Session Abstract

INDEX

S24 IMS Extended Recovery Facility (XRF) and Parallel Sysplex Positioning

Donald Streicher

VIEW

This session covers the strategic direction of IMS for the IMS XRF customer. The presentation includes a discussion on the functional comparisons with current and planned IMS parallel sysplex support. The attendee should leave the session with the confidence that IMS will not eliminate XRF until a viable replacement is available and should be able to effectively communicate that message to his management and peers.
