Preface

When the term "CICS" is used without any qualifications in this book, it refers to the CICS element of IBM CICS Transaction Server for OS/390.

This master index consists of the merged primary entries from the indexes of books in the CICS library. Each entry is followed by one or more book identifiers, indicating the book(s) in which the topic is discussed. These identifiers are listed in "Book identifiers used in this Master Index" on page ix. After looking up a topic in the master index, you can either refer to the indexes in the books, or search the softcopy version of the book listed against that topic.

The *CICS Diagnosis Reference* manual contains information on all CICS source and executable modules which are provided on the distribution tapes (including the optional source material and the Japanese language feature tape, as well as the basic distribution tape). For this reason, the primary index entries for DFHxxxxx names in *CICS Diagnosis Reference* have been excluded from the master index.

To improve retrievability, some closely similar entries have been replaced by a single entry in this index. For this reason, an entry in the master index may not have an exact match in an individual index.

For some topics, secondary index entries have been included to qualify the meaning of the primary entry.

This book is intended to help you find a topic in the CICS library. It contains guidance about the contents of the CICS manuals. The information in this book must not be used for programming purposes.
