation: The CPI-C state machine has detected a state error. The verb *verb* cannot be issued in BACKOUT-REQUIRED program state.

System Action: CICS returns control to the application program with return code CM_PROGRAM_STATE_CHECK.

User Response: Amend the application program in accordance with the supplied guidelines. See the *SAA CPI-C Reference* (SC26-4399), which contains a description of CPI-C verbs and how they should be called.

Destination: CCPI

Module: DFHCPIC

XMEOUT Parameters: *date, time, applid, tranid, program name, conversation_ID, verb*

DFHCRxxxx messages

DFHCR4300 *date time applid* **Transaction** *tranid* **not executed on terminal** *termid* **on system** *sysid***. Transaction invalid on that system**

Explanation: A request was made to schedule a task on remote system *sysid*. The request could not be executed because transaction *tranid* is not defined on system *sysid*.

System Action: Other processing continues.

User Response: Ensure that terminal *termid* and transaction *tranid* are defined on system *sysid*.

Destination: CSMT

Module: DFHCRS

XMEOUT Parameters: *date, time, applid, tranid, termid, sysid*

DFHCR4301 *date time applid* **Transaction** *tranid* **not executed on terminal** *termid* **on system** *sysid***. Terminal invalid on that system**

Explanation: A request was made to schedule a task on remote system *sysid*. The request could not be executed because terminal *termid* is not defined on system *sysid*.

System Action: Other processing continues.

User Response: Ensure that terminal *termid* and transaction *tranid* are defined on system *sysid*.

Destination: CSMT

Module: DFHCRS

XMEOUT Parameters: *date, time, applid, tranid, termid, sysid*

DFHCR4302 *date time applid* **Transaction** *tranid* **not executed on terminal** *termid* **on system** *sysid***. Schedule request failed on that system**

Explanation: A request was made to schedule a task on remote system *sysid*. The request could not be executed.

System Action: Other processing continues.

User Response: Check the system definition tables of the remote system to determine why schedule requests might not be honored.

Destination: CSMT

Module: DFHCRS

XMEOUT Parameters: *date, time, applid, tranid, termid, sysid*

DFHCR4310 *date time applid* **Request from system** *sysid* **to initiate transaction** *tranid* **on that system on terminal** *termid* **was not executed. Transaction invalid on this system.**

Explanation: A request was received from remote system *sysid* to initiate transaction *tranid* on system *sysid* on terminal *termid*. The request could not be honored because transaction *tranid* is not defined in this system.

System Action: Processing continues.

User Response: Ensure that terminal *termid* and transaction *tranid* are defined on both systems.

Destination: CSMT

Module: DFHCRS

XMEOUT Parameters: *date, time, applid, sysid, tranid, termid*

DFHCR4311 *date time applid* **Request from system** *sysid* **to initiate transaction** *tranid* **on that system on terminal** *termid* **was not executed. Terminal invalid on this system.**

Explanation: A request was received from remote system *sysid* to initiate transaction *tranid* on system *sysid* on terminal *termid*. The request could not be honored because terminal *termid* is not defined on this system.

System Action: Processing continues.

User Response: Ensure that terminal *termid* and transaction *tranid* are defined on both systems.

Destination: CSMT

Module: DFHCRS

XMEOUT Parameters: *date, time, applid, sysid, tranid, termid*

DFHCR4312 *date time applid* **Request from system** *sysid* **to initiate transaction** *tranid* **on that system on terminal** *termid* **was not executed. Schedule request failed**

Explanation: A request was received from remote system *sysid* to initiate transaction *tranid* on system *sysid* on terminal *termid*. The request could not be honored because the schedule request failed.

System Action: Processing continues.

User Response: Check the system definition tables of the local system to determine why schedule requests might not be honored.

Destination: CSMT

Module: DFHCRS

XMEOUT Parameters: *date, time, applid, sysid, tranid, termid*

DFHCR4314 *date time applid* **Request to initiate transaction** *tranid* **on remotely owned terminal** *termid* **has been purged. Request was not deliverable to system** *sysid* **within the ATI purge delay time interval.**

Explanation: A request to initiate transaction *tranid* was not delivered to system *sysid*, probably because a link to system *sysid* had not been made available.

System Action: Processing continues.

User Response: Ensure that a link to system *sysid* is made available between issuing the transaction initiation request and the elapse of the ATI purge delay time interval.

Destination: CSMT

Module: DFHCRQ

XMEOUT Parameters: *date, time, applid, tranid, termid, sysid*

DFHCR4315 *date time applid* **Request to initiate transaction** *tranid* **on remotely owned terminal** *termid* **has been purged. System** *sysid* **has not responded within the ATI purge delay time interval.**

Explanation: A request to initiate transaction *tranid* was sent to system *sysid*. System *sysid* acknowledged the request but did not respond within the ATI purge delay time interval. If system *sysid* eventually responds, the task will not be executed.

System Action: Processing continues.

User Response: Determine why system *sysid* did not respond. The system did not respond because

1. the task started and abnormally terminated, or
2. the task failed a security check, or
3. system *sysid* abnormally terminated and all details of the request were lost.

Destination: CSMT

Module: DFHCRQ

XMEOUT Parameters: *date, time, applid, tranid, termid, sysid*

DFHCZxxxx CICS class libraries messages

In order to format CZ messages correctly in a DBCS environment, use the sit override MSGCASE=UPPER.

DFHCZ0105 *date time applid userid termid tranid program name* **CICS event summary:** *class*::*method* **condition=***X'resp'* **(***resptext***) minor=***X'resp2'*

Explanation: This message is issued whenever the method IccEvent::summary is called, and it gives the summary details of the event (CICS call).

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table and writes this message to the TD queue CCZM.

User Response: This message is issued for information only and there is no specific user action needed in response.

Destination: CCZM

Module: ICCEVTEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, X'resp', resptext, X'resp2'*

DFHCZ0106 *date time applid userid termid tranid program name* **CICS exception summary:** *exceptno class*::*method* **type=***type***.**

Explanation: This message is issued whenever the method IccException::summary is called, and it gives the summary details of the exception.

The message related to the exception can be obtained by calling the method IccException::message.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table and writes this message to the TD queue CCZM.

User Response: This message is issued for information only and there is no specific user action needed in response.

Destination: CCZM

Module: ICCEXCEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, exceptno, class, method, type*

DFHCZ0108 *date time applid userid termid tranid program name class*::*method* **This method failed because an internal call to CICS returned the condition** *condition***.**

Explanation: The method reported in the message failed because an internal call to CICS returned a failure condition.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: You need to correct the cause of the underlying CICS failure before retrying this command. You should look at other messages and the trace log for further indication of the root cause.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCRESIC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, condition*

DFHCZ0109 *date time applid userid termid tranid program name class*::*method* **This method failed because of a severe internal error. Diagnostic information:** *diaginfo1***,** *diaginfo2***.**

Explanation: The method reported in the message failed because of a severe internal error.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: Make a note of the diagnostic information and contact IBM for assistance. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCBASIC, ICCCLKEC, ICCCTLEC, ICCFILEC, ICCFLIEC, ICCRESEC, ICCRESIC, ICCTIMEC, ICCTRMEC, ICCTSKEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, diaginfo1, diaginfo2*

DFHCZ0110 *date time applid userid termid tranid program name class*::*method* **This constructor/operator failed because it is not supported on the current platform of** *env***.**

Explanation: The constructor/operator reported in the message failed because it is not supported on the current platform (MVS).

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to establish why this program was running on an MVS platform; and then, either change the program not to call this method, or change the platform as appropriate.

If you are using vendor written software that fails in this way, you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCCONEC, ICCJRNEC, ICCRIDEC, ICCSESEC, ICCUSREC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, env*

DFHCZ0111 *date time applid userid termid tranid program name class*::*method* **This constructor/operator failed because the system is configured with CICS family subset enforcement.**

Explanation: The method/operator reported in the message failed because CICS has been configured to restrict its functionality to that of the CICS family subset. This method/operator is not part of this subset.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written, then you need to establish why this method/operator was called; and if appropriate, switch off the CICS family subset enforcement or change the program to avoid using this method/operator.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCCONEC, ICCJRNEC, ICCRIDEC, ICCSESEC, ICCUSREC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method*

DFHCZ0112 *date time applid userid termid tranid program name class*::*method* **This method failed because it is not supported on the current platform of** *env***.**

Explanation: The method reported in the message failed because it is not supported on the current platform (MVS).

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to establish why this program was running on an MVS platform, and then either change the program not to call this method or change the platform as appropriate.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCABDEC, ICCCLKEC, ICCCONEC, ICCCTLEC, ICCSESEC, ICCSRQIC, ICCTMDEC, ICCTRMEC, ICCTSKEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, env*

DFHCZ0113 *date time applid userid termid tranid program name class*::*method* **This method failed because the system is configured with CICS family subset enforcement.**

Explanation: The method reported in the message failed because CICS has been configured to restrict its functionality to that of the CICS family subset. This method is not part of this.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to establish why this method was called, and if appropriate, switch off the CICS family subset enforcement or change the program to avoid using this method.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCABDEC, ICCCLKEC, ICCCONEC, ICCCTLEC, ICCSESEC, ICCSRQIC, ICCTMDEC, ICCTRMEC, ICCTSKEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method*

DFHCZ0114 *date time applid userid termid tranid program name class*::*method* **This method failed because the object being accessed was incomplete.**

Explanation: The method reported in the message failed because the object being accessed was incomplete as shown below:

Method Name	**Required Resource**
IccSession::connectProcess	Partner Id

IccSession::convId	Conversation identifier name
IccSession::PIPList	PIP list
IccSession::process	Process name
IccSession::syncLevel	Sync level

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to change it so that the object being accessed, is built correctly.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCSESEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method*

DFHCZ0115 *date time applid userid termid tranid program name class*::*method* **This method failed because the object being accessed had a reference to an input message while the program was invoked via the remote program link.**

Explanation: The method reported in the message failed because the object being accessed had a reference to an input message and was invoked through the use of the remote program link. This combination is not supported.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to change it so that the object being accessed, either does not have an input message, or the program is not invoked through the use of the remote program link.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCPRGEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method*

DFHCZ0116 *date time applid userid termid tranid program name class*::*method* **This method failed because the object being accessed was not one of the supported classes.**

Explanation: The method reported in the message failed because the object being accessed was not one of the supported classes; IccDataQueue, IccFile, IccFileIterator, IccProgram, IccStartRequestQ, IccTempStore.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to change it so that the object is of the correct type before it is accessed in this way.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCRESEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method*

DFHCZ0117 *date time applid userid termid tranid program name class*::*method* **This method failed because the object being accessed was of type** *object_type***.**

Explanation: The method reported in the message failed because the object being accessed was not of the correct type.

For example the method IccSession::extractProcess() is restricted to access objects of type Back-End only.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need either to change it or the related CICS definitions, so that the object is of the correct type before it is accessed in this way.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCSESEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, object_type*

DFHCZ0118 *date time applid userid termid tranid program name class*::*method* **This method failed because the object being accessed did not have a reference for the resource** *resource***.**

Explanation: The method reported in the message failed because the object being accessed did not have all the resources it needs allocated to it.

For example, the method call, IccFile::readRecord(mode, updateToken), would fail in this way if the object being accessed did not have a valid reference of a record index.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to change it, so that the object has the correct resources allocated to it before it is accessed in this way.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCFILEC, ICCFILIC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, resource*

DFHCZ0120 *date time applid userid termid tranid program name class*::*method* **This method failed because the current number of nested program calls made using this method is already at the maximum of** *max***.**

Explanation: The method reported in the message failed because its usage is restricted to a maximum of 15 nested calls, while the current request would cause this to be exceeded.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to change it so that it does not cause the depth of nesting to exceed 15.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCPRGEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, max*

DFHCZ0121 *date time applid userid termid tranid program name class*::*method* **This method failed because the call is invalid for the object being accessed. The resource type of the object is** *resourcetype***.**

Explanation: The method reported in the message failed because the method is only valid for a restricted set of resource types, and is invalid for the object being accessed.

This method is valid for the following resource types; cDataQueue, cFile, cFileIterator, cProgram, cStartRequestQ, cTempStore.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to change it so that it does not call this method for this type of object.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCFILEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, resourcetype*

DFHCZ0122 *date time applid userid termid tranid program name class*::*method* **This method failed because the optional parameter named** *pname* **was set, which is invalid for the current environment of** *env***.**

Explanation: The method reported in the message failed because it detected that an optional parameter was set which is invalid for the current environment.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to establish why the optional parameter was being used, and if appropriate, change the environment or change the program to avoid using this option.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCFILEC ICCFLIIC ICCSEMEC ICCSESIC ICCSRQEC ICCSYSEC ICCTIMEC ICCTSKEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, pname, env*

DFHCZ0123 *date time applid userid termid tranid program name class*::*method* **This method failed because the optional parameter named** *pname* **was set, which is invalid because the system is configured with CICS family subset enforcement.**

Explanation: The method reported in the message failed because it detected that an optional parameter was set which is invalid when CICS is configured to restrict its functionality to that of the CICS family.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to establish why the optional parameter was being used, and if appropriate, switch off the CICS family subset enforcement or change the program to avoid using this option.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCFILEC, ICCFLIIC, ICCSEMEC, ICCSESIC, ICCSRQEC, ICCSYSEC, ICCTIMEC, ICCTSKEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, pname*

DFHCZ0125 *date time applid userid termid tranid program name class*::*method* **This method failed because the object being accessed had a buffer containing function management headers(FMHs), which is invalid for the current environment of** *env***.**

Explanation: The method reported in the message failed because the system detected a buffer containing a function management header(FMH), which is invalid for the current environment.

FMH headers are used in SNA communication protocols and during 3270 terminal error conditions.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to establish why the system used buffers containing FMH headers, and if appropriate, change the environment or change the program to avoid using this function.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCSRQEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, env*

DFHCZ0126 *date time applid userid termid tranid program name class*::*method* **This method failed because the object being accessed had a buffer containing function management headers(FMHs), which is invalid because the system is configured with CICS family subset enforcement.**

Explanation: The method reported in the message failed because the system detected a buffer containing a function management header(FMH), which is invalid when CICS is configured to restrict its functionality to that of the CICS family.

FMH headers are used in SNA communication protocols and during 3270 terminal error conditions.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to establish why the system used a buffer containing FMH headers, and if appropriate, switch off CICS family subset enforcement or change the program to avoid using this function.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCSRQEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method*

DFHCZ0127 *date time applid userid termid tranid program name class*::*method* **This method failed because the value of the parameter named** *pname***, specified as** *length***, was not within the range 1 to** *max***.**

Explanation: The method reported in the message failed because the value passed in for the named parameter was invalid.

For example, assuming the definition, IccResource::IccResourceId(cFileId,"ABC"), the call, assign(9999,"PQRS"), would fail because the length value of 9999 is invalid.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, throws an exception, and completes the request having truncated the excess data.

User Response: If the calling program is user written then you need to check the invalid parameter on the calling statement, and if appropriate, change it.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCRIDEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, pname, length, max*

DFHCZ0128 *date time applid userid termid tranid program name class*::*method* **This method failed because the length of the parameter named** *pname***, specified as** *length***, was not within the range 1 to** *max***.**

Explanation:

This is an internal logic error.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: You will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCSESEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, pname, length, max*

DFHCZ0129 *date time applid userid termid tranid program name class*::*method* **This method detected an exception which resulted in data being truncated.**

Explanation: The method/operator reported in the message failed because the target object was not big enough and could not be extended to accommodate the new string.

For example, assuming the definition, IccBuf buffer(5,IccBuf::fixed), the assignment, buffer = "toolong", would fail because the length of "toolong" is greater than 5. The resulting text value of the object buffer would be "toolo".

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, throws an

exception, and completes the request having truncated the excess data.

User Response: If the calling program is user written then you need to check the invalid parameter on the calling statement, and if appropriate, change it.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCBUFIC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method*

DFHCZ0130 *date time applid userid termid tranid program name class*::*method* **This method/operator failed because the parameter** *pname* **contained a string of length** *length***, while the maximum allowed is** *max***.**

Explanation: The method reported in the message failed because one of the string parameters supplied contained a value that was too long.

For example, the method call IccFileId::IccFileId("LONGFILENAME") would fail because the value "LONGFILENAME" is greater than IccGI::maxFileNameLength.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to check the invalid parameter on the calling statement, and if appropriate, change it.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCCTLEC ICCRESEC ICCRIDEC ICCSRQEC ICCSRQIC ICCTSKEC ICCUSREC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, pname, length, max*

DFHCZ0131 *date time applid userid termid tranid program name class*::*method* **This constructor failed to create an object because a parameter of type string contained a value that was too long. It was set to '***stringvalue***...' while the maximum length allowed is** *maxstringlength***.**

Explanation: The constructor method reported in the message failed because one of the string parameters supplied contained a value that was too long.

For example, the method call IccFileId::IccFileId("LONGFILENAME") would fail because the value "LONGFILENAME" is greater than IccGI::maxFileNameLength.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to check the invalid parameter on the calling statement, and if appropriate, change it.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCRIDEC, ICCTIMEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, stringvalue, maxstringlength*

DFHCZ0132 *date time applid userid termid tranid program name class*::*method* **This constructor failed to create an object because the parameter named** *pname* **contained an invalid string of length** *plength* **while the maximum length allowed is** *pmaxlength***.**

Explanation:

This is an internal logic error.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: You will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCSESIC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, pname, plength, pmaxlength*

DFHCZ0134 *date time applid userid termid tranid program name class*::*method* **This method failed because the parameter named** *pname* **contained an invalid value.**

Explanation: The method reported in the message failed because one of the parameters supplied was invalid. For example, the method call IccFile::readRecord(999,updateToken) would fail because the read mode value of 999 is not within the valid range of 70 to 74.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to check the invalid parameter on the calling statement, and if appropriate, change it.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCBASEC ICCBUFEC ICCCLKEC ICCFILEC ICCFLIIC ICCGLBEC ICCPRGEC ICCRESEC ICCSEMEC ICCSESEC ICCSESIC ICCSRQEC ICCSYSEC ICCTMPEC ICCTRMEC ICCTSKEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, pname*

DFHCZ0136 *date time applid userid termid tranid program name class*::*method* **This method failed because the parameter named** *param_name* **contained conflicting flags specified as** *flag1* **and** *flag2*.

Explanation: The method reported in the message failed because one of the parameters supplied was invalid.

This parameter of the method is defined as an integer, where each bit denotes a flag, some of which must not be set simultaneously. The calling parameter had a contradictory pair of flags set. For example, the method call IccFile::setAccess(3) would fail because the access value of 3 contains the two contradictory flags readable and notReadable.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to check the invalid parameter on the calling statement, and if appropriate, change it.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCFILEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, param_name, flag1, flag2*

DFHCZ0137 *date time applid userid termid tranid program name class*::*method* **This constructor failed to create an object because the parameter named** *pname* **contained an invalid value of** *pvalue*.

Explanation: The method reported in the message failed because one of the parameters supplied was invalid.

This parameter of the method is restricted to a defined range, while the value supplied on the call was not within this range. For example, the the constructor method call IccJournalId::IccJournalId(987) would fail because the journalNum value of 987 is outside the range 1 to 99.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to check the invalid parameter on the calling statement, and if appropriate, change it.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCRIDEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, pname, pvalue*

DFHCZ0138 *date time applid userid termid tranid program name class*::*method* **This method failed because the parameter named** *pname* **contained an invalid value of** *pvalue*.

Explanation: The method reported in the message failed because one of the parameters supplied was invalid.

This parameter of the method is defined as an integer (general sense), while the value supplied on the call was not sensible for the functional content of the method. For example the method call IccTerminal::sendLine(9876,buffer) would fail, because the column value of 9876 is greater than the height of the screen.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written then you need to check the invalid parameter on the calling statement, and if appropriate, change it.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCBUFIC ICCCONEC ICCDATEC ICCFILEC ICCRIDEC ICCTIMEC ICCTMPEC ICCTRMEC ICCTSKEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, pname, pvalue*

DFHCZ0140 *date time applid userid termid tranid program name class*::*method* **This constructor failed to create an object because it is a singleton class which already exists.**

Explanation: The constructor method reported in the message failed to create an object because it is a singleton class which already exists. Such classes only allow a single instance of itself to exist at any one moment.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If the calling program is user written, then you need to change it so that it does not call this method more than once per transaction.

You might consider using the method instance(). All CICS singleton classes provide a method of this name or similar, which returns a reference to the unique object, creating it should it not pre-exist. This method can be safely called multiple times, each time returning the reference to the same object.

If you are using vendor written software that fails in this way then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCABDEC ICCCONEC ICCCTLEC ICCSRQEC ICCSYSEC ICCTMDEC ICCTRMEC ICCTSKEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method*

DFHCZ0141 *date time applid userid termid tranid program name class*::*method* **This method failed to create the object** *object* **because the CICS task did not have a terminal as its principal facility.**

Explanation: The method reported in the message failed to create an object because the CICS transaction was not defined with a terminal as its principal facility. Typically, the program calling this method, should be running as a terminal initiated transaction in a front end CICS region (TOR).

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: You need to change the CICS configuration definition so that the program calling this method runs in the correct environment.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCCTLEC ICCTMDEC ICCTRMEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, object*

DFHCZ0142 *date time applid userid termid tranid program name class*::*method* **This method failed to create an object of type** *object* **because the CICS task did not have a session as its principal facility.**

Explanation: The method reported in the message failed to create an object because the CICS transaction was not defined with a session as its principal facility. Typically, the program calling this method would be running as a system initiated transaction relating to CICS distributed transaction processing.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: You need to change the CICS configuration definition so that the program calling this method runs in the correct environment.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCCTLEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method, object*

DFHCZ0143 *date time applid userid termid tranid program name class*::*method* **This virtual method has not been implemented by the derived class.**

Explanation: The method of the class reported in the message has not been implemented by a derived class.

This method is defined as a virtual method with the intent that it is redefined, when appropriate, by its sub-classes.

The default implementation simply throws an exception to alert the user of this condition.

For further guidance, see the *CICS Family C++ OO Class Libraries*.

System Action: The system creates an exception entry in the trace table, writes this message to the TD queue CCZM, and throws an exception.

User Response: If you have written a class that inherits this class then you should provide a suitable implementation for this method.

If you are using vendor written software that may inherit this class then you will need assistance from the vendor.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: ICCRESEC

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, class, method*

DFHCZ0200 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (AttachInitiator.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0201 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, profile)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, profile), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (AttachInitiator.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0202 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, process)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, process), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (AttachInitiator.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0203 *date time applid userid termid tranid program name* **The process name passed to the CONNECT_PROCESS method in** *module* **was invalid.**

Explanation: The process name passed to the native method CONNECT_PROCESS was invalid.

System Action: The system writes this message to the TD queue CCZM and ignores the invocation of CONNECT_PROCESS.

User Response: Ensure that the process name is set correctly using the setProcess() method on the correct AttachInitiator Java object.

Destination: CCZM

Module: DFJCZDTC (AttachInitiator.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0204 *date time applid userid termid tranid program name* **JNI call 'GetFieldID() for DataHolder.value' in** *module* **failed.**

Explanation: A JNI call, GetFieldID() for DataHolder.value, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (Conversation.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0205 *date time applid userid termid tranid program name* **An unexpected value for the control parameter was passed to the ISSUE_CONTROL() method in** *module***.**

Explanation: An unexpected value for the control parameter was passed to the ISSUE_CONTROL() method.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (Conversation.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0206 *date time applid userid termid tranid program name* **An attempt to issue an ASSIGN ABCODE command in** *module* **has failed.**

Explanation: Code written to support Java native methods used by the JCICS Java class library has unsuccessfully attempted to issue an ASSIGN ABEND.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCAbend.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0207 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass(), in code written to support Java native methods used by the JCICS Java class library has failed to find the class for CicsResponseConditionException.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCCondition.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0208 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCCondition.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0209 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0224 *date time applid userid termid tranid program name* **JNI call 'GetByteArrayElements()' in** *module* **failed.**

Explanation: A JNI call, GetByteArrayElements(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0225 *date time applid userid termid tranid program name* **A NULL key has been passed to a native method in** *module***.**

Explanation: A NULL key has been passed to a Java native method used by the JCICS Java class library.

System Action: The system writes this message to the TD queue CCZM and ignores the request.

User Response: Ensure that all relevant reset() methods executed against KeyedFileBrowse objects specify a valid key.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0226 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars()' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0227 *date time applid userid termid tranid program name* **A NULL filename has been passed to a native method in** *module***.**

Explanation: A NULL filename has been passed to a native method used by the JCICS Java class library.

System Action: The system writes this message to the TD queue CCZM and ignores the request.

User Response: Ensure that a valid file name has been specified using the setName() method for each relevant file object.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0228 *date time applid userid termid tranid program name* **JNI call 'GetByteArrayElements()' in** *module* **failed.**

Explanation: A JNI call, GetByteArrayElements(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0229 *date time applid userid termid tranid program name* **JNI call 'GetByteArrayElements()' in** *module* **failed.**

Explanation: A JNI call, GetByteArrayElements(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0230 *date time applid userid termid tranid program name* **An attempt to allocate storage in** *module* **failed.**

Explanation: An attempt to obtain storage, for use as a RIDFLD parameter, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0231 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0232 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars()' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0233 *date time applid userid termid tranid program name* **A NULL filename has been passed to a native method in** *module***.**

Explanation: A NULL filename has been passed to a native method used by the JCICS Java class library.

System Action: The system writes this message to the TD queue CCZM and ignores the request.

User Response: Ensure that a valid file name has been specified using the setName() method for each relevant file object.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0234 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0235 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCProgram.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0236 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, TransId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, TransId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCProgram.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0237 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' for 'DataLength.Length' in** *module* **failed.**

Explanation: A JNI call, GetFieldID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCProgram.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0238 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass() to find the class for EndOfProgramException, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCProgram.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0239 *date time applid userid termid tranid program name* **JNI call 'ThrowNew()' in** *module* **failed.**

Explanation: A JNI call, ThrowNew(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCProgram.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0240 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass(), to find the class for TransferOfControlException, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCProgram.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0241 *date time applid userid termid tranid program name* **JNI call 'ThrowNew()' in** *module* **failed.**

Explanation: A JNI call, ThrowNew(), to throw a TransferOfControlException, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCProgram.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0242 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass(), to find the class for TransferOfControlException, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCProgram.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0243 *date time applid userid termid tranid program name* **JNI call 'ThrowNew()' in** *module* **failed.**

Explanation: A JNI call, ThrowNew(), to throw TransferOfControlException, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCProgram.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0244 *date time applid userid termid tranid program name* **An attempt to issue an ASSIGN APPLID SYSID command in** *module* **has failed.**

Explanation: Code written to support Java native methods used by the JCICS Java class library has unsuccessfully attempted to issue an ASSIGN APPLID(...) SYSID(...).

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCAbend.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0245 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0246 *date time applid userid termid tranid program name* **JNI call 'ThrowNew()' in** *module* **failed.**

Explanation: A JNI call, ThrowNew(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0247 *date time applid userid termid tranid program name* **A 'malloc' in** *module* **failed.**

Explanation: A malloc in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: Increase the amount of heap storage available to the application.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0248 *date time applid userid termid tranid program name* **A 'malloc' in** *module* **failed.**

Explanation: A malloc in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: Increase the amount of heap storage available to the application.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0249 *date time applid userid termid tranid program name* **JNI call 'FindClass(envp,** *classname***)' in** *module* **failed.**

Explanation: A JNI call, FindClass(), for the named class in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, classname, module*

DFHCZ0250 *date time applid userid termid tranid program name* **JNI call 'ThrowNew()' in** *module* **failed.**

Explanation: A JNI call, ThrowNew(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0253 *date time applid userid termid tranid program name* **JNI call 'NewByteArray()' in** *module* **failed.**

Explanation: A JNI call, NewByteArray(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0254 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0255 *date time applid userid termid tranid program name* **JNI call 'ThrowNew()' in** *module* **failed.**

Explanation: A JNI call, ThrowNew(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0256 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' failed in** *module***.**

Explanation: A JNI call, GetFieldID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0257 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID() for setState(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0258 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID() for setConvId(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0259 *date time applid userid termid tranid program name* **An attempt to allocate storage in** *module* **failed.**

Explanation: An attempt to obtain storage in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0260 *date time applid userid termid tranid program name* **JNI call 'NewObject()' in** *module* **failed.**

Explanation: A JNI call, NewObject(), to construct a Conversation object, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0261 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID(), to find the constructor for Conversation, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0262 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass(), to find com/ibm/cics/server/Conversation, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0263 *date time applid userid termid tranid program name* **An attempt to allocate storage in** *module* **failed.**

Explanation: An attempt to obtain storage in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0264 *date time applid userid termid tranid program name* **JNI call 'CallVoidMethod()' in** *module* **failed.**

Explanation: A JNI call, CallVoidMethod(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0265 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID() for setConvId(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0266 *date time applid userid termid tranid program name* **JNI call 'CallVoidMethod()' in** *module* **failed.**

Explanation: A JNI call, CallVoidMethod(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0267 *date time applid userid termid tranid program name* **JNI call 'CallVoidMethod()' in** *module* **failed.**

Explanation: A JNI call, CallVoidMethod() for setState(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0268 *date time applid userid termid tranid program name* **JNI call 'CallVoidMethod()' in** *module* **failed.**

Explanation: A JNI call, CallVoidMethod(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need

assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0269 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID() for setProcess(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0270 *date time applid userid termid tranid program name* **JNI call 'CallVoidMethod()' in** *module* **failed.**

Explanation: A JNI call, CallVoidMethod(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0271 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0272 *date time applid userid termid tranid program name* **JNI call 'CallVoidMethod()' in** *module* **failed.**

Explanation: A JNI call, CallVoidMethod(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0273 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0274 *date time applid userid termid tranid program name* **JNI call 'CallVoidMethod()' in** *module* **failed.**

Explanation: A JNI call, CallVoidMethod(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0275 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0276 *date time applid userid termid tranid program name* **JNI call 'CallVoidMethod()' in** *module* **failed.**

Explanation: A JNI call, CallVoidMethod(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0277 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0278 *date time applid userid termid tranid program name* **JNI call 'CallVoidMethod()' in** *module* **failed.**

Explanation: A JNI call, CallVoidMethod(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0279 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0280 *date time applid userid termid tranid program name* **JNI call 'NewObject()' in** *module* **failed.**

Explanation: A JNI call, NewObject() for a ConversationPrincipalFacility object, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0281 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0282 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass(), for com/ibm/cics/server/ConversationPrincipalFacility, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0283 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass() to find the Conversation class, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0284 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0285 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0286 *date time applid userid termid tranid program name* **JNI call 'NewObject()' in** *module* **failed.**

Explanation: A JNI call, NewObject(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0287 *date time applid userid termid tranid program name* **An attempt to allocate storage in** *module* **failed.**

Explanation: An attempt to obtain storage in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0288 *date time applid userid termid tranid program name* **An attempt to allocate storage in** *module* **failed.**

Explanation: An attempt to obtain storage in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0289 *date time applid userid termid tranid program name* **An attempt to allocate storage in** *module* **failed.**

Explanation: An attempt to obtain storage in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0290 *date time applid userid termid tranid program name* **An attempt to allocate storage in** *module* **failed.**

Explanation: An attempt to obtain storage in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need

assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0291 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0292 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass(), for com/ibm/cics/server/RetrievedData, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCSupport.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0293 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID() for taskNumber, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0294 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID() for transactionName, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0295 *date time applid userid termid tranid program name* **JNI call 'GetObjectClass()' in** *module* **failed.**

Explanation: A JNI call, GetObjectClass(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0296 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID() for principalFacility, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0297 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID() for FCI, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0298 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0299 *date time applid userid termid tranid program name* **JNI call 'NewObject()' in** *module* **failed.**

Explanation: A JNI call, NewObject() for a TerminalPrincipalFacility, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0300 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID() for the TerminalPrincipalFacility constructor, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0301 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass() for com/ibm/cics/server/TerminalPrincipalFacility, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0302 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0303 *date time applid userid termid tranid program name* **JNI call 'GetObjectClass()' in** *module* **failed.**

Explanation: A JNI call, GetObjectClass() for com/ibm/cics/server/Task, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0305 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, abcode)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, abcode), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0311 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTask.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0312 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, queueName, NULL)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, queueName, NULL), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTDQ.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0313 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTDQ.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0314 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, queueName, NULL)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, queueName, NULL), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTDQ.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0315 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTDQ.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0316 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, queueName, NULL)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, queueName, NULL), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTDQ.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0317 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTDQ.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0324 *date time applid userid termid tranid program name* **JNI call 'GetByteArrayElements()' in** *module* **failed.**

Explanation: A JNI call, GetByteArrayElements(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTerminal.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0325 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID() for the toBinary() method, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTerminal.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0326 *date time applid userid termid tranid program name* **A text array passed to the SEND_TEXT() method in** *module* **was greater than 32767 bytes. The data has been truncated.**

Explanation: A text array passed to the SEND_TEXT() method in code written to support Java native methods used by the JCICS Java class library was longer than 32767 bytes.

System Action: The system writes this message to the TD queue CCZM and sends the first 32767 bytes in the array.

User Response: Ensure that the length of text passed to the sendText() method does not exceed 32767.

Destination: CCZM

Module: DFJCZDTC (DTCTerminal.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0327 *date time applid userid termid tranid program name* **JNI call 'GetByteArrayElements()' in** *module* **failed.**

Explanation: A JNI call, GetByteArrayElements(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTerminal.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0328 *date time applid userid termid tranid program name* **JNI call 'GetMethodID()' in** *module* **failed.**

Explanation: A JNI call, GetMethodID() for the toBinary() method, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTerminal.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0329 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID() for TCTUAlength, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTerminal.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0330 *date time applid userid termid tranid program name* **An attempt to allocate storage in** *module* **failed.**

Explanation: An attempt to obtain storage in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0331 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID() for TERMCODE, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need

assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTerminal.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0332 *date time applid userid termid tranid program name* **JNI call 'FindClass()' in** *module* **failed.**

Explanation: A JNI call, FindClass(), for com/ibm/cics/server/TerminalPrincipalFacility, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTerminal.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0333 *date time applid userid termid tranid program name* **An attempt to allocate storage in** *module* **failed.**

Explanation: An attempt to obtain storage in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCFile.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0334 *date time applid userid termid tranid program name* **JNI call 'GetFieldID()' in** *module* **failed.**

Explanation: A JNI call, GetFieldID() for TCTUAP, in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTerminal.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0335 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTSQ.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0336 *date time applid userid termid tranid program name* **An invalid value for item number was passed to the READITEM() method in** *module***. The value passed was** *item_no* **.**

Explanation: An invalid value for item number was passed to the readItem() method, in code written to support Java native methods used by the JCICS Java class library.

System Action: The system writes this message to the TD queue CCZM and ignores the request.

User Response: Ensure that the item number specified on the readItem() method of the appropriate TSQ Java object is in the range 0 - 32767.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTSQ.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module, item_no*

DFHCZ0337 *date time applid userid termid tranid program name* **TSQ name** *tsqname* **has been truncated to 16 characters in the SETNAME() method in** *module***.**

Explanation: The Temporary Storage queue identified in the message has been truncated to 16 characters.

System Action: The system writes this message to the TD queue CCZM and continues with the request.

User Response: Ensure all TS queue names used in JCICS applications are 16 characters or less in length.

Destination: CCZM

Module: DFJCZDTC (DTCTSQ.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, tsqname, module*

DFHCZ0338 *date time applid userid termid tranid program name* **An invalid value for item number was passed to the REWRITE() method in** *module***. The value passed was** *item_no***.**

Explanation: An invalid value for item number was passed to the REWRITE() method, in code written to support Java native methods used by the JCICS Java class library.

System Action: The system writes this message to the TD queue CCZM and ignores the request.

User Response: Ensure that the item number specified on the REWRITE() method of the appropriate TSQ Java object is in the range 0 - 32767.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (DTCTSQ.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module, item_no*

DFHCZ0340 *date time applid userid termid tranid program name* **JNI call 'GetByteArrayElements()' in** *module* **failed.**

Explanation: A JNI call, GetByteArrayElements(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (StartRequest.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0341 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars()' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, transactionName), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (StartRequest.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0342 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (StartRequest.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0345 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars()' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, transactionName), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (StartRequest.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0347 *date time applid userid termid tranid program name* **JNI call 'GetByteArrayElements()' in** *module* **failed.**

Explanation: A JNI call, GetByteArrayElements(), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (StartRequest.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0348 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, terminal)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, terminal), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (StartRequest.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0349 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, SysId)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, SysId), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (StartRequest.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0350 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars()' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, rTransaction), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (StartRequest.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0351 *date time applid userid termid tranid program name* **JNI call 'GetStringUTFChars(envp, rTerminal)' in** *module* **failed.**

Explanation: A JNI call, GetStringUTFChars(envp, rTerminal), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (StartRequest.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0352 *date time applid userid termid tranid program name* **JNI call 'GetByteArrayElements()' in** *module* **failed.**

Explanation: A JNI call, GetByteArrayElements(envp, data, NULL), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (SynchronizationResource.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0353 *date time applid userid termid tranid program name* **JNI call 'GetByteArrayElements()' in** *module* **failed.**

Explanation: A JNI call, GetByteArrayElements(envp, data, NULL), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (SynchronizationResource.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0354 *date time applid userid termid tranid program name* **JNI call 'GetByteArrayElements()' in** *module* **failed.**

Explanation: A JNI call, GetByteArrayElements(envp, CommArea, NULL), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (WrapperNative.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0355 *date time applid userid termid tranid program name* **JNI call 'NewByteArray(envp, Length)' in** *module* **failed.**

Explanation: A JNI call, NewByteArray(envp, Length), in code written to support Java native methods used by the JCICS Java class library has failed.

System Action: The system writes this message to the TD queue CCZM and takes a system dump.

User Response: If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJCZDTC (WrapperNative.c)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, module*

DFHCZ0356 *date time applid userid termid tranid program name* **non-CICS security manager of class** *className* **installed.**

Explanation: The Environment constructor has been unable to install the CICS security manager because a non-CICS security manager of class *className* is installed.

System Action: The system writes this message to the TD queue CCZM.

User Response: The CICS security manager ensures for example that a java program cannot issue the exit command. Check that the security manager you have installed is compatible with running a CICS java program.

Destination: CCZM

Module: DFJCICS (com.ibm.cics.server.Environment.java)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, className*

DFHCZ0357 *date time applid userid termid tranid program name* **Uncaught exception from application.**

Explanation: The jcics Wrapper class has caught an InvocationTargetException. This occurs when the application throws, or doesn't catch, an exception. Details of the application exception are given in accompanying message DFHCZ0358.

System Action: The system writes this message to the TD queue CCZM.

User Response: Correct the problem and rerun the task.

Destination: CCZM

Module: DFJCICS (com.ibm.cics.server.Wrapper.java)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name*

DFHCZ0358 *date time applid userid termid tranid program name* **Exception** *exception* **occurred invoking main method in class** *className***.**

Explanation: The jcics Wrapper class caught exception *exception* trying to invoke the main method in class *className*.

System Action: An exception trace entry is made and the task is abnormally terminated.

User Response: Correct the problem and rerun the task.

Destination: CCZM

Module: DFJCICS (com.ibm.cics.server.Wrapper.java)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, exception, className*

DFHCZ0359 *date time applid userid termid tranid program name* **Exception** *exception* **occurred creating object reference for class** *className***.**

Explanation: The _GenericFactoryImpl create_object method has caught exception *exception* issuing a Class.forName(*className*).newInstance()

System Action: A CORBA NoFactory exception is returned to the client and the task terminates normally.

User Response: Correct the problem and reissue the request. For a ClassNotFoundException, check that a program with an appropriate package alias is in a PDSE available to CICS. If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CCZM

Module: DFJGFAC (com.ibm.CosLifeCycle._GenericFactoryImpl.java)

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, exception, className*

DFHCZ0399 *termid tranid date time* **COM.IBM.CICS.SERVER.WRAPPER - UNSATISFIEDLINKERROR LOADING** *library***.**

Explanation: An UnsatisfiedLinkError occurred trying to load the jcics native library com_ibm_cics_server_DTC.

System Action: An UnsatisfiedLinkError is thrown to the caller. The task is terminated abnormally.

User Response: If running in an ET/390 environment, check that PROGRAM DFJCZDTC, with alias libcom_ibm_cics_server_DTC.so, is in a PDSE available to CICS. If running under the JVM, check that libcom_ibm_cics_server_DTC.so is in the libpath defined to CICS.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFJCICS (com.ibm.cics.server.Wrapper.java)

DFHDBxxxx messages

The DFHDBxxxx messages are issued by the CICS-DB2 and CICS-DBCTL interfaces. Messages for the CICS-DB2 interface are in the range 2000-2999.

CICS-DB2 messages that are documented to be output to transient data destination CDB2, are in fact output to whatever destinations are specified in the MSGQUEUE1, MSGQUEUE2 and MSGQUEUE3 parameters of the DB2CONN. MSGQUEUE1 must be specified, and its default is CDB2. This manual documents the default destination.

DFHDB2001 *date time applid* **CICS-DB2 resynchronization with** *db2id* **for unit of work** *X'uowid'* **cannot take place due to initial start of CICS.**

Explanation: CICS cannot resolve the disposition of unit of work (UOW) *uowid* that DB2 subsystem *db2id* holds from a previous connection because CICS was initial started. A CICS initial start should be avoided when resynchronisation is outstanding. CICS cold, warm and emergency starts do not affect resynchronisation, which occurs automatically when CICS and DB2 are connected.

System Action: The CICS is connected to DB2 but UOW *uowid* will remain indoubt in DB2.

User Response: The UOW *uowid* will have to be resolved manually using DB2 -DISPLAY THREAD and -RECOVER INDOUBT operator commands.

Destination: Console and Transient Data Queue CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, db2id, X'uowid'*

DFHDB2003 *date time applid* **The CICS-DB2 attachment facility is already active.**

Explanation: The CICS-DB2 attachment is already active and enabled to CICS.

System Action: The CICS-DB2 attachment facility initialization does not complete.

User Response: Only one CICS-DB2 attachment facility may be active in a CICS region.

Destination: CDB2 and Terminal End User

Module: DFHD2STR

XMEOUT Parameters: *date, time, applid*

DFHDB2004 *date time applid* **No threads were found for plan** *plan-name*

Explanation: This message is in response to a CICS-DB2 attachment facility DSNC DISPLAY or DISCONNECT command. No threads were found using the specified plan name *plan-name*. The *plan-name* may be blank if a specific plan was not requested.

System Action: The CICS-DB2 attachment facility command is not processed.

User Response: Reenter the command with the correct plan name.

Destination: Terminal End User

Module: DFHD2CC

DFHDB2005 *date time applid* **RCT does not contain transaction** *tran*

Explanation: This message is in response to a CICS-DB2 attachment facility DSNC DISPLAY or MODIFY command. The transaction *tran* specified in the command was not found in the RCT. That is, there was no DB2TRAN defined for the transid, or the DB2TRAN referred to a DB2ENTRY that does not exist, or the case of the DISPLAY command, no threads were found for the transaction.

System Action: The CICS-DB2 attachment facility command is not processed.

User Response: Reenter the command with the correct transaction name.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2006 *date time applid* **The** *dest* **destination ID is invalid.**

Explanation: This message is in response to a CICS-DB2 attachment facility DSNC MODIFY DESTINATION command. The destination ID *dest* specified on the command to be modified is not one of the destinations currently defined in the DB2CONN as a message queue.

System Action: The CICS-DB2 attachment facility command is not processed.

User Response: Reenter the command with the correct destination ID.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2007 *date time applid* **The command verb is missing or invalid.**

Explanation: The CICS-DB2 attachment facility does not recognize the verb entered on the DSNC command.

System Action: The command is not processed.

User Response: Reenter the command with the correct syntax.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2008 *date time applid* **Keyword missing or invalid.**

Explanation: The CICS-DB2 attachment facility DSNC command contains an unknown positional keyword or a keyword is missing.

System Action: The command is not processed.

User Response: Reenter the command with the correct syntax.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2009 *date time applid* **The value in the command is invalid.**

Explanation: The numeric value in the DSNC modify command is invalid. The error is caused by one of the following:

- The value in the command is greater than 2000.
- The value in the command is greater than the TCBLIMIT specified in the DB2CONN.
- If the pool is being changed - for example, using transaction id CEPL - the value is less than 3.

System Action: The CICS-DB2 attachment facility command is not processed.

User Response: Reenter the command with a correct value.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2010 *date time applid tranid* **Transaction abended because DB2 thread tcbs are unavailable.**

Explanation: The transaction was abnormally terminated because a DB2 thread TCB was not available on which to create a thread for the transaction.

System Action: The transaction is abnormally terminated.

User Response: Determine if more subtask TCBs should be made available to the CICS-DB2 connection by increasing the TCBLIMIT value of the DB2CONN. The TCBLIMIT value can be altered using a SET DB2CONN command.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, tranid*

DFHDB2011 *date time applid tranid* **Transaction abended because threads are unavailable for resource** *resname*

Explanation: The transaction was abnormally terminated because a thread connection to DB2 was not available for the transaction. *Resname* identifies the name of the DB2ENTRY or the POOL from which the thread was to be allocated. This error can occur when:

- The DB2ENTRY specifies Threadwait(no) and all threads are currently being used.

- The DB2ENTRY specified Threadwait(pool), but the pool definition within the DB2CONN specifies Threadwait(no), and all threads are currently being used both in the DB2ENTRY and the Pool.
- The transaction was using the pool directly, the pool specifies Threadwait(no) and all pool threads are currently in use.

System Action: The transaction is abnormally terminated.

User Response: Determine if more threads can be made available to the DB2ENTRY or the POOL by increasing the THREADLIMIT value on the DB2ENTRY or the DB2CONN respectively. The THREADLIMIT value can be increased using SET DB2ENTRY and SET DB2CONN commands.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, tranid, resname*

DFHDB2012 *date time applid* **Stop quiesce of the CICS-DB2 attachment facility from DB2 subsystem** *db2-id* **is proceeding.**

Explanation: A DSNC STOP command entered by the master terminal operator is being processed. CICS is disconnected from DB2 subsystem *db2-id*. When the disconnect is complete message DFHDB2025 is output to the terminal.

System Action: New CICS transactions attempting to issue SQL commands is abended or receives a negative SQL reason code dependent on the CONNECTERROR setting in the DB2CONN definition.

Existing transactions using the CICS-DB2 interface are allowed to complete before the CICS-DB2 attachment facility is stopped.

User Response:

If the quiesce is not completed within an acceptable time period, a DSNC STOP FORCE command should be issued from another terminal.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2013 *date time applid* **Display report follows for threads accessing DB2** *db2-id*

Explanation: A CICS-DB2 attachment display plan or display tran command was requested and the results follow this message. If not blank, *db2-id* is the name of the DB2 subsystem involved.

The following information is displayed for each thread:

DB2ENTRY The name of the DB2ENTRY which contains the thread.

S The thread status. This will be “A” for an active thread or “I” for an inactive thread. A thread is active if it has been assigned to a task. To determine if a thread is active in DB2, use the DB2 command “-DISPLAY THREAD.”

PLAN The current plan name.

PRI-AUTH The DB2 primary authorization ID.

SEC-AUTH The DB2 secondary authorization ID.

CORRELATION The DB2 thread correlation ID.

For active threads only:

TRAN The CICS transaction ID.

TASK The CICS task number.

UOW-ID The CICS unit-of-work ID.

System Action: Processing continues normally.

User Response: None.

Destination: CDB2 and Terminal End User

Module: DFHD2CC

XMEOUT Parameters: *date, time, applid, db2-id*

DFHDB2014 *date time applid* **Statistics report follows for** *db2conn-name* **accessing DB2** *db2-id*

Explanation: A CICS-DB2 attachment facility statistics display was requested and follows this message. The name of the DB2CONN that is currently in use is *db2conn-name* and *db2-id*, if not blank, is the name of the DB2 subsystem involved.

The following information is displayed for each DB2ENTRY and for the command and pool sections of the DB2CONN:

- DB2ENTRY

  The name of the DB2ENTRY or '*COMMAND' for the command section and '*POOL' for the pool section.
- PLAN

  DB2 Plan name
- CALLS

  Total number of SQL calls made
- AUTHS

  Total number of sign-on invocations for transactions associated with this entry. A sign-on does not indicate whether a new thread is created or an existing thread reused. If a thread is reused a sign-on may occur dependent on the ACCOUNTREC setting of the DB2ENTRY.
- W/P

  Number of times all available threads for this entry were busy and the transaction had to wait or the thread request was diverted to the POOL.
- HIGH

  Maximum number of concurrent threads required by transactions associated with this DB2ENTRY at any time since the CICS-DB2 attachment facility was started.
- ABORTS

  Total number of units of work that were rolled back.
- COMMITS

  One of the following two fields is incremented each time a DB2 transaction associated with this DB2ENTRY takes an explicit or implicit (end of task) syncpoint.
- 1-PHASE

  The total number of single-phase commits for transactions associated with this DB2ENTRY.
- 2-PHASE

  The total number of two-phase commits for transactions associated with this DB2ENTRY.

System Action: Processing continues normally.

User Response: None.

Destination: CDB2 and Terminal End User

Module: DFHD2CC

XMEOUT Parameters: *date, time, applid, db2conn-name, db2-id*

DFHDB2015 *date time applid* **The CICS-DB2 attachment facility is in standby for DB2 subsystem** *db2-id*

Explanation: The CICS-DB2 attachment facility has dropped into standby mode because DB2 subsystem *db2-id* has stopped and STANDBYMODE=RECONNECT was specified in the DB2CONN.

System Action: The CICS-DB2 attachment facility waits for the DB2 subsystem to become active again, at which time it automatically reconnects. While in standby mode, all SQL requests receive a negative SQLCODE or an AEY9 abend depending on whether CONNECTERROR=SQLCODE or CONNECTERROR=ABEND was specified in the DB2CONN.

User Response: Notify the system programmer.

Destination: Console and Transient Data Queue CDB2

Module: DFHD2TM

XMEOUT Parameters: *date, time, applid, db2-id*

DFHDB2016 *date time applid* **The connection of CICS to DB2 subsystem** *db2-id* **failed with reason** *X'reason-code'*

Explanation: The CICS-DB2 attachment facility startup cannot complete because an error occurred while connecting with DB2 subsystem *db2-id*. The response from DB2 was *reason-code*.

System Action: The CICS-DB2 attachment facility initialization does not complete.

User Response: Analyze the DB2 reason code given and any prior messages issued to the attachment error destination or CDB2 TS queues to determine the source of the error. Some possible causes include:

- incorrect DB2 subsystem specified
- the DB2 subsystem was not initialized during MVS IPL processing.

Destination: CDB2

Modules: DFHD2STR, DFHD2CM1

XMEOUT Parameters: *date, time, applid, db2-id, X'reason-code'*

DFHDB2018 *date time applid db2-id* **DB2 subsystem is not active.**

Explanation: The CICS-DB2 attachment facility startup cannot complete because the *db2-id* subsystem is not active.

System Action: The CICS-DB2 attachment facility stops.

User Response: Restart the CICS-DB2 attachment facility after starting DB2.

Destination: CDB2

Modules: DFHD2STR, DFHD2CM1

XMEOUT Parameters: *date, time, applid, db2-id*

DFHDB2019 *date time applid* **The modify command is complete.**

Explanation: The DSNC MODIFY command completed sucessfully.

System Action: Processing continues.

User Response: None.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2020 *date time applid* **The display command is complete.**

Explanation: The DSNC DISPLAY command completed successfully.

System Action: Processing continues normally.

User Response: None.

Destination: CDB2 and Terminal End User

Module: DFHD2CC

XMEOUT Parameters: *date, time, applid*

DFHDB2021 *date time applid* **The disconnect command is complete.**

Explanation: The DSNC DISCONNECT command completed successfully.

System Action: Processing continues normally.

User Response: None.

Destination: Terminal End User

Module: DFHD2CC

DFHDB2022 *date time applid* **Stop force of the CICS-DB2 attachment facility from** *db2-id* **is proceeding.**

Explanation: A DSNC STOP FORCE command entered by the master terminal operator is being processed. CICS will be disconnected from DB2 subsystem *db2-id*. When the disconnect is complete, message DFHDB2025 is output to the terminal.

System Action: New CICS transactions attempting to issue SQL commands are abended or receive a negative SQL reason code dependent upon the CONNECTERROR setting in the DB2CONN definition.

Existing transactions using the CICS-DB2 interface will be force purged.

User Response: None.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2023I *date time applid* **The CICS-DB2 attachment has connected to DB2 subsystem** *db2-id*

Explanation: The CICS-DB2 attachment facility startup has successfully connected to the *db2-id* subsystem.

System Action: The CICS-DB2 attachment facility is active.

User Response: None. You can suppress this message with the SIT parameter, MSGLVL = 0.

Destination: Console and Transient Data Queue CDB2 and Terminal End User

Modules: DFHD2STR, DFHD2CM1

XMEOUT Parameters: *date, time, applid, db2-id*

DFHDB2025I *date time applid* **The CICS-DB2 attachment has disconnected from DB2 subsystem** *db2-id*

Explanation: The CICS-DB2 attachment facility has successfully disconnected from the *db2-id* subsystem.

System Action: The CICS-DB2 attachment facility is inactive.

User Response: None. You can suppress this message with the SIT parameter, MSGLVL = 0.

Destination: Console and Transient Data Queue CDB2 and Terminal End User

Modules: DFHD2STP, DFHD2CM1

XMEOUT Parameters: *date, time, applid, db2-id*

DFHDB2027 *date time applid* **CICS-DB2 attachment is shutting down. DSNC DB2 commands may not be entered.**

Explanation: The CICS-DB2 attachment facility cannot accept commands directed to DB2 during or after the termination of the CICS-DB2 attachment facility.

System Action: The command is rejected.

User Response: Issue the command via the DB2 console instead.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2028 *date time applid* **The user is not authorised to issue DB2 commands via DSNC.**

Explanation: DB2 rejected the command request during sign-on of the user. Therefore, the user is assumed not to be authorised for the requested function in the command.

System Action: The command is rejected.

User Response: Notify the system programmer.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2029 *date time applid tranid* **DB2 command failed with IFCARC1=***rc***, IFCARC2=***X'reason-code'*

Explanation: The DB2 command submitted by *transaction* received IFI return code *rc* and reason code *reason-code*

System Action: The command processing stops.

User Response: Refer to the *DB2 Messages and Codes* for a description of the *rc* and *reason-code*.

Destination: CDB2

Module: DFHD2CM1

XMEOUT Parameters: *date, time, applid, tranid, rc, X'reason-code'*

DFHDB2031 *date time applid* **CICS-DB2 command is invalid. No DB2CONN is installed.**

Explanation: A DSNC command cannot be executed as there is no DB2CONN installed. For all DSNC commands (including the STRT command) a DB2CONN definition must be installed before issuing the command. CICS no longer supports running with a macro RCT. All macro RCTs should be migrated to the CSD and the resulting definitions installed before attempting to startup the CICS-DB2 Attachment Facility.

Likewise a CEMT or EXEC CICS SET DB2CONN CONNECTED command cannot be issued to startup the CICS-DB2 Attachment Facility if no DB2CONN definition is installed.

System Action: The command is rejected.

User Response: Install the necessary DB2CONN. The command can then be re-issued.

Destination: CDB2 and Terminal End User

Modules: DFHD2CM1, DFHD2STR

XMEOUT Parameters: *date, time, applid*

DFHDB2032 *date time applid* **Alternate destination display command complete.**

Explanation: The DSNC DISPLAY command to an alternate destination is complete. The output should be available at the requested destination.

System Action: Processing continues normally.

User Response: None.

Destination: CDB2 and Terminal End User

Module: DFHD2CC

XMEOUT Parameters: *date, time, applid*

DFHDB2033 *applid* **Terminal** *termid* **is not supported by BMS or is invalid.**

Explanation: This message is issued in response to a CICS-DB2 attachment facility command, or DB2 command that requested an alternative destination for the response. CICS basic mapping support (BMS) encountered an error while routing to the requested terminal named *termid*.

System Action: Output from the command may be suppressed.

User Response: Ensure that the terminal ID was correctly entered. Otherwise notify the system programmer. This message may occur if the destination device is not supported by BMS, or is not defined to CICS.

Destination: Console and Terminal End User

Module: DFHD2CC

XMEOUT Parameters: *applid, termid*

DFHDB2035 *date time applid* **Indoubt resolution for Unit of Work** *X'uowid'* **is incomplete for DB2 subsystem** *db2id*

Explanation: CICS indicates that recovery should not be required for *uowid* but DB2 subsystem *db2id* is indoubt.

System Action: The CICS is connected to DB2 but the UOW remains indoubt in DB2.

User Response: The indoubt UOW will have to be resolved manually using DB2 -DISPLAY THREAD and -RECOVER INDOUBT operator commands. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, X'uowid', db2id*

DFHDB2037 *date time applid* **DB2 subsystem** *db2-id* **is not active. The CICS-DB2 attachment facility is waiting.**

Explanation: The CICS-DB2 attachment facility is waiting for notification from the *db2-id* subsystem that it is active. The CICS-DB2 attachment facility will complete initialization after DB2 has started.

System Action: The CICS-DB2 attachment facility waits to complete the start process.

User Response: Notify the system programmer that the DB2 subsystem requires starting.

Destination: Console and Transient Data Queue CDB2 and Terminal End User

Module: DFHD2STR,DFHD2CM1

XMEOUT Parameters: *date, time, applid, db2-id*

DFHDB2038 *date time applid* **The command is invalid while waiting for** *db2id*

Explanation: The CICS-DB2 attachment facility cannot accept commands directed to DB2 while it is waiting for the DB2 subsystem to start. The name of the DB2 subsystem that is not yet operational is *db2id*.

System Action: The command is rejected.

User Response: Re-issue the command when DB2 has been started and the attachment facility has connected to DB2.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2039 *date time applid* **The error destinations are:** *dest1 dest2 dest3***.**

Explanation: This message is in response to a CICS-DB2 attachment facility DSNC MODIFY DESTINATION command and lists the currently active message destinations known to the attachment facility. Null entries show as '****' and can be modified so they identify actual destinations.

System Action: Processing continues.

User Response: None.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2040 *date time applid tranid* **Module** *modname* **could not be found.**

Explanation: During the CICS-DB2 attachment facility initialization, an attempt was made to locate and load the named module, but it was not found in any of the libaries accessible to MVS through the MVS LOAD macro.

System Action: The CICS-DB2 attachment facility initialization does not complete.

User Response: Check the CICS JOBLIB/STEPLIB and ensure that the CICS SDFHAUTH library is defined there and contains the named module.

Destination: CDB2

Module: DFHD2STR

XMEOUT Parameters: *date, time, applid, tranid, modname*

DFHDB2041 *date time applid* **No active threads found.**

Explanation: A DSNC DISPLAY TRANSACTION or DSNC DISPLAY PLAN command was entered, but there were no active threads found. The CICS-DB2 attachment facility might have identified and signed on some subtasks, but a create thread was not issued for any of the subtasks. Likewise, threads may have been created previously on the subtasks but were subsequently terminated when there were no more DB2 requests to service.

System Action: Processing continues normally.

User Response: None.

Destination: Terminal End User

Module: DFHD2CC

DFHDB2042 *date time applid* **Connection not authorized to** *db2-id*

Explanation: The attempt to connect to the *db2-id* DB2 subsystem failed because the user was not authorized to access DB2. Authorization was denied by either RACF or a user-written connection exit.

System Action: The CICS-DB2 attachment does not connect to DB2.

User Response: The userid specified on the CICS job was not authorized to connect to the named DB2 subsystem. Refer to the *DB2 Administration Guide* for information on how to authorize a user to access DB2.

Destination: CDB2

Module: DFHD2STR

XMEOUT Parameters: *date, time, applid, db2-id*

DFHDB2044 *date time applid* **Authorization parameters for** *resname* **have been corrupted.**

Explanation: THe CICS-DB2 attachment facility detected that the AUTHTYPE or AUTHID parameters for *resname* have been corrupted since it was last installed or updated by a SET command. *Resname* is the name of the DB2ENTRY involved, or it is set to 'POOL' or 'COMMAND' if it is the pool or command thread authorizations of the DB2CONN that are involved.

System Action: The transaction is abnormally terminated.

User Response: If it is a DB2ENTRY involved, the DB2ENTRY needs to be reinstalled, or the AUTHID or AUTHTYPE parameters reset using a SET command to make the DB2ENTRY usable.

For pool or command thread authorizations, a SET DB2CONN command needs to be issued to reset the AUTHID or AUTHTYPE parameters, or the DB2CONN needs to be reinstalled. Note however that a DB2CONN cannot be re-installed without stopping the CICS-DB2 attachment facility first.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, resname*

DFHDB2045 *date time applid* **Resource Manager** *rmi-name* **is unknown to the CICS-DB2 Attachment facility.**

Explanation: The CICS-DB2 Attachment facility received a request for a resource manager with entryname *rmi-name*. This resource name is not known by the CICS-DB2 attachment facility.

System Action: The transaction is abnormally terminated with abend code AD21. A CICS system dump is taken.

User Response: You need further assistance from IBM to resolve

this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, rmi-name*

DFHDB2048 *date time applid* **Unable to interpret SQL call while formatting an EDF display for transaction** *transid* **task** *taskid*

Explanation: The CICS attachment facility was unable to call its EDF processor DFHD2EDF or the CICS attachment facility was unable to decipher storage associated with an SQL statement for CICS transaction *transid* and task *taskid*. Either the SQL communications area (SQLCA) or the RDS input parameter list (RDI) storage could not be interpreted by the CICS-DB2 attachment facility.

System Action: If the CICS attachment facility was unable to call its EDF processor DFHD2EDF and a transaction dump is taken with dump code AD29.

If DFHD2EDF was called but it was unable to decipher storage, a transaction dump of the storage in question is taken with dump code AD22.

User Response: For an AD29 dump, analyze the trace in the CICS transaction dump to determine why the call to DFHD2EDF failed. For an AD22 dump, analyze the CICS transaction dump of the storage in question. In this situation the information supplied by the Execution Diagnostic Facility (EDF) of CICS for SQL statements consists of:

- The EDF status: ABOUT TO EXECUTE or COMMAND EXECUTION COMPLETE
- The processing status: CALL TO RESOURCE MANAGER DSNCSQL
- The ARG values associated with this call to the CICS-DB2 attachment facility

No other information is provided about the SQL statement.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, transid, taskid*

DFHDB2049 *date time applid* **CICS-DB2 resynchronization for** *db2-id* **Unit of Work** *X'uowid'* **failed with reason code** *X'reason-code'*

Explanation: A resolve indoubt request passed to DB2 from CICS for Unit of Work *uowid* failed with DB2 reason code *reason-code*. The DB2 subsystem involved is *db2id*.

System Action: The UOW remains indoubt in DB2 and CICS keeps hold of the UOW disposition. A CICS system dump is taken with dumpcode 00C30003.

User Response: Use the reason code to determine why the resolve indoubt request failed.

Destination: Console and Transient Data Queue CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, db2-id, X'uowid', X'reason-code'*

DFHDB2050 *date time applid tranid termid* **Abend** *abcode* **has occurred in dynamic plan exit program** *progname*

Explanation: Dynamic plan exit program *progname* has abnormally terminated with abend code *abcode*.

System Action: Normal transaction abend processing continues.

User Response: See the description of abend code *abcode* for further guidance.

If the code is not a CICS transaction abend code, it is a user abend code. Request an explanation from the programmer responsible for this area.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, tranid, termid, abcode, progname*

DFHDB2051 *date time applid tranid termid* **Abend** *abcode* **in DFHD2EX1 - Dynamic plan exit program** *progname* **must be AMODE 31.**

Explanation: The CICS-DB2 attachment facility has failed to link to dynamic plan exit program *progname* because it is not link edited AMODE 31.

System Action: Normal transaction abend processing continues.

User Response: Relinkedit the dynamic plan exit program AMODE 31.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, tranid, termid, abcode, progname*

DFHDB2053 *date time applid tranid termid* **Abend** *abcode* **in DFHD2EX1 - Dynamic plan exit program** *progname* **is disabled.**

Explanation: The CICS-DB2 attachment facility has failed to link to dynamic plan exit program *progname* because it is disabled.

System Action: Normal transaction abend processing continues.

User Response: Enable the dynamic plan exit program.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, tranid, termid, abcode, progname*

DFHDB2054 *date time applid tranid termid* **Abend** *abcode* **in DFHD2EX1 - Link to the dynamic plan exit** *progname* **failed.**

Explanation: An unexpected return code was returned from the link to the dynamic plan exit program *progname* by the CICS-DB2 attachment facility.

System Action: Normal transaction abend processing continues.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, tranid, termid, abcode, progname*

DFHDB2055 *date time applid* **Single phase commit failed with reason code** *X'reason-code'* **for transaction** *transid* **task** *taskid*

Explanation: CICS requested a single-phase commit from DB2, but DB2 was unable to comply. The request failed with DB2 reason code *reason-code*.

System Action: The CICS-DB2 attachment facility abormally terminates the transaction with abend code AD2W. CICS recovery manager will supersede the AD2W abend code with abend code ASPR.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, X'reason-code', transid, taskid*

DFHDB2057 *date time applid tranid termid* **Abend** *abcode* **in DFHD2EX1 - PPT entry for dynamic plan exit program** *progname* **was not found.**

Explanation: CICS was unable to find a PPT entry for the dynamic plan exit program *progname*.

System Action: Normal transaction abend processing continues.

User Response: Ensure that the dynamic plan exit program *progname* has been correctly defined to CICS.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, tranid, termid, abcode, progname*

DFHDB2058 *date time applid tranid termid* **Abend** *abcode* **in DFHD2EX1 - Fetch for dynamic plan exit program** *progname* **failed.**

Explanation: CICS was unable to load the dynamic plan exit program *progname*.

System Action: Normal transaction abend processing continues.

User Response: Ensure that the dynamic plan exit program *progname* has been correctly defined and is in a load library accessible to CICS.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, tranid, termid, abcode, progname*

DFHDB2061 *date time applid* **The INITPARM specified for the CICS-DB2 attachment is invalid. The attachment facility cannot start.**

Explanation: The initparm for the CICS-DB2 attachment facility is not in the correct format. The format of the INITPARM should be:

```
INITPARM=(DFHD2INI='yyyy')
```

where ***yyyy*** is a one to four character DB2 subsystem id. CICS no longer supports running with a macro RCT, so an RCT suffix should not be specified in the initparm string.

System Action: The CICS-DB2 attachment facility initialization does not complete.

User Response: Correct the INITPARM and restart the CICS region, or specify a DB2 subsystem id on a DSNC STRT command or in the DB2CONN. INITPARM is only used when the DB2CONN definition does not contain a DB2ID and a DB2ID is not specified on the startup command.

Destination: CDB2

Modules: DFHD2STR, DFHD2CM1

XMEOUT Parameters: *date, time, applid*

DFHDB2063 *date time applid* **Authorization failure starting the CICS-DB2 attachment with RESP=***xxxx* **and RESP2=***yyyy*

Explanation: An authorization error occurred when starting the CICS-DB2 attachment. The SET DB2CONN CONNECTED responses for RESP (*xxxx*) and RESP2 (*yyyy*) indicate the specific error.

System Action: The CICS-DB2 attachment initialization does not complete.

User Response: Ensure that the DSNC transaction definition in group DFHDB2 is the installed definition.

Destination: CDB2

Module: DFHD2CM1

XMEOUT Parameters: *date, time, applid, xxxx, yyyy*

DFHDB2065 INVALID LENGTH. DATA NOT DISPLAYABLE.

Explanation: The module running under the CICS Execution Diagnostic Facility (EDF) attempted to display an input or output variable that had an incorrect length indicator.

System Action: EDF processing continues, but the value of the variable is not displayed.

User Response: Examine the SQL statement in the application program.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHD2EDF

DFHDB2066 *date time applid tranid termid* **Abend** *abcode* **in DFHD2EX1 - PPT entry for dynamic plan exit program** *progname* **defines the program as remote.**

Explanation: The PPT entry for the dynamic plan exit program *progname* defines the program as remote. The dynamic plan exit program must be local to this CICS system.

System Action: Normal transaction abend processing continues.

User Response: Correct the PPT entry to define the program as local.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, tranid, termid, abcode, progname*

DFHDB2067 *date time applid* **The CICS-DB2 attachment facility is already inactive.**

Explanation: A DSNC STOP command or an EXEC CICS SET DB2CONN NOTCONNECTED command was issued when the CICS-DB2 interface was already inactive.

System Action: The CICS-DB2 attachment facility stop processing is ended.

User Response: If this was unexpected, examine earlier messages to determine why the CICS-DB2 attachment facility is inactive.

Destination: CDB2 and Terminal End User

Module: DFHD2STP

XMEOUT Parameters: *date, time, applid*

DFHDB2068 *applid* **Send text command to terminal** *termid* **failed with eibresp** *X'eibresp'***.**

Explanation: While processing a DSNC command, an EXEC CICS SEND TEXT command to terminal *termid* failed with EIBRESP *eibresp*.

System Action: Processing of the command terminates.

User Response: Examine the eibresp value *eibresp* to determine why the SEND TEXT command failed.

Destination: Console and Terminal End User

Module: DFHD2CC

XMEOUT Parameters: *applid, termid, X'eibresp'*

DFHDB2069 *applid* **Send page command to terminal** *termid* **failed with eibresp** *X'eibresp'***.**

Explanation: While processing a DSNC command, an EXEC CICS SEND PAGE command to terminal *termid* failed with EIBRESP *eibresp*.

System Action: Processing of the command terminates.

User Response: Examine the eibresp value to determine why the SEND PAGE command failed.

Destination: Console and Terminal End User

Module: DFHD2CC

XMEOUT Parameters: *applid, termid, X'eibresp'*

DFHDB2070 *date time applid* **Syncpoint rollback failed for transaction** *transid* **with eibresp2** *X'eibresp2'*

Explanation: DB2 detected a deadlock and the CICS-DB2 attachment facility attempted a syncpoint rollback command for transaction *transid* because DROLLBACK(YES) was specified for the DB2ENTRY or POOL. The syncpoint rollback command failed with EIBRESP2 set to *eibresp2*.

System Action: The transaction is abnormally terminated with abend code AD2Z.

User Response: Examine the eibresp2 value *eibresp2* to determine why the syncpoint rollback request failed. One possible reason could be that the transaction running is a DPL server transaction which was DPLed to by a client transaction without specifying the SYNCONRETURN parameter. In this case syncpoints or syncpoint rollbacks cannot be taken by the server transaction, so DROLLBACK(YES) is invalid in this case.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, transid, X'eibresp2'*

DFHDB2071 *date time applid* **The first error destination cannot be null.**

Explanation: This message is in response to a CICS-DB2 attachment facility DSNC MODIFY DESTINATION command. An attempt was made to nullify the first error destination by setting it to '****'. The CICS-DB2 attachment facility does not allow a null first error destination. The second and third error destinations may be nullified.

System Action: The CICS-DB2 attachment facility command is not processed.

User Response: Re-enter the command with a correct destination ID.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2072 *date time applid* **Transaction** *transid* **, task** *tasknum* **has been directed to the pool as DB2ENTRY** *db2ename* **is disabled.**

Explanation: Transaction *transid* is associated with DB2ENTRY *db2ename*. However DB2ENTRY *db2ename* is disabled or disabling and the DISABLEDACT keyword on the DB2ENTRY specifies that new work should be directed to the pool.

System Action: The transaction will use a DB2 thread from the pool.

This message is output for each task that attempts to use the disabled DB2ENTRY.

User Response: Determine why the DB2ENTRY has been disabled. If appropriate re-enable the DB2ENTRY.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, transid, tasknum, db2ename*

DFHDB2073 *date time applid* **Transaction** *transid* **has been directed to the pool as DB2TRAN** *db2tname* **refers to DB2ENTRY** *db2ename* **which is not installed.**

Explanation: Transaction *transid* is associated with DB2TRAN *db2tname* which is turn refers to DB2ENTRY *db2ename*. However DB2ENTRY *db2ename* is not installed in the CICS system. The DB2TRAN *db2tname* is an 'orphan' in that it refers to a DB2ENTRY that does not exist. A DB2TRAN cannot be installed unless its associated DB2ENTRY has been installed first. Hence either the DB2ENTRY has subsequently been discarded or the DB2TRAN modified by a SET command to refer to a non existent DB2ENTRY.

System Action: The transaction will use a DB2 thread from the pool.

This message is output only when an attempt is made to locate a DB2ENTRY for the transaction. Having decided to use the pool, the CICS-DB2 attachment facility will use the pool for all subsequent transactions of the same name without locating the DB2ENTRY each time. When any DB2TRAN or DB2ENTRY is installed or modified will this force a relocate of the DB2ENTRY next time the transaction is run.

User Response: Determine why the DB2ENTRY is not installed. If appropriate re-install the DB2ENTRY.

Destination: CDB2

Module: DFHD2EX1

XMEOUT Parameters: *date, time, applid, transid, db2tname, db2ename*

DFHDB2074 *date time applid* **CICS-DB2 Attachment facility startup cannot proceed as the currently installed DB2CONN is not useable.**

Explanation: The CICS-DB2 Attachment facility detected that the currently installed DB2CONN is marked for discard. This implies that a previous discard of the DB2CONN did not complete successfully. A discard of a DB2CONN involves CICS discarding all DB2TRANs and DB2ENTRYs first before discarding the DB2CONN. The discard request failed before finally deleting the DB2CONN.

System Action: Startup of the CICS-DB2 interface does not complete.

User Response: If an RDO-defined RCT is being used, re-issue the discard for the DB2CONN. When it has been sucessfully discarded, re-install the required DB2CONN, DB2ENTRYs and DB2TRANs and then retry the startup of the CICS-DB2 interface.

If a macro RCT is to be used, issue a discard for the current DB2CONN and then retry the startup of the CICS-DB2 interface.

Destination: CDB2 and Terminal End User

Module: DFHD2STR

XMEOUT Parameters: *date, time, applid*

DFHDB2100 *applid* **Program DFHD2RP cannot be found.**

Explanation: CICS cannot link to the CICS/DB2 restart program (DFHD2RP).

CICS cannot find DFHD2RP in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System Action: CICS initialization terminates with message DFHSI1521 and a dump is taken.

User Response: To correct this error, place DFHD2RP in a partitioned data set in the DFHRPL DD statement.

Destination: Console

Module: DFHD2IN2

XMEOUT Parameter: *applid*

DFHDB2101 *date time applid terminal userid tranid* **DB2CONN** *db2conn-name* **has been added.**

Explanation: This is an audit log message indicating that DB2CONN *db2conn-name* has been added to the CICS system using the INSTALL command or EXEC CICS CREATE. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

There can be only one DB2CONN installed in the CICS system at a time. A DB2CONN is the minimum required for an RCT.

System Action: The system continues normally.

User Response: None.

Destination: CDB2

Module: DFHD2TM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, db2conn-name*

DFHDB2102 *date time applid terminal userid tranid* **DB2CONN** *db2conn-name* **has been replaced.**

Explanation: This is an audit log message indicating that DB2CONN *db2conn-name* has been replaced in the RCT using the INSTALL command or EXEC CICS CREATE. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System Action: The system continues normally.

User Response: None.

Destination: CDB2

Module: DFHD2TM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, db2conn-name*

DFHDB2103 *date time applid terminal userid tranid* **DB2CONN** *db2conn-name* **has been deleted.**

Explanation: This is an audit log message indicating that DB2CONN *db2conn-name* has been deleted from the CICS system using the DISCARD command. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

Deleting of a DB2CONN means that the whole RCT is deleted. This message will have been preceded by messages indicating the deletion of any currently installed DB2ENTRYs and DB2TRANs which by definition are always associated with the currently installed DB2CONN.

System Action: The system continues normally.

User Response: None.

Destination: CDB2

Module: DFHD2TM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, db2conn-name*

DFHDB2104 *date time applid terminal userid tranid* **DB2ENTRY** *db2entry-name* **has been added.**

Explanation: This is an audit log message indicating that DB2ENTRY *db2entry-name* has been added to the CICS system using the INSTALL command or EXEC CICS CREATE. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.

- *tranid* is the transaction issuing the message.

System Action: The system continues normally.

User Response: None.

Destination: CDB2

Module: DFHD2TM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, db2entry-name*

DFHDB2105 *date time applid terminal userid tranid* **DB2ENTRY** *db2entry-name* **has been replaced.**

Explanation: This is an audit log message indicating that DB2ENTRY *db2entry-name* has been replaced in the RCT using the INSTALL command or EXEC CICS CREATE. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System Action: The system continues normally.

User Response: None.

Destination: CDB2

Module: DFHD2TM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, db2entry-name*

DFHDB2106 *date time applid terminal userid tranid* **DB2ENTRY** *db2entry-name* **has been deleted.**

Explanation: This is an audit log message indicating that DB2ENTRY *db2entry-name* has been deleted from the CICS system using the DISCARD command. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System Action: The system continues normally.

User Response: None.

Destination: CDB2

Module: DFHD2TM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, db2entry-name*

DFHDB2107 *date time applid terminal userid tranid* **DB2TRAN** *db2tran-name* **has been added.**

Explanation: This is an audit log message indicating that DB2TRAN *db2tran-name* has been added to the CICS system using the INSTALL command or EXEC CICS CREATE. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System Action: The system continues normally.

User Response: None.

Destination: CDB2

Module: DFHD2TM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, db2tran-name*

DFHDB2108 *date time applid terminal userid tranid* **DB2TRAN** *db2tran-name* **has been replaced.**

Explanation: This is an audit log message indicating that DB2TRAN *db2tran-name* has been replaced in the RCT using the INSTALL command or EXEC CICS CREATE. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System Action: The system continues normally.

User Response: None.

Destination: CDB2

Module: DFHD2TM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, db2tran-name*

DFHDB2109 *date time applid terminal userid tranid* **DB2TRAN** *db2tran-name* **has been deleted.**

Explanation: This is an audit log message indicating that DB2TRAN *db2tran-name* has been deleted from the CICS system using the DISCARD command. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System Action: The system continues normally.

User Response: None.

Destination: CDB2

Module: DFHD2TM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, db2tran-name*

DFHDB2207 *date time applid* **Load error** *rc abend-code* **for module** *modname*

Explanation: Error *rc* with *abend-code* occurred when the CICS-DB2 attachment facility initialization attempted to use the MVS LOAD macro to load module *modname*.

System Action: The CICS-DB2 attachment initialization does not complete.

User Response: Resolve the problem indicated by the LOAD return code and abend code.

Destination: CDB2

Module: DFHD2STR

XMEOUT Parameters: *date, time, applid, rc, abend-code, modname*

DFHDB2208 *date time applid* **Delete error** *rc* **for module** *modname*

Explanation: Error *rc* occurred when the CICS-DB2 attachment facility attempted to use the MVS DELETE macro to delete module *modname* during shutdown of the CICS-DB2 interface.

System Action: The CICS-DB2 attachment shutdown continues.

User Response: Resolve the problem indicated by the DELETE return code.

Destination: CDB2

Module: DFHD2STP

XMEOUT Parameters: *date, time, applid, rc, modname*

DFHDB2210 *date time applid* **DB2 subsystem id** *db2-id* **contains invalid characters. The CICS-DB2 Attachment facility is not started.**

Explanation: The CICS-DB2 attachment facility startup cannot complete because the *db2-id* subsystem id specified on the DSNC STRT command contains invalid characters.

System Action: The CICS-DB2 attachment facility does not start.

User Response: Correct the DB2 subsystem id and retry the DSNC STRT command.

Destination: Terminal End User

Module: DFHD2CM1

DFHDB2300 *date time applid tranid* **DB2 command output truncated (***ifcabnm* **bytes not shown).**

Explanation: *ifcabnm* bytes of a DB2 command response could not be shown.

System Action: The command processing completes, but the output is truncated.

User Response: If you need complete command output, modify the command to reduce the amount of output. For example, specify specific databases rather than an asterisk on a -DISPLAY DATABASE(xxxx).

Destination: CDB2

Module: DFHD2CM1

XMEOUT Parameters: *date, time, applid, tranid, ifcabnm*

DFHDB2301 *date time applid tranid* **DB2 command complete.**

Explanation: The DB2 command processing is complete.

System Action: Control is returned to the user.

User Response: None.

Destination: CDB2 and Terminal End User

Module: DFHD2CM1

XMEOUT Parameters: *date, time, applid, tranid*

DFHDB8101 I *date time applid* **Connection to DBCTL** *xxxx* **is now complete. Startup Table Suffix used is** *xx***.**

Explanation: DBCTL has notified CICS that the CICS-DBCTL connection is complete.

System Action: CICS resynchronizes any outstanding DBCTL in-doubts.

User Response: None.

Destination: CDBC

Module: DFHDBCT

XMEOUT Parameters: *date, time, applid, xxxx, xx*

DFHDB8102 I *date time applid* **Disconnection from DBCTL** *xxxx* **is now complete.**

Explanation: CICS has successfully disconnected from DBCTL.

System Action: CICS has successfully disconnected from DBCTL and performed its clean up.

User Response: None.

Destination: CDBC

Module: DFHDBDI

XMEOUT Parameters: *date, time, applid, xxxx*

DFHDB8103 E *date time applid* **IDENTIFY request to DBCTL** *xxxx* **has failed. MVS SSI return code** *rc***, reason code** *reason***.**

Explanation: CICS has attempted to connect to DBCTL. The attempt has failed. CICS has been notified that DBCTL is not currently executing. The return code from MVS SSI, reported in PAPLRETC, is *rc*. The reason code from MVS SSI, reported in PAPLRCOD, is *reason*. The return and reason codes reported in PAPLRETC and PAPLRCOD are explained in the *IMS Messages and Codes* manual.

System Action: CICS attempts to connect to DBCTL at 5 second intervals, issuing this message at each attempt, and message DFHDB8297 at 1 minute intervals, until either:

1. Disconnection is requested via the CICS supplied DBCTL support menu transaction, CDBC.
2. 10 minutes have elapsed, after which time CICS stops attempting to connect and IMS message DFS0690 is issued, requesting the operator to type in WAIT (retry the connection attempt) or CANCEL (abandon the connection attempt).

Refer to the explanation of DFHDB8297 for more information. Refer to the *IMS Messages and Codes* manual for further information on message DFS0690.

User Response: Check why DBCTL is not running. You can cancel the connection attempts by using the CDBC transaction to issue a disconnect request. If message DFH0690 has been issued you should reply to this.

Destination: CDBC

Module: DFHDBCT

XMEOUT Parameters: *date, time, applid, xxxx, rc, reason*

DFHDB8104 E *date time applid* **IDENTIFY request to DBCTL** *xxxx* **has been rejected by DBCTL.** *{System abend code | IMS user abend code | DBCTL return code }rc***.**

Explanation: CICS has attempted to connect to DBCTL. The attempt has failed. CICS has been notified that DBCTL has rejected the identify request.

System Action: The attempt to connect to DBCTL is abandoned and the storage associated with the CICS-DBCTL interface is cleaned up. Message DFHDB8102 is output.

User Response: For further information about the nonzero response code, if *rc* is:

- A **system abend code**, refer to the *OS/390 MVS System Codes* manual
- An **IMS user abend code**, refer to the *IMS Messages and Codes* manual
- A **DBCTL return code**, refer to the *IMS Messages and Codes* manual.

Destination: CDBC

Module: DFHDBCT

XMEOUT Parameters: *date, time, applid, xxxx, {1=System abend code , 2=IMS user abend code , 3=DBCTL return code }, rc*

DFHDB8105 W *date time applid* **Operator has requested cancellation of the connection to DBCTL.**

Explanation: DBCTL notifies CICS that the operator has replied 'CANCEL' to IMS message DFS0690. Refer to the *IMS Messages and Codes* manual for information on IMS message DFS0690.

System Action: CICS cleans up the storage associated with the CICS-DBCTL interface and issues message DFHDB8102.

User Response: None. This message is for information only.

Destination: CDBC

Module: DFHDBCT

XMEOUT Parameters: *date, time, applid*

DFHDB8106 E *date time applid* **The DRA has abnormally terminated. CICS is no longer connected to DBCTL id** *xxxx***.**

Explanation: DBCTL has notified CICS that the database resource adapter (DRA) is abnormally terminating.

System Action: CICS cleans up the storage associated with the CICS-DBCTL interface and disconnects from DBCTL. CICS then issues message DFHDB8102.

User Response: See the *CICS IMS Database Control Guide* for information about problem determination. If you wish to reconnect CICS to DBCTL, use the menu transaction CDBC.

Destination: CDBC

Module: DFHDBCT

XMEOUT Parameters: *date, time, applid, xxxx*

DFHDB8107 E *date time applid* **DBCTL** *xxxx* **has abnormally terminated. Will attempt to reconnect.**

Explanation: DBCTL notifies CICS it is about to terminate.

System Action: CICS will attempt to reconnect to DBCTL.

User Response: Notify the system programmer.

Look for messages output by the DBCTL system and determine why DBCTL failed. Restart DBCTL if required.

Destination: CDBC

Module: DFHDBCT

XMEOUT Parameters: *date, time, applid, xxxx*

DFHDB8108 I *date time applid* **DBCTL** *xxxx* **has received a CHECKPOINT FREEZE command. CICS will disconnect from DBCTL.**

Explanation: DBCTL notifies CICS that it is about terminate because a CHECKPOINT FREEZE command has been issued.

System Action: CICS will clean up the storage associated with the CICS-DBCTL interface and will then output message DFHDB8102.

User Response: None.

Destination: CDBC

Module: DFHDBCT

XMEOUT Parameters: *date, time, applid, xxxx*

DFHDB8109 E *date time applid* **Request to DL/I failed for transaction** *tranid***, task** *taskid***, recovery token X'***nn***'***{, system abend code | , IMS user abend code | , DBCTL return code }rc***, DBCTL id** *xxxx***.**

Explanation: DBCTL *xxxx* returns a nonzero response code *rc* when a DL/I request has been issued from an application program.

System Action: The CICS transaction may be abnormally terminated.

User Response: If the CICS transaction is abnormally terminated, refer to the accompanying CICS transaction abend code.

For further information about the nonzero response code, if *rc* is:

- A **system abend code**, refer to the *OS/390 MVS System Codes* manual
- An **IMS user abend code**, refer to the *IMS Messages and Codes* manual
- A **DBCTL return code**, refer to the *IMS Messages and Codes* manual.

For further information about the unit of recovery, refer to the *CICS IMS Database Control Guide*.

Destination: CDBC

Module: DFHDLIDP

XMEOUT Parameters: *date, time, applid, tranid, taskid, X'nn', {1=, system abend code , 2=, IMS user abend code , 3=, DBCTL return code }, rc, xxxx*

DFHDB8110 E *date time applid* **Non zero return code from DFHDBAT. Return code** *rc* **for** *request* **request.**

Explanation: The module DFHDBAT, which is a task related user exit forming part of the CICS-DBCTL interface, returns a nonzero return code in reply to a request issued from CICS to DBCTL.

System Action: The request to DBCTL fails.

Three types of request to DBCTL can fail in this way:

1. A request to connect to DBCTL from module DFHDBCON
2. A request to disconnect from DBCTL from module DFHDBDSC
3. A DL/I request from an application program via module DFHDLIDP

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: The return code is one of the following:

4 — CALL NOT UNDERSTOOD
This can be returned when attempting to connect, disconnect or issue DL/I requests to DBCTL. The most likely cause is a storage overwrite. If CICS detects a storage overwrite, a dump is taken.

8 — REDUNDANT INTERFACE CALL
This can be returned when attempting to connect or disconnect from DBCTL. The request is ignored.

16 — DISCONNECT PRE-EMPTED
This can be returned when attempting to disconnect from DBCTL while a disconnection request is already being processed.

24 — ADAPTER NOT READY
A request has been made to the adaptor DFHDBAT but CICS is still in the process of connecting to DBCTL.

28 — ADAPTER IS DISABLED
This indicates that the CICS-DBCTL interface is not available.

Note: The DBCTL interface terminates normally after any inflight tasks accessing DBCTL complete the unit of work. Subsequently any new unit of work or ATI task can receive this return code because of a PCB schedule failure.

Destination: CDBC

Modules: DFHDBCON, DFHDBDSC, DFHDLIDP

XMEOUT Parameters: *date, time, applid, rc, request*

DFHDB8111 E *date time applid* **Connection has failed. DBCTL return code** *rc***.**

Explanation: DBCTL returns a nonzero response code when CICS is attempting to connect to it.

System Action: The connection attempt is abandoned.

User Response: Notify the system programmer.

For further information about the DBCTL return code, refer to the *IMS Messages and Codes* manual.

Destination: CDBC

Module: DFHDBCON

XMEOUT Parameters: *date, time, applid, rc*

DFHDB8112 E *date time applid* **Unable to generate Task Token due to purge request.**

Explanation: The module, DFHDBTOX, was invoked:

- To set up a task token, or
- To GETMAIN some storage.

The GETMAIN failed.

System Action: Processing continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This message indicates that there is a storage management problem. You should check for other messages issued from the CICS region to the MVS console.

