A20   IMS Connector for Java: Developing Web Applications for Accessing IMS Transactions
Haley Fung

Come to this session to learn about building Web applications with VisualAge for Java in the development environment. This topic utilizes basic Java concepts to address the creation of Java applications, servlets and Enterprise JavaBeans that use IMS Connector for Java to run IMS transactions in the WebSphere Application Server environment. This presentation also illustrates how to use the latest update to IMS Connector for the J2EE Connector Architecture technology and how to migrate existing Java applications that use the CCF (Common Connector Framework) architecture to the J2EE Connector Architecture.
