如今的存储管理

- 每一个存储设备都有自己的管理工具
- 管理员必须精通每一种存储管理工具
- 不同的管理工具几乎做“相同”的事情
- 没有一个端到端(HBA to disk)的存储管理平台
- 没有一个集中的报告管理工具
- 不能自动化定制存储管理任务

TotalStorage Productivity Center 能够帮助回答的问题

问题1：您如何对IT环境中的存储资源能进行详细统计分析？

问题2：您如何决定何时进行存储扩容？何时购置新的存储设备？

问题3：您是否担心由于存储空间不足而造成应用宕机？

问题3：您是否感觉到对多台异构存储设备的管理力不从心？

问题4：您是否对存储资源具有一个统一的**Topology**图，并且能够对连接状态及数据流量实时更新？

问题5：您是否能够对磁盘阵列的性能进行综合评估，已发现存在或潜在的风险？

TPC集中存储管理平台 新的配置分析

Best Practices & Security

Requires SE

■ 新的监控 & 通知

在最好的实践策略基础上，提供配置验证

■ 自动的

或手工的分析方法，能够被用于所有的 fabrics, a single fabric, 或者 a single zoneset

■ 容易识别

策略violators 会被打标记，并显示在 topology viewer 里

■ 安全事件

关于 zone 的安全 violations, 通知 IT administrator

■ 动态alerting的多种方法;

SNMP traps, tech events, emails

■ 优化

通过一个xml格式，优化自己最好的实践策略

Configuration Analysis
Scope: All Fabrics

Depending on selected scope, some policies do not apply and are grayed out. These policies will be ignored by the configuration analyzer.

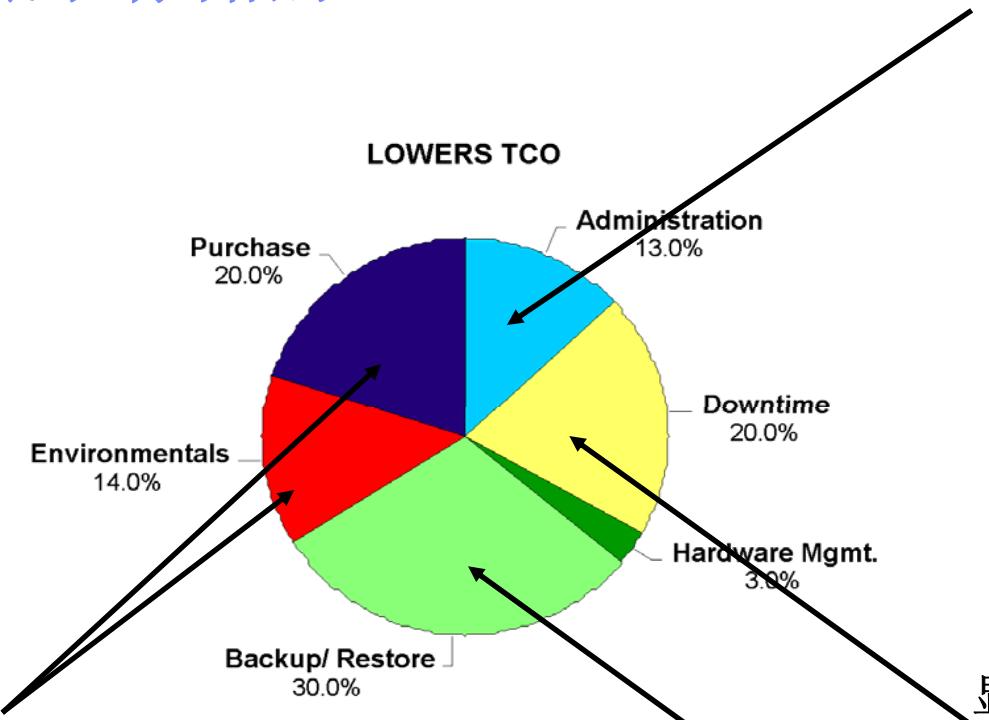

Select All/ UnSelect All

1. Each active and connected computer and storage subsystem port must be in at least one zone.
2. Each HBA accesses storage subsystem ports or tape ports, but not both.
3. Each volume is accessed only by computers running the same type and version of operating system.
4. Each zone contains only HBAs from a single vendor.
5. Each zone contains only a single model of storage subsystem.
6. Each zone is part of a zone set.
7. Each host must be zoned so that it can access all of its assigned volumes.
8. Each computer has only HBAs of the same model and firmware version.
9. For each host type and operating system, every HBA of a given model must have the same firmware version.
10. Every SAN switch of a given model must have the same firmware version.
11. Every storage subsystem of a given model must have the same firmware version.
12. Each fabric may have a maximum of x zones.
The maximum number of zones that can be present in a fabric: 9
13. Each zone may have a maximum of x zone members.
The maximum number of zone members that can be present in a zone: 20