See the *CICS Problem Determination Guide* for guidance on dealing with storage problems.

Destination: CDBC

Module: DFHDBTOX

XMEOUT Parameters: *date, time, applid*

DFHDB8113 E *date time applid* **Getmain failure for storage to hold the indoubt list. Resync has not taken place.**

Explanation: Connection to DBCTL has been completed, but there are some in-doubts outstanding. The GETMAIN to store the in-doubts has failed.

System Action: CICS remains connected to DBCTL but the in-doubts are not resolved.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This message indicates that there is a storage management problem. You should check for other messages issued from the CICS region to the MVS console.

See the *CICS Problem Determination Guide* for guidance on dealing with storage problems.

Destination: CDBC

Module: DFHDBCT

XMEOUT Parameters: *date, time, applid*

DFHDB8114 E *date time applid* **Connection has failed. DRA startup table with suffix** *xx* **cannot be found.**

Explanation: An attempt has been made to connect CICS to DBCTL but the DRA Startup Table with the suffix *xx* cannot be found.

System Action: The connection attempt is abandoned.

User Response: If you were using the DBCTL Support Menu transaction, CDBC, check to see if you have mistyped the suffix value.

If you have not mistyped the suffix value then notify the system programmer.

Place the DRA Startup Table in a CICS STEPLIB library. For further guidance on how to do this, see the *CICS IMS Database Control Guide*.

Destination: CDBC

Module: DFHDBCON

XMEOUT Parameters: *date, time, applid, xx*

DFHDB8115 E *date time applid* **Connection has failed. Module DFSPRRC0 cannot be found.**

Explanation: An attempt has been made to connect CICS to DBCTL but the DRA Router module, DFSPRRC0, cannot be found.

System Action: The connection attempt is abandoned.

User Response: Place the module DFSPRRC0 in a CICS STEPLIB library. For further guidance on how to do this, refer to the *CICS IMS Database Control Guide*.

Destination: CDBC

Module: DFHDBCON

XMEOUT Parameters: *date, time, applid*

DFHDB8116 I *date time applid* **Connection to DBCTL** *xxxx* **is proceeding. Startup Table Suffix used is** *xx***.**

Explanation: The first phase of connecting CICS to DBCTL has been completed.

System Action: CICS connection to DBCTL proceeds.

User Response: None.

Destination: CDBC

Module: DFHDBCON

XMEOUT Parameters: *date, time, applid, xxxx, xx*

DFHDB8117 W *date time applid* **No connection to DBCTL made although the connection program is in the PLT.**

Explanation: The connection program, DFHDBCON, has been placed in the program list table (PLT) but CICS was not connected when CICS last shut down.

System Action: CICS will not connect to DBCTL.

User Response: This is a warning message. In this case, if you wish to connect CICS to DBCTL then use the DBCTL Support Menu transaction, CDBC.

Destination: CDBC

Module: DFHDBCON

XMEOUT Parameters: *date, time, applid*

DFHDB8118 E *date time applid* **Connection to DBCTL** *xxxx* **has been rejected by CICS. Reason code** *rc***.**

Explanation: CICS has rejected the connection attempt to DBCTL for reason *rc* The value in the reason code field is 4. This indicates an invalid IMS/ESA release for storage protection. That is, CICS storage protection was active, and an attempt was made to connect to a DBCTL system running a release of IMS/ESA that does not support the storage protection function.

System Action: On completion of phase 2 connection processing, CICS indicates to the database resource adapter (DRA), in the control exit, that the DRA should terminate. CICS then completes cleanup of the CICS-DBCTL interface. The status of the interface is that CICS is not connected to DBCTL.

User Response: Connection to this DBCTL system is only possible if CICS is run with storage protection turned off. To run with storage protection on, install a release of IMS/ESA that supports the storage protection function.

Destination: CDBC

Module: DFHDBCT

XMEOUT Parameters: *date, time, applid, xxxx, rc*

DFHDB8119 I *date time applid* **CICS is INDOUBT about the LUW with recovery token** *X'rectok'* **after issuing a single phase commit request to DBCTL,** *{SYSTEM ABEND CODE | IMS USER ABEND | DBCTL RETURN CODE} rc***.**

Explanation: CICS was attempting to syncpoint updates made to IMS databases via DBCTL for the logical unit of work (LUW) identified by unit of recovery X'*rectok*'. CICS has detected that updates were made to only one resource manager, DBCTL, in this LUW, and hence has issued a single-phase commit to DBCTL, in place of the normal two-phase commit process. An unexpected response to the single-phase commit has been received from DBCTL, and so CICS is INDOUBT about this LUW. CICS is unable to report whether the updates made via DBCTL have been committed or backed out. No local CICS resources are affected.

System Action: The transaction terminates abnormally with abend code ADCS and a transaction dump. CICS processing continues.

User Response: The unit of recovery X'*rectok*' output with this message can be used in conjunction with IMS message DFSxxxx output on the IMS console to determine the outcome of the LUW.

If the IMS region has failed, on restart of the IMS region, IMS will output DFSxxxx messages for each LUW that has committed using the single-phase commit protocol. The DFSxxxx message contains the same X'*rectok*' recovery token as output in this message. While matching up the recovery tokens, if a DFSxxxx message is found with the same recovery token, then the LUW was comitted. Failure to find a relevant DFSxxxx message means that the LUW has been backed out.

Rather than the IMS region failing, if the bad response to single-phase commit was caused by an individual thread failure and the LUW has been committed, then IMS outputs a DFSxxxx message for just this LUW.

For further information on IMS message DFSxxxx, refer to the *IMS Messages and Codes manual*

For further information about the nonzero response code, if *rc* is:

- A **system abend code**, refer to the *OS/390 MVS System Codes* manual
- An **IMS user abend code**, refer to the *IMS Messages and Codes* manual
- A **DBCTL return code**, refer to the *IMS Messages and Codes* manual.

Destination: CDBC

Module: DFHDBAT

XMEOUT Parameters: *date, time, applid, X'rectok', {1=SYSTEM ABEND CODE, 2=IMS USER ABEND, 3=DBCTL RETURN CODE}, rc*

DFHDB8120 I *date time applid* **DBCTL may be INDOUBT about the LUW with recovery token X'***nn***', which CICS has** *{committed | backed out}***,** *{SYSTEM ABEND CODE | IMS USER ABEND CODE | DBCTL RETURN CODE} rc***.**

Explanation: CICS has received a bad return code from DBCTL for a commit or backout request for the logical unit of work (LUW) identified by unit of recovery X'*nn*'.

System Action: CICS has either backed out or committed this LUW. CICS continues.

User Response: At the next reconnection, CICS and DBCTL resolve all INDOUBTs.

Alternatively you can request DBCTL to find out if the LUW is INDOUBT, and instruct DBCTL to commit it or back it out. For more information on how to do this, refer to the *CICS IMS Database Control Guide*.

For further information about the nonzero response code, if *rc* is:

- a **system abend code**, refer to the *OS/390 MVS System Codes* manual
- an **IMS user abend code**, refer to the *IMS Messages and Codes* manual
- a **DBCTL return code**, refer to the *IMS Messages and Codes* manual.

Destination: CDBC

Module: DFHDBAT

XMEOUT Parameters: *date, time, applid, X'nn', {1=committed, 2=backed out}, {1=SYSTEM ABEND CODE, 2=IMS USER ABEND CODE, 3=DBCTL RETURN CODE}, rc*

DFHDB8121 I *date time applid* **A failure has occurred in DBCTL during syncpoint prepare processing.** *{System abend code | IMS user abend code | DBCTL return code | IMS fast path status code} rc***.**

Explanation: CICS has detected a failure in DBCTL during syncpoint prepare processing.

System Action: The transaction terminates abnormally with abend code ASP7 and a transaction dump. CICS processing continues.

User Response: Refer to the abend code ASP7 for further information about the accompanying CICS transaction.

For further information about the nonzero response code, if *rc* is:

- A **system abend code**, refer to the *OS/390 MVS System Codes* manual
- An **IMS user abend code**, refer to the *IMS Messages and Codes* manual
- A **DBCTL return code**, refer to the *IMS Messages and Codes* manual
- An **IMS fast path status code**, refer to the *IMS Application Programming: EXEC DLI Commands* manual if you were running an EXEC DLI program at the time of the message, or if you were using CALL, refer to the *Application Programming: DL/I Calls*.

Destination: CDBC

Module: DFHDBAT

XMEOUT Parameters: *date, time, applid, {1=System abend code, 2=IMS user abend code, 3=DBCTL return code, 4=IMS fast path status code}, rc*

DFHDB8122I *applid* **CICS is about to disconnect from DBCTL for CICS shutdown.**

Explanation: CICS was connected to DBCTL when CICS termination commenced. CICS is going to issue a disconnect request.

System Action: CICS disconnection from DBCTL proceeds.

User Response: None. You can suppress this message with the SIT parameter, MSGLVL = 0.

Destination: Console

Module: DFHDBAT

XMEOUT Parameter: *applid*

DFHDB8123I *applid* **CICS disconnection from DBCTL for CICS shutdown has completed successfully.**

Explanation: CICS was connected to DBCTL when CICS termination commenced. CICS has successfully disconnected from DBCTL.

System Action: CICS shutdown continues.

User Response: None. You can suppress this message with the SIT parameter, MSGLVL = 0.

Destination: Console

Module: DFHDBAT

XMEOUT Parameter: *applid*

DFHDB8124 E *date time applid* **CICS disconnection from DBCTL for CICS shutdown has** *{failed, | timed out.}{System abend code | IMS user abend code | DBCTL return code | }rc*

Explanation: CICS was connected to DBCTL when CICS termination commenced. CICS disconnection from DBCTL failed for one of the reasons given in the message text.

System Action: CICS shutdown continues.

User Response: If the failure is due to a timed out condition, the message indicates that the time elapsed since CICS requested disconnection has reached the interval specified in the TIMEOUT parameter of the DRA interface without a response from DCBTL. The default interval is 60 seconds.

If failure is due to any other condition, a nonzero return code is given. If *rc* is:

- A **system abend code**, refer to the *OS/390 MVS System Codes* manual
- An **IMS user abend code**, refer to the *IMS Messages and Codes* manual
- A **DBCTL return code**, refer to the *IMS Messages and Codes* manual.

Destination: Console

Module: DFHDBAT

XMEOUT Parameters: *date, time, applid, {1=failed, , 2=timed out.}, {1=System abend code , 2=IMS user abend code , 3=DBCTL return code , 4= }, rc*

DFHDB8128 W *date time applid* **Error linking to the CICS-DBCTL user replaceable program DFHDBUEX from module** *modname***.**

Explanation: An attempt was made to invoke the user replaceable module, DFHDBUEX, but the module was not available.

System Action: CICS disregards the failure and continues execution.

User Response: Ensure that module DFHDBUEX is available.

Destination: CDBC

Modules: DFHDBCT, DFHDBDSC.

XMEOUT Parameters: *date, time, applid, modname*

DFHDB8129 E *date time applid* **Getmain failure in the Control Exit DFHDBCTX.**

Explanation: The MVS GETMAIN request failed in DFHDBCTX.

System Action: The CICS-DBCTL interface remains unchanged.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This message indicates that there is a storage management problem. Check for other messages issued from the CICS region to the MVS console.

See the *CICS Problem Determination Guide* for guidance on dealing with storage problems.

Destination: CDBC

Module: DFHDBCTX

XMEOUT Parameters: *date, time, applid*

DFHDB8130 E *date time applid* **Disconnection has failed. DBCTL return code** *rc***.**

Explanation: The disconnection attempt failed in DBCTL.

System Action: CICS abandons the attempt to disconnect from DBCTL.

User Response: For further information about the DBCTL return code, refer to the *IMS Messages and Codes* manual.

Destination: CDBC

Module: DFHDBDSC

XMEOUT Parameters: *date, time, applid, rc*

DFHDB8131 E *date time applid* **The CICS-DBCTL control transaction has abnormally terminated with abend** *abcode***.**

Explanation: The CICS-DBCTL control transaction, CDBO, has failed.

System Action: The CICS/DBCTL interface is no longer usable.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: See the description of abend *abcode* for further guidance.

If you wish to use DBCTL from this CICS system again, you have to restart CICS.

Destination: CDBC

Module: DFHDBCT

XMEOUT Parameters: *date, time, applid, abcode*

DFHDB8199 E GETMAIN REQUEST FOR CICS-DBCTL CONTROL WORK ELEMENT (CWE) HAS FAILED.

Explanation: While notifying the CICS-DBCTL control transaction of changes to the state of the CICS-DBCTL interface a GETMAIN request for storage to hold a CICS-DBCTL control work element failed.

System Action: CICS uses control exit storage in DBCTL global block (DGB) to notify the control transaction of the error. The control transaction issues message DFHDB8129 to transient data destination CDBC. CICS abandons the attempt to change the state of the CICS-DBCTL interface.

User Response: This message indicates that there is a storage management problem. See any other messages issued from the CICS region to the MVS console for further guidance. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDBCTX

DFHDB8201I The key that you pressed has no meaning on this panel.

Explanation: The terminal operator has pressed the wrong key when using either

- CDBI, the CICS-DBCTL support inquiry transaction (Module DFHDBIQ), or
- CDBC, the CICS-DBCTL support menu transaction (Module DFHDBME).

System Action: CICS ignores the key pressed.

User Response: Check the allowable keys display which appears at the bottom of the screen and try a valid key.

Destination: TERMCDBC

Modules: DFHDBIQ, DFHDBME

DFHDB8202 Selection must be one of those shown above.

Explanation: The terminal operator has typed in an invalid option when using CDBC, the DBCTL Support Menu Transaction.

System Action: CICS rejects the invalid option.

User Response: Check the allowable options that appear on the screen and choose the appropriate one.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8204 Invalid DRA startup table suffix supplied.

Explanation: The terminal operator has typed an invalid startup table suffix when using CDBC, the DBCTL Support Menu Transaction. The suffix must be one or two characters long consisting only of characters valid for a partitioned data set member name.

System Action: CICS rejects the invalid Startup Table Suffix.

User Response: Correct the startup table suffix and try again. You may need to check the suffix with your system programmer.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8207D Connection to DBCTL requested. Press PF5 to confirm.

Explanation: The terminal operator has requested that CICS should be connected to DBCTL.

This message is not used when you are running the CDBC transaction at the console. If you are running the CDBC transaction on the console, the terminal PF5 key function (to confirm the request) is not used.

System Action: If the PF5 key is pressed, then CICS will connect to DBCTL. If any other key is pressed in response to this message, CICS will not connect to DBCTL.

User Response: Press the PF5 key if you wish to proceed with connecting CICS to DBCTL. If you do not wish the connection to proceed then press the PF3 key to terminate the transaction, or change the input data and press enter.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8208D DBCTL immediate disconnection requested. Press PF5 to confirm.

Explanation: The terminal operator has requested that CICS should be disconnected from DBCTL immediately.

This message is not used when you are running the CDBC transaction at the console. If you are running the CDBC transaction on the console, the terminal PF5 key function (to confirm the request) is not used.

System Action: If the PF5 key is pressed, then all DL/I requests issued from this CICS system and currently being processed in DBCTL will complete and then CICS will disconnect from DBCTL. Tasks which have been using DBCTL but have not yet issued a CICS SYNCPOINT, either explicitly in the application or implicitly as a result of CICS task termination processing, will abnormally terminate with abend code ASP7. If any other key is pressed in response to this message, CICS will not disconnect from DBCTL.

User Response: Press the PF5 key if you wish to proceed with disconnecting CICS from DBCTL immediately. If you do not wish the disconnection to proceed then press the PF3 key to terminate the transaction, or change the input data and press enter.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8209D DBCTL orderly disconnection requested. Press PF5 to confirm.

Explanation: The terminal operator has requested that CICS should be disconnected from DBCTL in an orderly manner.

This message is not used when you are running the CDBC transaction at the console. If you are running the CDBC transaction on the console, the terminal PF5 key function (to confirm the request) is not used.

System Action: If the PF5 key is pressed, then all tasks running in this CICS system that have already used DBCTL will complete and then CICS will disconnect from DBCTL. No new tasks running in this CICS system will be permitted to use DBCTL until CICS is connected to DBCTL again. If any other key is pressed in response to this message, CICS will not disconnect from DBCTL.

User Response: Press the PF5 key if you wish to proceed with disconnecting CICS from DBCTL in an orderly way. If you do not wish the disconnection to proceed then press the PF3 key to terminate the transaction, or change the input data and press enter.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8210D Connection to DBCTL is proceeding. Check CDBC TD queue.

Explanation: The operator has pressed PF5 in response to message DFHDB8207 or the CDBC transaction was used from the MVS operator console to connect to DBCTL. CICS issues further messages concerning the connection to the CDBC transient data destination.

System Action: CICS proceeds with the connection attempt.

User Response: Press PF3 to terminate the transaction. Press PF2 to refresh the status information on the screen. If you are running the CDBC transaction on the console, the PF key functions are not available. Check the CDBC transient data destination for further messages.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8211D Orderly disconnection from DBCTL is proceeding. Check CDBC TD queue.

Explanation: The operator has pressed PF5 in response to message DFHDB8209. CICS issues further messages concerning the disconnection to the CDBC transient data destination. Additionally, DBCTL issues some messages to the MVS console.

System Action: CICS proceeds with the disconnection attempt.

User Response: You are now able to use your terminal to perform other functions. You can check to see how the disconnection attempt is proceeding by using the refresh key to refresh the CICS-DBCTL status information on the screen. In case of problems, for example, CICS does not disconnect from DBCTL, check the CDBC transient data destination.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8212D Immediate disconnection from DBCTL is proceeding. Check CDBC TD queue.

Explanation: The operator has pressed PF5 in response to message DFHDB8208. CICS issues further messages concerning the disconnection to the CDBC transient data destination. Additionally, DBCTL issues some messages.

System Action: CICS proceeds with the disconnection attempt.

User Response: You are now able to use your terminal to perform other functions. You can check to see how the disconnection attempt is proceeding by using the refresh key to refresh the CICS-DBCTL status information on the screen. In case of problems, for example, CICS does not disconnect from DBCTL, check the CDBC transient data destination.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8213 Connection to DBCTL is already in progress. Request is ignored.

Explanation: The terminal operator has requested that CICS should connect to DBCTL and CICS is already trying to connect to DBCTL.

System Action: This connection request is ignored.

User Response: Use the PF2 key to refresh the CICS-DBCTL status information on the screen. If the “DBCTL connected and ready” message is not displayed, check the CDBC transient data destination to ensure that no errors have occurred while CICS was connecting to DBCTL. The operator should also check the MVS console as the message DFS0690 may have been issued, and be waiting for a reply.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8214 Connection to DBCTL has already been done. Request is ignored.

Explanation: The terminal operator has requested that CICS should connect to DBCTL when CICS is already connected to DBCTL.

System Action: This connection request is ignored.

User Response: If you did not expect DBCTL to be connected to CICS then check the CDBC transient data destination to see when CICS did connect to DBCTL (message DFHDB8101).

Destination: TERMCDBC

Module: DFHDBME

DFHDB8215 Orderly disconnection from DBCTL in progress. Request is ignored.

Explanation: The terminal operator has either:

- Requested that CICS should disconnect from DBCTL when CICS is already disconnected from DBCTL, or
- Requested that CICS should connect to DBCTL when CICS is still disconnecting from DBCTL.

System Action: This disconnection request is ignored.

User Response: Use the refresh key to refresh the CICS-DBCTL status information on the screen. If the 'DBCTL not connected to CICS' message is not displayed, check the CDBC transient data destination to ensure that no errors have occurred while CICS was disconnecting from DBCTL.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8216 Immediate disconnection from DBCTL in progress. Request is ignored.

Explanation: The terminal operator has either:

- Requested that CICS should disconnect from DBCTL while CICS is already disconnected from DBCTL, or
- Requested that CICS should connect to DBCTL while CICS is still disconnecting from DBCTL.

System Action: This disconnection request is ignored.

User Response: Use the PF2 key to refresh the CICS-DBCTL status information on the screen. If the 'DBCTL not connected to CICS' message is not displayed, check the CDBC transient data destination to ensure that no errors have occurred while CICS was disconnecting from DBCTL. If necessary, check the location of the CDBC destination with your system programmer.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8217 DBCTL not currently connected to CICS. Request ignored.

Explanation: The terminal operator has requested that CICS should disconnect from DBCTL when CICS is not connected to DBCTL.

System Action: This disconnection request will be ignored.

User Response: If you did not expect DBCTL to be disconnected from CICS then check the CDBC transient data destination to see when and why CICS did disconnect from DBCTL (message DFHDB8102). If you do not know where the CDBC destination is, then please check with your system programmer.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8218 CDBC - Please specify CONNECT or DISCONNECT.

Explanation: The terminal operator has used CDBC, the DBCTL support menu transaction, from the MVS operator console and has not selected an option.

System Action: No action is taken until the operator selects an option.

User Response: Select an option by typing in CDBC with a connect or disconnect option.

See the *CICS Supplied Transactions* for guidance on using CDBC.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8219 DBCTL connection phase 1 in progress. Request is ignored.

Explanation: The first phase of connecting CICS to DBCTL has not completed yet, but the terminal operator has requested disconnection from DBCTL.

System Action: This disconnection request is ignored.

User Response: Try requesting disconnection again if you wish to proceed with disconnecting CICS from DBCTL. If you still cannot disconnect then check the CDBC transient data destination to see if any messages have been issued which indicate that there are problems with the connection attempt. Also check if any messages have been issued from DBCTL.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8220 CICS-DBCTL connection is unusable. Request is ignored.

Explanation: A failure has occurred in the CICS-DBCTL interface.

System Action: Any requests to connect or disconnect from DBCTL is ignored.

User Response: Look for earlier messages identifying the source of the error by checking the CDBC transient data destination for any messages issued from CICS and also by checking for any messages issued from DBCTL.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8221 Non zero return code *rc* from DFHDBAT. The request is ignored.

Explanation: The module DFHDBAT returns a nonzero return code in reply to a request issued to DBCTL. DFHDBAT is a task-related user exit and forms part of the CICS-DBCTL interface.

System Action: The request to DBCTL fails.

User Response: See message DFHDB8110 for further guidance.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8222 Connection has failed. DBCTL return code is *rc*.

Explanation: DBCTL rejects a request from CICS to connect to it.

System Action: The connection does not proceed.

User Response: See the *IMS Messages and Codes* manual for an explanation of the DBCTL return code.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8223 DRA startup table with suffix *xx* cannot be found. Request is ignored.

Explanation: A connection request has been issued and the startup table with the suffix specified cannot be found.

System Action: The connection does not proceed.

User Response: If you were using the DBCTL Support Menu transaction, CDBC, check if you have mistyped the suffix value.

Place the DRA startup table in a CICS STEPLIB library. For guidance on how to do this, see the *CICS IMS Database Control Guide*.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8224 Module DFSPRRC0 cannot be found. Connection cannot be done.

Explanation: The DRA router module, DFSPRRC0, could not be found during an attempt to connect to DBCTL.

System Action: The connection does not proceed.

User Response: Place the module DFSPRRC0 in a CICS STEPLIB library. For guidance on how to do this, see the *CICS IMS Database Control Guide*.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8225I *applid* The DBCTL ID is *xxxx*. The DRA Startup Table suffix is *xx*.

Explanation: This message is issued from module DFHDBME when CDBC, the DBCTL support menu transaction, is used from the MVS operator's console. This message is issued from module DFHDBIQ when CDBI, the DBCTL support inquiry transaction, is used from the MVS operator's console.

System Action: Processing continues.

User Response: None.

Destination: TERMCDBC

Modules: DFHDBME, DFHDBIQ

DFHDB8226 There was an error starting CDBT. Disconnection from DBCTL failed.

Explanation: An error has occurred, starting the disconnection transaction CDBT.

System Action: The disconnection attempt fails.

User Response: Look for earlier messages identifying the source of the error on the CDBC or CSMT transient data destinations. Check that the disconnection transaction CDBT is available. Check that the disconnection module DFHDBDSC is available.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8227 There was an error linking to DFHDBCON. Connection to DBCTL failed.

Explanation: An attempt was made to connect to DBCTL but there was an error when linking to the connection module.

System Action: The connection attempt fails.

User Response: Look for earlier messages identifying the source of the error on the CDBC or CSMT transient data destinations. Check that module DFHDBCON is available.

Destination: TERMCDBC

Module: DFHDBME

DFHDB8228 The period (.) and subsequent characters have been removed.

Explanation: A comment was found at the end of the command. The CDBM transaction has removed the comment before sending the IMS command. Comments start with the period character (.) and continue to the end of the command.

System Action: The IMS command is sent without the comment.

User Response: None.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8229 Spaces immediately after the CRC (/) have been removed.

Explanation: One or more spaces were found between the command recognition character (CRC) and the IMS verb. The default CRC is the oblique stroke (/). Spaces in this position would normally cause an IMS command to fail.

System Action: The CDBM transaction removes the spaces before sending the IMS command.

User Response: None. The operator should not add spaces between the CRC and the command.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8230 The key that you pressed has no meaning on this panel.

Explanation: The terminal operator has pressed the wrong key.

System Action: CICS ignores the key pressed.

User Response: Check the display of key functions at the bottom of the screen and try a valid key.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8231 FORCE IMS LOG END OF VOLUME was not set to 1 or 2.

Explanation: When entering a /DBDUMP or /DBRECOVER IMS command, the value in the FORCE IMS LOG END OF VOLUME field must be set to either 1 or 2. If you select 1, which is the default, the command has the NOFEOV option set; this does not force IMS End OF LOG for this command. To override this, select option 2; the NOFEOV option is not added.

System Action: The command is not sent.

User Response: Choose option 1 or 2 and press Enter.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8232 Initial CRC (/) was not found. Reenter the IMS command.

Explanation: The command recognition character (CRC) is expected at the start of the command line. The default CRC is the oblique stroke (/).

System Action: The command is not sent.

User Response: Reenter the command with the CRC as the initial character.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8233 A second CRC (/) was found. Reenter the IMS command.

Explanation: The command field can accept only one command. A command must start with the command recognition character (CRC). The default CRC is the oblique stroke (/). A second CRC within the command field is not allowed and must be removed before the command is sent to IMS.

System Action: The command is not sent.

User Response: Correct the command field by removing the second command or correcting the command syntax.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8234 An invalid wildcard was found. Reenter the IMS command.

Explanation: More than one database name contains a wildcard. You can use the asterisk (*) to refer to any number of characters, or the plus sign (+) to refer to a single character. However, in a command you can use wildcard characters in one database name only. Wildcards in more than one database name are not permitted and should be removed.

System Action: The command is not sent.

User Response: Remove the invalid wildcard. Either change the first wildcard string to include the database names matched by the second wildcard string, or explicitly name the databases. Alternatively issue the command with the first wildcard string, retrieve the command by pressing F9 (Retrieve) and replace the first wildcard string with the second. If there are other database names within the command, you may need to remove them before sending the command.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8235 Incorrect wildcard position. Reenter the IMS command.

Explanation: You can use a wildcard character in a command only to refer to database names. In this case a wildcard character, an asterisk (*) or plus sign (+), has been wrongly positioned in the command.

System Action: The command is not sent.

User Response: Correct the command by moving the wildcard to a position where it can refer to a database name or names.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8236 Invalid IMS command verb. Reenter the IMS command.

Explanation: The command has been rejected by IMS because the verb is not recognized as a valid IMS operator command.

System Action: IMS rejects the command.

User Response: Correct the command and press Enter.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8237 Command not allowed. Enter a valid IMS command.

Explanation: This command has been rejected by IMS because it cannot be executed using the AIB interface used by CICS.

Certain IMS operator commands such as /MODIFY are not valid with the CDBM transaction and must be issued via the MVS console.

System Action: IMS rejects the command.

User Response: Enter a valid IMS operator command.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8238 Command not authorized. Enter a valid IMS command.

Explanation: The command has been rejected by IMS because the application or user does not have the necessary authorization to execute the command as entered.

System Action: IMS rejects the command.

User Response: Get the necessary authorization and reissue the command.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8239 *aaaa* **call failed, AIB Return** *X'bbbb'* **Reason** *X'cccc'*

Explanation: The command has been rejected by IMS.

System Action: IMS rejects the command.

User Response: For the IMS function code, examine the AIB return code and reason code to determine the cause of the error. See the *IMS/ESA Application Programming: Database Manager* manual, SC26-8015 for an explanation of these codes.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8240 DBCTL not connected. Run CDBC to connect.

Explanation: CICS was unsuccessful in its attempt to schedule the program specific block (PSB) DFHDBMP before issuing the IMS command.

System Action: The command is not sent.

User Response: Ensure that the DBCTL system is attached using the CICS supplied transaction CDBC.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8241 PSB schedule unsuccessful. UIB return codes (*X'aaaa'*)

Explanation: CICS was unsuccessful in its attempt to schedule the program specification block (PSB) DFHDBMP before issuing the IMS command.

System Action: The command is not sent.

User Response: Ensure that PSB DFHDBMP is available to your system. See the summary of abends and return codes in the *CICS IMS Database Control Guide* for an explanation of the UIB return codes.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8242 Command in progress. Issue /DISPLAY command for status.

Explanation: The command sent to IMS has not returned a segment but has sent an acknowledgment.

System Action: The IMS command is proceeding or has completed.

User Response: Issue a /DISPLAY command to determine the status. Press F9 (Retrieve) to retrieve the IMS command and change the command to a /DISPLAY command. Alternatively press F12 (Cancel) and enter a new command to display the status.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8243 No match has been found for wildcard (*aaaaaaaa*).

Explanation: CICS was unsuccessful in its attempt to match any IMS databases with the wildcard supplied.

System Action: The command is not sent.

User Response: Check the names of the databases required and/or the wildcard supplied.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8244 The requested command cannot be found in the command file.

Explanation: The group command entered does not exist in the command file.

System Action: No action

User Response: Check that the group name and command were typed correctly. A list of all available commands can be found using the browse function in the group command maintenance section of CDBM.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8245 The command file, DFHDBFK, cannot be opened.

Explanation: CDBM failed to open the command file, DFHDBFK.

System Action: CDBM will not allow the user to enter the maintenance section.

User Response: Determine the cause of the open failure, and correct the error. Retry selecting the maintenance option from within CDBM.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8246 An error has occurred reading the command file, DFHDBFK.

Explanation: An error occurred whilst CDBM was trying to read a record from the command file, DFHDBFK.

System Action: CDBM cannot read and execute the requested group command.

User Response: Determine the cause of the read failure, and correct the error. Retry issuing the group command again from within CDBM.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8247 Record not found.

Explanation: There was no record in the group command file, DFHDBFK, for the specified group and command.

System Action: None.

User Response: Browse the group command file to locate the correct record. If this message was issued during a browse request, clear the group and name fields and retry the browse.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8248 End of file reached during browse. Press enter to wrap.

Explanation: The end of the file was reached during a browse request on the group command file, DFHDBFK.

System Action: None.

User Response: Press return to browse the group command file from the beginning.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8249 A record already exists for this command in this group.

Explanation: A record with a matching group and command names already exists in the group command file, DFHDBFK.

System Action: A new group command record is not added to the group command file.

User Response: Check the command name is correct. If it is, use a different group name.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8250 A record must be read before updating.

Explanation: Before a record in the group command file, DFHDBFK, can be updated, it must first be read.

System Action: The group command record is not updated in the group command file.

User Response: Read the record and apply the changes before issuing an update request.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8251 A record must be read before deletion.

Explanation: Before a record in the group command file, DFHDBFK, can be deleted, it must first be read.

System Action: The record is not deleted from the group command file.

User Response: Read the record before issuing a delete request.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8252 Group and command must not be altered. Record not updated.

Explanation: The group and command fields must not be altered during a group command record update request.

System Action: The record is not updated in the group command file, DFHDBFK.

User Response: Add a new record with the required group and name fields. Delete the unwanted record.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8253 Group and command must not be altered. Record not deleted.

Explanation: The group and command fields must not be altered during a group command record delete request.

System Action: The record is not deleted from the group command file, DFHDBFK.

User Response: Read the correct record before issuing a delete request.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8254 Cannot update during browse. Read record to update.

Explanation: Before a record in the group command file, DFHDBFK, can be updated, it must first be read.

System Action: The group command record is not updated in the group command file.

User Response: Read the record and apply the changes before issuing an update request.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8255 Cannot delete during browse. Read record to delete.

Explanation: Before a record in the group command file, DFHDBFK, can be deleted, it must first be read.

System Action: The record is not deleted from the group command file.

User Response: Read the record before issuing a delete request.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8256 Both group and command must be specifed.

Explanation: The group and command fields must both be specified when adding a new group command record to the group command file, DFHDBFK.

System Action: A new group command record is not added to the group command file.

User Response: Enter data in both the group and command fields and issue the add request.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8257 Function invalid. Must be A, B, D, R or U.

Explanation: An action requested was not valid.

System Action: None.

User Response: Enter a valid action letter.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8258 File *{write | rewrite | delete | read | browse}* **failure. EIBRESP=***eibresp***, EIBRESP2=***eibresp2***.**

Explanation: An unexpected error has occurred during a file operation on the group command file, DFHDBFK.

System Action: The requested update to the group command file is not made.

User Response: Determine the reason for the failure using the EIBRESP and EIBRESP2 values. Fix the cause of the error and retry the operation.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8259 Group command, *group command***,** *{added | updated | deleted | read | browsed}***.**

Explanation: The operation indicated has been performed on the group command file, DFHDBFK.

System Action: The group command file has been successfully modified.

User Response: None.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8260 Record length exceeds screen size.

Explanation: The record read from the group command file, DFHDBFK, was found to contain more data than could be displayed on the screen.

System Action: None.

User Response: The data set associated with the group command file, DFHDBFK, has been created with a larger record size than allowed. Recreate the data set with the correct record size, and reload the data.

Destination: Terminal End User

Module: DFHDBMP

DFHDB8290I DBCTL not connected to CICS.

Explanation: This message is issued when CICS is not connected to DBCTL.

If you are using the CDBC transaction, the DBCTL Support Menu transaction, then the message is issued from module DFHDBME.

If you are using the CDBI transaction, the DBCTL Support Inquiry transaction, the message is issued from module DFHDBIQ.

System Action: Processing continues.

User Response: None.

Destination: TERMCDBC

Modules: DFHDBME, DFHDBIQ

DFHDB8291I DBCTL connect phase 1 in progress.

Explanation: CICS is in phase 1 of connecting to DBCTL and has not yet moved into phase 2 of connection processing.

If you are using the CDBC transaction, the DBCTL Support Menu transaction, this message is issued from module DFHDBME.

If you are using the CDBI transaction, the DBCTL Support Inquiry transaction, this message is issued from module DFHDBIQ.

System Action: Processing continues.

User Response: Press the PF2 key to refresh the status information on the screen. Check the CDBC transient data message destination for any other messages issued from CICS concerning the CICS-DBCTL interface.

Destination: TERMCDBC

Modules: DFHDBME, DFHDBIQ

DFHDB8292I DBCTL connect phase 2 in progress.

Explanation: CICS is in phase 2 of connecting to DBCTL. (That is, phase 1 of connection has been completed and CICS has not yet heard from DBCTL that phase 2 of connection has been completed.)

If you are using the CDBC transaction, the DBCTL Support Menu transaction, this message is issued from module DFHDBME.

If you are using the CDBI transaction, the DBCTL Support Inquiry transaction, then this message is issued from module DFHDBIQ.

System Action: Processing continues.

User Response: Press the PF2 key to refresh the status information on the screen.

Check the CDBC transient data message destination for any other messages issued from CICS concerning the CICS-DBCTL interface. Check that the DBCTL system you are trying to connect to has been initialized.

Check the MVS operator console for any IMS console messages that need a reply (for example, message DFS0690).

Destination: TERMCDBC

Modules: DFHDBME, DFHDBIQ

DFHDB8293I DBCTL connected and ready.

Explanation: CICS is connected to DBCTL.

If you are using the CDBC transaction, the DBCTL Support Menu transaction, the message is issued from module DFHDBME.

If you are using the CDBI transaction, the DBCTL Support Inquiry transaction, the message is issued from module DFHDBIQ.

System Action: Processing continues.

User Response: Press the PF3 key to terminate the transaction.

Press the PF2 key to refresh the status information on the screen.

Check the CDBC transient data message destination for any other messages issued from CICS concerning the CICS-DBCTL interface.

Destination: TERMCDBC

Modules: DFHDBME, DFHDBIQ

DFHDB8294I DBCTL orderly disconnect in progress.

Explanation: CICS is disconnecting from DBCTL in an orderly manner. (That is, all tasks using DBCTL from this CICS system will run to termination before CICS is disconnected from DBCTL.)

If you are using the CDBC transaction, the DBCTL Support Menu transaction, the message is issued from module DFHDBME.

If you are using the CDBI transaction, the DBCTL Support Inquiry transaction, the message is issued from module DFHDBIQ.

System Action: Processing continues.

User Response: Press the PF3 key to terminate the transaction.

Press the PF2 key to refresh the status information on the screen.

Check the CDBC transient data message destination for any other messages issued from CICS concerning the CICS-DBCTL interface.

Destination: TERMCDBC

Modules: DFHDBME, DFHDBIQ

DFHDB8295I DBCTL immediate disconnect in progress.

Explanation: CICS is disconnecting from DBCTL immediately. (That is, all DL/I requests issued from this CICS system and currently being processed by DBCTL will complete before CICS is disconnected from DBCTL.)

If you are using the CDBC transaction, the DBCTL Support Menu transaction, this message is issued from module DFHDBME.

If you are using the CDBI transaction, the DBCTL Support Inquiry transaction, this message is issued from module DFHDBIQ.

If there is an IMS console message DFS0690 waiting for an operator reply, this message continues to be displayed until the operator replies to the IMS console message.

System Action: Processing continues.

User Response: Press the PF3 key to terminate the transaction.

Press the PF2 key to refresh the status information on the screen.

Check the CDBC transient data message destination for any other messages issued from CICS concerning the CICS-DBCTL interface.

Destination: TERMCDBC

Modules: DFHDBME, DFHDBIQ

DFHDB8296I DBCTL cannot be connected to CICS.

Explanation: A failure has occurred in the CICS-DBCTL interface.

If you are using the CDBC transaction, the DBCTL Support Menu transaction, the message is issued from module DFHDBME.

If you are using the CDBI transaction, the DBCTL Support Inquiry transaction, the message is issued from module DFHDBIQ.

System Action: Processing continues.

User Response: Look for earlier messages identifying the source of the error by checking the CDBC transient data destination and checking any messages issued from DBCTL.

Destination: TERMCDBC

Modules: DFHDBME, DFHDBIQ

DFHDB8297 *applid* **CICS/DBCTL CONNECTION BEING ATTEMPTED**

Explanation: This message only occurs when there is no recoverable service table (RST). CICS has attempted to connect to DBCTL but has failed on one or more occasions. DBCTL may not be running, or it may be restarting after a DBCTL abend.

System Action: CICS continues to attempt to connect every 5 seconds. This message is reissued every minute for ten minutes or until connection is made.

If the connection is not made in ten minutes, CICS will stop attempting to connect and IMS message DFS0690 is issued. If the user replies WAIT to the IMS DFS0690 message, then the IMS DRA will take over responsibility for retrying the connection attempt. The TIMER parameter in the DRA startup table specifies how often the DRA will retry the connect to DBCTL.

User Response: Check why DBCTL is not running. You can cancel the connection attempts using the CDBC transaction by issuing a disconnect request.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDXAX

DFHDB8298 *applid* **An attempt has been made to connect to DBCTL via PLT phase 1. The request has been rejected.**

Explanation: The attempt to connect to DBCTL has been unsuccessful.

You are using a startup PLT and the request for DFHDBCON has been issued in PLT phase 1 processing. It can only be issued from PLT phase 2.

System Action: Processing continues.

User Response: Look at the source for your startup PLT. Ensure the DBCTL startup program (DFHDBCON) is after the statement specifying DFHDELIM.

Destination: Console

Modules: DFHDBME, DFHDBCON

XMEOUT Parameter: *applid*

DFHDDxxxx messages

DFHDD0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the program check or abend indicated that CICS was executing at offset X'*offset*' in module *modname*. This may have been caused by corruption of CICS code or control blocks.

System Action: A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDDDM, DFHDDDI, DFHDDLO, DFHDDBR

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHDD0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: Directory Domain has received an unexpected error response from some other part of CICS. The operation requested by Directory Domain is described by code X'*code*'.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System Action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the cause of the problem as follows:

1. Determine if the problem can be explained by any previous messages output from some other part of CICS.
2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDDDM, DFHDDDI, DFHDDLO, DFHDDBR

XMEOUT Parameters: *applid, X'code', modname*

DFHDHxxxx messages

DFHDH0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.
If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDHDH, DFHDHDM, DFHDHSL

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHDH0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System Action: An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDHDH, DFHDHDM, DFHDHSL

XMEOUT Parameters: *applid, X'code', modname*

DFHDH0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function, so there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the ICVR system initialization parameter, which is measured in milliseconds. This means that module *modname* in the message is terminated and CICS continues.

But if you have specified ICVR=0 you consider that module *modname* is looping, you must terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR system initialization parameter. You can change the RUNAWAY time interval temporarily using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHDMTM

XMEOUT Parameters: *applid, X'offset', modname*

DFHDH0100I *applid* **Document domain initialization has started.**

Explanation: This is an informational message indicating that document domain initialization has started.

System Action: System initialization continues.

User Response: None. The message can be suppressed with the system initialization parameter MSGLVL=0.

Destination: Console

Module: DFHDHDM

XMEOUT Parameter: *applid*

DFHDH0101I *applid* **Document domain initialization has ended.**

Explanation: This is an informational message indicating that document domain initialization has completed successfully.

System Action: System initialization continues.

User Response: None. The message can be suppressed with the system initialization parameter MSGLVL=0.

Destination: Console

Module: DFHDHDM

XMEOUT Parameter: *applid*

DFHDH0105 *date time applid* **Document template definition** *doctemplate* **has been added as** *{PDS-MEMBER | FILE | PROGRAM | TSQUEUE | TDQUEUE | EXITPGM}***(***resourcename***) with template name** *templatename***.**

Explanation: The document template definition *doctemplate* has been successfully added to the Document Handler domain. The template definition maps on to one of the following resources named *resourcename*:

PDS-MEMBER A member of a partitioned dataset
FILE A CICS file
PROGRAM A CICS program
TSQUEUE A CICS Temporary Storage queue
TDQUEUE A CICS Transient Data queue
EXITPGM A User-replaceable program that reads in a template of its own specification.

The document template is assigned a template name of *templatename*.

System Action: The definition is cataloged in the CICS Global Catalog and will be restored on a CICS warm start.

User Response: Application programs can now use the template using the name *templatename*.

Destination: CSDH

Module: DFHDHTM

XMEOUT Parameters: *date, time, applid, doctemplate, {1=PDS-MEMBER, 2=FILE, 3=PROGRAM, 4=TSQUEUE, 5=TDQUEUE, 6=EXITPGM}, resourcename, templatename*

DFHDH0106 *date time applid* **Document template definition** *doctemplate* **has been deleted.**

Explanation: The document template definition *doctemplate* has been successfully deleted from the Document Handler domain.

System Action: The definition is removed from the CICS Global Catalog and will be not be restored on a CICS warm start.

User Response: Application programs can no longer use the template using the name *templatename*.

Destination: CSDH

Module: DFHDHTM

XMEOUT Parameters: *date, time, applid, doctemplate*

DFHDMxxxx messages

DFHDM0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end (abend) or program check has occurred in the module *modname*. This implies that there may be an error in CICS code.

Alternatively,

- Unexpected data has been input, or
- Storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either CICS will continue unless you have specified in the dump table that CICS should terminate. This action will be taken by DFHDMIQ.

Or this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. This action is taken by DFHDMDM, DFHDMDS and DFHDMWQ.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Then look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, a runaway or something else and may give you some guidance concerning user response.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDMDM, DFHDMEN, DFHDMENF, DFHDMIQ, DFHDMDS, DFHDMWQ

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHDM0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code *code* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System Action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either CICS will continue unless you have specified in the dump table that CICS should terminate. This action will be taken by DFHDMIQ.

Or, this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. This action is taken by DFHDMDM, DFHDMDS and DFHDMWQ.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This indicates a possible error in the CICS code. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDMDM, DFHDMEN, DFHDMENF, DFHDMIQ, DFHDMDS, DFHDMWQ

XMEOUT Parameters: *applid, X'code', modname*

DFHDM0003 *applid* **Insufficient storage to satisfy GETMAIN (code** *X'code***) in module** *modname***.**

Explanation: A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code X'*code*' is the exception trace point id which uniquely identifies the place where the error was detected.

This error has occurred above the 16Mb line.

System Action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either CICS continues unless you have specified in the dump table that CICS should terminate. This action is taken by DFHDMIQ.

Or this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. This action is taken by DFHDMDM and DFHDMWQ.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Try increasing the size limits of the DSAs or EDSAs. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Destination: Console

Modules: DFHDMDM, DFHDMIQ, DFHDMWQ

XMEOUT Parameters: *applid, X'code', modname*

DFHDM0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either CICS continues unless you have specified in the dump table that CICS should terminate. This action is taken by DFHDMIQ.

Or this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. This action is taken by DFHDMDM, DFHDMDS and DFHDMWQ.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that the module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDMDM, DFHDMEN, DFHDMENF, DFHDMIQ, DFHDMDS, DFHDMWQ

XMEOUT Parameters: *applid, X'offset', modname*

DFHDM0005 *applid* **A hardware error has occurred (module** *modname***, code** *X'code'***). The Time-of-Day clock is invalid.**

Explanation: A hardware error has occurred during the running of module *modname*. The MVS Store Clock facility is the timing mechanism for the operating system.

The code *code* is the exception trace point id which uniquely identifies the place where the error was detected.

System Action: An exception entry (code *code* in the message) is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This is in all probability a hardware error and you should in the first instance investigate the MVS Store Clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDMDM, DFHDMWQ, DFHDMDS

XMEOUT Parameters: *applid, modname, X'code'*

DFHDM0101I *applid* **CICS is initializing.**

Explanation: This message is for information only.

CICS initialization has started. The domain (DM) manager is about to attach an initialization task for each domain defined in the local CICS catalog, DFHLCD.

System Action: Processing continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHDMDM

XMEOUT Parameter: *applid*

DFHDM0102I *applid* **CICS is quiescing.**

Explanation: This message is for information only.

The controlled shutdown of CICS has started. The domain (DM) manager is about to attach a quiesce task for each CICS component.

System Action: Processing continues.

User Response: None. You can suppress this message with the SIT parameter, MSGLVL=0.

Destination: Console

Module: DFHDMDM

XMEOUT Parameter: *applid*

DFHDM0103 *applid* **Unsuccessful quiesce of** *domain* **domain. CICS will terminate.**

Explanation: A domain has failed to quiesce.

System Action: CICS terminates. An exception trace and a dump are issued by the domain in error.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHDMDS

XMEOUT Parameters: *applid, domain*

DFHDM0104 *applid* **Unsuccessful load of program** *domain***. CICS will terminate.**

Explanation: The domain (DM) manager has called the loader to load a program for an initialization task but the load has failed. The module is missing from the DFHRPL concatenation, possibly because the SDFHLOAD is missing. Alternatively, if the module name given in the message is not a legitimate CICS module, the CICS catalog could be corrupted.

System Action: CICS terminates.

An exception trace is issued by the domain manager. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHDMDM

XMEOUT Parameters: *applid, domain*

DFHDM0105 *applid* **Unsuccessful initialization of** *domain* **domain. CICS will terminate.**

Explanation: A domain has failed to initialize.

System Action: CICS terminates.

Diagnostics are issued by the domain in error. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Review the diagnostics and take remedial action for any installation-related problems. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHDMDS

XMEOUT Parameters: *applid, domain*

DFHDM0106 *applid* **The Domain Manager records on the CICS Catalog may have been corrupted.**

Explanation: A problem was detected when calling the CICS catalog to browse the domain (DM) manager records. For example, the domain manager records may not be present.

This message may follow message DFHDM0002.

System Action: This is a critical error and CICS terminates, even if you have specified in the dump table that CICS should not terminate.

A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Try reinitializing the local CICS catalog, DFHLCD, using DFHCCUTL, and perform an initial start of CICS.

If this does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHDMDM

XMEOUT Parameter: *applid*

DFHDSxxxx messages.

DFHDS0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If CICS is still running, it is necessary to decide whether to terminate CICS.

1. Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.
2. Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.
3. If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.
4. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHDS0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point id which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

System Action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Or this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

The system action taken depends on the context.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDSAT, DFHDSBR, DFHDSDM, DFHDSDS2, DFHDSDS3, DFHDSDS4, DFHDSIT, DFHDSKE, DFHDSSM, DFHDSSR, DFHDSST, DFHDSTCB, DFHDSUE

XMEOUT Parameters: *applid, X'code', modname*

DFHDS0003 *applid* **Insufficient storage (code** *X'code'***) in module** *modname***.**

Explanation: A CICS GETMAIN was issued by module *modname* but there was insufficient storage available to satisfy the request.

The code X'*code*' is the exception trace point id which uniquely identifies the place where the error was detected. This error has occurred above the 16M line.

System Action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try increasing the overall size limits of the DSAs or EDSAs. If CICS is not already terminated, you will need to bring CICS down to do this. See the *CICS System Definition Guide* or the *CICS Performance Guide* for more information on CICS storage.

You may need further assistance from IBM to fully resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHDSBR

XMEOUT Parameters: *applid, X'code', modname*

DFHDS0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *module* will be terminated and CICS will continue.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDSAT, DFHDSBR, DFHDSDM, DFHDSDS2, DFHDSDS3, DFHDSDS4, DFHDSIT, DFHDSKE, DFHDSSM, DFHDSSR, DFHDSST, DFHDSTCB, DFHDSUE

XMEOUT Parameters: *applid, X'offset', modname*

DFHDS0005 *applid* **A hardware error has occurred (code** *X'code'***, module** *modname***). The Time-of-Day clock is invalid.**

Explanation: A hardware error has occurred during the running of module *module*. The MVS Store Clock facility is the timing mechanism for the operating system.

The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. This is in all probability a hardware error and you should in the first instance investigate the MVS Store Clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHDSTCB

XMEOUT Parameters: *applid, X'code', modname*

DFHDS0006 *applid* **Insufficient storage to satisfy GETMAIN (code** *X'code*'**) in module** *modname*. **MVS code** *mvscode*.

Explanation: An MVS GETMAIN was issued by module *modname* but there was insufficient storage available to satisfy the request.

The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

This error may occur either above or below the 16M line. This depends on context.

The code *mvscode* is the MVS GETMAIN return code.

System Action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Or this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

The system action depends on the context.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual which is listed in the book list at the front of this book.

Try decreasing the overall size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. If CICS is not already terminated, you will need to bring CICS down to do this. See the *CICS System Definition Guide* or the *CICS Performance Guide* for more information on CICS storage.

You may need further assistance from IBM to fully resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDSAT, DFHDSDM, DFHDSDS2, DFHDSSR

XMEOUT Parameters: *applid, X'code', modname, mvscode*

DFHDS0101 *applid* **Dispatcher cannot enable the CICS post exit.**

Explanation: The dispatcher has been unable to gain authorization to enable the CICS post exit. This is probably because the CICS SVC number has been defined incorrectly in the SIT.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Check to see whether the CICS SVC number has been defined correctly in the SIT and the SIT overrides.

Check that the SVC and other code has been correctly installed as described in the *CICS Transaction Server for OS/390 Installation Guide*. In particular, ensure that the CICS post-exit stub (DFHDSPEX) is in the LPA.

Destination: Console

Module: DFHDSDM

XMEOUT Parameter: *applid*

DFHDUxxxx messages

DFHDU0001 *applid* **An abend (code** *aaa/bbbb*) **has occurred at offset** *X'offset'* **in module** *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: An exception entry is made in the trace table.

For module DFHDUDT, a system dump is taken unless you have specifically suppressed the dumps (by a user exit program at the XDUREQ exit, in the dump table or by global system dump suppression). CICS processing continues unless you have specified in the dump table that CICS should terminate.

For module DFHDUTM, a system dump is taken. This dump cannot be suppressed. CICS processing continues.

For module DFHDUDU, a system dump cannot be taken as doing so could cause CICS to loop. CICS processing continues.

For other modules, a system dump is taken.

CICS processing continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Then look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, a runaway or a recovery percolation, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

If the abend occurred in modules DFHDUDT or DFHDUTM, the dump table is not available. Therefore, any EXEC API commands relating to dump codes fail and any dumps taken are processed using default information (for example, whether to terminate CICS or not) rather than information you may have put on the dump table for specific dump codes.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDUDT, DFHDUTM, DFHDUDU, DFHDUXD, DFHDUIO, DFHDUSU, DFHDUXW, DFHPCXDF, DFHSAXDF, DFHDLXDF, DFHXDXDF, DFHXRXDF, DFHTCXDF, DFHTRXDF, DFHFCXDF

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHDU0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code *code* is the exception trace point ID which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System Action: An exception entry (code *code* in the message) is made in the trace table.

For module DFHDUDT, a system dump is taken unless you have specifically suppressed the dumps (by a user exit program at the XDUREQ exit, in the dump table or by global system dump suppression). CICS processing continues unless you've specified in the dump table that CICS should terminate.

For module DFHDUTM, a system dump is taken. This dump cannot be suppressed. CICS processing continues.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller. A message will be issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

If the error occurred in modules DFHDUDT or DFHDUTM, the dump table may not be available. Therefore, any EXEC API commands relating to dump codes may fail and any dumps taken may be processed using default information (for example, whether to terminate CICS or not) rather than information you may have put on the dump table for specific dump codes.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHDUDT, DFHDUTM

XMEOUT Parameters: *applid, X'code', modname*

DFHDU0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which happened to be executing at the time when the error was detected.

System Action: An exception entry is made in the trace table.

For module DFHDUDT, a system dump is taken unless you have specifically suppressed the dumps (by a user exit program at the XDUREQ exit, in the dump table or by global system dump suppression). CICS processing continues unless you have specified in the dump table that CICS should terminate.

For module DFHDUTM, a system dump is taken. This dump cannot be suppressed. CICS processing continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* will be terminated and CICS will continue.

If you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Modules: DFHDUDT, DFHDUTM, DFHDUXD, DFHDUIO, DFHDUSU, DFHDUXW, DFHPCXDF, DFHSAXDF, DFHDLXDF, DFHXDXDF, DFHXRXDF, DFHTCXDF, DFHTRXDF, DFHFCXDF

XMEOUT Parameters: *applid, X'offset', modname*

DFHDU0006 *applid* **Insufficient storage to satisfy Getmain (code** *X'code'***) in module** *modname***. MVS code** *mvscode***.**

Explanation: An MVS GETMAIN was issued module *modname*, but there was insufficient storage available to satisfy the request.

The code X'*code*' is the exception trace point id which uniquely identifies the place where the error was detected. This error has occurred above the 16M line.

The code *mvscode* is the MVS GETMAIN return code.

System Action: An exception entry is made in the trace table (code *code* in the message) and a system dump is taken. This dump cannot be suppressed. CICS processing continues.

User Response: Inform the system programmer. If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

As the problem is in module DFHDUTM, EXEC API commands for browsing the dump tables may not work, or additions to the dump tables may not work.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual which is listed in the book list at the front of this book.

Try decreasing the size limit of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. If CICS is not already terminated, you need to bring CICS down to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUTM

DFHDU0102 *applid* **DFHDUIO could not be loaded. Transaction dump is inoperative.**

Explanation: CICS could not locate module DFHDUIO during initialization.

System Action: An exception trace entry is produced, and CICS continues with the transaction dump facility inoperative.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Use the exception trace entry and any other relevant messages to determine why module DFHDUIO was not available.

Destination: Console

Module: DFHDUDM

XMEOUT Parameter: *applid*

DFHDU0103 *applid* **An abend has occurred during initialization of dump domain in module DFHDUDM.**

Explanation: A dump domain has failed to initialize.

System Action: CICS terminates.

An exception trace and a kernel dump are issued by the dump domain. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHDUDU

XMEOUT Parameter: *applid*

DFHDU0201 *applid* **About to take SDUMP. Dumpcode:** *dumpcode***, Dumpid:** *dumpid***.**

Explanation: An error, possibly signalled by a previous message, has caused a call to the CICS dump (DU) domain. Dump domain will issue this message immediately before calling the MVS SDUMP facility if the following conditions are satisfied:

- The SIT option, DUMP=YES, for SDUMPS has been specified.
- The dump table entry for dump code *dumpcode* specifies that a system SDUMP is required.
- The maximum dump limit for this dump code in the dump table entry has not been exceeded.
- The user exit XDUREQ does not suppress the taking of this dump.

The dump code *dumpcode* is an 8-character system dump code identifying the CICS problem. However some of these characters may be blanks. A system dump code is a CICS message number with the DFH prefix removed.

The dumpid *dumpid* is the unique 9-character string identifying this dump.

System Action: When the dump is complete, message number DFHDU0202 is issued.

User Response: Inform the system programmer, who should refer to the CICS message indicated by *dumpcode* to resolve the problem.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUDU

DFHDU0202 *applid* **SDUMP complete.**

Explanation: This message is issued on successful completion of an SDUMP.

System Action: Processing continues unless a CICS shutdown is requested by either the dump table entry for this dump or the dump call to the dump (DU) domain.

User Response: Print off the system dump if required. A previous MVS message identifies in which SYS1.DUMP data set this dump can be found.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUDU

DFHDU0203I *date time applid* **A transaction dump was taken for dumpcode:** *dumpcode***, Dumpid:** *dumpid***.**

Explanation: A CICS transaction has abnormally terminated, possibly signalled by a previous message, and the CICS dump (DU) domain has taken a transaction dump.

The dump code *dumpcode* is normally the 4-character CICS transaction abend code if the dump was requested as a result of a transaction abend. It may also be the value of the DUMPCODE operand on an EXEC CICS DUMP TRANSACTION request.

The dump ID *dumpid* is the unique 9-character string identifying this dump

System Action: A transaction dump is written to the current CICS dump data set, either DFHDMPA or DFHDMPB.

CICS may terminate if the dump table entry for the specified abend code specifically requests it.

User Response: Print off the transaction dump if required.

Destination: CDUL

Module: DFHDUDU

XMEOUT Parameters: *date, time, applid, dumpcode, dumpid*

DFHDU0205 *applid* **A system dump for dumpcode:** *dumpcode* **was suppressed by the** *reason***.**

Explanation: An error, possibly signalled by a previous message, has caused a call to the CICS (DU) dump domain, which failed to take a system dump for reason *reason*. Reason *reason* indicates what has caused dump suppression.

- The XDUREQ user exit.
- The dump table option for dump code *dumpcode*.
- The global system dump suppression option.

The dump code *dumpcode* is an 8-character system dump code identifying the CICS problem. However some of these characters may be blanks. A system dump code is a CICS message number with the DFH prefix removed.

System Action: A system dump is not produced. However, CICS will be terminated if the dump table entry for this dump code or the caller of the dump domain requests CICS termination.

User Response: If a system dump is required for this dump code, perform the user action appropriate to the reason *reason* given in the message.

- If the user exit XDUREQ has suppressed the dump, either inactivate this exit, or as a more permanent measure change the user exit program not to suppress the dump.
- If the dump table has suppressed the dump, use CEMT or CECI to browse and update the dump table entry for dump code *dumpcode*.
- If the global system dump suppression option has suppressed the dump, specify DUMP=YES on the SIT to allow future system dumps to be taken.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUDU

DFHDU0206I *date time applid* **A transaction dump for dumpcode:** *dumpcode* **was suppressed by the** *reason***.**

Explanation: A CICS transaction has abnormally terminated, possibly signalled by a previous message, and the CICS dump (DU) domain has failed to take a transaction dump for the reason *reason*. Reasons *reason* indicates the reason for dump suppression.

- XDUREQ user exit.
- Dump table option for this dump code.

The dump code *dumpcode* is the 4-character CICS transaction abend code.

System Action: A transaction dump is not produced. However, CICS is terminated if the dump table entry for this dump code or the caller of the dump domain specifically requests such.

User Response: If a transaction dump is required for this dump code, perform the user action appropriate to the reason *reason* given in the message.

- If the user exit, XDUREQ, has suppressed the dump, either inactivate this exit, or as a more permanent measure, change the user exit program so that it does not suppress the dump.
- If the dump table has suppressed the dump, use CEMT or CECI to browse and update the dump table entry for dump code *dumpcode*.

Destination: CDUL

Module: DFHDUDU

XMEOUT Parameters: *date, time, applid, dumpcode, reason*

DFHDU0207I *date time applid* **Transaction and system dumps for dumpcode:** *dumpcode* **were suppressed by the** *reason***.**

Explanation: Either an EXEC CICS DUMP TRANSACTION DUMPCODE command has been issued, or a CICS transaction has abnormally terminated, possibly signalled by a previous message, and the CICS dump (DU) domain has failed to take a transaction dump nor a system dump for reason *reason*. Reasons *reason* indicates what caused dump suppression.

- XDUREQ user exit.
- Dump table option for this dump code.

The dump code *dumpcode* is the 4-character CICS transaction abend code.

System Action: Neither a transaction nor a system dump is produced. However, CICS is terminated if the dump table entry for this dump code or the caller of the dump domain makes such a request.

User Response: If a transaction dump and/or a system dump is required for this dump code, perform the user action appropriate to the reason *reason* given in the message:

- If the user exit XDUREQ has suppressed the dump, either inactivate this exit, or, as a more permanent measure change, the user exit program so it does not suppress the dump.
- If the dump table has suppressed the dump, use CEMT or CECI to browse and update the dump table entry for this dump code.

Destination: CDUL

Module: DFHDUDU

XMEOUT Parameters: *date, time, applid, dumpcode, reason*

DFHDU0208 *applid* **SDUMP busy - CICS will retry in five seconds.**

Explanation: At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This caused MVS to reject the new request. A non-zero value for the DURETRY parameter on the SIT means that CICS is waiting for five seconds before reissuing the SDUMP request.

System Action: CICS issues an MVS STIMERM macro which caused CICS to stop for five seconds. The request is reissued when the delay interval has expired. CICS will delay and retry every five seconds for a total time equal to the number of seconds specified on the DURETRY SIT parameter.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUDU

DFHDU0209 *applid* **Retrying SDUMP.**

Explanation: At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This caused MVS to reject the new request. CICS has waited for five seconds (as indicated by message DFHDU0208) and is now about to reissue the SDUMP request.

System Action: CICS reissues the SDUMP request.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUDU

DFHDU0210 *applid* **SDUMPX REQUEST FAILED -** *reason***.**

Explanation: An MVS SDUMPX request from CICS signalled by message DFHDU0201 has failed to complete successfully. The possible reasons, (*reason*) for the failure are as follows:

SDUMPX RETURN CODE X'nn' ONLY PARTIAL DUMP.
The SYS1.DUMP data set to which the dump is written is not large enough to contain all of the dumped storage.

SDUMPX RETURN CODE X'nn' REASON X'mm' SDUMPX BUSY
At the time of the MVS SDUMPX request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This causes MVS to reject the new request. If a nonzero value is specified for the DURETRY SIT parameter, CICS retries the SDUMPX request every five seconds for the specified period. This message is only issued if SDUMPX is still busy after the final retry.

SDUMPX RETURN CODE X'nn' REASON X'mm' NO DATA SET AVAILABLE
No SYS1.DUMP data sets were available at the time the SDUMPX request was issued.

SDUMPX RETURN CODE X'nn' REASON = X'mm'
MVS has rejected the SDUMPX request for some other reason than those listed above. X'nn' gives the SDUMPX return code and X'mm' gives the SDUMPX reason code.

STIMERM FAILED
In order to delay for five seconds before retrying SDUMPX after an SDUMPX BUSY condition, CICS issues an MVS STIMERM macro request. MVS has indicated that the STIMERM request has failed.

NOT AUTHORIZED IN CICS
SDUMP is not authorized for this CICS run.

INSUFFICIENT STORAGE
CICS issued an MVS GETMAIN for Subpool 253 storage during the processing of the SDUMPX request. The GETMAIN has been rejected by MVS.

DFHDUSVC FESTAE FAILED
CICS issued an MVS FESTAE request from DFHDUSVC during the processing of the SDUMPX request. The FESTAE has been rejected by MVS.

IWMWQWRK RETURN CODE X'xx' REASON X'yy' REMOTE DUMPS NOT TAKEN
CICS issued an MVS IWMWQWRK request during the processing of the SDUMPX request for dumps of related CICS systems. The IWMWQWRK request has been rejected by MVS return code X'xx' and reason X'yy'. In this case CICS was unable to dump related CICS address spaces but has attempted to dump the local address space.

DFHDUSVC INVALID PROBDESC
The SDUMPX PROBDESC parameters, created by DFHDUSVC, contain invalid data.

System Action: CICS proceeds as if the dump had been successful.

User Response: The user response depends on the reason, (*reason*), for the failure.

SDUMPX RETURN CODE X'nn' ONLY PARTIAL DUMP.
See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMPX return code X'nn'. Use MVS problem determination methods to determine why a partial dump was taken.

SDUMPX RETURN CODE X'nn' REASON X'mm' SDUMPX BUSY
Cause the SDUMP to be reissued after, if appropriate, increasing the value of the DURETRY system initialization parameter. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMPX return code X'nn' and reason X'mm'.

SDUMPX RETURN CODE X'nn' REASON X'mm' NO DATA SET AVAILABLE
Clear a SYS1.DUMP data set and then cause the SDUMP request to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMPX return code X'nn' and reason X'mm'.

SDUMPX RETURN CODE X'nn' REASON X'mm'
No action is required if the dump was suppressed deliberately. If the dump has failed because of an error in the MVS SDUMP routine, use MVS problem determination methods to fix the error and then cause the SDUMP request to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMPX return code X'nn'. and reason code X'mm'

STIMERM FAILED
Use MVS problem determination methods to fix the STIMERM failure and then cause the SDUMP request to be reissued.

NOT AUTHORIZED IN CICS
This reason is unlikely to occur because SDUMPX is unconditionally authorized during CICS initialization, and

should be authorized throughout the CICS run. If you do get this reason, the CICS AFCB (authorized function control block) has probably been accidentally overwritten.

INSUFFICIENT STORAGE
Ensure sufficient storage is available to MVS for subpool 253 requests.

DFHDUSVC FESTAE FAILED
Use MVS problem determination methods to fix the FESTAE failure and then cause the SDUMP request to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the FESTAE macro.

IWMWQWRK RETURN CODE X'xx' REASON X'yy'.
CICS issued an MVS IWMWQWRK request during the processing of the SDUMPX request. The IWMWQWRK request has been rejected by MVS return code X'xx' and reason X'yy'. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the return and reason codes.

DFHDUSVC INVALID PROBDESC
The SDUMPX PROBDESC parameters, created by DFHDUSVC during the processing of the SDUMPX request, are invalid. The PROBDESC parameters have probably been accidentally overwritten.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUDU

DFHDU0211 *applid* **THE XDUREQ USER EXIT IS NOT CALLED FOR DUMPCODE** *dumpcode***.**

Explanation: Because of a severe system error, the XDUREQ user exit (which allows you to suppress system dumps) has not been called for system dump *dumpcode*.

System Action: The XDUREQ user exit is not called.

DFHDU0211 is followed either by message DFHDU0201, indicating that dump *dumpcode* was taken, or by message DFHDU0205, indicating that dump *dumpcode* was suppressed. Message DFHDU0201 or DFHDU0205 is followed by message DFHDU0309 if CICS terminates.

The XDUREQ user exit is called for subsequent system dumps.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUDU

DFHDU0212 *applid* **Requested transaction dump code** *dumpcode* **is invalid.**

Explanation: A requested transaction dump code has unprintable characters, or has leading or imbedded blanks.

System Action: A transaction dump is produced unless suppressed by the user exit XDUREQ. However, no dump statistics are committed. The transaction dump is complete when message DFHDU0203 is issued. The invalid dump code is shown in dump domain (DU) trace points X'0600' and X'0601'.

User Response: Print off the transaction dump and determine how an abend or EXEC CICS request was issued with an invalid dump code.

Destination: Console

Module: DFHDUDU

XMEOUT Parameters: *applid, dumpcode*

DFHDU0213 REMOTE SDUMPX REQUEST FAILED - *reason***.**

Explanation: A remote MVS SDUMPX request from CICS has failed to complete successfully. The possible reasons, (*reason*) for the failure are as follows:

DFHDUMPX AUTOMATIC STORAGE GETMAIN FAILED.
CICS issued an MVS GETMAIN for Subpool 253 storage during the processing of the SDUMPX request. The GETMAIN has been rejected by MVS.

DFHDUMPX NOT RUNNING IN THE MASTER ADDRESS SPACE.
DFHDUMPX must run in the MASTER address space. CICS stops processing the remote SDUMPX request if it detects that DFHDUMPX is running in another address space.

IWMWQWRK FOUND NO ADDRESS SPACES TO DUMP.
The MVS IWMWQWRK service found no CICS address spaces with work relating to the remote SDUMPX request.

IWMWQWRK FAILED WITH A WARNING.
CICS issued an MVS IWMWQWRK request from DFHDUMPX during the processing of the remote SDUMPX request. MVS has rejected the IWMWQWRK request with a warning return code.

IWMWQWRK FAILED WITH AN ERROR.
CICS issued an MVS IWMWQWRK request from DFHDUMPX during the processing of the remote SDUMPX request. MVS has rejected the IWMWQWRK request with an error return code.

DFHDUMPX OUTPUT WORKAREA GETMAIN FAILED
CICS issued an MVS GETMAIN for Subpool 253 storage during the processing of the SDUMPX request. The GETMAIN has been rejected by MVS.

NO PROBDESC PARAMETERS SUPPLIED TO DFHDUMPX.
DFHDUMPX is invoked by MVS under the IEASDUMP.QUERY exit. If MVS does not supply the SDUMPX PROBDESC parameters then DFHDUMPX is unable to determine whether a remote dump should be taken or suppressed.

DFHDUMPX RECOVERY ROUTINE ENTERED
An abnormal end (abend) or program check has occurred in DFHDUMPX. This implies that there is an error in CICS code.

Alternatively, unexpected data has been input, or storage has been overwritten.

CICS adds diagnostic data to the MVS SDWA and makes an entry in SYS1.LOGREC.

System Action: CICS proceeds as if the dump had been successful.

User Response: The user response depends on the reason, (*reason*), for the failure.

DFHDUMPX AUTOMATIC STORAGE GETMAIN FAILED.
Ensure sufficient storage is available to MVS for subpool 253 requests.

DFHDUMPX NOT RUNNING IN THE MASTER ADDRESS SPACE.

This reason is unlikely to occur because CICS requests that the MVS CSVDYNEX service adds DFHDUMPX as an IEASDUMP.QUERY exit in the MASTER address space.

If you do get this reason, there was probably an error during CICS initialization.

Notify the system programmer.

You will need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

IWMWQWRK FOUND NO ADDRESS SPACES TO DUMP.

This is unlikely to be an error. DFHDUMPX is invoked on all the MVS images in a SYSPLEX for a remote SDUMPX request. Some of the images may not have any CICS address spaces with work relating to the CICS system which originated the remote SDUMPX request.

IWMWQWRK FAILED WITH A WARNING.

The IWMWQWRK return code and reason are included in a CICS trace entry which is written to the GTF data set. The trace entry is not written to the CICS internal trace or in the CICS auxiliary trace data set because DFHDUMPX does not execute under a CICS TCB.

See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the IWMWQWRK return code and reason.

IWMWQWRK FAILED WITH AN ERROR.

The IWMWQWRK return code and reason are included in a CICS trace entry which is written to the GTF data set. The trace entry is not written to the CICS internal trace or in the CICS auxiliary trace data set because DFHDUMPX does not execute under a CICS TCB.

See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the IWMWQWRK return code and reason.

DFHDUMPX OUTPUT WORKAREA GETMAIN FAILED

Ensure sufficient storage is available to MVS for subpool 253 requests.

NO PROBDESC PARAMETERS SUPPLIED TO DFHDUMPX.

This is an error if the remote SDUMPX request was made by CICS for a system dumpcode which included the RELATED option, or if the operator entered a remote SDUMPX request which included PROBDESC parameters.

A GTF trace may aid in problem diagnosis.

Notify the system programmer.

To resolve the problem, collect any data from GTF trace, any dumps and any relevant messages. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFHDUMPX RECOVERY ROUTINE ENTERED

Notify the system programmer.

To resolve the problem, collect any data from SYS1.LOGREC, any dumps and any relevant messages. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUMPX

DFHDU0214 DFHDUMPX IS ABOUT TO REQUEST A REMOTE SDUMP.

Explanation: DFHDUMPX is called under the MVS IEASDUMP.QUERY exit and determines whether a remote dump should be taken.

DFHDUMPX issues this message immediately before returning to MVS if the following conditions are satisfied:

- a dump has been requested for a CICS dump code, whose dump table entry specified that related dumps are required, and DFHDUMPX has found related CICS work on this MVS image or
- the operator requested remote dumps from the console, including the CICS DFHJOBN keyword in the MVS PROBDESC parameters, and DFHDUMPX has found CICS jobs on this MVS image which match the DFHJOBN data.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUMPX

DFHDU0215 DFHDUMPX IS ABOUT TO SUPPRESS A REMOTE SDUMPX.

Explanation: DFHDUMPX is called under the MVS IEASDUMP.QUERY exit and determines whether a remote dump should be taken.

DFHDUMPX issues this message immediately before returning to MVS if it has found that a remote dump should be suppressed.

The remote dump is suppressed under the following conditions :

- A dump has been requested for a CICS dump code, whose dump table entry specified that related dumps are required, and DFHDUMPX has found no related CICS work on this MVS image or
- The operator requested remote dumps from the console, including the CICS DFHJOBN keyword in the MVS PROBDESC parameters, and DFHDUMPX has found no CICS jobs on this MVS image which match the DFHJOBN data.

The remote dump is also suppressed if an error occurred during the DFHDUMPX processing. Look for a previous DFHDU0213 message to find the reason for the error.

System Action: Processing continues.

User Response: To determine whether action is necessary refer to any DFHDU0213 message preceding this one.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUMPX

DFHDU0216 PROBDESC DOES NOT CONTAIN CICS DATA.

Explanation: DFHDUMPX is called under the MVS IEASDUMP.QUERY exit and determines whether a remote dump should be taken.

DFHDUMPX issues this message if it has found that the SDUMPX PROBDESC parameters do not contain CICS data. It is probable that this is not an error and that the remote dump was requested by a product other than CICS. However, if you were expecting a CICS remote dump it could be that the PROBDESC parameters were accidentally overwritten.

System Action: DFHDUMPX will request that MVS suppresses the remote dump and then processing continues.

User Response: You need to take the action only if you were expecting a remote CICS dump.

Notify the system programmer.

To resolve the problem, collect any data from GTF trace, any dumps and any relevant messages. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUMPX

DFHDU0302I *applid* **Transaction Dump Data set** *dataset* **to be closed due to** *text-descr*

Explanation: This message is output when attempting to write a record to the transaction dump data set. *text-descr* is one of the following:

- DCB ABEND
- TASK TIMEOUT
- TASK CANCEL

System Action: None unless *text-descr* is DCB ABEND, in which case an exception entry is made in the trace table and a system dump is taken.

User Response: Notify the system programmer.

In the case of DCB ABEND, there will normally be an accompanying MVS error message to help identify the problem with the data set.

If the problem is not due to a major corruption of CICS, successful switching of dump data sets will reinstate the transaction dump environment. Otherwise, the transaction dump environment will be available only if the XDUOUT user-exit is active.

Destination: Console

Module: DFHDUIO

XMEOUT Parameters: *applid, dataset, text-descr*

DFHDU0303I *applid* **Transaction Dump Data set** *dataset* **closed.**

Explanation: This message is issued in one of the following situations:

- A request to close the dump data set is issued by the operator.
- The CICS system is shut down.
- A request to switch between dump data sets is issued by the operator.
- A transaction dump data set becomes full.

The insert *dataset* indicates the name of the data set being closed.

System Action: Processing continues.

If autoswitching of the transaction dump data set is not active, the transaction dump environment is available only if the XDUOUT user-exit is active.

If autoswitching is enabled, this message is followed by DFHDU0304 and DFHDU0305 to indicate that the data set switch is successful.

If the switch is unsuccessful, this message is followed by DFHDU0306.

User Response: None.

Destination: Console

Module: DFHDUSU

XMEOUT Parameters: *applid, dataset*

DFHDU0304I *applid* **Transaction Dump Data set** *dataset* **opened.**

Explanation: This message is output when any of the following situations occur:

- A request to open the dump data set is issued by the operator.
- The CICS system is brought up.
- A request to switch between dump data sets is issued by the operator.
- Automatic switching between dump data sets is being performed.

dataset in the message indicates the name of the data set being opened.

System Action: Processing continues.

User Response: None.

Destination: Console

Module: DFHDUSU

XMEOUT Parameters: *applid, dataset*

DFHDU0305I *applid* **Transaction Dump Data set switched to** *ddname*

Explanation: This message is issued when one of the following situations occurs:

- A command is issued by the operator to switch dump data sets.
- Automatic switching is being performed between dump data sets due to a dump data set being full.

This message is always preceded by message DFHDU0304 and also, if the old dump data set was open, by message DFHDU0303.

ddname in the message indicates the ddname of the active transaction dump data set (either DFHDMPA or DFHDMPB).

System Action: Processing continues.

User Response: Print or copy the completed dump data set, and if required, reissue the command CEMT SET DUMP AUTO.

Destination: Console

Module: DFHDUSU

XMEOUT Parameters: *applid, ddname*

DFHDU0306 *applid* **Unable to open Transaction Dump Data set** *dataset* **-** *text-descr*

Explanation: This message occurs when attempting to open a transaction dump data set.

text-descr is one of:

OPEN ERROR An attempt was made to open the dump data set, and an abend exit was invoked. This condition is usually accompanied by MVS system messages.

INSUFFICIENT STORAGE An MVS GETMAIN was issued to obtain storage below the 16MB line. This request was unsuccessful.

System Action: An exception entry is made in the trace table.

In both cases, the transaction dump data set is not open, and unless the XDUOUT exit is active, the transaction dump is inoperative.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: See any associated MVS messages for further guidance.

Destination: Console

Module: DFHDUIO

XMEOUT Parameters: *applid, dataset, text-descr*

DFHDU0307 *applid* **Module DFHDUIO is unavailable. Transaction dump is inoperative.**

Explanation: This message is issued either when an attempt is made to open or close a dump data set, or when switching between dump data sets, to remind the user that CICS could not locate module DFHDUIO during initialization. CICS will have issued message DFHDU0102 during initialization to warn the user of this condition.

System Action: CICS continues with the transaction dump facility inoperative.

User Response: If necessary, refer to the user response for message DFHDU0102.

Destination: Console

Module: DFHDUSU

XMEOUT Parameter: *applid*

DFHDU0308I *applid* **CICS will terminate because the Dump Table entry for the transaction dump code:** *dumpcode* **specifies shutdown.**

Explanation: This message is issued when a transaction dump has been requested for the transaction dump code *dumpcode* and the associated dump table entry specifies that CICS should be terminated.

This message records that it was a transaction dump table entry which requested the termination of CICS.

System Action: CICS is terminated.

User Response: Process any transaction dump in the normal way.

On a warm or emergency start, explicitly defined dump table entries are restored from the catalog. If the dump table entry for *dumpcode* was explicitly defined, it can be modified to prevent CICS from terminating, if desired, using CEMT or EXEC API commands.

Implicitly defined dump table entries are not recorded on the catalog and are therefore not restored. On a cold or initial start, CICS does not restore the dump table from the catalog.

Destination: Console

Module: DFHDUDU

XMEOUT Parameters: *applid, dumpcode*

DFHDU0309I *applid* **CICS will terminate because the Dump Table entry for the system dump code:** *dumpcode* **specifies shutdown.**

Explanation: This message is issued when a system dump has been requested for the system dump code *dumpcode* and the associated dump table entry specifies that CICS should be terminated.

This message records that it was a system dump table entry which requested the termination of CICS.

System Action: CICS is terminated.

User Response: Print off any system dump if required.

On a warm or emergency start, explicitly defined dump table entries are restored from the catalog. If the dump table entry for *dumpcode* was explicitly defined, it can be modified to prevent CICS from terminating using CEMT or EXEC API commands.

Implicitly defined dump table entries are not recorded on the catalog and are therefore not restored. On a cold or initial start, CICS does not restore the dump table from the catalog.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDUDU

DFHDU1601 DATA SET READ ERROR.

Explanation: The access method has indicated a read error. The dump data set may not have been opened during the most recent CICS execution.

System Action: The record is skipped.

User Response: Either ensure that the JCL is correct, or determine the reason for the read errors.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDU520

DFHDU1602 36 CONSECUTIVE UNIDENTIFIABLE RECORDS, DUMP UTILITY TERMINATED.

Explanation: An identification record has an incorrect code or format. The most common reasons for this error include the following.

- The wrong data set is being processed.
- The dump data set that the utility is trying to process has not been used in the current CICS execution.

In the latter case, the error would arise because no dumps were produced in the current execution or because the data sets had been switched.

System Action: Records are skipped and execution is terminated with a return code of 8.

User Response: Ensure that the correct data set is being processed. Alternatively, check for a possible error in the dump control program, DFHDCP.

If two dump data sets are being used, check that the data set being processed has been used before in the current CICS execution.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDU520

DFHDU1603 NO *{DUMP | PRINT}* DATA SET DD CARD *{DFHDMPDS | DFHPRINT}*, DUMP UTILITY TERMINATED.

Explanation: A dump or a print data set was not successfully opened.

System Action: If it was a dump data set that failed to open successfully, the system prints the message on the print data set and terminates execution with a return code of 12.

If it was the print data set that failed to open successfully, the system terminates execution with a return code of 16.

User Response: If the JCL is correct with the stated ddnames as in the message, determine why the data set cannot be opened. The return codes are issued by DFHDU520. They only identify whether a dump or print data set failed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDU520

DFHDU1604 END OF FILE ENCOUNTERED, LAST DUMP MAY BE INCOMPLETE.

Explanation: The dump data set has been filled.

System Action: The dump utility program DFHDU520 terminates.

User Response: Check that the dump is complete and that no incomplete message is at the end of it. If there is an incomplete message at the end of the dump, the last dump in the data set may not contain all the information required. You should recreate the problem to try and get a complete dump. If dump data set auto-switching was active at the time the dump was taken, a complete version of the dump is present on the alternate dump data set.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHDU520

DFHDU1609 36 CONSECUTIVE INVALID READ ERRORS. DUMP UTILITY TERMINATED.

Explanation: The access method has indicated 36 consecutive invalid records in the dump data set. The most probable cause of this problem is an invalid end-of-file marker which caused the access method to attempt to read beyond the last record in the data set. This problem may also have been caused if:

- DFHDU520 has been run with a data set that has never been accessed by CICS before. The data set may contain an invalid type of record format.
- DFHDU520 has been run with a data set that has been copied with the wrong block size and record format.

System Action: The dump utility execution is terminated with a return code of 8 from DFHDU520.

User Response: Determine and correct the reason for the access failure. Recreate the dump if necessary.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDU520

DFHDU1610 DUMP FORMATTING HAS ENCOUNTERED AN INVALID TRACE BLOCK. TRACE ENTRIES MAY BE LOST.

Explanation: The dump utility program, DFHDU410, has detected an error while copying trace records from the trace data set. Trace records may be omitted from the formatted output.

System Action: DFHDU410 attempts to read the next trace block and continues formatting trace records.

User Response: To resolve the problem, keep the dump and contact your IBM Support Centre. Further guidance on how to prepare information for IBM support is given in the *CICS Problem Determination Guide*. If you are not familiar with this process, refer to the guide before contacting IBM.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDU520

DFHDU1611 FILE ERROR, FULL TRACE FAILED. DUMP FORMATTING WILL CONTINUE WITH ABBREVIATED TRACE.

Explanation: Due to an error in the MVS NOTE macro, the dump utility program, DFHDU520 was unable to note the position on the data set at which the trace data started. It is therefore not possible to return to the start of the trace data after the abbreviated trace has been formatted in order to print the trace with format FULL.

System Action: Transaction dump formatting continues with only abbreviated trace for this dump.

User Response: If only the full trace is required, rerun the DFHDU410 job with the NOABBREV parameter. Otherwise attempt to recreate the dump. If the problems recurs, keep the dump and contact your IBM Support Centre. Further guidance on how to prepare information for IBM support is given in the *CICS Problem Determination Guide*. If you are not familiar with this process, refer to the guide before contacting IBM.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDU520

DFHDXxxxx messages

DFHDX8300I *applid* GETMAIN REQUEST FAILED. NOT ATTEMPTING TO CONNECT TO ALTERNATE SYSTEMS.

Explanation: The CICS system, with specific applid given, was unable to obtain working storage to control the sequencing of DBCTL connection attempts defined in the RST. (Recovery Service Table).

System Action: CICS attempts to connect only to the DBCTL subsystem defined in the DBCTL start-up table.

User Response: The working storage can be above the 16MB line so the GETMAIN request is unlikely to fail for genuine lack of space. If the error is persistent it may be necessary to cancel CICS with a dump to resolve the problem.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDXAX

DFHDX8301I *applid* **LOAD REQUEST FAILED FOR** *rstname***. NOT ATTEMPTING TO CONNECT TO ALTERNATE SYSTEMS.**

Explanation: The CICS system, with the specific applid given, was unable to load the RST *rstname* while looking for the names of alternative DBCTL subsystems to which to connect.

System Action: CICS will attempt to connect only to the DBCTL subsystem defined in the DBCTL start-up table.

User Response: Check that the RST suffix in the SIT is correct and that the RST is actually present in the authorized library.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDXAX

DFHDX8302I *applid* **VALIDATION FAILED FOR** *rstname***. NOT ATTEMPTING TO CONNECT TO ALTERNATE SYSTEMS.**

Explanation: The CICS system, with the specific applid given, found that the RST *rstname* was invalid.

It is unable to use it to look for the names of alternative DBCTL subsystems to which to connect.

System Action: CICS will attempt to connect only to the DBCTL subsystem defined in the DBCTL start-up table.

User Response: Check that the RST suffix in the SIT is correct and that the RST has been correctly prepared using the DFHRST macro that is supplied as part of the CICS product.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDXAX

DFHDX8303 *applid* **DELETE REQUEST FAILED FOR** *rstname***.**

Explanation: The CICS system, with the specific applid given, was unable to delete the RST *rstname* after completing an attempt to connect to a DBCTL subsystem.

System Action: CICS continues normally.

User Response: If the error is persistent it may be necessary to cancel CICS with a dump to resolve the problem.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDXAX

DFHDX8304 *applid* **CICS/DBCTL RECONNECTION IN PROGRESS.**

Explanation: This message occurs in an XRF environment only. It occurs when CICS attempts to connect to DBCTL but believes that DBCTL is restarting.

The message is displayed two minutes after the attempted connection, and then after each subsequent minute.

System Action: CICS continues to attempt to reconnect.

User Response: Check why DBCTL is not restarting. You can cancel the connection using the CDBC transaction.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDXAX

DFHDX8309 *applid* **Unable to detach subtask during CICS termination.**

Explanation: CICS has detected that a subtask, attached during CICS XRF support of DBCTL, cannot be detached during CICS termination.

System Action: CICS abends with code A03.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: None. This abend occurs as a result of a previous error. Check for earlier DFHDX832*x*, DFHDX833*x*, or DFHDX834*x* error messages for further information and guidance.

Destination: Console

Module: DFHAPDM

XMEOUT Parameter: *applid*

DFHDX8310I *applid* **Initiating catch-up tasks.**

Explanation: The catch-up transaction, CXCU, has received control.

System Action: The catch-up transaction is about to initiate the catch-up tasks for specific functional areas.

User Response: None. This is simply a “work is in progress” message. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHCXCU

XMEOUT Parameter: *applid*

DFHDX8311I *applid* **System initialized with XRF=NO. Catch-up transaction CXCU took no action.**

Explanation: The catch-up transaction, CXCU, was invoked but the CICS system specified XRF=NO. Catchup functions are not relevant.

System Action: The catch-up transaction terminates normally without taking any action.

User Response: None.

Destination: Console

Module: DFHCXCU

XMEOUT Parameter: *applid*

DFHDX8312I *applid* **Catch-up transaction failed to run program** *progname***. Catch-up is incomplete.**

Explanation: The catch-up transaction, CXCU, running on the CICS system with specific applid given, was unable to call the specific catch-up service routine *progname*. This may be either DFHDXCU (DBCTL catch-up) or DFHZXCU (terminal catch-up).

System Action: The catch-up associated with routine *progname* is not performed.

The active and alternate CICS systems continue, but the alternate will be less effective in the event of a takeover.

User Response: Retry by entering 'CXCU' from a terminal. If the error persists check that the routine *progname* is present in the load library.

