Developer skills roadmap for IBM Content Manager Version 8.0

Role

This role is focused on the programming and integration necessary to extend the capabilities of Content Manager out of the box. This role could be viewed as the applications architect, and is focused on APIs, data modeling, and in-depth programming activities. The role assumes API knowledge, programming environments, and knowledge and experience with all platforms, toolkits and multiple release levels.

Assumptions

- · Working knowledge of underlying operating system platforms
- · Basic knowledge of WebSphere Application Server and database (DB2, Oracle)-for install and administration
- Working knowledge of Object Oriented Programming (00) using Java or C++

Objective

Build working knowledge of Content Manager V8
