## Session Abstract

**INDEX** 

B06 MFS: The Basics and Beyond

Pete Sadler

**VIEW** 

Message Format Service definitions of screen layouts and application program I/O areas are the heart of user interactions with the applications. Understanding the relevance of MODNAME to application flow control in OTMA driven applications is often critical to web-enabling IMS transactions. This session examines the MFS source statements, describes the relationships between to control blocks (DIF, DOF, MID, MOD). It also covers the MFS utilities and introduces the MFS Reversal Utilities.