Destination: Console

Module: DFHCXCU

XMEOUT Parameters: *applid, progname*

DFHDX8313I *applid* **Catch-up transaction failed.**

Explanation: The catch-up transaction, CXCU, running on the CICS system with specific applid given, has failed. CXCU runs either in response to a transaction request from an end-user, or automatically by an active CICS system in response to the appearance of an alternate CICS system. Its purpose is to inform the alternate of the active's state regarding terminals and DBCTL connection.

System Action: The CXCU transaction abends with a dump and transaction abend code ACXA.

Both active and alternate CICS systems continue, but the alternate will be less effective in the event of a takeover. For example, terminal backup sessions may not be established.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Retry by entering 'CXCU' from a terminal. If the error persists diagnose problem from the dump.

Destination: Console

Module: DFHCXCU

XMEOUT Parameter: *applid*

DFHDX8315I *applid* **XRF DBCTL state catch-up starting.**

Explanation: The catch-up transaction to transmit the active's DBCTL state to the alternate has been started on the CICS system with specific applid named.

System Action: None.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHDXCU

XMEOUT Parameter: *applid*

DFHDX8316I *applid* **XRF DBCTL state catch-up ending.**

Explanation: The catch-up transaction to transmit the active's DBCTL state to the alternate has been completed on the CICS system with specific applid given.

System Action: None.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHDXCU

XMEOUT Parameter: *applid*

DFHDX8317I *applid* **XRF DBCTL state catch-up ignored for reason** *nn***.**

Explanation: The XRF DBCTL catch-up transaction has been invoked on the CICS system with the given specific applid.

Although this system has DL/I installed, and an RST has been specified in the SIT, catch-up for DBCTL has proved unnecessary for reason *nn*, where *nn* may be one of the following.

Reason	Meaning
01	DBCTL has not been used yet.
02	XRF DBCTL has not been used yet.
03	There is no connection state information to send.
04	The system is running with XRF=NO.
05	There is no alternate CICS to which to send state data.

System Action: None. No catch-up is needed.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHDXCU

XMEOUT Parameters: *applid, nn*

DFHDX8318I *applid* **XRF DBCTL state catch-up failed for reason** *nn***.**

Explanation: The XRF DBCTL catch-up transaction has been invoked on the CICS system with the given specific applid.

The transaction has failed for reason *nn*, where *nn* may be one of the following.

Reason	Meaning
01	The CAVM message service returned an unidentifiable return code.
02	The CAVM message service returned an unexpected exception return code.
03	The CAVM message service returned an unexpected failure reason code.

System Action: The DBCTL catch-up transaction is terminated with a dump. The transaction abend code is ADXB.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Check for any other messages relating to CAVM data set problems for further information and guidance.

Destination: Console

Module: DFHDXCU

XMEOUT Parameters: *applid, nn*

DFHDX8319I *applid* **XRF DBCTL state catch-up failed.**

Explanation: The XRF DBCTL catch-up transaction has been invoked on the CICS system with the given specific applid.

The transaction has failed.

System Action: The DBCTL catch-up transaction is terminated with a dump. The transaction abend code is ADXA.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Diagnose the error from the dump.

Destination: Console

Module: DFHDXCU

XMEOUT Parameter: *applid*

DFHDX8320I *applid* **DBCTL Restart processing completed after DBCTL failure.**

Explanation: The user exit XXDFA requested a restart of DBCTL. The restart was initiated successfully.

System Action: The active CICS continues normally and will attempt to reconnect to DBCTL.

User Response: None. You can suppress this message with the SIT parameter, MSGLVL=0.

Destination: Console

Module: DFHDBCT

XMEOUT Parameter: *applid*

DFHDX8321 *applid* **Unable to determine JES affiliation of DBCTL subsystem for reason X'***nn***'.**

Explanation: CICS can offer full XRF support only if the DBCTL to which it is connected is running under the same JES as CICS itself.

nn may be one of the following.

nn	**Meaning**
X'09'	MVS GETMAIN failure.
X'10'	MVS ATTACH failure.

System Action: The active CICS continues, but, in the event of failure, CICS will not attempt to restart DBCTL automatically.

User Response: None.

Destination: Console

Module: DFHDBCT

XMEOUT Parameters: *applid, X'nn'*

DFHDX8322 *applid* **LOAD request failed for** *xxxxxxxx***. DBCTL/XRF support will not be provided for this connection.**

Explanation: CICS has been notified of a DBCTL failure, but has been unable to load the specified Recovery Service Table (RST) to determine if XRF support is required.

System Action: CICS continues as if no XRF support had been requested for the failing DBCTL subsystem.

User Response: Re-link-edit a valid RST into STEPLIB. DBCTL may have to be restarted manually.

Destination: Console

Module: DFHDBCT

XMEOUT Parameters: *applid, xxxxxxxx*

DFHDX8323 *applid* **Unable to complete search for DBCTL alternate.**

Explanation: CICS has been notified of a DBCTL failure, but has been unable to complete the search for a DBCTL alternate, possibly due to an unexpected return code from an IEFSSREQ request.

System Action: CICS continues as if no DBCTL alternate had been found. An ADDI transaction dump will be produced. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: It may be necessary to restart DBCTL manually.

Destination: Console

Module: DFHDBCT

XMEOUT Parameter: *applid*

DFHDX8324 *applid* **Unable to restart DBCTL** *xxxxxxxx* **for reason X'***nn***'.**

Explanation: CICS was unable to restart DBCTL owing to an internal failure indicated by the value of *n*. *n* may be one of the following.

n	**Meaning**
X'08'	An MVS GETMAIN failed.
X'09'	An MVS ATTACH failed.

System Action: The active CICS continues but was not able to restart DBCTL automatically. However, it will attempt to reconnect to DBCTL in the normal way.

User Response: It may be necessary to restart DBCTL manually.

Destination: Console

Module: DFHDBCT

XMEOUT Parameters: *applid, xxxxxxxx, X'nn'*

DFHDX8325 *applid* **Restart command issued unsuccessfully to** *subsysid* **for reason** *X'xx' X'yy'***.**

Explanation: The user exit XXDFA requested a restart of DBCTL. The restart request was issued to *subsysid* but was rejected with hexadecimal reason codes X'*xx*' and X'*yy*'.

System Action: The active CICS continues normally and will attempt to reconnect to DBCTL.

User Response: It may be necessary to restart DBCTL manually.

Destination: Console

Module: DFHDBCT

XMEOUT Parameters: *applid, subsysid, X'xx', X'yy'*

DFHDX8326 *applid* **DBCTL state message lost owing to message services error.**

Explanation: The active CICS system was unable to report a change of DBCTL connection status to the alternate.

System Action: The active system writes an error entry in its CAVM status record, but otherwise continues normally.

User Response: Check for any other messages relating to CAVM data set problems.

Were the CICS alternate to take over now it might try to restart the wrong DBCTL. There would be no database integrity exposure but there might some loss of availability as well as operational inconvenience. It may be preferable to cancel the alternate and restart it, either manually or via an overseer.

Destination: Console

Module: DFHDBCT

XMEOUT Parameter: *applid*

DFHDX8327 *applid* **DBCTL state message lost owing to CAVM services failure.**

Explanation: The active CICS system was unable to report a change of DBCTL connection status to the overseer.

System Action: Processing continues.

User Response: Check for any other CICS messages relating to CAVM data set problems (DFH66*xx*).

Were the overseer to oversee a takeover now it might try to restart the wrong DBCTL. There would be no database integrity exposure but there might some loss of availability as well as operational inconvenience.

If the overseer is being used to control XRF takeovers then disconnecting and reconnecting to the DBCTL will cause a re-write of the status record.

Destination: Console

Module: DFHDBCT

XMEOUT Parameter: *applid*

DFHDX8328 *applid* **Unable to determine Jes affiliation of (***jobname***,** *jobid***).**

Explanation: CICS can offer full XRF support only if the DBCTL to which it is connected is running under the same JES as CICS itself.

System Action: The active CICS continues, but, in the event of failure, CICS will not attempt to restart DBCTL automatically.

User Response: It is recommended that DBCTL should be run under the same JES as the active CICS system.

The message indicates that either a system or set-up problem has occurred. If there is a system problem then message DFHDX8321 will also be displayed.

Destination: Console

Module: DFHDBCT

XMEOUT Parameters: *applid, jobname, jobid*

DFHDX8329 *applid* **Restart request after DBCTL failure ignored for reason X'***nn***'.**

Explanation: The user exit XXDFA requested a restart of DBCTL. This request has been ignored for the reason indicated by *nn*.

The reason code *nn* should be one of the following.

nn	**Meaning**
X'09'	There is no alternate DBCTL to be restarted.
X'10'	Possibly, the DBCTL subsystem is under a different JES from the active CICS system.
X'11'	The DBCTL subsystem was an IMS DB/DC system.

System Action: The active CICS continues as if the user exit had indicated 'no action'.

User Response: Check that the user exit is performing as intended and that the CICS and DBCTL systems have been set up with the correct options.

Destination: Console

Module: DFHDBCT

XMEOUT Parameters: *applid, X'nn'*

DFHDX8330 *applid* **IMS DB/DC region has requested XRF support.**

Explanation: This message is produced when CICS connects to an IMS system for which the user has requested XRF support (via the RST), but which is unable to participate in XRF. For example, in an IMS/DC system without the XRF option.

System Action: The system continues to run without XRF.

User Response: Either enable IMS/DC for XRF, or remove SSID from RST.

Destination: Console

Module: DFHDBCT

XMEOUT Parameter: *applid*

DFHDX8331 *applid* **CAVM message input service error** *xxxxxxxx***, X'***nn***',** *xxxxxxxx***.**

Explanation: The alternate CICS system task responsible for tracking the DBCTL connection status of the active CICS has received an error response from the CAVM message input service.

System Action: The tracking transaction terminates. No further action will be taken in response to DBCTL status changes. The global exits XXDFB and XXDTO will never be invoked and no attempt at a DBCTL restart will be made in the event of a takeover. An ADMA transaction dump is produced.

User Response: Check for any other messages relating to CAVM data set problems. In the event of a takeover it may be necessary to restart DBCTL manually.

Destination: Console

Module: DFHDBCR

XMEOUT Parameters: *applid, xxxxxxxx, X'nn', xxxxxxxx*

DFHDX8332I *applid* **Connection to** *xxxxxxxx* **notified after** *xxxxxxxx* **failure initiated takeover.**

Explanation: The alternate CICS system task responsible for tracking the DBCTL connection status of the active CICS has received a message from the CAVM message input service, after a takeover decision from the global user exit XXDFB has been accepted.

This problem is usually caused by a setup or an operational error.

System Action: The takeover continues. If the message is a notification of a successful connection, then the global user exit XXDTO may be driven.

User Response: In order for the active CICS system to reconnect to an element of the RSE, a DBCTL must have been restarted in the active CEC. Consequently, the alternate CICS will not be able to restart an element of the RSE in the alternate CEC without terminating this new active DBCTL.

The global user exit XXDTO will be driven as part of CICS takeover processing. This exit could be used to request a takeover of the DBCTL that was restarted in the active CEC.

Locate and correct any setup or operational errors.

Destination: Console

Module: DFHDBCR

XMEOUT Parameters: *applid, xxxxxxxx, xxxxxxxx*

DFHDX8333 *applid* **Unrecognized message type** *xxxxxxxx* **received by DBCTL tracking task.**

Explanation: The alternate CICS system task responsible for tracking the DBCTL connection status of the active CICS has received an unrecognized message from the CAVM message input service.

System Action: The tracking transaction terminates. No further action will be taken in response to DBCTL status changes. The global exits XXDFB and XXDTO will never be invoked and no attempt at a DBCTL restart will be made in the event of a takeover. An ADMB transaction dump is produced. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: In the event of a takeover it may be necessary to restart DBCTL manually.

Destination: Console

Module: DFHDXCU

XMEOUT Parameters: *applid, xxxxxxxx*

DFHDX8334 *applid* **Error detected in** *xxxxxxxx* **for reason** *nn***.**

Explanation: The alternate CICS system task responsible for tracking the DBCTL connection status of the active CICS has detected an invalid recovery service table (RST) during processing of a CICS|DBCTL failure.

nn may be one of the following.

nn	**Meaning**
01	The CICS SVC detected an error in the RST. Refer to the accompanying DFHXG64*xx* or DFHXA65*xx* message for the reason for the error.
02	The RST could not be loaded by the XRF/DBCTL tracking task, or the XRF/DBCT tracking task detected that the RST was invalid.
03	The CICS SVC detected an error in the RST during initialization. Refer to the accompanying DFHXG64*xx* or DFHXA65*xx* message for the reason for the error.
04	The CICS SVC detected an error in the RST during connect time. Refer to the accompanying DFHXG64*xx* or DFHXA65*xx* message for the reason for the error.

System Action: The tracking transaction continues as if no XRF support had been requested via the RST for the connected DBCTL.

User Response: In the event of a takeover it may be necessary to restart DBCTL manually. When the failure is detected during the initialization of the XRF/DBCTL tracking task the RST should be assembled and link-edited to resolve the problem.

Destination: Console

Module: DFHDBCR

XMEOUT Parameters: *applid, xxxxxxxx, nn*

DFHDX8335 *applid* **Unable to complete search for DBCTL alternate.**

Explanation: The alternate CICS system task responsible for tracking the DBCTL connection status of the active CICS has been unable to complete its search for a DBCTL alternate, possibly due to an unexpected return code from an IEFSSREQ request.

System Action: The tracking transaction continues as if no DBCTL alternate had been found. An ADMD transaction dump will be produced.

User Response: In the event of a takeover it may be necessary to restart DBCTL manually.

Destination: Console

Module: DFHDBCR

XMEOUT Parameter: *applid*

DFHDX8336 *applid* **Unable to provide DBCTL/XRF support for reason: X'***nn***'.**

Explanation: The user exit XXDFB or XXDTO requested a restart of DBCTL. This request has been ignored for the reason indicated by the value of *nn*.

n may be one of the following.

nn	**Meaning**
X'46'	No valid RST was found. Refer to DFHDX8334.
X'50'	DBCTL subsystem is an IMS DB/DC system.
X'51'	There is no alternate DBCTL to be restarted.
X'52'	The DBCTL subsystem is, or may be, under a different JES from the active CICS system.
X'53'	The active CICS system has already attempted a restart of DBCTL.

System Action: The alternate CICS continues as if the user exit had indicated ‘no action’.

User Response: Check that the user exit is performing as intended and that the CICS and DBCTL systems have been set up with the correct options.

Destination: Console

Module: DFHDBCR

XMEOUT Parameters: *applid, X'nn'*

DFHDX8337 *applid* **Takeover request rejected by CAVM, reason code X'***nn***'.**

Explanation: The user exit XXDFB requested a takeover as a result of a DBCTL failure, but the CAVM rejected the takeover request.

System Action: The alternate CICS continues as if the user exit had indicated ‘no action’.

User Response: Check that the user exit is performing as intended and that the CICS and DBCTL systems have been set up with the correct options. The message indicates that a CICS internal error has occurred, normally as a result of an earlier problem. It may be necessary to initiate a manual CICS takeover.

Destination: Console

Module: DFHDBCR

XMEOUT Parameters: *applid, X'nn'*

DFHDX8338 *applid* **Unable to issue** *command* **command to** *subsysid* **for reason X'***nn***'.**

Explanation: The user exit XXDFB/XXDTO issued a restart request to the DBCTL/XRF tracking task, the task was unable to process the request for the reason indicated in the message.

The issued command should either be a switch system backup command or an ERE command.

The reason code X'*nn*' should be one of the following.

nn	**Meaning**
X'09'	MVS GETMAIN failure
X'10'	MVS ATTACH failure.

System Action: The takeover continues.

User Response: Restart the DBCTL subsystem manually.

Destination: Console

Module: DFHDBCR

XMEOUT Parameters: *applid, command, subsysid, X'nn'*

DFHDX8339 *applid command* **command issued unsuccessfully to** *subsysid* **for reason X'***nn***'.**

Explanation: The DBCTL/XRF tracking task issued a restart command (either switch or ERE) to an alternate DBCTL subsystem but the request was rejected for reason *nn*.

XXDFA or XXDTO requested CICS takeover with DBCTL. The error was detected when the request was made.

System Action: The takeover continues.

User Response: Restart the DBCTL subsystem manually.

Destination: Console

Module: DFHDBCR

XMEOUT Parameters: *applid, command, subsysid, X'nn'*

DFHDX8340 *applid* **DBCTL tracking task started in an invalid environment reason** *X'nn'***.**

Explanation: The alternate CICS system task responsible for tracking the DBCTL connection status of the active CICS has been started in an environment which does not support DBCTL/XRF.

Reason code X'*nn*' may be one of the following.

nn	**Meaning**
X'65'	XRF=NO specified in the SIT.
X'67'	CICS system is running as active.
X'69'	MVS GETMAIN failure.

System Action: The tracking transaction terminates. No further action will be taken in response to DBCTL status changes. The global exits XXDFB and XXDTO will never be invoked and no attempt at a DBCTL restart will be made in the event of a takeover.

User Response: The user response depends on the reason code issued.

For reasons X'65' and X'67', there is a possible error in CICS code. In this case you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

For reason X'69', specify a smaller overall size limit for the EDSAs.

Destination: Console

Module: DFHDBCR

XMEOUT Parameters: *applid, X'nn'*

DFHDX8341I *applid* **Takeover request accepted.**

Explanation: The DBCTL/XRF tracking task issued a takeover request due to a request from user exit XXDFB. The request has been accepted.

System Action: The takeover continues.

User Response: None. You can suppress this message with the system initialization parameter MSGLVL = 0.

Destination: Console

Module: DFHDBCR

XMEOUT Parameter: *applid*

DFHDX8342I *applid* **Restart command issued successfully.**

Explanation: The DBCTL/XRF tracking task issued a restart command to an alternate DBCTL subsystem due to a request from user exit XXDFB/XXDTO. The request was issued successfully.

System Action: Takeover continues.

User Response: None. You can suppress this message with the system initialization parameter MSGLVL = 0.

Destination: Console

Module: DFHDBCR

XMEOUT Parameter: *applid*

DFHEMxxxx messages

DFHEM0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a

runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHEMDM, DFHEMEM.

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHEM0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System Action: An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHEMDM, DFHEMEM.

XMEOUT Parameters: *applid, X'code', modname*

DFHEM0100I *applid* **Event Manager initialization has started.**

Explanation: This is an informational message indicating the start of event manager domain initialization.

System Action: Initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHEMDM

XMEOUT Parameter: *applid*

DFHEM0101I *applid* **Event Manager initialization has ended.**

Explanation: Event manager domain initialization has completed successfully

System Action: Initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHEMDM

XMEOUT Parameter: *applid*

DFHERxxxx messages

DFHER2813I *applid* **Program DFHRCEX cannot be found**

Explanation: CICS cannot find DFHRCEX in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System Action: CICS terminates abnormally with a dump.

User Response: To correct this error, place DFHRCEX in a partitioned data set in the DFHRPL DD statement.

Destination: Console

Modules: DFHTCBP, DFHUSBP

XMEOUT Parameter: *applid*

DFHER5730 *applid* **User recovery beginning**

Explanation: During warm or emergency restarts CICS issues this message when it is about to start processing records from the system log.

System Action: If the global user exit XRCINIT is enabled, it is invoked with an indication that this is the initial call. Processing continues.

User Response: None.

Destination: Console

Module: DFHAPRC

XMEOUT Parameter: *applid*

DFHER5731 *applid* **No active user records on the system log**

Explanation: During warm or emergency restarts CICS issues this message when it has completed its scan of the system log and has found no active user journal records. Active user journal records are those written to the system log by one of the following:

- A unit of work that was in flight or in doubt when the preceding CICS system terminated.
- An application request in which the high order bit of the JTYPEID value was set to 1 (provided that the record lies within the compass of the restart system log scan).
- The XAKUSER global user exit during the last completed activity keypoint.

If there are such active user journal records, they are presented to the global user exit XRCINPT and this message is not issued.

System Action: Processing continues.

User Response: None.

Destination: Console

Module: DFHAPRC

XMEOUT Parameter: *applid*

DFHER5732 *applid* **User recovery completed**

Explanation: During warm or emergency restarts CICS issues this message when it has finished processing records from the system log. Any active user journal records have by now been presented to the global user exit XRCINPT. Active user journal records are those written to the system log by one of the following:

- A unit of work that was in flight or in doubt when the preceding CICS system terminated.
- An application request in which the high order bit of the JTYPEID value was set to 1 (provided that the record lies within the compass of the restart system log scan).
- The XAKUSER global user exit during the last completed activity keypoint.

System Action: If the global user exit XRCINIT is enabled, it is invoked with an indication that this is the final call. Processing continues.

User Response: None.

Destination: Console

Module: DFHAPRC

XMEOUT Parameter: *applid*

DFHEXxxxx messages

DFHEX0001 An abend (code *aaa/bbbb***) has occurred in module** *modname***.**

Explanation: An unexpected program check or abend *aaa/bbbb* has occurred in module *modname*. This implies that there may be an error in external CICS interface code.

Alternatively, unexpected data has been passed on an external CICS interface call or storage has been overwritten.

The code *aaa/bbbb* is, if applicable, a 3-digit hexadecimal MVS system completion code *aaa* (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa* is, if applicable, a user abend code produced by the external CICS interface. If the user abend code is not applicable, this field is filled with four hyphens.

System Action: An exception entry is made in the external CICS interface internal trace table, and to the GTF trace dataset (if GTF is active), and a SYSMDUMP is taken.

The external CICS interface terminates the current request, and attempts to recover to a consistent state so that further EXCI requests can be serviced. For an application using the EXCI CALL API, a response of EXCI_SYSTEM_ERROR with a REASON of ESTAE_INVOKED is returned to the application. For an application using the EXCI EXEC API, an EXEC_RESP of LINKERR is returned to the application, together with an EXEC_RESP2 of ESTAE_INVOKED or EXEC_ESTAE_INVOKED, depending on whether the call level ESTAE routine, or the EXEC level ESTAE routine was invoked.

User Response: Look up the MVS code *aaa*, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

If applicable, see the description of abend code *bbbb* for further guidance.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHXCPRH, DFHXCEIP

DFHEX0002 A severe error (code *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System Action: An exception entry is made in the EXCI internal trace table and to GTF if it is active, (X'*code*' in the message). A system dump is taken.

This is a critical error and the EXCI request is terminated. The external CICS interface attempts to recover to a consistent state so that further EXCI requests can be issued. For applications using the EXCI CALL API, the EXCI_REASON returned to the application indicates the reason for the error. For applications using the EXCI EXEC API, the reason is returned in the EXEC_RESP2 field of the RETCODE area.

User Response: This failure indicates a serious error in the external CICS interface code. For further information about the EXCI exception trace entries, refer to the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHXCPRH, DFHXCEIP

DFHEX0003 A GETMAIN request in module *modname* **(code** *X'code'***) has failed. Reason** *X'rc'***.**

Explanation: An MVS GETMAIN was issued by module *modname*, but it failed with return code *rc*.

The code X'*code*' is the exception trace point ID which uniquely identifies the place where the MVS GETMAIN was issued.

System Action: An exception entry is made in the EXCI internal trace table (code X'*code*' in the message). This is a critical error and the EXCI request is terminated. The external CICS interface attempts to recover to a consistent state so that further EXCI requests can be issued.

For applications using the EXCI CALL API, the EXCI_REASON returned to the application indicates the point of failure.

For applications using the EXCI EXEC API, the point of failure is returned in the EXEC_RESP2 field of the RETCODE area.

For EXCI_REASON and EXCI_RESP of 603, the EXCI module DFHXCPRH also issues abend 0410 which drives the ESTAE exit. Message DFHEX0001 is issued and a SYSMDUMP is taken

User Response: Look up the MVS GETMAIN return code *rc* in the relevant MVS codes manual.

If the reason is insufficient storage, try increasing the size of the region for the batch EXCI job.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHXCPRH, DFHXCTRI

DFHEX0100 The installed level of CICS SVC does not support the EXCI call.

Explanation: The external CICS interface module DFHXCPRH detected that the level of CICS SVC (DFHCSVC) in use does not support the external CICS interface.

System Action: The EXCI request is terminated. An exception trace is made in the EXCI internal trace table, and if GTF is active, in the GTF trace data set. The external CICS interface module DFHXCPRH issues abend 0407 which drives the ESTAE exit. Message DFHEX0001 is issued, and a SYSMDUMP is taken.

User Response: Check the level of DFHCSVC installed in the LPA. A CICS/ESA 4.1 level of DFHCSVC is required for the external CICS interface. Generally, the latest level of DFHCSVC must be used when running CICS and the external CICS interface. For more information about installing DFHCSVC see the *CICS Transaction Server for OS/390 Installation Guide*.

Destination: Console

Module: DFHXCPRH

DFHEX0101 Unable to start interregion communication because DFHIRP level check failed.

Explanation: The call to DFHIRP to check DFHIRP's service level has failed.

This is probably because the version of DFHIRP being used is at a lower level than that of the External CICS Interface (EXCI) module DFHXCPRH. A less likely reason is that a failure occurred before DFHIRP could make the level check.

System Action: The EXCI allocate pipe request is rejected. A return code is passed back to the batch application.

User Response: Ensure that the correct level of DFHIRP exists in the LPA such that it matches the level of the latest CICS version in use.

Destination: Console

Module: DFHXCPRH

DFHEX0110 EXCI SDUMP has been taken. Dumpcode: *dumpcode*, Dumpid: *dumpid*.

Explanation: This message is issued on successful completion of a MVS SDUMP issued by external CICS interface module DFHXCDMP. An error, signalled by a previous message, caused a call to be made to DFHXCDMP to take a system dump.

The dump code *dumpcode* is an 8-character system dump code identifying the external CICS interface problem. A system dump code is the EXCI message number with the DFH prefix removed.

dumpid is the unique 9-character string identifying this dump.

System Action: The EXCI request is terminated.

User Response: See the EXCI message indicated by *dumpcode* for further guidance.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHXCDMP.

DFHEX0111 EXCI SDUMP attempted but SDUMP is busy - will retry every five seconds for *nnnn* seconds.

Explanation: At the time of the MVS SDUMP request issued by DFHXCDMP another address space in the same MVS system was in the process of taking an SDUMP. This causes MVS to reject the new request. A nonzero value for the dump retry parameter in the DFHXCOPT table means that the external CICS interface waits five seconds before retrying the SDUMP request. If necessary, the external CICS interface retries every five seconds for the total time specified on the retry parameter.

System Action: The external CICS interface issues an MVS STIMERM macro which causes it to wait for five seconds. The request is reissued when the delay interval has expired.

User Response: None.

Destination: Console

Module: DFHXCDMP.

DFHEX0112 SDUMP request failed - *reason X'nn'*.

Explanation: An MVS SDUMP request issued from the external CICS interface has failed to complete successfully. The possible reasons, (*reason*) for the failure are as follows:

ONLY PARTIAL DUMP
: The SYS1.DUMP data set to which the dump is written is not large enough to contain all of the dumped storage.

SDUMP BUSY
: At the time of the MVS SDUMP request issued by the EXCI, another address space in the same MVS system was in the process of taking an SDUMP. This causes MVS to reject the new request. If a nonzero value is specified for the dump retry parameter in DFHXOPTS table, the EXCI has retried the SDUMP request every five seconds for the specified period. This message is only issued if SDUMP is still busy after the final retry.

STIMERM FAILED
: In order to delay for five seconds before retrying SDUMP after an SDUMP BUSY condition, the EXCI issues an MVS STIMERM macro request. MVS has indicated that the STIMERM request has failed.

NO DATA SET AVAILABLE
: No SYS1.DUMP data sets were available at the time the SDUMP request was issued.

REJECTED BY MVS, REASON = X'nn'
: MVS has rejected the SDUMP request because of user action (for example, specifying DUMP=NO in the MVS IPL) or because of an I/O error or terminating error in the SDUMP routine. X'nn' is the SDUMP reason code.

NOT AUTHORIZED FOR EXCI
: SDUMP is not authorized for the external CICS interface.

INSUFFICIENT STORAGE
: The EXCI issued an MVS GETMAIN for subpool 253 storage during the processing of the SDUMP request. The GETMAIN has been rejected by MVS.

System Action: The EXCI proceeds as if the dump had been successful.

User Response: The user response depends on the reasons, (*reason*), for the failure.

ONLY PARTIAL DUMP
: Increase the size of the SYS1.DUMP data sets and cause the SDUMP request to be reissued.

SDUMP BUSY
: Cause the SDUMP to be reissued after, if appropriate, increasing the dump retry time in DFHXCOPT.

STIMERM FAILED
: Use MVS problem determination methods to fix the STIMERM failure and then cause the SDUMP request to be reissued.

NO DATA SET AVAILABLE
: Clear a SYS1.DUMP data set and then cause the SDUMP request to be reissued.

REJECTED BY MVS, REASON = X'nn'
: No action is required if the dump is suppressed deliberately. If the dump has failed because of an error in the MVS SDUMP routine, use MVS problem determination methods to fix the error and then cause the SDUMP request to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference*. for an explanation of the SDUMP reason code X'nn'.

NOT AUTHORIZED FOR EXCI
: This reason is unlikely because SDUMP is unconditionally authorized during EXCI initialization, and should be authorized throughout the EXCI run. If you do get this reason, the EXCI AFCB (authorized function control block) has probably been accidentally overwritten.

INSUFFICIENT STORAGE
: Ensure sufficient storage is available to MVS for subpool 253 requests.

Destination: Console

Module: DFHXCDMP

DFHEX0113 EXCI trace Initialization has failed.

Explanation: An attempt to initialize external CICS interface (EXCI) trace facilities during EXCI initialization has failed.

System Action: The EXCI request continues without trace facilities. An earlier message identifies the cause of the failure.

User Response: Refer to the earlier message to determine the cause of the failure.

Destination: Console

Module: DFHXCTRI

DFHEX0114 Incorrect data has been passed for EXCI tracing causing a program check in DFHXCTRP.

Explanation: Some data passed to the external CICS interface (EXCI) trace module DFHXCTRP for addition to the EXCI internal trace table, or GTF trace, caused a program check to occur when an attempt was made to access it.

The most likely cause of this error is incorrect data passed on an EXCI CALL API request that the trace program DFHXCTRP is attempting to access.

System Action: The EXCI request is terminated and a SYSMDUMP is taken.

User Response: Examine the dump to determine the source of the incorrect data.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHXCTRI

DFHEX0115 EXCI trace services have been disabled due to a previous error.

Explanation: An error occurred in the external CICS interface (EXCI) trace module DFHXCTRP indicated by message DFHEX0001. In trying to recover from the error, module DFHXCTRI determined that the error was not caused by accessing incorrect data passed to DFHXCTRP, but was due to a program check in DFHXCTRP.

System Action: The EXCI trace facilities are disabled to prevent further errors. A SYSMDUMP is taken.

User Response: See the DFHEX0001 message and the SYSMDUMP to determine the cause of the error.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHXCTRI

DFHEX0116 Program check occurred within global trap exit - DFHXCTRA now marked unusable.

Explanation: After making a trace entry, the external CICS interface (EXCI) trace program DFHXCTRP called the EXCI field engineering global trap program DFHXCTRA. A program check occurred during execution of DFHXCTRA.

System Action: The EXCI marks the currently active version of DFHXCTRA as unusable and ignores it on subsequent calls to DFHXCTRP for all subsequent calls made under this TCB. The EXCI request is terminated, and a SYSMDUMP is taken.

User Response: Use the dump to find the cause of the program check.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

You should use the global trap exit only in consultation with an IBM support representative.

Destination: Console

Module: DFHXCTRI

DFHFCxxxx messages

Note: In cases where standard message inserts such as *opid* or *termid* are undefined or cannot be determined, the inserts are replaced by dashes.

DFHFC0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively,

- Unexpected data has been input, or
- Storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three

hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Then look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some further guidance.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHEFRM, DFHFCAT, DFHFCCA, DFHFCDN, DFHFCDTS, DFHFCDTX, DFHFCES, DFHFCFL, DFHFCFR, DFHFCFS, DFHFCIR, DFHFCLF, DFHFCLJ, DFHFCMT, DFHFCQI, DFHFCQR, DFHFCQS, DFHFCQU, DFHFCRC, DFHFCRL, DFHFCRO, DFHFCRP, DFHFCRR, DFHFCRS, DFHFCSD, DFHFCST, DFHFCVR, DFHFCVS

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHFC0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code *code* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

To discover the cause of the problem, examine the exception trace entry and immediately preceding entries. For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

System Action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHEFRM, DFHFCAT, DFHFCCA, DFHFCDN, DFHFCDTS, DFHFCDTX, DFHEIFC, DFHFCES, DFHFCFL, DFHFCFR, DFHFCFS, DFHFCIR, DFHFCLF, DFHFCLJ, DFHFCMT, DFHFCOR, DFHFCQI, DFHFCQR, DFHFCQS, DFHFCQU, DFHFCRC, DFHFCRD, DFHFCRL, DFHFCRO, DFHFCRP, DFHFCRR, DFHFCRS, DFHFCSD, DFHFCST, DFHFCVR, DFHFCVS

XMEOUT Parameters: *applid, X'code', modname*

DFHFC0003 *applid* **Insufficient storage (code** *X'code'***) in module** *modname***.**

Explanation: A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code X' *code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS continues unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. If CICS has been terminated by another module, look out for the relevant termination messages (from the domain manager, for example), and look up the user response for these messages.

If CICS is still running, the problem may be a temporary one which rights itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try increasing the size limits of the DSAs or EDSAs. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Destination: Console

Module: DFHFCRP

XMEOUT Parameters: *applid, X'code', modname*

DFHFC0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 as a system initialization parameter and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will require further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHEFRM, DFHFCAT, DFHFCDN, DFHFCDTS, DFHFCDTX, DFHFCFR, DFHFCFS, DFHFCMT, DFHFCRL, DFHFCRP, DFHFCSD, DFHFCST, DFHFCVR, DFHFCVS

XMEOUT Parameters: *applid, X'offset', modname*

DFHFC0005 *applid* **A hardware error has occurred (module** *modname***, code** *X'code'***). The Time-of-Day clock is invalid.**

Explanation: A hardware error has occurred during the running of module *modname*. The MVS store clock facility is the timing mechanism for the operating system.

The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message to this effect is issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. This is in all probability a hardware error and you should in the first instance investigate the MVS store clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will require further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module:

XMEOUT Parameters: *applid, modname, X'code'*

DFHFC0100I *applid* **File Control initialization has started.**

Explanation: This is an informational message indicating the start of file control initialization.

System Action: Initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHFCRP

XMEOUT Parameter: *applid*

DFHFC0101I *applid* **File Control initialization has ended.**

Explanation: File control initialization has completed successfully.

System Action: Initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHFCRP.

XMEOUT Parameter: *applid*

DFHFC0102 *applid* **File Control initialization has failed.**

Explanation: File control has failed to initialize correctly.

System Action: Message DFHSI1521 is usually issued and initialization is terminated.

If the failure occurred at a critical stage during file control initialization, CICS initialization is terminated immediately with a dump, and message DFHSI1521 is not issued.

User Response: The error can be identified by a trace entry, and possibly by a prior message. You should then take action that is appropriate to the error.

Destination: Console

Module: DFHFCRP

XMEOUT Parameter: *applid*

DFHFC0103 *applid* **Required module** *modname* **could not be loaded.**

Explanation: Module *modname* is required by file control. It could not be loaded because it is missing from the DFHRPL library list.

System Action: The system terminates with a system dump and code FC0103.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Ensure that module *modname* is in the DFHRPL library list.

If this is not the cause of the problem you will require further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHFCIN1, DFHFCRP, DFHFCFS

XMEOUT Parameters: *applid, modname*

DFHFC0104 *applid* **Unexpected catalog error.**

Explanation: File control issued a request to the catalog (CC) domain which failed. This is probably caused by an I/O error on the catalog.

System Action: A system dump is produced with code FC0104.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Determine the cause of the error from the messages issued from the catalog domain.

Destination: Console

Module: DFHFCRP

XMEOUT Parameter: *applid*

DFHFC0105 *applid* **Entry for file** *filename* **cannot be located in the CICS catalog.**

Explanation: During file control initialization, an error occurred either while the table manager was linking the AFCT entries to the FCT entries, or while the table manager was searching for the FCTs in order to connect them to the dsname blocks.

System Action: CICS initialization is abnormally terminated and a trace entry is made.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate why the catalog has no FCT entry. If this is not the cause of the problem, determine why the FCT could not be found.

Destination: Console

Module: DFHFCRP

XMEOUT Parameters: *applid, filename*

DFHFC0106 *applid* **Insufficient storage to satisfy GETMAIN request in module** *modname***.**

Explanation: The storage (SM) domain has insufficient space to satisfy a GETMAIN request made during CICS initialization.

System Action: A system dump is produced.

User Response: None.

Destination: Console

Module: DFHFCRP

XMEOUT Parameters: *applid, modname*

DFHFC0107D *applid* **Unable to load File Control table DFHFCT***xx***. Enter either an alternative suffix, or 'YES', or 'NO'.**

Explanation: The file control table, DFHFCT*xx* could not be found in the DFHRPL library list during a cold or initial start of CICS.

System Action: File control initialization waits for a reply to this message.

User Response: Reply as follows:

- With a 1 or 2 character suffix to cause file control to load DFHFCT*xx*, or
- YES to load an unsuffixed FCT, or
- NO to initialize file control without an FCT.

Destination: Console

Module: DFHFCRP

XMEOUT Parameters: *applid, xx*

DFHFC0108 *applid* **Invalid reply to message DFHFC0107D. A 1 or 2 character suffix, or YES or NO is required**

Explanation: The reply to message DFHFC0107 was invalid. The reply may have been too long or may have contained invalid characters.

System Action: Message DFHFC0107 is reissued and initialization waits for a reply.

User Response: Reply to message DFHFC0107.

Destination: Console

Module: DFHFCRP

XMEOUT Parameter: *applid*

DFHFC0110 *applid* **Error, a** *xxxx* **version of** *DFHFCTxx* **has been loaded.**

Explanation: DFHFCRP loaded DFHFCT*xx* that was assembled for CICS release *xxxx*. It is not valid to run CICS with an FCT assembled against a previous release.

System Action: File control initialization, and hence CICS, is terminated.

User Response: Reassemble DFHFCT*xx* for the CICS release being used. Cold start CICS.

Destination: Console

Module: DFHFCRP

XMEOUT Parameters: *applid, xxxx, DFHFCTxx*

DFHFC0111 *applid* **Error, CICS is attempting to initialize with release** *xxxx* **of DFP.**

Explanation: DFHFCRP detected that CICS was being initialized with data facility product (DFP) level *xxxx*. CICS does not support this level of DFP.

System Action: File control initialization, and hence CICS, is terminated.

User Response: Install a level of DFP supported by this release of CICS.

Destination: Console

Module: DFHFCRP

XMEOUT Parameters: *applid, xxxx*

DFHFC0112 *applid* **Install of remote FCT entry** *filename* **failed. SYSID** *sysid***, specified in the entry, is the local SYSID.**

Explanation: DFHFCRP attempted to install file *filename* from the assembled FCT. The install failed because the file was defined as TYPE=REMOTE but the SYSIDNT specified, *sysid*, was the system identifier of this local system.

System Action: File *filename* is not installed and file control initialization continues.

User Response: Examine the entry for *filename* in the FCT and either make the entry a local entry (TYPE=FILE) or correct the SYSIDNT specified.

Destination: Console

Module: DFHFCRP

XMEOUT Parameters: *applid, filename, sysid*

DFHFC0116 *applid* **The load of callable service IGWARLS has failed with return code** *X'eeee'***.**

Explanation: Callable service IGWARLS is required by file control for processing files which have update SERVREQs and are using the VSAM catalog as a repository for data set recovery attributes. The load of IGWARLS requested by file control initialization has failed. This is a serious problem because CICS is using a level of VSAM that supports use of the VSAM catalog for specifying data set recovery attributes.

System Action: CICS initialization fails.

User Response: IGWARLS is supplied on SYS1.CSSLIB. Ensure that SYS1.CSSLIB is in the concatenation for the MVS linklist or LPA. If the failure persists, this is likely to be an internal CICS error. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCRP

XMEOUT Parameters: *applid, X'eeee'*

DFHFC0118 *applid* **System initialization parameter requesting RLS support has been ignored because the level of VSAM does not support RLS.**

Explanation: RLS=YES has been specified on CICS startup but the level of VSAM does not support RLS access.

System Action: CICS initialization continues without RLS support.

User Response: If you intend to use RLS access ensure that the level of VSAM is DFSMS 1.3 or later.

Destination: Console

Module: DFHFCRP

XMEOUT Parameter: *applid*

DFHFC0150 *date time applid termid tranid* **An attempt to release locks for unit of work** *X'uowid'* **failed. VSAM return code** *X'rrrr'* **reason code** *X'cccc'***.**

Explanation: Unit of work *uowid* for tranid *tranid* has attempted to release its RLS locks. The release locks request made to VSAM has failed because VSAM detected an error.

The IDALKREL response is *rrrr* and the reason code is *cccc*.

termid identifies the terminal running this transaction.

System Action: CICS continues with the completion of the unit of work.

The unit of work is shunted. The shunt reason indicates that a further release locks attempt is required.

Some records may remain locked until a successful lock release command can be processed by VSAM.

If the failure is caused by the SMSVSAM server being unavailable, CICS automatically retries the completion of the UOW when the server becomes available.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Use the VSAM codes to determine the cause of the problem. The most likely cause of this failure is that the SMSVSAM server failed at the time of the error. For the meaning of the VSAM codes, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

When the condition that caused the lock release to fail has been resolved, you may need to retry the unit of work using

```
CEMT SET DSNAME RETRY
```

or

```
EXEC CICS SET DSNAME(dsname) ACTION(RETRY)
```

.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCCA

XMEOUT Parameters: *date, time, applid, termid, tranid, X'uowid', X'rrrr', X'cccc'*

DFHFC0151 *date time applid termid tranid* **An attempt to retain locks for unit of work** *X'uowid'* **failed. VSAM return code** *X'rrrr'* **reason code** *X'cccc'***.**

Explanation: Unit of work *uowid* for transaction *tranid* has gone indoubt because it has lost contact with its coordinating system. Consequently CICS has attempted to convert all RLS locks owned by this unit of work into retained locks. This attempt has failed because VSAM has detected an error.

The IDARETLK macro response is *rrrr* and the reason code is *cccc*.

termid identifies the terminal running this transaction.

System Action: CICS continues shunting this unit of work. It is possible that some locks may remain as active locks (which cause other transactions to wait until their timeout value is reached) rather than as retained locks (which cause other transactions to encounter LOCKED responses.)

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Use the VSAM codes to determine the cause of the problem. For the meaning of the VSAM codes, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*. The most likely reason for the failure to convert locks into retained locks is that the SMSVSAM server was not available. Other VSAM codes may indicate a more severe error.

Normally no other action should be necessary. When contact is reestablished, the coordinating system instructs this system to commit or backout. At the end of commit or backout, all retained and active locks are released.

A problem that you may encounter is that some locks may have been left as active locks. This may cause slow response (and

eventual failures) from transactions that wait for these locks and have to wait for their full timeout interval.

In this case, you can use the CEMT SET UOW command to force the unit of work to commit or backout, or to make a decision to commit or backout according to the ACTION attribute in the transaction definition. Alternatively, you can use the CEMT SET DSNAME command which will force all in-doubt units of work which had updated the specified data set. However, you should not normally use these commands because they can cause this CICS to become out of step with its coordinating system with consequent loss of data integrity.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCCA

XMEOUT Parameters: *date, time, applid, termid, tranid, X'uowid', X'rrrr', X'cccc'*

DFHFC0152 *date time applid termid tranid* **An attempt to retain locks for data set within unit of work** *X'uowid'* **failed. VSAM return code** *X'rrrr'* **reason code** *X'cccc'***.**

Explanation: Unit of work *uowid* for transaction *tranid* has failed backout for one of its data sets. CICS has attempted to convert all the RLS locks owned by this unit of work that are associated with the failing data set into retained locks. This attempt has failed because VSAM has detected an error.

The IDARETLK response is *rrrr* and the reason code is *cccc*.

termid identifies the terminal running this transaction.

This message is followed by message DFHFC0312 which identifies the failing data set.

System Action: CICS continues shunting this unit of work. Some locks may remain as active locks (which cause other transactions to wait until their timeout value is reached) rather than as retained locks (which cause other transactions to encounter LOCKED responses).

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Use the VSAM codes to determine the cause of the problem. For the meaning of the VSAM codes, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

The most likely reason for the failure to convert locks into retained locks is that the SMSVSAM server was not available. It is also possible to get a failure because the specified logical unit of work ID does not exist for the subsystem (that is, the unit of work does not hold any locks) during lost locks recovery, or after a CICS restart which specified OFFSITE=YES as a system initialization override. If you are performing RLS lost locks recovery, message DFHFC0555 will have been issued when lost locks recovery started; if you are performing RLS offsite recovery, message DFHFC0574 will have been issued during file control initialization. Other VSAM codes may indicate a more severe error.

Normally no other action is necessary. When the condition that caused the backout failure has been resolved, the backout of this unit of work is retried. If the attempt to retry the backout succeeds, all locks are released.

Message DFHFC4701 specifies the cause of the backout failure. The most common cause of backout failures is a hardware problem causing I/O errors. In this case the data set needs to be restored and forward recovered. If CICSVR (or a functionally equivalent product) is used to perform forward recovery, and the data set was being accessed in RLS mode, units of work that have failed backout for this data set are retried automatically. If the data set was quiesced, you need to unquiesce it to allow the backout to succeed. When the data set is unquiesced, CICS automatically retries the backout.

Backouts may also be retried using

```
CEMT SET DSNAME RETRY
```

or

```
EXEC CICS SET DSNAME(dsname) ACTION(RETRY)
```

.

The only problem that you may encounter is that some locks may have been left as active locks. This can cause a slow response (and eventual failures) from transactions that wait for these locks and have to wait for their full timeout interval.

In this case, consider releasing all locks held against this data set using the CEMT SET DSNAME RESETLOCKS command. This command should only be considered in extreme cases because it discards both the retained locks held by this CICS system against the named data set and all associated log records. The consequence is that the corresponding backout operations are never performed and data integrity is lost.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCCA

XMEOUT Parameters: *date, time, applid, termid, tranid, X'uowid', X'rrrr', X'cccc'*

DFHFC0153 *applid* **The previous instance of the SMSVSAM server has failed. File control RLS access is being closed down.**

Explanation: The SMSVSAM server is the separate VSAM address space that handles all VSAM requests made in RLS mode. The instance of this address space which CICS has been using has terminated, and CICS has just detected the failure. CICS must close down all accesses from file control to this instance of the SMSVSAM server in order to be able to register with the next server instance when the server restarts.

If message DFHFC0568 is issued before DFHFC0153, CICS did not detect the failure until the server restarted and notified CICS that a new instance was available. If message DFHFC0568 is not issued before DFHFC0153, CICS detected the failure when it tried to access the failed instance of the server.

System Action: CICS disables all further RLS accesses, closes all files which were open in RLS mode, and attempts to unregister the RLS control ACB.

Transactions that attempt to access files previously opened in RLS mode abend. The abend code depends upon what the transaction was doing at the time of the failure.

User Response: The SMSVSAM server address space should normally restart itself. If it does not, restart the SMSVSAM server address space manually. If the SMSVSAM server address space fails to restart, there may be a more severe error. In this case, you need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCCA

XMEOUT Parameter: *applid*

DFHFC0156 *applid* **A failure to reset the PERMITNONRLSUPDATE state has occurred. Vsam return code** *X'rrrr'* **reason code** *X'cccc'***.**

Explanation: CICS has completed processing after a PERMITNONRLSUPDATE batch override response was returned by VSAM when CICS issued an RLS open. The call to VSAM from CICS to reset the state so that it is no longer in batch override status has failed.

The VSAM response is *rrrr* and the VSAM reason is *cccc*.

This message is followed by message DFHFC0312 which identifies the failing data set.

System Action: CICS takes a system dump.

User Response: To resolve the problem, keep the dump and contact your IBM Support Centre.

Destination: Console

Module: DFHFCCA

XMEOUT Parameters: *applid, X'rrrr', X'cccc'*

DFHFC0157 *applid tranid termid userid* **An I/O error has occurred on base data set** *dsname* **accessed via file** *filename* **component code** *X'code'***.**

Explanation: An I/O error has been reported by VSAM after a request to update VSAM file *filename*.

The name of the base data set associated with the file is *dsname* although the error may have been encountered elsewhere. This is indicated by the value of the component code X'*code*'. Its possible values and the corresponding error locations are as follows.

- X'00' or X'01' - Base cluster.
- X'02' or X'03' - Alternate index.
- X'04' or X'05' - Upgrade set.

System Action: The application request which encountered the error receives an 'IOERR' response.

CICS also issues message DFHFC0158 to display the VSAM diagnostic information for this error.

User Response: Follow standard procedure for I/O errors. No special additional action is required to respond to this particular message although the data set name and component code may help in identifying the problem.

Destination: Console

Module: DFHFCRS

XMEOUT Parameters: *applid, tranid, termid, userid, dsname, filename, X'code'*

DFHFC0158 *applid vsam-error-data*

Explanation: This message displays additional VSAM diagnostic information that is available following I/O errors and cache failures. The message is provided for information only.

The format of the data contained in message DFHFC0158 is described in *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*. in the section describing the physical error message format. This is a common data format used by other IBM products following I/O errors.

This message is issued after messages DFHFC0157, DFHFC0162 and DFHFC0163 and provides additional information to go with those messages.

System Action: Processing continues.

User Response: See the description of the associated preceding message (DFHFC0157, DFHFC0162 or DFHFC0163.)

Destination: Console

Modules: DFHFCRS, DFHFCVS

XMEOUT Parameters: *applid, vsam-error-data*

DFHFC0159 *applid* **A request issued to cold start the RLS subsystem has failed. VSAM return code** *X'rrrr'* **reason code** *X'cccc'***.**

Explanation: A cold or initial start of CICS has been requested. CICS has made a call to the RLS component of VSAM which requested RLS to cold start its status with respect to this CICS. This request has failed because VSAM RLS detected an error while performing cold start processing.

System Action: CICS continues to initialize. However, the restart of the RLS component of file control has failed and all RLS eligible files are unusable.

No dump is taken with this message. However, file control restart may subsequently produce message DFHFC0001 and take a dump if the error is of a type which should not occur during normal running.

User Response: If the VSAM return code indicates that the SMSVSAM server has failed, restart the SMSVSAM server (if it has not already automatically restarted). You also need to restart CICS because CICS has been warm started with respect to RLS when the server returns.

If the SMSVSAM server has not failed, this is probably an error in CICS or VSAM. You should keep the dump associated with message DFHFC0001. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCCA

XMEOUT Parameters: *applid, X'rrrr', X'cccc'*

DFHFC0160 *applid* **An attempt to notify VSAM that CICS has completed lost locks processing for a data set has failed. VSAM return code** *X'rrrr'* **reason code** *X'cccc'***.**

Explanation: Following a failure of the VSAM lock structure, VSAM has marked a data set as being in lost locks state with regard to this CICS. CICS has performed all recovery actions necessary to resolve its locks against this data set and has attempted to inform VSAM that it has completed its recovery. This attempt has failed.

The VSAM response is *rrrr* and the VSAM reason is *cccc*.

This message is followed by message DFHFC0312 which identifies the failing data set.

System Action: If the VSAM return code does not indicate that the SMSVSAM server has failed, CICS takes a system dump.

User Response: The most likely cause of this failure is that the SMSVSAM server failed at the time that CICS issued the request.

If the problem was caused by the SMSVSAM server having failed at the time that the request was issued, restart the SMSVSAM server (if it has not already automatically restarted). Otherwise, you can make CICS retry the attempt to notify VSAM of the

completion of lost locks processing either by restarting CICS or by restarting the SMSVSAM server.

It is possible that your installation may have performed some action, such as deleting the data set, which would cause VSAM not to recognise the data set and therefore return an error. If this is the case for the data set named in message DFHFC0312 then you need take no further action.

If the VSAM return and reason codes suggest an internal CICS or VSAM error, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCCA

XMEOUT Parameters: *applid, X'rrrr', X'cccc'*

DFHFC0161 *applid* **Inquire recovery has failed. VSAM return code** *X'rrrr'* **reason code** *X'cccc'***.**

Explanation: During restart CICS has issued an inquire recovery request to VSAM. This request has failed because VSAM has detected an error.

System Action: CICS restart continues. All RLS files are unusable.

If the VSAM return code does not indicate that the SMSVSAM server has failed, CICS later issues message DFHFC0001 which has an associated system dump.

User Response: The most likely cause of this failure is that the SMSVSAM server failed at the time that CICS issued the request. In that case you should restart the SMSVSAM server, if it has not already automatically restarted. There is no need to restart CICS.

If the VSAM return and reason codes indicate an internal CICS or VSAM error, keep the dump from message DFHFC0001. You will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCCA

XMEOUT Parameters: *applid, X'rrrr', X'cccc'*

DFHFC0162 *applid* **A VSAM data cache has failed.**

Explanation: A data cache structure being used by VSAM RLS has failed.

System Action: The application request which encountered the error receives an 'IOERR' response.

CICS also issues message DFHFC0158 to display the VSAM diagnostic information for this error. The name of the failing cache can be derived from the information displayed in the following DFHFC0158 message.

While the data cache remains unusable, all data sets bound to this cache are also unusable. Any attempt to read from or write to such a data set cause an IOERR response.

CICS issues messages DFHFC0162 and DFHFC0158 the first time that an I/O request fails because of a cache failure. To prevent flooding the console with messages, CICS does not display these messages again until it is notified that a cache has been recovered. If several caches fail, DFHFC0162 and DFHFC0158 are only displayed for the first cache to fail. However, VSAM issues messages for all failed caches.

User Response: Allocate a new data cache and bring it on line to VSAM.

CICS is notified as soon as the new cache is available and is able to take appropriate recovery action.

Destination: Console

Module: DFHFCRS

XMEOUT Parameter: *applid*

DFHFC0163 *applid* **Connectivity to a VSAM RLS data cache has been lost.**

Explanation: Connectivity has been lost to a data cache that is being used by VSAM RLS.

System Action: The application request which encountered the error receives an 'IOERR' response.

CICS also displays message DFHFC0158 to display the VSAM diagnostic information for this error. The name of the failing cache can be derived from the information displayed in the following DFHFC0158 message.

While the data cache remains unusable, all data sets bound to this cache are also unusable. Any attempt to read from or write to such a data set receives an 'IOERR' response.

CICS issues messages DFHFC0163 and DFHFC0158 the first time that an I/O request fails because contact has been lost between the processor running this MVS image and the coupling facility that holds the data cache. To prevent flooding the console with messages, CICS does not display these messages again until it is notified that a cache has been recovered. If contact with several caches is lost, messages DFHFC0163 and DFHFC0158 are only displayed for the first cache to fail. However, VSAM issues messages for all caches for which contact has been lost.

User Response: Reestablish contact between the processor running CICS and the coupling facility that contains the cache.

CICS is notified as soon as contact has been reestablished and is able to take appropriate recovery action.

Destination: Console

Module: DFHFCRS

XMEOUT Parameter: *applid*

DFHFC0164 *date time applid tranid trannum termid userid***. A request has timed out waiting for an RLS lock. There are** *nn* **transactions holding this lock.**

Explanation: This message and the following DFHFC0165 messages are issued to assist in problem determination when transactions abend with the AFCV abend code, or when application programs receive the RECORDBUSY condition.

An attempt made by transaction *tranid* with task number *trannum* to update a file which is open in VSAM RLS mode has failed because the request timed out waiting to obtain a lock on a record.

VSAM RLS has detected that a request has waited for a lock for more than the timeout interval. However, RLS was unable to detect any deadlock. Possibly there is a deadlock between VSAM RLS requests and requests to another resource manager such as DB2 or DBCTL.

When the timeout occurred there were *nn* other transactions holding the required lock.

System Action: If the application request which encountered the error specified NOSUSPEND, it receives the RECORDBUSY condition and continues. If the request did not specify NOSUSPEND, it receives an AFCV abend.

CICS displays message DFHFC0164 to identify the failing transaction and the number of owners of the lock. CICS also

issues message DFHFC0165 once for each lock owner. CICS issues message DFHFC0168 instead of DFHFC0165 in the unlikely event that VSAM RLS is unable to identify the lock owner.

User Response: The following DFHFC0165 messages identify the transactions that are holding the required lock and the CICS systems that they are running in. Examine these transactions to see why they are not releasing VSAM RLS locks. For example:

- They may be holding VSAM RLS locks and waiting for terminal input.
- They may be trying to access resources from both VSAM RLS and another resource manager, creating an inter-resource manager deadlock.

Destination: CSFL

Module: DFHFCRS

XMEOUT Parameters: *date, time, applid, tranid, trannum, termid, userid, nn*

DFHFC0165 *date time applid tranid trannum termid userid***. Transaction** *transid* **(***tasknum***) unit of work** *X'uowid'* **running in job** *jobname* **with applid** *applid2* **in MVS** *mvsid* **holds** *{add to end lock | internal lock | exclusive lock on key | shared lock on key }X'keyid'* **in data set** *dsname* **causing** *{true | false}* **contention.**

Explanation: This message and the preceding message DFHFC0164 or DFHFC0174 are issued to assist in problem determination when transactions abend with the AFCV or AFCW abend codes, or when applications receive the RECORDBUSY condition.

Normally this message appears after VSAM returns a timeout response to CICS. However, it may also appear after VSAM returns a deadlock response to CICS when that deadlock arises as a result of a failure to promote a lock. When this message is associated with a timeout response from VSAM, it is preceded by message DFHFC0164. When this message is associated with a deadlock response from VSAM it is associated with message DFHFC0174.

There is one occurrence of message DFHFC0165 for each transaction currently owning the required lock.

The name of the transaction that has failed is *tranid* and it has task number *trannum*.

The message inserts that identify the owner of the lock which caused this transaction to time out are as follows:

- *transid* is the name of the transaction running in the system that owns the lock. If the job that holds the lock is not a CICS system, this is displayed as *????*.
- *tasknum* is the task number of *transid*. If the job that holds the lock is not a CICS system, this is displayed as *?????*.
- *uowid* is the unit of work ID associated with the above transaction. The unit of work ID is also used by VSAM RLS as its logical unit of work ID (luwid).
- *jobname* is the job name of the CICS system that owns the lock.
- *applid2* is the applid of the CICS system whose job name was given by the previous insert.
- *mvsid* is the name of the MVS in which this CICS is running.
- *dsname* is the name of the data set against which the lock is held.
- *keyid* identifies the key which is locked. As it is not always possible to display keys in character form, the key is displayed in hexadecimal notation. If the message indicates that the transaction is waiting for an add to end lock or an internal lock, no key information is displayed.

The message identifies whether the lock is held as an exclusive lock or a shared lock:

- A lock is exclusive if it can only have one holder. For example, exclusive locks are used to protect update operations.
- A lock is shared if it can have many holders. Shared locks are used to protect repeatable and consistent read operations.

A lock causes true contention if the request was for a lock against the locked key. A lock causes false contention if the request was for a lock against a different key but the lock requests clashed because of the RLS key hashing algorithm which is used when the key length exceeds 16 characters.

System Action:

This message is preceded by DFHFC0164 or DFHFC0174. See the description of DFHFC0164 or DFHFC0174 for a description of the system action associated with this message.

User Response:

This message is preceded by DFHFC0164 or DFHFC0174. See the description of DFHFC0164 or DFHFC0174 for a description of the user actions associated with this message.

Destination: CSFL

Module: DFHFCRS

XMEOUT Parameters: *date, time, applid, tranid, trannum, termid, userid, transid, tasknum, X'uowid', jobname, applid2, mvsid, {1=add to end lock , 2=internal lock , 3=exclusive lock on key , 4=shared lock on key }, X'keyid', dsname, {1=true, 2=false}*

DFHFC0166 *date time applid tranid termid userid***. VSAM RLS has detected a deadlock. There are** *nn* **transactions in the deadlock chain.**

Explanation: This message and the following DFHFC0167 messages are issued to assist in problem determination when transactions abend with AFCW abend codes.

An attempt made by transaction *tranid* to update a file which is open in VSAM RLS mode has failed because VSAM RLS detected that this request would have caused a deadlock with other transactions.

At the time that the timeout occurred there were *nn* other transactions in the chain which caused deadlock.

System Action: The application request which encountered the error receives an AFCW abend.

CICS issues message DFHFC0166 to identify the failing transaction and the number of transactions in the deadlock chain.

CICS also issues message DFHFC0167 once for each transaction involved in the deadlock chain. DFHFC0167 identifies the resource that the transaction is holding and the resource that the transaction is waiting for.

User Response: Examine the transactions in the deadlock chain to determine why deadlock arose. If necessary, correct the programming logic to avoid deadlock-creating situations.

For guidance on writing programs that avoid deadlock problems, see the *CICS Application Programming Guide*.

Destination: CSFL

Module: DFHFCRS

XMEOUT Parameters: *date, time, applid, tranid, termid, userid, nn*

DFHFC0167 *date time applid tranid termid userid*. **Transaction** *transid(tasknum)* **with unit of work id** *X'uowid'* **running in** *jobname/applid2* **in MVS** *mvsid* **holds** *{add to end lock | internal lock | exclusive lock on key | shared lock on key }X'key1'* **on data set** *dsname1* **and is waiting for** *{add to end lock | internal lock | exclusive lock on key | shared lock on key }X'key2'* **on data set** *dsname2*.

Explanation: This message and the preceding DFHFC0166 message are issued to assist in problem determination when transactions abend with AFCW abend codes.

The preceding message DFHFC0166 reports that a deadlock has been detected and includes how many transactions exist in the deadlock chain.

Message DFHFC0167 is issued once for each transaction in the deadlock chain and includes the resource that transaction holds and which resource it is waiting for.

The message inserts are as follows:

- *transid(tasknum)* is the transaction name and the associated task number of a transaction that owns a lock and is waiting for another lock. If this participant in the deadlock chain is not a CICS system, this will appear as ????(?????).
- *uowid* is the unit of work ID associated with task *transid(tasknum)*. The unit of work is also used by VSAM as the logical unit of work ID (luwid).
- *jobname/applid2* is the job name and applid of the CICS system in which this transaction is running.
- *mvsid* is the name of the MVS in which this CICS job is running.
- *dsname1* is the name of the data set against which this transaction holds a lock.
- *key1* identifies the key which is locked. As it is not always possible to display keys in character form, the key is displayed in hexadecimal notation. If the message indicates that an add to end lock or an internal lock is held then no key information is displayed.
- *dsname2* is the name of the data set against which this transaction is attempting to acquire a lock.
- *key2* identifies the key which this transaction is attempting to lock. If the message indicates that the transaction is attempting to obtain an add to end lock or an internal lock then no key information is displayed.

The message identifies whether the lock is held as an exclusive lock or a shared lock and whether the transaction is attempting to acquire an exclusive or shared lock.

- A lock is exclusive if it can only have one holder. For example, exclusive locks are used to protect update operations.
- A lock is shared if it can have many holders. Shared locks are used to protect repeatable and consistent read operations.

System Action: The application request which encountered the error receives an AFCW abend.

User Response: See the description of message DFHFC0166.

Destination: CSFL

Module: DFHFCRS

XMEOUT Parameters: *date, time, applid, tranid, termid, userid, transid(tasknum), X'uowid', jobname/applid2, mvsid, {1=add to end lock , 2=internal lock , 3=exclusive lock on key , 4=shared lock on key }, X'key1', dsname1, {1=add to end lock , 2=internal lock , 3=exclusive lock on key , 4=shared lock on key }, X'key2', dsname2*

DFHFC0168 *date time applid tranid trannum termid userid.{ An exclusive | A shared}* **lock on key** *X'keyid'* **in data set** *dsname* **is causing** *{true | false}* **contention but the owner of this lock is unknown.**

Explanation: This message and the preceding DFHFC0164 message are issued to assist in problem determination when transactions abend with AFCV abend codes.

Message DFHFC0168 is issued whenever VSAM RLS is unable to determine the owner of a lock. This is an abnormal condition. It may indicate that a processor in the sysplex is stopped.

dsname is the name of the data set against which the lock is held. *keyid* identifies the key which is locked. As it is not always possible to display keys in character form, the key is displayed in hexadecimal notation.

The message identifies whether the lock is held as an exclusive lock or a shared lock.

- A lock is exclusive if it can only have one holder. For example, exclusive locks are used to protect update operations.
- A lock is shared if it can have many holders. Shared locks are used to protect repeatable and consistent read operations.

A lock causes true contention if the request was for a lock against the locked key. A lock causes false contention if the request was for a lock against a different key but the lock requests clashed as a result of hashing algorithms used in creating RLS keys.

System Action: Processing continues.

User Response: None. The message is issued to assist in problem determination.

Destination: CSFL

Module: DFHFCRS

XMEOUT Parameters: *date, time, applid, tranid, trannum, termid, userid, {1= An exclusive, 2= A shared}, X'keyid', dsname, {1=true, 2=false}*

DFHFC0169 *date time applid termid userid*. **Transaction** *tranid* **with transaction number** *trannum* **encountered an RLS retained lock held on data set** *dsname* **by unit of work** *X'uowid'* **within CICS with applid** *applid2*.

Explanation: An attempt was made to update a record which is currently held locked by a retained RLS lock.

Message inserts are as follows:

- *applid2* is the applid of the CICS system which owns the lock.
- *uowid* is the identifier of the unit of work that owns the lock.
- *dsname* is the name of the data set against which the lock is held.

This message is issued to aid in problem diagnosis. It identifies the owner of the lock that is causing a request to fail with a 'LOCKED' response.

System Action: The application request which encountered the error receives a 'LOCKED' response.

User Response: If repeated LOCKED responses are causing a problem, note the name of the CICS system and the identifier of the unit of work and attempt to find why this unit of work is holding a retained lock. There are three reasons why a unit of work can hold a retained lock.

1. The unit of work was running in a CICS system that has failed. If this CICS system is restarted, the lock is normally released.

2. The unit of work has gone indoubt. Indoubt failures occur as a result of a failure in communication between two CICS systems, neither of which need be the CICS system that is encountering the 'LOCKED' response.

   From a terminal connected to the CICS system with applid *applid2*, issue the command

   ```
   CEMT I UOW(uowid)
   ```

   or

   ```
   CEMT I UOWDSNFAIL
   ```

   to identify the applid of the CICS system that is coordinating the distributed unit of work. Then attempt to reestablish contact between the coordinating CICS and the system that owns the lock.

3. The unit of work has failed backout. From a terminal connected to the CICS system with applid *applid2*, issue the command

   ```
   CEMT INQUIRE
   UOWDSNFAIL DATASET(dsname)
   ```

   to determine the reason why unit of work *uowid* failed backout while processing data set *dsname*. There are several reasons why a unit of work can fail backout, each identified by a different reason code from CEMT INQUIRE UOWDSNFAIL. See the *CICS Problem Determination Guide* for guidance on how to resolve each of these types of backout failure.

Destination: CSFL

Module: DFHFCRS

XMEOUT Parameters: *date, time, applid, termid, userid, tranid, trannum, dsname, X'uowid', applid2*

DFHFC0170 *applid* **An attempt to release locks which are held by RLS but unknown to CICS has failed.**

Explanation: An attempt was made to release locks which are held on behalf of this CICS system by the VSAM RLS lock manager, but about which CICS has no knowledge. Such locks are known as "orphan" locks. The attempt to release the locks failed, either because the VSAM RLS server is not available or because there were no locks to release.

System Action: CICS continues. The locks are automatically released after the VSAM RLS server becomes available again.

The presence of these "orphan" locks could prevent the running of non-RLS applications against the data sets which hold such locks. "Orphan" locks can also cause LOCKED responses to be returned to applications running on CICS systems which have access to an available VSAM RLS server and try to update the locked records, or try to read the records with one of the read integrity options.

Since CICS has no knowledge of "orphan" locks, it is not possible to get information about them using CICS API commands.

User Response: If the failure is due to the server not being available, wait for the VSAM RLS server to restart. If it does not restart automatically, determine the reason and attempt to start it manually.

If the failure is due to there being no locks to release, this could either be a result of some user action resulting in locks being deleted such as deleting the data set, or it could indicate a severe VSAM error. If user action is not responsible, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCRR

XMEOUT Parameter: *applid*

DFHFC0171 *applid* **Lost locks recovery might be delayed by inflight transactions.**

Explanation: A coupling facility (CF) lock structure failure has occurred, and SMSVSAM has been unable to rebuild the lock structure dynamically. This has resulted in the loss of VSAM RLS locks. SMSVSAM has notified CICS of this event so that CICS can perform lost locks recovery processing. In the course of this processing, CICS has attempted to purge inflight transactions that hold one or more of the lost locks in order to expedite recovery from the lost locks condition. However, it has not been possible to purge all of the transactions.

RLS lost locks recovery cannot complete until all UOWs that have updated data sets in RLS mode are completed. It is unlikely that an inflight transaction can complete normally in a lost locks situation because it will abend at the next attempt to access RLS. CICS attempts to purge inflight transactions because allowing them to run to completion (when they will probably abend anyway) could take a long time. This is particularly the case for conversational transactions.

System Action: CICS continues.

If the failure to purge a transaction is due to a severe error, message DFHFC0002 is issued and a dump is taken.

User Response: It may not be necessary to take any action because the purging of transactions is only a precautionary measure.

This message indicates that there are inflight UOWs that have not yet completed only when there are data sets that return a LOSTLOCKS value of RECOVERLOCKS after you have resolved any failed units of work that had updated the data sets. (See the EXEC CICS INQUIRE DSNAME(...) command for information about the LOSTLOCKS parameter.)

If it is possible to identify the transactions in question, either ensure that they run to normal completion, or attempt to force purge them using the CEMT master terminal command. However, as this should be a rare situation, consider performing an immediate shutdown of CICS followed by an emergency restart as an alternative solution. This causes all inflight transactions to be backed out.

Destination: Console

Module: DFHFCRR

XMEOUT Parameter: *applid*

DFHFC0172 *applid* **File control is unable to return to processing on the QR TCB because a change mode request has failed. CICS will t erminate.**

Explanation: Normally most CICS functions are run on a TCB called the QR TCB. Exceptionally, file control issues OPEN and CLOSE requests on a TCB called the FO TCB. File control may also process VSAM read and write requests on a TCB called the CO TCB if SUBTSKS=1 has been specified in the SIT.

After completing its work on the RO or CO TCB, file control must return to processing on the QR TCB. In order to return to the QR TCB, file control has issued a CHANGE_MODE call to the CICS dispatcher. This request has failed.

System Action: This is a severe error. CICS is unable to continue processing because it must be running on the QR TCB in order to do so. CICS is terminated with a dump.

The dispatcher domain has put out messages to describe the failure in the CHANGE_MODE request.

User Response: See the messages issued by the dispatcher domain for further guidance.

Destination: Console

Modules: DFHFCRO, DFHFCCA, DFFCRV, DFHFCFS

XMEOUT Parameter: *applid*

DFHFC0173 *date time applid* **VSAM has issued a** *{deadlock | timeout | locked}* **response but cannot supply problem determination data.**

Explanation: After certain failures, VSAM normally provides problem determination information which CICS uses to issue diagnostic messages and create exception trace entries.

However, although VSAM set a return code indicating that a failure occurred, it is unable to provide any problem determination information.

The failure detected by VSAM RLS is one of the following:

- A deadlock - CICS normally issues message DFHFC0166 and two or more DFHFC0167 messages.
- A timeout - CICS normally issues message DFHFC0164 and one or more DFHFC0165 messages.
- A record locked by a retained lock - CICS normally issues message DFHFC0169.

System Action: CICS continues processing the error in the normal way but cannot issue any of the normal problem determination messages or create the usual exception trace entries.

CICS does not take a dump. However, you can request a dump via the dump table in the usual way.

User Response: This indicates an error in VSAM RLS. You may wish to take a dump of the SMSVSAM server. See the appropriate DFSMS/MVS manual for further guidance.

Destination: CSFL

Module: DFHFCRS

XMEOUT Parameters: *date, time, applid, {1=deadlock, 2=timeout, 3=locked}*

DFHFC0174 *date time applid tranid trannum termid userid* **A deadlock has occurred as a result of a lock promote failure. There are** *nnn* **transactions holding this lock.**

Explanation: This message and the following DFHFC0165 messages are issued to assist in problem determination when transactions abend with the AFCW abend code or receive RECORDBUSY response as NOSUSPEND was specified.

An attempt made by transaction *tranid* with transaction number *trannum* to update a file which is open in VSAM RLS mode has failed because VSAM has detected a deadlock while attempting to promote a shared lock to become an exclusive lock.

VSAM RLS returns problem determination information to CICS to assist with debugging the deadlock. However, this type of deadlock looks to VSAM like a timeout and thus the information returned to CICS looks like the information returned after a timeout. Hence this message is followed by one or more DFHFC0165 messages instead of the DFHFC0167 messages which follow other types of deadlocks.

When the deadlock occurred there were *nnn* other transactions holding the required lock.

System Action: The transaction receives an AFCW abend or RECORDBUSY response.

CICS displays message DFHFC0174 to identify the failing transaction and the number of owners of the lock. CICS also issues message DFHFC0165 once for each lock owner. CICS issues message DFHFC0168 instead of DFHFC0165 in the unlikely event that VSAM RLS is unable to identify the lock owner.

User Response: The following DFHFC0165 messages identify the transactions that are holding the required lock and the CICS systems that they are running in. Examine these transactions to determine why they are not releasing VSAM RLS locks. Examine other RLS resources they acquire to determine whether this could cause a deadlock with the failing transaction.

Module: DFHAFMT.

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, filename*

DFHFC0207 *date time applid terminal userid tranid* **AFCT entry for** *filename* **has been deleted.**

Explanation: This message provides a record of the dynamic deletion of a remote file *filename*.

This occurs when a remote file, which already exists in the system, is being deleted using RDO.

System Action: Processing continues.

User Response: None.

Destination: CSFL

Module: DFHAFMT.

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, filename*

DFHFC0208I *applid* **LSR pool** *n* **is being built dynamically by CICS because all of the necessary parameters have not been supplied. Either there is no LSRPOOL definition or it is incomplete. The following are not defined:** *'CISIZE"STRINGS"MAXKEYLENGTH'***. A delay is possible.**

Explanation: If one or more of the parameters, CI size, strings and maxkeylength are not defined for a LSR pool, either because there is no LSRPOOL definition or it is incomplete, then CICS will calculate the size by using information from the VSAM Catalog for data sets allocated to this LSR pool.

System Action: CICS will issue SHOWCATS to obtain the information necessary to calculate the LSR pool size. If any data sets have been migrated the SHOWCAT could take longer than expected.

User Response: If there are severe delays due to SHOWCAT processing, you will have to wait for migrated data sets to be recalled, and for the calculation of the LSR pool size to complete. If you wish to avoid similar problems in the future, consider defining the LSR pool explicitly. The missing parameters are contained in this message.

Normally, you will not experience delays, in which case no user action is required.

You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHFCBD

XMEOUT Parameters: *applid, tranid, termid, filename*

DFHFC0302 *applid* **(***tranid termid***) CICS terminating. Failure while waiting for I/O operation on VSAM file '***filename***'.**

Explanation: A DISASTER type error occurred when the transaction *tranid* was waiting for the completion of an I/O operation on the VSAM file whose file name and data set name appear in message DFHFC0305 which follows this message. *termid* identifies the terminal running this transaction.

System Action: CICS is terminated with a system dump (dump code FC0302).

User Response: This problem was caused by an earlier error. Look for earlier messages and return codes (for example, from the dispatcher domain) and associated trace entries and dumps.

If the problem cannot be traced to an application error, you will require further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCVR

XMEOUT Parameters: *applid, tranid, termid, filename*

DFHFC0303 *applid* **(***tranid termid***) CICS terminating. Failure while waiting for I/O operation on BDAM file '***filename***'.**

Explanation: A DISASTER type error occurred when transaction *tranid* was waiting for the completion of an I/O operation on BDAM file *filename*.

termid identifies the terminal running this transaction.

System Action: CICS is terminated with a system dump (dump code FC0303).

User Response: This problem was caused by an earlier error. Look for earlier messages and return codes (for example, from the dispatcher domain) and associated trace entries and dumps.

If the problem cannot be traced to an application error, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCBD

XMEOUT Parameters: *applid, tranid, termid, filename*

DFHFC0304 *applid* **Dump taken in** *module_name* **due to a file control OPEN/CLOSE error.**

Explanation: This message is issued after DFHFCFS has made an OPEN or CLOSE request which has completed with an error. The specific error is identified by another message. In most cases the other message appears before this message, but if the error occurs during the building of a shared resources pool, the other message appears after this message.

The failure is identified as one of the following:

- An invalid request (not OPEN or CLOSE) has been sent
- There has been a subtask failure
- There has been a system failure other than “DSNAME NOT FOUND” or “VSAM CATALOG DOMAIN NOT FOUND”.
- There has been a failure during shared resources pool building.

System Action: A trace entry is made and a dump is taken with dumpcode FC0304.

User Response: Locate the fault by examining the trace entry and the dump.

Destination: Console

Modules: DFHFCL, DFHFCM, DFHFCN

XMEOUT Parameters: *applid, module_name*

DFHFC0305 *applid* **Message** *msgno* **file '***filename***' dsname '***dataset***'.**

Explanation: This message follows message DFHFC0300, DFHFC0302, DFHFC0307, DFHFC0308 or DFHFC0309. It identifies the VSAM data set name referred to in those messages.

If this message follows DFHFC0300 or DFHFC0302, it is issued from DFHFCVR.

If this message follows DFHFC0308 or DFHFC0309, it is issued from DFHFCRV.

If this message follows DFHFC0307, it is issued from DFHFCVS.

System Action: Processing continues in the way specified in the preceding message from the list above, whichever is applicable.

User Response: Find the earlier message to which this information refers and follow the user response for that message.

Destination: Console

Modules: DFHFCVR, DFHFCVS, DFHFCRV

XMEOUT Parameters: *applid, msgno, filename, dataset*

DFHFC0307 *applid* **I/O error on file '***filename***', component code** *X'code'***. File is temporarily disabled.**

Explanation: An I/O error was reported by VSAM after a request to update VSAM file *filename*.

The file has been specified with LSR so VSAM has not released the buffers it assigned to process the request. Therefore, CICS must take special action to release them.

The name of the data set associated with the file is in message DFHFC0305 which follows, although the error may have been encountered elsewhere. This is indicated by the value of the component code X'*code*'. Its possible values and the corresponding error locations are as follows.

- X'00' or X'01'—base cluster.
- X'02' or X'03'—alternate index.
- X'04' or X'05'—upgrade set.

System Action: Activity against the file is stopped, and the file is closed and then reopened in order to release the VSAM output buffers. Until the close has completed successfully, the file appears 'UNENABLED' to new would-be users and they receive a 'NOTOPEN' response to requests to use the file. The application request which encountered the error receives an 'IOERR' response.

User Response: The installation should follow its standard procedure for I/O errors. No special additional action is required to respond to this particular message although the data set name and component code may help in identifying the problem.

Destination: Console

Module: DFHFCVS

XMEOUT Parameters: *applid, filename, X'code'*

DFHFC0308 *applid tranid termid* **Purge deferred due to incomplete I/O operation on VSAM RLS file** *filename*

Explanation: An attempt has been made to purge a transaction using FORCE. Transaction *tranid* is currently waiting for completion of an I/O operation on the VSAM RLS file *filename*. *termid* identifies the terminal running this transaction. The data set name is included in message DFHFC0305 which follows this message.

System Action: The transaction waits until the I/O operation is completed before the purge is allowed to take effect. This is done to avoid a risk to data integrity. After the I/O operation is completed, the transaction is terminated with transaction abend code AFCY.

User Response: If the transaction does not terminate within a few seconds, the I/O wait might be genuine (for example, another CEC has reserved the DASD volume). If this is the case, wait until the I/O situation is relieved before trying again.

Alternatively, there may be a system problem that warrants terminating CICS and using emergency restart to guarantee data integrity. If this is the case, terminate CICS and perform an emergency restart.

Module: DFHFCRV

XMEOUT Parameters: *applid, tranid, termid, filename*

DFHFC0309 *applid tranid termid* **Failure while waiting for I/O operation on VSAM RLS file** *filename*

Explanation: A DISASTER type error occurred when the transaction *tranid* was waiting for the completion of an I/O operation on the VSAM RLS file *filename*

System Action: CICS returns to VSAM who completes the wait for the I/O operation on CICS behalf. Since VSAM rather than CICS completes the wait for I/O to complete, there may be a significant degradation in CICS performance until the operation completes.

User Response: This problem was caused by an earlier error. Look for earlier messages and return codes (for example, from the dispatcher domain) and associated trace entries and dumps.

If the problem cannot be traced to an application error, you will require further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCRV

XMEOUT Parameters: *applid, tranid, termid, filename*

DFHFC0310 *applid tranid termid* **Purge deferred due to incomplete I/O operation on the RLS control ACB.**

Explanation: An attempt has been made to purge a transaction using FORCE. Transaction *tranid* is currently waiting for completion of an I/O operation on the VSAM RLS control ACB.

termid identifies the terminal running this transaction.

System Action: The transaction waits until the I/O operation is completed before the purge is allowed to take effect. This is done to avoid a risk to data integrity. After the I/O operation is completed, the transaction is terminated with transaction abend code AFCY.

User Response: If the transaction does not terminate within a few seconds, the VSAM wait might be genuine (for example, certain requests may take a fairly long time to complete). If this is the case, wait until the VSAM request has completed before trying again.

Alternatively, there may be a system problem that warrants terminating CICS and using emergency restart to guarantee data integrity. If this is the case, terminate CICS and perform an emergency restart.

Destination: Console

Module: DFHFCCA

XMEOUT Parameters: *applid, tranid, termid*

DFHFC0311 *applid tranid termid* **Failure waiting for I/O operation on the RLS control ACB.**

Explanation: A DISASTER type error occurred when the transaction *tranid* was waiting for the completion of an I/O operation on the VSAM RLS control ACB.

System Action: CICS returns to VSAM and VSAM completes the wait for the I/O operation on CICS behalf. Since VSAM rather than CICS completes the wait for I/O to complete, there may be a significant degradation in CICS performance until the operation completes.

User Response: This problem was caused by an earlier error. Look for earlier messages and return codes (for example, from the dispatcher domain) and associated trace entries and dumps.

If the problem cannot be traced to an application error, you will require further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCCA

XMEOUT Parameters: *applid, tranid, termid*

DFHFC0312 *applid* **Message** *msgno* **data set** *dsname*

Explanation: This message follows message DFHFC0152 or DFHFC0160. It identifies the VSAM data set name referred to in those messages.

System Action: Processing continues as specified in either DFHFC0152, or DFHFC0160.

User Response: Find the earlier message to which this information refers and follow the user response for that message.

Destination: Console

Module: DFHFCCA

XMEOUT Parameters: *applid, msgno, dsname*

DFHFC0400 *applid* **This CICS system is not authorized to provide shared access to data tables - reason code** *X'code'***.**

Explanation: CICS is about to open a data table but has been unable to make provision for sharing the table with other CICS systems because a security check for update access to the resource name DFHAPPL.*applid* has failed. The value of the reason code, X'*code*', provides further information on the reason for the failure of the security check. It has the format X'*ffrraaaa*' where *ff* identifies the authorization check which failed, *rr* gives the register 15 return code from SAF, and *aaaa* is the SAFPRRET value.

The values of X'*ff*' are

X'01' Access was refused by an AUTH security check.

X'02' Access was refused by a FASTAUTH security check.

System Action: CICS continues normally but no other CICS systems are able to share any data tables it creates until authority is granted and a table is subsequently opened.

User Response: Ensure that CICS has the necessary authorization to provide shared access to data tables. Refer to the description of either the AUTH or FASTAUTH macro in the RACF documentation for explanations of the values that were reported in the reason code, X'*code*', and to determine the changes to the security definitions or setup that are required to allow the CICS system to act as a shared data table server (assuming that this is desired).

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, X'code'*

DFHFC0401 *applid* **This CICS system is now authorized to provide shared access to data tables.**

Explanation: CICS is about to open a data table. On a previous occasion message DFHFC0400 was issued because authorization checks failed preventing this CICS system from making provision for sharing its data tables with any other CICS system. The check has been retried successfully.

System Action: CICS continues normally. Subject to specific authorization checks, other CICS systems are now able to share this system's data tables.

User Response: None.

Destination: Console

Module: DFHFCFS

XMEOUT Parameter: *applid*

DFHFC0402 *applid* **CICS cannot provide shared access to data tables because CICS is not defined as an MVS subsystem.**

Explanation: CICS is about to open a data table but has been unable to make provision for sharing the table with other CICS systems because CICS has not been defined as an MVS subsystem.

System Action: CICS continues normally but no other CICS systems are able to share any data tables it creates.

User Response: CICS must be defined as an MVS subsystem in order to permit the sharing of data tables between CICS systems.

See the *CICS Shared Data Tables Guide* for more guidance.

Destination: Console

Module: DFHFCFS

XMEOUT Parameter: *applid*

DFHFC0403 *applid* **CICS cannot provide shared access to remote data tables because CICS is not defined as an MVS subsystem.**

Explanation: CICS is about to access a remote file resource. However, shared data tables cannot be used to access any remote tables because CICS has not been defined as an MVS subsystem.

If this message is issued on a CICS system at release 3.2.1, it means that the shared data tables module DFHDTINS is installed in the LPA or in the load library used by this CICS system, and has therefore been loaded by mistake.

System Action: CICS continues normally and function ships this and subsequent remote file requests.

User Response: CICS must be defined as an MVS subsystem in order to permit the sharing of data tables between CICS systems.

If the message was issued by a CICS/ESA 3.2.1 system, check where the DFHDTINS module is located. If DFHDTINS is in the load library specified by this CICS, it should be removed: shared data tables support cannot be installed on a CICS system at a lower level than 3.3. If it is in the link pack area (LPA) of this MVS system, it should be removed: the DFHDTINS module should not be placed in the LPA of an MVS system which contains any CICS regions at release 3.2.1 which might want to use data tables, unless a PTF has been applied to the CICS 3.2.1 regions.

Destination: Console

Module: DFHFCFS

XMEOUT Parameter: *applid*

DFHFC0405 *applid* **This CICS system cannot provide shared access to data tables because an earlier job step has used MVS cross-memory services.**

Explanation: CICS is prevented from using shared data tables because of the use of MVS cross-memory services by an earlier job step. CICS has attempted to create an entry table during LOGON as a shared data table server, but this has resulted in an MVS 052 ABEND because a prior jobstep owned space-switching entry tables. (MVS does not allow subsequent job steps to establish a cross-memory environment.)

System Action: CICS continues normally but other CICS systems are unable to gain shared access to any data tables that this CICS system creates.

User Response: In order to use the shared access to data tables feature, review the sequence of job steps in the job which includes this CICS system.

See the *CICS Shared Data Tables Guide* and also the explanation of system abend code 052, reason code 0314 in *MVS System Codes* for more guidance.

Destination: Console

Module: DFHFCFS

XMEOUT Parameter: *applid*

DFHFC0406 *applid* **This CICS system is not authorized for shared access to any data tables owned by the CICS system with applid** *applid2* **- reason code** *X'code'***.**

Explanation: A file request for a remote file resource is about to be passed to a CICS system with the specified applid. The remote system has registered as a shared data table server, but this system cannot access any of its tables because a security check for read access to the resource name DFHAPPL.*applid2* has failed, where *applid2* is the applid of the data table owning CICS system. The value of the reason code, X'*code*', provides further information on the reason for the failure of the bind security check. It has the format X'*ffrraaaa*' where *ff* identifies the authorization check which failed, *rr* gives the register 15 return code from SAF, and *aaaa* is the SAFPRRET value.

The values of X'*ff*' are

X'01' Access was refused by an AUTH security check.

X'02' Access was refused by a FASTAUTH security check.

User Response: If it was intended that this CICS system should be able to access data tables owned by the system *applid2*, refer to the description of either the AUTH or FASTAUTH macro in the RACF documentation for explanations of the values that were reported in the reason code, X'*code*', and to determine what changes to the security definitions or setup are required.

System Action: CICS continues normally and function ships this and subsequent requests directed to the specified remote system until authority is granted. Access is retried after about 10 minutes.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, applid2, X'code'*

DFHFC0407 *applid* **This CICS system is now authorized for shared access to data tables owned by the CICS system with applid** *applid2***.**

Explanation: The security check which failed earlier and was reported in message DFHFC0406, has now succeeded. This system can now attempt to access shared data tables owned by the CICS system with applid *applid2*.

System Action: CICS continues normally. Subject to specific resource authorization checks, shared data tables owned by the remote CICS system can now be accessed by this system.

User Response: None.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, applid2*

DFHFC0408 *applid* **This CICS system is not authorized for shared access to remote file** *filename* **- reason code** *X'code'***.**

Explanation: A file request to the specified remote file resource has just been processed. The file owning region contains shared data tables. An attempt was made to connect to any data table associated with the file but the connecting region failed the security check for shared access to the file resource. However, function shipped access was not similarly prevented.

