A44   IBM's XML Solution for Enterprise Application Tooling and Web Services
Shyh-Mei Ho

Get up to speed on the latest technology for Enterprise Application Integration, XML and the Web Services. This technology exploits IBM's XML solution based on Common Application Metamodel (CAM). Learn how to use the published standard to build software that can map to your IMS, CICS and other applications. This presentation describes how the new XML metamodel is used to develop tools that can analyze existing applications to enhance your e-business solutions. See a demonstration on how this new technology can be leveraged to transform existing enterprise application programs to the new Web Services.
