DataDirect TECHNOLOGIES — The World Leader In Data Connectivity and Mainframe Integration

Innovations for IMS
-- sponsored by DataDirect Technologies --

"Innovations in IMS" is a one-day seminar featuring the latest IMS technical information, customer success stories, new ISV tools and demonstrations.

Joining DataDirect to support this event will be experts from the IBM IMS Development Lab, who will guide us through the latest innovations in the IMS product. We will also introduce DataDirect's Shadow middleware for IMS that seamlessly incorporates features for both SOA and Data – with unique capabilities to lower mainframe TCO through zIIP exploitation. Plus, we have an exciting customer use- case from The State of Maryland Department of Public Safety and Corrections, an IMS shop winning acclaim for their new Law Enforcement Dashboard.