This message can be issued whether or not the remote file has an associated data table. This is because it is not possible to determine whether a table exists until cross-memory linkage has been established to the file owning region, and this is only done after a connection attempt has passed all security checks. Once cross-memory linkage has been set up, any further connection attempts can first check whether a table exists. The shared access security check is then only needed when a data table is known to be available.

The value of the reason code, X'*code*', provides further information on the reason for the failure of the file security check. It has the format X'*ffrraaaa*'; where *ff* identifies the userid that was refused access, *rr* gives the register 15 return code from SAF, and *aaaa* is the SAFPRRET value.

The values of X'*ff*' are

X'01' The requesting system's own userid was refused read access to the remote file *filename*.

X'02' The default userid of the CICS system which owns the remote file *filename* was used in the security check for read access to the file, and access was refused.

System Action: CICS continues normally and function ships this and subsequent requests directed to the specified remote file until authority to use shared access is granted. Access is retried after about 10 minutes.

User Response: Check whether shared access from this system to the specified file is intended. If it is, use the additional information provided in the reason code to determine what changes to the security definitions or set-up are required.

See the *CICS Shared Data Tables Guide* for an explanation of the rules determining which userid is used for a file security check.

Destination: Console

Module: DFHEIFC

XMEOUT Parameters: *applid, filename, X'code'*

DFHFC0409 *applid* **This CICS system is now authorized for shared access to remote file** *filename***.**

Explanation: The security check which failed earlier, and was reported in message DFHFC0408, has now succeeded. This system can now use shared access to the specified table.

System Action: CICS continues normally.

User Response: None.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename*

DFHFC0410 *applid* **Data table cannot be opened. Data table initialization has failed for reason** *X'code'***.**

Explanation: CICS is about to open a data table but has been unable to initialize shared data table services. The value of the reason code, X'*code*', provides further information about why CICS was unable to initialize shared data table services.

The format of the reason code is either: X'*ffaaaaaa*', in which *ff* is a value less than X'80' that identifies the type of failure, and *aaaaaa* is additional information provided for some of the failures, or when an abnormal termination (abend) has occurred, X'*axxxrrrr*' in which *a* is a value greater than or equal to X'8' that categorizes the type of abend, *rrrr* contains any register 15 abend reason code, and *xxx* contains the system or user completion code as three hexadecimal digits.

When X'*code*' < X'80000000', the values of X'*ff*' are:

X'01' An unexpected failure occurred. This code is reported when the data tables SVC detects an unexpected error.

X'04' An error was returned by the MVS RESMGR macro, called to establish an MVS resource manager for end-of-task processing. The first byte of the additional information, X'*aa0000*' contains the low order byte of the register 15 return code from the MVS RESMGR macro.

X'06' An error was returned by the CICS SVC. The first byte of the additional information, X'*aa0000*' is the register 15 return code from the attempt to call the CICS SVC.

X'08' An error was returned by the MVS DSPSERV macro. The additional information in the reason code consists of 1 byte containing the register 15 return code followed by 2 bytes containing the middle bytes from the register 0 reason code returned by DSPSERV.

X'09' An error was returned by the MVS ALESERV macro, called to create an access list entry either for the data space or for references to the primary address space. The additional information in the reason code consists of one byte containing the register 15 return code followed by two bytes containing the ALESERV function code (service type) and qualifier (options) which identify the failing request.

X'0E' An attempt to serialize the use of shared data table services (thus ensuring that only one TCB per address space can use the services) has failed. The first byte of additional information contains the ENQ return code.

When X'*code*' ≥ X'80000000', the values of X'*a*' are formed from combinations of:

X'8' An abend was detected.

X'4' A user abend was detected, in which case *xxx* contains the hexadecimal equivalent of the user completion code (otherwise, *xxx* contains the hexadecimal system completion code).

X'2' An abend was detected but could not be analyzed fully because no SDWA was available.

X'1' An asynchronous abend was detected (otherwise, the abend was synchronous or could not be classified because there was no SDWA).

System Action: CICS continues normally. This message is followed either by message DFHFC0931 or by DFHFC0932. The following message indicates the action taken for the table involved. A system dump is taken for unexpected errors (X'*ff*' =X'01') and for abends (if dumps are requested for that abend code).

User Response: The response depends on the reason for the failure as indicated in the first byte of the reason code:

X'01' Use the system dump to help you determine the cause of the problem.

X'04' Refer to the documentation of the MVS RESMGR macro to interpret the low-order byte of the register 15 return code reported in the reason code.

X'06' The most likely reason for a failure of the CICS SVC call is that the data tables SVC module DFHDTSVC could not be loaded, in which case the return code value is X'02'. If this is the case, check that the DFHDTSVC module is in the LPA or in an authorized library in the link list of the MVS system. If the module is in the correct location, investigate why it could not be loaded. There might be a hardware fault on the disk. Another less likely value for the return code is X'06', which implies that DFHDTSVC has been relink-edited and not marked reentrant.

X'08' Refer to the documentation of the MVS DSPSERV macro to interpret the register 0 and register 15 return codes reported in the additional information part of the reason code.

X'09' The function code (service type) and qualifier (options) reported in the reason code can be used to determine which ALESERV request was being attempted. Refer to the MVS ALESERV documentation and macro to interpret the function code, qualifier, and register 15 return code reported in the reason code.

X'0E' This might indicate that the limit on the number of ENQs per address space has been reached, or that another TCB running in this CICS address space has already initialized as a requester of shared data table services.

≥ **X'80'** When the reason code indicates that an abend has been detected, use the additional information provided in the reason code to find out what the abend was, and refer to information on that abend code to determine the cause.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, X'code'*

DFHFC0411 *applid* **Data table cannot be opened. Data table initialization has failed owing to a storage failure - reason code** *X'code'***.**

Explanation: CICS is about to open a data table but has been unable to initialize shared data table services because of a failure to obtain storage. The value of the reason code, X'*code*', provides further information about the type of storage which could not be obtained.

The format of the reason code is X'*ttnnnnnn*' in which *tt* identifies the type of storage and, for some of the codes, *nnnnnn* gives the hexadecimal size in bytes of the storage which could not be obtained. For fixed-length storage blocks, the reason code does not usually report the size.

The values of X'*tt*' are:

X'01' Private storage from MVS subpool 230 (key 0) for a work area used by the data tables SVC

X'02' Private storage from MVS subpool 0 for the local header block used by a shared data table server

X'03' Private storage from MVS subpool 0 for a pool for data table blocks

X'04' Private storage from MVS subpool 0 for a pool for file blocks

X'08' MVS/ESA data space storage

X'09' Private storage from MVS subpool 230 (key 0) for a region anchor

X'11' Private storage from MVS subpool 0 for a dummy recovery block

X'12' Storage from MVS subpool 252 required to load the DFHDTAM load module

X'13' Private storage from MVS subpool 230 (CICS key) for a parameter list used by the data tables SVC

X'14' Private storage from MVS subpool 230 (key 0) for a new ALET list section

System Action: CICS continues normally. This message is followed either by message DFHFC0931 or by DFHFC0932. The following message indicates the action taken for the table involved.

User Response: The response depends on the type of storage indicated by the reason code. If it indicates private storage, you should reconsider the various region size parameters which have been specified on the CICS job, or have been set as defaults for the system by IEALIMIT or the IEFUSI installation exit. It might be necessary to take an SDUMP of the CICS job and process it using the VERBEXIT VSMDATA in order to investigate the way in which MVS storage has been allocated to the various subpools.

If it indicates data space storage, check whether the size of data spaces in this MVS system has been limited by use of the IEFUSI installation exit.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, X'code'*

DFHFC0412 *applid* **Data table cannot be opened. Data table initialization has failed owing to a module loading failure - reason code** *X'code'***.**

Explanation: CICS is about to open a data table but a module loading failure has prevented the initialization of shared data table services. The value of the reason code, X'*code*', provides further information about which module was being loaded, and what went wrong with the attempt to load it.

The format of the reason code is X'*mfrraaaa*' in which *m* identifies the module and *f* is a code for the type of failure. For some failures, *rr* contains the register 15 return code from the failing macro call, and *aaaa* might contain additional information.

The value of X'*m*' can be:

X'1' DFHDTFOR

X'2' DFHDTAM

X'6' DFHMVRMS

The values of X'*f*' are:

X'1' module not found by a LOAD, BLDL or CSVQUERY macro call.

X'2' an error was returned by the MVS LOAD macro. The two bytes X'*aaaa*' of additional information in the reason code contain the completion code from the LOAD. X'*rr*' is the register 15 return code.

X'3' an error was returned by the MVS CSVQUERY macro. X'*rr*' is the register 15 return code.

X'4' an error was returned by the MVS BLDL macro. The two bytes X'*aaaa*' of additional information in the reason code contain the R0 reason code returned by BLDL.

X'5' the module is not reentrant.

X'6' the module had the wrong AMODE.

X'7' the module had the wrong RMODE.

Note for CICS/ESA 3.2.1 users: There is an additional code of X'08000000' which is only seen on a CICS/ESA 3.2.1 system that has DFHDTINS installed in the LPA or in its load library, and has mistakenly loaded this module.

System Action: CICS continues normally. This message is followed either by message DFHFC0931 or by DFHFC0932. The following message indicates the action taken for the table involved.

User Response: The response depends on the reason for the failure as indicated in the second hex digit of the reason code:

X'1' Use the first hex digit to determine which module could not be found, and ensure that it is in the correct library.

X'2' Refer to the documentation of the MVS LOAD macro to interpret the return and completion codes given in the reason code. There might also be a message from the MVS LOAD which explains the reason for the failure.

X'3' Refer to the documentation of the MVS CSVQUERY macro to interpret the return code given in the second byte of X'*code*'.

X'4' This indicates an I/O error or a storage allocation failure. Refer to the documentation of the MVS BLDL macro to interpret the values in the reason code X'*code*'.

X'5', X'6', X'7' Use the first digit of the reason code to determine the name of the module, then check the status of that module. These errors imply that it is

either not the module which was supplied with CICS or that it has become corrupted.

Note for CICS/ESA 3.2.1 users: If the reason code was X'08000000', the shared data tables module DFHDTINS has been incorrectly installed in a library which is used by this CICS/ESA 3.2.1 system. If DFHDTINS is in the load library specified by this CICS, it should be removed: shared data tables support cannot be installed on a CICS system at a lower level than 3.3. If it is in the link pack area (LPA) of this MVS system, it should be removed: the DFHDTINS module should not be placed in the LPA of an MVS system which contains any CICS regions at release 3.2.1 which might want to use data tables, unless a PTF has been applied to the CICS 3.2.1 regions

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, X'code'*

DFHFC0415 *applid* **Remote data tables cannot be accessed. Shared data table initialization has failed for reason** *X'code'***.**

Explanation: CICS is about to access a remote file resource which may have an associated shared data table. However, shared data tables cannot be used to access any remote tables because CICS has been unable to initialize data table services. The value of the reason code, X'*code*', provides further information about why this CICS region was unable to perform the initialization required to act as a requester of shared data table services.

The format of the reason code is either: X'*ffaaaaaa*' in which *ff* is a value less than X'80' that identifies the type of failure, and *aaaaaa* is additional information provided for some of the failures; or, when an abnormal termination (ABEND) has occurred, X'*axxxrrrr*' in which *a* is a value greater than or equal to X'8' that categorizes the type of abend, *rrrr* contains any register 15 abend reason code, and *xxx* contains the system or user completion code as three hexadecimal digits.

When X'*code*' < X'80000000', the values of X'*ff*' are:

X'01' An unexpected failure occurred. This code is reported when the data tables SVC detects an error which should never occur.

X'06' An error was returned by the CICS SVC. The first byte of the additional information, *aa0000*, is the register 15 return code from the attempt to call the CICS SVC.

X'0E' An attempt to serialize the use of shared data table services (thus ensuring that only one TCB per address space can use the services) has failed. The first byte of additional information contains the ENQ return code.

When X'*code*' ≥ X'80000000', the values of X'*a*' are formed from combinations of:

X'8' An abend was detected.

X'4' A user abend was detected, in which case *xxx* contains the hexadecimal equivalent of the user completion code (otherwise, *xxx* contains the hexadecimal system completion code).

X'2' An abend was detected but could not be analyzed fully because no SDWA was available.

X'1' An asynchronous abend was detected (otherwise, the abend was synchronous or could not be classified because there was no SDWA).

System Action: CICS continues normally and function ships this and subsequent remote file requests. Initialization is retried after about 10 minutes. A system dump is taken for unexpected errors (X'*ff*' =X'01') and for abends (if dumps are requested for that abend code).

User Response: The response depends on the reason for the failure as indicated in the first byte of the reason code:

X'01' Use the system dump to help you determine the cause of the problem.

X'06' The most likely reason for a failure of the CICS SVC call is that the data tables SVC module DFHDTSVC could not be loaded, in which case the return code value is X'02'. If this is the case, check that the DFHDTSVC module is in the LPA or in an authorized library in the link list of the MVS system. If the module is in the correct location, then investigate why it could not be loaded; possibly there might be a hardware fault on the disk. Another less likely value for the return code is X'06', which implies that DFHDTSVC has been relink-edited and not marked reentrant.

X'0E' This might indicate that the limit on the number of ENQs per address space has been reached, or that another TCB running in this CICS address space has already initialized as a requester of shared data table services.

≥ **X'80'** When the reason code indicates that an abend has been detected, use the additional information provided in the reason code to find out what the abend was, and refer to information on that abend code to determine the cause.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, X'code'*

DFHFC0416 *applid* **Remote data tables cannot be accessed. Shared data table initialization has failed owing to a storage failure - reason code** *X'code'***.**

Explanation: CICS is about to access a remote file resource. However, a failure to get storage has prevented CICS from initializing shared data table services. The value of the reason code, X'*code*', provides further information about the type of storage which could not be obtained:

The format of the reason code is X'*ttnnnnnn*' in which *tt* identifies the type of storage and, for some of the codes, *nnnnnn* gives the hexadecimal size in bytes of the storage which could not be obtained. For storage blocks whose length is fixed, the reason code does not usually report the size.

The values of X'*tt*' are:

X'01' Private storage from MVS subpool 253 (below the 16MB line) for a work area required by module DFHQSSS

X'02' Private storage from MVS subpool 0 for the shared data table header block required for this CICS to act as a data tables requester

X'09' Private storage from MVS subpool 230 (key 0) for a region anchor

X'0A' ECSA storage from subpool 241 (key 0) for a qualified subsystem block

X'0B' ECSA storage from MVS subpool 241 (key 0) for a system anchor

X'0E' Private storage from MVS subpool 230 (key 0) for a connect header block

System Action: CICS continues normally and function ships this and subsequent remote file requests. Initialization is retried after about 10 minutes.

User Response: The response depends on the type of storage indicated by the reason code.

If it indicates private storage, you should reconsider the various region size parameters which have been specified on the CICS job or have been set as defaults for the system by IEALIMIT or the IEFUSI installation exit. It might be necessary to take an SDUMP of the CICS job and process it using the VERBEXIT VSMDATA in order to investigate the way in which MVS storage has been allocated to the various subpools.

If it indicates ECSA (extended common service area) storage, you should review the CSA size specified in system parameter list IEASYSxx, or by use of the CSA override on initialization of the MVS system. You should also review the size of the ESQA, since the system might have started to use ECSA storage if the ESQA storage is depleted.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, X'code'*

DFHFC0417 *applid* **Remote data tables cannot be accessed. Shared data table initialization has failed owing to a module loading failure - reason code** *X'code'***.**

Explanation: CICS is about to access a remote file resource. However, shared data tables cannot be used to access any remote tables because a module loading failure prevents CICS from initializing data table services.

The value of the reason code, X'*code*', provides further information about which module was being loaded, and what went wrong with the attempt to load it.

The format of the reason code is X'*mfrraaaa*' in which *m* identifies the module and *f* is a code for the type of failure. For some failures, *rr* contains the register 15 return code from the failing macro call, and *aaaa* might contain additional information.

The value of X'*m*' can be:

X'3' DFHDTAOR

X'4' DFHDTCV

The values of *f* are:

X'1' module not found by LOAD

X'2' an error was returned by the MVS LOAD macro. The two bytes X'*aaaa*' of additional information in the reason code contain the completion code from the LOAD. X'*rr*' contains the register 15 return code

X'5' the module is not reentrant.

X'6' the module had the wrong AMODE.

System Action: CICS continues normally and function ships this and subsequent remote file requests. Initialization is retried after about 10 minutes.

User Response: The response depends on the reason for the failure as indicated in the second hex digit of the reason code:

X'1' Use the first hex digit to determine which module could not be found, and ensure that it is in the correct library.

X'2' Refer to the documentation of the MVS LOAD macro to interpret the return and completion codes reported in the reason code. There might also be a message from the MVS LOAD which explains the reason for the failure.

X'5', X'6' Use the first digit of the reason code to determine the name of the module, then check the status of that module. This error implies that it is either not the module which was supplied with CICS or that it has become corrupted.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, X'code'*

DFHFC0420 *applid* **Shared access to data tables cannot be provided by this CICS system because it has not been registered as a shared data table server - reason code** *X'code'***.**

Explanation: CICS is about to open a data table but has been unable to do so because this CICS system has not been registered as a shared data table server. The value of the reason code, X'*code*', provides further information about why this CICS system was unable to register (LOGON) as a shared data table server.

The format of the reason code is either: X'*ffaaaaaa*' in which *ff* is a value less than X'80' that identifies the type of failure, and *aaaaaa* is additional information provided for some of the failures; or, when an abnormal termination (ABEND) has occurred, X'*axxxrrrr*' in which *a* is a value greater than or equal to X'8' that categorizes the type of ABEND, *rrrr* contains any register 15 ABEND reason code, and *xxx* contains the system or user completion code as three hexadecimal digits.

When X'*code*' < X'80000000', the values of X'*ff*' are:

X'01' This code is reported when the data tables SVC detects an unexpected error.

X'02' Another region within the MVS image with the same APPLID as this region is already registered (logged on) as a shared data tables server.

X'03' DFHDTRM has supplied the data tables SVC with an invalid address for the PC vector, or the PC vector specifies an invalid number of entry table entries (ETEs). In the latter case, X'*aaaaaa*' contains the number of ETEs that were requested.

X'04' A failure occurred when attempting to establish an MVS resource manager for end-of-memory processing. The first byte of the additional information, X'*aa0000*' contains the low order byte of the register 15 return code from the MVS RESMGR macro.

X'05' A failure occurred when attempting to make the server address space permanently non-swappable. The additional information, X'*aaaaaa*', contains the low order 3 bytes of the code posted in an ECB that was specified when the SYSEVENT TRANSWAP macro was issued.

X'06' An error was returned by the CICS SVC. The first byte of the additional information, X'*aa0000*' is the register 15 return code from the attempt to call the CICS SVC.

X'0D' An error occurred when issuing an MVS ENQ to ensure that, at any given time, only one server per MVS system can be active for a given APPLID. The first byte of the additional information, X'*aa0000*' contains the return code from ENQ.

X'10' An attempt to create the environment for shared data tables connect security checks has found that the security environment has already been set up.

X'11' There is a disparity between the actual version of the CICS security block and the version which was used to assemble the shared data tables module DFHDTXS.

When X'*code*' ≥ X'80000000', the values of X'*a*' are formed from combinations of:

X'8' An ABEND was detected.

X'4' A user ABEND was detected, in which case *xxx* contains the hexadecimal equivalent of the user completion code (otherwise, *xxx* contains the hexadecimal system completion code).

X'2' An ABEND was detected but could not be analyzed fully because no SDWA was available.

X'1' An asynchronous ABEND was detected (otherwise, the abend was synchronous or could not be classified because there was no SDWA).

System Action: CICS continues normally and attempts to open the table for local use only. A system dump is taken for unexpected errors (X'*ff*' =X'01') and for ABENDs (if dumps are requested for that ABEND code).

User Response: The response depends on the reason for the failure as indicated in the first byte of the reason code:

X'01' Use the system dump to help you determine the cause of the problem.

X'02' There cannot be more than one region with a given APPLID acting as a shared data table server within the same MVS image.

X'03' This error might indicate that some corruption of the system has occurred, or that there is an error in CICS code.

X'04' Refer to the documentation of the MVS RESMGR macro to interpret the return code reported in the additional information part of the reason code.

X'05' Refer to the documentation of the MVS SYSEVENT macro to interpret the ECB contents reported in the additional information part of the reason code.

X'06' Server initialization should have been completed before LOGON is issued, so CICS SVC errors associated with the loading of the data tables SVC module DFHDTSVC should not be encountered. Therefore this error probably indicates a logic problem or corruption of your system.

X'0D' Refer to the documentation of the MVS ENQ macro to interpret the return code reported in the additional information part of the reason code.

X'10' This error might indicate that some corruption of the system has occurred, or that there is an error in CICS code.

X'11' This error might indicate that service has been applied which requires PTFs to both base CICS and the shared data tables code, and only one has been correctly updated, or that some corruption of the system has occurred, or that there is an error in CICS.

≥ X'80' When the reason code indicates that an ABEND has been detected, use the additional information provided in the reason code to find out what the ABEND was, and refer to information on that ABEND code to determine the cause.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, X'code'*

DFHFC0421 *applid* **Shared access to data tables cannot be provided by this CICS system because a storage failure has prevented it from registering as a shared data table server - reason code** *X'code'***.**

Explanation: CICS is about to open a data table but cannot do so because a failure to acquire storage has prevented the register of this CICS system as a shared data table server. The value of the reason code, X'*code*', provides further information about the type of storage which could not be obtained:

The format of the reason code is X'*ttnnnnnn*' in which *tt* identifies the type of storage and, for some of the codes, *nnnnnn* gives the hexadecimal size in bytes of the storage which could not be obtained. For storage blocks whose length is fixed, the reason code does not usually report the size.

The values of X'*tt*' are:

X'01' private storage from MVS subpool 253 (below the 16MB line) for a work area for module DFHQSSS or from MVS subpool 230 (key 0) for a work area used by the data tables SVC LOGON processing

X'0A' ECSA storage from MVS subpool 241 (key 0) for a qualified subsystem block

X'0B' ECSA storage from MVS subpool 241 (key 0) for a system anchor

X'0C' ECSA storage from MVS subpool 241 (key 0) for a server element

X'0D' ECSA storage from MVS subpool 241 (key 0) for a security block

System Action: CICS continues normally and attempts to open the table for local use only.

User Response: The response depends on the type of storage indicated by the reason code.

If it indicates private storage then you should probably reconsider the various region size parameters which have been specified on the CICS job, or have been set as defaults for the system by IEALIMIT or the IEFUSI installation exit. It might be necessary to take an SDUMP of the CICS job and process it using the VERBEXIT VSMDATA in order to investigate the way in which MVS storage has been allocated to the various subpools.

If it indicates ECSA (extended common service area) storage, you should review the CSA size specified in system parameter list IEASYSxx, or by use of the CSA override on initialization of the MVS system. You should also review the size of the ESQA, since the system might have started to use ECSA storage if the ESQA storage is depleted.

Module: DFHFCFS

XMEOUT Parameters: *applid, X'code'*

DFHFC0422 *applid* **Shared access to data tables cannot be provided by this CICS system because a module loading failure has prevented it from registering as a shared data table server - reason code** *X'code'***.**

Explanation: CICS is about to open a data table but cannot do so because a module loading failure has prevented the register of this CICS system as a shared data table server.

The value of the reason code, X'*code*', provides further information about which module was being loaded, and what went wrong with the attempt to load it.

The format of the reason code is X'*mfrraaaa*' in which *m* identifies the module and *f* is a code for the type of failure. For some failures, *rr* contains the register 15 return code from the failing macro call, and *aaaa* might contain additional information.

The value of X'*m*' can be:

X'5' DFHDTXS

The values of X'*f*' are:

X'1' module not found by LOAD

X'2' an error was returned by the MVS LOAD macro. The two bytes X'*aaaa*' of additional information in the reason code contain the completion code from the LOAD. X'*rr*' contains the register 15 return code.

X'5' the module is not reentrant.

X'6' the module had the wrong AMODE.

System Action: CICS continues normally and attempts to open the table for local use only.

User Response: The response depends on the reason for the failure as indicated in the second hex digit of the reason code:

X'1' Use the first hex digit to determine which module could not be found, and ensure that it is in the correct library.

X'2' Refer to the documentation of the MVS LOAD macro to interpret the return and completion codes given in the reason code. There might also be a message from the MVS LOAD which explains the reason for the failure.

X'5', X'6' Use the first digit of the reason code to determine the name of the module, then check the status of that module. This error implies that it is either not the module which was supplied with CICS or that it has become corrupted in some way.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, X'code'*

DFHFC0430 *applid* **Data table open request for file** *filename* **has failed for reason** *X'code'***.**

Explanation: CICS has attempted to create a data table for file resource *filename* but has been unable to do so.

System Action: CICS continues normally. This message is followed either by message DFHFC0931 or by DFHFC0932. The following message indicates the action taken for the specified table.

User Response: This indicates an internal error or a corruption of your system. You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, X'code'*

DFHFC0431 *applid* **Data table open request for file** *filename* **has failed owing to a storage failure - reason code** *X'code'***.**

Explanation: CICS has attempted to create a data table for file resource *filename* but has been unable to do so owing to a failure to get storage. There is insufficient storage above the 16MB line and the value of the reason code, X'*code*', provides further information about the type of storage which could not be obtained.

The format of the reason code is X'*ttnnnnnn*' in which *tt* identifies the type of storage and, for some of the codes, *nnnnnn* gives the hexadecimal size in bytes of the storage which could not be obtained. For storage blocks whose length is fixed, the reason code does not usually report the size.

The values of X'*tt*' are:

X'03' private storage from MVS subpool 0 for a data table block

X'04' private storage from MVS subpool 0 for a file block

X'05' private storage from MVS subpool 0 for a pool of backout cells (the pool is created if the file being opened is the first recoverable user-maintained table to be opened in this CICS run)

X'06' private storage from MVS subpool 0 for a pool of table entry descriptor blocks, or for a descriptor block to be used when loading the table

X'07' private storage from MVS subpool 0 for data table index storage

X'08' storage for a pool of data table records in the MVS/ESA data space

System Action: CICS continues normally. This message is followed either by message DFHFC0931 or by DFHFC0932. The following message indicates the action taken for the table involved.

User Response: The response depends on the type of storage indicated by the reason code.

If it indicates private storage then you should probably reconsider the various region size parameters which have been specified on the CICS job, or have been set as defaults for the system by IEALIMIT or the IEFUSI installation exit. It might be necessary to take an SDUMP of the CICS job and process it using the VERBEXIT VSMDATA in order to investigate the way in which MVS storage has been allocated to the various subpools.

If it indicates data space storage then check whether the size of data spaces in this MVS system has been limited by use of the IEFUSI installation exit.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, X'code'*

DFHFC0435 *applid* **Data table access request for remote file** *filename* **has failed for reason** *X'code'***.**

Explanation: An error has occurred while the requesting region was attempting to establish a connection to the remote file *filename* owned by the serving region. The value of the reason code, X'*code*', provides further information about why CICS was unable to connect to the remote file.

The format of the reason code is either: X'*ffaaaaaa*' in which *ff* is a value less than X'80' that identifies the type of failure, and *aaaaaa* is additional information provided for some of the failures; or, when an abnormal termination (ABEND) has occurred, X'*axxxrrrr*' in which *a* is a value greater than or equal to X'8' that categorizes the type of ABEND, *rrrr* contains any register 15 ABEND reason code, and *xxx* contains the system or user completion code as three hexadecimal digits.

When X'*code*' < X'80000000', the values of X'*ff*' are:

X'01' An unexpected failure occurred. This code is reported when the data tables SVC detects an error which should never occur.

X'06' An error was returned by the CICS SVC. The first byte of the additional information, *aa0000*, is the register 15 return code from the attempt to call the CICS SVC.

X'07' The connection index returned by the data tables SVC exceeds the maximum value supported by the calling module (2^{20} - 1).

X'0A' The scan of the chain of files owned by the serving region has failed because there is a permanently invalid entry on the chain which indicates that the chain has become damaged.

X'0B' The number of connections by this requesting CICS region to the remote file is already at the allowed maximum (2^{32} - 1).

X'0C' The vector which records details of all connections to shared data tables by this requesting CICS region needs expanding, but this would cause it to equal or exceed a size of 16MB.

X'0F' An attempt to serialize with termination of the server has failed because the number of ENQs has reached the address space limit. The first byte of the additional information, X'*aa0000*', contains the return code from the ENQ.

When X'*code*' ≥ X'80000000', the values of X'*a*' are formed from combinations of:

X'8' An ABEND was detected.

X'4' A user ABEND was detected, in which case *xxx* contains the hexadecimal equivalent of the user completion code (otherwise, *xxx* contains the hexadecimal system completion code).

X'2' An ABEND was detected but could not be fully analyzed because no SDWA was available.

X'1' An asynchronous ABEND was detected (otherwise, the abend was synchronous or could not be classified because there was no SDWA).

System Action: CICS continues normally and function ships this and subsequent remote file requests. Use of shared tables is retried after about 10 minutes. A system dump is taken for unexpected errors (X'*ff*' =X'01') and for ABENDs (if dumps are requested for that ABEND code).

User Response: The response depends on the reason for the failure as indicated in the first byte of the reason code:

X'01' Use the system dump to help you determine the cause of the problem.

X'06' Requester initialization should have been completed before CONNECT is issued, so CICS SVC errors associated with the loading of the data tables SVC module DFHDTSVC should not be encountered. Therefore this error probably indicates a logic problem or corruption of your system.

X'07' Some changes to your system configuration should be made, as this requesting region is trying to access too many shared data tables owned by other regions. It is necessary either to reduce the number of remote files being used, or to split the requesting CICS region into a number of smaller regions.

X'0A' This indicates corruption of subpool 0 storage in the server region.

X'0B' This indicates that either the requesting region contains more than 2^{32} - 1 remote file definitions, all of which refer to the same file in the server region, or that storage has been corrupted.

X'0C' Same response as X'07'.

X'0F' Refer to the documentation of the MVS ENQ macro to interpret the return code reported in the additional information part of the reason code.

≥ **X'80'** When the reason code indicates that an ABEND has been detected, use the additional information provided in the reason code to find out what the ABEND was, and refer to information on that ABEND code to determine the cause.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, X'code'*

DFHFC0436 *applid* **Data table access request for remote file** *filename* **has failed because of a storage failure - reason code** *X'code'***.**

Explanation: CICS has attempted to access the remote file resource *filename* but cannot do so because of a failure to get storage.

The value of the reason code, X'*code*', provides further information about the type of storage which could not be obtained:

The format of the reason code is X'*ttnnnnnn*' in which *tt* identifies the type of storage and, for some of the codes, *nnnnnn* gives the hexadecimal size in bytes of the storage which could not be obtained. For storage blocks whose length is fixed, the reason code does not usually report the size.

The values of X'*tt*' are:

X'01' Private storage from MVS subpool 230 (key 0) for a work area used by module DFHDTXS or for a work area used by data tables SVC CONNECT processing.

X'0F' Private storage from MVS subpool 230 (key 0) for a connect vector

System Action: CICS continues normally and function ships this and subsequent remote file requests. Use of shared tables is retried after about 10 minutes.

User Response: The response depends on the type of storage indicated by the reason code.

As it indicates private storage, you should probably reconsider the various region size parameters which have been specified on the CICS job, or have been set as defaults for the system by IEALIMIT or the IEFUSI installation exit. It might be necessary to take an SDUMP of the CICS job and process it using the VERBEXIT VSMDATA in order to investigate the way in which MVS storage has been allocated to the various subpools.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, X'code'*

DFHFC0440 *applid* **Data table close request for file** *filename* **has failed for reason** *X'code'***.**

Explanation: CICS has attempted to close a data table for file resource *filename* but has been unable to do so.

System Action: CICS continues normally. The table is treated as having been closed.

A system dump is taken for unexpected errors (X'*ff*' =X'01') and for abends (if dumps are requested for that abend code).

User Response: The response depends on the reason for the failure as indicated in the first byte of the reason code:

X'01' Use the system dump to help you determine the cause of the problem.

X'06' Server initialization should have been completed before LOGON is issued, so CICS SVC errors associated with the loading of the data tables SVC module DFHDTSVC should not be encountered. Therefore this error probably indicates a logic problem or corruption of your system.

X'09' The function code (service type) and qualifier (options) reported in the reason code can be used to determine which ALESERV request was being attempted. Refer to the MVS ALESERV documentation and macro to interpret the function code, qualifier, and register 15 return code reported in the reason code.

≥ **X'80'** When the reason code indicates that an ABEND has been detected, use the additional information provided in the reason code to find out what the ABEND was, and refer to information on that abend code to determine the cause.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, X'code'*

DFHFC0441 *applid* **Data table close request for file** *filename* **has failed owing to a storage failure - reason code** *X'code'***.**

Explanation: CICS has attempted to close a data table for file resource *filename* but has been unable to do so owing to a failure to release storage.

The format of the reason code is X'*ttnnnnnn*' in which *tt* identifies the type of storage and, for some of the codes, *nnnnnn* gives the hexadecimal size in bytes of the storage which could not be obtained. For storage blocks whose length is fixed, the reason code does not usually report the size.

The values of X'*tt*' are:

X'14' private storage from MVS subpool 230 (key 0) for a new ALET list section

System Action: CICS continues normally. The table is treated as having been closed.

User Response: You should probably reconsider the various region size parameters which have been specified on the CICS job, or have been set as defaults for the system by IEALIMIT or the IEFUSI installation exit. It may be necessary to take an SDUMP of the CICS job and process it using the VERBEXIT VSMDATA in order to investigate the way in which MVS storage has been allocated to the various subpools.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, X'code'*

DFHFC0445 *applid* **Data table disconnect request for remote file** *filename* **has failed for reason** *code***.**

Explanation: CICS has attempted to disconnect from the remote data table *filename* but has been unable to do so.

An error has occurred while the requesting region was attempting to break the connection to the remote file *filename* owned by the serving region. The value of the reason code, X'*code*', provides further information about why CICS was unable to disconnect from the remote file.

The format of the reason code is either: X'*ffaaaaaa*' in which *ff* is a value less than X'80' that identifies the type of failure, and *aaaaaa* is additional information provided for some of the failures; or, when an abnormal termination (ABEND) has occurred, X'*axxxrrrr*' in which *a* is a value greater than or equal to X'8' that categorizes the type of ABEND, *rrrr* contains any register 15 ABEND reason code, and *xxx* contains the system or user completion code as three hexadecimal digits.

When X'*code*' < X'80000000', the values of X'*ff*' are:

X'01' An unexpected failure occurred. This code is reported when the data tables SVC detects an error which should never occur.

X'06' An error was returned by the CICS SVC. The first byte of the additional information, *aa0000*, is the register 15 return code from the attempt to call the CICS SVC.

When X'*code*' ≥ X'80000000', the values of X'*a*' are formed from combinations of:

X'8' An ABEND was detected.

X'4' A user ABEND was detected, in which case *xxx* contains the hexadecimal equivalent of the user completion code (otherwise, *xxx* contains the hexadecimal system completion code).

X'2' An ABEND was detected but could not be analyzed fully because no SDWA was available.

X'1' An asynchronous ABEND was detected (otherwise, the abend was synchronous or could not be classified because there was no SDWA).

System Action: CICS continues normally. The table is treated as having been disconnected from the requesting CICS system. A system dump is taken for unexpected errors (X'*ff*' =X'01') and for ABENDs (if dumps are requested for that ABEND code).

User Response: The response depends on the reason for the failure as indicated in the first byte of the reason code:

X'01' Use the system dump to help you determine the cause of the problem.

X'06' Requester initialization should have been completed before DISCONNECT is issued, so CICS SVC errors associated with the loading of the data tables SVC module DFHDTSVC should not be encountered. Therefore this error probably indicates a logic problem or corruption of your system.

≥ **X'80'** When the reason code indicates that an ABEND has been detected, use the additional information provided in the reason code to find out what the ABEND was, and refer to information on that ABEND code to determine the cause.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, code*

DFHFC0446 *applid* **Data table disconnect request for remote file** *filename* **has failed because of a storage failure - reason code** *X'code'***.**

Explanation: CICS has attempted to disconnect from the remote data table *filename* but has been unable to do so owing to a failure to release storage.

System Action: CICS continues normally. The table is treated as having been disconnected from the requesting CICS system.

User Response: This indicates an in internal error or a corruption of the system. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, X'code'*

DFHFC0490 *applid* **Unable to use data table for file** *filename***.**

Explanation: The data set to which file *filename* relates has an associated data table but CICS is unable to make use of the table data owing to a lack of storage.

System Action: CICS continues normally. Performance of read-only accesses to the file is degraded because records cannot be retrieved from the table.

User Response: Ensure that there is sufficient storage in the CICS region outside the EDSA.

See the *CICS Shared Data Tables Guide* for further guidance.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename*

DFHFC0500 *applid* **RLS OPEN of file** *filename* **failed. VSAM has returned code** *X'eeee'* **in R15 and reason** *X'cccc'***.**

Explanation: While CICS was opening file *filename*, the CICS file control RLS open/close routine received a nonzero return code from VSAM.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use RLS files is sent a NOTOPEN condition.

User Response: For the meaning of the VSAM return code, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename, X'eeee', X'cccc'*

DFHFC0501 *applid* **RLS OPEN of file** *filename* **failed. VSAM has returned code 16 in R15. RLS access has been disabled.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine received a return code of 16 in register 15. This means that the RLS VSAM server is currently unavailable so file control has disabled RLS access.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use RLS files is sent a NOTOPEN condition.

CICS file control reenables RLS access when the RLS VSAM server restarts.

User Response: None.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename*

DFHFC0502 *applid* **RLS OPEN of file** *filename* **failed. Access type switch to RLS attempted while other files open for the same data set have non-RLS access type.**

Explanation: While CICS was opening file *filename*, the CICS file control RLS open/close routine detected that the access type for the file has been changed to RLS but there are still other files open for the data set with non-RLS access type. The file cannot be opened until all the other files have closed.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use the file is sent a NOTOPEN condition.

User Response: Close all the other files or change access of this file back to non-RLS. Files for the same data set should have the same access type.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename*

DFHFC0503 *applid* **Non-RLS OPEN of file** *filename* **failed. Access type switch to non-RLS attempted while other files open for the same data set have RLS access type.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine detected that the access type for the file has been changed to non-RLS but there are still other files open for the data set with RLS access type. The file cannot be opened until all the other files have closed.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use the file is sent a NOTOPEN condition.

User Response: Close all the other files or change access of this file back to RLS. Files for the same data set should have the same access type.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename*

DFHFC0504 *applid* **RLS OPEN of file** *filename* **failed. The VSAM SHOWCB macro has detected a RLS VSAM server failure. RLS access has been disabled.**

Explanation: While CICS was opening file *filename*, the CICS file control RLS open/close routine received a return code of X'1A' in register 15. This means that the RLS VSAM server is not available so file control has disabled RLS access. The return code was returned by the SHOWCB macro when CICS was attempting to find the reason for the open failure that had just been detected.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use RLS files is sent a NOTOPEN condition. CICS reenables RLS access when the RLS VSAM server restarts.

User Response: None.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename*

DFHFC0505 *applid* **RLS CLOSE of file** *filename* **failed. The VSAM SHOWCB macro has detected a RLS VSAM server failure. RLS access has been disabled.**

Explanation: While CICS was closing file *filename*, the CICS file control RLS open/close routine received a return code which indicates that the RLS VSAM server is unavailable. Consequently file control has disabled and closed down RLS access. This does not affect the rest of the close processing. The return code is returned by the SHOWCB macro which is invoked during CICS close.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any subsequent close requests for other files which are issued while the server is unavailable also receive the error return code but do not issue this message. CICS reenables RLS access when the RLS VSAM server restarts.

User Response: None.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename*

DFHFC0507 *applid* **RLS OPEN of file** *filename* **failed. Callable service IGWARLS is not present.**

Explanation: Callable service IGWARLS is required by file control for processing files which have update SERVREQs and are using the VSAM catalog as a repository for data set recovery attributes. CICS expects to find IGWARLS in the LPA. IGWARLS resides in library SYS1.CSSLIB. If SYS1.CSSLIB is not in the LPA concatenation, RLS files with update SERVREQs cannot be opened.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use RLS files is sent a NOTOPEN condition.

User Response: If you intend to use RLS access for files with UPDATE SERVREQs, ensure that SYS1.CSSLIB is included in the LPA concatenation.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename*

DFHFC0508 *applid* **RLS OPEN of file** *filename* **failed. VSAM has returned code X'AA' in register 15. RLS access has been disabled.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine received a return code of X'AA' in register 15. This means that the RLS VSAM server is currently unavailable so file control has disabled RLS access.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use RLS files is sent a NOTOPEN condition.

CICS file control reenables RLS access when the RLS VSAM server restarts.

User Response: None.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename*

DFHFC0510 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed because the data set is unavailable. Module** *module***.**

Explanation: An attempt to open file *filename* failed because CICS has internally marked the data set as unavailable. This is the result of an earlier EXEC CICS SET DSNAME UNAVAILABLE command, or CEMT equivalent. This prevents the opening of new RLS and non-RLS files against the data set.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transactions attempting to use the data set from this CICS region are sent a NOTOPEN condition.

User Response: Ensure that an EXEC CICS SET DSNAME AVAILABLE command (or the CEMT equivalent) is issued before attempting to open the file.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, module*

DFHFC0511 *applid* **RLS OPEN of file** *filename* **failed. This CICS has other files open for the data set (or its associated base) with non-RLS access mode. The data set name is** *dsname***.**

Explanation: While CICS was opening file *filename*, the CICS file control RLS open/close routine detected that this region has other files open for the data set *dsname*, or its associated base data set, in non-RLS access mode. The file cannot be opened in RLS access mode until all the other non-RLS mode files have closed, even if these files are accessing the data set in read-only mode. This constraint is to ensure a consistent view of this data set from within each CICS region.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use the file is sent a NOTOPEN condition.

User Response: Close all the other files or change access of this file to non-RLS mode. Files accessing the same base data set from within a given CICS region must all have the same access mode. This includes access via a path data set.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename, dsname*

DFHFC0512 *applid* **Non-RLS OPEN of file** *filename* **failed. This CICS has other files open for the data set (or its associated base) with RLS access mode. The data set name is** *dsname***.**

Explanation: While CICS was opening file *filename*, the CICS file control non-RLS open/close routine detected that this region has other files open for the data set *dsname*, or its associated base data set, in RLS access mode. This file cannot be opened in non-RLS access mode until all the other RLS mode files have closed, even if this file is opening the data set in read-only mode. This constraint is to ensure a consistent view of this data set from within each CICS region.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use the file is sent a NOTOPEN condition.

User Response: Close all the other files or change access of this file to RLS mode. Files accessing the same base data set from within a given CICS region must all have the same access mode. This includes access via a path data set.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC0513 *applid* **Non-RLS OPEN of file** *filename* **has failed. CICS has unresolved RLS recovery work for the data set (or its associated base). The data set name is** *dsname***.**

Explanation: While CICS was opening file *filename*, the CICS file control non-RLS open/close routine detected that this region has unresolved recovery work for the data set *dsname*, or its associated base data set, which requires the base data set and any associated path data sets to be accessed in RLS mode. This file cannot be opened until all the RLS recovery work has been resolved. This constraint ensures that any automatic resolution of the recovery work is not impeded by non-RLS accesses to the data set.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use the file is sent a NOTOPEN condition.

User Response: Use the INQUIRE UOWDSNFAIL command to investigate the RLS recovery work, and take action to resolve it. This may involve retrying backout-failed units of work and resynchronising indoubt-failed units of work. See the *CICS Recovery and Restart Guide* for more information on unit of work failures and their resolution.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC0520 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. IGWARLS call returned codes** *X'rrrr'***,** *X'cccc'* **and problem determination** *X'dddddddd'* **to module** *module***.**

Explanation: While CICS was opening file *filename* and retrieving information from the VSAM catalog using callable service IGWARLS, the CICS file control open/close routine in module *module* detected an error. The return code and reason code from IGWARLS are respectively *rrrr* and *cccc*. ddddddd is any available problem determination information.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Use the IGWARLS reason code to determine the cause of the problem. For the meaning of the IGWARLS reason code, see *DFSMS/MVS Version 1 Release 5 DFSMSdfp Advanced Services*.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, X'rrrr', X'cccc', X'dddddddd', module*

DFHFC0521 *applid* **RLS OPEN of file** *filename* **failed. Undefined LOG parameter is invalid for an RLS file with update type SERVREQs.**

Explanation: While CICS was opening file *filename* and retrieving information from the VSAM catalog using callable service IGWARLS, the CICS file control open/close routine detected that the LOG parameter for the sphere is undefined. LOG must be specified for a file that has RLS access type and update type servreqs.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: Use IDCAMS ALTER to set the LOG parameter for the sphere.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename*

DFHFC0522 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. IGWARLS call has returned that the LOG parameter is set to ALL but LOGSTREAMID has not been specified. Module** *module***.**

Explanation: While CICS was opening file *filename* and retrieving information from the VSAM catalog using callable service IGWARLS, the CICS file control open/close routine in module *module* detected that the LOG(ALL) has been specified without LOGSTREAMID.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: If forward recovery is required, use IDCAMS ALTER to add a LOGSTREAMID for the sphere. Otherwise, remove the forward recovery setting.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, module*

DFHFC0523 *applid* **RLS OPEN of file** *filename* **failed. The LOGSTREAMID for forward recovery is the same as the system log. Module** *module***.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the LOGSTREAMID for forward recovery is the same as that for the system log. The forward recovery LOGSTREAMID must be different from the system log.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: Use IDCAMS ALTER to change the LOGSTREAMID for forward recovery for the sphere. Ensure that it is different from the system log.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename, module*

DFHFC0524 *applid* **An attempt to write a log record failed because the record length was greater than the maximum supported by that log. Module** *module***.**

Explanation: An attempt to write a log record, as part of a file update operation, has failed because the length of the data in the record was greater than the maximum supported by the associated log stream.

System Action: A trace entry is made and a dump is taken with a dumpcode of FC0524.

User Response: Redefine the log stream using a structure which has a MAXBUFSIZE larger than that of the file update record size.

Destination: Console

Module: DFHFCLJ

XMEOUT Parameters: *applid, module*

DFHFC0525 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed because the forward recovery log stream could not be opened. Module** *module*

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the forward recovery log stream for the sphere could not be opened. An internal call to the CICS logger has returned an error.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCFS,DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, module*

DFHFC0526 *applid* **An error occurred on the request to the CICS log manager to close the forward recovery log stream for file** *filename***. Module** *module***.**

Explanation: While CICS was processing file *filename*, the CICS file control open/close routine in module *module* detected that a request to close the forward recovery log stream for the associated sphere returned an error.

System Action: Processing continues.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, filename, module*

DFHFC0527 *applid* **Recovery attributes for file** *filename* **have been overridden by new settings found on the catalog.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine detected that the recovery settings for the sphere have changed.

System Action: Processing continues. The new recovery settings are assumed for the sphere.

User Response: Ensure that the change is as required.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename*

DFHFC0528 *applid* **RLS OPEN of file** *filename* **failed. Recovery attributes on the catalog have changed while there are other files still open for the sphere.**

Explanation: While CICS was opening file *filename* and retrieving information from the VSAM catalog using callable service IGWARLS, the CICS file control open/close routine detected that the recovery attributes on the catalog have changed. There are currently other files open for the sphere which have assumed the previous recovery attributes. Further opens will fail until all files have closed or the recovery attributes are returned to their previous settings. Recovery attributes on the catalog should not be changed without first quiescing the associated sphere in all CICS systems that use it.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: Quiesce the sphere and start again with the new settings.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename*

DFHFC0529 *applid* **Recovery attributes for file** *filename* **have been reset as there has been a switch of access type. Module** *module***.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the access type had been changed from RLS to non-RLS VSAM or vice versa. This has the effect of clearing out existing recovery attributes and starting again.

System Action: Processing continues. The new recovery settings are assumed for the sphere.

User Response: None.

Destination: Console

Modules: DFHFCRO, DFHFCFS

XMEOUT Parameters: *applid, filename, module*

DFHFC0530 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. The automatic journal is the same stream as the system log. Module** *module***.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the automatic journal for the file is the same stream as that for the system log. This is not allowed so an internal call to the CICS logger has returned an error.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: Ensure that the stream given in the FCTE for automatic journaling is different from the system log.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, module*

DFHFC0531 *date time applid* **Automatic journal** *journal* **journalname** *journalname***, opened for file** *filename* **is not of type MVS. Module** *module***.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the stream specified for the automatic journal, *journalname*, was not of type MVS. For example, it might be a dummy log, or you might be journalling to an SMF data set. This message informs you of this in case the journal type is not what you intended. *journal* is the number specified for JOURNAL on the file definition.

System Action: CICS continues processing.

User Response: Ensure that the stream type for the automatic journal is correct.

Destination: CSFL

Modules: DFHFCN, DFHFCRO

XMEOUT Parameters: *date, time, applid, journal, journalname, filename, module*

DFHFC0532 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed because the automatic journal could not be opened. Module** *module***.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the automatic journal for the file could not be opened. An internal call to the CICS logger has returned an error.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: This is likely to be an internal CICS error. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, module*

DFHFC0533 *applid* **An error occurred on the request to the CICS log manager to close the automatic journal for file** *filename***. Module** *module***.**

Explanation: While CICS was processing file *filename*, the CICS file control open/close routine in module *module* detected that a request to close the automatic journal returned an error.

System Action: CICS continues processing.

User Response: This is likely to be an internal CICS error. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, filename, module*

DFHFC0534 *applid* **Recovery attributes for file** *filename* **previously taken from the VSAM catalog have been overridden by new settings from the FCTE. Module** *module***.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the recovery settings for the sphere have been changed to undefined. For a non-RLS VSAM file, recovery attributes from the FCTE now take effect.

System Action: Processing continues. The new recovery settings are assumed for the file.

User Response: Ensure that this change to the recovery attributes is correct.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, module*

DFHFC0535 *applid* **Recovery attributes for file** *filename* **previously taken from the VSAM catalog have been overridden by new settings from the VSAM catalog. Module** *module***.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the recovery settings for the sphere on the VSAM catalog have changed. The new recovery attributes now take effect because there are no other files open for the data set.

System Action: Processing continues. The new recovery settings are assumed for the file.

User Response: Ensure that this change to the recovery attributes is correct.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, module*

DFHFC0536 *applid* **Recovery attributes for file** *filename* **previously taken from the FCTE have been overridden by new settings from the VSAM catalog. Module** *module***.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the recovery settings for the sphere on the VSAM catalog are no longer undefined. The new recovery attributes now take effect because there are no other files open for the data set.

System Action: Processing continues. The new recovery settings are assumed for the file.

User Response: Ensure that this change to the recovery attributes is correct.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, module*

DFHFC0537 *applid* **OPEN of file** *filename* **failed. The request to write a tie up record for the OPEN failed.**

Explanation: While CICS was opening file *filename*, a request to write a tie up record for the OPEN failed. CICS has closed the file again and failed the OPEN request.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: This is likely to be an internal CICS error. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename*

DFHFC0539 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. IGWARLS call has returned that the LOG parameter is not set to ALL but the BWO setting has been defined as TYPECICS. Module** *module***.**

Explanation: While CICS was opening file *filename* and retrieving information from the VSAM catalog using callable service IGWARLS, the CICS file control open/close routine in module *module* detected that BWO has been set to TYPECICS but LOG(ALL) has not been specified.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: If BWO(TYPECICS) is required, specify LOG(ALL). Alternatively, the setting BWO(NO) is recommended.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, module*

DFHFC0540 *applid* **The BWO setting for file** *filename* **has not been explicitly set to NO or TYPECICS and is assumed to be BWO(NO). Module** *module***.**

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the BWO setting for the sphere on the VSAM catalog had not been explicitly specified as either BWO(TYPECICS) or BWO(NO). The setting is assumed to be BWO(NO).

System Action: Processing continues. The BWO(NO) setting is assumed for the file.

User Response: If you require to use backup while open, use the ALTER function of access method services to set BWO(TYPECICS) for this data set. If you do not require to backup while open, you do not need to take any action, but you may wish to use the ALTER function of access method services to explicitly set BWO(NO).

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, module*

DFHFC0541 *applid* **RLS OPEN of file** *filename* **failed. RLS is not supported.**

Explanation: While CICS was opening file *filename* the CICS file control open/close routine in module *module* detected that RLS was not supported. Either this CICS system is running with system initialization parameter RLS=NO or the level of VSAM does not support RLS.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use RLS files is sent a NOTOPEN condition. Determine why RLS access is not supported.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename*

DFHFC0542 *date time applid* **Forward recovery log ID** *fwdrecovlog*, **journalname** *journalname* **opened for file** *filename* **is not of type MVS. Module** *module*.

Explanation: While CICS was opening file *filename*, the CICS file control open/close routine in module *module* detected that the forward recovery log, *journalname*, was not of type MVS. For example, it might be a dummy log, or you might be logging to an SMF data set. This message informs you of this in case the log type is not what you intended.

fwdrecovlog is the forward recovery log ID specified in the file definition. If the forward recovery log stream is specified in the VSAM catalog rather than in the file definition, it must be of type MVS, so this message can be issued only when the forward recovery log is specified in the file definition.

System Action: CICS continues processing.

User Response: Correct the definition of the forward recovery log if it was not what you had intended.

Destination: CSFL

Module: DFHFCFS

XMEOUT Parameters: *date, time, applid, fwdrecovlog, journalname, filename, module*

DFHFC0555 *applid* **One or more data sets are in lost locks status. CICS will perform lost locks recovery.**

Explanation: CICS had one or more data sets open in RLS access mode at the time of a failure of the coupling facility lock structure from which SMSVSAM was not able to recover transparently. As a result, the RLS locks held by CICS for those data sets have been lost.

SMSVSAM has informed CICS that one or more data sets are in a lost locks state with respect to this CICS. CICS must therefore perform lost locks recovery for those data sets.

This can occur on a CICS warm or emergency restart, and on a dynamic RLS restart. On a CICS cold or initial start, if there are any data sets with lost locks status, that status is cleared with respect to this CICS.

System Action: The data sets with lost locks status are marked as being unavailable for general use. Units of work that attempt to access such data sets abend with an AFCU abend code.

CICS performs lost locks recovery for the data sets. For each data set, lost locks recovery involves waiting until all units of work that had made uncommitted updates to the data set have completed. These units of work are allowed to access the data set, in order to perform their recovery. When CICS has completed lost locks recovery for a data set, it reports this fact to SMSVSAM. When all CICS regions that had been accessing the data set have completed their lost locks recovery, then the data set is made available for general use again. Note that a data set becomes available for general use as soon as its lost locks recovery has been completed; it does not have to wait for all data sets to be recovered.

CICS takes the following actions to expedite lost locks recovery:

- Backout-failed and commit-failed units of work are driven for retry
- On a dynamic RLS restart, inflight transactions that had updated the data set are purged (on a warm or emergency restart, inflight units of work are automatically backed out).

User Response: Lost locks recovery normally completes automatically without requiring any action from the user. However, if there are shunted units of work which had updated a data set with lost locks status, these prevent lost locks recovery from completing until they are resolved. Use the INQUIRE UOWDSNFAIL command to investigate these shunted units of work. See the *CICS Recovery and Restart Guide* for guidance on resolving shunted units of work which hold RLS retained locks.

Destination: Console

Module: DFHFCRR

XMEOUT Parameter: *applid*

DFHFC0556 *applid* **Unexpected notification of completion of lost locks recovery for data set** *dsname*.

Explanation: CICS has received a notification from SMSVSAM that lost locks recovery has completed for data set *dsname*, but CICS still has outstanding lost locks recovery work for that data set. This notification has therefore been issued out of sequence.

System Action: CICS continues processing. The data set remains in a lost locks state, and CICS continues with its lost locks recovery. New file control requests against the data set will continue to be rejected with AFCU abends. When all CICS regions have completed their lost locks recovery for the data set, then a valid notification will be received and CICS will remove the data set from the lost locks state.

There will be an instance of this message on each CICS system for each data set when an unexpected notification is received.

User Response: Lost locks recovery processing should complete normally without any user intervention.

However, this message is an indication of a probable logic error in SMSVSAM, so you should take dumps of all the SMSVSAM servers and their associated data spaces in the sysplex. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCRR

XMEOUT Parameters: *applid, dsname*

DFHFC0560 *applid* **The register of the RLS control ACB has failed because the SMSVSAM server is not available. VSAM macro IDAREGP return code** *X'rrrr'*, **reason code** *X'cccc'*.

Explanation: While CICS was initializing file control, the call to VSAM to register the control ACB for RLS processing returned an error. The codes returned mean that the SMSVSAM server address space is not available.

System Action: CICS continues processing but all RLS access is disabled. Any transaction attempting to use RLS files is sent a NOTOPEN condition. CICS reenables RLS access when the SMSVSAM server restarts.

User Response: The SMSVSAM server address space should restart itself. If it does not, restart the SMSVSAM server address space manually. If the SMSVSAM server address space fails to restart, there may be a more severe error. In this case, you need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

DFHFC0568I *applid* **File control dynamic RLS restart has started.**

Explanation: File control dynamic RLS restart has started.

System Action: Processing continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHFCRR

XMEOUT Parameter: *applid*

DFHFC0569I *applid* **File control dynamic RLS restart has ended.**

Explanation: File control dynamic RLS restart has completed successfully.

System Action: Processing continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHFCRR.

XMEOUT Parameter: *applid*

DFHFC0570 *applid* **File control RLS access has been enabled.**

Explanation: RLS access is now available.

System Action: Processing continues.

User Response: None.

Destination: Console

Module: DFHFCRR.

XMEOUT Parameter: *applid*

DFHFC0571 *applid* **RLS access cannot be restarted.**

Explanation: An error has occurred while attempting to restart CICS access to VSAM RLS, either at startup, or during a dynamic RLS restart which took place when the VSAM RLS server became available while CICS was running. Because of this error, it may not be possible to access VSAM RLS again during this CICS run.

Access is made available again only if the VSAM RLS server in this MVS system fails causing CICS to perform dynamic RLS restart processing when it restarts, or if you choose to deliberately recycle the RLS server to trigger a dynamic restart.

System Action: CICS continues, but with access to VSAM RLS disabled (unless an offsite restart is being performed). Other CICS functions, including access to non-RLS VSAM files, should continue.

At the time the error affecting RLS restart is detected, CICS issues one or more messages and takes a system dump.

This error might also affect other aspects of this CICS system, for example if it is due to the corruption of internal CICS control structures.

If an **offsite restart** is being performed; that is, if OFFSITE=YES was specified as a system initialization override, then CICS does not continue, but is terminated with a system dump. When RLS offsite recovery is required, then there is no value in continuing without RLS, because it will be needed in order for the offsite restart to be able to complete. Until all CICS systems complete their offsite recovery work, including this one, no other CICS system in the CICSplex will be allowed to perform new RLS work either.

User Response: If you do not need access to any VSAM RLS files from this CICS system, you can allow CICS to continue. For example, this CICS system might never open files in RLS access mode, or you might prefer to continue without RLS access in order to continue this CICS run.

If you do need to access VSAM RLS files from this CICS, consider shutting CICS down and restarting it, or recycling the VSAM RLS server. However, be aware that recycling the server causes all CICS systems in this MVS to go through dynamic RLS restart processing, which implicitly closes all files that were open in RLS access mode.

To determine the cause of the original error, examine the messages and the system dump that were issued when the error was detected.

If you are performing an **offsite restart**, then restart CICS with OFFSITE=YES still specified as a system initialization override.

Destination: Console

Module: DFHFCRR.

XMEOUT Parameter: *applid*

DFHFC0574 *applid* **RLS offsite recovery will be performed. Normal RLS access is not allowed.**

Explanation: OFFSITE=YES has been specified as a SIT override, and RLS is supported by this CICS (RLS=YES has been specified and the level of DFSMS/MVS supports RLS). This message is issued during file control initialization to indicate that RLS offsite recovery processing is to be carried out during this CICS run.

System Action: RLS access is not allowed until after this CICS has performed its RLS recovery work. Only tasks performing the recovery work are allowed RLS access. Message DFHFC0575 is issued when RLS recovery has been completed by this CICS. RLS access for normal work is not allowed until this CICS has issued message DFHFC0575 and received the reply GO. The description of message DFHFC0575 explains when it is safe to reply to the message.

User Response: Wait for message DFHFC0575 to be issued. If this does not happen shortly after CICS restart has completed, there are probably some backout failed or indoubt failed units of work which had updated RLS data sets, and which are now delaying the completion of RLS recovery. In this case you should use the INQUIRE UOWDSNFAIL command to determine the causes of such failures, and to resolve them.

If some of the failures cannot be resolved cleanly, you may decide to force indoubt units of work and to reset locks for backout failed units of work. See the *CICS Recovery and Restart Guide* for guidance on resolving RLS retained locks.

If CICS terminates for any reason before message DFHFC0575 is issued, specify OFFSITE=YES on the restart.

OFFSITE=YES must be specified on all restarts until the offsite recovery has completed and you have responded to message DFHFC0575.

Destination: Console

Module: DFHFCRP

XMEOUT Parameter: *applid*

DFHFC0575D *applid* **Reply 'GO' only after all CICS regions have completed offsite recovery and issued this message.**

Explanation: This message is issued when a CICS system is participating in an offsite recovery of a CICSplex.

The message is issued when this CICS system has completed all of its RLS recovery work. CICS has backed out or committed all units of work which had made updates to data sets open in RLS mode, and which were either inflight or shunted at the time of the disaster at the primary site (or, more exactly, which were in that state at the common point in time to which the CICS system logs have been pruned).

System Action: CICS processing continues, but the system task which issued this message waits for your reply. RLS access is not allowed for user applications until the reply is received, after which

CICS allows new RLS work to run. The User Response explains when it is safe for you to reply.

User Response: The message indicates that RLS recovery work has been completed by a particular CICS region. Replying to it indicates that all RLS recovery for the offsite CICSplex has been completed. Do not reply until all CICS regions in the CICSplex have issued this message. When this has happened, you should reply GO. When you next restart this CICS region after having replied GO, you should revert to the default value of NO for the system initialization parameter OFFSITE.

GO is the only reply allowed. If you supply any other response, the message is reissued with a new reply number.

If you suspect that there will be a problem getting some of the CICS regions in the CICSplex to complete their RLS recovery work, and would therefore prefer to shut this CICS down in the meantime, you can use the master terminal to do so. You must specify OFFSITE=YES when you restart the CICS region because offsite recovery for the CICSplex has not been completed. Remember that OFFSITE=YES must be specified on all restarts until the offsite recovery has completed and you have responded to message DFHFC0575.

Destination: Console

Module: DFHFCOR

XMEOUT Parameter: *applid*

DFHFC0577 *applid* **RLS offsite recovery is now complete. RLS access is allowed.**

Explanation: This message is issued when a CICS system is participating in an offsite recovery of a CICSplex.

The message is issued when the reply GO has been supplied to message DFHFC0575.

System Action: CICS allows user applications to access RLS because it is assumed that a reply of GO means that all CICS systems in the CICSplex have completed their RLS recovery work, and it is therefore safe to allow sharing of RLS data sets.

User Response: Once you have received this message, you can recode your SIT overrides so that OFFSITE=NO is specified when this CICS is next restarted.

Destination: Console

Module: DFHFCOR

XMEOUT Parameter: *applid*

DFHFC0920 *applid* **Open of empty file** *filename* **failed. VSAM codes -** *eeee*,*rrrr*,*cccc*

Explanation: CICS file control issued an OPEN command for VSAM file *filename* but the command failed with VSAM return code *cccc*. The CICS internal error code *eeee* has a value of 8509 and *rrrr* is the return code in register 15.

This failure is probably caused by the file not being loaded before use by CICS.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

Message DFHME0116 is normally produced containing the symptom string for this problem.

VSAM issues a console error message.

User Response: Check whether the file has been loaded before being accessed by CICS. This condition is probably the result of a user error in passing an empty file to CICS.

For the meaning of the VSAM return code, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, eeee, rrrr, cccc*

DFHFC0931 *applid* **OPEN of data table** *name* **failed for reason** *n*.

Explanation: CICS was unable to OPEN the user-maintained data table *name* for reason *n*, where *n* may have one of the following values:

1 The data table support initialization module DFHDTINS could not be loaded.

2 Initialization of data table support has failed. This message is preceded by one of messages DFHFC0410, DFHFC0411 or DFHFC0412 which identifies the reason for the failure.

3 The source data set for the data table is not a KSDS base data set.

4 The data table OPEN module DFHDTST has reported an error. This message is preceded by one of messages DFHFC0430 or DFHFC0431 which identifies the error.

6 The file definition for the data table allows neither read nor browse access.

System Action: The data table remains closed and is DISABLED. CICS processing continues.

User Response: The appropriate user response depends on the reason code *n* as follows:

1 Check that module DFHDTINS is present in the library.

2 See the user action for the preceding message (which will be one of DFHFC0410, DFHFC0411 or DFHFC0412).

3 Check whether the data table has been associated with the intended source data set.

4 See the user action for the preceding message (which will be one of DFHFC0430 or DFHFC0431).

6 Change the SERVREQs in the file definition. There is no benefit in using data tables support for a file which cannot be read or browsed.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, name, n*

DFHFC0932 *applid* **OPEN of data table** *name* **was incomplete for reason** *n*.

Explanation: CICS was unable to treat *name* as a CICS-maintained data table for reason *n*.

System Action: The data table's source data set is opened for access as a normal VSAM data set, and no main storage table is built. CICS processing continues.

User Response: The appropriate user response depends on the reason code *n*. Refer to message DFHFC0931 for a list of reason codes and their appropriate user responses.

Urgent action is probably not necessary when this message occurs, as no function has been lost. However, READ performance may be adversely affected.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, name, n*

DFHFC0933 *applid* **MVS FREEMAIN failure detected during CLOSE of data table** *name***.**

Explanation: An MVS FREEMAIN, issued while CICS was attempting to release the storage associated with data table *name*, returned the error response R15=4. Some storage in the CICS address space has not been freed. The error is probably the result of some earlier overwriting of data table control areas.

System Action: CICS closes data table *name*. CICS processing continues.

User Response: This condition does not adversely affect the data tables function. However, if the problem recurs take a system dump (SDUMP) as soon as possible after the appearance of this message. For example, by means of a CEMT PERFORM SNAP command.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, name*

DFHFC0935 *applid* **SHAREOPTIONS of the source for data table** *name* **allow inconsistencies between table and source.**

Explanation: The cross region SHAREOPTION for the source data set associated with the data table *name* is 3 or 4, or the SHAREOPTION is 2 and the table is being opened only for read access. It is possible for another job in this MVS system to update the source without notifying CICS. The result of this is that the data table may no longer match the source data set.

System Action: Opening and loading of the data table continues normally. CICS processing continues.

User Response: Check that the SHAREOPTION is specified correctly and that the DISP parameter is correct.

Note that source data set changes are reflected in the data table only when the changes are made by the CICS system which owns the table.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, name*

DFHFC0936 *applid* **Initiation of loading of data table** *name* **has failed.**

Explanation: An attempt to initiate the table loading transaction for the data table *name* has failed.

System Action: CICS processing continues. The effect this has is that the table always appears to be in the process of being loaded and the load completion exit, XDTLC, is not invoked.

One consequence of this is that the table is effectively **demand loaded**. This means that an entry is only made in the table when a transaction refers to it explicitly. A further consequence is that, for user maintained tables, API requests (other than READ) always result in a LOADING condition.

User Response: Take remedial action after determining the cause of the failure from the trace of the OPEN request and from any related messages and dumps. It may be that the system action of leaving the table open, but not loaded, adversely affects your application. For example, if the application depends on being able to update a user maintained table as soon as loading is complete. If so, closing and reopening the data table may be successful as an immediate response, if the problem was simply a temporary lack of resources.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, name*

DFHFC0937 *applid* **OPEN of** *name1* **as a data table was not possible. The file has been opened and will use data table** *name2* **which has the same source.**

Explanation: File *name1* could not be opened as a CICS-maintained data table (CMT) because another CMT *name2* is already open for the source data set specified in the file definition of *name1*. However, *name1* is still able to benefit from shared data tables support by accessing the already open CMT.

System Action: *name1* is opened as a normal CICS file, and therefore automatically uses the existing data table *name2* whenever possible.

User Response: This is not normally a problem, but you should ensure that the data table *name2* has the required characteristics in terms of its maximum number of records and in the behavior of any data table user exits that refer to it.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, name1, name2*

DFHFC0940 I *date time applid* **CICS data table load has started for data table** *name***.**

Explanation: CICS file control has detected that an open request has been issued for data table *name*, and a task has been attached to load the data table.

System Action: CICS processing continues.

User Response: None.

Destination: CSFL

Module: DFHDTLX

XMEOUT Parameters: *date, time, applid, name*

DFHFC0941 I *date time applid* **CICS data table load has completed successfully for data table** *name***.**

Explanation: The task that was attached to load the data table *name* has successfully completed loading.

System Action: The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate a successful load. CICS processing continues.

User Response: None.

Destination: CSFL

Module: DFHDTLX

XMEOUT Parameters: *date, time, applid, name*

DFHFC0942 E *date time applid* **CICS data table load has terminated abnormally for data table** *name***, reason code =** *X'xx'***.**

Explanation: The CICS task that is loading data table *name* has received a reason code X'*xx*', where X'*xx*' has one of the following values:

X'FB' CICS file control has requested that the data table load be abandoned. This may occur, for example, if a close request has been made against the data table

X'FD' an attempt has been made to add more entries to the data table than the maximum specified in the table definition

X'FE' a shortage of virtual storage has been reported by the add entry (from DASD) service, due to a failure to get storage for the record.

System Action: The user exit XDTLC is invoked, if enabled, unless file control has requested that the load be abandoned (reason code X'FB'). The value of the UEPDTORC parameter passed to the exit indicates that loading completed abnormally. No more records are loaded into the data table. The user exit may ask for the file to be closed.

If the table is CICS-maintained, provided that the user exit has NOT requested that the file be closed, those records which were not added are retrieved from the source data set to satisfy API requests.

If the table is user-maintained, requests to access any record which was not added results in a “not found” response code. If the table has been closed, then API requests result in an “unenabled” response code.

CICS processing continues.

User Response: The appropriate user response depends on the reason code. User responses are as follows:

X'FB' no action necessary

X'FD' increase the size specified for the data table, either using the SIZE parameter in the FCT entry or the MAXNUMRECS field in the CEDA definition

X'FE' increase the available storage above the 16MB line.

Destination: Console and Transient Data Queue CSFL

Module: DFHDTLX

XMEOUT Parameters: *date, time, applid, name, X'xx'*

DFHFC0943 E *date time applid* **CICS data table load has terminated abnormally for data table** *name***, reason code =** *X'xx'***.**

Explanation: The CICS task that is loading data table *name* has received an unexpected return code from CICS file control while browsing the source data set. The reason code X'*xx*' should be one of the following.

X'02' ILLOGIC—A VSAM error which does not fall into one of the other categories.

X'0C' NOTOPEN—The file is CLOSED and UNENABLED, or still open and in use, but a CLOSE request has been received.

X'0D' DISABLED—The file is disabled.

X'80' IOERR—I/O error.

System Action: The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate that loading completed abnormally. No more records are loaded into the data table. The user exit may ask for the file to be closed.

If the table is CICS-maintained, provided that the user exit has NOT requested that the file be closed, those records which were not added are retrieved from the source data set to satisfy API requests.

If the table is user maintained, requests to access any record which was not added results in a “not found” response code. If the table has been closed, API requests result in an “unenabled” response code.

CICS processing continues.

User Response: Investigate the reason for the return code from CICS file control. For further information about the reason code, see the description of exception conditions for the STARTBR and READNEXT commands, in the *CICS Application Programming Reference*.

Destination: Console and Transient Data Queue CSFL

Module: DFHDTLX

XMEOUT Parameters: *date, time, applid, name, X'xx'*

DFHFC0945 E *date time applid* **CICS data table load has terminated abnormally for data table** *name***.**

Explanation: The special CICS transaction that was loading data table *name* has detected an abnormal termination.

System Action: Depending on the cause of this abnormal termination, CICS may produce either a system dump or a transaction dump.

The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate that loading completed abnormally. CICS then terminates the loading transaction with abend code AFCM. No more records are loaded into the data table. The user exit may ask for the file to be closed.

If the table is CICS-maintained, provided that the user exit has NOT requested that the file be closed, those records which were not added, are retrieved from the source data set to satisfy API requests.

If the table is user-maintained, requests to access any record which was not added result in a “not found” response code. If the table has been closed, then API requests result in an “unenabled” response code.

CICS processing continues.

User Response: Look at the system log for related CICS messages to determine the original abend detected by the loading transaction. Refer to the description of abend code AFCM for further information about the cause of the original termination.

For more information on how to determine system problems, refer to the *CICS Problem Determination Guide*.

Destination: Console and Transient Data Queue CSFL

Module: DFHDTLX

XMEOUT Parameters: *date, time, applid, name*

DFHFC0946 E *date time applid* **CICS data table load has terminated abnormally for data table** *name***, a call to FCFR has failed for reason code =** *n***.**

Explanation: The CICS task that is loading data table *name* has failed while calling file control to browse the source data set. The value of the reason code *n* indicates the type of failure as follows:

1. Response from FCFR was INVALID.
2. Response from FCFR was DISASTER.
3. Response from FCFR was PURGED.
4. FCFR failed for some unexpected reason.

System Action: The user exit XDTLC is invoked, if enabled, with parameter UEPDTORC set to indicate that loading has completed abnormally. CICS then terminates the loading transaction with abend code AFCM. No more records are loaded into the data table. The user exit may ask for the file to be closed.

If the table is CICS-maintained, provided that the user exit has NOT requested that the file be closed, records which were not added are retrieved from the source data set to satisfy API requests. If the table is user-maintained, requests to access any record which was not added result in a “not found” response code.

If the table has been closed, API requests result in an “unenabled” response code.

CICS processing continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Determine the cause of the failure of the domain call using the diagnostic information provided by file control.

Destination: Console and Transient Data Queue CSFL

Module: DFHDTLX

XMEOUT Parameters: *date, time, applid, name, n*

DFHFC0947 E *date time applid* **CICS data table load has failed to close data table** *name***, a call to FCFS has failed for reason code =** *n***.**

Explanation: The CICS task that is loading data table *name* has failed while trying to close the file at the request of an exit program invoked at exit point XDTLC. The value of reason code *n* indicates the type of failure as follows:

1. Response from FCFS was INVALID.
2. Response from FCFS was DISASTER.
3. Response from FCFS was PURGED.
4. FCFS failed for some unexpected reason.

System Action: CICS terminates the loading transaction with abend code AFCM.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: It is unlikely that the user exit invoked at the XDTLC exit point would request that the file should be closed unless a previous problem had occurred with the load. Determine the cause of any such previous problem by checking for earlier messages which may have been issued referring to data table *name*. Diagnostic information provided by file control may be used to investigate the failure of the close file call.

CICS processing continues.

Report the details of the symptom string given in message DFHME0116.

Destination: Console and Transient Data Queue CSFL

Module: DFHDTLX

XMEOUT Parameters: *date, time, applid, name, n*

DFHFC0949 *date time applid* **CICS shared data table table load has terminated abnormally. A call to DFHXMIQ to retrieve the parameters for the load transaction has failed with response code =** *n***.**

Explanation: The CICS task to load a shared data table has failed while trying to inquire on the parameters passed to it during attach. The value of the reason code *n* indicates the type of failure as follows:

1. Response from XMIQ was INVALID.
2. Response from XMIQ was DISASTER.
3. Response from XMIQ was PURGED.
4. XMIQ failed for some unexpected reason.

System Action: The user exit XDTLC is not invoked as failure to retrieve the attach parameters means the filename is not known. CICS terminates the loading transaction with abend code AFCL. No records are loaded into the data table.

Requests to access any record which was not added result in a “not found” response code.

CICS processing continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Determine the cause of the failure of the domain call using the diagnostic information provided by the CIS Transaction Manager.

The file should be closed so that a load may be attempted again when it is next opened.

Destination: Console and Transient Data Queue CSFL

Module: DFHDTLX

XMEOUT Parameters: *date, time, applid, n*

DFHFC0950 *applid* **Warning. File** *filename* **Opened with VSAM SHROPT 3 or 4. CICS cannot prevent concurrent updates**

Explanation: VSAM share options 3 and 4 permit updating of a data set from multiple regions. Under these circumstances, CICS cannot prevent concurrent updates.

The file is being opened for update against a data set defined with share options 3 or 4, and the file has been defined with the following auto-journaling options:

Either: JREQ=WU or WN if the file is defined using the FCT macro,

Or: JNLADD = BEFORE, AFTER, OR ALL if the file is defined using RDO.

System Action: The file is opened and a warning message is issued.

User Response: None.

Destination: Console

Module: DFHFCN

XMEOUT Parameters: *applid, filename*

DFHFC0951 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. DSNAME not available from JCL or FCT. Module** *module***.**

Explanation: A CICS attempt to open file *filename* failed because neither the JCL nor the FCT specified the data set name.

CICS file control did not open file *filename*, because:

1. At initialization time, the startup JCL did not include a DD statement, *and*
2. No user-submitted routine allocated the file dynamically, *and*
3. The FCT does not contain a DSNAME parameter to enable CICS to allocate the file dynamically.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: Before resubmitting the transaction, you must supply the data set name in the JCL or the FCT. You can set the name in the FCT while CICS is running by using the CEMT transaction or the EXEC CICS SET command or by using CEDA to correct and reinstall the FCT entry.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, module*

DFHFC0952 *applid* **Dynamic allocation of** *{RLS | Non-RLS}* **file** *filename* **failed. Return code** *X'rrrr',X'cccc'* **in module** *module***.**

Explanation: While dynamically allocating file *filename*, CICS file control issued an MVS DYNALLOC macro. The DYNALLOC failed with return code *cccc*. *rrrr* is the additional return code in register 15.

System Action: CICS continues with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: for the meaning of the DYNALLOC return codes, see the *OS/390 MVS Programming: Authorized Assembler Services Guide*.

Destination: Console

Modules: DFHFCFS DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, X'rrrr', X'cccc', module*

DFHFC0953 *applid* **Non-RLS OPEN or CLOSE of file** *filename* **failed. CICS logic error** *eeee,cccc*

Explanation: While processing a request to open or close file *filename*, CICS detected an internal logic error in the file control services program. The value of *eeee* identifies the error as follows:

8105 The DFHFCFS set base dsname block failed. *cccc* is the return code from DFHFCFS.
8302 Request to DFHFCN for a pool that is not in the FCT.
8701 Request to DFHFCN is not OPEN or CLOSE.
8704 Request to DFHFCL is not BUILD or DELETE.
8705 Request to DFHFCL is for invalid pool number *cccc*.
8706 Request to DFHFCL is for pool number *cccc* that is not in the FCT.
8707 DFHFCL failed to build BLDVRP parameters. *cccc* is the pool number.
8798 Logic error at OPEN detected in DFHFCN at offset *cccc*.

System Action: CICS terminates the task abnormally, produces a dump and continues processing with the status of file *filename* unchanged.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This is probably a logic error in CICS. You should note, however, that terminating CICS with an immediate shutdown while opening or closing files may cause such logic errors to happen as a normal occurrence. This is because CICS terminated immediately without regard to running tasks.

It is also possible for this error to occur if CICS has to calculate parameters for the BLDVRP macro, (this happens if you do not supply an LSR pool definition either by CEDA DEFINE LSRPOOL or by DFHFCT TYPE=SHRCTL), and all attempts to access the VSAM catalog for files in this LSR pool fail. Other messages are issued for the individual catalog failures.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, eeee, cccc*

DFHFC0954 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. No disposition specified for dynamic allocation. Module** *module***.**

Explanation: CICS file control cannot open file *filename*, because it is not allocated. It is not allocated because:

1. At initialization time, the startup JCL did not include a DD statement, *and*
2. The FCT does not contain a DISP parameter to enable CICS to allocate the file dynamically.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file are sent a NOTOPEN condition.

User Response: If you want to use file *filename* in this run, supply the DISP parameter with the CEMT transaction or with a user transaction using the EXEC CICS SET command. When you have done this, transactions are able to access the file successfully.

The change described above is only effective for the lifetime of the CICS system. A permanent disposition definition of a file can be made either through a JCL DD statement, through a DEFINE file command, or through the DISP=operand of a macro FCT definition.

Destination: Console

Modules: DFHFCFS DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, module*

DFHFC0955 *applid* **Associated data set is** *dataset***. Module** *module***.**

Explanation: This message follows DFHFC0952 or DFHFC0510. It identifies the VSAM data set referred to in that message.

System Action: Processing continues in the way specified in DFHFC0952 or DFHFC0510.

User Response: Follow the user response for DFHFC0952 or DFHFC0510 as appropriate.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, dataset, module*

DFHFC0956 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. VSAM catalog error. Return code -** *X'eeee',X'cccc'* **in module** *module***.**

Explanation: While reading the VSAM catalog to open the VSAM data set *filename*, CICS file control received the return code *cccc* from a SHOWCAT macro. The value of *eeee* is an error code from DFHFCN as follows:

8112 SHOWCAT for the AIX of a path failed.
8113 SHOWCAT for the data component of a base failed.
8116 SHOWCAT for the base of a path failed.
8117 SHOWCAT for an upgrade member failed.

System Action: CICS writes a system dump, and continues processing, with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: For the meaning of the SHOWCAT return code, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, X'eeee', X'cccc', module*

DFHFC0958 *applid* **Non-RLS OPEN of file** *filename* **failed. VSAM resource usage conflict with open file.**

Explanation: CICS did not open file *filename* because it found that its access method control block (ACB) specified a different buffer/string resource (NSR or LSR pool) from that specified by another ACB that is already open for the same base cluster.

VSAM provides integrity for different ACBs open for the same base cluster only if they use the **same** buffer/string resource.

System Action: CICS writes a system dump and continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: Determine the correct buffer/string resource and change the FCT.

Alternatively, if you specify DSNSHR=UPDATE in the FCT and open the file for read only, CICS permits the use of different buffer/string resources because no integrity exposure exists.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename*

DFHFC0960 *applid* **Non-RLS OPEN of file** *filename* **failed. Unable to build its LSR pool** *n***. Return code -** *cccc***.**

Explanation: CICS has requested VSAM to build the local shared resource (LSR) pool specified in the FCT entry for file *filename*. However, VSAM was unable to complete the request. *n* is the pool number, and *cccc* is the VSAM BLDVRP return code.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

Note: The first time this error occurs, CICS writes a system dump before continuing.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: For the meaning of the BLDVRP return code, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, n, cccc*

DFHFC0961 *date time applid* **Calculation of LSR pool** *n* **parameters incomplete. Filename** *filename* **has no DSNAME.**

Explanation: While dynamically calculating the parameters for the local shared resource pool (LSR) *n*, CICS found an FCT entry for which no DSNAME exists (either the FCT entry has no DSNAME, or no DD statement exists).

System Action: CICS processing continues.

Without a DSNAME, CICS cannot use the VSAM catalog to determine the file attributes. Therefore, in the LSR calculation, CICS uses the number of strings specified in the STRNO parameter of the FCT entry but does not use the BUFFERS or KEYLEN information.

User Response: Ensure that each FCT entry has either a DSNAME, or a DD statement corresponding to its DATASET name.

Destination: Console and Transient Data Queue CSMT

Module: DFHFCFS

XMEOUT Parameters: *date, time, applid, n, filename*

DFHFC0962 *date time applid* **Calculation of LSR pool** *n* **parameters incomplete for file** *filename***. VSAM catalog access error. Return code -** *cccc*

Explanation: While CICS was dynamically calculating the parameters for the local shared resource (LSR) pool *n*, a VSAM SHOWCAT or a VSAM LOCATE failed with return code *cccc*. Parameters for file *filename* are incomplete.

System Action: CICS retains the accumulated LSR parameters for file *filename* and continues processing. No further attempts at calculating LSR parameters for file *filename* are made.

An exception trace is taken which identifies the failing VSAM request and its return code.

User Response: For the meaning of the SHOWCAT return code, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*. For the meaning of the LOCATE return code, see *DFSMS/MVS Version 1 Release 5 DFSMSdfp Advanced Services*. This error indicates a corrupted VSAM catalog. If you cannot restore the catalog, you will need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSMT

Module: DFHFCL

XMEOUT Parameters: *date, time, applid, n, filename, cccc*

DFHFC0963 *applid* **LSR pool** *n* **not deleted. Code -** *cccc*

Explanation: CICS requested VSAM to delete a local shared resource (LSR) pool *n*. During processing of the request, a VSAM DLVRP macro failed with return code *cccc*. (*cccc* is the VSAM DLVRP return code.)

System Action: CICS takes a system dump and continues processing with the pool still in existence.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: For the meaning of the DLVRP return code, see the *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, n, cccc*

DFHFC0964 *applid* **Non-RLS OPEN of file** *filename* **failed. VSAM codes -** *eeee***,***rrrr***,***cccc***.**

Explanation: CICS file control issued an open for a VSAM file, *filename*. The open has failed with VSAM return code, *cccc*. *eeee* has a value of 8502 and represents the CICS internal error code and *rrrr* is the return code in register 15.

System Action: CICS continues processing, with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: VSAM will have issued a console error message. Use the VSAM message and the VSAM return code in the CICS message to solve the problem.

For the meaning of the VSAM return code, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, eeee, rrrr, cccc*

DFHFC0965 *applid* **Open of BDAM file** *filename* **failed.**

Explanation: CICS file control issued an open for a BDAM file, *filename*. The open failed.

System Action: CICS continues processing, with file *filename* closed and with its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: BDAM will have issued a console error message. Refer to the BDAM message for further guidance to solve the problem.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename*

DFHFC0966 *applid* **Non-RLS OPEN of file** *filename* **failed. Unable to position ESDS. Error codes:** *eeee,rrrr,cccc.*

Explanation: Before opening the VSAM ESDS file *filename* for output, CICS file control could not determine the end-of-data relative byte address (RBA) correctly. During the positioning process, CICS may perform **any** of the following steps, each of which can fail:

- Dynamically allocate the base cluster to DDname DFHESDS (if it is a path that is being opened)
- Open the base cluster for control interval (CI) processing
- Read the last CI in the file
- Determine the end-of-data in the file
- Close the base cluster
- Dynamically deallocate the base cluster.

The value of *eeee* in the message indicates the error or the failing function as follows:

8503 Open base cluster. *rrrr* is the VSAM return code in register 15. *cccc* is the error field in the VSAM ACB.

8504 Read last control interval (CI). *rrrr* is the VSAM return code in register 15. *cccc* is the FDBK field in the VSAM RPL.

8505 Last CI middle of spanned record.

8506 Close base cluster. *rrrr* is the VSAM return code in register 15. *cccc* is the error field in the VSAM ACB.

8507 Insufficient storage to get CI

8508 Dynamic allocation of base. *rrrr* is the MVS return code in register 15. *cccc* is the MVS DYNALLOC return code.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: For the meaning of the VSAM return codes, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*. For the meaning of the DYNALLOC return codes, refer to the *OS/390 MVS Programming: Authorized Assembler Services Guide*. CICS file control uses control interval processing when opening a VSAM ESDS. Therefore, ensure that you have specified ACCESS(CONTROL) for the data set.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, eeee, rrrr, cccc*

DFHFC0967 *applid* **Error detected while closing** *{RLS | Non-RLS}* **file** *filename* **- VSAM codes** *X'rrrr',X'cccc'* **in module** *module.*

Explanation: CICS file control issued a close for VSAM file *filename*. The close failed with VSAM return code *cccc*. *rrrr* is the return code in register 15.

System Action: CICS processing continues. CICS marks file *filename* as closed because VSAM will have closed the access method control block (ACB).

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Use the VSAM return code, *cccc* and the preceding VSAM console message to determine the cause of the problem.

For the meaning of the VSAM return code, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, X'rrrr', X'cccc', module*

DFHFC0968 *applid* **Close of BDAM file** *filename* **failed**

Explanation: CICS file control issued a close for a BDAM file, *filename*. The close failed.

System Action: CICS continues, with file *filename* still open.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: BDAM will have issued a console error message. Use the BDAM message to solve the problem.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename*

DFHFC0969 *applid* **Non-RLS CLOSE of file** *filename* **failed. CICS logic error - 8799** *rrrr,cccc.*

Explanation: While attempting to close file *filename*, CICS detected internal logic error 8799 in the file control services program. *cccc* is the offset in DFHFCN at which the error occurred.

System Action: CICS terminates the task abnormally, takes a system dump, and continues processing with the status of file *filename* unchanged.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, rrrr, cccc*

DFHFC0970 *applid* **Recoverable non-RLS file** *filename* **opened with VSAM SHROPT 3 or 4. CICS cannot ensure integrity.**

Explanation: While opening the recoverable VSAM file *filename* for update, CICS detected that it was defined with SHAREOPTION 3 or 4, which allows updating from multiple regions. CICS issues this message to warn you that it cannot ensure data integrity.

