

With IBM WebSphere® Application Server, you can quickly create new application servers that are responsive to your users' demands and expectations.

You can also combine your existing servers, and reuse their transactional integrity, proven performance and dependability.

WebSphere Application Server software supports applications that are based either on integrated WebSphere software platform products or on vendor products.

Such applications can range from dynamic Web presentations to sophisticated transaction-processing systems.

IBM WebSphere Application Server - Express, WebSphere Application Server, and IBM WebSphere Application Server Network Deployment are incrementally related.

As you scale up your On Demand Business demand, you can also scale up your On Demand Business capability by moving from one product to the next.

IBM WebSphere Application Server for z/OS is a full-function version of WebSphere Application Server Network Deployment with the function of the base product.

WebSphere Application Server for z/OS can support On Demand Business on any scale and features IBM z/OS® integration designed for the utmost in high-end deployments.

WebSphere Application Server Community Edition™ is a new product in the portfolio and is freely downloadable.

The Express product is the entry point for a single distributed environment machine.

The base WebSphere Application Server product differs from the Express product in licensing and tooling support.

WebSphere Application Server Network Deployment and WebSphere Application Server for z/OS

include all of the WebSphere Application Server functionality of the other two products

and also offer multiple-machine hosting and centralized management through a deployment manager process.

WebSphere Application Server Extended Deployment™ is an add-on product for either WebSphere Application Server Network Deployment

or WebSphere Application Server for z/OS, delivering enhanced functionality and ease of use initiatives.

Regardless of where your data and applications reside,  
WebSphere Application Server helps you build and run On Demand Business  
applications

that make your business available to a whole new world of customers through the Internet.