System Action: CICS opens file *filename* and continues processing.

User Response: If this integrity exposure is acceptable, no further user action is required.

If this integrity exposure is unplanned and unacceptable, cancel CICS, redefine file *filename* with a different SHAREOPTION, and restart.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename*

DFHFC0971 *applid* **Non-RLS OPEN of file** *filename* **returned warning when positioning ESDS. Error codes:** *rrrr*,*cccc*.

Explanation: Before opening the VSAM ESDS file *filename* for output, CICS file control had to determine the end-of-data relative byte address (RBA). The positioning process involved the dynamic allocation and deallocation of the base cluster to DDname DFHESDS. The deallocation failed.

The MVS DYNALLOC return code is *cccc*. *rrrr* is the additional return code in register 15.

System Action: CICS opens the file *filename* and continues processing.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: For the meaning of the DYNALLOC return codes, see the *OS/390 MVS Programming: Authorized Assembler Services Guide*.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, rrrr, cccc*

DFHFC0972 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. VSAM catalog entry not found, return code - 8111** *X'cccc'* **in module** *module*.

Explanation: While opening a VSAM file *filename*, CICS file control attempted to retrieve information from the VSAM catalog using the file name given in the JCL or the FCT. This initial retrieval failed with VSAM return code *cccc* from the SHOWCAT macro. 8111 indicates where within CICS file control the error was detected.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: You have probably specified DSNAME incorrectly in the FCT. If DSNAME is correctly specified, see the explanation of the SHOWCAT return code in *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, X'cccc', module*

DFHFC0973 *applid* **Dynamic deallocation of** *{RLS | Non-RLS}* **file** *filename* **failed. Return code -** *X'rrrr'*,*X'cccc'* **in module** *module*.

Explanation: While closing file *filename*, CICS file control issued the MVS macro, DYNALLOC, to dynamically deallocate the file. Deallocation failed with the MVS return code, *cccc*. *rrrr* is the return code in register 15.

System Action: CICS continues with the file closed, but still allocated.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If you change the DSNAME in the FCT, and then reopen the file in the same CICS run, CICS may open the original data set. For an explanation of the MVS return code, refer to the *OS/390 MVS Programming: Authorized Assembler Services Guide*.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, X'rrrr', X'cccc', module*

DFHFC0974 *date time applid* **Calculation of LSR pool** *n* **parameters incomplete for file** *filename*. **VSAM catalog inconsistency -** *oooo*

Explanation: While dynamically calculating local shared resource (LSR) parameters for file *filename*, CICS found that a VSAM SHOWCAT macro gave a normal return code, but the object retrieved was logically incorrect. *n* is the pool number, and *oooo* is the VSAM object type in error.

System Action: CICS retains the accumulated LSR parameters for file *filename*, and continues processing. No further attempts at calculating LSR parameters for file *filename* are made.

User Response: This error indicates a corrupted VSAM catalog. If you cannot restore the catalog, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSMT

Module: DFHFCL

XMEOUT Parameters: *date, time, applid, n, filename, oooo*

DFHFC0975 *applid* **LSR pool** *n* **already exists**

Explanation: CICS requested VSAM to build the local shared resource (LSR) pool *n*. However, this pool already exists.

System Action: CICS continues processing. If the existing pool is unsuitable, subsequent file OPENs may fail.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Examine the system console log and the LSR statistical data for pool creation and deletion times, and in the case of the log, for possible pool delete failures. (The simplest and most likely reason for this error is the failure of a previous attempt to delete pool *n*.)

Destination: Console

Module: DFHFCL

XMEOUT Parameters: *applid, n*

DFHFC0976 *applid {RLS | Non-RLS}* **file** *filename* **not opened. DSNAME = NULLFILE or DD DUMMY. Module** *module***.**

Explanation: CICS could not open file *filename*, because the DSNAME was NULLFILE or the DD statement was DUMMY.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: None.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, module*

DFHFC0977 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. VSAM catalog error. Return code -** *X'eeee'***,***X'cccc'* **in module** *module***.**

Explanation: While CICS was opening file *filename* and retrieving information from the VSAM catalog, an SVC 26 (LOCATE macro) failed with return code *cccc*. *eeee* is the CICS internal return code, as follows:

8114 SVC 26 failed on index or data.
8115 SVC 26 failed on base cluster.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: For the meaning of the LOCATE return code, see *DFSMS/MVS Version 1 Release 5 DFSMSdfp Advanced Services*.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, X'eeee', X'cccc', module*

DFHFC0978 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. VSAM catalog error. Return code -** *X'eeee'* **in module** *module***.**

Explanation: While CICS was opening file *filename* and retrieving information from the VSAM catalog, CICS file control open/close detected a CICS logic error. *eeee* is as follows:

8118 A VSAM catalog entry for a path does not have a base cluster or an AIX as its first association.
8119 In a VSAM catalog entry for an AIX, either the data association or the base cluster association is missing.
811A In a VSAM catalog entry for a base cluster, the data association or the index association is missing.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: Obtain a VSAM LISTCAT listing for file *filename*. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, X'eeee', module*

DFHFC0979 *date time applid* **LSR pool** *n* **parameters incomplete for file** *filename* **because the DSNAME specified in the file entry could not be found on the VSAM catalog. VSAM has returned code** *rrrr* **in R15.**

Explanation: While dynamically calculating VSAM local shared resource (LSR) parameters, CICS attempted to retrieve information from the VSAM catalog using the data set name in the FCT entry for file *filename*. The catalog access failed with the VSAM return code *rrrr* from the SHOWCAT macro.

System Action: CICS continues processing, but does not use any parameters for file *filename* in calculations for the LSR pool.

User Response: Ensure that you have correctly specified the JCL for the file, and that the catalog containing the file is included in the JCL. If these checks do not reveal the error, see the meaning of the SHOWCAT return code, *rrrr*, in *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*.

Destination: CSMT

Module: DFHFCFS

XMEOUT Parameters: *date, time, applid, n, filename, rrrr*

DFHFC0980 *applid* **Non-RLS OPEN of base for file** *filename* **failed. CICS logic error** *eeee***,***cccc***.**

Explanation: While trying to open the VSAM ESDS base of a path through which a record insert has been requested for file *filename*, CICS has detected an internal logic error. *eeee* is as follows:

8E01 Request to DFHFCM is not OPEN or CLOSE.
8E99 Logic error during DFHFCM processing at offset *cccc*.

System Action: CICS takes a system dump and terminates the transaction abnormally.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCM

XMEOUT Parameters: *applid, filename, eeee, cccc*

DFHFC0981 *applid* **Dynamic allocation of base for non-RLS file** *filename* **failed. Return code** *rrrr*,*cccc*.

Explanation: While trying to open the VSAM KSDS base of a path through which a record insert has been requested for file *filename*, CICS file control issued an MVS DYNALLOC command which failed with the return code *cccc*. *rrrr* is the return code in register 15.

System Action: CICS takes a system dump and terminates the transaction abnormally.

User Response: For the meaning of the DYNALLOC return codes, refer to the *MVS/ESA System Programming Reference: Application Development Guide*.

Destination: Console

Module: DFHFCM

XMEOUT Parameters: *applid, filename, rrrr, cccc*

DFHFC0982 *applid* **Non-RLS OPEN of base for file** *filename* **failed. VSAM codes -** *rrrr*,*cccc*.

Explanation: While trying to open the VSAM KSDS base of a path through which a record insert has been requested for file *filename*, CICS file control issued an OPEN which failed with the VSAM error code *cccc* from the ACB. *rrrr* is the VSAM return code in register 15.

System Action: CICS takes a system dump and terminates the transaction abnormally.

User Response: VSAM issues a console error message. Use the VSAM message and the VSAM return code in the CICS message to solve the problem.

For the meaning of the VSAM return code, see the *MVS/DFP Access Method Services for VSAM Catalogs*.

Destination: Console

Module: DFHFCM

XMEOUT Parameters: *applid, filename, rrrr, cccc*

DFHFC0983 *applid* **Non-RLS CLOSE of base for file** *filename* **failed. CICS logic error** *eeee*,*cccc*.

Explanation: While trying to close the VSAM KSDS base of a path through which a record insert has been requested for file *filename*, CICS has detected an error. *eeee* is as follows:

8E05 Failure in DFHFCM to close VSAM base. *cccc* is the error code from the VSAM ACB.

8E07 SVC 99 dynamic deallocation in DFHFCM failed. *cccc* is the SVC 99 error return code.

System Action: CICS takes a system dump and continues processing, with base left open.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCM

XMEOUT Parameters: *applid, filename, eeee, cccc*

DFHFC0987 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed: Not available for type of processing. VSAM codes - 0008, 00A8 in module** *module*.

Explanation: When CICS attempted to open the VSAM file *filename*, the OPEN failed with the VSAM return codes shown in the message text. The probable reason for the failure is that the data set is in use by another region or another ACB in the CICS region, and that the VSAM share options prohibit the level of sharing needed to permit the OPEN.

A data set may not be open in both RLS and non-RLS mode, via different files, at the same time, with one exception. It is possible for a data set to be open in non-RLS read-only mode from either another CICS region or from batch at the same time as the data set is open in RLS mode.

System Action: CICS continues processing, with the file left closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If the data set is in use by another user, wait until it is free and then retry the OPEN.

If the problem recurs and you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, module*

DFHFC0988 *applid* **Non-RLS OPEN of file** *filename* **failed. This data set type is not supported by CICS.**

Explanation: An attempt to open file *filename* has failed because the file referenced a data set of a type not supported by CICS.

CICS File Control supports opening VSAM KSDS, ESDS, RRDS and VRRDS data sets, paths over KSDS and ESDS data sets, and BDAM data sets. No other data set types are supported. For example, CICS does not support opening a VSAM linear data set.

System Action: CICS continues processing with *filename* closed and its state UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: You have probably specified DSNAME incorrectly in the file definition. Correct the file definition.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename*

DFHFC0989I *applid* **Non-RLS OPEN of file** *filename* **will be delayed because the associated data set** *dataset* **is being recalled.**

Explanation: File *filename* is taking longer than expected to open because the associated data set has been migrated and has to be recalled before the file open processing can complete.

System Action: The open of file *filename* will be delayed until its associated data set has been recalled.

User Response: None.

Destination: Console

Module: DFHFCN

XMEOUT Parameters: *applid, filename, dataset*

DFHFC0990 *applid {RLS | Non-RLS}* **OPEN of file** *filename* **failed. Recovery specified, but the path is not in the upgrade set. Base data set** *dsname***. Module** *module***.**

Explanation: An attempt was made to open a recoverable file, associated with a VSAM path over an alternate index, for update processing (SERVREQ=ADD, DELETE or UPDATE set). However, the alternate index is not in the upgrade set of the base. CICS detects this condition and does not attempt to open the file.

If the alternate index is not in the upgrade set of the base, any updates made via the base are not reflected in the alternate index and so updates made via the path may compromise data integrity. Note the open of the path fails if RECOVERY=ALL or RECOVERY=BACKOUTONLY is specified on the path FCTE entry, or on the base data set.

The base takes the recovery attributes of the first file to open for update against it since a cold or initial start. Those attributes remain in force on the data set, and consistency checks are performed between the FCT entry and the data set at file open time.

System Action: CICS continues processing with file *filename* closed and not enabled.

User Response: Take the data set offline and redefine the alternate index with the UPGRADE option. Run a BLDINDEX job to bring the alternate index up to date with the base data set and then retry the open of the file.

Destination: Console

Modules: DFHFCFS, DFHFCRO

XMEOUT Parameters: *applid, {1=RLS, 2=Non-RLS}, filename, dsname, module*

DFHFC0991 *applid* **Non-RLS OPEN of file** *filename* **failed. Recovery attributes conflict with those on the VSAM data set -** *cccc***. Base data set** *dsname*

Explanation: An attempt was made to open a file *filename* for update processing. (SERVREQ=ADD, DELETE or UPDATE set), CICS detected that the recovery attributes on the file were inconsistent with those currently in force for the VSAM data set as recorded in the CICS data set name block. The file was not opened in order to maintain data integrity.

The data set takes the recovery attributes of the first file to open for update against it since a cold or initial start. Code *cccc* identifies the inconsistency found and takes the following values:

8514 Both the file and the data set have RECOVERY=ALL specified, but the forward recovery logs specified are different.

8515 The data set has RECOVERY=BACKOUTONLY or RECOVERY=NONE specified, and the file is trying to open with RECOVERY=ALL.

8516 The data set has RECOVERY=NONE specified. The file is attempting to open with RECOVERY=BACKOUTONLY.

851B The file specified RECOVERY=NONE or BACKOUTONLY. The VSAM data set had RECOVERY=ALL specified.

851C The file specified RECOVERY=NONE. The VSAM data set had BACKOUTONLY specified.

System Action: CICS continues processing with file *filename* closed and not enabled.

User Response: Ensure that files referencing the same VSAM data set have the same recovery attributes specified.

Alter the FCT entries using the CEDA ALTER FILE command and reinstall the group.

To nullify the recovery attribute set for the base data set, the user can issue a CEMT SET DSNAME REMOVE or EXEC CICS SET DSNAME REMOVE command. This deletes the base cluster block, and leaves CICS with no record of prior recovery settings for this VSAM data set. The **first** file to subsequently open against this data set causes a new base cluster block to be built. If the file is opened for update processing, the recovery attributes of this file are copied into the base cluster block.

If you want to have files referencing the same VSAM data set with different **backout** recovery attributes you should use Global User Exit XFCNREC.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, cccc, dsname*

DFHFC0995 *applid* **Hiperspace allocation for LSR pool** *n* **was incomplete or zero.**

Explanation: CICS requested VSAM to provide hiperspace buffers when building local shared resource (LSR) pool number *n*, but there was insufficient expanded storage available to satisfy the request completely.

System Action: CICS continues processing. VSAM uses the buffers it has been able to provide.

User Response: Review your installation's use of expanded storage and use MVS facilities to adjust its allocation, or change your RDO LSRPOOL definition or DFHFCT TYPE=SHRCTL definition, to reduce the hiperspace buffer requirements for pool *n.*

Destination: Console

Module: DFHFCL

XMEOUT Parameters: *applid, n*

DFHFC0996 *date time applid {Open | Close | Enable | Disable | Cancel of close}* **of file** *filename* **suppressed due to intervention of User Exit.**

Explanation: An open, close, enable, disable or cancel close request has been issued against the specified file. An exit program enabled at the global user exit point XFCSREQ in CICS file control has directed CICS not to carry out the request.

System Action: If the request being issued is an enable, disable, close or cancel close request, the file state remains unchanged, that is, it remains in the same state as before the request was issued.

If the request is an open request, the state remains unchanged unless the file was in a closed, enabled state. In this state, the open request could be an implicit open request, (that is, the file is being opened as part of a file API request). If it is an implicit open request, the file state is changed to closed unenabled to ensure the file API request is halted, and a NOTOPEN condition is returned to the application.

User Response: Examine the reason for the command being suppressed. This is installation specific.

Destination: Console and Transient Data Queue CSMT

Module: DFHFCFS

XMEOUT Parameters: *date, time, applid, {1=Open, 2=Close, 3=Enable, 4=Disable, 5=Cancel of close}, filename*

DFHFC0997I *applid* **RLS OPEN of file** *filename* **is delayed because the associated data set** *dsname* **is being recalled.**

Explanation: RLS file *filename* is taking longer than expected to open because the associated data set has been migrated and has to be recalled before the file open processing can complete.

System Action: The open of file *filename* is delayed until its associated data set has been recalled.

User Response: None.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename, dsname*

DFHFC0998 *applid* **User exit XFCNREC is causing file** *filename* **to be opened even though a file recovery inconsistency of type** *X'code'* **exists. CICS cannot guarantee data integrity for base data set** *dsname*

Explanation: An attempt was made to open file *filename* for update processing, (SERVREQ=ADD, DELETE or UPDATE set), and CICS detected that the backout recovery attribute on the file was inconsistent with that on the VSAM base data set. Normally CICS would fail the open on detection of an inconsistency. However, a program running at user exit XFCNREC has indicated that the open should continue even though an inconsistency has been detected. CICS can no longer guarantee the integrity of the data on the associated data set. Code X'*code*' identifies the inconsistency and can take one of the following values:

X'8516' The data set has RECOVERY=NONE specified. The file is attempting to open with RECOVERY=BACKOUTONLY.

X'851C' The file specified RECOVERY=NONE. The VSAM data set had BACKOUTONLY specified.

An INQUIRE on the RECOVSTATUS for the data set from this point onwards returns a NOTRECOVABLE response. The data set is marked as not recoverable until the next CEMT SET DSNAME REMOVE, EXEC CICS SET DSNAME REMOVE command or cold or initial start.

System Action: CICS opens file *filename* and continues processing using the recovery setting from the file definition to determine whether backout logging should be performed.

User Response: Ensure that it is correct for the backout recovery attribute inconsistency to be ignored for this data set.

If the backout recovery attribute inconsistency should not have been ignored, ensure that files referencing the same VSAM data set have the same recovery attributes. If they do not, either alter the FCT entries using the CEDA ALTER FILE command and reinstall the group, or alter the FCT macro definition of the file. Note that this reassembled FCT only takes effect at the next CICS cold or initial start.

To nullify the recovery attribute set for the base data set, issue a CEMT SET DSNAME REMOVE or EXEC CICS SET DSNAME REMOVE command. This deletes the base cluster block and leaves CICS with no record of prior recovery settings for this VSAM data set. The **first** file to subsequently open against this data set causes a new base cluster block to be built. If the file is opened for update processing, the recovery attributes of this file are copied into the base cluster block.

Destination: Console

Module: DFHFCN

XMEOUT Parameters: *applid, filename, X'code', dsname*

DFHFC0999 *applid* **RLS OPEN of file** *filename* **failed. RLS access is disabled.**

Explanation: While CICS was opening file *filename* the CICS file control open/close routine detected that RLS access is disabled. A PREVIOUS open or record management request received a serious error from VSAM and disabled RLS access.

System Action: CICS continues processing with file *filename* closed and its state UNENABLED. Any transaction attempting to use RLS files is sent a NOTOPEN condition.

User Response: Determine why RLS access was disabled.

Destination: Console

Module: DFHFCRO

XMEOUT Parameters: *applid, filename*

DFHFC2813 *applid* **Program DFHRCEX cannot be found.**

Explanation: An attempt to link to program DFHRCEX during file control initialization has failed. This is a severe error.

System Action: CICS startup is abnormally terminated with a dump.

User Response: Find out why DFHRCEX could not be located.

Destination: Console

Module: DFHFCRP

XMEOUT Parameter: *applid*

DFHFC3001 *date time applid* **Record not backed out because it may have been overridden by a non-RLS batch job. Diagnostic information follows in message DFHFC3010. The record was updated by unit of work** *X'local-uowid'* **for file** *filename***, base data set** *data-set-name*

Explanation: A log record was presented to file control for backing out, but although the updated record was protected by a VSAM RLS lock, a non-RLS batch job had elected to override the RLS locks held on this data set and therefore the condition of the record can no longer be guaranteed. The update had been made to the base data set *data-set-name* via the CICS file *filename*, under the unit of work identified by *local_uowid*.

System Action: The update is not backed out because the condition of the updated record cannot be guaranteed, The updated data is committed instead. Diagnostic information is provided by this message and the subsequent message DFHFC3010.

User Response: See the associated message DFHFC3010 for more information and guidance.

Destination: CSFL

Module: DFHFCRC

XMEOUT Parameters: *date, time, applid, X'local-uowid', filename, data-set-name*

DFHFC3002 *date time applid* **Record backed out at request of user exit although it may have been overridden by a non-RLS batch job. Diagnostic information follows in message DFHFC3010. The record was updated by unit of work** *X'local-uowid'* **for file** *filename***, base data set** *data-set-name*

Explanation: A log record was presented to file control for backing out, but although the updated record was protected by a VSAM RLS lock, a non-RLS batch job had elected to override the RLS locks held on this data set. However, an exit program enabled at the XFCBOVER exit point decided that the non-RLS batch job would not have caused corruption of the record, and requested that the backout should go ahead. The update had been made to the base data set *data-set-name* via the CICS file *filename*, under the unit of work identified by *local_uowid*.

System Action: An attempt to backout the update is made because the user exit requested that backout should go ahead. Diagnostic information is provided by this message and the subsequent message DFHFC3010.

User Response: See the associated message DFHFC3010 for more information and guidance.

Destination: CSFL

Module: DFHFCRC

XMEOUT Parameters: *date, time, applid, X'local-uowid', filename, data-set-name*

DFHFC3003 *date time applid* **Record not backed out because locks for a backout-failed data set have been reset. Diagnostic information follows in message DFHFC3010. The record was updated by unit of work** *X'local-uowid'* **for file** *filename***, base data set** *data-set-name*

Explanation: An update made by unit of work *local-uowid* to the base data set *data set name* via the CICS file *filename* was protected by a lock while awaiting successful backout, but a decision has been taken locally to reset the locks for this data set. The log record representing the update has therefore been presented to file control for the purpose of providing diagnostic information in this and the subsequent message DFHFC3010.

System Action: The update is not backed out and the lock is released. The implication of resetting the locks for a data set is that the backout has failed for some reason which cannot be easily corrected. Diagnostic information is provided by this message and the subsequent message DFHFC3010.

User Response: See the associated message DFHFC3010 for more information and guidance.

Destination: CSFL

Module: DFHFCRC

XMEOUT Parameters: *date, time, applid, X'local-uowid', filename, data-set-name*

DFHFC3004 *date time applid* **Record backed out because of the forced back out of an indoubt unit of work. Diagnostic information follows in message DFHFC3010. The record was updated by unit of work** *X'local-uowid'* **for file** *filename***, base data set** *data-set-name*

Explanation: A log record has been presented to file control for backing out because the local unit of work *local-uowid*, which was part of a distributed unit of work, has gone in-doubt, and CICS has backed out the local unit of work. This decision to back out the record is the result of one of the following:

- CICS received an SPI SET UOW or SET DSNAME command that specified BACKOUT.
- CICS received an SPI SET UOW or SET DSNAME command that specified FORCE and the indoubt attributes on the transaction definition specified BACKOUT.
- An indoubt WAIT timeout occurred, and the transaction definition specified BACKOUT.
- One of the resource managers involved in the unit of work did not support waiting during the indoubt period.

The update being backed out was made to the base data set *data-set-name* via the CICS file *filename*. This and the subsequent message provides diagnostic information which is of use in correcting the situation if the actual resolution of the distributed unit of work was to commit it rather than to back it out.

System Action: The update is backed out, and diagnostic information is provided by this message and the subsequent message DFHFC3010.

User Response: See the associated message DFHFC3010 for more information and guidance.

Destination: CSFL

Module: DFHFCRC

XMEOUT Parameters: *date, time, applid, X'local-uowid', filename, data-set-name*

DFHFC3010 *date time applid* **Diagnostic information for unit of work** *X'local-uowid'* **and file** *filename***. Update was a** *{read-update | write-add}* **made by transaction** *tranid* **at terminal** *termid* **under task number** *tasknum***. Key length** *key-length***, data length** *data-length***, base ESDS RBA** *X'base-RBA-or-zero'***, record key** *X'record-key'*

Explanation: This message follows each DFHFC3001, DFHFC3002, DFHFC3003, or DFHFC3004 message, and provides additional information to help diagnose and correct the situation reported in the preceding message.

For any given filename and unit of work CICS normally issues messages of only one type; for example, a series of DFHFC3001 messages each followed by DFHFC3010, or a series of DFHFC3003 messages each followed by DFHFC3010.

The exception to this is when an exit program enabled at the XFCBOVER global user exit point elects to backout some updates and not to backout others. In this situation CICS might issue a combination of DFHFC3001 and DFHFC3002 messages (each followed by DFHFC3010) for the same filename and unit of work.

This message includes the following information:

local-uowid The local unit-of-work identifier for correlation with the preceding message.

filename The file name for correlation with the preceding message.

read-update **or** *write-add***.** The type of before-image log record presented to file control. The type is *read-update* if the update made to the file was either: a READ UPDATE, READNEXT UPDATE or READPREV UPDATE request (which will normally have been followed by a REWRITE or DELETE request), or a DELETE request which specified a RIDFLD. The type is *write-add* if the update made to the file was a WRITE request.

tranid The transaction under which the original update was made.

termid The terminal from which the transaction which made the original update was run.

tasknum The task number under which the transaction which made the original update was run

key-length The length of the record key

data-length The length of the data in the before-image.

base-RBA-or-zero The base RBA if the update was made to an ESDS, or zero if not.

record-key The value of the record key field, in hexadecimal.

System Action: None beyond the system action described under the preceding message.

User Response: Use the diagnostic information to determine any changes that need to be made to the data set to ensure that the contents are correct. Once you have identified the record which may not now contain the correct contents, and the transaction which originally updated it, a knowledge of your application programs should allow you to determine the necessary action.

Destination: CSFL

Module: DFHFCRC

XMEOUT Parameters: *date, time, applid, X'local-uowid', filename, {1=read-update, 2=write-add}, tranid, termid, tasknum, key-length, data-length, X'base-RBA-or-zero', X'record-key'*

DFHFC4700 *applid {An unexpected | A VSAM | A length | A lock | A timeout | An unexpected delete}* **error has occurred during file backout. (Module DFHFCFR has returned reason code (***X'xx***), access method code (***X'cccccccc***) and length error code (***X'yy***).)**

Explanation: File backout has called module DFHFCFR as part of its processing, and an error has been returned which should not be possible during backout. The message text includes the type of error that has occurred.

Additional diagnostic information is provided by: the reason code *xx* returned from DFHFCFR, the code *cccccccc* which was returned to DFHFCFR from the access method that it called, and the length error code *yy*.

The length error code is normally either X'00', indicating that length errors are not applicable to the type of request which was in error, or X'01', indicating that there was no length error. A value greater than X'01' occurs when the message text indicates that the type of error is a length error.

System Action: An exception trace point is written, and a system dump is taken.

The error is processed as a backout failure. Unless a user exit program enabled at the XFCBFAIL exit point bypasses backout failure processing, message DFHFC4701 or DFHFC4702 follows and gives details of the file and data set involved.

CICS continues.

User Response: Inform the system programmer. This indicates a possible error in CICS, VSAM or BDAM code. The severity of its impact depends on whether the backout can be successfully retried.

If the data set being backed out is a VSAM data set, you can retry the backout. Message DFHFC4701 names the data set, and the failed backout can be retried using SET DSNAME RETRY. If the problem is due to some transient condition which has since cleared, the backout will now succeed.

If the data set being backed out is a BDAM data set, the backout cannot be retried. The data is committed and the locks are released, unless an exit program enabled at the XFCBFAIL exit point terminates CICS, in which case data integrity can be preserved by performing an emergency restart.

If the backout cannot be successfully retried, then take action depending on the type of error indicated in the message text:

- An unexpected error

  This probably indicates either a corruption of storage or an error within CICS code. It might also indicate an error within the access method called to process the request (VSAM or BDAM).

  The reason code *xx* is the reason code from the DFHFCFR parameter list and has been included as additional documentation in case you need further help from IBM.

  The access method code *cccccccc* is information returned to file control in the VSAM RPL if the error was detected by VSAM, or the BDAM DECB if the error was detected by BDAM. For VSAM, the first byte is the VSAM return code and the second byte is the VSAM reason code; the third and fourth bytes may contain additional VSAM diagnostics (for more information, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*). For BDAM, the access method code is the 4-byte exception codes field from the DECB (for more information, see *DFSMS/MVS Version 1 Release 5 Using Data Sets*).

- A VSAM error

  This indicates that an error has occurred within VSAM.

  The access method code *cccccccc* is information returned to file control in the VSAM RPL. The first byte is the VSAM return code and the second byte is the VSAM reason code; the third and fourth bytes may contain additional VSAM diagnostics (for more information, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*).

- A length error

  When a length error is reported, the length error code *yy* will be greater than X'01'. This normally indicates a serious error in CICS, VSAM, or BDAM processing. If it occurs for a BDAM data set, check the FCT and DCB definitions in case there is a mismatch between, for example, the blocksizes, which would result in a length error.

- A lock error

  This indicates that backout processing has encountered a LOCKED response on attempting to acquire a lock on a record which is held as a retained lock by another unit of work. This should not be possible because the record should be locked by the unit of work being backed out. If this error occurs for a file being accessed in RLS mode, then it probably indicates an error in the SMSVSAM server. If this error occurs for a file being accessed in non-RLS mode, then it probably indicates an error in CICS enqueue processing.

- A timeout error

  This indicates that backout processing has timed out attempting to acquire an RLS lock. This should not be possible during backout because the record should already be locked by the unit of work being backed out. If this error occurs then it probably indicates an error in the SMSVSAM server.

- An unexpected delete error

  This indicates that the request to be backed out was a delete request, but that the file type is one for which deletes are not

supported (VSAM ESDS or BDAM). The most likely cause of this error would be some corruption of the data set, although it might also indicate an error within CICS, or a storage corruption.

You may need assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCRC

XMEOUT Parameters: *applid, {1=An unexpected, 2=A VSAM, 3=A length, 4=A lock, 5=A timeout, 6=An unexpected delete}, X'xx', X'cccccccc', X'yy'*

DFHFC4701 *date time applid* **Backout failed for transaction** *tranid***, VSAM file** *filename***, unit of work** *X'local_uowid'***, task** *task_number***, base** *base_dsname***, path** *path_dsname***, failure code** *X'bfail_code'***.**

Explanation: File backout has been unable to backout an uncommitted change made to a VSAM data set via file *filename*, that was made by the unit of work *local_uowid*.

The file is associated with the data set *path_dsname*. This is either a base cluster data set if the *path_dsname* and *base_dsname* given in the message are the same, or is a path data set whose base cluster is the *base_dsname* given in the message if the two names differ.

The change that is being backed out was originally made by task *task_number* servicing transaction code *tranid*, running under the unit of work *local_uowid* The current task number will differ from the original one that is given in the message if this backout is itself a retry of an earlier backout which also failed, or is a backout being carried out following resolution of an indoubt situation, and the current transaction code will differ from the original one if the transaction has been disabled.

The failure code X'*bfail_code*' indicates the reason for the failure.

System Action: The system continues normally.

Backing out of the unit of work continues, but no further attempts to backout updates made by this unit of work to the *base_dsname* named in the message are made.

When the unit of work has been backed out as far as is possible, those updates which could not be backed out are deferred (shunted) until the backout can be retried.

It is possible for other work to continue to access the base cluster data set, but the records in that data set that were changed by this unit of work are locked by retained locks. This ensures that any attempt to access these records results in a LOCKED response being returned to the application. The records must remain locked until the backout has been successfully retried in order to preserve data integrity.

If, when the backout is retried, it fails again for either the same or another reason, this message is issued again, with the failure code indicating the reason for the failure on this occasion.

User Response: You may decide to leave the data set online for any of the errors indicated by X'*bfail_code*', especially if you believe that the backout failure may have been due to some transient situation, and that the backout may succeed if retried. You can manually drive retry of the backout using the SET DSNAME RETRY command, or alternatively wait until some event triggers retries of the shunted backouts in the system.

As a last resort, and at the cost of losing data integrity, you could bypass the deferred backout of uncommitted changes to this data set using the SET DSNAME RESETLOCKS command.

The user response depends on the value of the failure code X'*bfail_code*'.

10 The backout attempted to add a duplicate key value to a unique alternate index. The backout can never be carried out unless you can delete the existing record with this alternate key value, then retry the backout using SET DSNAME RETRY. This failure can only occur for a file being accessed in non-RLS mode.

20 The data set ran out of storage while the request was being processed. You should reallocate the data set with more space, then retry the backout using SET DSNAME RETRY. Do not forward recover the data set. If you accessed the file in RLS mode, there are extra steps required to ensure that the retained locks remain associated with the data set. These are explained in the *CICS Recovery and Restart Guide*.

24 An I/O error has occurred on the data set. You should consider the possibility that the data set needs restoring, especially if there have been a large number of these messages referring to the same base cluster data set, or if there have also been I/O errors issued during request processing for that data set.

If you do decide to restore the data set, you should take the following steps:

1. Prevent access to the data set
2. Restore a backup copy and forward recover the data set (for example, using CICSVR)
3. Reallow access to the data set
4. Retry deferred backouts.

For an RLS mode data set, prevent access by issuing a SET DSNAME QUIESCED command which closes all open files throughout the sysplex and prevents further RLS opens. Reallow access by issuing a SET DSNAME UNQUIESCED command, which also retries deferred backouts automatically.

For a non-RLS mode data set, prevent access by issuing a SET DSNAME UNAVAILABLE command to prevent further non-RLS opens and issue SET FILE CLOSED commands for all open files. Reallow access by issuing a SET DSNAME AVAILABLE command, and retry deferred backouts using SET DSNAME RETRY.

40 Logical delete for an ESDS data set was not performed because the XFCLDEL exit either chose not to carry out the logical delete, or was not enabled.

41 A DFSMSdss non-BWO backup is in progress for the data set. The backout will be automatically retried when the backup completes.

B0 A deadlock was detected. This can only happen for files opened in non-RLS mode. Since this is a transient condition, you should just retry the backout using SET DSNAME RETRY.

C0 A failure of the VSAM RLS server was detected by this request. The backout is automatically retried when the server becomes available again.

C1 VSAM RLS access is disabled because the server is unavailable. The backout is automatically retried when the server becomes available again.

C2 The VSAM RLS server has recycled (failed and restarted) whilst a record was being backed out. This is a very rare occurrence since the failure and restart must have taken place after the record to be backed out was read for update, and before it was rewritten or deleted. A retry of the backout should be successful, but because the server has already

become available, backout will not be automatically retried. You should use SET DSNAME RETRY to drive backout retry.

C3 The VSAM RLS cache structure to which the data set was bound has either failed or has lost connectivity, and VSAM has been unable either to rebuild the failed cache structure, or to bind the data set to an alternative cache structure in the cache set. The backout is automatically retried when the cache structure becomes available again.

C4 VSAM has returned a response indicating that the RLS lock structure in the coupling facility is full. Allocate a larger lock structure, rebuild into it and retry the backout using set dsname retry. See *OS/390 MVS Setting up a Sysplex*, (GC28-1779) and *DFSMS/MVS DFSMSdfp Storage Administration Reference*, (SC26-4920) for further information on how to allocate, and build into, larger lock structures.

F0 There was no space to add another alternate key value to a non-unique alternate index. You should rebuild the data set with a larger alternate index data CI size (unless you are already at the maximum), and then retry the backout using SET DSNAME RETRY. If you accessed the file in RLS mode, there are extra steps required to ensure that the retained locks remain associated with the data set. These are explained in the *CICS Recovery and Restart Guide*. Do not forward recover the data set.

FB An error occurred when opening the file for backout. Determine why the file would not open, and if it is possible to correct it, do so and then issue SET DSNAME RETRY to retry the backout. If the error occurred because the data set was quiesced, the backout is automatically retried when the data set is unquiesced. If the error occurred because the VSAM RLS server was not available, the backout is automatically retried when it becomes available again.

FE An error occurred which is not expected to be possible during backout. An exception trace point is written, message DFHFC4700 is issued and a system dump is taken. Use these to determine the cause of the error. It might be worth retrying the backout, using SET DSNAME RETRY, since the problem could have been some transient condition which has since cleared.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCRC

XMEOUT Parameters: *date, time, applid, tranid, filename, X'local_uowid', task_number, base_dsname, path_dsname, X'bfail_code'*

DFHFC4702 *date time applid* **Backout failed for transaction** *tranid*, **BDAM file** *filename*, **unit of work** *X'local_uowid'*, **task** *task_number*.

Explanation: File backout has been unable to backout an uncommitted change made to a BDAM data set via file *filename*, that was made by the unit of work *local_uowid*.

The change that is being backed out was originally made by task *task_number* servicing transaction code *tranid*, running under the unit of work *local_uowid*. However, if this backout is being attempted after waiting for an indoubt situation to be resolved, the current task number will be different from the original one given in the message, and transaction code will be different from the original one if the transaction has been disabled.

System Action: The system continues normally.

Backing out of the unit of work continues, and any further failures to backout changes made to this BDAM data set result in the message being reissued.

Unless a program invoked at the backout failure exit point, XFCBFAIL, took some action to prevent it, it is possible for other work to continue to access the BDAM data set, but data integrity is compromised because the changes have not been backed out.

User Response: Unless you are prepared to continue using the data set in spite of the loss of data integrity, you should take some action to correct matters, such as closing all files that are using the data set and backing out the uncommitted changes offline.

One possible cause of a BDAM backout failure is that a logical delete could not be performed because the XFCLDEL exit either chose not to carry out the logical delete or was not enabled. If this is the case then you may want to ensure that a suitable exit program is enabled at the XFCLDEL exit point, so that any future attempts at backing out writes made to BDAM data sets will succeed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCRC

XMEOUT Parameters: *date, time, applid, tranid, filename, X'local_uowid', task_number*

DFHFC4800 *date time applid* **A failure has been detected on forward recovery log stream** *log_stream*. **The associated RLS data set has been quiesced. Data set** *dsname*

Explanation: The logger domain has detected an error on the forward recovery log stream *log_stream*. As a result, the associated RLS data set *dsname* cannot safely continue to be used.

System Action: Processing continues. The RLS data set *dsname* has been quiesced.

User Response: First, take a backup of the data set to establish a new forward recovery point. You can then correct the problem causing the log stream failure, delete and redefine the failed MVS log stream, and unquiesce the data set to reallow RLS access.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCLF

XMEOUT Parameters: *date, time, applid, log_stream, dsname*

DFHFC4801 *date time applid* **A failure has been detected on forward recovery log stream** *log_stream*. **The associated non-RLS data set has been set unavailable and its files closed. Data set** *dsname*

Explanation: The logger domain has detected an error on the forward recovery log stream *log_stream*. As a result, the associated non-RLS data set *dsname* cannot safely continue to be used.

System Action: Processing continues. The data set *dsname* has been set unavailable and all files associated with it have been closed.

User Response: First, take a backup of the data set to establish a new forward recovery point. Then, having corrected the problem which caused the log stream failure, you can delete and redefine the failed MVS log stream. If the name of the forward recovery log stream for the data set is held in the VSAM catalog, you can now make the data set available again, using SET DSNAME AVAILABLE. If the name of the forward recovery log stream for the data set is held in the file definition, you must issue SET JOURNALNAME RESET for the forward recovery log before making the data set available again using SET DSNAME AVAILABLE.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCLF

XMEOUT Parameters: *date, time, applid, log_stream, dsname*

DFHFC4802 *date time applid* **A failure has been detected on auto journal** *journal_name***. The associated file** *file_name* **has been closed.**

Explanation: The logger domain has detected an error on the automatic journal *journal_name*. As a result, the automatic journal is no longer reliable.

System Action: The associated file *filename* has been set closed.

User Response: The appropriate action depends on how you use the automatic journal, and on whether you can tolerate missing information.

If you require a complete automatic journal with no missing information, you need to take some action to establish a new start point for the automatic journal. You can then correct the error causing the log stream failure, delete and redefine the log stream, issue SET JOURNALNAME RESET, and reopen the file.

If you do not require a complete automatic journal, if the log stream is still writeable, you can issue SET JOURNALNAME RESET, open the file, and continue autojournalling to the same journal. A message preceding this one reports details of the log stream failure.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCLF

XMEOUT Parameters: *date, time, applid, journal_name, file_name*

DFHFC5801A *applid* **File OPEN has failed for VSAM data set. The BWO values in the ICF catalog indicate that data set needs to be restored and forward recovered. Data set '***dsname***'.**

Explanation: CICS has rejected a file open for the VSAM base data set *dsname*. This base data set could not be opened because the integrated catalog facility (ICF) catalog backup while open (BWO) flags indicated a corrupted data set.

This message is accompanied by message DFHFC5806 which includes the name of the file involved in the OPEN failure.

System Action: The file open for data set *dsname* fails. CICS continues processing but the file is closed and its state is set to UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: Carry out the following procedure:

1. If a BWO copy of this VSAM data set is available:
   a. Restore the BWO copy of this data set via DFHSM and/or DFDSS.
   b. Apply the CICS forward recovery logs via a log-apply utility, such as CICS VSAM Recovery (CICSVR), to bring the data set to a point of consistency.
2. If no BWO copy of this base data set exists but a normal quiesced copy does, apply the forward recovery logs to the data set in the normal way to bring the data set to a point of consistency.
3. Set the ICF catalog BWO flags to indicate that the data set has been recovered to the point of failure. This can be done by issuing a CEMT SET DSNAME RECOVERED or EXEC CICS SET DSNAME RECOVERED command.
4. Rename the data set to that of the original data set prior to the failure.
5. Make the data set available.

Note: Some log-apply utilities, such as CICS VSAM Recovery MVS/ESA (CICSVR MVS/ESA) Version 2, set the ICF catalog BWO flags to a RECOVERED state after the CICS forward recovery logs have been applied.

Destination: Console

Module: DFHFCAT

XMEOUT Parameters: *applid, dsname*

DFHFC5802A *applid* **File OPEN has failed for VSAM data set. The BWO values in the ICF catalog indicate that data set needs to be forward recovered. Data set '***dsname***'.**

Explanation: CICS has rejected a file open for the VSAM base data set *dsname*. This base data set could not be opened because the ICF catalog backup while open (BWO) flags indicated that the data set was back-level and needed to be forward recovered. This failure occurs if a BWO of a VSAM base data set is restored but not forward recovered. This message is accompanied by DFHFC5806 which includes the name of the file involved in the OPEN failure.

System Action: The file open for data set *dsname* fails. CICS continues processing but the file is closed and its state set to UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: Carry out the following procedure:

1. Apply the CICS forward recovery logs via a log-apply utility, such as CICS VSAM Recovery (CICSVR), to bring the data set to a point of consistency.
2. Set the ICF catalog BWO flags to indicate that the data set has been recovered to the point of failure. This can be done by issuing a CEMT SET DSNAME RECOVERED or EXEC CICS SET DSNAME RECOVERED command.

Note: Some log-apply utilities, such as CICS VSAM Recovery (CICSVR), set the ICF catalog BWO flags to a RECOVERED state after the CICS forward recovery logs have been applied.

Destination: Console

Module: DFHFCAT

XMEOUT Parameters: *applid, dsname*

DFHFC5803 *applid* **A severe error (code** *X'code'***) has occurred while inquiring/setting VSAM data set BWO attributes. Data set '***dsname***' Return Code** *X'xxxxxxxx'* **Reason Code** *X'yyyyyyyy'* **Prob Det** *X'zzzzzzzzzzzzzzzz'***.**

Explanation: A severe error has been detected in DFHFCAT while inquiring or setting ICF catalog backup while open (BWO) attributes of base data set *dsname*. The error code is the exception trace point ID which uniquely identifies the call which has failed. The code X'*code*' can take the following values:

Value	Meaning
X'0B57'	A call to MVS/DFP Callable Services to inquire if a data set is known to a SMS sub-system has failed
X'0B59'	A call to MVS/DFP Callable Services to update the BWO flags to a forward recovered state for a data set has failed
X'0B5A'	A call to MVS/DFP Callable Services to update the recovery point for a data set has failed
X'0B5B'	A call to MVS/DFP Callable Services to update the BWO flags to a BWO disabled state for a data set has failed

X'0B5C' A call to MVS/DFP Callable Services to inquire if the BWO flags for a data set were in a BWO enabled state has failed

X'0B5D' A call to MVS/DFP Callable Services to update the BWO flags to a BWO enabled state for a data set has failed.

For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

The values *xxxxxxxx*, *yyyyyyyy* and *zzzzzzzzzzzzzzzz* are the BWO return code, reason code and problem determination code from the MVS/DFP Callable Services Interface call to update/inquire the ICF catalog BWO attributes.

This message is accompanied by message DFHFC5806 when a file open failure occurs or by message DFHFC5810 when a file close failure occurs.

System Action: CICS makes an exception trace point entry and issues this message. No system dump is taken. The actions taken depend on the operation in progress at the time of the error.

If the error occurs while opening a file, the open request fails, the file is closed, and its state is set to UNENABLED.

If the error occurs while closing a file, the status of the file is unchanged.

If the error occurs during activity keypoint when updating the recovery point, CICS tries to update the recovery point on the next activity keypoint that creates a keypoint directory element (KPDE).

If the error occurs while setting the data set RECOVERED via CEMT or EXEC CICS commands, a non-OK response is returned.

User Response: Use the return code, reason code and problem determination code to determine why the call to MVS/DFP Callable Services has failed. For further information see *MVS/DFP Callable Services* in the *MVS/DFP V3.2 System Programming Reference*.

Ensure that the appropriate level of MVS/DFP is installed on the processor where CICS is running. Also ensure that the data set is SMS managed and known to the SMS subsystem.

Destination: Console

Module: DFHFCAT

XMEOUT Parameters: *applid, X'code', dsname, X'xxxxxxxx', X'yyyyyyyy', X'zzzzzzzzzzzzzzzz'*

DFHFC5804 *applid* **File CLOSE failed during CICS termination. File '** *filename***'.**

Explanation: An attempt to close file *filename* during orderly CICS termination has failed. This message is produced only as a warning that this file could not be closed. Data integrity has been maintained.

System Action: CICS termination continues.

If this file was open against a base data set open for update with BACKUPTYPE=DYNAMIC specified, one of the following messages is issued on the first open for update for this base data set in the next CICS run:

DFHFC5807
DFHFC5808
DFHFC5809.

User Response: In order to avoid repetition of this failure, try to determine why the file was not closed from any other DFHFCxxxx messages produced during termination.

Destination: Console

Module: DFHFCSD

XMEOUT Parameters: *applid, filename*

DFHFC5805 *applid* **File OPEN failed. RECOVERY attributes of VSAM data set are not valid. File '***filename***' data set '***dsname***'.**

Explanation: The file *filename* is defined as eligible for backup while open for update (BACKUPTYPE=DYNAMIC). An attempt to open this file for update processing (SERVREQ=ADD, DELETE or UPDATE set), has failed because CICS has detected that the RECOVERY attributes have not been validated for the VSAM base data set *dsname*. A data set cannot be defined with BACKUPTYPE=DYNAMIC without RECOVERY=ALL specified.

System Action: The file open for data set *dsname* fails. Processing continues but the file is closed and its state set to UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: This is probably caused by a logic error in CICS. You should, however, check if there are any other DFHFCxxxx messages that indicate the cause of the error.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC5806 *applid* **File OPEN failed. DFHFCAT returned an error response from a BWO action on a VSAM data set. File '***filename***' data set '***dsname***'.**

Explanation: An attempt to open file *filename* has failed due to the failure of a call to MVS/DFP Callable Services or due to an invalid state returned from a call to MVS/DFP Callable Services for the VSAM base data set *dsname*. This message is accompanied by one of the following messages depending on the type of error being reported:

DFHFC0002
DFHFC5801
DFHFC5802
DFHFC5803

System Action: CICS fails the file open request for data set *dsname*. Processing continues but the file is closed and its state set to UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: See the accompanying message for the appropriate action to take in resolving this error.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC5807 *applid* **File OPEN failed. BACKUPTYPE attributes conflict with those currently defined for the VSAM data set. File '***filename***' data set '***dsname***'.**

Explanation: An attempt to open file *filename* for update processing, (SERVREQ=ADD, DELETE or UPDATE set), against the VSAM base data set *dsname* has failed. This is because CICS has detected an attribute conflict between the opening CICS FCT entry and the base data set's DSNB which was already opened for update. An FCT entry with a BACKUPTYPE=STATIC cannot be opened against a DSNB which already has or had an FCT entry opened against it with BACKUPTYPE=DYNAMIC. Similarly, an FCT entry with a BACKUPTYPE=DYNAMIC cannot be opened against a DSNB which already has or had an FCT entry opened against it with BACKUPTYPE=STATIC.

Note: A CICS base data set's DSNB cannot change BACKUPTYPE midway through a CICS run. In order to do this, you must destroy the DSNB and create a new one. There are three ways of doing this:

- CEMT SET DSNAME REMOVE
- EXEC CICS SET DSNAME REMOVE
- Terminate CICS and restart with a cold start.

If you respecify a DSNB with BACKUPTYPE=DYNAMIC, where previously it was specified with RECOVERY=NONE or BACKOUTONLY and BACKUPTYPE=STATIC, no forward recovery logging exists for the time that the DSNB had RECOVERY=NONE or BACKOUTONLY specified. Therefore you should take a backup copy of the data set before the change. This ensures that the data set can be recovered to a consistent point should a failure occur.

System Action: The file open for data set *dsname* fails. CICS continues processing but the file is closed and its state set to UNENABLED. Any transaction attempting to use this file is sent a NOTOPEN condition.

User Response: Determine the correct values for the BACKUPTYPE and RECOVERY attributes, and if necessary, redefine them for the FCT entry via CEDA.

Alternatively, remove the old DSNB as already described and reattempt the open.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC5808 *applid* **File OPEN warning. VSAM data set already set eligible for BWO on first open for update. File '***filename***' data set '***dsname***'.**

Explanation: The file *filename* is defined as eligible for backup while open for update (BACKUPTYPE=DYNAMIC). While opening this file for update processing, (SERVREQ=ADD, DELETE or UPDATE set), against the VSAM base data set *dsname*, CICS detected that the ICF catalog has already defined this base data set as eligible for BWO.

If a batch job has updated this data set in a prior batch window and a DFHSM backup was scheduled for the same time, you should discard the backup produced in the batch window as it is not possible to forward recover it to a consistent point should a failure occur. This is because updates made to the data set in the batch window are not reflected in the CICS forward recovery logs. This situation is likely to arise if CICS fails to close a file defined with BACKUPTYPE=DYNAMIC during CICS termination.

System Action: CICS updates the ICF catalog recovery point and open processing continues.

User Response: To ensure complete data integrity, quiesce all files opened against this base data set and take a backup copy. This can now be forward recovered at a later date and reflects updates made to this data set during a prior batch window.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC5809 *applid* **File OPEN warning. BACKUPTYPE attributes conflict with BWO values defined in ICF catalog. BWO values have been updated. File '***filename***' data set '***dsname***'.**

Explanation: The file *filename* is defined as not eligible for backup while open for update (BACKUPTYPE=STATIC). While opening this file for update processing (SERVREQ=ADD, DELETE or UPDATE set), against the VSAM base data set *dsname*, CICS detected that the BWO flags in the ICF catalog already defined this base data set as eligible for BWO. However, the CICS FCT entry and the DSNB define the base data set as not eligible for BWO.

If a batch job has updated this data set in a prior batch window and a DFHSM backup was scheduled for the same time, you should discard the backup produced in the batch window as it is not possible to forward recover it to a consistent point should a failure occur. This is because updates made to the data set in the batch window are not reflected in the CICS forward recovery logs.

This situation is likely to arise if CICS fails to close a file that is defined with BACKUPTYPE=DYNAMIC, during CICS termination and the file is redefined with BACKUPTYPE=STATIC on a subsequent CICS run.

System Action: CICS updates the ICF catalog to indicate that the data set is no longer eligible for BWO. File open processing continues.

User Response: Determine the correct value for the BACKUPTYPE attribute, and if necessary, redefine it via CEDA.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC5810 *applid* **File CLOSE failed. DFHFCAT returned an error response from a BWO action on a VSAM data set. File '***filename***' data set '***dsname***'.**

Explanation: An attempt to close file *filename* has failed because of the failure of a call to MVS/DFP Callable Services for the VSAM base data set *dsname*. This file is defined as eligible for backup while open for update (BACKUPTYPE=DYNAMIC), and is open for update processing, (SERVREQ=ADD, DELETE or UPDATE set). This message is accompanied by message DFHFC5803 or DFHFC0002, depending on the type of error reported.

System Action: The file close request for data set *dsname* fails. Processing continues and the file remains open.

User Response: See the accompanying message for the appropriate action to take in resolving this error.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC5811 *applid* **File OPEN warning. BACKUPTYPE=DYNAMIC attribute has been ignored. File '***filename***' data set '***dsname***'.**

Explanation: The file *filename* is defined as eligible for backup while open for update (BACKUPTYPE=DYNAMIC). During an attempt to open this file for update processing, (SERVREQ=ADD, DELETE or UPDATE set), against the VSAM base data set *dsname*, either:

- CICS has detected that the appropriate levels of software needed for VSAM backup while open (BWO) support have not been installed, or

- The appropriate MVS/DFP Callable Services modules could not be loaded.

System Action: CICS ignores the BACKUPTYPE=DYNAMIC parameter and continues as if STATIC were specified. File open processing continues.

User Response: If BWO support is required, ensure that the appropriate level of MVS/DFP Callable Services is installed.

If BWO support is not required, ensure that the file is defined with the BACKUPTYPE=STATIC attribute.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC5812 *applid* **File OPEN warning. BACKUPTYPE=DYNAMIC has been ignored for VSAM AIX data set. STATIC has been defaulted. File** *filename* **data set** *dsname***.**

Explanation: The file *filename* is defined as eligible for backup while open for update (BACKUPTYPE=DYNAMIC). This file is opening against the data set *dsname* which is a VSAM AIX. BACKUPTYPE=DYNAMIC is not a valid option for a VSAM AIX. BACKUPTYPE=STATIC has been defaulted.

System Action: File open processing continues.

User Response: Redefine this file via CEDA, specifying BACKUPTYPE=STATIC.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC5813 *applid* **File OPEN warning. Level of** *{DFHSM | DFDSS | DFHSM and DFDSS}* **does not support BWO.**

Explanation: You have opened a VSAM file for update and requested backup while open (BWO) support by specifying BACKUPTYPE=DYNAMIC in the FCT. However, CICS has detected that the software release level of DFHSM and/or DFDSS required for BWO support has not been installed on the processor on which CICS is running.

This message is issued once for the first file to open for update and be defined as eligible for BWO after a cold or initial start.

System Action: CICS file open processing continues. If the file open completes without error, the file is defined as eligible for BWO. However, no BWO backup facilities are available using DFHSM and/or DFDSS on the processor on which CICS is running.

User Response: Ensure that DFHSM and/or DFDSS, both of version 2.5.0 or later, are installed on the processor on which the BWO backup is to be made.

Note: DFSMS/MVS 1.1 (DFSMShsm and DFSMSdss) supersedes DFHSM 2.5 and DFDSS 2.5.

Destination: Console

Module: DFHFCAT

XMEOUT Parameters: *applid, {1=DFHSM, 2=DFDSS, 3=DFHSM and DFDSS}*

DFHFC5814 *applid* **An error (code** *X'code'***) has occurred while inquiring on VSAM data set attributes in the ICF catalog.** *{SHOWCAT | LOCATE}* **return code** *X'rrrr'***. Data set** *dsname***.**

Explanation: While reading the ICF catalog to obtain attributes of data set *dsname*, CICS received return code *rrrr* from a VSAM SHOWCAT or LOCATE macro or detected an associated error. The error code *code* is the exception trace which uniquely identifies the error. It can take the following values:

Value	Meaning
X'237A'	SHOWCAT for the data set failed with return code *rrrr*.
X'237B'	In the VSAM catalog entry for an AIX, either the data association or the base cluster association is missing.
X'237C'	SHOWCAT for the AIX of a path failed with return code *rrrr*.
X'237D'	The VSAM catalog entry for a path does not have a base cluster or an AIX as its first association.
X'237E'	LOCATE for the data set failed with return code *rrrr*.

For further information about CICS exception trace entries, see the *CICS Diagnosis Reference*.

System Action: CICS processing continues after making an exception trace entry and taking a system dump with dumpcode FC5814.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Use the SHOWCAT or LOCATE return code if present to determine the cause of the problem. For the meaning of the SHOWCAT return code, see *DFSMS/MVS Version 1 Release 5 Macro Instructions for Data Sets*. For the meaning of the LOCATE return code, see *DFSMS/MVS Version 1 Release 5 DFSMSdfp Advanced Services*. A VSAM LISTCAT listing for the data set may also be useful.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCAT

XMEOUT Parameters: *applid, X'code', {1=SHOWCAT, 2=LOCATE}, X'rrrr', dsname*

DFHFC5815 *applid* **An error has occurred while inquiring on VSAM data set attributes in the ICF catalog. VSAM RLS codes** *X'rrrr'***,** *X'cccc'***. Problem determination:** *X'dddddddd'***. Data set** *dsname***.**

Explanation: While reading the ICF catalog to obtain RLS attributes of data set *dsname*, CICS received reason code *cccc* from a VSAM IGWARLS macro. *rrrr* is the return code in register 15. *dddddd* is any available VSAM problem determination information.

System Action: CICS processing continues after making an exception trace entry and taking a system dump with dumpcode FC5815.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Use the IGWARLS reason code and problem determination information to determine the cause of the problem. For the meaning of the IGWARLS reason code, see *DFSMS/MVS Version 1 Release 5 DFSMSdfp Advanced Services*.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHFCAT

XMEOUT Parameters: *applid, X'rrrr', X'cccc', X'dddddddd', dsname*

DFHFC5820 *applid* **Any files that are still open against the base data set may need to be closed. File** *filename***, data set** *dsname***.**

Explanation: File *filename* was the first file to open a dynamically allocated data set *dsname*. This file is being closed leaving one or more files still open against the same base data set. However, if one of these files requires secondary extents, the request will fail with a CICS ILLOGIC error (EIBRCODE X'08BA0000').

System Action: Close processing completes normally.

User Response: To avoid this potential problem, you are advised to close and reopen the files that remain open against the base data set.

If you are unsure of the data set associations, run a LISTCAT against the above base dataset to produce a list of all associated data sets. Use CEMT INQ FILE(*) to identify which files are affected. All of these should be closed and reopened, for example, using the CEMT SET FILE(file name) CLOSE and CEMT SET FILE(file name) OPEN.

Destination: Console

Module: DFHFCFS

XMEOUT Parameters: *applid, filename, dsname*

DFHFC6000 *date time applid* **About to** *{quiesce | unquiesce}* **data set** *dsname*

Explanation: This message is issued just before a request is made to VSAM RLS to quiesce or unquiesce base data set *dsname* throughout the sysplex. The quiesce or unquiesce is initiated either by an end user issuing EXEC CICS SET DSNAME QUIESCESTATE or the CEMT equivalent, or internally by CICS.

System Action: The data set is quiesced or unquiesced, as indicated in the message.

User Response: None.

Destination: CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=quiesce, 2=unquiesce}, dsname*

DFHFC6001 *date time applid* **Data set successfully** *{quiesced | unquiesced}* **by** *{CICS | user}***. Data set** *dsname*

Explanation: A request to VSAM RLS to quiesce or unquiesce base data set *dsname* throughout the sysplex has been successfully completed.

System Action: CICS processing continues. The quiesce state of the data set in the ICF catalog is set to quiesced or unquiesced, as indicated in the message.

User Response: None.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=quiesced, 2=unquiesced}, {1=CICS, 2=user}, dsname*

DFHFC6003 *date time applid* **Attempt by** *{CICS | user}* **to** *{quiesce | unquiesce}* **a data set has been rejected because** *{quiesce | unquiesce | non-BWO backup | BWO backup | unknown event}* **is in progress. Data set** *dsname*

Explanation: This message is issued after a request to VSAM RLS to quiesce or unquiesce base data set *dsname* throughout the sysplex was rejected because a conflicting data set operation is in progress for that data set. The conflicting operation is specified in the message.

System Action: CICS processing continues. The quiesce state of the data set in the ICF catalog remains unchanged.

User Response: Wait for the conflicting data set operation to complete then retry the quiesce or unquiesce using EXEC CICS SET DSNAME or the CEMT equivalent.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=CICS, 2=user}, {1=quiesce, 2=unquiesce}, {1=quiesce, 2=unquiesce, 3=non-BWO backup, 4=BWO backup, 5=unknown event}, dsname*

DFHFC6005 *date time applid* **Attempt by** *{CICS | user}* **to quiesce a data set has failed. Quiesce was cancelled. Data set** *dsname*

Explanation: A request to VSAM RLS to quiesce base data set *dsname* throughout the sysplex has been cancelled by a participating CICS region. The CICS region could be any CICS in the sysplex. The quiesce was cancelled for one of the following reasons.

- An end user issued an EXEC CICS SET DSNAME UNQUIESCED command
- User code at global exit XFCVSDS suppressed the quiesce
- User code at global exit XFCSREQ suppressed the close of a file that is open against the data set
- The quiesce would not complete and was timed out

A preceding console message in the sysplex indicates the reason. For XFCVSDS the message is DFHFC6023. For XFCSREQ the message is DFHFC6024. For timeout the message is DFHFC6020. If there is no preceding message, EXEC CICS SET DSNAME UNQUIESCED has been used.

System Action: CICS processing continues. The quiesce state of the data set in the ICF catalog is set to unquiesced as a result of the cancel.

User Response: The response depends on the reason for the cancellation. If a preceding message was issued, refer to the explanation for that message for background information.

If EXEC CICS SET DSNAME UNQUIESCED was the reason, determine what the desired quiesce state should really be. If it should be quiesced, issue an EXEC CICS SET DSNAME QUIESCED command or the CEMT equivalent.

If an exit suppressed the quiesce, the user code at XFCVSDS or XFCSREQ must be disabled on all CICS regions in the sysplex before the data set can be quiesced.

If the quiesce timed out, retry the quiesce using EXEC CICS SET DSNAME QUIESCED or the CEMT equivalent. If the timeout occurs again, consider using EXEC CICS SET DSNAME IMMQUIESCED or the CEMT equivalent. This force-purges transactions accessing the data set, thereby speeding up the

closing of files. Alternatively, attempt to identify any long-running transactions that are using the data set, and terminate them.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=CICS, 2=user}, dsname*

DFHFC6007 *date time applid* **Attempt by** *{CICS | user}* **to** *{quiesce | unquiesce}* **a data set failed because the SMSVSAM server is not available. Data set** *dsname*

Explanation: A request to VSAM RLS to quiesce or unquiesce base data set *dsname* throughout the sysplex has failed because the SMSVSAM server address space is not available.

System Action: CICS processing continues. The SMSVSAM server address space should attempt to restart automatically.

The quiesce state of the data set in the ICF catalog is unpredictable.

User Response: The SMSVSAM server address space should normally restart itself. If it does not, restart the SMSVSAM server address space manually. Then issue an EXEC CICS SET DSNAME command or the CEMT equivalent to set the quiesce state in the ICF catalog to quiesced or unquiesced as desired.

If the SMSVSAM server address space fails to restart, there may be a more severe error. In this case, you need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSFL

DFHFC6010 *date time applid* **Attempt by** *{CICS | user}* **to** *{quiesce | unquiesce}* **a data set has failed because it has been migrated. Data set** *dsname*

Explanation: A request to VSAM RLS to quiesce or unquiesce base data set *dsname* throughout the sysplex failed because *dsname* has been migrated. The data set must be recalled before the quiesce or unquiesce can take place.

System Action: CICS processing continues.

User Response: Recall the data set and retry the quiesce or unquiesce.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=CICS, 2=user}, {1=quiesce, 2=unquiesce}, dsname*

DFHFC6015 *date time applid* **About to cancel** *{non-BWO | BWO}* **backup of data set** *dsname*

Explanation: A request is about to be made to VSAM RLS to cancel a DFSMSdss-initiated backup for base data set *dsname*. This is performed in response to user code at global exit XFCVSDS suppressing the backup.

The message indicates whether the backup is BWO or non-BWO.

System Action: The backup is cancelled throughout the sysplex.

User Response: None.

Destination: CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=non-BWO, 2=BWO}, dsname*

DFHFC6016 *date time applid {Non-BWO | BWO}* **backup of a data set cancelled by CICS. Data set** *dsname*

Explanation: A request to VSAM RLS to cancel a DFSMSdss-initiated backup for base data set *dsname* has been successful.

System Action: CICS continues processing. The BWO or non-BWO backup is cancelled throughout the sysplex.

User Response: None.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=Non-BWO, 2=BWO}, dsname*

DFHFC6017 *date time applid* **Attempt by CICS to cancel a** *{non-BWO | BWO}* **backup of a data set has been rejected because a cancel is already underway. Data set** *dsname*

Explanation: A request to VSAM RLS to cancel a DFSMSdss-initiated backup for base data set *dsname* has been rejected because another cancel is already underway.

System Action: CICS processing continues. The BWO or non-BWO backup is cancelled throughout the sysplex by the other cancel request.

User Response: None.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=non-BWO, 2=BWO}, dsname*

DFHFC6018 *date time applid* **Attempt by CICS to cancel a** *{non-BWO | BWO}* **backup of a data set failed because the SMSVSAM server is not available. Data set** *dsname*

Explanation: A request to VSAM RLS to cancel a DFSMSdss-initiated backup for base data set *dsname* failed because the SMSVSAM server address space was not available.

System Action: CICS processing continues. The SMSVSAM server address space should attempt to restart automatically.

The BWO or non-BWO backup request is not canceled. The backup may fail or succeed depending on whether the SMSVSAM server concerned is coordinating the backup or not.

User Response: The SMSVSAM server address space should normally restart itself. If it does not, restart the SMSVSAM server address space manually. Then use DFSMSdss to retry the backup if it failed.

If the SMSVSAM server address space fails to restart, a more severe error is indicated. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Explanation: A request to VSAM RLS to cancel a DFSMSdss-initiated backup for base data set *dsname* has failed with an unexpected error. The VSAM IDAQUIES macro failed with reason code *cccc*. *rrrr* is the return code in register 15.

System Action: CICS processing continues after taking a system dump with dumpcode FC6019. The BWO or non-BWO backup is not cancelled.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Use the IDAQUIES reason code to determine the cause of the problem. For the meaning of the IDAQUIES reason code, see the *DFSMS/MVS Version 1 Release 5 DFSMSdfp Diagnosis Reference*.

If you cannot resolve the problem, or the problem recurs, a more severe error is indicated. In this case, you will assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=non-BWO, 2=BWO}, X'rrrr', X'cccc', dsname*

DFHFC6020 *date time applid* **Timeout has occurred while quiescing a data set. Quiesce will be cancelled. Data set** *dsname*

Explanation: The request made to VSAM RLS to quiesce base data set *dsname* throughout the sysplex has timed out. The timeout limit is given by the system initialization parameter QUIESTIM.

This is probably due to the presence of long-running transactions on a participating CICS region failing to reach syncpoint, and therefore preventing the close of files open against the data set.

System Action: CICS cancels the quiesce throughout the sysplex by issuing an unquiesce for the data set. Depending upon the timing of the unquiesce request, one of two situations can result:

1. Normally the unquiesce is processed immediately and the quiesce request is canceled by VSAM. In this case, message DFHFC6020 is followed by messages DFHFC6000 and DFHFC6001 for the unquiesce completing.
2. Occasionally, depending on the timing of the unquiesce, the original quiesce request completes before the unquiesce request has been processed. Because the unquiesce cannot be canceled, it completes thereby canceling the original quiesce. In this case, message DFHFC6020 is followed by messages DFHFC6000, DFHFC6027, a DFHFC6001 for the quiesce completing, and another DFHFC6001 for the unquiesce completing.

User Response: If timeouts occur regularly, the following action can be taken to resolve the problem

- Increase the QUIESTIM SIT value. This can be useful if the system is particularly busy when quiesces are likely to be issued.
- Change the long-running transaction which is holding up the request. Note that the transaction can be on any CICS in the sysplex.

The SET DSNAME IMMQUIESCED command can be used to force purge any transaction and quiesce the data set. This should not be used regularly because force purges can occasionally abend CICS. The messages issued as part of the force purge enable the system programmer to identify the long-running transaction if no other method is available.

See also the Explanation of message DFHFC6005 for guidance.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, dsname*

DFHFC6021 *date time applid* **An error has occurred while notifying VSAM RLS of the completion of CICS processing for a data set quiesce or backup. VSAM RLS codes** *X'rrrr'*, *X'cccc'*. **Data set** *dsname*

Explanation: An unexpected error occurred when CICS notified VSAM RLS that it had completed its processing for a data set quiesce, or for a BWO or non-BWO backup. The VSAM IDAQUIES macro failed with reason code *cccc*. *rrrr* is the return code in register 15.

System Action: CICS processing continues after taking a system dump is taken with dumpcode FC6021. The failure of the IDAQUIES macro may cause the data set operation to timeout or fail.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Use the IDAQUIES reason code to determine the cause of the problem. For the meaning of the IDAQUIES reason code, see the *DFSMS/MVS Version 1 Release 5 DFSMSdfp Diagnosis Reference*.

If the data set operation has failed, retry the data set operation once the problem has been resolved,

If you cannot resolve the problem, or the problem reoccurs, a more severe error is indicated. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQI

XMEOUT Parameters: *date, time, applid, X'rrrr', X'cccc', dsname*

DFHFC6022 STORAGE OBTAIN macro failure in CICS RLS quiesce exit. MVS code *X'rrrr'*

Explanation: The CICS RLS quiesce exit was driven by VSAM RLS to process a data set operation request. An attempt was made to get storage for the request but the STORAGE OBTAIN macro failed. *rrrr* is the return code in register 15.

System Action: The CICS RLS quiesce exit writes a GTF trace entry. The request is **not** processed by CICS. The data set operation continues throughout the sysplex.

User Response: Use the return code to determine the cause of the problem, then refer to the Explanation of message DFHFC6030 for guidance. For the meaning of the return code, refer to the *OS/390 MVS System Codes* manual.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHFCQX

DFHFC6023 *date time applid* **The quiesce of a data set has been suppressed by user exit XFCVSDS. Quiesce will be cancelled. Data set** *dsname*

Explanation: User code at global exit XFCVSDS has suppressed a quiesce for base data set *dsname*.

System Action: CICS cancels the quiesce throughout the sysplex by issuing an unquiesce for the data set.

User Response: See the Explanation of message DFHFC6005 for guidance.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQU

XMEOUT Parameters: *date, time, applid, dsname*

DFHFC6024 *date time applid* **The quiesce of a data set has been suppressed by user exit XFCSREQ. Quiesce will be cancelled. Data set** *dsname*

Explanation: User code at global exit XFCSREQ has suppressed the close of a file open against base data set *dsname*. The file was being closed because the data set was being quiesced.

System Action: CICS cancels the quiesce throughout the sysplex by issuing an unquiesce for the data set.

User Response: See the Explanation of message DFHFC6005 for guidance.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCFS

XMEOUT Parameters: *date, time, applid, dsname*

DFHFC6025 *date time applid {Non-BWO | BWO}* **backup of a data set has been suppressed by user exit XFCVSDS. Backup will be cancelled. Data set** *dsname*

Explanation: User code at global exit XFCVSDS has suppressed a DFSMSdss-initiated backup for base data set *dsname*.

System Action: CICS cancels the backup throughout the sysplex.

User Response: If the backup must take place, before it can succeed the user code at XFCVSDS must be disabled on all CICS regions in the sysplex.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQU

XMEOUT Parameters: *date, time, applid, {1=Non-BWO, 2=BWO}, dsname*

DFHFC6026 *date time applid* **An error has occurred while notifying VSAM RLS of the completion of CICS processing for a data set quiesce or backup. The SMSVSAM server is not available. Data set** *dsname*

Explanation: CICS has notified VSAM RLS that it has completed its processing for a data set quiesce, or a BWO or non-BWO backup, but the SMSVSAM server address space is not available.

System Action: CICS processing continues. The SMSVSAM server address space should attempt to restart automatically.

The data set operation may fail or succeed, depending on whether the SMSVSAM server concerned was coordinating the operation or not.

User Response: The SMSVSAM server address space should normally restart itself. If it does not, restart the SMSVSAM server address space manually. Retry the data set operation if it has failed.

If the SMSVSAM server address space fails to restart, a more severe error is indicated. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQI

XMEOUT Parameters: *date, time, applid, dsname*

DFHFC6027 *date time applid* **VSAM RLS has been notified of the completion of CICS processing for a quiesce or backup of data set** *dsname*

Explanation: CICS has successfully notified VSAM RLS that it has completed its processing for a data set quiesce, or a BWO or non-BWO backup.

System Action: CICS processing continues. The data set operation continues throughout the sysplex, until all CICS systems involved have successfully notified VSAM RLS of the completion of their processing.

User Response: None.

Destination: CSFL

Module: DFHFCQI

XMEOUT Parameters: *date, time, applid, dsname*

DFHFC6028 *date time applid* **File Control RLS quiesce system transaction** *transid* **has started.**

Explanation: CICS system transaction CFQS or CFQR has started successfully.

CFQS and CFQR provide support for VSAM RLS data set quiesce and unquiesce operations, DFSMSdss-initiated BWO and non-BWO backups, and certain other data set related operations.

System Action: CICS processing continues.

User Response: None.

Destination: CSFL

Module: DFHFCQT

XMEOUT Parameters: *date, time, applid, transid*

DFHFC6029 *date time applid* **File Control RLS quiesce system transaction** *transid* **has failed. Reattach will be attempted.**

Explanation: CICS system transaction CFQS or CFQR has failed due to a serious error. An attempt will be made to reattach the transaction *transid*.

A preceding message should indicate the cause of the error.

CFQS and CFQR provide support for VSAM RLS data set quiesce and unquiesce operations, DFSMSdss-initiated BWO and non-BWO backups, and certain other data set related operations.

System Action: The transaction is reattached and CICS processing continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Check Transient Data Queue CSFL for message DFHFC6028, indicating that the reattach of the transaction was successful. If the reattach fails, VSAM RLS data set quiesce support is lost. If this happens, CICS must be restarted.

If it is not possible to restore VSAM RLS quiesce support, a more severe error is indicated. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQT

XMEOUT Parameters: *date, time, applid, transid*

DFHFC6030 *date time applid* **The CICS RLS quiesce exit was unable to process data set operation request** *X'type'* **for** *{data set | cache} name*

Explanation: The CICS RLS quiesce exit was driven by VSAM RLS to process data set operation request *type* for data set or cache *name*, but encountered a severe error and was unable to process the request. The error is normally caused by a STORAGE OBTAIN macro failure

A preceding console message (normally DFHFC6022) gives more information about the error.

This message is issued by DFHFCQR on behalf of the CICS RLS quiesce exit DFHFCQX.

Note: The CICS RLS quiesce exit is used by VSAM RLS to notify CICS that processing is required for the following data set related operations. The number corresponds to *type* in the message.

01 The quiesce of a data set
02 The unquiesce of a data set
03 The start of a DFSMSdss non-BWO backup
04 The end of a DFSMSdss non-BWO backup
05 The start of a DFSMSdss BWO backup
06 The end of a DFSMSdss BWO backup
07 The recovery of lost locks for a data set
08 The completion of forward recovery for a data set
09 The recovery of a coupling facility cache structure.

System Action: CICS continues after taking a system dump with dumpcode FC6030. The data set operation request is **not** processed by CICS.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Referring to the preceding console message, attempt to determine the cause of the problem.

Because CICS could not process the request, this might invalidate later processing. For example, if the request was for the quiesce of a data set, open files against the data set must be closed manually, or the quiesce retried using EXEC CICS SET DSNAME QUIESCED or the CEMT equivalent. If the request was in connection with a BWO or non-BWO backup, the backup may be invalid and should be discarded.

If you cannot resolve the problem, or the problem recurs, a more severe error is indicated. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQR

XMEOUT Parameters: *date, time, applid, X'type', {1=data set, 2=cache}, name*

DFHFC6031 *date time applid* **Attempt by** *{CICS | user}* **to process data set operation request** *{quiesce | unquiesce}* **failed because the SMSVSAM server detected an internal error. Data set** *dsname*

Explanation: An attempt by a user to issue a quiesce function for the base data set *dsname* failed because the SMSVSAM server detected an internal error.

System Action: CICS continues processing. The request is canceled throughout the sysplex.

User Response: None.

Destination: Console and Transient Data Queue CSFL

DFHFC6034 *date time applid* **Attempt by** *{CICS | user}* **to process data set operation request** *{quiesce | unquiesce}* **failed because the user is not authorized to access the sphere. Data set** *dsname*

Explanation: An attempt by a user to issue a quiesce function for the base data set *dsname* failed because the user is not authorized to access the sphere.

System Action: CICS continues processing. The request is canceled throughout the sysplex.

User Response: None.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=CICS, 2=user}, {1=quiesce, 2=unquiesce}, dsname*

DFHFC6035 *date time applid* **Attempt by CICS to cancel** *{non-BWO | BWO}* **backup request failed because the user is not authorized to access the sphere. Data set** *dsname*

Explanation: Attempt by CICS to cancel a backup request for the base data set *dsname* failed because the user is not authorized to access the sphere.

System Action: CICS continues processing. See the message from DFSMSdss and the SMSVSAM server to identify the state of the backup request.

User Response: None.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQS

XMEOUT Parameters: *date, time, applid, {1=non-BWO, 2=BWO}, dsname*

DFHFC6036 *date time applid* **Attempt by CICS to notify VSAM RLS of the completion of CICS processing for a data set quiesce or backup of a data set failed because the user is not authorized to access the sphere. Data set** *dsname*

Explanation: An attempt by CICS to notify VSAM RLS of the completion of CICS processing for a data set quiesce or backup for the base data set *dsname* failed because the user is not authorized to access the sphere.

System Action: CICS continues processing. See the message from DFSMSdss and the SMSVSAM server to identify the state of the backup request.

User Response: None.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCQI

XMEOUT Parameters: *date, time, applid, dsname*

DFHFC7000 *applid* **The maximum records parameter(***rrrr***) specified on OPEN of coupling facility data table** *dddd***, poolname** *pppp***, for file** *filename***, differs from the current maximum records parameter(***ssss***) for the table.**

Explanation: During OPEN of coupling facility data table *dddd* for file *filename* it has been found that the maximum records parameter *rrrr* specified in the file definition is different from that already specified for the table on a previous OPEN or server SET command.

System Action: The open continues. This is a warning message. The maximum records parameter *ssss* already set is the one that applies. The different maximum records parameter is ignored.

User Response: Ensure that the maximum records parameter that is in use is as expected. If not, delete the table and reopen it after correcting the maximum records parameter in the file definition. Alternatively, reopen the table via another file definition that already has the correct maximum records parameter or use the coupling facility data table server SET command to change the maximum records parameter for the table.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, rrrr, dddd, pppp, filename, ssss*

DFHFC7002 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because access is not allowed.**

Explanation: The OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname* has failed because access is not allowed. The security check for the table has failed.

A RACF message containing a return code indicating the reason for failure will have been issued prior to this message.

System Action: The table cannot be opened.

User Response: Set the correct table access using RACF.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7003 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because the table is not currently available for access.**

Explanation: The OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because the table is currently not available for access. The table has been set unavailable by an earlier server command. This prevents the opening of new files against this table.

System Action: The table cannot be opened. CICS continues processing with the table closed and its state unenabled. Any transactions attempting to use the table will get a NOTOPEN condition.

User Response: Ensure that the server command to set the table available is issued before attempting to open the file. The format of this command is MODIFY server-name,SET TABLE=name,AVAILABLE=YES|NO

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7004 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because the table is not yet loaded.**

Explanation: The OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because the table requires loading and is not already being loaded. The user has tried to open it for shared access. A shared access open will only succeed if the table is already being loaded or has completed loading.

System Action: The table cannot be opened.

User Response: Investigate why the table has not already been loaded or started loading. Change the file definition to make this OPEN do the load if that is appropriate.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7005 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because of a shared access conflict.**

Explanation: The OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because of a shared access conflict. CICS either requests an EXCLUSIVE open (for the purposes of loading) or a SHARED open (for all other cases).

For a shared open request, this error means that the open mode which CICS has specified for this data table conflicts with the shared access mode which has been specified by an existing exclusive open for the data table. For an exclusive open request, this means that the shared access mode which CICS has specified on the open conflicts with one or more existing shared opens for the data table. CICS should not normally specify conflicting open or shared access modes.

System Action: The file cannot be opened.

User Response: Investigate the access modes of other opens against the data table *dddd* in pool *poolname*, using a server query, to determine whether there is an error.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7006 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because of an exclusive access conflict.**

Explanation: The OPEN of coupling facility data table *dddd* for file *filename*, pool *poolname* has failed because of an exclusive access conflict. Exclusive access to the data table is not available. This error can occur when CICS has requested an exclusive open in order to load the data table from a source data set, if another open already has exclusive access. The error can also occur on a request to delete a data table if there are any opens against the data table. CICS should not normally specify access modes which could result in an exclusive access conflict.

System Action: The table cannot be opened.

User Response: Investigate any other opens against the data table *dddd* in pool *poolname*, for example using a server query, to determine whether it is expected that access is denied.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7007 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because one or more attributes on the file definition are incompatible with those that were set for the table when it was created.**

Explanation: An OPEN request naming an existing table specifies one or more attributes for the table which are not compatible with those for the existing table. The coupling facility data table server has rejected the open.

The attributes that may be incorrect are:

- record length
- key length
- initial load option
- update model
- recovery status

This can also occur if the coupling facility data table server that is attempting to open the table is at a lower release level than the server which created the table, as the newer server may have set internal attributes when it created the table which are not supported by the older server.

System Action: CICS fails the open.

User Response:

Use the coupling facility data table server DISPLAY command to view the attributes for the table and then determine whether :

- the file definition for the table just opened should have its attributes changed to match the server values
- the already created table is incorrect because the file definition whose open caused the creation of the table has incorrect attributes. In this case the table should be deleted and recreated either by correcting the file definition or via a file definition which already has the correct values.

Note that this problem could occur if there has been unintentional use of the same table name in different file definitions.

When the problem has been corrected, retry the open.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7010 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because recovery is not enabled.**

Explanation: An attempt was made to open a recoverable table *dddd* for read/write access, but the client region has not yet issued a restart request to enable recovery support for this pool connection.

System Action: The open fails.

User Response: Investigate why there has been no restart request by checking for CICS error messages.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7012 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because there is no space in the pool.**

Explanation: The coupling facility list structure for the table pool has no more space available.

System Action: The open fails.

User Response: Investigate whether space can be freed in the coupling facility list structure by deleting tables, or records in tables, that are no longer required.

Alternatively, use the DISPLAY POOLSTATS command to find if the structure is currently at its maximum size; and if not, increase the size using the SETXCF ALTER command.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7013 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because the maximum number of tables has been reached.**

Explanation: A new table cannot be created because the maximum number of tables specified when the first server was started for the structure has been reached.

System Action: The open fails.

User Response: Investigate whether the number can be increased or whether there are any tables no longer required that could be deleted.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7014 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because there are too many users.**

Explanation: The number of concurrent opens for table *dddd* has reached the maximum supported limit which is currently 1024. This means that there are already 1024 files open which all reference the same coupling facility data table in the same coupling facility data table pool.

System Action: The open fails.

User Response: Investigate reducing the number of concurrent users; that is, the number of files open against this coupling facility data table.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7015 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because the table has been destroyed.**

Explanation: Table *dddd* in pool *poolname* is no longer valid. The most likely cause is that a delete request overlapped with the current request.

System Action: The open fails.

User Response: Investigate whether the table was deleted. This is not an error if the table is no longer required. If the table is still required, it should be recreated by opening it again.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7018 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because the table requires loading.**

Explanation: The OPEN of file *filename* has failed because it requires the associated coupling facility data table *dddd*, which resides in coupling facility data table pool *poolname*, to have been pre-loaded, but the table has not yet been loaded. Automatic loading of the data table could not be initiated because there is no source data set specified for this file, either in the file definition or in the CICS startup JCL.

System Action: The file cannot be opened.

User Response: There are a number of possible operational errors which might have resulted in this failure:

1. The application does not require the coupling facility data table *dddd* to be pre-loaded. The 'load required' parameter should be removed from the file definition for file *filename*.
2. The application does require the coupling facility data table *dddd* to be pre-loaded, but it should already have been loaded before file *filename* was opened.

   If this is the case, then there should be at least one file definition within the sysplex that names data table *dddd* in pool *poolname* and which specifies a source data set, or for which the source data set is supplied in the CICS startup JCL. You should issue an open for one of the files which specifies the source data set, after which an open of this file should succeed.

   You may also want to put operational procedures in place which will ensure that in future this file is only opened after the data table has been loaded. Use of the data tables load complete global user exit point, XDTLC, might be one way of achieving this.
3. The application does require the coupling facility data table *dddd* to be pre-loaded, and it is intended that the load should be automatically initiated by opening file *filename* (unless the table has already been loaded).

   A source data set name should have been specified, either in the file definition for file *filename* or in the CICS startup JCL as a DD card for file *filename*, depending on whether dynamic allocation or preallocation is required respectively.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7019 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because the table requires loading but the supplied data set is not KSDS.**

Explanation: The OPEN of file *filename* has failed because it requires the associated coupling facility data table *dddd*, which resides in coupling facility data table pool *poolname*, to have been pre-loaded, but the table has not yet been loaded. Automatic loading of the data table could not be initiated because the source data set specified for this file, either in the file definition or in the CICS startup JCL, is not a KSDS. Coupling facility data tables can only be loaded from VSAM KSDS data sets.

System Action: The file cannot be opened.

User Response: Investigate whether the reason for this error is that the file should not have been defined as requiring loading, or that the data set name specified is incorrect, or that no data set name should have been specified (because the data table should be pre-loaded via some other file definition before this file is opened). Correct the file definition, re-install and retry the open.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7032 *applid* **CLOSE of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because the table has been destroyed.**

Explanation: The table is no longer valid in the pool. The most likely reason is that a delete request overlapped with the current request.

System Action: The close fails.

User Response: Investigate whether the table was deleted. This is not an error if the table is no longer required. If the table is still required, it should be recreated by opening it again.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7051 *applid* **A request to inquire on which attributes of coupling facility data table** *dddd***, file** *filename***, pool** *poolname***, are incompatible has failed because the table could not be found.**

Explanation: Inquire for coupling facility data table *dddd* has failed because during the request it was found that the table could not be found. CICS File Control issued the inquire as the result of an open failure due to incompatible table attributes. The inquire was intended to provide which attributes were in error so that they could be given as part of the open failure diagnostics.

System Action: The table open has failed due to incompatible attributes and the processing to provide more information on which attributes are incorrect has detected that the table can now not be found.

User Response: Investigate why the table cannot be found.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7071 *applid* **The request to set shared access for coupling facility data table** *dddd***, file** *filename***, pool** *poolname***, at the end of a successful table load, has failed because access is not allowed.**

Explanation: At the end of a coupling facility data table load, the source data set is closed and CICS File Control requests the server to change the table access from the exclusive access that was required for loading, to shared access. The server has returned that the table is not available for access. The security check for the table has failed.

A RACF message containing a return code indicating the reason for failure will have been issued prior to this mesage.

System Action: Although the table successfully opened and loaded, the load is not considered complete because the request to the server to set the access to shared has not occurred. The table is closed again ready for the next open attempt which will reattempt the load. The close will still get the security error, but the CICS side of close will complete.

User Response: Investigate why the table is not available for access. Set the required table access, if possible, using RACF.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7072 *applid* **The request to set shared access for coupling facility data table** *dddd*, **file** *filename*, **pool** *poolname*, **at the end of a successful table load, has failed because the table cannot be found.**

Explanation: At the end of a coupling facility data table load the source data set is closed, and CICS File Control requests the server to change the table access from the exclusive access that was required for loading to shared access. The server has returned that the table cannot be found.

System Action: Although the table was successfully opened and loaded, the load is not considered complete because the request to the server to set the access to shared has not occurred. The table is closed again ready for the next open attempt which will retry the load. The close will still get the error, but the CICS side of close will complete.

User Response: Investigate why the table cannot be found. If it is still required open it again so that it will be recreated and reloaded.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7073 *applid* **The request to set shared access for coupling facility data table** *dddd*, **file** *filename*, **pool** *poolname*, **at the end of a successful table load, has failed because of a shared access conflict.**

Explanation: At the end of a coupling facility data table load the source data set is closed, and CICS File Control requests the server to change the table access from the exclusive access that was required for loading to shared access. The server has returned that it cannot process the request because of a shared access conflict.

System Action: Although the table successfully opened and loaded, the load is not considered complete because the request to the server to set the access to shared has not occurred. The table is closed again ready for the next open attempt which will retry the load. The close will still get the error, but the CICS side of close will complete.

User Response: Investigate the access mode of other table, and what other files are open against it, to determine if there is an error. The coupling facility data table server supports commands, such as DISPLAY TABLE, which will provide you with this information.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7079 *applid* **The request to set shared access for coupling facility data table** *dddd*, **file** *filename*, **pool** *poolname*, **at the end of a successful table load, has failed because the table has been destroyed.**

Explanation: At the end of a coupling facility data table load the source data set is closed, and CICS File Control requests the server to change the table access from the exclusive access that was required for loading to shared access. The server has returned that the request has failed because the table has been destroyed.

System Action: All requests to use the table will return the same error.

User Response: Investigate why the table has been destroyed. If it is still required open it again so that it will be recreated and reloaded.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7081 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because the key length or record length parameter on the file definition is inconsistent with the equivalent for the source data set.**

Explanation: The OPEN of coupling facility data table *dddd* has failed because before the call to the server to perform the actual open, CICS has found that the record length and/or keylength specified by the user on the file definition does not match that returned by VSAM when the associated source data set was opened.

System Action: The table cannot be opened.

User Response: Check whether the file definition is in error or whether the wrong data set has been specified. It is not necessary to specify the parameters on the file definition if there is a source data set. Clear the parameters or make them the same as the source.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7082 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because the key length or record length parameter for the source data set is inconsistent with the value already set for the table.**

Explanation: The OPEN of coupling facility data table *dddd* has failed because the values for record length and/or key length returned for the table on the open do not match those for the source data set specified in the file definition.

System Action: The table cannot be opened.

User Response: Check whether the wrong data set has been specified in the file definition. If the table is opened and loaded by another user, it is not necessary for this user to specify a source data set in the definition.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7083 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename*, **pool** *poolname*, **has failed because the key length or record length parameter specified on the file definition is inconsistent with that already set for the table.**

Explanation: The OPEN of coupling facility data table *dddd* has failed because the values for record length and/or key length returned for the table on the open do not match those specified in the file definition for the table.

System Action: The table is closed again.

User Response: Check whether the wrong data set has been specified in the file definition. If the table is opened and loaded by another user, it is not necessary for this user to specify record length and key length on the file definition. Attention is drawn to the mismatch rather than ignoring it in case there is an error.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7084 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because the table cannot be found.**

Explanation: When a coupling facility data table server fails, all the files which were accessing tables in that pool are marked as requiring a re-open after connection to a new server instance. This is required so that a valid table token is obtained for the new instance. The re-open for coupling facility data table *dddd* for file *filename*, pool *poolname*, has failed because the table has gone away (possibly due to a failure of the coupling facility) since it was last opened for this file.

System Action: The table cannot be opened. CICS closes and enables the file so that a full open can be tried later. The full open will recreate the table (unless the file definition specifies that the table must already have been recreated, in which case another file definition which specifies it is capable of recreating and loading the table must be opened first).

User Response: Retry when the table is available.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname*

DFHFC7085 *applid* **On a request to process** *{OPEN | CLOSE | EXTRACT STATISTICS}* **for coupling facility data table** *dddd* **for file** *filename***, it has been found that the server for coupling facility data table pool** *poolname***, is down. The server should be restarted.**

Explanation: CICS has issued a request to a file which is defined to use a coupling facility data table which resides in the pool *poolname*. CICS did not currently have a connection established to the pool, so an attempt to connect to the pool has to be made. Before the connect, a query is issued to check whether the server for the pool is available. The query has failed because the server is currently down.

A coupling facility data table server is a separate address space which handles all requests made to coupling facility data tables that reside in the pool which it serves.

System Action: If the request is an open, CICS fails the request to the coupling facility data table.

If the request is a close, CICS can complete close processing as normal.

If the request is to extract statistics, issued while gathering file control statistics, the request to obtain the statistics will fail. If the request is to extract statistics, issued as part of INQUIRE FILE processing in order to return the current MAXNUMRECS limit, then the INQUIRE FILE request can complete as normal, but the MAXNUMRECS value returned may differ from the current actual value.

New requests to coupling facility data tables which reside in this pool will check whether the server is available, and will attempt another connect if it is.

User Response: Determine the reason for the failure. Diagnostic messages issued by the coupling facility data table server address space should assist you in doing this. The most likely cause of this error is a problem with the coupling facility. The coupling facility data table server does not automatically restart itself, so after you have corrected the cause of the error, you should resubmit the job which starts the server.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, {1=OPEN, 2=CLOSE, 3=EXTRACT STATISTICS}, dddd, filename, poolname*

DFHFC7086 *applid* **OPEN of coupling facility data table** *dddd* **for file** *filename***, pool** *poolname***, has failed because the** *{keylength | recordsize}* **of the source data set is greater than the supported maximum.**

Explanation: The OPEN of file *filename*, associated with coupling facility data table *dddd* in coupling facility data table pool *poolname*, has failed because the key length and/or record size of the source data set specified for the file is greater than the value supported.

For a coupling facility data table, the key length must be less than or equal to 16 bytes, and the record size must be less than or equal to 32767 bytes.

The message indicates whether it was the key length or the record size which was found to be too large.

System Action: The file is left closed.

User Response: Check whether the wrong data set has been specified for this file (either in the file definition or in the CICS start-up JCL), and whether this data table really requires pre-loading from a source data set.

If the correct data set was specified, then this file may not be suitable for use as a coupling facility data table. If this was because the key length was beyond the range supported for coupling facility data tables, then consider redefining the file as a user-maintained data table or as an RLS file.

If the data table does not need to be pre-loaded, then specify LOAD(NO) on the file definition, and a key length and record size which are in the supported ranges.

Destination: Console

Module: DFHFCDO

XMEOUT Parameters: *applid, dddd, filename, poolname, {1=keylength, 2=recordsize}*

DFHFC7090 *date time applid* **CICS coupling facility data table load has started for data table** *dddd***, file** *filename***, pool** *poolname***.**

Explanation: CICS file control has detected that an open request has been issued for coupling facility data table data table *dddd*, and a task has been attached to load the data table.

System Action: CICS processing continues.

User Response: None.

Destination: CSFL

Module: DFHFCDL

XMEOUT Parameters: *date, time, applid, dddd, filename, poolname*

DFHFC7091 *date time applid* **CICS coupling facility data table load has successfully processed all records in the source data set for table** *dddd***, file** *filename***, pool** *pool***.**

Explanation: The task which was attached to load coupling facility data table *dddd* has successfully processed all of the records in the associated source data set. The load, however, is not complete until user exit XDTLC has been called, and the table has been marked as loaded, with its access changed from EXCLUSIVE to SHARED.

System Action: The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate a successful load. The coupling facility data table server is called to mark the table as loaded and to set the access to shared. Another message (DFHFC7095) will be issued indicating that these have completed and that the load is complete. CICS processing continues.

User Response: None.

Destination: CSFL

Module: DFHFCDL

XMEOUT Parameters: *date, time, applid, dddd, filename, pool*

DFHFC7092 *date time applid* **CICS data table load has terminated abnormally for coupling facility data table** *dddd***, file** *filename***, pool** *poolname***, because the table has been closed.**

Explanation: The CICS task that is loading coupling facility data table *dddd* has found that CICS file control has requested that the load be abandoned because the file has been closed.

System Action: The load transaction terminates. CICS processing continues. Any records already loaded will remain in the table. The next open will start the load transaction again which will continue the load.

User Response: Investigate why the file has been closed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCDL

XMEOUT Parameters: *date, time, applid, dddd, filename, poolname*

DFHFC7093 *date time applid* **CICS data table load has terminated abnormally for coupling facility data table** *dddd***, file** *filename***, pool** *poolname***, reason code =** *X'xx'***.**

Explanation: The CICS task that is loading coupling facility data table *dddd* has received a reason code X'*xx*', where X'*xx*' has one of the following values:

X'02'	ILLOGIC - A VSAM error which does not fall into one of the other categories.
X'0C'	NOTOPEN - The file is CLOSED and UNENABLED, or still open and in use, but a CLOSE request has been received.
X'0D'	DISABLED - The file is DISABLED.
X'0F'	ENDFILE - The file is CLOSED and UNENABLED, or still open and in use, but a CLOSE request has been received.
X'80'	IOERR - I/O error.
X'84'	TABLE_FULL - Maximum records exceeded.
X'85'	RLS_DISABLED - RLS access currently not available.
X'86'	RLS_FAILURE - The RLS server has failed.
X'87'	PREVIOUS_RLS_FAILURE - The RLS server has been recycled in this unit of work.
X'88'	CACHE_FAILURE - Cache connectivity failure.
X'89'	CFDT_POOL_FULL - No more space available in the coupling facility structure for the table pool.
X'8A'	DATASET_BEING_COPIED - DSS is performing a sharp copy

System Action: The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate that loading completed abnormally. The user exit may ask for the file to be closed. No more records are loaded into the coupling facility data table.

If the user exit did not request the file to be closed (or if no user exit program was enabled at the XDTLC exit point), then API requests to access records within the range of keys which has already been loaded into the data table will succeed, but requests to access any record beyond the loaded range will receive the "LOADING" condition.

If the file has been closed, then API requests will receive a "NOTOPEN" condition.

CICS processing continues.

User Response: Investigate the reason for the return code from CICS file control. For further information about the reason code, see the description of exception conditions for the STARTBR, READNEXT and WRITE commands in the &dfhp4001..

You may be able to correct the cause of the failure, for example by explicitly enabling the file if the reason is DISABLED, or re-cycling the RLS server if it has failed. If the error is TABLE_FULL, meaning that the number of records to be loaded into the table exceeds the MAXNUMRECS parameter, then you can increase this parameter using the coupling facility data tables server command SET TABLE=tablename,MAXRECS=n. (Note that although altering the MAXNUMRECS parameter on the file definition within CICS, using SET FILE for example, will not have any effect on the current setting for the data table, you should consider resetting it to the new value in order to avoid getting a warning message about the mismatch.) If the error is CFDT_POOL_FULL, then you can increase the size of the coupling facility data table pool that this data table resides in.

If it is possible to correct the problem which caused the load to fail, then you can complete the load of the coupling facility data table by closing the file which attempted the load (if it has not already been closed) and re-opening it, or any other file which is capable of loading the table; that is, which has access to the source data set. This will cause the load to be restarted from the point at which it failed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCDL

XMEOUT Parameters: *date, time, applid, dddd, filename, poolname, X'xx'*

DFHFC7094 *date time applid* **CICS data table load has terminated abnormally for coupling facility data table** *dddd***, file** *filename***, pool** *poolname***, reason code =** *X'xx'***.**

Explanation: The request to close the source data set at the end of load of coupling facility data table *dddd* has failed. The most likely cause of the failure is an error on the SET call to the coupling facility data table server to mark the table as loaded and to set the table access as shared, either because the server was down at the time of the SET or because of an error returned by file control during processing.

System Action:

The table and source are closed, leaving the table in a state such that a subsequent open may be able to complete the load.

CICS processing continues.

User Response: Determine the cause of the failure using the diagnostic information provided by file control.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCDL

XMEOUT Parameters: *date, time, applid, dddd, filename, poolname, X'xx'*

DFHFC7095 *date time applid* **CICS coupling facility data table load has completed successfully for data table** *dddd*, **file** *filename*, **pool** *pool*.

Explanation: The task that was attached to load coupling facility data table *dddd* has successfully completed loading.

System Action: The user exit XDTLC has been invoked and has accepted the load. The table has been marked as loaded and the table access has been set to SHARED. CICS processing continues.

User Response: None.

Destination: CSFL

Module: DFHFCDL

XMEOUT Parameters: *date, time, applid, dddd, filename, pool*

DFHFC7100 *date time applid* **CICS data table load has terminated abnormally for coupling facility data table** *name*, **file** *filename*, **pool** *poolname*, **a call to FCFR to BROWSE the source data set has failed for reason code =** *n*.

Explanation: The CICS task which is loading coupling facility data table *dddd* has failed while calling file control to browse the source data set. The value of the reason code *n* indicates the type of failure as follows:

1. Response from FCFR was INVALID.
2. Response from FCFR was DISASTER.
3. Response from FCFR was PURGED.
4. FCFR failed for some unexpected reason.

System Action: The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate that loading completed abnormally. The user exit may ask for the file to be closed. No more records are loaded into the coupling facility data table, and CICS terminates the loading transaction with abend code ACFA.

If the user exit did not request that the file be closed (or if no user exit program was enabled at the XDTLC exit point), then API requests to access records within the range of keys which has already been loaded into the data table will succeed, but requests to access any record beyond the loaded range will receive the “LOADING” condition.

If the file has been closed, then API requests will receive a “NOTOPEN” condition.

CICS processing continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Determine the cause of the failure of the domain call using the diagnostic information provided by file control.

If it is possible to correct the problem which caused the browse to fail, then you can complete the load of the coupling facility data table by closing the file which attempted the load (if it has not already been closed) and re-opening it, or any other file which is capable of loading the table; that is, which has access to the source data set. This will cause the load to be restarted from the point at which it failed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCDL

XMEOUT Parameters: *date, time, applid, name, filename, poolname, n*

DFHFC7101 *date time applid* **CICS data table load has failed to close coupling facility data table** *dddd*, **file** *filename*, **pool** *poolname*, **a call to FCFS has failed for reason code =** *n*.

Explanation: The CICS task that is loading coupling facility data table *dddd* has failed while trying to close the file at the request of an exit program invoked at exit point XDTLC. The value of reason code *n* indicates the type of failure as follows:

1. Response from FCFS was INVALID.
2. Response from FCFS was DISASTER.
3. Response from FCFS was PURGED.
4. FCFS failed for some unexpected reason.

System Action: CICS terminates the loading transaction with abend code ACFA.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: It is unlikely that the user exit invoked at the XDTLC exit point would request that the file should be closed unless a previous problem had occurred with the load. Determine the cause of any such previous problem by checking for earlier messages which may have been issued referring to data table *dddd*. Diagnostic information provided by file control may be used to investigate the failure of the close file call.

CICS processing continues.

Report the details of the symptom string given in message DFHME0116.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCDL

XMEOUT Parameters: *date, time, applid, dddd, filename, poolname, n*

DFHFC7103 *date time applid* **CICS data table load has terminated abnormally for coupling facility data table** *dddd*, **file** *filename*, **pool** *poolname*.

Explanation: The special CICS transaction that was loading coupling facility data table *dddd* has detected an abnormal termination.

System Action: Depending on the cause of this abnormal termination, CICS may produce either a system dump or a transaction dump.

The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate that loading completed abnormally. The user exit may ask for the file to be closed. No more records are loaded into the coupling facility data table, and CICS terminates the loading transaction with abend code ACFA.

If the user exit did not request that the file be closed (or if no user exit program was enabled at the XDTLC exit point), then API requests to access records within the range of keys which has already been loaded into the data table will succeed, but requests to access any record beyond the loaded range will receive the “LOADING” condition.

If the file has been closed, then API requests will receive a “NOTOPEN” condition.

CICS processing continues.

User Response: Look at the system log for related CICS messages to determine the original abend detected by the loading transaction. Refer to the description of abend code ACFA for further information about the cause of the original termination.

For more information on how to determine system problems, refer to the *CICS Problem Determination Guide*.

If it is possible to correct the problem which caused the load to abend, then you can complete the load of the coupling facility data table by closing the file which attempted the load (if it has not already been closed) and re-opening it, or any other file which is capable of loading the table; that is, which has access to the source data set. This will cause the load to be restarted from the point at which it failed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCDL

XMEOUT Parameters: *date, time, applid, dddd, filename, poolname*

DFHFC7104 *date time applid* **CICS data table load has terminated abnormally for coupling facility data table** *dddd***, file** *filename***, pool** *poolname***, a call to FCFR to WRITE a record has failed for reason code =** *n***.**

Explanation: The CICS task that is loading coupling facility data table *dddd* has failed while calling file control to write to the data table. The value of the reason code *n* indicates the type of failure as follows:

1. Response from FCFR was INVALID.
2. Response from FCFR was DISASTER.
3. Response from FCFR was PURGED.
4. FCFR failed for some unexpected reason.

System Action: The user exit XDTLC is invoked, if enabled, with the parameter UEPDTORC set to indicate that loading completed abnormally. The user exit may ask for the file to be closed. No more records are loaded into the coupling facility data table, and CICS terminates the loading transaction with abend code ACFA.

If the user exit did not request that the file be closed (or if no user exit program was enabled at the XDTLC exit point), then API requests to access records within the range of keys which has already been loaded into the data table will succeed, but requests to access any record beyond the loaded range will receive the “LOADING” condition.

If the file has been closed, then API requests will receive a “NOTOPEN” condition.

CICS processing continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Determine the cause of the failure of the domain call using the diagnostic information provided by file control.

If it is possible to correct the problem which caused the write to fail, then you can complete the load of the coupling facility data table by closing the file which attempted the load (if it has not already been closed) and re-opening it, or any other file which is capable of loading the table; that is, which has access to the source data set. This will cause the load to be restarted from the point at which it failed.

Destination: Console and Transient Data Queue CSFL

Module: DFHFCDL

XMEOUT Parameters: *date, time, applid, dddd, filename, poolname, n*

DFHFC7110 *applid* **An attempt to connect to coupling facility data table pool** *poolname***, issued by module** *modulename***, has failed.**

Explanation: CICS has issued a request to a file which is defined to use a coupling facility data table which resides in the pool *poolname*. CICS did not currently have a connection established to the pool, so an attempt to connect to the pool has been made. This attempt has failed. The connect attempt was issued from module *modulename*.

A coupling facility data table server is a separate address space that handles all requests made to coupling facility data tables which reside in the pool which it serves. CICS must have a connection to the server before it can open and access coupling facility data tables in the pool.

System Action: CICS fails the request to the coupling facility data table.

New requests to coupling facility data tables which reside in this pool will check whether the server is available and will attempt another connect if it is.

User Response: Determine the reason for the failure to connect. Diagnostic messages issued by the coupling facility data table server address space should assist you in doing this. The most likely cause of this error is a problem with the coupling facility. The coupling facility data table server does not automatically restart itself, so after you have corrected the cause of the error, you should resubmit the job which starts the server.

Destination: Console

Modules: DFHFCDR, DFHFCDO, DFHFCDU

XMEOUT Parameters: *applid, poolname, modulename*

DFHFC7111 *applid* **An attempt to disconnect from the coupling facility data table server for pool** *poolname* **for connection token** *X'connecttoken'***, issued by module** *modulename,* **has failed.**

Explanation: CICS has detected that an instance of the coupling facility data table server for pool *poolname* has failed. CICS has therefore attempted to disconnect from this pool server, but this attempt has failed. The disconnect has been issued by module *modulename*, and *connecttoken* is the token which was associated with the connection to this pool server.

A coupling facility data table server is a separate address space that handles all requests made to coupling facility data tables which reside in the pool which it serves.

System Action: CICS continues. As soon as a new instance of the pool server is available (which it might already be) then CICS can re-establish a connection to the server and continue to process coupling facility data table requests.

In many cases, CICS will later be able to disconnect from the server automatically. If not, the only effect of this failure is that some storage allocated by the server to the connection will not be freed until CICS terminates, at which time a disconnect message will be issued by the pool server for each instance from which CICS failed to disconnect.

User Response: Determine the reason for the failure to disconnect. Diagnostic messages issued by the coupling facility data table server address space should assist you in doing this.

Destination: Console

Modules: DFHFCDR, DFHFCDO, DFHFCDU

XMEOUT Parameters: *applid, poolname, X'connecttoken', modulename,*

DFHFC7112 *applid* **Resynchronization of coupling facility data table pool** *poolname* **issued from module** *modulename* **has failed.**

Explanation: CICS has issued a request to a file which is defined to use a coupling facility data table which resides in the pool *poolname*. CICS did not currently have a connection established to the server for this pool, so an attempt to connect to and resynchronize the pool server has been made, but the resynchronization has failed. The attempt to resynchronize was issued from module *modulename*.

A coupling facility data table server is a separate address space that handles all requests made to coupling facility data tables which reside in the pool which it serves. When CICS re-establishes its connection to a coupling facility data table pool server, it must perform resynchronization in order to complete recovery processing for any unresolved units of work which had made recoverable updates to coupling facility data tables residing in the pool.

System Action: CICS fails the request to the coupling facility data table.

Other requests to coupling facility data tables which reside in this pool will succeed if they do not require the pool to have been resynchronized, or might attempt another resynchronization if they do.

User Response: Determine the reason for the failure to resynchronize. Diagnostic messages issued by CICS components involved in the resynchronization and by the coupling facility data table server address space should assist you in doing this.

Depending on the stage during resynchronization at which the failure occurred, any subsequent request to a recoverable file which uses a coupling facility data table in the pool might trigger an attempt to retry the resynchronization. If such requests do not trigger a retry, then you should recycle the server region for this pool (by stopping or cancelling the server region using a server command, and then restarting it).

Destination: Console

Modules: DFHFCDR, DFHFCDO, DFHFCDU

XMEOUT Parameters: *applid, poolname, modulename*

DFHFC7113 *applid* **An attempt to retry resynchronization of coupling facility data table pool** *poolname* **issued from module** *modulename* **has failed.**

Explanation: CICS has issued a request to the coupling facility data table server for pool *poolname*. This request requires the pool to have been resynchronized.

Although CICS currently has a connection established to the pool server, an earlier attempt to resynchronize the pool failed, so the resynchronization has been retried. This retry has also failed. The attempt to retry resynchronization of the pool was issued from module *modulename*.

A coupling facility data table server is a separate address space that handles all requests made to coupling facility data tables which reside in the pool which it serves. When CICS has re-established its connection to a coupling facility data table pool server, it must perform resynchronization in order to perform recovery processing for any unresolved units of work which had made recoverable updates to coupling facility data tables residing in the pool.

Certain requests require the coupling facility data table pool to have been resynchronized before they can succeed. Such requests include:

- Open requests for files which are defined to use recoverable coupling facility data tables (open requests against non-recoverable coupling facility data tables do not require the pool to have been resynchronized).
- Syncpoint requests for units of work which have made recoverable updates to coupling facility data tables such as commit or backout requests.

These requests do not require all the units of work to have been resolved, but they do require CICS to have successfully restarted its recoverable connection to the pool server.

System Action: CICS fails the request to the coupling facility data table pool.

Other requests to this pool server will succeed if they do not require the pool to have been resynchronized, or will attempt another resynchronization if they do.

User Response: Determine the reason for the failure to resynchronize. Diagnostic messages issued by CICS components involved in the resynchronization and by the coupling facility data table server address space should assist you in doing this.

Destination: Console

Modules: DFHFCDO, DFHFCDU

XMEOUT Parameters: *applid, poolname, modulename*

DFHFC7114 *applid* **Force purge of transaction** *trannum* **which made recoverable updates to coupling facility data table pool** *poolname* **has failed.**

Explanation: An attempt to force purge transaction *trannum* has failed. The system attempted to force purge the transaction because it had made recoverable updates to one or more coupling facility data tables residing in the coupling facility data table pool *poolname*, and the server for that coupling facility data table pool is undergoing resynchronization. The fact that this resynchronization is taking place is an indication that a failure has occurred which will have resulted in all recoverable updates made to the coupling facility data table pool *poolname*, which have not yet been committed, having been backed out. This transaction had therefore made updates which have since been backed out, so the transaction needs to be abended, in order to ensure that any updates which it made to other recoverable resources will also be backed out. However, it has not been possible to purge this transaction.

The effect of the failure to purge this transaction is that updates made to other recoverable resources may be committed, with the result that the overall unit of work will not be commit-consistent. It is also possible that the transaction will try to make subsequent updates to the coupling facility data table pool which will cause it to be abnormally terminated.

System Action: Resynchronization of the coupling facility data table server pool continues.

User Response:

If the transaction is still active, then attempt to force purge the transaction using the CEMT master terminal command. However, as this should be a rare situation, consider performing an immediate shutdown of CICS followed by an emergency restart as an alternative solution. This causes all inflight transactions to be backed out.

Destination: Console

Module: DFHFCDY

XMEOUT Parameters: *applid, trannum, poolname*

DFHFC7115 *applid* **The coupling facility data table server for pool** *poolname* **has failed and restarted. One or more in-flight transactions which had made recoverable updates to coupling facility data tables residing in the pool will be abended.**

Explanation: The coupling facility data table server for data table pool *poolname* is undergoing resynchronization. The fact that this resynchronization is taking place is an indication that a failure has occurred which will mean that any recoverable updates made to the coupling facility data table pool *poolname* that had not yet been committed will have been backed out. Any in-flight transaction which had made recoverable updates to one or more coupling facility data tables residing in data table pool *poolname* therefore needs to be abended, in order to ensure that any updates which it made to other recoverable resources will also be backed out.

This message is issued to inform you that one or more such in-flight transactions has been found, and that CICS will attempt to abend the transactions and cause them to back out by force purging them. You should therefore expect that one or more transactions will be abnormally terminated with an ATCH transaction abend code (or possibly, in some instances, with an AKC3 abend code).

System Action: Resynchronization of the coupling facility data table server pool will complete, and one or more in-flight transactions will be abnormally terminated.

User Response: None.

This message is purely informational, to indicate that transactions will be abended in order to preserve data integrity.

Destination: Console

Module: DFHFCDY

XMEOUT Parameters: *applid, poolname*

DFHFC7120 *applid* **The coupling facility data table pool** *poolname* **has an unresolved unit of work** *X'UOWid'* **for this CICS region of which CICS has no knowledge.**

Explanation: CICS is resynchronizing the coupling facility data table server for pool *poolname*.

A coupling facility data table server is a separate address space that handles all requests made to coupling facility data tables which reside in the pool that it serves. When CICS has established its connection to a coupling facility data table pool server, it must perform resynchronization in order to perform recovery processing for any unresolved units of work which had made recoverable updates to coupling facility data tables residing in the pool. The resynchronization involves restarting the recoverable connection to the pool server, and completing any unresolved units of work known to the server for which the resolution is now known.

The server has an unresolved unit of work *UOWid*, but CICS has no knowledge of a link to the pool server for this unit of work. Knowledge of links will be lost when CICS performs an initial start, but in the case of unit of work *UOWid* there has not been a CICS initial start since the unit of work was created.

System Action: CICS resolves the unit of work by backing out the updates that it made to coupling facility data tables within the pool, and completes resynchronization of the pool.

User Response: Since CICS will have resolved the unit of work, you do not need to take any immediate action. This message is issued to provide diagnostic information which you may want to use to understand why CICS had no knowledge of the link.

DFHFC7121 *applid* **CICS coupling facility data table load has terminated abnormally. A call to DFHXMIQ to retrieve the parameters for the load transaction has failed with response code =** *n***.**

Explanation: The CICS task to load a coupling facility data table has failed while trying to inquire on the parameters passed to it during attach. The value of the reason code *n* indicates the type of failure as follows:

1. Response from XMIQ was INVALID.
2. Response from XMIQ was DISASTER.
3. Response from XMIQ was PURGED.
4. XMIQ failed for some unexpected reason.

System Action: The user exit XDTLC is not invoked as failure to retrieve the attach parameters means the filename is not known. CICS terminates the loading transaction with abend code ACFD. No records are loaded into the data table.

Requests to access the table result in a “loading” response code.

CICS processing continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Determine the cause of the failure of the domain call using the diagnostic information provided by file control.

The file should be closed so that a load may be attempted again when it is next opened.

Destination: Console

Module: DFHFCDL

XMEOUT Parameters: *applid, n*

DFHFC7130 *date time applid tranid trannum termid userid***. Unit of work** *X'uowid'* **running in region** *owner-applid* **in MVS system** *MVSid* **holds a lock on key** *X'keyid'* **in coupling facility data table** *tablename* **in pool** *CFDTpool***, which caused this request to wait.**

Explanation: This message is issued to aid problem determination when a transaction that has accessed, or attempted to access, a coupling facility data table is about to terminate abnormally with an AFCY abend code.

The message is issued when a request to a coupling facility data table times out waiting on a lock. A request that requires a lock on a coupling facility data table has been issued, but was forced to wait because the record was locked by another unit of work. The wait has been purged by one of the following actions:

- The timeout time for the transaction has been exceeded.
- CICS has purged transactions in an attempt to alleviate a short-on-storage (SOS) condition.
- The transaction has been purged by an operator request.

The name of the transaction that has failed is *tranid* and it is running under task number *trannum*, at terminal *termid*, for user *userid*.

The message inserts identify the owner of the lock that caused this transaction to timeout:

- *uowid* is the local UOW id of the unit of work running in the region that owns the lock.
- *owner-applid* is the applid of the region that owns the lock.

- *MVSid* is the name of the MVS system in which the region that owns the lock is running.
- *keyid* identifies the key that is locked. As it is not always possible to display keys in character form, the key is displayed in hexadecimal notation.
- *tablename* is the name of the coupling facility data table against which the lock is held.
- *CFDTpool* is the name of the coupling facility data table pool in which the CF data table *tablename* resides.

The locks held against coupling facility data tables are always exclusive locks, and can only have one holder. Therefore, this message uniquely identifies the owner of the required lock.

System Action: The transaction is abended with an AFCY abend code.

User Response: This message identifies the unit of work that is holding the required lock and the region in which it is running. Examine this unit of work to see why it is not releasing the lock; for example:

- The unit of work may be holding CF data table locks and waiting for terminal input.
- The unit of work may be trying to access both coupling facility data table resources and resources owned by another resource manager, creating an inter-resource manager deadlock.

DFHFExxxx messages

DFHFE3301 Transaction complete

Explanation: The field engineering program, DFHFEP, which was called by the field engineering transaction, CSFE, has completed.

System Action: Other processing continues.

User Response: None.

Destination: Terminal End User

Module: DFHFEP

DFHFE3302 Invalid debug request

Explanation: The field engineering program, DFHFEP, which was called by the field engineering transaction, CSFE, either found a syntax error in the debug request, or found that the installed transaction definition option was invalid.

System Action: The task ends.

User Response: Check for syntax errors or for an invalid installed transaction definition option. Correct the errors and reenter the request.

Destination: Terminal End User

Module: DFHFEP

DFHFE3303 Invalid trace option

Explanation: The field engineering program, DFHFEP, which was called by the field engineering transaction, CSFE, found a syntax error in the trace request (ZCQTRACE).

System Action: The task ends.

User Response: Check for syntax errors. Correct the errors and reenter the request.

Destination: Terminal End User

Module: DFHFEP

DFHFE3304 Enter PRINT for character set, END to terminate. All other data will be echoed.

Explanation: This message is sent to the terminal when the CSFE transaction is started. It asks the engineer what action is required from the field engineering program, DFHFEP.

System Action: The task waits for a response.

User Response: Enter PRINT to display the character set.

Enter END to terminate module DFHFEP.

All other data typed in is echoed to the screen.

Destination: Terminal End User

Module: DFHFEP

DFHFE3307 Invalid option specified in request

Explanation: The field engineering program, DFHFEP, which was called by the field engineering transaction, CSFE, found an error in one of the options specified in the request. Either the specified option could not be found (for example, an invalid transaction definition) or it was an invalid type. CSFE ends without completing the request.

System Action: The task ends.

User Response: Correct the error and reenter the request.

Destination: Terminal End User

Module: DFHFEP

DFHFE3308 Program DFHTRAP is not available - global trap not activated

Explanation: CICS could not find the global trap exit program, DFHTRAP, during execution of the CICS field engineering transaction request, CSFE DEBUG,TRAP=ON.

System Action: CICS continues with the global trap not activated.

User Response: Ensure that DFHTRAP is defined in the processing program table and made available in the program library.
You should use the global trap exit only in consultation with an IBM support representative.

Destination: Terminal End User

Module: DFHFEP

DFHFE3309 Global trap DFHTRAP is unusable following program check in exit

Explanation: While executing a field engineering (FE) transaction request to activate the global trap exit (CSFE DEBUG,TRAP=ON), the FE program, DFHFEP, has found that the global trap exit program, DFHTRAP, is already active but marked unusable. This is because, when the trap was last used, a program check occurred in DFHTRAP. This error is fully documented in message DFHTR1001.

System Action: CICS continues with the global trap still marked unusable.

User Response: Refer to DFHTR1001 for more information. To replace the currently active but unusable version of DFHTRAP by a new version from the CICS program library, issue the following commands in the sequence:

CSFE DEBUG,TRAP=OFF (to de-activate the current trap);
CEMT SET PROGRAM(DFHTRAP) NEWCOPY (to update the disk trap known to CICS);
CSFE DEBUG,TRAP=ON (to activate the new version of the trap).

You should use the global trap exit only in consultation with an IBM support representative.

Destination: Terminal End User

Module: DFHFEP

DFHFE3310 *applid* **Program DFHTRAP is not available - global trap not activated.**

Explanation: CICS could not find the global trap exit program, DFHTRAP, during execution of the CICS field engineering transaction request, CSFE DEBUG,TRAP=ON.

System Action: CICS continues with the global trap not activated.

User Response: Ensure that DFHTRAP is defined in the processing program table and made available in the program library.
You should use the global trap exit only in consultation with an IBM support representative.

DFHICxxxx messages

DFHIC0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where it was detected.

System Action: An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you will need assistance. Bring CICS down in a controlled shutdown and collect the dumps and any relevant messages sent by the module identified in the message. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHEIIC

XMEOUT Parameters: *applid, X'code', modname*

DFHIC0200 *date time applid* **Automatic transaction restart for transaction** *tranid* **has failed.**

Explanation: A STARTed nonterminal transaction is ending abnormally and automatic transaction restart was requested via the user replaceable module DFHREST. A severe error occurred when CICS attempted to restart the transaction.

System Action: Message DFHAP0002 with a dump is issued for the severe error that caused the restart to fail. Abnormal termination of the transaction for which restart was requested continues. The transaction is not automatically restarted.

User Response: Investigate the reason for the earlier severe error. See message DFHAP0002 for further guidance. Restart the transaction manually if necessary.

Destination: Console and Transient Data Queue CSMT

Module: DFHICXM

XMEOUT Parameters: *date, time, applid, tranid*

DFHIC0310 *date time applid* **Unable to attach transaction -** *tranid* **to terminal -** *termid*

Explanation: An attempt was made to start transaction *tranid* on terminal *termid* as a result of:

- a START command, or
- a DFHIC TYPE=PUT macro, or
- a DFHIC TYPE=INITIATE macro.

The attempt was rejected. The most likely cause is that, at the time the attempt was made, the terminal was unknown in the system.

This message is also issued when:

- A START command is issued in an application owning region (AOR) for a terminal that exists as a remote terminal entry in the AOR, but the destination system ID associated with the remote terminal has not been defined.
- A START command is issued against a pipeline device, or other device which is not eligible for ATI requests.

System Action: The request is deleted from the system.

User Response: Ensure that a valid terminal name is being specified. If the name is valid, examine the trace (if one is available) to determine why the attempt was rejected.

Destination: Console

Module: DFHICP

XMEOUT Parameters: *date, time, applid, tranid, termid*

DFHIC0360 *date time applid* **An attempt to establish security for userid** *userid* **has failed. Transaction** *tranid* **cannot be started without a terminal. SAF codes are (***X'safresp'***,***X'safreas'***). ESM codes are (***X'esmresp'***,***X'esmreas'***).**

Explanation: An attempt was made to establish security for userid *userid* but it was rejected by the external security manager (ESM).

A time ordered request, such as an EXEC CICS START command, required security to be established for the userid in order to start the transaction *tranid* without a terminal.

System Action: Security has not been established for the userid. The attempt to start the transaction has failed.

User Response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM* (SC28-1366). See these manuals for an explanation of the codes.

There may be further messages produced by CICS or the external security manager (ESM) which provide more information.

Module: DFHICXM

XMEOUT Parameters: *date, time, applid, userid, tranid, X'safresp', X'safreas', X'esmresp', X'esmreas'*

DFHIC0801 *applid* **CICS time altered from** *hh.mm.sss* **to** *hh.mm.sss* **- date** *ddddddd* **- relative day** *rrr*

Explanation: This console message is printed when the operating system-maintained time of day has been rolled back (for example, when the operating system clock is reset to zero at midnight). Where:

- *hh.mm.sss* is the time in hours minutes and tenths of a second
- *ddddddd* is the current date in the format specified by the DATFORM parameter in the system initialization table
- *rrr* is the day number relative to the day CICS was started.

System Action: CICS has recognized the condition and adjusted its own time of day to agree with that of the operating system.

User Response: None

Destination: Console

Module: DFHTAJP

XMEOUT Parameters: *applid, hh.mm.sss, hh.mm.sss, ddddddd, rrr*

DFHIC0802 *applid* **S/370 clock inoperative ... external action required**

Explanation: CICS execution is dependent on the continued operation of the processor time-of-day clock. This warning message is sent to the console operator during the execution of the time adjustment program if the system detects a processor clock failure at that time. Immediate corrective action (if possible) must be taken by the console operator, if the clock has been disabled for any reason.

System Action: CICS abnormally terminates itself after the condition is detected.

User Response: The ability to enable or disable the time-of-day clock is under the control of the console operator. If the clock is disabled, it must be enabled immediately.

Destination: Console

Module: DFHTAJP

XMEOUT Parameter: *applid*

DFHINxxxx (Indoubt testing tool) messages

DFHIN1001 *date time applid termid userid* **The indoubt tool is now active for DFHTCIND tranclass transactions.**

Explanation: The indoubt tool is active and causes all units of work (UOWs) running under transactions defined to be in transaction class DFHTCIND to fail indoubt when they reach syncpoint.

A unit of work that fails indoubt is either shunted by the recovery manager domain or is unilaterally committed or unilaterally backed out by recovery manager. A unit of work is shunted if the transaction definition under which it is running specifies WAIT(yes) as an indoubt option, and the unit of work has not accessed any resources that force a unilateral decision to be taken.

System Action: CICS processing continues with the indoubt tool active.

User Response: None.

Destination: CSMT and Terminal End User

Module: DFHINDT

XMEOUT Parameters: *date, time, applid, termid, userid*

DFHIN1002 *date time applid* **The indoubt tool is already active.**

Explanation: A CIND ON request was issued to activate the indoubt tool but CICS has detected that the indoubt tool is already active.

System Action: CICS processing continues with the indoubt tool active.

User Response: None.

Destination: Terminal End User

Module: DFHINDT

DFHIN1003 *date time applid* **The indoubt tool is active for DFHTCIND tranclass transactions.**

Explanation: A CIND INQUIRE request was issued to inquire on the status of the indoubt tool. CICS has detected that the indoubt tool is active.

System Action: CICS processing continues with the indoubt tool active.

User Response: None.

Destination: Terminal End User

Module: DFHINDT

DFHIN1004 *date time applid termid userid* **The indoubt tool is no longer active for DFHTCIND tranclass transactions.**

Explanation: A CIND OFF request was issued to deactivate the indoubt tool. No more units of work (UOWs) running under transactions defined in tranclass DFHTCIND will fail indoubt when they reach syncpoint.

Existing transactions in the DFHTCIND tranclass that are currently running fail indoubt at syncpoint, but no new transactions in the DFHTCIND tranclass will fail indoubt.

System Action: CICS processing continues with the indoubt tool inactive.

User Response: None.

Destination: CSMT and Terminal End User

Module: DFHINDT

XMEOUT Parameters: *date, time, applid, termid, userid*

DFHIN1005 *date time applid* **The indoubt tool is already inactive.**

Explanation: A CIND OFF request was issued to deactivate the indoubt tool but CICS has detected that the indoubt tool is already inactive.

System Action: CICS processing continues with the indoubt tool inactive.

User Response: None.

Destination: Terminal End User

Module: DFHINDT

DFHIN1006 *date time applid* **The indoubt tool is not active.**

Explanation: A CIND INQUIRE request was issued to inquire on the status of the indoubt tool. CICS has detected that the indoubt tool is inactive.

System Action: CICS processing continues with the indoubt tool inactive.

User Response: None.

Destination: Terminal End User

Module: DFHINDT

DFHIN1007 *date time applid termid userid* **Initiation of resynchronization for units of work awaiting coordinator DFHINDSP is now complete.**

Explanation: A CIND RESYNC COMMIT or CIND RESYNC BACKOUT request was issued. The indoubt tool has successfully initiated resynchronization of all units of work (UOWs) currently awaiting resynchronization with coordinator DFHINDSP.

System Action: Shunted UOWs awaiting the return of coordinator DFHINDSP are unshunted by the recovery manager (RM) domain. All participants in the UOW are notified of the outcome of the unit of work. The outcome of the unit of work is defined by the user of CIND, for example, CIND RESYNC COMMIT tells the RM domain to unshunt the UOWs and commit them. Likewise, CIND RESYNC BACKOUT tells the RM domain to backout the UOWs. Message DFHIN1012 is issued to transient data for each UOW resynchronized.

For UOWs awaiting the return of coordinator DFHINDSP which were not shunted, that is, they abended before syncpoint, or a unilateral decision was taken, a CIND RESYNC command merely results in message DFHIN1012 being issued to transient data. DFHIN1012 reports on whether this CICS system and DFHINDSP are synchronized.

User Response: See the associated transient data DFHIN1012 messages.

Destination: CSMT and Terminal End User

Module: DFHINDT

XMEOUT Parameters: *date, time, applid, termid, userid*

DFHIN1008 *date time applid* **Invalid CIND keyword. Specify one of the following: ON, OFF, INQUIRE, RESYNC COMMIT, or RESYNC BACKOUT.**

Explanation: The CIND transaction was invoked with an invalid keyword.

System Action: CICS processing continues and the status of the indoubt tool is unchanged.

User Response: Reinvoke the CIND transaction with the correct keyword.

Destination: Terminal End User

Module: DFHINDT

DFHIN1009 *date time applid* **The indoubt tool has added coordinator link DFHINDSP to UOW** *X'uowid'* **for transaction** *tranid* **task number** *taskno***.**

Explanation: The indoubt tool task related user exit DFHINTRU, invoked when a transaction is first started, has detected that the transaction is part of transaction class DFHTCIND. Coordinator DFHINDSP has been added to unit of work (UOW) so that the transaction will fail indoubt when a syncpoint is issued.

System Action: The named transaction and UOW continue processing until it reaches syncpoint when it will fail indoubt.

User Response: None.

Destination: CSMT

Module: DFHINTRU

XMEOUT Parameters: *date, time, applid, X'uowid', tranid, taskno*

DFHIN1010 *date time applid* **Coordinator DFHINDSP is not available. The indoubt tool has caused RM domain to shunt UOW** *X'uowid'* **for transaction** *tranid* **task number** *taskno***.**

Explanation: The named UOW for the named transaction and task has failed indoubt during a syncpoint request due to the indoubt tool.

System Action: The recovery manager domain shunts the UOW, and then abends the transaction.

User Response: To initiate an unshunt of the UOW, issue a CIND RESYNC command.

Destination: CSMT

Module: DFHINDSP

XMEOUT Parameters: *date, time, applid, X'uowid', tranid, taskno*

DFHIN1011 *date time applid* **Coordinator DFHINDSP is not available, but UOW** *X'uowid'* **for transaction** *tranid* **task number** *taskno* **is not indoubt and has not been shunted.**

Explanation: UOW X'*uowid*' for transaction *tranid* was not shunted, and is not indoubt despite being monitored by the indoubt tool. One of the following has occurred:

- The unit of work abended before syncpoint.

- The unit of work was rolled back.
- The unit of work failed indoubt at syncpoint time but the recovery manager domain was forced to take a unilateral decision instead of shunting the UOW.
- The unit of work failed indoubt at syncpoint time but the recovery manager domain detected that the unit of work was read-only, that is, no recoverable resources were updated, and therefore no shunting was required.

System Action: CICS processing continues.

User Response: If the unit of work was abended, rolled back, or a unilateral decision was taken, recovery manager keeps the resolution of the unit of work pending the return of the coordinator DFHINDSP.

To synchronize the outcome of the UOW with coordinator DFHINDSP, issue a CIND RESYNC command.

Destination: CSMT

Module: DFHINDSP

XMEOUT Parameters: *date, time, applid, X'uowid', tranid, taskno*

DFHIN1012 *date time applid* **The indoubt tool is resynchronizing UOW** *X'uowid'* **for transaction** *tranid* **task number** *taskno***. DFHINDSP coordinator UOW status is** *{commit. | backout.}* **Recovery manager UOW status is** *{commit. | backout. | heuristic commit. | heuristic backout.}*

Explanation: The unit of work X'*uowid*' for the named transaction and task has been resynchronized as a result of a CIND RESYNC command. The message reports the UOW status as defined by the coordinator DFHINDSP, and the unit of work status held by the recovery manager domain. The recovery manager domain also issues messages reporting whether or not the UOW is synchronized.

System Action: CICS processing continues.

User Response: None.

Destination: CSMT

Module: DFHINDT

XMEOUT Parameters: *date, time, applid, X'uowid', tranid, taskno, {1=commit., 2=backout.}, {1=commit., 2=backout., 3=heuristic commit., 4=heuristic backout.}*

DFHIN1013 *date time applid termid userid* **No units of work awaiting resynchronization with coordinator DFHINDSP were found.**

Explanation: A CIND RESYNC COMMIT or CIND RESYNC BACKOUT request was issued. The indoubt tool did not find any units of work (UOWs) that were awaiting resynchronization with coordinator DFHINDSP.

System Action: CICS processing continues.

User Response: Before initiating resynchronization, the indoubt tool needs to be activated via command CIND ON, and transactions in tranclass DFHTCIND run to create indoubt units of work.

Destination: CSMT and Terminal End User

Module: DFHINDT

XMEOUT Parameters: *date, time, applid, termid, userid*

DFHIN1014 *date time applid* **The indoubt tool will not operate on transaction** *tranid* **task number** *taskno* **as it is an internal CICS system transaction.**

Explanation: The indoubt tool task related user exit DFHINTRU, invoked when a transaction is first started, has detected that the transaction is part of transaction class DFHTCIND. However it has also detected that the transaction is an internal CICS system transaction. CIND cannot be used on internal CICS system transactions.

System Action: The named transaction and task continue processing and are not forced indoubt at syncpoint time.

User Response: None.

Destination: CSMT

Module: DFHINTRU

XMEOUT Parameters: *date, time, applid, tranid, taskno*

DFHIN1015 *date time applid* **The Indoubt tool has already previously resynchronized UOW** *X'uowid'* **for transaction** *tranid* **task number** *taskno***. DFHINDSP coordinator UOW status is** *{commit. | backout.}* **Recovery manager UOW status is** *{commit. | backout. | heuristic commit. | heuristic backout.}*

Explanation: The named unit of work (UOW) for the named transaction and task has already been resynchronized as a result of a previous CIND RESYNC command. The message documents the UOW status as defined by the coordinator DFHINDSP, and the unit of work status held by the recovery manager domain.

No messages are issued by the recovery manager domain in this case and no resynchronization takes place. Processing of a previous CIND RESYNC command did not complete fully before CICS failed. In particular, 'forget processing' whereby CICS removes DFHINDSP as a coordinator of the unit of work did not complete. This caused CICS to recover the unit of work on restart with DFHINDSP as coordinator, causing it to be processed by the subsequent CIND RESYNC command.

System Action: CICS continues processing.

User Response: None.

Destination: CSMT

Module: DFHINDT

XMEOUT Parameters: *date, time, applid, X'uowid', tranid, taskno, {1=commit., 2=backout.}, {1=commit., 2=backout., 3=heuristic commit., 4=heuristic backout.}*

DFHIR2321 *applid* **MRO/IRC Communication being Terminated. Session(s) with the following Netname(s) are still Active:**

Explanation: CICS is attempting to close MRO/IRC communication. This message is normally followed by the netname of each session that is still active, and additionally for EXCI sessions, the jobname, stepname, procname and MVS ID of the batch program communicating on that session.

For EXCI sessions, a netname of GENERIC indicates a generic pipe. For the batch job information to appear in the message, at least one DPL request must have been issued on that session.

Note: In some circumstances the message is not followed by any netnames. This can occur if CICS is using the cross-system coupling facility (XCF) to communicate across CECs, and CICS is unable to deliver an earlier message to XCF because, for example, the XCF buffer is full.

System Action: CICS issues IRC STOP IMMEDIATE to force close the remaining session(s). This message is reissued at 30 second intervals, or until the last session is closed.

User Response: None, unless the delay in closedown appears abnormally long. If this is the case, investigate why the session(s) are still active. Take appropriate action to allow the session(s) to close. If no netnames are displayed, investigate why XCF is unable to accept a message from CICS.

Destination: Console

Module: DFHZDSP

XMEOUT Parameter: *applid*

DFHIR3747 *applid* **CONNECTION** *connid* **with protocol(EXCI) has been connected to by a NON-BATCH system. Connection set out of service.**

Explanation: A CICS connection has been defined with the protocol EXCI and an attempt has been made to connect to it by a non-batch system.

There are two possible explanations for this message:

- The non-batch system is attempting to communicate with the wrong target connection definition.
- The target connection definition has incorrectly been defined as an EXCI connection.

System Action: CICS sets the connection out of service.

User Response: Investigate and correct the relevant connection definitions and set back in service.

Destination: Console

Module: DFHCRNP

XMEOUT Parameters: *applid, connid*

DFHIR3748 *date time applid* **Initial start of connected system** *sysid***, netname** *netname***, protocol** *pppp* **was detected.**

Explanation: A new logname was received during the MRO bind process from the connected system. This indicates that the connected system has restarted with a start type of INITIAL, since it last communicated with this CICS. If the message-issuing system has any resynchronization data relating to units of work from a previous usage of the connection, this data is kept but cannot be used by the system for automatic resynchronization.

System Action: New MRO work for the connection is not inhibited.

User Response: Examine the resynchronization information kept by the system from the previous usage of the connection using the

```
EXEC CICS INQUIRE UOWLINK RESYNCSTATUS
```

command (or the equivalent CEMT command) for the named connection in order to locate UOWLINKs with a RESYNCSTATUS of COLDSTART. You can use this information to resolve manually any indoubt units of work that existed on this system or the connected system. When the information is no longer of use, issue the

```
EXEC CICS SET CONNECTION PENDSTATUS(NOTPENDING)
```

command (or the CEMT equivalent) for the named connection to discard the resynchronization data relating to the previous usage.

Note that any new resynchronization data generated for the newly established connection is still kept.

Destination: Console and Transient Data Queue CSMT

Module: DFHCRR

XMEOUT Parameters: *date, time, applid, sysid, netname, pppp*

DFHIR3750 *applid* **Unable to stop interregion communication session during startup recovery.**

Explanation: A request has been received as the result of an abnormal termination to stop the interregion communication session during the startup recovery process. This request has failed.

System Action: The session remains active.

User Response: If the session must be stopped, you may have to re-IPL. (To diagnose the underlying problem, contact your IBM Support Center.)

Destination: Console

Module: DFHCRNP

XMEOUT Parameter: *applid*

DFHIR3751 *applid* **Unable to stop interregion communication session during shutdown.**

Explanation: A request has been received (by means of system termination, abnormal termination, or master terminal) to stop the interregion communication session during the shutdown process. This request has failed.

System Action: The session remains active.

User Response: If the session must be stopped, you may have to re-IPL. (To diagnose the underlying problem, contact your IBM Support Center.)

Destination: Console

Module: DFHSTP

XMEOUT Parameter: *applid*

DFHIR3760 *applid* **Unable to break lines with interregion communication. (Modname:** *modname***)**

Explanation: A request has been made to shut down the interregion session. This has caused module DFHZCX to issue a request to the interregion communication program to terminate the association between CICS and the interregion communication program, but the request failed because of a system error.

System Action: Any running batch (database sharing) programs are left in the wait state, and should be canceled. Any CICS tasks (in other CICS systems) that are in communication with this system are also left in the wait state. These other CICS systems should issue CEMT SET CONNECTION(*sysid*) OUTSERVICE PURGE, where *sysid* is the CONNECTION name of the system for which DFHIR3760 was issued. Also, any attempt to restart the interregion session (in the current or any subsequent CICS session) fails.

User Response: To run further batch CICS interregion communication, you must re-IPL. You will need further assistance to resolve the underlying problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHZIS2, DFHSTP

XMEOUT Parameters: *applid, modname*

DFHIR3762 *date time applid* **Inter-region activity now complete**

Explanation: A CEMT SET INTERREGION COMMUNICATION (IRC) CLOSED request was issued at the master terminal. The IRC session is now complete.

System Action: Processing continues.

User Response: None.

Destination: CSMT

Module: DFHCRNP

XMEOUT Parameters: *date, time, applid*

DFHIR3765 UNABLE TO STOP INTERREGION COMMUNICATION SESSION AFTER SYSTEM ABEND.

Explanation: A request has been received (by means of system termination, abnormal termination, or master terminal) to stop the interregion session. This request has failed.

System Action: The session remains active.

User Response: If the session must be stopped, you may have to re-IPL. You will need further assistance to resolve the underlying problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHCRC

DFHIR3767 *applid* **The interregion startup program DFHCRSP is not present.**

Explanation: Module DFHCRSP is required to start an IRC session, but is missing from the CICS program library or has no installed program definition.

System Action: The IRC session is not started.

User Response: Install DFHCRSP definition (group DFHISC) and/or supply module DFHCRSP

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3771 *applid* **Unable to start interregion communication because (E)STAE macro failed.**

Explanation: CICS issued an ESTAE macro that did not execute successfully, probably because storage for a ESTAE control block (SCB) was not available. For more information about the SCB, refer to the *MVS/ESA System Programming Library: Application Development Guide*.

System Action: The IRC session is not started.

User Response: Correct the cause of (E)STAE failure.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3772 *applid* **Error while attempting to start interregion communication.**

Explanation: CICS has evidence that the IRC session has already started. This is probably because the previous session could not be stopped (see messages DFHIR3760 and DFHIR3765).

Note: The session, although apparently started, is not in a usable state.

System Action: The IRC session is not started.

User Response: Perform another IPL.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3773 *applid* **Unable to start interregion communication because the APPLID option has a blank value.**

Explanation: Either the default value of *applid* (on DFHTCT TYPE=INITIAL, DFHSIT, override) must be used, or a value which is not a null value must be used.

System Action: The IRC session is not started.

User Response: Correct the *applid* value.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3775 *applid* **Unable to start interregion communication because short on storage.**

Explanation: Main storage is required to start the IRC session, but the storage is not available.

System Action: The IRC session is not started.

User Response: Wait until the storage condition has eased, then issue CEMT SET IRC OPEN command at the master terminal.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3776 *applid* **Unable to start interregion communication because another CICS system of the same name is active.**

Explanation: A CICS system is named by its applid value. If two CICS systems have the same applid value, the interregion communication SVC cannot distinguish between the systems.

Note: This situation may arise if a previous interregion communication (IRC) session could not be stopped; see message DFHIR3760. In this case, the IRC SVC would consider that the new session conflicted with the old (unstoppable) session.

System Action: The IRC session is not started.

User Response: Use a different generic applid for each CICS system.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3777 *applid* **The interregion communication table is full**

Explanation: The interregion communication SVC's user table is full.

System Action: The IRC session is not started.

User Response: When there are fewer batch-sharing programs running, issue CEMT SET IRC OPEN at the master terminal.

A common cause of this error is that MAXGROUP is set too low in an XCF Sysplex environment. Check the value of MAXGROUP and, if necessary, raise it to suit your environment. For further information, See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3778 *applid* **Insufficient storage is available for interregion communication blocks.**

Explanation: There is insufficient key 0 storage for the IRC control blocks. Storage is required from the CICS region but from outside the CICS DSA.

System Action: The IRC session is not started.

User Response: Ensure that sufficient storage is available. See the *CICS Performance Guide* for further guidance on how to determine the CICS DSA size limits in relation to the REGION size.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3779 *applid* **Insufficient storage is available for interregion communication subsystem blocks.**

Explanation: There is insufficient storage for the control blocks required by IRC. Storage is required from the CICS region but from outside the CICS DSA.

System Action: The IRC session is not started.

User Response: Ensure that sufficient storage is available. See the *CICS Performance Guide* for further guidance on how to determine the CICS DSA size limits in relation to the REGION size.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3780 *applid* **Unable to start interregion communication. Return code=***X'retcode'***, Reason code=***X'rsncode'***.**

Explanation: CICS attempted to establish itself as a user of the interregion communication (IRC) services, but the attempt failed.

System Action: The IRC session is not started.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: The return code (which might include an error qualifier) and reason code (if any) correspond to a number of possible errors. See *Interregion Control Blocks (IRC)* in the *CICS Data Areas* manual for a complete list of return codes, error qualifiers and reason codes. (The names of all the return codes, error qualifiers and reason codes start with IRERR, IRERQ and IRRSN respectively.) Check that the following requirements are satisfied:

- A copy of DFHIRP providing an adequate level of function is present in the link pack area (LPA).
- CICS has been defined as an operating system subsystem. The *CICS Transaction Server for OS/390 Installation Guide* explains how to define CICS as a subsystem.
- The XCF couple data sets have been formatted with enough XCF groups and members per group to satisfy the requirements of your installation.
- The userid of the CICS job is authorized to log on to the CICS interregion program (DFHIRP) using the generic applid specified.
- The CICS region has a unique generic applid within the MVS sysplex.
- The CICS DB2 attachment has **not** been initialized before the first start of IRC in a CICS system that is using **both** of the following:
  - Multiregion operation (MRO) or CICS shared database, where any of the installed MRO or CICS shared database resource definitions specify ACCESSMETHOD(XM)
  - The DB2 CICS attachment to run DB2 applications.

If the message is issued when all of these conditions have been met, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameters: *applid, X'retcode', X'rsncode'*

DFHIR3781 *applid* **Unable to start interregion communication because task CSNC cannot be attached.**

Explanation: Definitions for CSNC or DFHCRNP have not been installed, or DFHCRNP is missing from the CICS program library.

System Action: The IRC session is not started.

User Response: Make CSNC or DFHCRNP available.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3783 *date time applid* **Transaction** *transid* **termid** *termid* **- Connected transaction abended with message** *xxxx*

Explanation: Transaction *transid* was connected to a transaction in another CICS system, through an MRO link. This other transaction has abnormally terminated with the given message, causing the local transaction to abnormally terminate.

System Action: The transaction abnormally terminates.

User Response: Correct the cause of the abend in the connected transaction.

Destination: CSMT

Module: DFHZCX

XMEOUT Parameters: *date, time, applid, transid, termid, xxxx*

DFHIR3784 *applid* **A severe error (code** *X'code'***) has occurred in module DFHCRR. Connection** *conname* **(if non-blank) has been set out of service.**

Explanation: An error has been detected in module DFHCRR. The code X'*code*' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System Action: An exception entry is made in the trace table (X'*code*' in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

The connection *conname* (if any) being processed at the time of error is set out of service, to prevent the error from recurring repeatedly.

CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Find and fix the source of the error before setting the connection back in service.

Notify the system administrator. This failure indicates a serious error in CICS. If you have not requested termination in the dump table, you may want to terminate CICS. For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHCRR

XMEOUT Parameters: *applid, X'code', conname*

DFHIR3785 *applid* **Interregion control task CSNC abend. Interregion activity will be abnormally terminated.**

Explanation: CSNC is abnormally terminated.

System Action: CSNC is abnormally terminated with a system dump. All tasks using MRO links to other systems are abnormally terminated. CICS also abends all tasks in other CICS regions (including CICS shared data base batch regions) that are currently communicating with this system.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Following this abend it is not possible to use IRC within this CICS system. CICS must be restarted before IRC can be used.

Destination: Console

Module: DFHCRNP

XMEOUT Parameter: *applid*

DFHIR3786 *applid* **Unable to start interregion communication because module DFHSCTE could not be found.**

Explanation: The IRC module DFHIRP attempted to load DFHSCTE, but the module was not in the LPA.

System Action: The interregion communication session is not started.

User Response: Ensure that DFHSCTE is available.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3788 *date time applid* **Unexpected failure (return code=***X'retcode'***, reason code=***X'rsncode'***) trying to establish connection to system** *sysid*

Explanation: CICS could not establish a link to system *sysid*, even though system *sysid* is available for communication.

The most common value of code X'*retcode*' returned by the interregion communication SVC is X'65'. This means that no connection to the requesting region has been defined in the target region.

See *Interregion Communication Control Blocks* in the *CICS Data Areas* manual for a complete list of return codes (which might include an error qualifier) and reason codes. (The names of all the return codes, error qualifiers and reason codes start with IRERR, IRERQ and IRRSN respectively.)

A possible reason for this message is that the *applid* of the system on which the message appears does not match the NETNAME on any of the system entries defined in system *sysid*.

System Action: The connection is not established. Any existing connections are not affected.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If an *applid* or a NETNAME mismatch has occurred, correct the error and retry.

If a mismatch is not the cause of the error, you may need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Module: DFHCRNP

XMEOUT Parameters: *date, time, applid, X'retcode', X'rsncode', sysid*

DFHIR3789 *date time applid* **SEND/RECEIVE mismatch between TCT system entries for this system and system** *sysid*

Explanation:

- The number of send sessions defined in this system's TCT entry for system *sysid* does not equal the number of receive sessions defined in system *sysid*'s TCT entry for this system, or
- The number of receive sessions defined in this system's TCT entry for system *sysid* does not equal the number of send sessions defined in system *sysid*'s TCT entry for this system.

System Action: As many sessions as possible are established.

User Response: Alter one or both DFHTCT entries.

Destination: CSMT

Module: DFHCRNP

XMEOUT Parameters: *date, time, applid, sysid*

DFHIR3790 *date time applid* **Unable to connect to system** *sysid* **for security reasons**

Explanation: The TYPE=SYSTEM entry in system *sysid*'s DFHTCT entry for this system contained a SECURITYNAME operand that did not match the real external security ID of this system, or the ID was unknown to IRC.

System Action: The connection is not established.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Discuss with the system programmer responsible for system *sysid*.

Destination: CSMT

Module: DFHCRNP

XMEOUT Parameters: *date, time, applid, sysid*

DFHIR3791 *applid* **Unable to start interregion communication because ISC=NO has been specified.**

Explanation: IRC facilities are not available because ISC=NO has been specified.

System Action: The interregion communication session is not started.

User Response: Run with a value other than NO in the ISC operand of DFHSIT or system initialization overrides.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3793 *applid* **Unable to start interregion communication because a severe error has occurred in the recovery manager.**

Explanation: IRC facilities are not available because an internal request issued to recovery manager has failed.

System Action: The interregion communication session is not started.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3794 *date time applid* **Interregion usage of MVS CSA storage has reached** *nnnn* **bytes for this IPL**

Explanation: The maximum number of MVS CSA bytes used so far in this IPL by the CICS interregion communication facility (for interregion buffers), is *nnnn*.

System Action: Processing continues.

User Response: None.

Destination: CSMT

Module: DFHZCX

XMEOUT Parameters: *date, time, applid, nnnn*

DFHIR3795 ABNORMAL TERMINATION - STATUS CODE DH*xx*

Explanation: The IMS high-level programming interface (HLPI) has found a condition caused by a programming error, or DL/I has returned a status code to HLPI that indicates an error. *xx* is the status code.

System Action: The batch program abnormally terminates with abend code 3795.

User Response: Correct the error and try again. See the IMS *Application Programming: DL/I Calls* or the *Application Programming: EXEC DLI Commands* for an explanation of the IMS status code.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHDRPG

DFHIR3796 *date time applid* **Transaction** *tranid* **termid** *termid* **- A connected transaction sent issue abend with following message:** *xxxxxx*

Explanation: Transaction *tranid* was connected to a transaction in another CICS system via an MRO link. The other transaction sent an ISSUE-ABEND flow with a message.

System Action: Processing continues.

User Response: Examine the information in the included message to determine the circumstances and what action to take.

Destination: CSMT

Module: DFHZIS1.

XMEOUT Parameters: *date, time, applid, tranid, termid, xxxxxx*

DFHIR3798 *applid* **IRC Not Started. Unable to load Interregion Communication Work Exit DFHIRW10.**

Explanation: As part of interregion communication intialization, an attempt is made to establish an internal work exit mechanism. This attempt has failed.

The most likely reason for the failure is that the interregion communication work exit module, DFHIRW10, cannot be loaded. This module should appear in an APF authorized library in the STEPLIB concatenation for the CICS region, in the linklist, or in the LPA.

System Action: The attempt to initiate the interregion communication facility (via the IRCSTRT DFHSIT or override option or via the CEMT SET IRC OPEN command) fails. CICS continues.

User Response: Ensure that the interregion communication work exit module, DFHIRW10, is available to be loaded.

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

DFHIR3799 *applid* **Unable to start interregion communication because DFHIRP services are down level.**

Explanation: The version of DFHIRP being used is at a lower level than that of the caller wishing to make use of interregion communication.

System Action: The interregion communication session is not started.

User Response: If IRC is required, update the level of the DFHIRP module in the LPA such that it matches the level of the latest CICS version in use. If IRC is not required, run with system initialization override option IRCSTRT=NO.

Destination: Console

Modules: DFHSIJ1, DFHDRPF

XMEOUT Parameter: *applid*

DFHJCxxxx messages

DFHJC4522 DDNAME *ddname* **HAD A PERMANENT I/O ERROR.**

Explanation: An unrecoverable I/O error occurred while the CICS journal print utility was processing the data set defined in the DD statement *ddname*.

System Action: If the error occurred on an output data set, and multiple output copies were specified, processing continues with the other copies. Otherwise, the journal print utility terminates abnormally.

User Response: If the error occurred on an output data set, and you wish to rerun, change the DD statement to refer to a different volume, and resubmit the job. Take the original volume offline for recovery, if possible.

If the error occurred on an input data set, to be able to recover you must have a backup copy of the defective volume. You can change the DD statement to refer to the backup volume, and rerun the job. If you have a backup copy of a defective disk, you can use IBM utilities to recover the disk by flagging the defective track and pointing to an alternate track.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4523 PROCESSING IS BEING TERMINATED FOR THIS OPTION.

Explanation: This is an informatory message issued by the CICS journal print utility, when it completes processing for an OPTION card. The card referred to is the last OPTION card before this message on SYSPRINT.

System Action: The journal print utility continues processing with the next option.

User Response: If no other messages appear between the OPTION card and this message, the termination is normal. If other messages have been issued, check them to see if the termination is normal or abnormal. If abnormal termination has occurred, correct the errors notified in other message(s), and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4524 INVALID CONTROL CARD FORMAT.

Explanation: The CICS journal print utility detected an error in an input CONTROL card. The card is displayed on SYSPRINT on the line before this message.

System Action: The journal print utility ignores the invalid card, and assumes standard defaults.

User Response: If the output of the run is not what you want, correct the invalid card and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4525 INVALID CARD TYPE.

Explanation: The CICS journal print utility read an input card that did not contain one of the following strings starting in column 1:

'CONTROL', 'OPTION', '*', or 'END'.

The invalid card is displayed on SYSPRINT in the line before this message.

System Action: The journal print utility ignores the invalid card and continues processing.

User Response: If the job fails or the output is not what you want, correct the invalid card and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4526 INVALID OPTION CARD OR PRIOR ERROR.

Explanation: The CICS journal print utility detected an error in an OPTION card or ignored it because of a previous error. The card is displayed in the line before this message.

System Action: The journal print utility ignores the card and continues processing.

User Response: If the job fails or the output is not what you want, correct the error and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4527 END OF JOB.

Explanation: This is an end-of-job information message issued by the CICS journal print utility when it terminates normally. Errors may have been detected but none was sufficient to cause abnormal termination.

System Action: The journal print utility terminates normally.

User Response: Check that all options completed normally. If not, submit another job for the options that you still need.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4528 NO OPTION CARDS SUPPLIED.

Explanation: The CICS journal print utility detected that, for one CONTROL card:

1. No OPTION cards were supplied **OR**
2. All the OPTION cards contained errors (notified in previous messages).

System Action: The journal print utility does no processing for the CONTROL card with no OPTION cards.

User Response: Supply correct OPTION cards for the options you want and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4529 UNABLE TO OPEN INPUT FILE.

Explanation: The CICS journal print utility was unable to open the input data set associated with the CONTROL card displayed before this message.

System Action: The journal print utility continues processing with the next input card.

User Response: Check the JCL. For a data set without a standard label, check that the data set control block (DCB) parameters are supplied. If you find a JCL error, correct it and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4530 ELEMENT LIST ERROR.

Explanation: The CICS journal print utility detected an error while processing an input file.

System Action: The journal print utility terminates processing with the MVS user abend code 0185.

User Response: This is usually caused by a previous error, for which a message has been issued. If any previous error messages were displayed, make the necessary corrections and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4531 END OF FILE ON INPUT.

Explanation: The CICS journal print utility has reached EOF on the current input file.

System Action: The journal print utility completes processing for the CONTROL card preceding this message on SYSPRINT.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4532 OPTION COMPLETE.

Explanation: The CICS journal print utility has completed processing for the OPTION card preceding this message on SYSPRINT.

System Action: The journal print utility continues processing with the next OPTION card or, if there are no further options before the END card, completes processing for the current control card.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4533 UNABLE TO OPEN OUTPUT FILE.

Explanation: The CICS journal print utility was unable to open the output data set associated with the last CONTROL card displayed on SYSPRINT before this message.

System Action: The journal print utility terminates processing for this CONTROL card, and continues processing with the next CONTROL card.

User Response: Check the JCL. For a data set without a standard label, check that the data set control block (DCB) parameters are supplied. If you find a JCL error, correct it and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4534 NO ELEMENT LIST ADDRESS.

Explanation: During CICS journal print utility processing, an error occurred in building the element list.

System Action: The journal print utility terminates processing for this element list, and terminates abnormally with the MVS user abend code, 0184.

User Response: This is an internal error in the journal print utility, DFHJUP. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHJC4571 AN ERROR (CODE *X'code'*) HAS OCCURRED IN THE USER EXIT PROGRAM.

Explanation: An error has been detected in the user exit program. The code *code* is the value returned in register 15 from the exit program to DFHJUP. The journal print utility terminates without processing any remaining OPTION cards.

User Response: Correct the error in the user exit program and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHJUP

DFHKCxxxx messages

DFHKC0102 *date time applid terminal userid tranid* **PFT entry for** *profname* **has been added.**

Explanation: This is an audit log message indicating that profile entry *profname* has been added to the PFT using the INSTALL command.

terminal is the netname or termid of the terminal at which the INSTALL command was entered.

userid is the user identifier of the operator performing the INSTALL command.

tranid is the transaction used to perform the INSTALL command.

System Action: The system continues normally.

User Response: None.

Destination: CSKL

Module: DFHKCQ

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, profname*

DFHKC0104 *date time applid terminal userid tranid* **PFT entry for** *profname* **has been deleted.**

Explanation: This is an audit log message indicating that profile entry *profname* has been deleted from the CICS profile table (PFT) using the DISCARD command.

terminal is the netname or termid of the terminal at which the DISCARD command was entered.

userid is the user identifier of the operator performing the DISCARD command.

tranid is the transaction used to perform the DISCARD command.

System Action: The system continues normally.

User Response: None.

Destination: CSKL

Module: DFHKCQ

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, profname*

DFHKC0106 *date time applid terminal userid tranid* **PFT entry for** *profname* **has been replaced.**

Explanation: This is an audit log message indicating that profile entry *profname* has been replaced in the CICS profile table PFT using the INSTALL command.

terminal is the netname or termid of the terminal at which the INSTALL command was entered.

userid is the user identifier of the operator performing the INSTALL command.

tranid is the transaction used to perform the INSTALL command.

System Action: The system continues normally.

User Response: None.

Destination: CSKL

Module: DFHKCQ

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, profname*

DFHKC0301 *applid* **Program DFHKCRP cannot be found.**

Explanation: The transaction manager recovery program is not available. CICS cannot find DFHKCRP in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System Action: CICS terminates abnormally with a dump.

User Response: To correct this error, place DFHKCRP in a partitioned data set in the DFHRPL DD statement.

Destination: Console

Module: DFHKCQ

XMEOUT Parameter: *applid*

DFHKC0302 *applid* **Transaction Manager restart failed. Reason - *rc*.**

Explanation: During transaction manager initialization, CICS executes the following steps in the order in which they are listed:-

1 Building the profile table (PFT) directory.

8 Purging profile definitions from the global catalog using the catalog domain.

10 Restoring profile definitions from the global catalog using the catalog domain.

The transaction manager restart has failed for reason *rc*, where *rc* indicates the job step that did not complete successfully. Subsequent steps have not been attempted.

System Action: CICS terminates the task under which DFHKCRP is running with an AKCB abend code, and issues message DFHSI1521.

User Response: Examine the trace in the CICS AKCB transaction dump to see the history of the task that DFHKCRP is running under for further information regarding the precise cause of the failure.

Destination: Console

Module: DFHKCRP

XMEOUT Parameters: *applid, rc*

DFHKC0308I *applid* **ERROR OCCURRED IN SRB MODE.**

Explanation: An error such as a program check was detected by the operating system during the execution of a unit of work scheduled by means of a service request block (SRB). The SRB was scheduled, directly or indirectly, by CICS in order to issue a VTAM authorized path request.

A message could not be issued because the error was detected when running under an SRB.

Diagnostics: The error is handled by a functional recovery routine (FRR) in DFHKCSP. This FRR saves the system diagnostic work area (SDWA) if one was provided, and issues a CALLRTM to terminate the CICS TCB with user abend code 0308.

This, in turn, causes the ESTAE exit established by DFHKESTX to be taken, resulting in the storing of the CICS TCB status and provision of a dump as for abends occurring during execution under the CICS TCB.

The SDWA saved by DFHKCSP may be located in the dump by:

Finding the module itself (look for characters 'DFHKCSP').

Finding the save area (look for characters 'SRB SDWA SAVE AREA'); the SDWA follows this character string.

Analysis: The SDWA, located as described above, is a standard MVS SDWA. The principal contents of the SDWA are:

SDWAGRSV General registers 0 through 15

SDWAEC1 Program status word (PSW) at the time of the interrupt.

In general, registers 12 and 13 will not address a TCA or the CSA.

The registers and PSW recorded in DFHKESTX represent the state of the CICS TCB when CICS was terminated by the FRR. Normally this information is not relevant to the cause of the failure, but may give clues to the environment in which the SRB was running.

System Action: CICS is terminated with user abend code U0308. The system diagnostic work area (SDWA) presented at the time of error is copied into module DFHKCSP. DFHKCSP resides in protected storage and can be printed from an MVS region dump.

User Response: Locate the SDWA, situated in DFHKCSP after the characters "SRB SDWA WORK AREA." This contains the PSW and registers at the time of the error.

If the address in SDWAEC1 is in CICS code, examine the code to determine the expected register contents at this point. If this does not suggest any obvious local problem, look for a pointer to the RPL associated with the SRB mode execution. This will indicate the location of the MVS save area.

If the address in SDWAEC1 is not in CICS code (that is in MVS), try using the contents of register 13 to trace back through the save areas to the one provided by CICS. The contents of this save area will show the point of call in CICS (in DFHZHPRX), and the arguments passed to the access method, in particular the address of the RPL (register 1). Failure in an access method may be due to an incorrect RPL. Therefore check the ACB address, entry point, and I/O area address.

Note: When CICS is executing in SRB mode, it is not possible for the message to be issued. However, user abend code 308 is generated and should appear in message DFHSR0606.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKCSP

DFHKExxxx messages

DFHKE0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in *OS/390 MVS System Codes*.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an

abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKETI

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHKE0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code *code* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHKEDD, DFHKEGD, DFHKEIN

XMEOUT Parameters: *applid, X'code', modname*

DFHKE0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. However, you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKETI

XMEOUT Parameters: *applid, X'offset', modname*

DFHKE0005 *applid* **A hardware error has occurred (module** *modname***, code** *X'code'***). The MVS store clock was found inoperative.**

Explanation: A hardware error has occurred during the running of module *modname*. The MVS store clock facility is the timing mechanism for the operating system.

The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

User Response: If CICS is still running, it is necessary to decide whether to terminate CICS. This is probably a hardware error and you should first investigate the MVS store clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKETI

DFHKE0006 *applid* **Insufficient storage to satisfy Getmain (code** *X'code'***) in module** *modname***. MVS code** *mvscode***.**

Explanation: An MVS GETMAIN was issued by module *modname* but there was insufficient storage available to satisfy the request.

The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

The code *mvscode* is the MVS GETMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS will terminate with a system dump. An exception entry is made in the trace table (code *code* in the message).

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual which is listed in the book list at the front of this book.

Try decreasing the overall size limit of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. If CICS is not already terminated, you will need to bring CICS down to do this. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Destination: Console

Module: DFHKEIN

XMEOUT Parameters: *applid, X'code', modname, mvscode*

DFHKE0101 *applid* **DFHSIP IS NOT APF-AUTHORIZED. CICS WILL TERMINATE.**

Explanation: Part of CICS initialization must be done in an APF-authorized state. The kernel has detected that DFHSIP is not APF-authorized.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS will terminate. The CICS job step terminates with return code 12.

User Response: All libraries concatenated in the STEPLIB concatenation should be APF-authorized, and DFHSIP should be link-edited with an authorization code of 1.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKESIP

DFHKE0102 *applid* **UNSUCCESSFUL PRE-INITIALIZATION OF** *domain* **DOMAIN. CICS WILL TERMINATE.**

Explanation: A domain has failed to pre-initialize and as a result the system will terminate.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

Since this problem has occurred so early in CICS initialization, possible causes include a severe lack of storage or corruption of the local catalog.

System Action: CICS terminates.

User Response: Inform the system programmer. If a dump is taken, investigate this problem using the exception trace which is issued by the failing domain.

You may need further assistance to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKETCB.

DFHKE0103 *applid* **IDENTIFY FAILED IN MODULE** *modname***. MVS CODE** *mvscode***. CICS WILL TERMINATE.**

Explanation: The kernel has issued an MVS IDENTIFY which has failed.

The code *mvscode* is the MVS IDENTIFY return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS terminates. The CICS job step terminates with return code 12.

User Response: Inform the system programmer.

To resolve the problem, use the MVS IDENTIFY return code *mvscode* and the *MVS/XA Supervisor Services and Macro Instructions* manual, (GC28-1154), to determine why the IDENTIFY failed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKETCB.

DFHKE0104 *applid* **CICS HAS BEEN SUPPLIED WITH INCORRECT SVC NUMBER** *svcno***.**

Explanation: CICS has validated the SVC number *svcno*, but it does not correspond to the correct CICS Type 3 SVC for this release of CICS. CICS cannot function without the correct CICS SVC.

The SVC number *svcno* has been specified in the SIT, or as an override, by the CICSSVC= parameter.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: Control is returned to the parameter manager for interaction with the operator. Further action depends upon which PARMERR= parameter has been specified.

- If PARMERR=ABEND, CICS is terminated with a system dump.
- If PARMERR=IGNORE, CICS is terminated with a system dump.
- If PARMERR=INTERACT, the operator is prompted to enter another SVC number, or to bypass entry. If the operator bypasses entry, CICS is terminated with a system dump.

User Response: The CICS Type 3 SVC is defined to MVS in SYS1.PARMLIB member IEASVCxx. SVC *svcno* must be defined as a Type 3 SVC with an entry point equal to the entry point name specified when the SVC module was installed into SYS1.LPALIB. Ensure that this is the case.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKEGD.

DFHKE0105 *applid* **CICS INITIALIZATION IS NOT SUPPORTED ON THIS LEVEL OF OPERATING SYSTEM.**

Explanation: The kernel has detected that the release level of the operating system is earlier than the pre-requisite release level required to run CICS.

System Action: CICS will terminate. The CICS job step terminates with return code 12.

User Response: Refer to the *CICS Program Directory* and install the pre-requisite operating system release level or higher.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKESIP

DFHKE0201 *applid* **ABOUT TO TAKE SDUMP. DUMPCODE:** *dumpcode***, DUMPID:** *dumpid***. (MODULE** *modname***).**

Explanation: An error during pre-initialization or termination, possibly signalled by a previous message, has caused the kernel domain to take a dump, which will issue this message immediately before calling the MVS SDUMP facility.

The dump code *dumpcode* is the 8-character dump code 'KERNDUMP'.

The dumpid *dumpid* is the string '0/0000'.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: When the dump is complete, message number DFHKE0202 is issued.

User Response: Inform the system programmer. See the associated dump and error messages for further guidance.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

DFHKE0202 *applid* **SDUMP COMPLETE. (MODULE** *modname***).**

Explanation: This message is issued on successful completion of an SDUMP.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS will terminate.

User Response: Print off the system dump if required. A previous MVS message will identify in which SYS1.DUMP data set this dump can be found.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

DFHKE0208 *applid* **SDUMP BUSY - CICS WILL RETRY IN FIVE SECONDS. (MODULE** *modname***).**

Explanation: At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This causes MVS to reject the new request. A nonzero value for the DURETRY parameter on the SIT means that CICS waits for five seconds before reissuing the SDUMP request.

System Action: CICS issues an MVS STIMERM macro which causes CICS to stop for five seconds. The request is reissued when the delay interval has expired. CICS delays and retries every five seconds for a total time equal to the number of seconds specified on the DURETRY system initialization parameter.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

DFHKE0209 *applid* **RETRYING SDUMP. (MODULE** *modname***).**

Explanation: At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This caused MVS to reject the new request. CICS has waited for five seconds (as indicated by message DFHKE0208) and is now reissuing the SDUMP request.

System Action: CICS reissues the SDUMP request.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

DFHKE0210 *applid* **SDUMP REQUEST FAILED. (MODULE** *modname***) -** *reason***.**

Explanation: An MVS SDUMP request from CICS signalled by message DFHKE0201 has failed to complete successfully. The possible reasons *reason* for the failure are detailed below.

SDUMP RETURN CODE X'nn' ONLY PARTIAL DUMP
The SYS1.DUMP data set to which the dump was written was not large enough to contain all of the dumped storage.

SDUMP RETURN CODE X'nn' REASON X'mm' SDUMP BUSY
At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This caused MVS to reject the new request.

If a nonzero value has been specified for the DURETRY SIT parameter, CICS will have retried the SDUMP request every five seconds for the specified period. This message is issued if SDUMP is still busy after the final retry.

SDUMP RETURN CODE X'nn' REASON X'mm' NO DATA SET AVAILABLE
No data set is available for the SDUMP request.

SDUMP RETURN CODE X'nn' REASON X'mm'
MVS rejected the SDUMP request for some other reason than those listed above. X'nn' gives the hexadecimal SDUMP return code and X'mm' gives the hexadecimal SDUMP reason.

NOT AUTHORIZED IN CICS
SDUMP is not authorized for this CICS run.

INSUFFICIENT STORAGE
CICS issued an MVS GETMAIN for Subpool 253 storage during the processing of the SDUMP request. The GETMAIN was rejected by MVS.

STIMERM FAILED
In order to delay for five seconds before retrying SDUMP after an SDUMP busy condition, CICS issues an MVS STIMERM macro request. MVS has indicated that the STIMERM request has failed.

DFHDUSVC FESTAE FAILED
CICS issued an MVS FESTAE request from DFHDUSVC during the processing of the SDUMP request. The FESTAE has been rejected by MVS.

DFHDUSVC FUNCTION INVALID
CICS called DFHDUSVC during the processing of the SDUMP request. The function passed to DFHDUSVC was invalid.

During initialization, CICS does not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS proceeds as if the dump had been successful.

User Response: The user response depends on the reason for the failure. For:

SDUMP RETURN CODE X'nn' ONLY PARTIAL DUMP
Examine the reason code that explains why the partial dump was taken. This code is contained in the MVS message IEA911E. See the *OS/390 MVS System Messages, Volume 1* for a description of this reason code.

SDUMP RETURN CODE X'nn' REASON X'mm' SDUMP BUSY
Cause the SDUMP to be reissued by increasing the DURETRY value on the SIT. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMP return code X'nn' and reason X'mm'.

SDUMP RETURN CODE X'nn' REASON X'mm' NO DATA SET AVAILABLE
Clear a SYS1.DUMP data set and then cause the SDUMP request to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMP return code X'nn' and reason X'mm'.

SDUMP RETURN CODE X'nn' REASON X'mm'
No action is required if the dump was suppressed deliberately. If the dump failed because of an error in the MVS SDUMP routine, use MVS problem determination methods to fix the error and then cause the SDUMP request to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMP return code X'nn' and reason X'mm'.

NOT AUTHORIZED IN CICS
This reason should not appear, because an SDUMP is unconditionally authorized during CICS initialization, and should be authorized throughout the CICS run. If you do get this reason, the CICS AFCB (Authorized Function Control Block) has probably been accidentally overwritten.

INSUFFICIENT STORAGE
Ensure sufficient storage is available to MVS for subpool 253 requests.

STIMERM FAILED
Use MVS problem determination methods to fix the STIMERM failure and then cause the SDUMP request to be reissued.

DFHDUSVC FESTAE FAILED
Use MVS problem determination methods to fix the FESTAE failure and then cause the SDUMP to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the FESTAE macro.

DFHDUSVC FUNCTION INVALID
The CICS DAFPB (dump authorized function parameter block) has probably been accidentally overwritten.

Notify the system programmer. If CICS is still running, it will be necessary to decide whether to terminate CICS.

You may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

To resolve the problem, collect any dumps and any relevant messages and contact your IBM Support Center.

Further guidance on how to prepare information for IBM support is given in the *CICS Problem Determination Guide* If you are not familiar with this process, refer to the guide before contacting IBM support.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

DFHKE0301 *applid* **Insufficient storage to satisfy Getmain in module** *modname***. MVS code** *mvscode***.**

Explanation: The kernel (KE) domain has issued an MVS GETMAIN for kernel stack storage, but there was insufficient storage available to satisfy the request.

The code *mvscode* is the MVS GETMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS terminates abnormally with a system dump. No exception entry is made in the trace table since a call to the trace (TR) domain would itself require kernel stack storage.

User Response: Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual which is listed in the book list at the front of this book. Also look at the kernel domain section of the system dump to see how the kernel stack storage has been used up.

Try decreasing the size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKESGM

DFHKE0302 *applid* **Freemain of stack storage failed in module** *modname***. MVS code** *mvscode***.**

Explanation: The kernel (KE) domain has issued an MVS FREEMAIN for kernel stack storage, but a bad return code was returned.

The code *mvscode* is the MVS FREEMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS terminates abnormally with a system dump. No exception entry is made in the trace table since a call to the trace (TR) domain would itself require kernel linkage.

User Response: Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the *OS/390 MVS System Codes* manual.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKEDS

DFHKE0303 *applid* **A RECURSIVE ABEND HAS BEEN DETECTED BY THE KERNEL DOMAIN.**

Explanation: The kernel (KE) domain has detected that the current task is recursively abending while attempting to recover from an abend.

System Action: CICS terminates abnormally with a system dump. No exception entry is written to the trace table because the trace (TR) domain may be the cause of the loop.

User Response: Use the dump provided to investigate the kernel error table to diagnose the earlier abends for the failing task.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKERRI

DFHKE0401 *applid* **CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED (RETURN CODES** *X'resp'***,** *X'reason'***).**

Explanation: An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System Action: A system dump is taken.

CICS continues, but cannot subsequently be restarted by ARM.

User Response: It is necessary to decide whether to terminate CICS.

For problem diagnosis look up the return codes from the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

Further information about how to use ARM can also be found in *OS/390 MVS Setting Up a Sysplex*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKEAR

DFHKE0402 *applid* **CICS DEREGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED (RETURN CODES** *X'resp'***,** *X'reason'***).**

Explanation: An attempt to invoke a DEREGISTER request against the MVS automatic restart manager (ARM) failed.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System Action: If the request failed during startup, a dump is taken and CICS continues.

If the request failed during shutdown, an exception entry is made in the trace table, and a system dump is taken unless you have specifically suppressed dumps in the dump table. CICS continues to shut down unless you have specified in the dump table that CICS should terminate. The DEREGISTER failed so a subsequent failure of CICS or an IMMEDIATE shutdown may result in ARM restarting CICS.

User Response: For problem diagnosis look up the return codes from the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHKEAR

XMEOUT Parameters: *applid, X'resp', X'reason'*

DFHKE0403 *applid* **CICS WAITPRED call to automatic restart manager failed (return codes** *X'resp'*, *X'reason'***).**

Explanation: An attempt to invoke a WAITPRED request against the MVS automatic restart manager (ARM) failed.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. The failure of the WAITPRED request may result in other subsystems not being available when CICS initialization completes.

User Response: If CICS is still running, it is necessary to decide whether to terminate CICS.

For problem diagnosis look up the return codes from the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHKEAR

XMEOUT Parameters: *applid, X'resp', X'reason'*

DFHKE0404 *applid* **CICS READY call to automatic restart manager failed (return codes** *X'resp'*, *X'reason'***).**

Explanation: An attempt to invoke a READY request against the MVS automatic restart manager (ARM) failed.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. Other subsystems which are waiting for CICS are not be informed that CICS is ready for work and continue to wait until timed out.

User Response: If CICS is still running, it is necessary to decide whether to terminate CICS.

For problem diagnosis look up the return codes from the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHKEAR

XMEOUT Parameters: *applid, X'resp', X'reason'*

DFHKE0405 *applid* **CICS WAITPRED call to automatic restart manager timed out (return codes** *X'resp'*, *X'reason'***).**

Explanation: A WAITPRED request against the MVS automatic restart manager (ARM) timed out.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. The WAITPRED request time out may result in other subsystems not being available when CICS initialization completes.

User Response: If CICS is still running, it is necessary to decide whether to terminate CICS.

For problem diagnosis look up the return codes from the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHKEAR

XMEOUT Parameters: *applid, X'resp', X'reason'*

DFHKE0406I *applid* **CICS is about to wait for predecessors defined in the MVS automatic restart management policy for this region.**

Explanation: CICS is about to invoke a WAITPRED request against the automatic restart manager. This may result in a delay before CICS processing continues.

System Action: CICS continues.

User Response: None.

Destination: Console

Module: DFHKEAR

XMEOUT Parameter: *applid*

DFHKE0407 *applid* **XRF IS INCOMPATIBLE WITH AUTOMATIC RESTART MANAGER. CICS IS TERMINATING.**

Explanation: CICS has registered with the MVS automatic restart manager (ARM) after having been restarted but the restart JCL specifies XRF=YES. XRF is incompatible with ARM.

System Action: CICS terminates.

User Response: Ensure that the XRF=YES option in the restart JCL is correct.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKEAR

DFHKE0408D *applid* **PLEASE SPECIFY START TYPE, 'ASIS' OR 'AUTO'.**

Explanation:

An attempt to REGISTER with the MVS automatic restart manager (ARM) has failed when a cold or initial start has been specified in the SIT.

When the CICS region has been restarted with JCL that specifies START=COLD or START=INITIAL, CICS relies on ARM to determine whether to override the start type and change it to AUTO. As the REGISTER has failed, CICS cannot determine whether the region is being restarted by ARM, and so does not know whether to override the start type.

System Action:

CICS waits until the operator supplies the START type to be used by this region.

User Response: If the region is being restarted by ARM, specify AUTO. If the startup type of COLD or INITIAL in the SIT should be preserved, specify ASIS.

See the previously issued message DFHKE0401 for guidance on dealing with the underlying REGISTER failure.

Note: This message cannot be changed with the message editing utility.

Destination: Console Routecodes 1 and 11

Module: DFHKEAR

DFHKE0410 *applid* **CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED BECAUSE THE JOB TYPE IS INVALID.**

Explanation: An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed because the job type is invalid to ARM. CICS can only register with ARM if it is being run as a started task or a batch job.

System Action: CICS continues, but cannot subsequently be restarted by ARM.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKEAR

DFHKE0411 *applid* **CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED BECAUSE MAXIMUM NUMBER OF USERS WAS REACHED.**

Explanation: An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed because the maximum number of ARM users allowed for in the ARM couple data set has been reached. This response is never given by ARM if ARM is restarting CICS.

System Action: CICS continues, but cannot subsequently be restarted by ARM.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKEAR

DFHKE0412I *applid* **CICS WAITPRED call to automatic restart manager has completed.**

Explanation: A WAITPRED request against the MVS automatic restart manager (ARM) has completed.

Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHKEAR

XMEOUT Parameter: *applid*

DFHKE0413 *applid* **CICS REGISTER CALL FAILURE IN MODULE DFHKESVC (RETURN CODE** *X'resp'***).**

Explanation: An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed in module DFHKESVC.

The code *resp* is the hexadecimal response from DFHKESVC and its meanings are:

- 08 - The requested function is not supported.
- 0C - The getmain for the dynamic storage failed.
- 10 - Unable to establish the recovery routine.
- 14 - The **DFHAUTH CHECK** failed.

System Action:

CICS continues, but cannot subsequently be restarted by ARM.

User Response:

It is necessary to decide whether to terminate CICS.

Further information about how to use ARM can also be found in *OS/390 MVS Setting Up a Sysplex*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKEAR

DFHKE0999 *applid* **MVS HAS CALLED DFHKESTX WITH NO SDWA. ABEND CODE** *X'code'***.**

Explanation: MVS has made a call to the CICS ESTAE-type recovery routine DFHKESTX, but it supplied no system diagnostic work area (SDWA). DFHKESTX is unable to continue with the recovery.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: Module DFHKESTX produces a system dump and percolates the error to the next ESTAE routine. This is potentially a serious error. CICS continues processing pending the result of the error percolation.

User Response: The abend code X'*code*' is the reason the CICS ESTAE was called. You need to find out which product has produced the abend. Typically it is an MVS system completion code, for example D37. However the abend may have been issued by CICS, for example abend 1596, or another product such as IMS.

Since there is little further diagnostic information in this case, look for any messages that may indicate the reason for the abend. The entry in the appropriate manual for the abend code gives user guidance regarding the error, and may also give some guidance concerning the appropriate user response.

The reason why no SDWA was passed and subsequently no recovery was attempted is probably a shortage of storage. This storage shortage may also be an influencing factor in the abend itself.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKESTX

DFHKE1799 *applid* **TERMINATION OF CICS IS COMPLETE.**

Explanation: This message is issued when CICS has terminated.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: Control is given back to the operating system.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKESIP

DFHKE1800 *applid* **ABNORMAL TERMINATION OF CICS IS COMPLETE.**

Explanation: CICS issues this message when it terminates abnormally.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: The abnormal termination of CICS continues. The kernel returns control to the operating system by issuing a user 1800 abend.

The original error which caused the abnormal termination may also have produced a dump. No specific dump is produced to accompany this message.

User Response: If a dump is produced, check the dump to determine the cause of the error. Use the *CICS Problem Determination Guide* to assist you to determine the problem.

If no dump is produced, check for other CICS and MVS messages and abend codes to help you to determine the cause of the problem.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHKESIP

DFHLDxxxx messages

DFHLD0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the program check or abend indicated that CICS was executing at offset X'*offset*' in module *modname*. This may have been caused by corruption of CICS code or control blocks.

System Action: A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLDDM, DFHLDDMI, DFHLDLD, DFHLDLD1, DFHLDLD2, DFHLDLD3, DFHLDNT, DFHLDST

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHLD0002 *applid* **A severe error (code** *X'code***) has occurred in module** *modname***.**

Explanation: The loader has received an unexpected error response from some other part of CICS or an operating system service. The operation requested by the loader is described by code X'*code*'.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System Action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the cause of the problem as follows:

1. Determine if the problem can be explained by any previous messages output from some other part of CICS.
2. Examine the symptom string.
3. Examine the dump.

Destination: Console

Modules: DFHLDDM, DFHLDDMI, DFHLDLD, DFHLDLD1, DFHLDLD2, DFHLDLD3, DFHLDNT, DFHLDST

XMEOUT Parameters: *applid, X'code', modname*

DFHLD0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: CICS has detected what it believes to be a code execution loop. At the time execution was interrupted, the program status word (PSW) indicated the next instruction address would have been at offset X'*offset*' in module *modname*.

System Action: CICS is terminated with a system dump unless dump table options specifically prevent this.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the existence of a previous error situation which may have led to corruption of CICS control blocks or to the non-completion of an expected event. If there is no evidence of a previous error, you will need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLDDM, DFHLDDMI, DFHLDLD, DFHLDLD1, DFHLDLD2, DFHLDLD3, DFHLDNT, DFHLDST

XMEOUT Parameters: *applid, X'offset', modname*

DFHLD0101I *applid* **CICS nucleus module** *modname* **not found.**

Explanation: The CICS loader (LD) was unable to locate a copy of module *modname* in either the link pack area (LPA) in or the DFHRPL library concatenation.

System Action: A system dump is taken and CICS execution continues unless specifically inhibited by a dump table entry.

User Response: This message is followed by one or more messages informing the user of reduced function availability due to the missing module *modname*.

Ensure that there is a copy of module *modname* in the LPA and/or in a library within the DFHRPL concatenation.

If module was expected to be in the LPA, ensure CICS is utilizing LPA resident modules by specifying LPA=YES as a start up override.

Destination: Console

Module: DFHLDDMI

XMEOUT Parameters: *applid, modname*

DFHLD0102 *applid* **Unable to declare gate** *ff* **for module** *modname***.**

Explanation: As part of its initialization, the CICS loader has attempted to define domain gate *ff* for module *modname*, but has received a bad response.

System Action: A system dump is taken and CICS execution continues unless specifically inhibited by a dump table entry.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This message diagnoses an internal error within CICS. Investigate whether previous errors have left CICS in a damaged state. If there is no evidence of previous serious errors, you will need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHLDDMI

XMEOUT Parameters: *applid, ff, modname*

DFHLD0103I *applid* **Module Storage Compression OFF. All modules are USAGE=TRANSIENT.**

Explanation: This message is normally preceded by either message DFHLD0101 or DFHLD0102 and indicates that the loader (LD) domain was unable to initialize its dynamic program storage compression facility.

System Action: CICS execution continues but all nonresident application programs are treated as if they had been defined with the USAGE=TRANSIENT option. Therefore they are removed from storage the moment their use count reaches zero.

For some functions, this can lead to a performance degradation as programs may be loaded many times during the life of a transaction instead of only once.

User Response: Investigate the reasons for the previous problem concerning module DFHLDNT as diagnosed by either message DFHLD0101 or DFHLD0102.

Destination: Console

Module: DFHLDDMI

XMEOUT Parameter: *applid*

DFHLD0104I *applid* **Module Statistics are not being collected.**

Explanation: This message is normally preceded by either message DFHLD0101 or DFHLD0102 and indicates that the loader (LD) domain was unable to initialize it's statistics collection module.

System Action: CICS execution continues but no module statistics will be collected.

User Response: Investigate the reasons for the previous problem concerning module DFHLDST as diagnosed by either message DFHLD0101 or DFHLD0102.

Destination: Console

Module: DFHLDDMI

XMEOUT Parameter: *applid*

DFHLD0105 *applid* **Restart of Loader Option Block (LOB) failed. System defaults in use.**

Explanation: The initialization of the CICS loader has detected one or more invalid parameters in the loader option block (LOB) recovered from the local catalog.

This may indicate that corruption of the local catalog has occurred.

System Action: A system dump is taken and CICS execution continues unless specifically inhibited by a dump table option.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the possibility of corruption of the local catalog. If you suspect that the local catalog is corrupt, reinitialize it and resubmit the CICS job.

Destination: Console

Module: DFHLDDM

XMEOUT Parameter: *applid*

DFHLD0106 *applid* **Bad response** *X'resp'* **returned on an OPEN of DFHRPL.**

Explanation: The CICS loader has attempted to open the DFHRPL library concatenation during initialization and has received the response code *resp*.

System Action: CICS execution continues although only link pack area (LPA) resident modules are accessible.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Ensure the DFHRPL concatenation is correctly specified in the JCL and that the libraries specified in it are operational. The response code returned may be interpreted as for a BSAM open request.

Destination: Console

Module: DFHLDDM

XMEOUT Parameters: *applid, X'resp'*

DFHLD0107I *applid modname1* **is unable to locate module** *modname2* **in the LPA. DFHRPL version of module will be used.**

Explanation: The user has specified the system initialization parameter LPA=YES. Module *modname2* is either defined as USELPACOPY=YES via RDO or is a CICS PCLASS=SYSTEM module. CICS has been unable to find *module2* in the link pack area (LPA).

System Action: CICS execution continues with an attempt to locate module *modname2* in the CICS program library DFHRPL.

User Response: carry out one of the following:

- Load module *modname2* into the LPA, if this is required and the module is LPA eligible (refer to the *CICS Transaction Server for OS/390 Installation Guide* for LPA eligibility of CICS modules).
- Code PRVMOD=*modname2* as a SIT option which ensures that CICS will not search the LPA for that module.
- Code LPA=NO as a system initialization parameter. This ensures that CICS does not search the LPA for any module.
- Inhibit this message from all or selected consoles using the MVS VARY command. For more information on how to do this, refer to the *CICS Transaction Server for OS/390 Installation Guide*.

Destination: Console Routecode 11

Modules: DFHLDDMI, DFHLDLD1

XMEOUT Parameters: *applid, modname1, modname2*

DFHLD0108I *applid* **The maximum of 32767 entries that CICS allows on a BLDL has been exceeded.**

Explanation: During a warm or emergency restart, the loader domain has detected more than 32767 modules eligible for BLDL.

System Action: A BLDL macro call is issued to locate the first 32767 modules and the rest are ignored. CICS initialization continues normally.

This is not a problem because CICS attempts to locate those modules not located during initialization when the module is first used.

User Response: None.

Destination: Console

Module: DFHLDDMI

XMEOUT Parameter: *applid*

DFHLD0201 *applid* **Corrupt Loader** *load* **structure detected at** *X'address'***. Module marked as unavailable.**

Explanation: During the execution of a CICS loader request, the loader detected an invalid field in the control block type *tttt* at storage address *address*.

System Action: A system dump is taken and execution continues unless specifically inhibited by a dump table option.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the possibility of corruption of CICS modules or control blocks or the local or global catalogs.

Destination: Console

Module: DFHLDLD1

XMEOUT Parameters: *applid, load, X'address'*

DFHLD0202 *applid* **Loader SVC** *svc* **request failed due to shortage of free storage in the region.**

Explanation: The loader domain has issued a request to its CICS SVC service routine, DFHLDSVC, but the execution of this request failed due to a lack of free storage in the MVS region. The type of request is indicated by *svc*.

System Action: A system dump will be taken unless specifically suppressed through a dump table entry and the system will continue execution. The task requesting loader services will be abnormally terminated with abend code APCT, or a PGMIDERR condition will be raised.

User Response: Ensure there is adequate free storage in the MVS region by balancing the overall size limits of the DSAs or EDSAs with the size of the MVS region specified by the REGION parameter on the job card of the CICS job JCL.

Destination: Console

Module: DFHLDLD1

XMEOUT Parameters: *applid, svc*

DFHLD0203 *applid* **Loader SVC** *svc* **request failed due to I/O errors on library DFHRPL.**

Explanation: The loader domain has issued a request to its CICS SVC service routine, DFHLDSVC, but the execution of this request failed due to I/O errors on the relocatable library, DFHRPL. The type of request is indicated by *svc*.

System Action: A system dump is taken unless specifically suppressed through a dump table entry and the system continues execution. The task requesting loader services is abnormally terminated with abend code APCT, or a PGMIDERR condition is raised.

User Response: Investigate the possible causes of the I/O errors encountered. The MVS system console log may contain more information about the problem in the form of access method or I/O subsystem messages. The loader domain exception trace entries, from the full trace, in the system dump normally identify the module or modules for which the I/O error occurred.

A possible cause of this problem is the compression of a partition data set (PDS) within the DFHRPL concatenation.

Destination: Console

Module: DFHLDLD1

XMEOUT Parameters: *applid, svc*

DFHLD0204 *applid* **Bad Loader PDB for module** *modname* **recovered from the** *{Local | Global}* **catalog. Corruption suspected.**

Explanation: The loader definition record, PDB, for module *modname* has been read from either the local (DFHLCD) or the global (DFHGCD) catalog during startup and has been found to contain invalid data.

System Action: System initialization terminates with a system dump, unless the dump is specifically suppressed. If the system dump is suppressed, the module definition is ignored.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Ensure the specified catalog data set has not been corrupted and is available to the CICS job.

Destination: Console

Modules: DFHLDDMI, DFHLDLD

XMEOUT Parameters: *applid, modname, {1=Local, 2=Global}*

DFHLGxxxx messages

DFHLG0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If you cannot continue without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLGDM, DFHLGGL, DFHLGLD, DFHLGJN, DFHLGST DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHLG0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System Action: An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot continue without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLGDM, DFHLGGL, DFHLGLD, DFHLGJN, DFHLGST

XMEOUT Parameters: *applid, X'code', modname*

DFHLG0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently, but you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHLGLB

XMEOUT Parameters: *applid, X'offset', modname*

DFHLG0101I *applid* **Log manager domain initialization has started.**

Explanation: This is an informational message indicating the start of log manager domain initialization.

System Action: Initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHLGDM

XMEOUT Parameter: *applid*

DFHLG0102I *applid* **Log manager domain initialization has ended.**

Explanation: This is an informational message indicating the end of log manager domain initialization.

System Action: Initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHLGDM

XMEOUT Parameter: *applid*

DFHLG0103I *applid* **System log (***journalname***) initialization has started.**

Explanation: This is an informational message indicating the start of system log initialization for the specified journal (either DFHLOG or DFHSHUNT).

System Action: Initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHL2SLN

XMEOUT Parameters: *applid, journalname*

DFHLG0104I *applid* **System log (***journalname***) initialization has ended. Log stream** *logstreamname* **is connected to structure** *structurename***.**

Explanation: This is an informational message indicating the end of system log initialization for the specified journal (either DFHLOG or DFHSHUNT).

The name shown as LOGSTREAMNAME(logstreamname) in the message is the name of the log stream associated with this journal. A value of '**********' implies that it is a dummy log.

The name shown as STRUCTNAME(structname) in the message is the structure name of the log stream associated with this journal. A value of '**********' implies that it has no related structure, which means that either the log stream is a dummy log or of type DASDONLY(YES).

System Action: Initialization continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHL2SLN

XMEOUT Parameters: *applid, journalname, logstreamname, structurename*

DFHLG0191 *subsys-name {CONVERTER | ALLOCATION}* **VERIFICATION HAS FAILED BECAUSE OF A** *{SEVERE ERROR | SYNTAX ERROR | MUTUAL EXCLUSION FAILURE}*

Explanation: A parse error was encountered while CICS was verifying the SUBSYS options of the application's JCL DD statement.

The message includes the following inserts:

- *subsys_name* - the installation defined subsystem name for the system logger.
- *CONVERTER* - the error was detected during MVS JCL conversion.
- *ALLOCATION* - the error was detected during MVS allocation processing.
- *SEVERE ERROR* - the parser encountered a severe error during its processing.
- *SYNTAX ERROR* - the statement failed the syntax check. MVS message ASA104I is issued specifying the keyword in error and acceptable keywords.
- *MUTUAL EXCLUSION FAILURE* - the parser encountered mutually exclusive keywords. MVS message ASA103I is issued specifying the keywords in error.

System Action: If the error was detected during MVS JCL conversion, the job is not executed because of the JCL error.

If the error was detected during MVS allocation processing, the allocation request is rejected.

User Response: Correct the SUBSYS= specification and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHLGIPI, DFHLGIMS

DFHLG0192 ERROR IN MVS LOGGER MACRO *macro_name* **FOR REQUEST** *request_type***. MVS LOGGER CODES X'**_X'return-code'_ **X'**_X'reason-code'_

Explanation: The CICS subsystem exit made a call to the MVS logger to access a log. This message gives the return code and reason code for that operation. Usually this message is issued only when the return code indicates an error in the MVS logger macro.

The message includes the following inserts:

- *macro_name* MVS logger macro
- *request_type* MVS logger macro REQUEST parameter
- *return-code* MVS logger macro return code
- *reason-code* MVS logger macro reason code.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: The subsystem exit terminates the logstream read, and passes a return code back to the caller.

This message is followed by message DFHLG0193 which specifies the logstream. In some cases a dump is also produced.

User Response: Use the MVS logger return and reason codes to diagnose the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHLGSSI, DFHLGIGT

DFHLG0193 *log-stream-name*

Explanation: This message gives the logstream referred to in the preceding DFHLG0192 message.

System Action: See message DFHLG0192.

User Response: See message DFHLG0192.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHLGSSI, DFHLGIGT

DFHLG0194 ERROR DETECTED BY CICS SUBSYSTEM.
error-description X'data1' X'data2' X'data3'

Explanation: The CICS subsystem exit detected an unexpected error. The error is described by the *error-description* and optional hex data fields.

In some cases a dump is also produced.

System Action: The subsystem exit terminates the logstream read, and passes a return code back to the caller. If DELETE was specified as on option on the SUBSYS keyword then it will be ignored.

User Response: Use the *error-description* to identify the cause of the error. A possible cause is an invalid logstream or invalid entries within a valid logstream; the CICS logger and DFHJUP work only with CICS logstreams containing CICS records for the appropriate release.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHLGSSI, DFHLGIGT

DFHLG0301 *date time applid* **An error has been detected for log stream** *stream* **for journal name** *journalname***. The journal status has been set to FAILED.**

Explanation: An error has been detected for log stream *stream* which is used by journal *journalname*.

System Action: An exception entry is made in the trace table.

CICS marks the journal as failed and ends the associated connection with the log stream. Applications which attempt to use the journal receive an IOERROR response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

See the associated messages issued by CICS or the MVS system logger for more information and for guidance about appropriate recovery actions.

If journal *journalname* is not crucial to the running of your CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of the journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces.

If you cannot continue without the full use of journal *journalname* you should bring CICS down in a controlled shutdown.

Destination: CSMT

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, stream, journalname*

DFHLG0302 *date time applid* **Journal name** *journalname* **has been installed. Journal type:** *{MVS | SMF | DUMMY}stream***.**

Explanation: Journal name *journalname* has been installed and is available for use. The type of journal, and for type MVS only, the log stream name *stream* are also shown.

System Action: An event entry is made in the trace table.

User Response: None

Destination: CRDI

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, journalname, {1=MVS , 2=SMF, 3=DUMMY}, stream*

DFHLG0303 *date time applid* **An error has been detected while connecting to log stream** *stream* **for journal name** *journalname***. The journal status has been set to FAILED.**

Explanation: An error has been detected connecting to log stream *stream* which is used by journal *journalname*.

System Action: An exception entry is made in the trace table.

CICS marks the journal as failed. Applications which attempt to use the journal receive an IOERROR response and may terminate abnormally.

User Response: Notify the system programmer.

See the associated messages issued by CICS or the MVS system logger for more information and for guidance about appropriate recovery actions.

If CICS is still running, it is necessary to decide whether to terminate CICS.

If journal *journalname* is not crucial to the running of your CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of the journal can be restored by issuing the CEMT or EXEC CICS command SET JOURNALNAME(*journalname*) ACTION(RESET).

If you cannot continue without the full use of journal *journalname* you should bring CICS down in a controlled shutdown.

Destination: CSMT

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, stream, journalname*

DFHLG0304 *date time applid* **An error has been detected writing the catalog entry for journal name** *journalname***.**

Explanation: An error has been detected writing the global catalog entry for journal *journalname*.

System Action: An exception entry is made in the trace table.

The new journal entry is used for this CICS run but does not persist over a CICS restart

User Response: Notify the system programmer.

See the associated CICS messages for more information, and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal *journalname*, you should bring CICS down in a controlled shutdown.

Destination: CSMT

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, journalname*

DFHLG0305 *date time applid* **An error has been detected deleting the catalog entry for journal name** *journalname***.**

Explanation: An error has been detected deleting the global catalog entry for journal *journalname*.

System Action: An exception entry is made in the trace table.

The old journal entry could not be discarded and may reappear after a CICS restart

User Response: Notify the system programmer.

See the associated CICS messages for more information and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal *journalname*, you should bring CICS down in a controlled shutdown.

Destination: CSMT

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, journalname*

DFHLG0306 *date time applid* **Journal name** *journalname* **has been discarded.**

Explanation: Journal name *journalname* has been discarded and is no longer available for use.

Future attempts to use the journal name will cause it to be reinstalled using the journal model definitions active at that time.

System Action: An event entry is made in the trace table.

User Response: None.

Destination: CRDI

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, journalname*

DFHLG0401 *date time applid* **Journal model resource** *journalmodel* **has been installed.**

Explanation: The journal model resource entry *journalmodel* has been installed and is available for use.

System Action: An event entry is made in the trace table.

User Response: None.

Destination: CRDI

Module: DFHLGLD

XMEOUT Parameters: *date, time, applid, journalmodel*

DFHLG0402 *date time applid* **An error has been detected writing the catalog entry for journal model** *journalmodel***.**

Explanation: An error has been detected writing the global catalog entry for journal model *journalmodel*.

System Action: An exception entry is made in the trace table.

The new journal model entry is used for this CICS run but does not persist over a CICS restart

User Response: Notify the system programmer.

See the associated CICS messages for more information and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal model *journalmodel* you should bring CICS down in a controlled shutdown.

Destination: CSMT

Module: DFHLGLD

XMEOUT Parameters: *date, time, applid, journalmodel*

DFHLG0403 *date time applid* **An error has been detected deleting the catalog entry for journal model** *journalmodel***.**

Explanation: The deletion of the global catalog entry for journal model *journalmodel* has failed.

System Action: An exception entry is made in the trace table.

The old journal model entry could not be deleted and may reappear after a CICS restart

User Response: Notify the system programmer.

See the associated CICS messages for more information and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal model *journalmodel* you should bring CICS down in controlled shutdown.

Destination: CSMT

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, journalmodel*

DFHLG0404 *date time applid* **Journal model resource** *journalmodel1* **has been replaced by** *journalmodel2***.**

Explanation: A journal model resource entry has been replaced because journal model *journalmodel2* has the same journal name template as *journalmodel1*.

System Action: An event entry is made in the trace table.

User Response: None.

Destination: CRDI

Module: DFHLGLD

XMEOUT Parameters: *date, time, applid, journalmodel1, journalmodel2*

DFHLG0405 *date time applid* **Journal model** *journalmodel* **has been discarded.**

Explanation: Journal model *journalmodel* has been discarded and is no longer available for use.

System Action: An event entry is made in the trace table.

User Response: None.

Destination: CRDI

Module: DFHLGLD

XMEOUT Parameters: *date, time, applid, journalmodel*

DFHLG0501 *date time applid* **Log stream definition for** *stream* **suppressed by XLGSTRM user exit.**

Explanation: MVS log stream *stream* does not exist but could not be defined because the XLGSTRM user exit suppressed automatic installation.

System Action: An exception entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications attempting to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Define the log stream directly to the MVS system logger.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CRDI

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream*

DFHLG0502 *date time applid* **Log stream** *stream* **defined to MVS using model stream** *model***.**

Explanation: MVS log stream *stream* did not exist and has been successfully defined to the MVS system logger using the attributes of model log stream *model*.

System Action: An event entry is made in the trace table.

CICS connects and uses the newly defined log stream.

User Response: None.

Destination: CRDI

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

DFHLG0503 *date time applid* **Log stream** *stream***, using model stream** *model***, not defined to MVS for reason** *X'rc'X'reason'***.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* for reason X'*rc*'/X'*reason*'.

X'*rc*' is the return code from the IXGINVNT macro and X'*reason*' is the reason code returned by the IXGINVNT macro. These are described in the *OS/390 MVS Programming: Assembler Services Reference* and in the IXGCON macro.

System Action: An event entry is made in the trace table. The trace entry contains additional diagnostic information from the system logger answer area (IXGANSAA).

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model, X'rc', X'reason'*

DFHLG0504 *date time applid* **Log stream** *stream* **using model stream** *model* **not defined to MVS due to insufficient authority.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of insufficient authority.

To define a log stream CICS requires the following authority:

- ALTER authority to *stream* in the LOGSTRM class,
- UPDATE authority to *model* in the LOGSTRM class,
- UPDATE authority to resource IXLSTR.structure_name in the FACILITY class if the XLGSTRM exit supplies a structure name.

System Action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

DFHLG0505 *date time applid* **Log stream** *stream* **using model stream** *model* **not defined to MVS because of an invalid HLQ parameter.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of an invalid high level qualifier (HLQ) parameter.

The HLQ parameter specifies the high level qualifier to be used for log stream data sets.

System Action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Correct the HLQ parameter in the *model* logger definition or the XLGSTRM exit, or both.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

DFHLG0506 *date time applid* **Log stream** *stream* **using model stream** *model* **not defined to MVS because of insufficient LOGR couple data set space.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of insufficient space in the MVS system logger's LOGR couple data set.

System Action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Redefine the MVS system logger's LOGR couple data set to contain space for this log stream and for future requirements.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

DFHLG0507 *date time applid* **Log stream** *stream* **using model stream** *model* **not defined to MVS. Maximum number of streams reached.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because the maximum number of log streams for the coupling facility structure has been reached.

The maximum number of streams per structure is specified in the LOGSNUM parameter when defining a structure to the MVS system logger.

System Action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Change the STRUCTNAME parameter in the *model* logger definition or the XLGSTRM exit to point to a structure that has room for more streams or delete unneeded streams from the current structure.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

DFHLG0508 *date time applid* **Log stream** *stream* **not defined to MVS because model stream** *model* **does not exist.**

Explanation: MVS log stream *stream* could not be defined to the MVS system logger because the model log stream *model* does not exist.

System Action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU). or you can define the *model* log stream to the MVS logger if there are likely to be more log streams to be defined using the same model.

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

DFHLG0509 *date time applid* **Log stream** *stream* **using model stream** *model* **not defined to MVS because of an invalid structure name.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of an invalid coupling facility structure name.

System Action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Correct the STRUCTNAME parameter in the *model* logger definition or the XLGSTRM exit, or both.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

DFHLG0510 *date time applid* **Log stream** *stream* **using model stream** *model* **not defined to MVS because of an invalid stream name.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because *stream* is an invalid stream name.

System Action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Correct the JOURNALMODEL definition used to create the stream name and DISCARD any JOURNAL definitions which refer to the stream name or, if the stream is a VSAM forward recovery log stream, correct the stream name in the VSAM data set's catalog entry.

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

DFHLG0511 *date time applid* **Log stream** *stream* **using model stream** *model* **not defined to MVS because STRUCTNAME parameter missing in model.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because the model log stream definition does not contain the required STRUCTNAME parameter.

System Action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Redefine the model log stream in the MVS system logger's LOGR couple data set using the IXCMIAPU utility ensuring the model stream definition contains the **STRUCTNAME(structure_name)** parameter to indicate which coupling facility structure is to be used for the log stream. Alternatively you can use the CICS exit, XLGSTRM, to supply the structure name to the MVS system logger.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

DFHLG0512 *date time applid* **Log stream** *stream* **cannot be used as both a system log and a general log.**

Explanation: MVS log stream *stream* cannot be used as both a system log and as a general log.

It is likely that a JOURNALMODEL resource definition has resulted in the same log stream name for a user journal as for the system log journal names (DFHLOG and DFHSHUNT).

Alternatively a system log stream name may have been specified in the ICF catalog as the forward recovery log stream for a VSAM data set.

System Action: CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Review and correct your installed Journalmodels to ensure that the the same log stream is not used for system logs (DFHLOG and DFHSHUNT) as for other journals. Use the CEMT DISCARD JOURNALNAME() command to remove any journals that have been installed with the incorrect stream name.

Note: If you change the Journalmodel definitions which apply to DFHLOG and DFHSHUNT, you will need to perform an initial start.

If the ICF catalog specifies the wrong stream name, use the IDCAMS ALTER command to correct it.

Destination: CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream*

DFHLG0513 *date time applid* **Log stream** *stream* **has failed and new connections cannot be accepted.**

Explanation: MVS log stream *stream* has been marked as failed by a previous error. The stream cannot be used again until all current users of the stream have disconnected and the problem that caused the failure has been resolved.

System Action: CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

CICS continues with attempting to quiesce usage of the log stream and will disconnect from the log stream.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

CICS should automatically quiesce usage of the log stream but if CEMT INQUIRE STREAM(*stream*) shows continued use of the log stream, you should investigate whether there are any long running transactions that are preventing the closure of files which use the log stream as a forward recovery log or autojournal.

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing the command SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream*

DFHLG0514 *date time applid* **Log stream** *stream* **is in use by another CICS system.**

Explanation: MVS log stream *stream* is in use by another CICS region.

General log streams can be shared between CICS regions but each CICS region must have unique system log streams.

One of the following may have occurred:

- You are running two copies of the CICS region (same APPLID)
- A JOURNALMODEL resource definition has resulted in the same log stream name for a system log as for the system log journal names (DFHLOG and DFHSHUNT) for another CICS region.
- A JOURNALMODEL resource definition has resulted in the same log stream name for a user journal as for the system log journal names (DFHLOG and DFHSHUNT).

- A system log stream name may have been specified in the ICF catalog as the forward recovery log stream for a VSAM data set.

System Action: CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Use the MVS console command DISPLAY GRS,RES=(DFHSTRM,*stream*) to find which other CICS region or regions are using the log stream,

Review and correct your installed Journalmodels to ensure that the the same log stream is not used for system logs (DFHLOG and DFHSHUNT as for other journals. Use the command CEMT DISCARD JOURNALNAME() to remove any journals that have been installed with the incorrect stream name.

Note: If you change the Journalmodel definitions which apply to DFHLOG and DFHSHUNT, you will need to perform an initial start.

If the ICF catalog specifies the wrong stream name, use the IDCAMS ALTER command to correct it.

Destination: Console and Transient Data Queue CSMT

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream*

DFHLG0730 *applid* **A severe error (code** *X'code'***) has occurred while opening the system log (***journalname***). CICS will be terminated.**

Explanation: The CICS log manager has detected a severe error while opening the primary or secondary system log. The nature of the error is indicated by a previous CICS message. The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: An exception entry is made in the trace table. A system dump is taken and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Using the previous message as a guide, correct the problem and restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2SLN

XMEOUT Parameters: *applid, X'code', journalname*

DFHLG0731 *applid* **A failure has occurred while opening the system log (***journalname***). CICS will be terminated.**

Explanation: The CICS log manager has detected a failure while opening the primary or secondary system log. The nature of the failure is indicated by a previous CICS message.

System Action: An exception entry is made in the trace table, and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

User Response: Using the previous message as a guide, correct the problem and restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

If you cannot resolve the problem, or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2SLN

XMEOUT Parameters: *applid, journalname*

DFHLG0733 *applid* **A log stream type of SMF has been requested for the system log (***journalname***). This is not allowed.**

Explanation: A log stream type of SMF has been specified on the JOURNALMODEL definition for either the primary or secondary system log. JOURNALMODEL definitions for the system log must have a log stream type of either MVS or DUMMY.

System Action: An exception entry is made in the trace table and CICS is terminated. CICS can not operate with an SMF system log.

User Response: Change the JOURNALMODEL definition so that a log stream type of either MVS or DUMMY is specified.

Destination: Console

Module: DFHL2SLN

XMEOUT Parameters: *applid, journalname*

DFHLG0734 *applid* **A severe error (code** *X'code'***) has occurred while accessing the CICS system log. CICS will be terminated.**

Explanation: The CICS log manager has detected a severe error while writing to or reading from the primary or secondary system log. The nature of the error is indicated by a previous CICS message. The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: An exception entry is made in the trace table . A system dump is taken and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Using the previous message as a guide, correct the problem and restart CICS, specifying the SIT START parameter as AUTO.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2SLE

XMEOUT Parameters: *applid, X'code'*

DFHLG0735 *applid* **A failure has occurred while** *{writing to | reading from}* **the system log (***journalname***). Access to the system log has been lost. CICS will be terminated.**

Explanation: The CICS log manager has detected a failure while writing to or reading from the system log. The nature of the failure is indicated by a previous CICS message, and implies that data on the log has not been lost.

System Action: An exception entry is made in the trace table,

and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

User Response: Using the previous message as a guide, correct the problem and restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

If you cannot resolve the problem, or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2SLE

XMEOUT Parameters: *applid, {1=writing to, 2=reading from}, journalname*

DFHLG0736 *applid* **A failure has occurred while reading from the system log (***journalname***). The requested data could not be found. CICS will be quiesced allowing some tasks to complete. Further work requires an initial start.**

Explanation: The CICS log manager is unable to locate previously hardened data when reading from the system log during the dynamic backout of a task. This implies that data on the system log has been lost. The integrity of the system log is therefore suspect.

System Action: No more blocks are written to the system log. CICS is quiesced via a normal shutdown to let as many tasks complete as possible. Any tasks that enter dynamic backout from this point onwards are suspended. If the next CICS start is not an initial start, CICS will terminate before allowing user processing to begin because system log data may have been lost.

User Response: Transactions that failed to complete before shutdown will need to be recovered by other means before starting CICS again.

You may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2SLE

XMEOUT Parameters: *applid, journalname*

DFHLG0737 *applid* **A failure has occurred while writing to the system log (***journalname***). A log record was longer than the maximum block size for the MVS log stream. CICS will be terminated.**

Explanation: The CICS log manager has detected a failure while writing to the system log. An attempt was made to write a log record longer than the maximum block size allowed for the MVS log stream. The size mismatch is indicated by a previous DFHLG0742 message written to the CSMT TD destination.

System Action: An exception entry is made in the trace table, and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

User Response: Using the DFHLG0742 message as a guide, define a larger block size for the MVS log stream structure that the system log will use. Then restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

Destination: Console

Module: DFHL2SLE

XMEOUT Parameters: *applid, journalname*

DFHLG0738 *applid* **A failure has occurred while reading the system log (***journalname***). The requested data could not be found. CICS will be terminated. Further work requires an initial start.**

Explanation: The CICS log manager is unable to locate previously hardened data when reading from the system log during a restart of CICS. This implies that data on the system log has been lost. The integrity of the system log is therefore suspect.

System Action: No blocks are written to the system log. CICS restart is abandoned. If the next CICS start is not an initial start, CICS will terminate before allowing user processing to begin because system log data may have been lost.

User Response: Incomplete transactions will need to be recovered by other means before starting CICS again.

You may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2SLE

XMEOUT Parameters: *applid, journalname*

DFHLG0739 *applid* **An attempt to start transaction CSQC to perform a normal shutdown of CICS has failed. Perform a normal shutdown of CICS manually.**

Explanation: The CICS log manager attempted to start transaction CSQC to quiesce CICS via a normal shutdown but the attempt was unsuccessful. CICS was being quiesced because the integrity of the system log is suspect.

System Action: An exception entry is made in the trace table, and a system dump is taken. CICS continues processing but any tasks that enter dynamic backout are suspended indefinitely and remain inflight.

User Response: Issue CEMT PERFORM SHUTDOWN to quiesce CICS via a normal shutdown. This lets as many transactions complete as possible. Refer to the explanations for messages DFHLG0736 and DFHLG0740.

Also attempt to establish why transaction CSQC failed to start, and correct the problem. If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2SLE

XMEOUT Parameter: *applid*

DFHLG0740 *applid* **While writing data to the system log (***journalname***), a lost data warning was received. CICS will be quiesced without logging, allowing tasks to complete. Further work requires an initial start.**

Explanation: The CICS log manager received a lost data warning when writing to the system log. This means that one or more blocks of previously hardened data have been lost from the system log. The integrity of the system log is therefore suspect.

System Action: No more blocks are written to the system log. CICS is quiesced via a normal shutdown to let as many tasks complete as possible. Any tasks that enter dynamic backout from this point onwards are suspended. If the next CICS start is not an initial start CICS will terminate before allowing user processing to begin because system log data may have been lost.

User Response: Transactions that failed to complete before shutdown will need to be recovered by other means before starting CICS again.

You may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2SLE

XMEOUT Parameters: *applid, journalname*

DFHLG0741 *applid* **A failure to read data from the system log during dynamic backout has caused task** *tasknum* **to be suspended indefinitely. Tranid** *tranid***, termid** *termid***.**

Explanation: Task *tasknum* with tranid *tranid* running at termid *termid* has been suspended indefinitely. Data required during dynamic backout could not be located on the system log. This message is preceded by message DFHLG0736.

System Action: The task is suspended. CICS in the process of quiescing via a normal shutdown.

User Response: Refer to the message explanation for message DFHLG0736.

Destination: Console

Module: DFHL2SLE

XMEOUT Parameters: *applid, tasknum, tranid, termid*

DFHLG0742 *date time applid* **Log record too long for block. Record size** *rsize* **bytes. Block size** *bsize* **bytes.** *{MVS log stream | SMF journal name}***.**

Explanation: The CICS log manager has detected an attempt to write a log record to an MVS logger log stream or SMF journal where the log record is too long to fit in the maximum block size allowed.

The message indicates the size of the log record and the maximum size of a block for that log stream. The size of the log record includes a CICS record header (up to 200 bytes for system log, 56 bytes otherwise) and any user prefix data. There must also be enough room in the block for a CICS block header (158 bytes for SMF, 52 bytes for system log, 40 bytes otherwise).

System Action: An exception entry is made in the trace table. If the log stream is part of the CICS system log and the log record was not written by a user application or exit program then CICS is terminated. Otherwise an exception is passed back to the caller.

User Response: First establish whether a log record of the indicated size is expected. If the log record was written by a user application or exit program using EXEC CICS WRITE JOURNALNAME or DFHJCJCX WRITE_JOURNAL_DATA, the program could be in error.

If the log record is correct, you should increase the block size for an MVS logger log stream by defining a larger block size for the structure that the log stream will use. For an SMF journal, the block size is fixed at 32756 bytes and cannot be changed.

Destination: CSMT

Modules: DFHL2LB, DFHL2WF, DFHL2CHM

XMEOUT Parameters: *date, time, applid, rsize, bsize, {1=MVS log stream, 2=SMF journalname}*

DFHLG0743 *date time applid* **Tail of log stream** *lsn* **deleted at block id** *X'blockid'***.**

Explanation: The CICS log manager has trimmed the tail of MVS logger log stream *lsn*. All records that occurred before (older) the specified MVS logger block id *blockid* have been deleted.

This occurs during activity keypoint processing when CICS decides it no longer needs records beyond a certain age on a CICS system log log stream.

System Action: CICS continues processing.

User Response: None.

Destination: CSMT

Module: DFHL2CHE

XMEOUT Parameters: *date, time, applid, lsn, X'blockid'*

DFHLG0744 *date time applid* **All records in log stream** *lsn* **have been deleted.**

Explanation: The CICS log manager has deleted all records from MVS logger log stream *lsn*.

This occurs either at CICS startup when the start type is initial, or during activity keypoint processing, when CICS decides it no longer needs any of the records currently on a CICS system log log stream.

System Action: CICS continues processing.

User Response: None.

Destination: CSMT

Modules: DFHL2CC, DFHL2CHE

XMEOUT Parameters: *date, time, applid, lsn*

DFHLG0745I *applid* **System log full scan has started.**

Explanation: The CICS log manager has started the full scan of the system log during startup.

This is a progress message.

System Action: CICS continues processing.

User Response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Destination: Console

Module: DFHL2CHA

XMEOUT Parameter: *applid*

DFHLG0746 *date time applid* **System log scan trim record found. Primary logstream block id** *X'pblock'***, secondary logstream block id** *X'sblock'***.**

Explanation: The CICS log manager has encountered a trim record during the scan of the system log stream during startup. The primary logstream trim record block id is *pblock*, the secondary logstream trim record block id is *sblock*.

This is an informational message.

System Action: CICS continues processing.

User Response: None.

Destination: CSMT

Module: DFHL2CHN

XMEOUT Parameters: *date, time, applid, X'pblock', X'sblock'*

DFHLG0747I *applid* **System log scan continuing,** *count* **records processed.**

Explanation: The CICS log manager has processed *count* records during the scan of the system logstream at a CICS restart.

The message is produced every 'n' records - where 'n' is half of AKPFREQ or 500, which ever is the greatest.

This is a progress message.

System Action: CICS continues processing.

User Response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Destination: Console

Modules: DFHL2CHN DFHL2CH4

XMEOUT Parameters: *applid, count*

DFHLG0748I *applid* **System log selective scan has started.**

Explanation: The CICS log manager has started the selective scan of the system log during startup.

This is a progress message.

System Action: CICS continues processing.

User Response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Destination: Console

Module: DFHL2CHH

XMEOUT Parameter: *applid*

DFHLG0749I *applid* **System log scan has completed.**

Explanation: The CICS log manager has finished the scan of the system log stream during startup.

This is a progress message.

System Action: CICS continues processing.

User Response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Destination: Console

Module: DFHL2CHL

XMEOUT Parameter: *applid*

DFHLG0750 *applid* **Transaction CSQC has failed to perform a normal shutdown of CICS. Perform a normal shutdown of CICS manually.**

Explanation: Transaction CSQC has failed to quiesce CICS via a normal shutdown because an error was detected. CICS was being quiesced because the integrity of the system log is suspect.

System Action: A system dump is taken. CICS continues processing but any tasks that enter dynamic backout are suspended indefinitely and remain inflight.

User Response: Issue CEMT PERFORM SHUTDOWN to quiesce CICS via a normal shutdown. This lets as many transactions complete as possible. Refer to the explanations for messages DFHLG0736 and DFHLG0740.

Attempt to establish why transaction CSQC failed to quiesce CICS, and correct the problem. If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHLGQC

XMEOUT Parameter: *applid*

DFHLG0770 *applid* **A severe error has occurred while writing to the SMF log, which was accessed via journal** *jname***. SMF response** *X'resp'***.**

Explanation: The CICS log manager has detected a severe error while writing to the SMF log. This is accessed via journal *jname*. SMF returns the response byte X'*resp*'.

System Action: An exception entry is made in the trace table, a system dump is taken and an exception is returned to the caller.

User Response: Using the SMF response byte, diagnose and correct the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2LB

XMEOUT Parameters: *applid, jname, X'resp'*

DFHLG0771 *date time applid* **A temporary error condition occurred during MVS logger operation** *{IXGCONN | IXGWRITE | IXGBRWSE | IXGDELET | IXGQUERY }{CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE}* **for log stream** *lsn***. MVS logger codes:** *X'ret'***,** *X'rsn'***.**

Explanation: The CICS log manager made a call to the MVS logger to access a log, which returned a temporary error condition. The MVS logger operation that returned the error condition is identified in the message. The return and reason codes shown are those returned by the MVS logger.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: The log manager automatically retries the operation every three seconds while the temporary error condition persists. This message is issued every ten retries following the first/previous issue.

User Response: None. This is a temporary condition.

Destination: CSMT

Modules: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *date, time, applid, {1=IXGCONN , 2=IXGWRITE, 3=IXGBRWSE , 4=IXGDELET , 5=IXGQUERY }, {1=CONNECT, 2=DISCONNECT, 3= , 4=START, 5=READCURSOR, 6=READBLOCK, 7=END, 8=ALL, 9=RANGE}, lsn, X'ret', X'rsn'*

DFHLG0772 *applid* **An error has occurred during MVS logger operation** *{IXGCONN | IXGWRITE | IXGBRWSE | IXGDELET }{CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE}* **for log stream** *lsn***. MVS logger codes:** *X'ret'***,** *X'rsn'***. Log stream attributes: SYSTEMLOG(***{*YES | NO*}***), DASDONLY(***{*YES | NO*}***), STRUCTNAME(***structname***), RETPD(***X'retpd'***), AUTODELETE(***{*YES | NO*}***).**

Explanation: The CICS log manager made a call to the MVS logger to access a log, which returned an error condition. The

MVS logger operation that returned the error condition is identified in the message, and the return and reason codes shown are those returned by the MVS logger. This is followed by some of the attributes which define the log stream. A structure name of "**********" indicates that no structure is being used by this log stream.

If the error occurred during a log stream connection, these attributes may not have been updated to the correct values for the log stream and should be ignored. These attributes are only valid following a successful connection.

This message may be followed by other CICS messages, especially if the log stream is part of the CICS system log.

This situation can occur when CICS calls the MVS logger using an obsolete log stream connection token, when the MVS logger has been restarted following either a crash or a user request. A restart of the MVS logger implicitly disconnects all connections to it.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table, and a system dump is taken.

The log manager returns an exception condition.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If the MVS logger was recently restarted, AUTO start CICS. Otherwise use the MVS logger return and reason codes to diagnose the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *applid, {1=IXGCONN , 2=IXGWRITE, 3=IXGBRWSE , 4=IXGDELET }, {1=CONNECT, 2=DISCONNECT, 3= , 4=START, 5=READCURSOR, 6=READBLOCK, 7=END, 8=ALL, 9=RANGE}, lsn, X'ret', X'rsn', {1=YES, 2=NO}, {1=YES, 2=NO}, structname, X'retpd', {1=YES, 2=NO}*

DFHLG0773 *applid* **A severe error (code** *X'code'***) has occurred while accessing (***{IXGCONN | IXGWRITE | IXGBRWSE | IXGDELET }{CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE}***) the log stream** *lsn***.**

Explanation: The CICS log manager has detected a severe error while attempting to access a log. The code X'*code*' is the exception trace point ID which uniquely identifies where the error was detected. This message is preceded by DFHLG0001, and usually followed by other messages.

System Action: An exception entry is made in the trace table. A system dump will have been taken by DFHLG0001. The log manager returns a disaster condition to the caller. If the log is the CICS system log, a forward recovery log or autojournal log, another message is issued. Otherwise a disaster condition is returned to the application program.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Refer to other messages following this message for more information and guidance.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *applid, X'code', {1=IXGCONN , 2=IXGWRITE, 3=IXGBRWSE , 4=IXGDELET }, {1=CONNECT, 2=DISCONNECT, 3= , 4=START, 5=READCURSOR, 6=READBLOCK, 7=END, 8=ALL, 9=RANGE}, lsn*

DFHLG0774 *applid* **The MVS logger has returned an alert during operation** *{IXGCONN CONNECT | IXGWRITE }***for logstream** *lsn***. The log stream data set directory is full. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected a warning while attempting to access a log stream. The log stream's data set directory is full.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

CICS continues normal operation until the current data set of the log stream becomes full. When this happens message DFHLG0772 is issued.

User Response: You should delete data from the log stream tail before the current data set fills up. You may wish to take a copy of the data before deleting it. Alternatively you could use a new log stream, but this may be too disruptive.

Destination: Console

Modules: DFHL2HS2, DFHL2HSF

XMEOUT Parameters: *applid, {1=IXGCONN CONNECT, 2=IXGWRITE }, lsn, X'ret', X'rsn'*

DFHLG0775 *applid* **The MVS logger has returned an alert during operation** *{IXGCONN CONNECT | IXGWRITE }***for log stream** *lsn***. The log stream writer offload task is failing. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected a warning while attempting to access a log stream. The writer offload task for the log stream is failing.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

CICS can continue normal operation until the log stream's structure becomes full. When this happens DFHLG0772 is issued.

User Response: You should investigate and fix the failing log stream writer offload task, which is part of the MVS logger, before the log stream structure in the coupling facility fills up.

Destination: Console

Modules: DFHL2HS2, DFHL2HSF

XMEOUT Parameters: *applid, {1=IXGCONN CONNECT, 2=IXGWRITE }, lsn, X'ret', X'rsn'*

DFHLG0776 *applid* **The MVS logger has returned an alert during operation IXGWRITE for log stream** *lsn***. The log stream staging data set has failed. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected an alert while attempting to access a log stream. The log stream staging data set has failed.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

CICS continues normal operation, but the data written to the log stream structure is not being duplexed. Consequently, if the structure (or coupling facility) fails, the data cannot be recovered.

User Response: You are recommended to shutdown CICS as soon as possible. You should investigate and fix the failing log stream, without losing the data.

If the failing log stream is the CICS system log and CICS was shutdown immediately, you should emergency restart CICS in order to recover the inflight transactions.

Destination: Console

Module: DFHL2HSF

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0777 *applid* **A temporary error condition occurred during MVS logger operation** *{IXGCONN | IXGWRITE | IXGBRWSE | IXGDELET | IXGQUERY }{CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE}* **for log stream** *lsn***. MVS logger codes:** *X'ret'***,** *X'rsn'***.**

Explanation: The CICS log manager made a call to the MVS logger to access a log, which returned a temporary error condition. The MVS logger operation that returned the error condition is identified in the message. The return and reason codes shown are those returned by the MVS logger.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: The log manager automatically retries the operation every three seconds while the temporary error condition persists. This message is issued every ten retries following the first/previous issue.

User Response: None. This is a temporary condition.

Destination: Console

Modules: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *applid, {1=IXGCONN , 2=IXGWRITE, 3=IXGBRWSE , 4=IXGDELET , 5=IXGQUERY }, {1=CONNECT, 2=DISCONNECT, 3= , 4=START, 5=READCURSOR, 6=READBLOCK, 7=END, 8=ALL, 9=RANGE}, lsn, X'ret', X'rsn'*

DFHLG0778 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream** *lsn***. CICS does not have authority to perform this operation. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. CICS region userid has not been defined to the MVS logger with the authority to perform this operation.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User Response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Ensure that the CICS region userid has authority to access the log stream. For further guidance, see the *CICS RACF Security Guide*.

Destination: Console

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0779 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream** *lsn***. The log stream is being deleted by another program. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The log stream is being deleted by a request from another program and CICS cannot connect to it until this program has finished.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log stream is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User Response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

You will need to understand why another program was deleting the log stream. Either prevent such a conflict from occurring in the future, or allocate a different log stream to CICS.

Destination: Console

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0780 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream** *lsn***. Some data previously written to this log stream has been lost. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. Some of the data written to this log stream has been permanently lost.

This message is issued only if the log stream is a general log (not a CICS system log).

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller.

User Response: This log stream is a general log, therefore it must be deleted and redefined before it can be used by CICS again.

If the log stream is used as a forward recovery log, take a fresh backup of all data sets that use this log stream as soon as possible.

If the log stream is used as a user journal, the associated journal needs to be reenabled before it can be used again. To do this, issue the command

```
SET JOURNALNAME(...) RESET
```

Use the MVS logger return and reason codes to further diagnose the problem.

Destination: Console

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0781 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream** *lsn***. The maximum number of log stream connections that the MVS logger can support has been reached. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The maximum number of log stream connections that the MVS logger can support has been reached.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User Response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

It may be possible to retry this transaction later when other work has completed and the number of concurrent transactions has reduced. Otherwise you should investigate your usage of log streams within the sysplex with a view to reducing the number of log streams that need to be connected concurrently.

Destination: Console

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0782 *applid* **The MVS logger has returned an error during operation** *{IXGCONN CONNECT | IXGWRITE}* **for log stream** *lsn***. The MVS logger does not have authority to access the log stream structure. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger does not have the authority to access the log stream structure.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User Response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Ensure that the MVS logger address space has authority to access the log stream structure.

Destination: Console

Modules: DFHL2HS2, DFHL2HSF

XMEOUT Parameters: *applid, {1=IXGCONN CONNECT, 2=IXGWRITE}, lsn, X'ret', X'rsn'*

DFHLG0783 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for logstream** *lsn***. CICS attempted to connect to a log stream model, which is not possible. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. CICS attempted to connect to a log stream model, which is not possible.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User Response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

It is possible that a user journal definition has been defined with the wrong log stream name or that the log stream has been defined incorrectly to have the MODEL(YES) attribute. See the *CICS System Definition Guide* for guidance on defining user journals.

Destination: Console

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0784 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream** *lsn***. You cannot connect to a DASDONLY log stream that is already connected to another MVS image. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger rejected the connect request because the log stream is of type DASDONLY and is already connected to another MVS image.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User Response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Log streams of type DASDONLY were designed to work within the scope of a single MVS image only (although the MVS image itself can still be part of a sysplex).

The possibilities are;-

- The connect request is using the wrong log stream name.
- The current connection is using the wrong log stream name.
- The log stream was wrongly defined as being of type DASDONLY.

Destination: Console

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0785 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream** *lsn***. This is a DASDONLY log stream, which is not supported by the current system release level. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger rejected the connect request because the log stream is of type DASDONLY and is not supported by the current system release level.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User Response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Log streams of type DASDONLY are supported by system release level OS/390 2.4 or later.

The possibilities are;-

- CICS was running on the wrong system.
- The log stream was wrongly defined as being of type DASDONLY.
- The connect request is using the wrong log stream name.

Destination: Console

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0786 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream** *lsn***. The MVS logger failed to find a suitable coupling facility for the log stream structure. MVS logger codes:** *X'ret' X'rsn'***.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger failed to find a suitable coupling facility for the log stream structure.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System Action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User Response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

You should investigate your usage of the coupling facility resource within the sysplex.

Destination: Console

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0787 *applid* **CICS is attempting to read a blockid that does not belong to the current chain. Read blockid:** *X'blkid1'***; Chain History Point:** *X'blkid2'***.**

Explanation: The requested blockid is a lower relative number than the Chain History Point blockid, which means the CICS log manager has requested a block which was written earlier than the current logical start of the chain. This indicates an internal logic error within CICS.

The blockid of the requested block, and the blockid representing the Chain History Point for the log block chain in question, are shown in the message.

System Action: An exception entry is made in the trace table and a system dump is taken, and the CICS log manager returns an exception condition.

If the failure occurred while CICS was reading from the system log, message DFHLG0736 will follow, and a quiesce of CICS will be initiated.

User Response: The logstream should be printed before CICS is restarted, using the DFHJUP utility. For guidance in using this, refer to the *CICS Operations and Utilities Guide*.

Note: If the failure occurred for the CICS system log, print both the primary and secondary CICS system log logstreams before restarting CICS.

Refer to any messages issued subsequently for further guidance.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2BLC

XMEOUT Parameters: *applid, X'blkid1', X'blkid2'*

DFHLG0800 *applid* **The MVS logger failed to locate a blockid requested by the CICS log manager. Missing blockid:** *X'blkid1'***; Chain History Point:** *X'blkid2'***.**

Explanation: The MVS logger has returned an IxgRsnCodeNoBlock (00000804) Reason Code to the CICS log manager. This means that the log block requested by CICS could not be located by the MVS logger.

The blockid of the requested block, and the blockid representing the Chain History Point for the log block chain in question, are shown.

System Action: This is an informational message to provide the blockid of the missing block, and the blockid of the Chain History Point for the chain which should contain the requested block.

This message will have been preceded by message DFHLG0772. An exception trace was written and a system dump taken.

If the failure occurred while CICS was reading from the system log message DFHLG0736 will follow, and a quiesce of CICS will be initiated.

User Response: Compare the requested blockid with the Chain History Point blockid. If the requested blockid is equal to, or a higher relative number than, the Chain History Point, the blockid represents a log block which CICS is still validly interested in and which should be available from the MVS logger.

If the requested blockid is a lower relative number than the Chain History Point blockid, then the CICS log manager has requested a block which was written earlier than the current logical start of the chain. This indicates an internal logic error within CICS.

The logstream should be printed before CICS is restarted, using the DFHJUP utility. For guidance in using this, refer to the *CICS Operations and Utilities Guide*. Note if the failure occurred for the CICS system log then print both the primary and secondary CICS system log logstreams before restarting CICS.

Refer to any messages issued subsequently for further guidance.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHL2BLC

XMEOUT Parameters: *applid, X'blkid1', X'blkid2'*

DFHLMxxxx messages

DFHLM0001 *applid* **An abend (code** *abcode***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *abcode* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If there is an MVS code, look it up in the relevant MVS codes manual which is detailed in the book list in the front of this manual. Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLMDM, DFHLMDS, DFHLMIQ, DFHLMLM

XMEOUT Parameters: *applid, abcode, X'offset', modname*

DFHLM0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System Action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate.
If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLMDM, DFHLMDS, DFHLMIQ, DFHLMLM

XMEOUT Parameters: *applid, X'code', modname*

DFHLM0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message will be terminated and CICS will continue.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLMDM, DFHLMDS, DFHLMIQ, DFHLMLM

XMEOUT Parameters: *applid, X'offset', modname*

DFHLM0006 *applid* **Insufficient storage to satisfy Getmain (code** *X'code'***) in module** *modname***. MVS code** *mvscode***.**

Explanation: An MVS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.
The code X'*code*' is the exception trace point id which uniquely identifies the place where the error was detected.

This error has occurred above the 16M line.

The code *mvscode* is the MVS GETMAIN return code.

System Action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try decreasing the overall size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. If CICS is not already terminated, you will need to bring CICS down to do this. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Destination: Console

Modules: DFHLMDM, DFHLMDS, DFHLMIQ, DFHLMLM

XMEOUT Parameters: *applid, X'code', modname, mvscode*

DFHMCxxxx messages

DFHMC4000 CICS SYNAD EXIT TAKEN FOR *dscname***, INPUT MSG TRUNCATED.**

Explanation: This message is issued when the SYNAD exit is taken for an input queue. *dscname* represents the DSCNAME.

System Action: The DCB is closed and then opened again. The data is truncated to the specified block size and passed to the user.

User Response: Increase the block size or reduce the length of input.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: MVS data management determines the problem. This message is issued from the CICS-provided SYNAD routine generated in the terminal control table (TCT).

DFHMC4001I *date time applid* **Error purge delay inoperative,** *{transid | invalid req | unexpected}* **error**

Explanation: An error return code has been received from the interval control program (ICP) during initiation of the purge delay transaction, CSPQ.

The return code is caused by one of the following.

- A TRANSID error.
- An INVALD REQ error.
- An UNEXPECTED error.

System Action: Purge delay does not operate for this execution of CICS. A dump is taken.

User Response:

- For a TRANSID error, define transaction CSPQ.
- For an INVALD REQ, the ICP returned an INVALID REQUEST return code in response to the INITIATE request. Determine why this has occurred and correct the problem.
- For an UNEXPECTED error, the ICP returned an unrecognized error code in response to the INITIATE request. The error code can be found in the dump at label MCPINERR in program DFHMCP. Determine why this has occurred and correct the problem.

Destination: CSMT

Module: DFHMCP

XMEOUT Parameters: *date, time, applid, {1=transid, 2=invalid req, 3=unexpected}*

DFHMExxxx messages

DFHME0001 *applid* **An abend (code** *xxx/yyyy***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end or program check has occurred in module *modname*.

The code *xxx/yyyy* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code (for example AKEA) or a number referring to a CICS message (for example 1310 refers to CICS message DFHTS1310).

System Action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Since the abend affects the national language modules in the message (ME) domain, CICS is not automatically terminated. However, you may decide that your system should not be allowed to run without these modules, in which case you need to bring CICS down.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in this manual. Look up the CICS alphanumeric code in this manual. This code tells you, for example, whether the error was a program check, an abend, a runaway, or a recovery percolation.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM, DFHMEME, DFHMESR

DFHME0002 *applid* **An error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point id which uniquely identifies the place where the error was detected.

System Action: A bad return code is sent to the caller of the message (ME) domain. If the call is made by the domain manager, DFHDMDM, CICS is terminated by the domain manager, and a message is issued to this effect. However, if the message is issued by a message domain module, CICS is allowed to continue.

An exception entry is made in the trace table. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer as this message indicates a severe error in CICS code. Its impact may or may not be severe, depending on the circumstances. For example, if it only occurs once and CICS has not been terminated by the domain manager, you may decide to continue to run and bring CICS down at a convenient time. But if the message recurs or if you cannot run without the full use of all CICS messages, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM, DFHMEME, DFHMESR, DFHMEWT

DFHME0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System Action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. This situation may not be an error, or if it is an error it may not be critical, so CICS is not terminated immediately, even if you have specified **terminate** in the dump table. CICS will purge the runaway task if you have specified this in the SIT.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This error affects message generation, and the message (ME) domain does not automatically terminate CICS. You should decide whether the problem is serious enough to bring CICS down.

Since some transactions can use a lot of CPU time, this message may have been caused by a long-running transaction. Usually, CICS terminates a task which it considers to be a runaway task. It does this termination when the task exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds).

If you have declared ICVR=0, you have to terminate the task yourself if you consider that it has gone into a loop. Purge the task using the CEMT transaction.

If CICS has purged the task and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time in order to do this.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM, DFHMESR, DFHMEME

DFHME0006 *applid* **Insufficient storage to satisfy GETMAIN (code** *X'code'***) in module** *modname***. MVS code** *mvscode***.**

Explanation: An MVS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request. The code X'*code*' is the exception trace point ID which uniquely identifies the place in the code where the error occurred. The code *mvscode* is the MVS GETMAIN return code.

System Action: An exception entry is made in the trace table with code X'*code*'. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated immediately, even if you have specified **terminate** in the dump table. However, if this error indicates a general problem with storage, CICS could be abnormally terminated by the CICS storage manager. A message will be issued to this effect.

If the GETMAIN fails for DFHMEDM, a return code is sent to the domain manager, DFHDMDM, and CICS is terminated by the domain manager. A message is issued to this effect.

If the GETMAIN fails for the message domain DFHMEME, it could occur in one of four places. The code X'*code*' indicates which GETMAIN has failed as follows:

Code	***Meaning***
X'0340' -	During formatting of TD message
	The message is not issued.
X'0341' -	During build of message
	The message is not issued.
X'0342' -	While building user exit parameters
	The message is issued to original destination.
X'0343' -	During rebuild of message in English
	The rebuilt English message is not issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If CICS is terminated, look out for the relevant termination messages from the storage manager or the domain manager and the user response suggested.

Try decreasing the size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. You will need to bring CICS down to do this, if it has not already been terminated.

The problem may be a temporary one which rights itself if more storage becomes available. If CICS is still running, and you can manage without the full set of CICS messages, you may decide to continue and bring CICS down at a convenient time.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM, DFHMEME

DFHME0101 *applid* **An error (code** *X'code'***) occurred while writing message** *msgno* **to transient data destination** *dest*

Explanation: CICS has tried to write message *msgno* to the transient data destination *dest*. This has failed for one of the following reasons:

1. Destination *dest* has not been defined in the DCT.
2. Destination *dest* is currently disabled.
3. The transient data queue for destination *dest* is full.
4. An I/O error has occurred writing to destination *dest*.

The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: An exception entry is made in the trace table and CICS continues.

User Response: Check that *dest* is defined in your DCT.

If (1), add a new entry to the DCT for destination *dest*. Alternatively, if *msgno* is a DFHDB2xxx message, refer to the installed DB2CONN object. Change any of the msgqueue1, msgqueue2 and msgqueue3 parameters of the DB2CONN that specify destination *dest* so that they name a valid destination defined in the DCT.

If (2), use CEMT to reset the status of the queue to 'enabled'.

If (3), allocate more space for the queue, or reset the trigger level (if messages are being issued to a terminal or printer).

If (4), investigate and fix the cause of the I/O error.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0102 *applid* **An error (code** *X'code'***) has occurred in module** *modname* **while producing message** *msgno***.**

Explanation: A severe error has been detected and the message (ME) domain has been unable to produce message *msgno*. The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: A return code is sent to the caller of the message (ME) domain, but since the call was made by a message domain module, CICS is allowed to continue.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer as this indicates a severe error in CICS code. However, its impact may not be serious. For example, if the error only occurs once and you can

run without message *msgno*, you may continue to run and bring CICS down at a convenient time.

However, if the message recurs (and on each recurrence there is a different message number *msgno*), or if you cannot run without the full use of all CICS messages, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEBU, DFHMEIN, DFHMEWT, DFHMEME

DFHME0105 *applid* **Insufficient storage to load module** *modname***.**

Explanation: An MVS load has failed. The message language module *modname* could not be loaded as there was insufficient storage available. The language module is defined in the SIT for messages in a particular language, or is the default language module.

The default language is always used for messages sent to transient data queues and to consoles (providing that it is not a double-byte language in which case the message is sent to the console in English). If the default language module cannot be loaded, no messages can be delivered. Terminals can have messages in the default language or in another chosen language. If the chosen language module cannot be loaded, terminal messages use the default language instead.

System Action: An exception entry is made in the trace table and a dump is taken, unless you have specifically suppressed dumps in the dump table. As this may not be a critical problem, CICS is not terminated unless the default language module cannot be loaded, (even if you have specified **terminate** in the dump table).

If the missing module is not the default language module, CICS uses the default language for messages to terminals. If the default language module cannot be loaded, a return code is sent to the domain manager and CICS is terminated by the domain manager.

User Response: If the default language is in operation and this is acceptable, you need not bring CICS down. (Or you may bring CICS down at a more convenient time.)

If the default language is in operation and this is not acceptable, or if the default language module itself is missing, try decreasing the size limits of the DSAs or EDSAs. Or you could try increasing the size of the whole region, if it is not already at maximum size.

Alternatively, you may be able to get more storage space by removing unwanted language modules from storage. To do this, bring CICS down, remove the language codes you do not need from the SIT or respecify the list of language modules as an override parameter, and restart CICS.

Note: You should not remove the default language module from the SIT.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEDM

DFHME0106 *applid* **Module** *modname* **could not be loaded. REGISTER 1 =** *X'nnnnnnnn'* **and REGISTER 15 =** *X'nnnnnnnn'*

Explanation: The message language module *modname* could not be loaded. The reason that it could not be loaded is given by the contents of registers 1 and 15, which are returned by MVS.

System Action: If the missing module is not the default language module, CICS uses the default language for messages.

If the default language module is missing, a return code is sent to the domain manager and CICS is terminated.

An exception entry is made in the trace table and a dump is taken, unless you have specifically suppressed dumps in the dump table. As this may not be a critical problem, CICS is not terminated unless the default language module cannot be loaded (even if you have specified **terminate** in the dump table).

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If the default language is in operation and this is acceptable, you need not bring CICS down, or you may do so at some convenient time.

If the default language is in operation and this is not acceptable, or if the default language module itself is missing, consult the MVS messages and codes manual to check the return codes displayed in the message. The return codes indicate why the module could not be loaded.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEDM

DFHME0107 *applid* **Module** *modname* **cannot be found in the library.**

Explanation: The message load module *modname* was not found in the library defined in the JCL for the CICS job. This load module is a language module for messages. It is either a module which has been defined in the SIT for messages in a particular language, or it is the default language module.

The default language is always used for messages sent to transient data queues and to consoles (providing that it is not a double-byte language, in which case the message is sent to the console in English). If the default language module is missing no messages can be delivered.

Terminals can have messages in the default language or in another chosen language. If the chosen language module is missing, terminal messages use the default language instead.

System Action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this may not be a critical error, CICS is not terminated immediately, even if you have specified this in the dump table, unless the default language module is missing, (even if you have specified **terminate** in the dump table).

If the missing module is not the default language module, CICS uses the default language for messages. If the default language module is missing, a return code is sent to the domain manager and CICS is terminated.

User Response: This error could have occurred because of a problem in a library or in the SIT. If the default language is in operation and this is acceptable, you need not bring CICS down, or you may do so at some convenient time.

The missing module may have been placed in the wrong library, or the wrong or misspelled module name may have been used in the right library.

If the default language is in operation and this is NOT acceptable, link the missing module into the library defined in the JCL for your CICS job by correcting whichever of the problems has occurred. You have to bring CICS down to do this.

It is also possible that an incorrect or misspelled language code has been used in the SIT. In this case, you have to bring CICS down, reinstall your chosen language code as a system initialization parameter, and restart CICS.

If you no longer need this language module, you should remove it from the SIT at the next convenient opportunity.

If the default language module is missing, CICS is terminated by the domain manager. You need to discover whether the fault is in the library or the SIT and follow the appropriate procedure above.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEDM

DFHME0108 *applid* **Message** *msgno* **cannot be found in module** *modname***.**

Explanation: Message *msgno* should have been delivered, but was not found in message language module *modname*.

This module is the national language module specified in the SIT by the user which gives messages in a chosen language.

System Action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue to run without message number *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

Note that this message will appear after maintenance has been applied to the CICS message domain if there are older, pre-maintenance, versions of the DFHMETxl message modules elsewhere in the STEPLIB concatenation.

If you have just applied maintenance and are encountering this message, check for, and remove, older versions of the message modules in the STEPLIB concatenation.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEIN

DFHME0109 *applid* **Message set** *setname* **could not be found in module** *modname* **while producing message** *msgno***.**

Explanation: Message set *setname* was not found in the message language module *modname*.

The *setname* is the first two characters after the DFH in CICS messages (for example, LD or 21), which is followed by the message number.

System Action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEIN

DFHME0110 *applid* **Optional value** *nn* **is missing from insert** *ii* **for message** *msgno***.**

Explanation: Optional insert value *nn* was requested for insert *ii* on a call to the message domain but could not be found in the definition template for message *msgno*.

System Action: CICS delivers the message with *???* in place of the insert *ii* as it cannot resolve which optional value has been requested for the insert.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEBU

DFHME0111 *applid* **Insert** *ii* **is missing for message** *msgno***.**

Explanation: Insert *ii* is required for message *msgno*. The insert was not found.

System Action: CICS delivers the message with *???* in place of the missing insert *ii*.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEBU

DFHME0112 *applid* **Insert number** *ii* **is invalid for message** *msgno* **(code** *X'code***').**

Explanation: Insert *ii,* supplied on the call to the message (ME) domain, was invalid. For example, it may have been a decimal insert with a length greater than 4 bytes.

The code X'*code*' uniquely identifies the occurrence of the invalid insert.

System Action: CICS delivers the message with *???* in place of the invalid insert *ii.*

An exception entry with code X'*code*' is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates an error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno* being produced.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEBU

DFHME0113 *applid* **Incorrect parameters used in call to DFHMEME for message** *msgno***.**

Explanation: A call to the message (ME) domain for message *msgno* was made with an invalid combination of parameters.

System Action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0114 *applid* **There are no destinations specified for message** *msgno*

Explanation: There was no destination *destid* specified in the message language module for message *msgno*. This error could occur if the message language module has been corrupted or is not at the correct release level.

System Action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno* being produced. If you feel it is not critical, you can continue to run your

system without message *msgno* until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEIN

DFHME0115 *applid modname* **Message module for language** *language* **not found. The default module** *modnameb* **is used.**

Explanation: The message language module *modname* for the national language *language* could not be found in the list of available modules. It is not found if a CICS program calls for a message in a particular language from the message domain, but the message domain cannot locate the message in that language.

The message language module may be unavailable because the LOAD for the appropriate message language module failed at initialization. In this case, there will have been an earlier message about the failed LOAD. Alternatively, the module may not be available because the language specified on the terminal definition, or userid definition, was not specified in the SIT or was specified incorrectly.

System Action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

All messages which should appear in language *language* in module *modname* appear in the system default language *modnameb* instead.

User Response: Your action depends on whether the use of the default language for messages is acceptable or not. If it is acceptable, you can delay taking any action until a convenient time. This may entail changing a terminal or userid definition if that is the cause of the problem.

If the use of the default language is not acceptable, and if module *modname* failed to load at initialization, take the action described for the appropriate message about a failed LOAD issued during start-up.

Otherwise, bring CICS down and specify module *modname* in the SIT or respecify the list of language modules as an override parameter, and restart CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEIN

DFHME0116 *applid* **(Module:***modname***) CICS symptom string for message** *msgno* **is** *symstring*

Explanation: Message *msgno* has been issued as the result of a possible CICS error.

Symptom string *symstring* has been produced to provide additional diagnostic information for IBM support.

System Action: This message accompanies message *msgno* and has no effect on the system action. The system action is that stated in message *msgno*.

User Response: Refer to the user response of message *msgno* which provides the necessary information to determine if the error is serious enough to be reported to IBM Support.

Destination: Console

Module: DFHMEME

XMEOUT Parameters: *applid, msgno, symstring, modname*

DFHME0117 *applid* **The Message User Exit point XMEOUT is unavailable for message** *msgno*

Explanation: The message (ME) domain was unable to use the message user exit point 'XMEOUT' when it was processing message *msgno*. This is probably because it was invoked too early in CICS initialization. A response of KERNERROR has been returned to the message (ME) domain from the program which invokes the user exit, DFHAPEX.

System Action: The message (ME) domain continues processing as this error is not severe. The message *msgno* which the message (ME) domain was trying to produce is not suppressed or rerouted by the message user exit. Instead, it is issued to the original destination defined for message *msgno*.

User Response: None. You cannot suppress message *msgno* because the error has occurred too early in initialization.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0118 *applid* **An error has occurred when calling the Message User Exit for message** *msgno*

Explanation: The message (ME) domain has received an incorrect response from DFHAPEX, the program which invoked the message user exit.

System Action: The message (ME) domain will continues processing as this error is not severe. The message *msgno* which the message (ME) domain was trying to produce is not suppressed or rerouted but is issued to its original destination.

User Response: This message indicates a probable error in the message user exit. Ensure that your message user exit program is working properly.

However, it is possible that the user exit invoking program DFHAPEX interface has been corrupted. DFHAPEX issues an exception trace entry to indicate that there is an error, but is not able to issue its own error message via the message (ME) domain as doing so would cause CICS to loop. In this case, you will need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0119 *applid* **Message** *msgno* **has an invalid** *{Destination | User Exit | Message Identification}* **component**

Explanation: The message (ME) domain has encountered an invalid component in the definition of message *msgno* in the message language module. The message language module may have been corrupted or be at the wrong release level.

System Action: The ME domain produces an exception trace entry and continues processing. No dump is taken.

User Response: Ensure that you are using the correct level of the message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*. If you feel it is not important, you can continue to run your system without this message until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEIN

DFHME0120I *applid* **Message** *msgno* **has been rerouted to its original destination.**

Explanation: The message domain user exit point XMEOUT has attempted to route message *msgno* to a transient data (TD) queue while CICS is quiescing or terminating. After CICS shutdown has started, a message can only be rerouted to a TD queue if its original destination has a TD queue.

System Action: The message is rerouted to its original destination.

User Response: None. For programming information about the XMEOUT user exit, see the *CICS Customization Guide*.

Destination: Console

Module: DFHMEME

XMEOUT Parameters: *applid, msgno*

DFHME0121 *applid* **The** *{first | second}* **attempt at formatting message** *msgno***, TD queue** *queuename* **has failed -** *{Invalid DBCS format | Unknown error}*

Explanation: The message (ME) domain was trying to produce message *msgno* (destined for transient data queue *queuename*). However, an invalid response has been returned from the message formatting routine, DFHMEFO. This error is probably due to invalid DBCS characters being found in either the message inserts or the message text. The message text is checked at definition time for mismatched shift-out and shift-in characters. However, adjacent shift-in and shift-out characters could appear in a message, for instance, if a double byte message insert has not been supplied correctly.

The message (ME) domain first tries to format the message into 120-byte segments. However, if the transient data queue has been defined with a different queue length, formatting is performed a second time using the new queue length. (Hence the reason for *first* or *second* attempts at formatting the message.)

System Action: A dump is taken. The message domain does not issue the message being formatted. An exception trace entry is made by the formatting routine DFHMEFO.

User Response: This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without the message *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0122 *applid* **The Message User Exit has returned invalid route code information for message number** *msgno*

Explanation: The message user exit program has set an invalid route code as the destination of message *msgno*. Valid route codes are numbers 1 to 28 inclusive.

System Action: The message (ME) domain ignores the invalid route code and defaults to the original destination defined for message *msgno* in the message language module.

User Response: Check that your message user exit program sets valid route code information for message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0123 *applid* **The Message User Exit has returned invalid TD queue information for message number** *msgno*

Explanation: The message user exit program has set an invalid queue name as the destination of the message *msgno*. Valid queue names consist of 4 alphanumeric characters.

System Action: The message (ME) domain ignores the invalid queue name and defaults to the original destination defined for message *msgno* in the message language module.

User Response: Check that your message user exit program sets valid queue name information for message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0124 *applid* **TD is unavailable for writing message** *msgno* **to TD queue** *queuename*

Explanation: The message (ME) domain has tried to output message *msgno* to transient data queue *queuename*. However, transient data (TD) is not yet available. This situation may occur early in CICS initialization.

System Action: If the message destination is CDBC, the message is rerouted to the console instead. If the message destination is any other TD queue, it is lost.

User Response: The impact of this error may not be severe. For example, the error may only occur once, or you may decide to continue without message *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0125 *applid* **The Message User Exit has returned an invalid return code** *rc* **for message** *msgno*

Explanation: The message user exit has returned a return code *rc*. which is neither 0 or 4 when it was processing message *msgno*. (A return code of 4 indicates that the message is to be suppressed.)

System Action: The message (ME) domain continues processing as normal and does not suppress or reroute the message. Instead, it issues the message as it was originally defined in the message language module.

User Response: Check that your message user exit program is working properly, and that it is passing the correct return code back to the message (ME) domain.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0126 *applid* **Error in SYMREC invocation. Return code in R15 =** *X'mmmm'***, Reason code in R0 =** *X'nnnn'***.**

Explanation: While handling an error, CICS tried to write a symptom record to SYS1.LOGREC.

However, a further problem was detected while attempting to invoke the SYMREC service.

Return code X'*mmmm*' in register 15 and reason code X'*nnnn*' in register 0 indicate the reason for the error. This may be one of the following.

- CICS has been prevented from writing the symptom record to SYS1.LOGREC by the ASREXIT MVS installation exit. In this case a system dump is not produced.
- There is an error in the SYMRBLD macro. (This is the macro CICS uses to build its symptom records.)
- CICS has supplied invalid data to be added to the symptom record.
- There is an error in the SYMREC service. Examples of possible problems include a storage error, or insufficient space in the LOGREC buffer.
- The SYMREC service is currently inoperative.

System Action: Processing continues and a system dump may be produced.

An exception trace entry (pointid=X'0806') is made in the trace table which contains the symptom record which CICS attempted to write.

User Response: Determine whether the error was caused by a problem in the format of the symptom record produced by CICS, or by a problem in the SYMREC service.

The meanings of the return and reason codes, together with additional information about the SYMREC service can be found in the OS/390 MVS Programming: Assembler Services Reference manual.

Return codes 0010 or 0014 indicate a problem in the SYMREC service which must be reported to the MVS System Administrator.

A return code of 000C and a reason code of 0F1C indicates that the ASREXIT installation exit has prevented CICS from writing the symptom record. This could be caused by an installation error. Report the problem to your MVS system administrator.

Any other return code indicates that the symptom record is invalid to the SYMREC service.

The impact of this error need not be severe, if for example, the problem occurs only as an isolated incident or on the production of a particular message. In these cases, this message can be ignored.

However, if the problem is persistent, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEWS

DFHME0127 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: An exception entry is made in the trace table. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this error may not be critical, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

No symptom string is produced for this message because the error has occurred in a module concerned with symptom strings.

User Response: Inform the system programmer. This message indicates a severe error in CICS code. However, the impact of this error should not be severe because the module DFHMEWS is not crucial to CICS functioning.

If the problem recurs, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEWS

DFHME0128 *applid* **Message** *msgno* **has an invalid route code.**

Explanation: The routine which issues the console message was unable to do so as it encountered an invalid route code associated with message *msgno*. Valid route codes are numbers from 1 through 28.

This error could only happen if the route codes have become corrupted as they are being passed to the routine which issues the console message, DFHSUWT.

System Action: The message (ME) domain issues an exception trace entry. Message *msgno* is not issued.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0129 *applid* **Unable to format console message** *msgno* **as it contains invalid DBCS characters.**

Explanation: The routine which attempted to format console message *msgno* was unable to do so as it was found to contain invalid double byte (DBCS) characters. For example, adjacent or unmatched pairs of shift-in and shift-out characters are invalid in a string of DBCS text.

This situation could occur if there are inserts in the message which contain, for example, a shift-out and a shift-in character with no double byte characters entered in between.

System Action: The message (ME) domain continues processing but message *msgno* is not issued as it cannot be formatted. The message formatting routine, DFHMEFO, issues an exception trace entry. The routine which issues console messages, DFHSUWT, also issues an exception trace entry.

User Response: Ensure that any double-byte information entered from a terminal which may be used as a message insert is entered correctly.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0130 *applid* **Message** *msgno* **has an invalid descriptor code.**

Explanation: The routine which issues the console message was unable to do so as it encountered an invalid descriptor code associated with message *msgno*. Valid descriptor codes are numbers 1 through 16.

This error could only happen if the descriptor codes have become corrupted as they are being passed to the routine which issues the console message, DFHSUWT.

System Action: The message (ME) domain issues an exception trace entry. Message *msgno* is not issued.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0131 *applid* **Unable to calculate length of message** *msgno* **due to message table corruption, code(***code***)**

Explanation: The message (ME) domain could not calculate the length of the message *msgno* due to possible corruption of the message language module.

System Action: A return code is sent to the caller of the message (ME) domain. The message *msgno* is not issued.

User Response: Ensure that you are using the correct level of the message data module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0132 *applid* **The User's Message Exit program has failed while processing message** *msgno*

Explanation: The user's message exit program is either looping or has failed with a program check.

System Action: The message (ME) domain continues processing and issues message *msgno* to its original destination. The user exit invoking program DFHAPEX issues an exception trace entry to indicate that the user's message exit program has failed, but it cannot issue its own error message via the message (ME) domain as doing so would cause CICS to loop.

User Response: Disable your message exit program and ensure it is working properly.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0133 *applid* **Message** *msgno* **could not be found in module DFHMEMGT**

Explanation: The message domain was trying to issue one of its own error messages to indicate that an error had occurred in the message domain. However, the message domain was unable to find the message it was attempting to issue in its own internal message table DFHMEMGT.

System Action: An exception entry is made in the trace table by the message domain. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

User Response: This message indicates an error in CICS code. However, its impact may not be severe.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHSUME

DFHME0134 *applid* **Message** *msgno* **has been truncated because it was too long.**

Explanation: The message (ME) domain was trying to output message *msgno*, but truncated the message because it was too long. Message *msgno* is a conversational message to an operator which has exceeded the maximum size of 119 characters.

System Action: The ME domain truncates the message to 119 bytes before issuing it. An exception trace entry is made and a dump taken, but processing continues.

User Response: This message indicates that *msgno* has been incorrectly defined in the message table, or that the inserts supplied to the message have caused it to exceed the size limit imposed on conversational messages. If enough information can be obtained from the truncated message, the impact of this error may not be severe. If necessary, you can continue to run your system without this message until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0135 *applid* **The default language** *language* **specified in the SIT NATLANG parameter is invalid. It has been defaulted to E.**

Explanation: The default language is the first character in the NATLANG system initialization parameter. The default language *language* is not in the list of valid CICS language suffixes.

System Action: CICS continues with a default language of E (US English).

User Response: If you do not want a default language of E, change the first character in the NATLANG system initialization parameter to another valid CICS language suffix. See the *CICS System Definition Guide* for a list of valid CICS language suffixes.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMESR

DFHME0136 *applid* **Message** *msgno* **is missing from national language module** *modname***. Searching the English message table for the message text.**

Explanation: Message *msgno* cannot be issued in the specified language because the message was not found in the national language module *modname*.

This could be the result of a PTF containing message *msgno* not being applied to the module *modname*. In this case, the text of the missing message could be present in the English language message table DFHMET1E.

System Action: An exception entry is made in the trace table. The message domain tries to find the message in the English language message table. If the message is not found in the English table either, message DFHME0108 is issued followed by a system dump.

User Response: Run the MEU PTF update process to ensure that any new messages have been applied to your language table *modname*, and rebuild this table. See the *CICS Operations and Utilities Guide* for guidance on this.

If message DFHME0108 follows this message, there is an error in CICS code and you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEIN

DFHME0137 *applid* **Message** *msgno* **cannot be rerouted to a transient data destination by the message user exit XMEOUT.**

Explanation: The message *msgno* cannot be rerouted to a transient data destination via XMEOUT because by doing so, CICS could get into a loop.

System Action: An exception entry is made in the trace table. The message (ME) domain ignores the queue destination returned by the message exit and defaults to the original destination defined for message *msgno* in the message language module.

User Response: Alter your message user exit program to avoid rerouting the message *msgno* to a transient data destination. The noreroute indicator is passed by the message domain to the exit so that the exit program can check whether or not it is valid to reroute a particular message.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMEME

DFHME0500 PLEASE ENTER A MESSAGE NUMBER.

Explanation: No search of the messages and codes file has been made because both the component ID and message number fields were blank when you pressed the ENTER key.

System Action: The transaction redisplays the main menu with this message.

User Response: Enter a valid message number or abend code.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHCMAC

DFHME0501 AN INVALID OPTION HAS BEEN ENTERED.

Explanation: A key other than F3 or ENTER has been pressed.

System Action: The transaction redisplays the main menu with this message.

User Response: Enter a valid message number or abend code and press ENTER, or press a valid function key.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHCMAC

DFHME0502 THE CMAC FILE IS DISABLED.

Explanation: The CMAC file is disabled for one of these reasons:

- The file was initially defined as disabled and has not been enabled
- The file has been disabled by an EXEC CICS SET command or by the CEMT transaction.

System Action: The transaction redisplays the main menu with this message.

User Response: If the CMAC file was defined as disabled, use the CEMT transaction to enable the file.

If the CMAC file has been disabled, determine the reason. It might have been disabled for maintenance or update.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHCMAC

DFHME0503 THE CMAC FILE CANNOT BE FOUND IN THE FCT.

Explanation: The CMAC file cannot be found in the file control table (FCT).

System Action: The transaction redisplays the main menu with this message.

User Response: Check that the CMAC file has been defined and installed. See the *CICS Transaction Server for OS/390 Installation Guide* for guidance.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHCMAC

DFHME0504 RESOURCE SECURITY CHECK FAILED ON CMAC FILE.

Explanation: The resource security check has failed.

System Action: The transaction redisplays the main menu with this message.

User Response: Ensure that the resource security class is correct.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHCMAC

DFHME0505 THE CMAC FILE IS CLOSED OR UNENABLED.

Explanation: One of the following has occurred:

- The requested file is CLOSED and UNENABLED. The CLOSED, UNENABLED state is reached after a close request has been received against an OPEN ENABLED file and the file is no longer in use. This state can be specified as the initial state by means of the FILSTAT parameter of the DFHFCT TYPE=FILE control table macro, or by defining a file using the RDO options STATUS = UNENABLED and OPENTIME = FIRSTREF.
- The requested file is OPEN and UNENABLED and in use by other transactions, but a close request against the file has been received.

System Action: The transaction redisplays the main menu with this message.

User Response: Use the CEMT transaction to ensure that the CMAC file is in the OPEN ENABLED state.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHCMAC

DFHME0506 REQUESTED MESSAGE NUMBER/ABEND CODE NOT FOUND

Explanation: The attempt to retrieve the specified message number or abend code has been unsuccessful.

System Action: The transaction redisplays the main menu with this message.

User Response: Ensure that the correct message number or abend code has been entered.

If no message numbers or abend codes appear to be valid, check that the correct DSName has been specified on the CMAC file definition.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHCMAC

DFHME0507 CHECK THAT THE CORRECT DSNAME IS BEING USED.

Explanation: An attempt to retrieve a record from the CMAC data set has been unsuccessful because the CMAC DSName is incorrectly specified.

System Action: The transaction redisplays the main menu with this message.

User Response: Ensure that the correct DSName has been specified on the CMAC file definition.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHCMAC

DFHME0508 THE CMAC TRANSACTION IS INVALID FOR THE CONSOLE.

Explanation: You have tried to invoke the CMAC transaction from a CONSOLE. This is not permitted.

System Action: The CMAC transaction ends with this message.

User Response: Ensure that CMAC is invoked from a terminal that is not being used as a CONSOLE.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHCMAC

DFHME9993I UNABLE TO DETERMINE LENGTH OF MESSAGE *msgno* **-** *response reason*

Explanation: The message DFH*msgno* could not be found by the message (ME) domain in the message tables.

System Action: CICS continues.

User Response: If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHMGPME

DFHME9994I UNABLE TO RETRIEVE MESSAGE *msgno* **-** *response reason*

Explanation: The message DFH*msgno* could not be retrieved by the message (ME) domain from the message tables.

System Action: CICS continues.

User Response: If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHMGPME

DFHME9996I MESSAGE PARAMETER LIST ERROR - CHECK PLIST

Explanation: The parameter list for the message generation process is not valid.

System Action: CICS continues but the message in error cannot be issued.

User Response: Ensure that the DFHMGT entry for the message has been built correctly.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHMGP00

DFHME9997I MESSAGE FIND ERROR - CHECK THE MESSAGE MODULE

Explanation: The message being issued could not be found by the message generation process in the DFHMGT table entry for this message set.

System Action: CICS continues but the message in error cannot be issued.

User Response: Ensure that an entry exists for the message number in the appropriate DFHMGT tables.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHMGP00

DFHME9998I MESSAGE NUMBERS GREATER THAN 9999 ARE INVALID

Explanation: The message being issued has a message number greater than 9999. Message numbers should be in the range 1 through 9999.

System Action: CICS continues but the message in error cannot be issued.

User Response: Redefine the message number.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHMGP00

DFHME9999I THE MESSAGE INDEX MODULE 'DFHMGT' IS MISSING

Explanation: The message generation process cannot find an index module in the DFHMGT table for the message it is trying to issue. This can occur where a message defined as being destined for either a console or a TDQ is being issued as a terminal end user message.

System Action: CICS continues but the message in error cannot be issued.

User Response: Ensure that the destination is correct for the message being issued.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Module: DFHMGP00

DFHMNxxxx messages

DFHMN0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abend or program check has occurred in module *modname*. This implies an error in CICS code. Alternatively, it is possible that unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning a user response.

If module *modname* is not crucial to the running of your CICS system, you have the option to continue to run and to bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHMNDM, DFHMNMN, DFHMNNT, DFHMNSR, DFHMNST, DFHMNSU, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHMN0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point id which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System Action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *module* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHMNDM, DFHMNMN, DFHMNNT, DFHMNSR, DFHMNST, DFHMNSU, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid, X'code', modname*

DFHMN0003 *applid* **Insufficient storage to satisfy Getmain (code** *X'code***) in module** *modname***.**

Explanation: A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error.

If DFHMNDM issues this message, CICS terminates, even if you have specified in the dump table that CICS should not terminate.

If DFHMNMN, DFHMNST or DFHMNXM issues this message, an exception trace and a system dump is taken and CICS continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try increasing the size limits of the DSAs or EDSAs. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Destination: Console

Modules: DFHMNDM, DFHMNMN, DFHMNST, DFHMNXM

XMEOUT Parameters: *applid, X'code', modname*

DFHMN0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing at the time the error was detected.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* will be terminated and CICS will continue.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHMNDM, DFHMNMN, DFHMNSR, DFHMNST, DFHMNSU, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid, X'offset', modname*

DFHMN0005 *applid* **A hardware error has occurred (module** *modname***, code** *X'code'***). The Time-of-Day clock is invalid.**

Explanation: A hardware error has occurred during the running of module *modname*. The MVS Store Clock facility is the timing mechanism for the operating system.
The code X'*code*' is the exception trace point ID which uniquely identifies the place where the error was detected.

System Action: An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Notify the system programmer. This is in all probability a hardware error and you should in the first instance investigate the MVS Store Clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHMNDM, DFHMNMN, DFHMNST, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid, modname, X'code'*

DFHMN0101 *applid* **SMF error - SMF return code** *X'rc'***.**

Explanation: The monitoring domain authorized services routine issued a SMFEWTM macro to write a record to the MVS system management facilities (SMF) data set and encountered a non-zero return code.

System Action: The request is ignored and the SMF record is lost. An exception entry is made in the trace table. CICS operation continues.

If the same error condition occurs continuously, the error messages are suppressed but tracing continues. The message is reissued if a different error condition occurs or if a zero return code has been received since the message was last issued.

User Response: Consult the *OS/390 MVS System Programming Library: System Management Facilities (SMF)* manual for a detailed explanation of the return codes.

Destination: Console

Module: DFHMNSU

XMEOUT Parameters: *applid, X'rc'*

DFHMN0102 *applid* **SYSEVENT error - SYSEVENT return code** *X'rc'***.**

Explanation: The monitoring domain authorized services routine issued a SYSEVENT macro to notify the MVS System Resource Manager (SRM) that a subsystem transaction had been completed and had encountered a nonzero return code.

System Action: The request is ignored and the SYSEVENT data is lost. An exception entry is made in the CICS trace table. CICS operation continues.

If the same error condition occurs continuously, the error messages are suppressed but tracing continues. The message is reissued if a different error condition occurs or if a zero return code has been received since the message was last issued.

User Response: See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the return codes.

Destination: Console

Module: DFHMNSU

XMEOUT Parameters: *applid, X'rc'*

DFHMN0103I *applid* **Monitoring control table for suffix '***xx***' not found.**

Explanation: The monitoring control table for suffix *xx* could not be found in the library described by the DFHRPL DD statement. This suffix is specified as a system initialization parameter.

System Action: Control is returned to the parameter manager for interaction with the operator. Further action depends upon which PARMERR= parameter is specified. The operator may enter another suffix or continue with system initialization.

If initialization continues without an override, monitoring domain uses the default monitoring control table.

User Response: There are three likely causes of this error:

- The monitoring control table is not in the library.
- The monitoring control table name has been misspelled.
- An incorrect suffix has been used at startup.

Ensure that the suffix specified is correct and that a library described in the DFHRPL DD statement contains a copy of the named monitoring control table.

If the suffix is incorrect and PARMERR=INTERACT is specified, the operator is prompted to enter an alternative suffix.

If the suffix is incorrect and PARMERR=IGNORE is specified, the monitoring domain uses the default monitoring control table.

If the monitoring control table is missing or misspelled and you want to reinstall it, CICS has to be terminated. Reassemble the monitoring control table into the relevant library.

Destination: Console

Module: DFHMNSR

XMEOUT Parameters: *applid, xx*

DFHMN0104 *applid* **Monitoring Control Table with suffix '***xx***' required for restart not found.**

Explanation: The monitoring domain has determined the monitoring control table suffix *xx* from the last CICS execution, but was unable to locate the monitoring control table in the library described by the DFHRPL DD statement and no override suffix has been specified.

Subsequent executions of CICS will continue to use the suffix specified in the message until it is changed in the SIT.

System Action: Initialization continues with the monitoring domain using the default monitoring control table.

User Response: Ensure that a library described in the DFHRPL DD statement contains a copy of the named monitoring control table. If the monitoring control table is missing, it must have been deleted. If you want to reinstall the table, CICS must be terminated. Reassemble the monitoring control table into the relevant library.

Destination: Console

Module: DFHMNDM

XMEOUT Parameters: *applid, xx*

DFHMN0105I *applid* **Using default Monitoring Control Table.**

Explanation: The monitoring domain is initializing with default monitoring control table settings. This occurs:

1. If the user has specified MCT=NO, or
2. Following message DFHMN0104, or
3. After message DFHMN0103 or DFHMN0106 has been issued, but no corrective action has been taken.

System Action: System initialization continues.

User Response: None.

Destination: Console

Module: DFHMNDM

XMEOUT Parameter: *applid*

DFHMN0106 *applid* **Unable to read the catalog record for the Monitoring Domain.**

Explanation: The monitoring domain has attempted to re-establish the status of the monitoring classes and the monitoring control table suffix under which it was running during the last execution of CICS. But it was unable to successfully read the record from the global catalog.

System Action: An exception entry is made in the trace table.

System initialization continues with the supplied system initialization parameters.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the cause of the error using any dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, there will be an earlier CICS message from the catalog. Follow the user response for this message.

If the problem has been caused by an invalid data length, there will be an exception trace entry in the trace table.

Destination: Console

Module: DFHMNDM

XMEOUT Parameter: *applid*

DFHMN0107 *applid* **Unable to update the catalog record for the Monitoring Domain.**

Explanation: The monitoring domain has attempted to update either the status of the monitoring classes or the monitoring control table suffix in the CICS global catalog, but was unable to successfully complete the request.

System Action: An exception entry is made in the trace table, and CICS operation continues with the updated values. Since the updates are not saved across a restart, the subsequent execution of CICS will restart with values recorded before the updates were applied.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the cause of the error using any dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, there will be an earlier CICS message from the catalog. Follow the user response for this message.

If the problem has been caused by an invalid data length, there is an exception trace entry in the trace table.

Destination: Console

Module: DFHMNSU

XMEOUT Parameter: *applid*

DFHMN0108I *applid* **Using Monitoring Control Table suffix '***xx***'.**

Explanation: The monitoring control table with the suffix *xx* is used for this CICS run.

System Action: Processing continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHMNDM

XMEOUT Parameters: *applid, xx*

DFHMN0109I *applid* **CICS Monitoring is active.**

Explanation: The CICS monitoring facility is currently active for this run of CICS.

System Action: Processing continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHMNDM

XMEOUT Parameter: *applid*

DFHMN0110I *applid* **CICS Monitoring is inactive.**

Explanation: The CICS monitoring facility is currently inactive for this run of CICS.

System Action: Processing continues.

User Response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Module: DFHMNDM

XMEOUT Parameter: *applid*

DFHMN0111 *applid* **SYSEVENT retry unsuccessful , data lost: transid** *transid* **userid** *userid***.**

Explanation: The Monitoring Domain Authorized services routine issued a SYSEVENT macro to notify the MVS System Resource Manager (SRM) that a subsystem transaction had been completed, and had still encountered a return code of 8 after five retries.

System Action: The request is ignored, and the SYSEVENT data is lost.

User Response: Refer to the *OS/390 MVS Initialization and Tuning* manual or the *OS/390 MVS Programming: Authorized Assembler Services Reference* for a detailed explanation of the return codes.

Destination: Console

Module: DFHMNSU

XMEOUT Parameters: *applid, transid, userid*

DFHMN0201 S Invalid parameter. The equals sign is missing.

Explanation: A SYSIN parameter has been encountered that does not contain an equals sign. Equals signs are mandatory for every keyword supported by the monitoring dictionary utility.

System Action: The job step is terminated with a return code of 12.

User Response: Correct the SYSIN keyword that does not have an equals sign and resubmit the job. For further guidance on the syntax of DFHMNDUP keywords, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0202 S Invalid parameter. MCT incorrectly specified

Explanation: Following the equals sign of the MCT= keyword there must be a 2-character operand or a delimiter. Neither has been found. The 2-character operand is treated as the suffix for an MCT to load.

System Action: The job step is terminated with a return code of 12.

User Response: Correct the MCT= keyword with a valid operand or delimiter.

If you do not wish to have a dictionary record constructed from a particular MCT, you can use a default MCT image by specifying a blank or a comma after the equals sign, or by specifying MCT=NO. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0203 S Invalid parameter. SYSID must be four characters or less.

Explanation: A SYSID of greater than 4 characters, or a SYSID keyword without an operand has been specified.

System Action: The job step is terminated with a return code of 12.

User Response: Specify a valid SYSID of up to 4 characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0204 S Invalid parameter. GAPPLID must be eight characters or less.

Explanation: A generic APPLID (GAPPLID) of greater than 8 characters, or a GAPPLID keyword without an operand has been specified.

System Action: The job step is terminated with a return code of 12.

User Response: Specify a valid GAPPLID of up to 8 characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0205 S Invalid parameter. SAPPLID must be eight characters or less.

Explanation: A specific APPLID (SAPPLID) of greater than 8 characters has been specified.

System Action: The job step is terminated with a return code of 12.

User Response: Specify a valid SAPPLID of up to 8 characters or allow the SAPPLID to default to the GAPPLID by not specifying SAPPLID. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0206 S Invalid parameter. DATE must be of format yyddd or yyyyddd.

Explanation: The date has been specified incorrectly. There are three possible reasons for this:

- The date specified is not in the correct format of yyddd or yyyyddd
- The date contains nonnumeric characters
- 'ddd' is not in the range 1 through 366.

System Action: The job step is terminated with a return code of 12.

User Response: Ensure that the date is in the format 'yyddd' or 'yyyyddd' and that the values are valid.

If you want DATE to default to the current date, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0207 S Invalid parameter. TIME must be of format hhmmss.

Explanation: The time has been specified incorrectly. There are three possible reasons for this:

- More than 6 characters have been specified
- The value specified contains nonnumeric characters
- The hours (hh), minutes (mm), or seconds (ss) are outside of the valid range.

System Action: The job step is terminated with a return code of 12.

User Response: Ensure that the time specified is in the format 'hhmmss' and that the values are valid.

If you want TIME to default to the current time, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0208 S Invalid parameter. Keyword is unknown.

Explanation: A SYSIN parameter has been processed and found to contain an unrecognized keyword.

System Action: The job step is terminated with a return code of 12.

User Response: Rename the unrecognized keyword. See the *CICS Operations and Utilities Guide*. for a complete list of supported keywords. Also, ensure that there are no blanks preceding any of the keywords in the SYSIN data set.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0209 S No SYSIN parameters have been specified.

Explanation: There are no SYSIN parameters specified in the JCL.

System Action: The job step is terminated with a return code of 12.

User Response: Check the JCL for the existence of SYSIN parameters. If SYSIN does not exist or has no parameters, see the *CICS Operations and Utilities Guide* for guidance on coding DFHMNDUP parameters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0210 S *applid* Load for MCT has failed. MCT cannot be found. A dump will be provided.

Explanation: DFHMNDUP attempted to load 'DFHMCTxx' from STEPLIB, where 'xx' is the suffix provided via the MCT= keyword. This MCT was not found in the STEPLIB concatenation.

System Action: The job step is abended with a dump.

User Response: Ensure that the MCT suffix is correct and that the library that contains it is in the STEPLIB concatenation for the job step.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMNDUP

DFHMN0211 S Getmain storage for control blocks has failed.

Explanation: An MVS GETMAIN for the utilities global storage has failed. There is not enough MVS storage below the line available in the region.

System Action: The job step is terminated with a return code of 12.

User Response: Increase the REGION= parameter of your JCL and try again. If this fails, consult your MVS system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0212 S Getmain storage for output record has failed.

Explanation: An MVS GETMAIN for the 32KB record buffer storage has failed. There is not enough MVS storage below the line available in the region.

System Action: The job step is terminated with a return code of 12.

User Response: Increase the REGION= parameter of your JCL and try again. If this fails, consult your MVS system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0213 S The MVS TIME macro has failed. There is a clock error.

Explanation: Because DATE and/or TIME have not been specified, DFHMNDUP has attempted to retrieve the current DATE and/or TIME from MVS using the TIME macro. The TIME macro has reported that the MVS clocks are damaged.

System Action: The job step is terminated with a return code of 12.

User Response: Inform your MVS system programmer of the failure.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0214 S Invalid parameter. Missing delimiter detected.

Explanation: DFHMNDUP parameter syntax requires keyword/operand pairs to be separated by a delimiter in the form of a comma or a blank space. A delimiter has been found missing from a keyword/operand.

System Action: The job step is terminated with a return code of 12.

User Response: If the SYSIN data set has been coded such that there are multiple parameters on one line, then ensure that there is one blank or one comma between each parameter. If the SYSIN data set has been coded such that there is only one parameter on a line, ensure that it is terminated with a blank or a comma. For further guidance on the syntax of DFHMNDUP parameters, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0215 S Mandatory SYSIN parameter(s) missing.

Explanation: The two mandatory parameters are for the generic APPLID (GAPPLID) and the MVS system identifier (SYSID). These two parameters have not been specified and there are no defaults.

System Action: The job step is terminated with a return code of 12.

User Response: Specify the following:

- the generic APPLID of the CICS system that DFHMNDUP is going to produce a dictionary record for
- the MVS system identifier for the MVS system that produced the monitoring performance class records you are going to process.

For further guidance on the syntax of DFHMNDUP parameters, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0216 S Invalid parameter. JOBNAME must be eight characters or less.

Explanation: A JOBNAME has been specified with more than eight characters.

System Action: The job step is terminated with a return code of 12.

User Response: Specify a valid JOBNAME of up to eight characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0217 S Invalid parameter. JOBDATE must be of format yyddd or yyyyddd.

Explanation: The JOBDATE parameter has been specified incorrectly. There are three possible reasons for this:

- The date specified is not in the correct format of yyddd or yyyyddd
- Nonnumeric characters have been specified
- The number of days 'ddd' is not in the range 1 through 366.

System Action: The job step is terminated with a return code of 12.

User Response: Ensure that JOBDATE consists of valid characters in the format 'yyddd' or 'yyyyddd'.

If you want JOBDATE to default to the current date, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0218 S Invalid parameter. JOBTIME must be of format hhmmss.

Explanation: The JOBTIME parameter has been specified incorrectly. There are three possible reasons for this:

- More than six characters have been specified
- Nonnumeric characters have been specified
- The hours (hh), minutes (mm), or seconds (ss) are outside of the valid range.

System Action: The job step is terminated with a return code of 12.

User Response: Ensure that JOBTIME consists of valid characters in the format 'hhmmss'.

If you want JOBTIME to default to the current time, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0219 S Invalid parameter. USERID must be eight characters or less.

Explanation: A USERID has been specified with more than eight characters.

System Action: The job step is terminated with a return code of 12.

User Response: Specify a valid USERID of up to eight characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMNDUP

DFHMN0220 DFHMNDUP CANNOT OPEN THE SYSPRINT FILE.

Explanation: The SYSPRINT file cannot be opened because the SYSPRINT DD statement is missing or incorrectly defined.

System Action: The job step is terminated with a return code of 12.

User Response: Ensure that the SYSPRINT DD statement has been correctly defined. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMNDUP

DFHMN0221 DFHMNDUP CANNOT OPEN THE SYSIN FILE.

Explanation: The SYSIN file cannot be opened because the SYSIN DD statement is missing or incorrectly defined.

System Action: The job step is terminated with a return code of 12.

User Response: Ensure that the SYSIN DD statement has been correctly defined. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHMNDUP

DFHMUxxxx Message editing utility messages

DFHMU0102 SOURCE DATA FILE NOT FOUND, OR RECORD FORMAT OR LENGTH NOT VALID.

Explanation: Either the input file has been deleted or has not been defined correctly.

System Action: Processing terminates.

User Response: Ensure the input file exists and has been defined as RECFM F LRECL 80.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0103 UNRECOGNIZED CONTROL WORD ON INPUT DATA RECORD.

Explanation: An unrecognized control word was encountered during processing. The line printed following this message contains the word in error.

System Action: Processing continues.

User Response: Correct or remove the incorrect control word.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0104 MISPLACED INPUT RECORD IN DATA SEQUENCE.

Explanation: An input record has been placed incorrectly. The record in error is printed after this message.

System Action: Processing continues.

User Response: Place the record in error in the correct position.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0105 PREMATURE END OF FILE REACHED IN 'SCANPARAMS' DATA SEQUENCE.

Explanation: End of file (EOF) was detected while processing the SCANPARAMS section of the message source (DFHMExxE) file.

System Action: Processing terminates.

User Response: Check the message source file for corruption and ensure that the SCANPARAMS section and subsequent message definitions have been completed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0106 PREMATURE END OF FILE REACHED IN 'MEMBERLIST' DATA SEQUENCE.

Explanation: Processing of a link-edit (DFHMETxx) file has ended because of an unexpected end-of-file (EOF) condition in the MEMBERLIST section.

System Action: Processing terminates.

User Response: Correct and complete the MEMBERLIST section of the link-edit file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0107 PREMATURE END OF FILE REACHED IN 'GLOBALS' DATA SEQUENCE.

Explanation: Processing of the DFHME00x file (where x is the current language suffix identifier) GLOBALS section was terminated due to an end-of-file (EOF) condition.

System Action: Processing terminates.

User Response: Check DFHME00x for corruption, and ensure that the GLOBALS section is complete and valid.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0108 MESSAGE *msgno*: PREMATURE END OF FILE REACHED IN 'MSGDEF' DATA SEQUENCE.

Explanation: An end-of-file (EOF) condition was encountered during the processing of message *msgno*. This is due to an incomplete message definition.

System Action: Processing terminates.

User Response: Complete the message definition for *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0109 NEXT LINE IS INCORRECT. IT MUST BE 'MEMBERLIST', 'SCANPARAMS', 'GLOBALS', OR 'MSGDEF'.

Explanation: The next line in the message source file being processed has not been recognized.

System Action: Processing terminates after the validation routine.

User Response: Ensure that the following parameters are present.

- MEMBERLIST in message link-edit (DFHMETxx) files.
- SCANPARAMS as the first parameter in all message source (DFHMExxE) files.
- GLOBALS in the NLS module DFHMET00x (where x is the current language suffix identifier).
- MSGDEF at the start of all message definition groups.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0110 MISPLACED RECORD IN 'SCANPARAMS' SEQUENCE.

Explanation: A record is not recognized as being part of the SCANPARAMS sequence. The record is printed after this message.

System Action: Processing terminates after the validation routine.

User Response: Reposition the incorrect parameter from the SCANPARAMS sequence in its correct position in the file. If the parameter is unknown, remove it from the file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0111 INCORRECT INPUT RECORD FOUND WHEN 'MEMBER' EXPECTED.

Explanation: The keyword encountered on the record being processed is invalid for the link-edit (DFHMETxx) files. The record is printed after this message.

System Action: Processing continues.

User Response: Correct or remove the invalid record.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0112 MISPLACED RECORD IN 'GLOBALS' SEQUENCE

Explanation: A keyword has been encountered that is not valid in the GLOBALS section of the message file. The record in error is printed after this message.

System Action: Processing continues.

User Response: Correct or remove the record containing the invalid keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0113 MISPLACED RECORD IN 'MSGDEF' SEQUENCE

Explanation: A record is out of sequence in the message definition. The record in error is printed after this message.

System Action: Processing continues.

User Response: Sequence the message definition records correctly.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0114 NUMBER OF MEMBERS IN MEMBERLIST EXCEEDS MAXIMUM ALLOWED.

Explanation: The maximum of 150 message members has been exceeded in the link-edit DFHMETxx module.

System Action: Processing continues.

User Response: Reduce the number of members in the MEMBERLIST section.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0115 MESSAGE *msgno*: TOO MANY SOURCE LINES.

Explanation: The maximum of 80 non-null and non-comment source lines has been exceeded in message *msgno*.

System Action: Processing continues.

User Response: Reduce the number of source lines in message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0116 'MEMBER' RECORD IS NOT A VALID 2-CHARACTER MESSAGE COMPONENT IDENTIFIER.

Explanation: The DFHMET*xx* member record printed after this message has an incorrect identifier.

System Action: Processing continues.

User Response: Ensure that all message component identifiers (MEMBER records) are correct.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0117 VALUE MISSING FOR KEYWORD ON GLOBAL OR PARAMETER RECORD.

Explanation: The keyword on the record printed after this message requires a value.

System Action: Processing continues.

User Response: Enter the required value for the keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0118 MESSAGE *msgno*: NO DATA DEFINED BETWEEN 'MSGDEF' AND 'ENDMSG'.

Explanation: The message definition for message *msgno* is incomplete. Only the MSGDEF and ENDMSG records have been created.

System Action: Processing continues.

User Response: Complete or remove the definition of message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0119 MESSAGE *msgno*: INVALID KEYWORD FOUND ON 'MSGDEF' DATA RECORD.

Explanation: A keyword specified on the MSGDEF record is not known to the system.

System Action: Processing continues.

User Response: Ensure that the spelling of the MSGDEF keywords is correct.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0120 MESSAGE NUMBER IS MISSING OR NOT A VALID 4-DIGIT NUMBER.

Explanation: A message number is missing or does not consist of 4 digits.

System Action: Processing continues.

User Response: Specify a valid 4-digit message number after the MSGNO keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0121 MESSAGE *msgno*: DESTINATION NAME MISSING FROM 'DEST' RECORD.

Explanation: The destination identifier is missing from the DEST keyword in message *msgno*.

System Action: Processing continues.

User Response: Specify a valid destination identifier.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0122 MESSAGE *msgno*: NO DELIMITERS FOUND FOR TEXT STRING.

Explanation: Opening and closing delimiters are missing from a text string in message *msgno*. The text string is printed after this message.

System Action: Processing continues.

User Response: Ensure all text strings are enclosed in delimiters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0123 MESSAGE *msgno*: AN OPENING OR CLOSING DELIMITER IS MISSING FROM A TEXT STRING.

Explanation: An opening or closing delimiter is missing from a text string in message *msgno*. The text string is printed after this message.

System Action: Processing continues.

User Response: Ensure that all text strings are enclosed in delimiters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0124 MESSAGE *msgno*: SUFFIX FOR 'INS#NN','REPLY#NN' OR 'VALUE#NN' IS INCORRECT. 'NN' MUST BE IN RANGE 1 TO 10.

Explanation: A maximum of 10 inserts is permitted for each message definition. The insert number *nn* in INS#*nn*, REPLY#*nn*, or VALUE#*nn* in message *msgno* has been mistyped or exceeds the maximum value.

System Action: Processing continues.

User Response: Correct the insert number.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0125 MESSAGE *msgno*: INSERT DATA RECORD HAS 'FORMAT' KEYWORD MISPLACED OR MISSPELLED.

Explanation: The FORMAT keyword for the record that defines an insert has either been misplaced or misspelled. FORMAT must always be the first keyword of the insert definition.

The incorrect record is printed after this message.

System Action: Processing continues.

User Response: Correct the spelling or position of the FORMAT keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0126 MESSAGE *msgno*: INVALID FORMAT TYPE. FORMAT MUST BE CHAR, HEX, DEC, TIME, OR DATE.

Explanation: The format type which is specified after the FORMAT keyword for message *msgno* is not valid. The FORMAT record at fault is printed after this message.

System Action: Processing continues.

User Response: Specify CHAR, HEX, DEC, TIME, or DATE after the FORMAT keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0127 MESSAGE *msgno*: 'FORMAT' OPERAND IS INCOMPLETE. 'FORMAT' MUST BE CHAR, HEX, DEC, TIME, OR DATE.

Explanation: The FORMAT record in message *msgno* is incomplete. The record at fault is printed after this message.

System Action: Processing continues.

User Response: Complete the FORMAT record details.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0128 MESSAGE *msgno*: VALUE#*nn* KEYWORD INCORRECT OR MISSING ON INS#*nn* DATA RECORD.

Explanation: The keyword VALUE has been misspelled or is missing on the INSERT record of message *msgno*. The record at fault is printed after this message.

System Action: Processing continues.

User Response: Correct the record.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0129 MESSAGE *msgno*: INVALID KEYWORD *keyword* ON 'SPECIAL_INSERT/TIMESTAMP' CARD.

Explanation: An invalid keyword *keyword* follows the TIME special insert record.

System Action: Processing continues.

User Response: Correct or remove the invalid keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0130 MESSAGE *msgno*: INTERNAL LOGIC ERROR CONVERTING FULLWORD TO CHARACTER FORMAT.

Explanation: The value of the message number being processed is greater than 9999. This is an internal error caused by the corruption of DFHMEU.

System Action: Processing terminates.

User Response: Restore DFHMEU and retry the process. If the process fails again, you will need further assistance. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0131 MESSAGE *msgno*: DESTINATION IS NOT VALID.

Explanation: The destination for message *msgno* is not recognized.

System Action: Processing terminates at the end of the validation routine.

User Response: Specify a valid message destination after the DEST keyword for message 'msgno'.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0132 MESSAGE *msgno*: ONE OR MORE SHIFT-OUT OR SHIFT-IN SYMBOLS MISPLACED OR MISSING.

Explanation: One or more Shift-Out or Shift-In symbols have not been found in the double-byte character set (DBCS) message *msgno*.

System Action: Processing continues.

User Response: Ensure all text strings in DBCS messages are surrounded by Shift-Out and Shift-In symbols.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0133 INVALID VALUE FOR GLOBAL FORMAT DEFINITION.

Explanation: The value listed for the keyword on the record printed after this message is not valid.

System Action: Processing continues.

User Response: Correct the keyword value.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0134 MESSAGE *msgno* IS OUT OF SEQUENCE IN SOURCE FILE.

Explanation: The definition of message *msgno* is out of sequence in the message file. Message definitions must be positioned in ascending order of their message numbers.

System Action: Processing continues.

User Response: Move the definition of message *msgno* to its correct position in the source file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0135 MESSAGE *msgno*: DUPLICATE MESSAGE NUMBER IN SOURCE FILE.

Explanation: The message *msgno* has already been defined in the message file.

System Action: Processing continues.

User Response: Remove the duplicate message definition or reassign with a unique message number.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0136 MESSAGE *msgno*: PREMATURE END OF FILE IN 'SYMDEF' DATA SEQUENCE.

Explanation: End of file (EOF) was detected while processing the SYMDEF section of the message definition. The SYMDEF section should be terminated by an ENDSYM record.

System Action: Processing terminates.

User Response: Insert an ENDSYM record to terminate the SYMDEF section of message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0137 MESSAGE *msgno*: UNRECOGNIZED SYMPTOM KEYWORD.

Explanation: The record being processed is not recognized as a symptom keyword.

System Action: All records up to the next ENDSYM keyword are rejected. If a record with an ENDSYM is not found, all records are rejected until end of file.

User Response: Ensure that an ENDSYM record exists for the symptom section and that all keywords are valid.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0138 MESSAGE *msgno*: MISSING SYMPTOM ARGUMENT.

Explanation: The SYMPTOM keyword printed after this message does not have an associated argument.

System Action: Processing continues.

User Response: Add a valid argument to the SYMPTOM keyword for message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0139 MESSAGE *msgno*: INVALID SYMPTOM ARGUMENT: INS#*n* | SPECIAL_INSERT | TEXT STRING.

Explanation: The argument specified for the SYMPTOM keyword printed after this message is not valid.

System Action: Processing continues.

User Response: Correct the SYMPTOM keyword argument for message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0140 MESSAGE *msgno*: UNDEFINED INSERT IN SYMPTOM OR EXIT RECORD.

Explanation: The insert number specified on the SYMPTOM or EXIT record printed after this message has not been defined in the message definition.

System Action: Processing continues.

User Response: Correct the SYMPTOM or EXIT keyword insert.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0141 MESSAGE *msgno*: SYMPTOM DATA ARGUMENT IS NOT VALID.

Explanation: The argument specified for the SYMPTOM keyword shown following this message is incorrect for this symptom.

System Action: Processing continues.

User Response: Ensure that the specified argument is the correct one for the SYMPTOM keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0142 MESSAGE *msgno*: SPECIAL INSERT IS NOT VALID AS A SYMPTOM ARGUMENT.

Explanation: The special insert specified as an argument to the SYMPTOM keyword for message *msgno* is not valid in the symptom string. The symptom record is printed after this message.

System Action: Processing continues.

User Response: Correct the symptom record.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0143 MESSAGE *msgno*: TEXT SYMPTOM ARGUMENT CONTAINS INVALID CHARACTERS.

Explanation: The text specified in the SYMPTOM argument contains one or more characters that are not allowed in IBM's RETAIN system.

System Action: Processing continues.

User Response: Ensure text arguments for SYMPTOM keywords contain only the following characters **A** to **Z**, **0** to **9**, **@**, **#**, **¢**, and **&**.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0144 MESSAGE *msgno*: NO ROUTECODES SPECIFIED. DEFAULTING TO 2 AND 11.

Explanation: The ROUTECODES keyword has been specified without any routecodes and has defaulted to routecodes 2 and 11.

System Action: Processing continues.

User Response: Accept the defaults or specify alternate valid routecodes.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0145 MESSAGE *msgno*: INVALID DESTINATION KEYWORD. IT SHOULD BE *x*.

Explanation: The system encountered an invalid destination keyword. The valid keyword should be *x*. The line in error is printed after this message.

System Action: Processing continues.

User Response: Correct the destination keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0146 MESSAGE *msgno* ROUTECODE *x* IS OUT OF RANGE. VALID RANGE IS >0 TO <=*n*.

Explanation: An invalid value has been specified for a routecode.

System Action: Processing continues.

User Response: Correct the routecode value. The routecode should be greater than 0 and less than or equal to *n*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0147 MESSAGE *msgno*: TRANSIENT DATA QUEUE *qname* IS NOT VALID.

Explanation: The destination transient data queue (TDQ) *qname* in message *msgno* is unknown to the system.

System Action: Processing continues.

User Response: Correct the TDQ name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0148 MESSAGE *msgno*: THE VALUE *x* IS NOT VALID. IT MUST BE NUMERIC.

Explanation: An EXIT parameter has been specified with a nonnumeric value.

System Action: Processing continues.

User Response: Ensure all EXIT parameters are defined with numeric values.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0149 MESSAGE *msgno*: INVALID ARGUMENT GIVEN FOR EXIT PARAMETER *n*.

Explanation: The insert argument specified on EXIT parameter *n* is unknown.

System Action: Processing continues.

User Response: Specify a valid argument for the exit parameter *n*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0150 MESSAGE *msgno*: EXIT PARAMETER *n* SPECIFIES AN INSERT NOT IN THE MESSAGE DEFINITION.

Explanation: The EXIT parameter *n* has specified an insert which does not exist in the definition template of message *msgno*.

System Action: Processing continues.

User Response: Specify only existing inserts for the EXIT parameters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0151 MESSAGE *msgno*: NO EXIT PARAMETERS HAVE BEEN SPECIFIED.

Explanation: No EXIT parameters have been specified for this message. These are required because the message contains inserts.

System Action: Processing continues.

User Response: Add user exit information to the message definition.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0152 MESSAGE *msgno*: EXIT PARAMETER *n* IS MISSING.

Explanation: The EXIT parameter for insert *n* is missing.

System Action: Processing continues.

User Response: Insert the missing EXIT parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0153 MESSAGE *msgno*: EXIT PARAMETER NUMBER IS NOT VALID. IT MUST BE GREATER THAN ZERO.

Explanation: An EXIT parameter number was defined with a number of zero. These parameter numbers should start from 1.

System Action: Processing continues.

User Response: Renumber the EXIT parameters correctly.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0154 MESSAGE *msgno*: INSERT *n* DOES NOT HAVE AN EXIT PARAMETER.

Explanation: A mismatch was found between the number of inserts and the user exit parameters defined for this message. There must be an EXIT parameter defined for each message insert.

System Action: Processing continues.

User Response: Correct the user exit parameters defined for this message.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0155 MESSAGE *msgno*: QUEUE NAME MISSING FROM TDQ DESTINATION.

Explanation: Message *msgno* has a transient data queue (TDQ) destination type but no TDQ name has been specified.

System Action: Processing continues.

User Response: Enter a valid TDQ name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0156 MESSAGE *msgno*: 'QUEUES' KEYWORD IS MISSING.

Explanation: The TDQ destination QUEUES keyword has been omitted from the definition of message *msgno*.

System Action: Processing continues.

User Response: Specify the QUEUES keyword and a valid TDQ name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0157 MESSAGE *msgno*: KEYWORD *keyword* HAS ALREADY BEEN SPECIFIED.

Explanation: The destination keyword *keyword* has already been specified for message *msgno*.

System Action: Processing continues.

User Response: Remove the duplicate entry or merge the destinations with the previous destination definition for this message.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0158 MESSAGE *msgno*: TOO MANY INSERTS ON SPECIAL INSERT LINE.

Explanation: More than four special inserts have been specified on one line.

System Action: Processing continues.

User Response: If you need more than four special inserts, create another SPECIAL_INSERT line with the extra inserts.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0159 MESSAGE *msgno* DESTINATION *destid*: TDQ NAME OR ROUTE CODE *destname* IS REPEATED.

Explanation: The destination *destid*, (either console or TDQ), has a duplicate *destname* entry. The *destname* is a route code if *destid* is console, or a transient data queue name if *destid* is TDQ.

System Action: Processing continues.

User Response: Correct the destination information for this message by removing the duplicate entry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0160 MESSAGE *msgno*: INSERT *n* HAS ALREADY BEEN SPECIFIED.

Explanation: The insert *n* has been repeated in the definition of the exit parameters. There should only be one exit parameter per insert.

System Action: Processing continues.

User Response: Correct the insert definition in the exit parameter section of message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0162 'MEXDEF' KEYWORD IS MISSING OR MISPLACED.

Explanation: The MEXDEF keyword is either missing or in the wrong place. This keyword signifies the start of the user exit parameters definition section. It should appear after the definition of the message text and before the ENDMSG keyword.

System Action: Processing continues.

User Response: Ensure the MEXDEF keyword is present and in the correct place.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0163 MESSAGE *msgno*: 'MEXDEF' IS SPECIFIED BUT NO INSERTS EXIST IN THE MESSAGE DEFINITION..

Explanation: The MEXDEF keyword has been included in the definition of message *msgno* but there are no inserts defined for it. MEXDEF indicates the start of the user exit parameter definition section, and user exit parameters are only needed when a message contains inserts.

System Action: Processing continues.

User Response: Remove the MEXDEF keyword or ensure that message inserts have not been omitted from the message template.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0165 MESSAGE *msgno*: 'MEXDEF' SPECIFIED FOR A MESSAGE THAT IS NEITHER CONSOLE NOR TDQ.

Explanation: A MEXDEF record has been included in a message definition when the output destination is not Console or TDQ. The MEXDEF record implies that the message is available for the message user exit. Only messages to a console or TDQ destination can go through the message user exit.

System Action: Processing continues.

User Response: Either remove the MEXDEF record or change the message destination.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0166 MESSAGE *msgno*: USER EXIT DATA SPECIFIED FOR A BOOKONLY OR OFFLINE MESSAGE.

Explanation: User exit parameters have been specified for message *msgno* which is not produced by the message domain because it is a bookonly or offline message. This message does not need user exit parameters as it is not available for the message user exit.

System Action: Processing continues.

User Response: Ensure that message *msgno* has been correctly defined as bookonly or offline. If it has, remove the user exit parameters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0167 MESSAGE *msgno*: 'ROUTECODES' OR 'QUEUES' KEYWORD IS OUT OF SEQUENCE.

Explanation: A ROUTECODES or QUEUES keyword is in the wrong position in the message definition template.

System Action: Processing continues.

User Response: Correct the keyword sequence. The ROUTECODES keyword should be on the DEST line after the CONSOLE keyword. The QUEUES keyword should be on the DEST line after the TDQ keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0169 MESSAGE *msgno*: 'APPLID' SPECIAL INSERT MISSING ON CONSOLE MESSAGE.

Explanation: Console messages must have the APPLID special insert specified before the message text. This special insert is either missing or misspelled.

System Action: Processing continues.

User Response: Add the APPLID special insert to the message definition before the start of the message text.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0170 MESSAGE *msgno*: DATE, TIME, OR APPLID SPECIAL INSERTS MISSING OR INCORRECT ON TDQ MESSAGE.

Explanation: Messages with a destination of TDQ should be defined with DATE, TIME, and APPLID special inserts before the message text. One or more of these special inserts is missing or incorrect.

System Action: Processing continues.

User Response: Ensure that the three special inserts are present and correct.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0171 MESSAGE: *msgno* RESP2 VALUE IS TOO LONG. THE MAXIMUM IS 4 DIGITS.

Explanation: Message *msgno* is being defined with an associated RESP2 value that will be returned as EIBRESP2 by the CICS command that issues the message. The value specified for RESP2 exceeds the maximum length of four decimal digits.

System Action: Processing continues.

User Response: Ensure that the RESP2 value is correct.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMU0999 INTERNAL LOGIC ERROR: NO MESSAGE FOR ERROR CODE *code*.

Explanation: The system attempted to display an error message that has not been defined in the internal message table.

System Action: Processing of the utility program terminates.

User Response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHMEU

DFHMVxxxx messages

DFHMV0001E SEVERE ERROR IN CICS SVC SERVICES DURING RESMGR EXIT CLEAN-UP PROCESSING, R15OUT = X'*X'xxxxxxxx*', R0OUT = X'*X'xxxxxxxx*', R1OUT = X'*X'xxxxxxxx*', R15IN = X'*X'xxxxxxxx*', R0IN = X'*X'xxxxxxxx*', SVC NUMBER = X' *X'xx*'.

Explanation: The CICS RESMGR exit stub has twice called the CICS SVC to perform clean-up for a particular functional area during normal or abnormal termination of a CICS TCB or address space. However, the SVC return code was nonzero both times. The message inserts identify the functional area concerned (*R0IN*), the SVC number, and the inputs and outputs.

System Action: CICS termination continues. Subsequently, other CICS regions might encounter severe errors in the functional area for which termination clean-up has failed.

User Response: Inform the system programmer. Keep any dumps, the system log, and the output from the failing job. If other CICS systems are being seriously degraded by persistent errors in the functional area affected, it is usually necessary to re-IPL MVS to correct the problem.

Note: This message cannot be changed with the message editing utility.

Module: DFHMVRMS

DFHNCxxxx messages

DFHNC0101I Named counter server initialization is in progress.

Explanation: The named counter sequence number server program has started execution.

System Action: Initialization continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCMN

DFHNC0102I Named counter server for pool *poolname* **is now active.**

Explanation: The named counter sequence number server for the named pool has completed initialization and is now ready to accept connections.

System Action: The server waits for connection requests or operator commands.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCMN

DFHNC0103 Named counter server initialization failed because the POOLNAME parameter was not specified.

Explanation: The named counter sequence number server program needs to know the name of the associated named counter pool in order to complete initialization, but no pool name was specified in the SYSIN or PARM field parameters.

System Action: The server is terminated.

User Response: Ensure that the parameter **POOLNAME=***name* is specified either in the SYSIN parameters or in the PARM field of the JCL for the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCMN

DFHNC0104 Named counter server initialization failed because program DFHNCMN is not APF authorized.

Explanation: The named counter sequence number server main program DFHNCMN cannot complete initialization because it is not running with APF authorization.

System Action: The server is terminated.

User Response: Ensure that the named counter sequence number server program DFHNCMN is loaded from an APF authorized library and has been link-edited with the option AC(1).

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCMN

DFHNC0111I Named counter server for pool *poolname* **is terminating.**

Explanation: The named counter sequence number server has started termination processing, so no further requests will be processed.

System Action: Termination continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCMN

DFHNC0112I Named counter server has terminated, return code *retcode***, reason code** *rsncode***.**

Explanation: The named counter sequence number server has completed termination processing. For normal termination, the return code and reason code are both zero. If the termination was caused by an error, the return code will be 8 and the reason code will be the number of the previous DFHNCnnnn message giving the reason for termination.

System Action: The named counter sequence number server program returns control (via the AXM termination routines) to MVS for job step termination.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCMN

DFHNC0113 Named counter server completion code is *cmpcode***, reason code** *rsncode***.**

Explanation: The named counter sequence number server has terminated after intercepting an abnormal termination (ABEND) request. If the completion code is a system completion code, it is shown as three hexadecimal digits, otherwise it is shown as four decimal digits for a user completion code. Any associated reason code is shown as a four byte hexadecimal value, which will be zero if no reason code was provided.

System Action: The named counter sequence number server program returns control (via the AXM termination routines) to MVS for job step termination.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCMN

DFHNC0201I Processing *type parameters*

Explanation: The named counter sequence number server parameter processing routine is interpreting the specified parameter string. The first word gives the type of parameter (SYSIN/PARM/SET/DISPLAY/PRINT) and the rest is the specified parameters optionally followed by descriptive comment text after one or more spaces. If the parameters start with an asterisk or a space, the whole line is taken as descriptive comments.

System Action: Any specified parameters will be processed.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0202 Unknown parameter keyword: *keyword*

Explanation: This parameter keyword did not match any of the defined parameter keywords for the named counter sequence number server.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter keyword (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0203 Value *value* **for parameter** *keyword* **is incorrect. It must be a name of up to 8 characters.**

Explanation: The value of this named counter sequence number server parameter should have been specified as a name containing not more than 8 characters.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0204 Value *value* **for parameter** *keyword* **is incorrect. It must be a decimal number.**

Explanation: The value of this named counter sequence number server parameter should have been specified as a decimal number but was not in a valid format. (Numeric parameters can optionally be followed by the letter K, M or G to denote the appropriate powers of 1024).

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0205 Value *value* **for parameter** *keyword* **is greater than the maximum allowed value** *maximum***.**

Explanation: The value of this named counter sequence number server parameter exceeded the maximum allowed value, given in the message.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0206 Value *value* **for parameter** *keyword* **is less than the minimum allowed value** *minimum***.**

Explanation: The value of this named counter sequence number server parameter was less than the minimum allowed value, given in the message.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0207 Value *value* **for parameter** *keyword* **is incorrect. It should be a time hh:mm:ss or hh:mm or a number of seconds.**

Explanation: The value of this named counter sequence number server parameter did not conform to the correct syntax for a time interval.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0208 Parameter keyword *keyword* **is not supported for** *command***.**

Explanation: A named counter sequence number server parameter keyword was specified in a context where it is not valid, such as an attempt to **SET** a parameter which can only be specified at initialization time, or to specify at initialization time a parameter which is only valid on **DISPLAY**.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: If the error occurred at initialization, remove the incorrect parameter and restart the server. If it occurred on a server command, check that the command and parameter were correctly entered.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0209 Parameter text contains invalid character: *text*

Explanation: The named counter sequence number server parameter processing routine found some unexpected text when attempting to process parameters.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameters (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0210 Parameter keyword *keyword* **should not have a value for** *command***.**

Explanation: A named counter sequence number server parameter keyword was specified in the form *keyword=value* in a context where it was not expected, for example on a **DISPLAY** command.

System Action: Processing of the current line of parameters is terminated.

User Response: Reenter the command without specifying a value for the parameter to be displayed.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0211I Parameter value: *keyword=value*

Explanation: This message is issued to show the current value of a named counter sequence number server parameter setting in response to a **DISPLAY** or **PRINT** command.

System Action: Processing continues normally.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0212 Value *value* **for parameter** *keyword* **is incorrect. It must be one of** *validlist***.**

Explanation: The value of this named counter sequence number server parameter was not recognized. It should have been specified as one of the indicated list of values.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0213 Value for parameter *keyword* **is missing. The correct form is keyword=value.**

Explanation: A parameter keyword was specified without an associated parameter value on a named counter sequence number server **SET** command or in a SYSIN or PARM parameter string. Note that the only character which should appear between the parameter keyword and its intended value is the equals sign, without any extra spaces.

System Action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User Response: Reenter the parameter specification in the correct form *keyword=value*.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCPR

DFHNC0301I Console operator *consname* **issued command:** *command*

Explanation: A named counter sequence number server operator command has been issued via the MVS **MODIFY** or **STOP** command. This message identifies the console name (or TSO userid) from which the command was issued and the text of the command.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCOP

DFHNC0302I *command* **command ignored because no valid parameters were given.**

Explanation: A named counter sequence number server command was issued which had no valid parameters on it but was otherwise syntactically valid. The command has had no effect.

System Action: Processing continues normally.

User Response: Ensure that the command was entered correctly.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCOP

DFHNC0303I *command* **command has been processed.**

Explanation: A named counter sequence number server command has been processed successfully.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCOP

DFHNC0304I STOP command is waiting for connections to be closed. Number of active connections = *connections***.**

Explanation: A named counter sequence number server **STOP** command has been issued (either via an MVS **STOP** command or via an MVS **MODIFY** command with the text **STOP**) but there are still active connections to the server, so the **STOP** command has not yet taken effect.

System Action: The server rejects any further attempts to establish new connections, but continues processing requests for existing connections. Each time a connection is terminated, this message will be repeated as long as there are more active connections.

User Response: Further information about the connections which are still active may be obtained using the command **DISPLAY CONNECTIONS**.

If the server needs to be shut down without waiting for connections to be closed, issue the server **CANCEL** command. Note that this will immediately terminate any active connections, causing any further requests for that server to be given a SYSIDERR indication. (The MVS **CANCEL** command can also be used, but should preferably be avoided because it will prevent the server from producing its normal closedown statistics and reports).

Note that if a CICS region is abnormally terminated while server connect or disconnect processing is in progress, or is terminated without going through end of task processing (for example using the **FORCE** command) there is a slight chance that the server will not be notified that the connection has been terminated. In this case the server will not be able to be closed down with the server **STOP** command, but only with the server **CANCEL** command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCOP

DFHNC0305I STOP command has been processed.

Explanation: Processing of a named counter sequence number server **STOP** command has now been successfully completed. This means that there are no longer any active connections and the server is ready to close down.

System Action: The named counter sequence number server starts termination processing.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCOP

DFHNC0306 Named counter server does not support this command: *command*

Explanation: An operator command was addressed to the named counter sequence number server using the MVS **MODIFY** command, but the first word of the **MODIFY** parameter text is not a recognized server command (**SET**, **DISPLAY**, **PRINT**, **STOP**, **CANCEL** or an accepted abbreviation for one of these).

System Action: The command is ignored.

User Response: Correct and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCOP

DFHNC0307I CANCEL command has been processed. Number of active connections = *connections***.**

Explanation: A named counter sequence number server **CANCEL** command has been issued, either from an operator console or internally by the server in response to a severe error such as coupling facility failure. This message includes the number of active connections which may be affected by this command.

System Action: The server terminates immediately, without waiting to close connections.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCOP

DFHNC0308 Named counter server does not support CICS commands. To close it down, you can use the STOP command.

Explanation: An operator command which appears to be a CICS command (a four-character transaction code of the form 'CExx') was addressed to the named counter sequence number server using the MVS **MODIFY** command.

System Action: The command is ignored.

User Response: Correct and reenter the command. If the intention is to close down the server, use the server **STOP** or **CANCEL** command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCOP

DFHNC0351I Connection: Job *jobname* **Applid** *applid* **Idle** *idletime*

Explanation: This describes a single connection from a CICS region to the named counter sequence number server, in response to the server command **DISPLAY CONNECTIONS** or **PRINT CONNECTIONS**. The information shows the job name, the generic APPLID and the time in hours, minutes and seconds since the most recent request was issued using the connection.

System Action: A message in this form is issued for each active connection to the current server, then message DFHNC0352I is issued to show the total number of active connections.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCN

DFHNC0352I Total connections to this server: *connections***.**

Explanation: This describes the total number of active connections from CICS regions to the named counter sequence number server, in response to the server command **DISPLAY CONNECTIONS** or **PRINT CONNECTIONS**.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCN

DFHNC0361I Counter names: *counter1 counter2*

Explanation: This message lists one or two counter names in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS**.

System Action: This message is issued as many times as is necessary to list all current counter names, then message DFHNC0362I is issued to show the total number of counters.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRQ

DFHNC0362I The total number of named counters in the pool is *counters***.**

Explanation: This describes the total number of counters within the the pool, in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS**.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRQ

DFHNC0363I Details for named counter *counter***:**

Explanation: This message shows counter details in response to the named counter sequence number server command **DISPLAY COUNTER=***name* or **PRINT COUNTER=***name*.

The detailed message layout is as follows:

```
Current value         Minimum value         Maximum value
           n                     n                     n
Options: x y
```

System Action: Processing continues.

User Response: The output shows the current counter value, the minimum counter value that can be assigned and the maximum counter that can be assigned. If the maximum value has just been assigned, the counter will be at its limit value, which is one greater than the maximum value that can be assigned.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRQ

DFHNC0364 No named counter was found matching *counter***.**

Explanation: A counter name specified on the named counter sequence number server command **DISPLAY COUNTER=***name* or **PRINT COUNTER=***name* did not match any existing counter in the pool.

System Action: The command is ignored.

User Response: Ensure that the counter name was entered correctly, and that the command was addressed to the correct pool server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRQ

DFHNC0365I The number of named counters in the pool matching *counter* **is** *counters***.**

Explanation: This indicates the number of matching named counters within the pool for which details were displayed in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS** where the counter name contained one or more wild card characters.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRQ

DFHNC0401I Connected to CF structure *strname***.**

Explanation: The named counter sequence number server has successfully established a connection to the coupling facility list structure for the named counter pool, using the IXLCONN macro.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0402I CF structure *strname* was allocated by this connection.

Explanation: The named counter pool list structure did not previously exist and was allocated as part of the connection process.

System Action: List structure initialization will be performed if necessary.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0403 Connection to CF structure *strname* failed, IXLCONN return code *retcode*, reason code *rsncode*.

Explanation: The IXLCONN macro to connect the named counter sequence number server to its pool list structure failed.

System Action: The named counter sequence number server is terminated.

User Response: See the documentation of the IXLCONN macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code. If the reason code is of the form `xxxx0C08`, indicating structure allocation failure, this message will be followed by message DFHNC0409 giving the facility reason code for each coupling facility in which allocation was attempted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0404 CF structure *strname* cannot be used because it has been allocated with attribute *attribute*.

Explanation: The named counter sequence number server has successfully connected to its pool list structure but has found that the structure has been allocated using an IXLCONN structure attribute keyword which is not supported by the server.

System Action: The server is terminated.

User Response: This probably indicates that the structure has been allocated or modified by some program other than the named counter sequence number server program. In this case, the incorrect structure should be deleted (using the MVS **SETXCF FORCE** command) so that it will be reallocated correctly when the server is restarted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0406 Initialization failed for CF structure *strname* with response *response*.

Explanation: The named counter sequence number server processing to initialize the pool list structure failed with an abnormal internal response code.

System Action: The server is terminated.

User Response: If the response code is 6 (I/O error), it indicates that an IXLLIST macro gave an abnormal return code, in which case a previous DFHNC0441 message will have been issued giving the IXLLIST return code and reason code. If this response code is any other value, this indicates that the list structure is in a state which should not occur, probably indicating that it was allocated or modified by a program other than the named counter sequence number server. In this case the structure may need to be deleted (using the MVS **SETXCF FORCE** command) so that it will be reallocated when the server is restarted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0407 CF structure *strname* is not available for shared use.

Explanation: The named counter sequence number pool is currently locked for exclusive use by some other job such as a pool unload or reload job. (This serialization uses an MVS ENQ with scope SYSTEMS, major name 'SYSZDFH' and minor name equal to the structure name, 'DFHNCLS_poolname').

System Action: The server is terminated.

User Response: Check whether a pool maintenance job is currently running. If it is, wait until it has finished before trying to start the server again. You can find out what jobs are currently using the pool using this MVS command:

```
DISPLAY GRS,RES=(SYSZDFH,'DFHNCLS_poolname')
```

Note that for this command the pool name must be exactly eight characters, padded with trailing spaces if necessary.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0408 CF structure *strname* is not available for exclusive use.

Explanation: The current named counter sequence number unload or reload job requires exclusive use of the pool, but some other job is running which already has shared or exclusive use of the pool. (This serialization uses an MVS ENQ with scope SYSTEMS, major name 'SYSZDFH' and minor name equal to the structure name, 'DFHNCLS_poolname').

System Action: The server is terminated.

User Response: Check whether a named counter sequence number server or maintenance job is currently running. If it is, wait until it has finished before trying to run the current job again. You can find out what jobs are currently using the pool using this MVS command:

```
DISPLAY GRS,RES=(SYSZDFH,'DFHNCLS_poolname')
```

Note that for this command the pool name must be exactly eight characters, padded with trailing spaces if necessary.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0409 CF structure *strname* could not be allocated in facility *cfname*, reason code *rsncode*.

Explanation: If a previous named counter sequence number server message DFHNC0403 indicated an IXLCONN failure because the structure could not be allocated, this message is issued for each coupling facility in which allocation was attempted to show the facility reason code indicating why structure allocation failed. If the reason code is known to the server, the name of the reason code is given (as defined in the MVS macro IXLYCONA, but without the 'ConaRsn' prefix), otherwise its decimal value is shown.

If the response indicates InvalidStructureSize, this means that the initial list structure size (specified on the server **POOLSIZE** parameter or in the CFRM policy **INITSIZE** parameter) is not large enough to contain the required structure control information. The size of the control information is affected by the maximum structure size specified in the CFRM policy.

System Action: The server is terminated.

User Response: If further details are required, see the descriptions of the reason codes in the source of the MVS macro IXLYCONA which maps the connect answer area.

If the response was InvalidStructureSize, increase the initial structure size specification in the server **POOLSIZE** parameter or the CFRM policy **INITSIZE** parameter to ensure that there is enough space for data in addition to the structure control information. Also, check that the maximum structure size specified in the CFRM policy is not unnecessarily large. See the CICS *System Definition Guide* for more information on how to estimate pool sizes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0411I CF structure *strname* now has *percentage*% of entries in use.

Explanation: This message is issued by the named counter sequence number server when the percentage of list entries in use within the list structure increases past certain set threshold levels, or when it decreases past a threshold level after previously being at a higher level. This message is also issued immediately after a structure alter request has completed in order to show how the percentage has been affected by changes in the structure size. The percentage is calculated using information that is returned by successful coupling facility access requests, so if the message was triggered by structure alter completion and the current server has not processed any successful requests recently, the information may not be accurate.

System Action: The warning threshold is increased to the next higher level (normally 5% higher if less than 95%, otherwise 1% higher), or decreased to the previous lower level depending on whether the usage is increasing or decreasing.

User Response: Note that the structure may soon become full, preventing new counters from being created. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and any active servers will be able to use the increased space immediately.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0417I Alter request completed normally for CF structure *strname*.

Explanation: The named counter sequence number server has been notified by the system that a structure alter request has completed normally.

System Action: New values for the structure size and number of entries are stored. This message is followed by message DFHNC0411 to indicate the new usage percentage.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0418I Alter request ended abnormally for CF structure *strname* with status *status*.

Explanation: The named counter sequence number server has been notified by the system that a structure alter request has ended abnormally. The two bytes of status information in this message are taken from EEPLALTERENDSTATEFLAGS in the event exit parameter list (defined in the MVS macro IXLYEEPL).

System Action: No action is taken as a result of this notification, but any problem which caused the alter request to fail may result in other related problems.

User Response: If further information is required, look for MVS messages on the system log indicating the reason for the structure alter request failure. For further information about the status flags, see the source of the MVS macro IXLYEEPL.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0419I Alter request ended normally for CF structure *strname* but target was not attained.

Explanation: The named counter sequence number server has been notified by the system that a structure alter request has ended normally but the target size was not attained.

System Action: New values for the structure size and number of entries are stored. This message is followed by message DFHNC0411 to indicate the new usage percentage.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0424 Connectivity has been lost to CF structure *strname*. The named counter server cannot continue.

Explanation: The named counter sequence number server has been notified by the system that connectivity has been lost to the coupling facility containing the pool list structure.

System Action: The server issues an internal **CANCEL** command to terminate itself immediately.

User Response: Restart the server when connectivity to the coupling facility from the current system has been reestablished. If connectivity is still available from other systems, CICS transactions which require access to the affected pool should be diverted to those systems if possible.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0425 CF structure *strname* has failed. The named counter server cannot continue.

Explanation: The named counter sequence number server has been notified by the system that the named counter pool list structure has been lost due to coupling facility structure failure. All named counters in the pool have been lost.

System Action: Each server for the affected pool issues an internal **CANCEL** command to terminate itself immediately.

User Response: If another coupling facility is available and is included in the CFRM preference list for the failed structure, restart the servers to cause a fresh copy of the list structure to be allocated on the alternate coupling facility. If no other coupling facility is available, wait until the original coupling facility has been made available again before restarting the servers.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0431I Access statistics for CF structure *strname*:

Explanation: This message gives a summary of coupling facility access statistics. It is issued in response to a named counter sequence number server **DISPLAY** or **PRINT** command which includes the **CFSTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Requests:   Create       Get       Set    Delete   Inquire    Browse
                n         n         n         n         n         n
Responses:  Asynch
                n
            Normal   Not fnd  Vers chk  List chk  Str Full   I/O err
                n         n         n         n         n         n
```

System Action: Processing continues.

User Response: The statistics are described in detail in the DFHNCS4D data area. The individual fields have the following meanings:

- Response counts:

  Asynch Number of requests for which completion was asynchronous.

  Normal Number of normal responses.

  Not fnd The specified entry (table or item) was not found.

  Vers chk A version check failed for an entry being updated. This occurs when a duplicate name is found while creating a new entry, or when an assign request finds the counter has reached its limit, or when a compare and swap type request (assign with increment, rewind or update) finds that the counter changed before the attempt to set the new value, in which case the request is retried until successful.

  List chk A list authority comparison failed. This should only be possible during server initialization.

  Str full The list structure became full.

  I/O err Some other error code was returned by IXLLIST.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0432I Pool statistics for CF structure *strname*:

Explanation: This message gives a summary of the usage statistics for the named counter pool list structure. It is issued in response to a named counter sequence number server **DISPLAY** or **PRINT** command which includes the **POOLSTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Structure:    Size  Max size
                nK        nK
Entries:     Total    In use  Max used      Free  Min free
                 n         n         n         n         n
              100%        n%        n%        n%        n%
```

System Action: Processing continues.

User Response: The statistics are described in detail in the DFHNCS6D data area. Pool usage statistics are calculated from information returned by recent coupling facility requests, and are not always very accurate, especially if the pool has not been accessed recently by the current server.

The individual fields have the following meanings:

- Structure:

  Size Current allocated size of the list structure.

  Max size Maximum size to which this structure could be altered.

- Entries:

  Total Total entries in the currently allocated structure (initially set at structure connection time and updated on completion of any structure alter request).

  In Use Number of entries currently in use.

  Max Used Maximum number in use (since last reset).

  Free Number of entries currently free (total minus used).

  Min Free Minimum number of free entries (since last reset).

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0441 CF structure *strname* request failed, IXLLIST return code *retcode*, reason code *rsncode*.

Explanation: A coupling facility access request issued by the named counter sequence number server using the IXLLIST macro gave an abnormal return code.

System Action: The failing request is given a return code indicating a coupling facility access error.

User Response: See the documentation of the IXLLIST macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0442 CF structure *strname* request failed, structure is full.

Explanation: A coupling facility access request issued by the named counter sequence number server using the IXLLIST macro failed because there is no free entry to create a new named counter.

System Action: The failing request is given a return code indicating that there is no space available in the pool. This message will not be issued for further failures until the the number of entries in use has fallen well below the warning threshold.

User Response: Any named counters which are no longer in use should be deleted so that the space can be reused. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and any active servers will be able to use the increased space immediately. However, if this action is possible it should normally have been taken in response to earlier warning message before the structure became full.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0451 Purge for CF structure *strname* failed, IXLPURGE return code *retcode*, reason code *rsncode*.

Explanation: A named counter sequence number access request was terminated abnormally and the server issued an IXLPURGE macro to ensure any active IXLLIST request was purged before releasing the I/O buffer, but the IXLPURGE macro gave a non-zero return code.

System Action: The error is ignored because this only occurs when a request is already being terminated abnormally.

User Response: See the documentation of the IXLPURGE macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0461I Disconnected from CF structure *strname*.

Explanation: The named counter sequence number server has successfully disconnected from the pool list structure (using the IXLDISC macro) during termination.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0462 Disconnect from CF structure *strname* failed, IXLDISC return code *retcode*, reason code *rsncode*.

Explanation: The IXLDISC macro to disconnect the named counter sequence number server from its pool list structure failed.

System Action: The error is ignored, as disconnection only occurs when the server is already terminating.

User Response: See the documentation of the IXLDISC macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCCF

DFHNC0601I Starting statistics collection for interval since *lasttime*.

Explanation: The named counter sequence number server is about to collect interval, end of day or closedown statistics. This message identifies the start of the time interval to which the statistics apply, which is either the time that the server was started up or the time of the last reset, which occurs whenever interval or end of day statistics are produced.

System Action: The server proceeds with statistics collection.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCST

DFHNC0602I Statistics collection completed, reset performed.

Explanation: Named counter sequence number server statistics have been collected and counters have been reset. This occurs for interval or end of day statistics.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCST

DFHNC0603I Statistics collection completed.

Explanation: Named counter sequence number server statistics have been collected but counters have not been reset. This normally occurs at server closedown.

System Action: Processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCST

DFHNC0604 Timer SET failed, return code *retcode*, reason code *rsncode*.

Explanation: The statistics subtask in the named counter sequence number server tried to set up a timer wait interval but failed.

System Action: The interval statistics function is terminated with message DFHNC0606.

User Response: Check the return code and reason code. A return code of 4 indicates an attempt to set up more than one concurrent timer interval, which indicates a logic error in the server. The reason code in this case is the MVS STIMERM identifier for the existing timer interval. A return code of 8 indicates that the MVS STIMERM macro failed, in which case the reason code indicates the return code received from STIMERM SET.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCST

DFHNC0605 Timer CANCEL failed, return code *retcode*, reason code *rsncode*.

Explanation: The statistics subtask in the named counter sequence number server tried to cancel a timer wait interval but failed.

System Action: The interval statistics function is terminated with message DFHNC0606.

User Response: Check the return code and reason code. A return code of 4 indicates an attempt to cancel a nonexistent timer interval, which indicates a logic error in the server. A return code of 8 indicates that the MVS STIMERM macro failed, in which case the reason code indicates the return code received from STIMERM CANCEL.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCST

DFHNC0606 Statistics collection function is no longer available.

Explanation: The statistics collection subtask in the named counter sequence number server was unable to continue processing and has terminated. The reason will have been indicated by an earlier message.

System Action: The interval statistics subtask terminates and no further interval statistics or end of day statistics will be produced for this run of the server.

User Response: See the earlier message indicating the reason for the termination of the subtask.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCST

DFHNC0610I Statistics written to SMF, return code was *retcode*.

Explanation: Named counter sequence number server statistics have been sent to SMF. The return code from the SMFEWTM macro is indicated in this message. A non-zero return code usually indicates that SMF recording was suppressed because of current SMF options or an installation exit.

System Action: Processing continues.

User Response: If the return code is non-zero but SMF statistics were expected to be successfully written, see the documentation of the SMFEWTM macro in *OS/390 MVS System Management Facilities (SMF)* (GC28-1783) for more information about return codes.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCST

DFHNC0701I Named counter pool *poolname* is to be unloaded.

Explanation: The named counter sequence number server program has been started with the **UNLOAD** option requesting that the named counter pool is unloaded to a sequential data set.

System Action: The server starts to process the unload request. In this case, the rest of cross-memory server initialization is bypassed as it will not be needed.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCUL

DFHNC0702I Named counter pool *poolname* has been successfully unloaded.

Explanation: The named counter pool has been unloaded successfully.

System Action: The server closes down normally.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCUL

DFHNC0703I Number of unloaded counters: *counters*. Blocks written: *blocks*.

Explanation: This message provides additional information about the results of the named counter pool unload process, giving the number of named counters which were unloaded and the number of 4K data blocks written to the unloaded named counter pool data set.

System Action: Server termination continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCUL

DFHNC0704 DFHNCUL data set for unload could not be opened.

Explanation: The data set to contain the unloaded named counter pool could not be opened.

System Action: Unload processing is terminated and the server is closed down with message DFHNC0706.

User Response: Check that the DFHNCUL DD statement is present in the JCL for the unload job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCUL

DFHNC0705 Unload access to CF structure *strname* **failed with response** *response***.**

Explanation: The named counter pool unload process failed because of a problem with coupling facility access.

System Action: Unload processing is terminated and the server is closed down with message DFHNC0706.

User Response: If the response code is 6, this indicates that an unexpected IXLLIST error occurred, for which a previous message DFHNC0441 will have been issued. Any other response code indicates an internal logic error.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCUL

DFHNC0706 Unload for named counter pool *poolname* **was unsuccessful.**

Explanation: The named counter pool unload process failed. The reason will have been described in a previous message.

System Action: The server is terminated.

User Response: See the previous message giving the reason for the unload failure. Note that any unload data set produced in this case will be incomplete and will not be valid for reload purposes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCUL

DFHNC0801I Named counter pool *poolname* **is to be reloaded.**

Explanation: The named counter sequence number server program has been started with the **RELOAD** option requesting that the named counter pool is to be reloaded from a sequential data set produced using the **UNLOAD** option.

System Action: The server starts to process the reload request. In this case, the rest of cross-memory server initialization is bypassed as it will not be needed.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRL

DFHNC0802I Named counter pool *poolname* **has been successfully reloaded.**

Explanation: The named counter pool has been reloaded successfully.

System Action: The server closes down normally.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRL

DFHNC0803I Counters reloaded: *counters***. Counters bypassed:** *duplicates***. Blocks read:** *blocks***.**

Explanation: This message provides additional information about the results of the named counter pool reload process. Named counters on the unloaded data set are bypassed during reload processing if they already exist in the pool (for example as a result of a previous reload which could not be completed due to lack of space).

System Action: Server termination processing continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRL

DFHNC0804 DFHNCRL data set for reload could not be opened.

Explanation: The data set containing the named counter pool to be reloaded could not be opened.

System Action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User Response: Check that the DFHNCRL DD statement is present in the JCL for the reload job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRL

DFHNC0805 Reload access to CF structure *strname* **failed with response** *response***.**

Explanation: The named counter pool reload process failed because of a problem with coupling facility access.

System Action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User Response: If the response code is 6, this indicates that an unexpected IXLLIST error occurred, for which a previous message DFHNC0441 will have been issued. Any other response code indicates an internal logic error.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRL

DFHNC0806 Unexpected end of file encountered on reload data set.

Explanation: End of file was encountered on the data set containing the unloaded named counter pool before the logical end of the unloaded data was encountered.

System Action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User Response: This indicates that the unloaded data set is incomplete, perhaps because the unload process was abnormally terminated.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRL

DFHNC0807 Reload data set contains incorrect data near block *block***, offset** *offset***.**

Explanation: The named counter pool reload process failed because the unloaded pool data set is not in the correct format.

System Action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User Response: Check that the correct data set is being used and that the unload process completed normally.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRL

DFHNC0808 Reload for named counter pool *poolname* **was unsuccessful.**

Explanation: The named counter pool reload process could not be completed. The reason will have been described in a previous message.

System Action: The program is terminated.

User Response: See the previous message giving the reason for the reload failure.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRL

DFHNC0809 Reload for CF structure *strname* **failed, structure is full.**

Explanation: Named counter pool reload processing failed because there are insufficient free entries or elements to store the new data in the structure.

System Action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User Response: If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and the reload job can then be run again as soon as the alter request completes, in which case it will skip over duplicate information which has already been successfully reloaded. If the structure is at its maximum size, use the MVS **SETXCF FORCE** command to delete the structure, then increase the **SIZE** and **INITSIZE** parameters in the current CFRM policy and activate the updated policy, and rerun the reload job. The approximate amount of information which could not be reloaded can be estimated by comparing the numbers of blocks read and named counters reloaded, as described by following message DFHNC0803, with the corresponding numbers from message DFHNC0703 in the unload job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Module: DFHNCRL

DFHNC0911I R12=*prv* **RQ Entry** *function* **Name=***counter* **Job=***region* **Task=***task*

Explanation: Named counter sequence number server request tracing is active and information from the NCRQ parameter list is being traced on entry to the request module DFHNCRQ.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCRQ

DFHNC0912I R12=*prv* **RQ Exit** *response* **Name=***counter* **Job=***region* **Task=***task*

Explanation: Named counter sequence number server request tracing is active and information from the NCRQ parameter list is being traced on exit from the request module DFHNCRQ.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCRQ

DFHNC0913I R12=*prv* **RQ** *parameter* **Hex=***hex* **Dec=***decimal*

Explanation: Named counter sequence number server request tracing is active and a parameter or result value from the NCRQ parameter list is being traced in hexadecimal and decimal notation by the request module DFHNCRQ.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCRQ

DFHNC0914I R12=*prv* RQ Options *options*

Explanation: Named counter sequence number server request tracing is active and an options parameter or result value from the NCRQ parameter list is being traced by the request module DFHNCRQ.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCRQ

DFHNC0941I R12=*prv* CF Entry *request* **Name=***counter* **R1=***parmlst*

Explanation: Named counter sequence number server tracing of coupling facility accesses is active and information from the request interface parameter list is being traced on entry to the coupling facility interface module DFHNCCF.

- CF interface requests:

  INI Initialize server connection

  CRE Create counter

  GET Assign and increment counter

  SET Set counter to a new value

  DEL Delete counter

  KEQ Inquire on single counter

  KGE Inquire browse

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCCF

DFHNC0942I R12=*prv* CF IXLLIST REQUEST=*request*
REASON=*rsncode*

Explanation: Named counter sequence number server tracing for coupling facility accesses is active and the result from an IXLLIST macro is being traced. The information traced includes an abbreviation of the type of request being performed and the reason code returned by the macro.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCCF

DFHNC0943I R12=*prv* CF IXLLIST *keyword=value*

Explanation: Named counter sequence number server tracing for coupling facility accesses is active and an IXLLIST parameter or result value (key, authority value, version or adjunct area) is being traced in hex and (if relevant) character format.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCCF

DFHNC0944I R12=*prv* CF Exit *response* **Name=***counter*

Explanation: Named counter sequence number server tracing for coupling facility accesses is active and information from the request interface parameter list is being traced on exit from the CF request module DFHNCCF.

- Response codes:

  OK Normal completion.

  LEN ERROR Data to be read exceeds buffer length.

  NOT FOUND No entry was found with the given key.

  DUPLICATE Add was rejected because counter name already exists.

  WRONG VER Change was rejected because version did not match.

  AUTH FAIL List authority value did not match.

  I/O ERROR IXLLIST error other than any of the above.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Module: DFHNCCF

DFHNC0999I Trace *text*

Explanation: This message is used by the named counter sequence number server for non-specific debugging traces in multiple modules, for use by service personnel. It should not appear in normal execution unless debugging traces were deliberately activated, or an internal logic error was encountered.

System Action: Processing continues.

User Response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

DFHNQxxxx messages

DFHNQ0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code in this manual. for further guidance.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHNQDM, DFHNQED, DFHNQIB, DFHNQNQ

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHNQ0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*. The code X'*code*' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System Action: An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHNQDM, DFHNQED, DFHNQIB, DFHNQNQ

XMEOUT Parameters: *applid, X'code', modname*

DFHNQ0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which happened to be executing at the time when the error was detected.

System Action: An exception entry is made in the trace table.

A system dump is taken unless you have specifically suppressed the dump (by a user exit program at the XDUREQ exit, in the dump table or by global system dump suppression). CICS processing continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that execution of module *modname* is terminated and CICS continues.

If you have specified ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If the runaway has occurred in module DFHNQIB, it is probably the result of a long-running UOWENQ browse. If there are many enqueues in the system (particularly if many are owned by the same task), CICS can take a long time to process the browse. This can be resolved by increasing the runaway interval associated with the task performing the browse. To do this change the RUNAWAY attribute of the associated transaction definition.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online using the CEMT transaction.

If raising the ICVR time does not solve the problem, you may need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHNQDM, DFHNQED, DFHNQIB, DFHNQNQ

XMEOUT Parameters: *applid, X'offset', modname*

DFHNQ0101 *date time applid* **ENQMODEL** *model* **has been installed.**

Explanation: The ENQMODEL resource *model* has been installed on the local system.

System Action: The enqmodel is installed and CICS continues normally.

User Response: None required.

Destination: CSMT

Module: DFHNQRN

XMEOUT Parameters: *date, time, applid, model*

DFHNQ0102 *date time applid* **ENQMODEL** *model* **has been discarded.**

Explanation: The ENQMODEL resource *model* has been discarded from the local system.

System Action: The enqmodel is discarded and CICS continues normally.

User Response: None required.

Destination: CSMT

Module: DFHNQRN

XMEOUT Parameters: *date, time, applid, model*

DFHNQ0103 *date time applid* **The limit for the number of concurrent sysplex resource ENQ requests has been reached. Transaction** *tran* **detected return code** *X'code'* **from MVS ENQ.**

Explanation: Code X'*code*' was returned by MVS when transaction *tran* attempted to Enqueue on a sysplex-wide resource. This indicates that the limit for the number of concurrent sysplex resource ENQ requests has been reached.

System Action: The task does not have control of the resource. The task issuing the EXEC ENQ request is abended ABCODE ANQC.

User Response: Retry the transaction one or more times. If the problem persists, consult your system programmer, who might be able to tune the system so that the limit is no longer exceeded.

Destination: CSMT

Module: DFHNQED

XMEOUT Parameters: *date, time, applid, tran, X'code'*

DFHNQ0104 *applid* **MVS returned code** *X'code'* **when transaction** *tran* **attempted to enqueue on a sysplex-wide resource. This in dicates that an unexpected environmental error has been detected.**

Explanation: Code *code* was returned by MVS when transaction *tran* attempted to Enqueue on a sysplex-wide resource. This indicates that an unexpected environmental error has been detected.

System Action: The task does not have control of the resource. The task issuing the EXEC ENQ request is abended ABCODE ANQD.

User Response: Retry the transaction one or more times. If the problem persists, consult your system programmer.

Destination: Console

Module: DFHNQED

XMEOUT Parameters: *applid, X'code', tran*

DFHNQ0105 *date time applid* **ENQMODEL** *model* **was either disabled or in the waiting state when transaction** *tran* **attempted to enqueue on a matching resource name.**

Explanation: An EXEC ENQ has been issued on a resource for which the enqmodel is either disabled or in the waiting state.

System Action: The ENQ request is rejected, and the issuing task abended abcode ANQE ENQ_DISABLED.

User Response: To avoid multiple transaction abends, such transactions should be disabled before disabling the enqmodel.

Destination: CSMT

Module: DFHNQRN

XMEOUT Parameters: *date, time, applid, model, tran*

DFHNQ0106 *date time applid* **ENQMODEL** *model* **has been replaced.**

Explanation: The ENQMODEL resource *model* has been replaced on the local system.

System Action: The enqmodel is replaced and CICS continues normally.

User Response: None required.

Destination: CSMT

Module: DFHNQRN

XMEOUT Parameters: *date, time, applid, model*

DFHNQ0107 *date time applid* **ENQMODEL** *model1* **must be disabled before enabling ENQMODEL** *model2***.**

Explanation: An attempt to enable an enqmodel failed, because a less specific enqmodel is enabled. Enqmodels forming nested generic enqnames must be enabled in order, from the most to the least specific.

ENQMODEL *model1* must be disabled before enabling ENQMODEL *model2*.

System Action: The enqmodel is not installed, but CICS continues normally.

User Response: Review the enqmodel definitions. If an enqmodel containing AB* is enabled, it must be disabled before enabling one with ABCD*. If enqmodels containing AB* and ABC* are installed, one must be discarded before installing an enqmodel with ABCD*.

Destination: CSMT

Module: DFHNQRN

XMEOUT Parameters: *date, time, applid, model1, model2*

DFHPAxxxx messages

DFHPA0001 *applid* **An abend (code** *aaa/bbbb***) has occurred at offset** *X'offset'* **in module** *modname***.**

Explanation: An unexpected program check or operating system abend with abend code *aaa/bbbb* occurred at offset X'*offset*' in module *modname*. This can be caused by corruption of CICS code or control blocks.

During initialization, CICS might not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: A system dump is taken unless specifically suppressed for this system abend code, and the system attempts to continue operation unless termination has been requested via the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: Investigate the cause of the abend or program check using the dump, the abend code, the trace table, and any other diagnostic messages which may have been issued.

Destination: Console

Modules: DFHPAGP, DFHPADM, DFHPAIO

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHPA0002 *applid* **A severe error (code** *X'code'***) has occurred in module** *modname***.**

Explanation: An error has been detected in module *modname*

The code X'*code*' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: An exception entry (code X'*code*' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHPADM

XMEOUT Parameters: *applid, X'code', modname*

DFHPA0004 *applid* **A possible loop has been detected at offset** *X'offset'* **in module** *modname***.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'*offset*'. This is the offset of the instruction which was executing when the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User Response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that the CICS module identified in the message is terminated and CICS continues..

However, if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. However, you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Module: DFHPADM

XMEOUT Parameters: *applid, X'offset', modname*

DFHPA1100 *applid* **OVERRIDE PARAMETERS FROM JCL EXEC STATEMENT:** *parm*

Explanation: This message is displayed during CICS initialization to show the SIT overrides obtained from the PARM parameter of the JCL EXEC statement for the CICS job. If the parameter string *parm* contains 40 characters or less, it is shown on this message. Otherwise it is shown on a DFHPA1927 message following this message.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: System initialization continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPAIO

DFHPA1101 *applid* **DFHSIT***xx* **IS BEING LOADED.**

Explanation: This is an informational message displayed during CICS initialization.

xx, if present, represents the 1- or 2-character suffix for the SIT being used.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: System initialization continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPADM

DFHPA1102 *applid* **OVERRIDE PARAMETERS FROM SYSIN:**

Explanation: This message is displayed during CICS initialization before displaying the SIT overrides obtained from the SYSIN data set. The message is followed by a series of DFHPA1927 messages that show the actual contents of the SYSIN records.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: System initialization continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPAIO

DFHPA1103 *applid* **END OF FILE ON SYSIN.**

Explanation: This is an informational message displayed when CICS has reached the end of the SYSIN data set.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: System initialization continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPAIO

DFHPA1104 *applid* **SPECIFY ALTERNATIVE SIT PARAMETERS, IF ANY, AND THEN TYPE '.END'.**

Explanation: If the word "CONSOLE" or "CN" was detected in either the parameter input stream on the EXEC statement of the CICS JCL, or in the SYSIN data set, then this prompt message will be displayed when the parameter (PA) manager is ready to accept console overrides.

System Action: The system initialization program waits for a response from the operator.

User Response: Enter the required parameter changes, separated by commas. Terminate your reply by entering '.END'.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPAIO

DFHPA1105 *applid* **CONTINUE SPECIFYING SIT PARAMETERS AND THEN TYPE '.END'.**

Explanation: While SIT overrides are being entered on the console, this prompt message will be displayed to request more overrides if the previous line did not end with ".END".

System Action: The system initialization program waits for more override parameters to be entered by the operator.

User Response: Continue entering the required parameter changes, separated by commas. Terminate your reply by entering '.END'.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPAIO

DFHPA1106 *applid* **MODULE** *DFHSITxx* **COULD NOT BE LOADED. SPECIFY NEW SUFFIX, 'NONE'(UNSUFFIXED) OR 'CANCEL'.**

Explanation: During PA domain initialization, a SIT with a suffix of *xx* could not be loaded.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: The PA domain initialization routines wait for the operator to enter an alternative 1- or 2-character suffix, or YES to request the unsuffixed SIT, or CANCEL. If CANCEL is entered, CICS is abnormally terminated.

User Response: Determine whether the suffix is correct. If it is not, enter the correct suffix or enter 'YES' for the unsuffixed version. Otherwise enter 'CANCEL', correct the error (by adding the module to the appropriate library) and restart CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPADM

DFHPA1107 *applid* **A** *level* **VERSION OF MODULE** *DFHSITxx* **WAS LOADED. CICS CAN ONLY INITIALIZE WITH THE CURRENT LEVEL SIT.**

Explanation: During PA domain initialization, a SIT with a suffix of *xx* and a release level of *level* was loaded. Since this version is not compatible with current CICS code, CICS is abnormally terminated.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS terminates abnormally.

User Response: To correct the error, reassemble the SIT at the current CICS level. Refer to the *CICS Transaction Server for OS/390 Migration Guide*. for guidance on changes to the SIT that may be required for the new release. CICS should then be restarted.

Alternatively, the system may have been pointing to the wrong SIT. To correct this second case, check the bring up JCL to make sure that the 'SIT=' override is correct. Refer to the *CICS System Definition Guide* for guidance on coding system initialization parameters. Furthermore, check the library search order to make sure that stray SITs, which may be unknowingly present, are removed or renamed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPADM

DFHPA1108 *applid* **DFHSIT***xx* **HAS BEEN LOADED. (GENERATED AT MM/DD=** *mm/dd* **HH/MM=** *hh/mm***).**

Explanation: This is an informational message displayed during CICS initialization. It displays the date and time that the loaded system initialization table was generated.

- *xx* is the suffix of the SIT being used.
- *mm/dd* is the date (month and day) that the SIT was generated.
- *hh/mm* is the time (hours and minutes of the 24 hour clock) that the SIT was generated.

System Action: CICS Initialization continues.

User Response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPADM

DFHPA1901 *applid modname* **COULD NOT BE FOUND OR IS IN A NON-APF LIBRARY/CONCATENATION. CICS IS TERMINATED.**

Explanation: An error has occurred while attempting to load either DFHPASYL or DFHPAIO.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS terminates abnormally.

User Response: Correct the problem with the module that failed to load.

For example, check that a module *modname* actually exists in the program libraries used by CICS. Check the JCL and that the correct name, the correct library and the correct member in the library are used.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPADM

DFHPA1902 *applid* **UNABLE TO OPEN SYSIN DATA SET. CICS IS TERMINATED.**

Explanation: An error has occurred while attempting to open the SYSIN data set. This occurs if the SYSIN data set does not exist.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS terminates abnormally.

User Response: Ensure that the SYSIN data set exists and is correct.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPAIO

DFHPA1903 *applid* **ERROR WHILE READING FROM SYSIN DATA SET. CICS IS TERMINATED.**

Explanation: An error has occurred while attempting to read a record from the SYSIN data set. This can occur if the SYSIN data set has been corrupted, or has been incorrectly defined (for example, has not been defined with a logical record length, LRECL, of 80).

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS terminates abnormally.

User Response: Correct the problem in the SYSIN data set.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPAIO

DFHPA1907 *applid* **SIT DATA** *data* **IS INVALID FOR KEYWORD** *keyword***. KEYWORD IS IGNORED.**

Explanation: This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, AND the PARMERR=IGNORE option is specified in the SIT or as an override.
keyword is the keyword for which the value is in error.
data is the invalid data.

System Action: The keyword is ignored. CICS will attempt to initialize without the keyword in error.

User Response: Correct the error by specifying a valid value for the keyword wherever it has been specified, either in the SIT or in the CICS input JCL, prior to restarting CICS. Refer to the *CICS System Definition Guide* for information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPAGP

DFHPA1908 *applid* **SIT DATA** *data* **IS INVALID FOR KEYWORD** *keyword***. CICS IS TERMINATED.**

Explanation: This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, and the PARMERR=ABEND option is specified in the SIT or as an override.
keyword is the keyword for which the value is in error.
data is the invalid data.
This message is issued only if the data for keyword MCT is in error.

System Action: CICS terminates abnormally.

User Response: Correct the error by specifying a valid value for the keyword wherever it has been specified, either in the SIT or in the CICS input JCL, prior to restarting CICS. Refer to the *CICS System Definition Guide*. for information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPAGP

DFHPA1909 *applid* **SIT DATA** *data* **IS INVALID FOR KEYWORD** *keyword***. RESPECIFY KEYWORD AND DATA.**

Explanation: This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, and the PARMERR=INTERACT option is specified in the SIT or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

Note: PARMERR=INTERACT is the default action for invalid keyword data.

System Action: CICS waits for the corrected keyword and data to be entered as an override on the console by the operator, and analyzes this override.

User Response: Enter the corrected SIT keyword and data on the console, or bypass by typing '.END', or just supply a blank line.

Refer to the *CICS System Definition Guide* for information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPAGP

DFHPA1910 *applid* **SIT OVERRIDE** *keyword* **IS NOT RECOGNIZED. OVERRIDE IS IGNORED. (MODULE** *modname***).**

Explanation: This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=IGNORE option is specified in the SIT, or as an override. The insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: The keyword is ignored, and CICS attempts to initialize without the keyword in error.

User Response: Ensure the keyword specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM, DFHPAGP

DFHPA1911 *applid* **SIT OVERRIDE** *keyword* **IS NOT RECOGNIZED. CICS IS TERMINATED.**

Explanation: This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=ABEND option is specified in the SIT, or as an override. the insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS terminates abnormally.

User Response: Correct the error by specifying a valid keyword in the SIT overrides, then restart CICS. Refer to the *CICS System Definition Guide*. for information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPADM

DFHPA1912 *applid* **SIT OVERRIDE** *keyword* **IS NOT RECOGNIZED. SPECIFY CORRECT SIT OVERRIDE.**

Explanation: This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=INTERACT option is specified in the SIT, or as an override. The insert *keyword* is the invalid keyword. Note that PARMERR=INTERACT is the default action for invalid SIT overrides.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS waits for the corrected override to be entered on the console by the operator, and analyzes this override.

User Response: Enter the corrected SIT override on the console, or bypass by typing '.END', or just supply a blank line.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Module: DFHPADM

DFHPA1913 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE** *keyword* **BY MODULE** *modname***. OVERRIDE IS IGNORED.**

Explanation: This message can be issued in the following situations:

- If the data supplied for a SIT override is syntactically invalid, and the PARMERR=IGNORE system initialization parameter is specified. The insert *keyword* is the keyword for which the value is in error.

- In response to invalid data when PARMERR=INTERACT is specified but the user has been attempting to correct a previous invalid SIT keyword or value. In this case, message DFHPA1912 or DFHPA1915 follows this message to prompt for the correction to the original error.
- When PARMERR=INTERACT is specified if invalid data has been passed in PARM or SYSIN for a keyword that cannot be entered from the console (and therefore cannot be corrected by interaction with the console). This typically applies to security keywords.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: The keyword is ignored, and CICS attempts to initialize without the keyword in error.

User Response: Ensure the value specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM, DFHPAGP

DFHPA1914 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE** *keyword***. CICS IS TERMINATED.**

Explanation: This message is displayed if the data specified for a SIT override is syntactically invalid, and the PARMERR=ABEND option is specified in the SIT, or as an override.

The insert *keyword* is the keyword for which the value is in error.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System Action: CICS terminates abnormally.
